L'Autriche est un Etat fédéral dans lequel l'Etat central et les Bundesländer (provinces fédérales) se partagent le pouvoir législatif et administratif. Ce partage englobe également la fiscalité. Il faut toutefois tenir compte du fait que la plus grande partie des revenus fiscaux en Autriche (environ 95%) provient des impôts fédéraux. Ceux-ci sont réglementés par la législation fédérale et sont perçus également par les autorités fédérales (administration financière fédérale). Les rendements provenant des impôts fédéraux les plus importants (en particulier la TVA et l'impôt sur le revenu) doivent néanmoins être partagés avec les autres collectivités locales (Bundesländer et Gemeinden/Communes).

Etant donné que le champ d'application de la Convention tendant à éviter les doubles impositions couvre essentiellement les impôts fédéraux, la structure fédérale de l'Autriche ne crée en général pas de problèmes particuliers.

Il y a seulement trois cas où des Conventions tendant à éviter les doubles impositons se réfèrent à des impôts locaux: ce sont le "Gewerbesteuer" (l'impôt sur les exploitations) dans la mesure où celui-ci est perçu pour le compte des Communes, le "Lohnsummensteuer" (l'impôt sur les salaires) et le "Grundsteuer" (impôt foncier).

Bien que ces trois impôts soient classés dans le groupe des impôts communaux (étant donné que les Communes en ont le seul droit de disposition) le pouvoir législatif en la matière, contrairement à la règle, n'est pas transmis aux Bundesländer mais est réservé à l'Etat fédéral, de sorte que la conclusion d'une Convention de double imposition ne pose pas de problèmes particuliers. En ce qui concerne les impôts des Bundesländer et des Communes une disposition de la Loi Constitutionnelle Financière de l'année 1948, Bundesgesetzblatt No. 45/1948, § 7 alinéa 4, attribue en outre à l'Etat fédéral la compétence de veiller à éviter des doubles impositions, à adapter de tels impôts aux dispositions du droit fiscal international et à empêcher des difficultés dans le domaine des transports internationaux et autres relations économiques.

Le seul effet pratique de la structure fédérale de l'Autriche sur la conclusion de Conventions tendant à éviter les doubles impositions résulte de l'engagement de l'Etat fédéral de partager le rendement de ses impôts fédéraux avec les Bundesländer et les Communes. Si, par conséquent, la conclusion d'une Convention tendant à éviter les doubles impositions ou toute autre mesure de l'Etat central pouvait entraîner une diminuation des parts de rendements fiscaux incombant aux Bundesländer, il faudrait alors entrer en négociations en temps utile avec les collectivités locales concernées (§ 5 du Finanzausgleichsgesetz 1973, Bundesgesetzblatt No. 445/1972).

B. LES RAPPORTS PARTICULIERS EXISTANT ENTRE LA CONVENTION TENDANT A EVITER LES DOUBLES IMPOSITIONS ET L'ORDRE JURIDIQUE FISCAL INTERNE D'UN ETAT

En dehors de la question générale traitée dans la première partie relative à l'intégration d'un traité international à l'ordre juridique interne, la Convention tendant à eviter les doubles impositions a encore d'autres points de rencontre avec l'ordre juridique fiscal interne, points qui ont besoin d'être éclaircis particulièrement. Vu sous l'angle de l'application pratique des Conventions tendant à éviter les doubles impositions en Autriche, ces questions peuvent être résumées comme suit:

---

8. Voir *Kelsen-Merkl-Fröhlich*, Die Bundesverfassung vom 1. Oktober 1920, remarques à l'article 50.
9. Voir *Verdross*, Völkerrecht [4], 105.

1. *Une Convention tendant à éviter les doubles impositions peut-elle créer des droits nouveaux d'imposition non prévus par le droit fiscal interne?*
2. *La Convention tendant à éviter les doubles impositions peut-elle influencer le mode selon lequel les droits d'imposition attribués par le traité sont mis en valeur?*
3. *Le droit interne peut-il servir de base à l'interprétation de la Convention tendant à éviter les doubles impositions?*
4. *Des dispositions contenues dans les Conventions tendant à éviter les doubles impositions peuvent-elles servir de base à l'interprétation du droit fiscal interne?*

1. Absence de création de nouvelles sources d'impôt

Il peut arriver qu'une Convention tendant à éviter les doubles impositions confère à l'Autriche un droit d'imposition qui n'est pas prévu par l'ordre juridique fiscal interne. C'est ainsi que par exemple l'article 11, alinéa 2 de la Convention tendant à éviter les doubles impositions austro-helvétique, Bundesgesetzblatt No. 63/1975, attribue à l'Etat de la source le droit de prélever sur des intérêts un impôt de 5 pour cent. Donc dans le cas où un bailleur de fonds résidant en Suisse offre un crédit à une entreprise autrichienne, l'Autriche aurait le droit, conformément à la Convention de double imposition, de frapper les intérêts payés à ce sujet d'un impôt de 5 pour cent. Pourtant d'après le droit fiscal interne (voir § 98 de la Loi sur l'impôt sur le revenu du 1972, Bundesgesetzblatt No. 440/1972) des intérêts payés à des non-résidents ne pourraient être imposés que s'ils sont garantis en Autriche par hypothèque. Dans le cas contraire, la question se pose de savoir si les autorités autrichiennes sont habilitées à percevoir, en la matière, l'impôt de 5% prévu par la Convention de double imposition qui est équivalent à la loi autrichienne relative à l'impôt sur le revenu (voir supra).

Cette question a toujours reçu une réponse négative en Autriche. Ces problèmes ont déjà été portés devant la Cour Constitutionnelle autrichienne qui dans sa décision s'y rapportant (voir décision du 11 mars 1965, B 210, 211/1964) considère que la tâche primordiale d'une Convention tendant à éviter les doubles impositions consiste à répartir les droits d'imposition et que par conséquent l'effet d'une telle Convention ne saurait dépasser le cadre d'une restriction du droit fiscal national existant. La Cour Constitutionnelle en conclut que le bien fiscal attribué à un Etat contractant ne peut être imposé par celui-ci que dans la mesure où le droit fiscal interne le permet.

Cette interprétation de l'effet exercé par une Convention tendant à éviter les doubles impositions sur la fiscalité interne qui se fonde sur la jurisprudence de l'ancien Reich allemand (voir jugement de la Cour Suprême des Finances du Reich du 3 octobre 1935, III A 267/34, "Reichssteuerblatt" de 1935, page 199) a pourtant été plusieurs fois sujet à critique. [10] Sa justification serait surtout mise en cause dans le cas où elle serait à l'origine de doubles *non*-impositions.

Si, par exemple, une entreprise allemande acquiert en Autriche des biens immobiliers pour la simple raison de placement sans les utiliser à ses propres fins industrielles ou commerciales (si par conséquent ces biens immobiliers ne constitutent pas d'établissement stable de l'entreprise allemande) et que ces biens immobiliers soient aliénés après expiration d'un délai de 6 ans, l'article 3 de la Convention austro-allemande tendant à éviter les doubles impositions, Bundesgesetzblatt No. 221/1955, confère à l'Autriche le droit d'imposer le gain réalisé par cette aliénation. D'après le droit autrichien relatif à l'impôt sur le revenu les gains réalisés par une entreprise étrangère ne peuvent être imposés que dans la mesure où ils peuvent être attribués à un établissement stable de l'entreprise étrangère situé en Autriche, ou bien qu'ils proviennent de l'aliénation de biens immobiliers nationaux effectués avant l'expiration d'un délai de cinq ans (délai de spéculation). D'autres cas d'imposition de gains réalisés par des entreprises étrangères en Autriche, énumérés d'une manière limitative au § 98 de la loi sur l'impôt sur le revenu, sont sans importance en l'occurence. Dans ces conditions l'Autriche est habilitée en vertu de la Convention tendant à éviter les doubles impositions d'imposer les gains provenant de l'aliénation de biens immobiliers, mais en est empêchée par son droit interne; il est vrai que dans le cas inverse la République fédérale d'Allemagne aurait, d'après son droit interne, une possiblité d'imposition (obligation fiscale illimitée), mais est empêchée d'exercer ce droit par les dispositions de la Convention tendant à éviter les doubles impositions.

2. L'importance du droit interne pour la réalisation des droits d'imposition attribués par la Convention

Conformément au principe exposé ci-dessus, selon lequel une Convention tendant à éviter les doubles impositions est en mesure de restreindre, mais non pas de créer des droits d'imposition internes, la question de savoir *si* dans une affaire fiscale internationale l'Autriche peut faire valoir son droit à l'imposition, ne pourra être résolue qu'en application commune du droit international et du droit national. La deuxième question à savoir *de quelle manière* un droit d'imposition fixé aussi bien par le traité que par le droit interne peut être exécuté, doit être résolue seulement en application du droit interne.

Ce principe a quelque importance dans le cas suivant: Conformément à l'article VII de la Convention austro-américaine tendant à éviter les doubles impositions, Bundesgesetzblatt No. 232/1957, des intérêts provenant de sources américaines peuvent être imposés en Autriche. Un contribuable résidant en Autriche, ayant touché des intérêts provenant d'obligations publiques ou communales américaines, a contesté le droit d'imposition de l'Autriche, en faisant valoir que ces intérêts sont exempts d'impôt selon le droit américain et qu'il faudrait en tenir compte dans l'imposition en Autriche conformément à la Convention austro-américaine tendant à éviter les doubles impositions. Conformément aux expositions plus hautes l'administration financière autrichienne a considéré que la Convention tendant à éviter les doubles impositions avait conféré à l'Autriche le droit d'imposer des intérêts américains, mais qu'elle ne pourrait pas avoir d'influence sur la détermination du montant imposable des revenus étrangers par les autorités fiscales autrichiennes. Les avantages fiscaux prévus par le droit américain relatif à l'impôt sur le revenu ne peuvent donc pas avoir de conséquences sur le calcul du revenu imposable en Autriche. Pour résoudre ce litige juridique on a fait appel à la Cour Administrative autrichienne qui a pourtant confirmé l'opinion de l'administration financière autrichienne dans sa décision du 27 mai 1966, chiffre 417/1966.

Le principe exposé ci-dessus joue aussi un certain rôle dans la prise en considération des revenus étrangers en vertu de la clause de progressivité. On peut souvent observer que dans les déclarations de l'impôt sur le revenu le montant des revenus provenant de l'étranger qui entrait en ligne de compte pour l'établissement de la progressivité en Autriche est identique à celui figurant à l'avis d'imposition à l'étranger. Là aussi il faudra tenir compte du fait que cette pratique ne sera admissible que dans la mesure où les lois des deux Etats relatives au calcul du revenu ne présentent pas trop de divergences. Car, comme il a déjà été dit, le montant des revenus provenant de l'étranger doit toujours être fixé conformément au droit autrichien.

Il faut procéder de même dans des cas de double résidence. Un contribuable ayant un résidence en République fédérale d'Allemagne dispose en Autriche d'une résidence secondaire (le centre de ses intérêts vitaux se trouvant en RFA); ses seuls revenus de source autrichienne proviennent de la location d'habitations. Etant donné que le contribuable dispose en Autriche d'un domicile fiscal, le droit interne revendique de l'assujettir intégralement (obligation d'impôt illimitée); ceci a pour conséquenc

10. Voir *Kruse* au "Österreichische Steuerzeitung" de 1975, 200, remarque No. 70.

que ses revenus provenant de la RFA comme de tout autre pays sont soumis à l'impôt sur le revenu autrichien. Ce devoir fiscal illimité procure pourtant au contribuable certains avantages (par ex. déductibilité de primes d'assurances sur la vie, déductibilité de certaines charges exceptionnelles, comme frais d'hôpital, jouissance de certains montants d'imputation), qui ne sont pas accordés aux non-résidents imposés seulement pour certains de leurs revenus autrichiens (contribuables à devoir fiscal limité). Dans le cas présent, la Convention tendant à éviter les doubles impositions confère à l'Autriche le droit d'imposer des revenus locatifs réalisés en Autriche; mais elle exclut l'Autriche d'imposer également les revenus allemands ou les revenus provenant de tout autre Etat. On pourrait très bien défendre l'opinion qu'un allègement international de l'obligation d'impôt des non-résidents durait entraîner également une réduction des avantages fiscaux. L'application du principe exposé aboutit pourtant au résultat inverse, à savoir que la Convention n'intervient pas pour résoudre la question de savoir de quelle manière des revenus locatifs autrichiens sont à imposer par l'Autriche; cette question se pourrait trouver uniquement une solution par l'application du droit interne. Etant donné que le droit interne relatif à l'impôt sur le revenu accorde les avantages fiscaux résultant de l'obligation fiscale illimitée sans tenir compte du fait que cette obligation fiscale est créée par une résidence principale ou par une résidence secondaire, il n'y a pas de possibilité lègale de ne pas accorder au contribuable les avantages fiscaux cités ci-dessus.

On peut encore noter que l'Autriche a déjà fait un premier essai, par sa législation interne, pour supprimer cette situation insatisfaisante: Ce n'est que récemment que dans le domaine de l'imposition de la fortune, les montants d'exonération d'impôt liés également à l'obligation fiscale illimitée ont été supprimés pour tous les cas où un contribuable résidant en Autriche selon le droit interne, est considéré en vertu d'une Convention tendant à éviter les doubles impositions comme résidant dans un autre Etat (voir amendement à la loi sur l'impôt sur la fortune de 1976, Bundesgesetzblatt No. 665/1976, chiffre 1).

3. L'importance du droit interne pour l'interprétation des Conventions tendant à éviter les doubles impositions

L'administration fiscale autrichienne déduit ce principe de l'article 3, alinéa 2 du projet de convention tendant à éviter les doubles impositions de l'OCDE. Cette dipsosition est la suivante:

"*Pour l'application de la Convention par un Etat contractant, toute expression qui n'est pas autrement définie a le sens qui lui est attribué par la législation dudit Etat régissant les impôts faisant l'objet de la Convention, à moins que le contexte n'exige une interprétation différente.*"

Ce principe s'applique dans le cas suivant: Une entreprise suisse construit un immeuble en Autriche qui, par la suite, est donné à bail à une entreprise allemande. L'entreprise allemande donne en sous-location ces installations à des entreprises autrichiennes. Ceci n'est pas considéré comme établissement stable de l'entreprise allemande en Autriche. Il n'y a aucun doute que les sommes payées par l'entreprise allemande à l'entreprise suisse peuvent être imposées en Autriche conformément à la règle d'attribution du droit d'imposition s'appliquant à des revenus provenant de biens immobiliers. Il est pourtant plus difficile de trouver une réponse à la question de savoir si les sommes touchées par l'entreprise allemande à titre de sous-location peuvent également être prises en considération pour l'imposition en Autriche. D'après l'article 3 de la Convention austro-allemande tendant à éviter les doubles impositions l'Autriche aurait le droit d'imposer les revenus provenant de biens immobiliers situés en Autriche. Il faut donc trancher la question de savoir si un contrat de sous-location doit être considéré comme location d'un droit de bail ayant le caractère d'un bien économique mobilier ou bien s'il s'agit plutôt là, du point de vue fiscal, d'un contrat de location relatif à des biens immobiliers. La Convention austro-allemande tendant à éviter les doubles impositions ne contient pas de disposition particulière à ce sujet. L'Autriche devra trouver une réponse à cette question en se fondant sur son droit interne qui décidera pour l'interprétation citée en deuxième lieu. [11]

Il est évident que ce principe d'interprétation sera limité dans la mesure où l'accord lui-même ne prévoit pas expressément autre chose. Il serait par exemple inadmissible de ne pas appliquer en Autriche la règle relative aux dividendes pour les gains de sociétés à responsabilité limitée pour la simple raison que conformément à la terminologie juridique autrichienne seuls les gains réalisés par des sociétés par actions sont nommés "dividendes". Car dans ce cas, conformément à la définition de la Convention tendant à éviter les doubles impositions, ce terme doit s'appliquer aux gains réalisés par toutes les sociétés de capitaux.

4. L'incompétence du droit fiscal international dans l'interprétation du droit fiscal interne

Le principe qui vient d'être exposé selon lequel le droit interne pourrait servir à l'interprétation du droit fiscal international, ne pourrait pas être appliqué dans le sens inverse.

Si, par conséquent, une entreprise suisse dispose en Autriche d'un simple bureau d'information qui, selon les dispositions de la Convention austro-helvétique ne doit pas être qualifié d'établissement stable (article 5, lit. e), le droit fiscal international, en se fondant sur cette définition, retire à l'Autriche le droit de frapper les installations d'une entreprise suisse sur le territoire autrichien de l'impôt sur le revenu et sur la fortune. Il ne serait pas juste de prétendre également que ce bureau d'information n'aurait pas le caractère d'un établissement stable pour la TVA. Le § 12 de la loi sur la TVA, Bundesgesetzblatt No. 223/1972, lie le droit d'une entreprise étrangère de faire valoir son droit à déduction de la taxe qui a grevé le prix de revient, entre autre à la condition que l'entreprise étrangère ait en Autriche un établissement stable. L'interprétation de ce terme d'établissement stable employé en matière de TVA doit se fonder sur le droit interne (voir § 29 de la loi fédérale portant sur la procédure fiscale, BGBl. No. 194/1961); selon le droit interne, de tels bureaux d'information constituent sans doute un établissement stable; il serait donc inadmissible de ne pas faire profiter l'entreprise suisse du droit à déduction en se référant à la définition des dispositions de la Convention austro-helvétique tendant à éviter les doubles impositions.

La Convention tendant à éviter les doubles impositions n'a également pas d'effets sur la question de savoir si l'obligation fiscale des employés travaillant dans le bureau d'information sera accompli par voie de déclaration d'impôt ou par voie de retenue à la source. Il est vrai que la loi autrichienne relative à l'impôt sur le revenu, Bundesgesetzblatt No. 440/1972 prévoit la possibilité d'une retenue à la source sur les salaires uniquement dans les cas où l'employeur dispose en Autriche d'un établissement stable (§ 81 de la loi relative à l'impôt sur le revenu); mais ce n'est de nouveau pas la Convention tendant à éviter les doubles impositions mais exclusivement le droit interne autrichien qui décide de la question de savoir si le bureau d'information constitue un établissement stable pour que la procédure de rétention d'impôt sur les salaires devienne applicable.

C. RESUME

Sans prétendre définir les rapports existant entre le droit international et le droit interne au sens d'une théorie moniste ou dualiste, il faut constater qu'il s'agit d'une part de deux domaines de

11. Voir *Schubert-Pokorny-Schuch*, remarque 22 faite au § 98 de la loi relative à l'impôt sur le revenu et la décision de la Cour d'Administration du 16 mars 1971, chiffre 1357/1970.

droit différents qui ont d'autre part de multiples points de rencontre. Le but de cet exposé était de parler de ces points de rencontre en prenant comme exemple l'Autriche.

Les Conventions tendant à éviter les doubles impositions font en premier lieu partie intégrante du droit international public. Une des affinités à l'ordre juridique interne résulte du fait que les accords internationaux doivent être exécutés dans le domaine du droit interne; ceci mène au problème de l'intégration d'une Convention tendant à éviter les doubles impositions à l'ordre juridique interne d'un Etat. En Autriche cette intégration se fait par voie de transformation générale; il serait possible d'appliquer à titre de choix également la méthode de transformation spéciale, mais dans le domaine du droit relatif aux Conventions tendant à éviter les doubles impositions on ne s'est pas encore servi de cette méthode. Une transformation en bonne règle doit respecter plusieurs conditions en vertu de la Constitution; des Conventions tendant à éviter les doubles impositions ne doivent être conclues que par le Président fédéral; en tant que traité modifiant la loi elles nécessitent l'approbation par le Parlement et ne doivent pas être signées *uno actu*, mais uniquement sous réserve de ratification. Des Conventions tendant à éviter les doubles impositions occupent à l'échelle de l'ordre juridique autrichienne le rang de simples lois fédérales et doivent donc être conformes à la Constitution. Des illégalités se produisant à l'occasion de la conclusion ou dans le texte d'une telle Convention n'entraînent pas sa nullité; pourtant des Conventions tendant à éviter les doubles impositions peuvent être annulées par la Cour Constitutionnelle (avec l'effet *ex nunc*); l'annulation se rapporte uniquement au domaine juridique interne et ne touche en aucune manière les obligations internationales de la Convention.

Quelques autres points de rencontre qui doivent être résolus dans l'application de la Convention tendant à éviter les doubles impositions peuvent être résumés comme suit: la Convention ne peut pas établir des droits à imposition qui ne sont pas déjà prévus par le droit interne; c'est exclusivement le droit interne qui décide de la manière suivant laquelle les droits à imposition attribués sont mis en valeur; les Conventions tendant à éviter les doubles impositions doivent être interprétées en se fondant sur le droit interne; on ne peut pas faire appel à des Conventions tendant à éviter les doubles impositions pour interpréter des prescriptions internes d'imposition.

II. LA REALISATION DES DROITS FISCAUX ET LA PROTECTION JURIDIQUE DANS LA PROCEDURE FISCALE AUTRICHIENNE
(en tenant compte en particulier des possibilités de conflits résultant des règlements internationaux)

A. L'ORGANISATION DE L'ADMINISTRATION FISCALE

Un principle dominant de la Constitution autrichienne est le principe fédéral. [12] Il est réalisé de manière que l'Etat fédéral et les Länder se partagent le pouvoir législatif et le pouvoir exécutif (la juridiction par contre est uniquement réservée à l'Etat fédéral) et les Länder ont le droit de coopérer à la législation fédérale (droit de remontrance suspensif à la deuxième Chambre, la Chambre des Länder). Les devoirs de l'administration fédérale ne sont accomplis qu'en partie par des autorités appartenant à l'Etat fédéral — brevets, PTT, armée). La plupart des affaires administratives de l'Etat fédéral sont réglées sous forme d'administration fédérale indirecte, par les autorités des Länder (chef du gouvernement provincial et autorités du Land qui lui sont subordonnées, autorités administravies du Bezirk); dans ce domaine de leur activité, celles-ci ont la fonction d'autorités fédérales et sont par conséquent obligées de s'en tenir aux instructions émanant des organes de l'Etat fédéral (autorités centrales).

Le premier échelon territorial de l'organisation administrative est constitué par les communes; celles-ci sont (comme l'Etat fédéral et les Länder) des collectivités territoriales (Gebietskörperschaften) ayant le droit à l'administration autonome ainsi que les compétences administratives qui relèvent de ce droit. De même que le droit constitutionnel attribue aux Länder des devoirs qu'ils accomplissent indépendamment des organes fédéraux, les communes sont elles aussi chargées de travaux administratifs qu'elles doivent effectuer sans être liées aux instructions de l'Etat fédéral et du Land (domaine autonome, réservé). Pourtant, de même que les Länder et les autorités leur appartenant peuvent être chargés d'effectuer des activités administratives pour l'Etat fédéral (administration fédérale indirecte), des devoirs publics peuvent également être transférés aux communes qu'elles sont tenues d'accomplir non pas au titre de leur position en tant qu'organisme autonome, mais au titre de leur qualité de ressort administratif public (domaine transféré).

Il apparait donc qu'en Autriche la législation est uniquement réservée à l'Etat fédéral et aux Länder. L'administration par contre est assurée par l'Etat fédéral, les Länder et également par les communes. Les Länder et les communes peuvent toutefois exercer une partie de leur activité en tant qu'administration déléguée, c'est à dire dans un domaine transféré et par conséquent liées à des instructions (ils fonctionnent en tant qu'autorités de la collectivité territoriale supérieure).

Bien que plusieurs domaines des compétences administratifs d'une collectivité territoriale supérieure puissent faire l'objet d'un transfert à des collectivités territoriales inférieures (un transfert dans l'autre sens est possible avec l'accord de la collectivité territoriale concernée, mais c'est rarement le cas), il apparait que — en dehors de l'attribution de compétences législatives — le principe fédéral trouve aussi son application dans l'organisation de l'activité des differentes autorités. Ceci permettrait de penser qu'il incombe à l'Etat fédéral, aux Länder et aux communes, donc à toutes les collectivités territoriales, d'assurer elles-mêmes la couverture des frais résultant de leur travail en particulier par la perception d'impôts. Cette solution idéale qui correspondrait à ce système (système de séparation) est mentionnée par la Constitution, [13] mais elle n'est pourtant pas mise en pratique. La raison est d'ordre historique: c'est uniquement l'Etat fédéral qui dispose d'une organisation bien rodée et efficace dans le domaine des impôts et de l'administration, dotée d'un corps de fonctionnaires très qualifiés. C'est ainsi qu'il apparait inopportun de constituer en dehors de l'administration traditionnelle d'un bon fonctionnement, une organisation parallèle dans les Länder et les communes

12. Article 2 de la Loi constitutionnelle fédérale, pour l'explication des notions et d'autres références de doctrine voir *Ermacora*, "Österreichisches Verfassungslehre", Vienne 1970, 251; *Walter*, "Österreichisches Bundesverfassungsrecht", Vienne 1972, 107; *Walter-Mayer*, "Grundriss des österreichischen Bundesverfassungsrechts", Vienne 1976, 45.
13. § 2 de la Loi portant sur la Constitution fiscale (F-VG) de 1948 Journal (BGBl. No. 45/1948.

C'est la raison pour laquelle la perception des impôts plus importants est réservée aux autorités fiscales de l'Etat fédéral. [14] Nonobstant la souveraineté des Länder et des communes dans le domaine des impôts, ceux-ci, conformément à leurs possibilités de perception limitées, ne gèrent que des impôts moins lucratifs et moins importants. La somme totale des impôts perçus en Autriche est réalisée pour 95% par les autorités fiscales de l'Etat fédéral. En tenant compte du principe fédéral et de la garantie réservée par la Constitution à toutes les collectivités territoriales [15] de maintenir leur existence, la sureté matérielle des Länder et des communes est assurée en leur accordant la participation appropriée aux résultats réalisés par la perception fédérale (donc système intégré), de même que par des affectations financières et subventions particulières.

Quant aux impôts classiques, tels que l'impôt sur le revenu, l'impôt sur les exploitations, la taxe sur le chiffre d'affaires, l'impôt sur la fortune, de même qu'en ce qui concerne les impôts sur certaines transactions ou des impôts de consommation, des monopoles et des droits de douane, ce sont donc uniquement les autorités fiscales de l'Etat fédéral qui en effectuent la perception.

L'organisation de l'administration fiscale de l'Etat fédéral est exposée par la loi fédérale du 13 décembre 1974, Journal Officiel (Bundesgesetzblatt) No. 18/1975 (loi portant sur l'organisation de l'administration fiscale — AVOG) de même que par la loi sur les ministères fédéraux de 1973, Journal Officiel (BGBl.) No. 389/1973. Conformément à ces lois — mis à part quelques rares exceptions prévues expressément par la loi — les *bureaux de finances* (Finanzämter) qui assument toujours le travail administratif nécessaire pour recouvrer les impôts. Il s'agit là d'autorités de première instance constituées au niveau du Bezirk. Le premier échelon dans le domaine des douanes est constitué par les *bureaux de douane* (Zollämter).

Les autorités de l'instance intermédiaire (en général au niveau du Land) sont formées par les Directions Fiscales Régionales (*Finanzlandesdirektionen*); ce sont des autorités supérieures ayant le droit de donner des instructions aux bureaux de finances et de douane. Les Directions Fiscales Régionales sont également des autorités de recours. Ce n'est que dans des cas exceptionnels qu'elles tranchent des décisions de première instance (particulièrement dans le domaine des impôts de consommation et des douanes).

Les activités de l'administration fiscale suprême de l'Etat fédéral sont exercées par le *Ministère fédéral des Finances*. Dans le domaine fiscal il lui incombe en particulier de s'occuper des affaires relatives à l'organisation financière, à la péréquation fiscale, au budget et au pouvoir législatif. Il doit donc également veiller à l'établissement de projets de loi dans ce domaine. C'est uniquement dans des cas très rares (expressément prévus par la loi) que le Ministère fédéral des Finances doit accomplir des tâches demandant des décisions par avis (Bescheid); il lui revient avant tout un pouvoir d'organisation et d'instruction.

Le Ministère des Finances prend des décisions en première instance sur des questions se rapportant au droit fiscal international par ex. pour éliminer sur demande par décision (individuelle) certains objets imposables totalement ou en partie de l'obligation fiscale ou pour imputer totalement ou en partie des taxes frappant de tels objets sur des impôts internes (§ 48 de la Loi Fédérale portant sur la procédure fiscale (BAO)), à condition qu'il n'existe pas de Conventions tendant à éviter les doubles impositions ou que dans des cas individuels elles ne soient pas en mesure d'éviter de manière efficace la double imposition. Le Ministère fédéral des Finances est également compétent pour consentir l'imputation de sommes, versées à titre d'impôt sur les successions à l'Etat du lieu de situation et frappant des objets situés à l'étranger sur l'impôt sur les successions et de donation autrichiens. [16] Finalement le Ministère fédéral des Finances peut accorder par décision des "avantages fiscaux d'entrée" dans le domaine de l'impôt sur le revenu et sur la fortune [17] à des personnes transférant leur domicile en Autriche sans y exercer une activité lucrative (ces avantages reviennent à restreindre l'obligation fiscale illimitée qui est constituée par l'installation du domicile en Autriche). En tant qu'autorité suprême il incombe au Ministère fédéral des Finances d'introduire et d'exécuter des procédures amiables avec des Etats contractants (voir art. 25 du Projet de l'OCDE d'une Convention tendant à éviter les doubles impositions et les Conventions bilatérales).

Etant donné que les Directions Fiscales des "Länder" constituent la dernière instance dans les voies de recours fiscales, le Ministère fédéral des Finances n'a pas la fonction d'une autorité d'appel. Ce sont uniquement les décisions prises par les bureaux de finances et les bureaux de douane qui peuvent faire l'objet d'un recours administratif; les voies de recours s'arrêtent donc aux Directions Fiscales des "Länder". Les décisions qu'elles prennent — soit en leur qualité d'autorité de recours ou en vertu de leur propre compétence en tant que première instance — ne peuvent pas faire l'objet d'une procédure de contestation administrative ce qui vaut également pour les décisions émanant du Ministère fédéral des Finances.

Etant donné que les dispositions résultant de Conventions tendant à éviter les doubles impositions font partie du droit interne une fois qu'elles ont été approuvées par le Parlement, la question de savoir s'il faut appliquer les règles autonomes du droit fiscal ou des règles se basant sur des Traités ne relève pas de la compétence des autorités. Les règles de compétence esquissées plus haut s'appliquent donc sans tenir compte des sources du droit fiscal. Aucune autorité spéciale, ni aucune compétence particulière ne sont prévues pour des impositions dont les effets dépassent les frontières de l'Autriche, en particulier dans les cas de double imposition ou dans les affaires où s'applique le droit international (bilatéral ou multilatéral).

B. LA REALISATION DES CREANCES FISCALES DE L'ETAT PAR LES ADMINISTRATIONS FISCALES; LES PRINCIPES DOMINANT LA PROCEDURE

Conformément au droit fiscal autrichien (comme par ex. au droit allemand) la créance fiscale de l'Etat en tant que créance de droit public (correspondant à la dette fiscale du redevable) est constituée avec la réalisation d'éléments constitutifs de l'obligation fiscale énoncés par la loi. Si, par conséquent, un acte concret est posé répondant aux exigences abstraites de ces éléments, la conséquence légale prescrite dans la loi se trouve réalisée. [18] Ceci ne répond pas seulement au principe impératif, selon lequel l'imposition doit se baser exclusivement sur des éléments constitutifs de l'obligation fiscale et au principe de la légalité de l'administration, [19] mais signifie en même temps que la créance publique (dont l'effet patrimonial est la création d'une créance dans le chef du créancier fiscal et d'une dette correspondante dans le chef du débiteur d'impôt) ne naît pas par sa constatation par l'administration, mais déjà par un comportement répondant à ces élé-

---

14. Conformément au § 3 de la Loi portant sur la Constitution fiscale, il revient à la législation fédérale de répartir les droits d'imposition et le rendement provenant des impôts (des lois dites de péréquation financière sont édictées, dernièrement BGBl. No. 445/1973); voir *Melichar*, "Die Österreichische Finanzverfassung" et *Wissgott*, "Der Finanzausgleich in Österreich" au "Handbuch der österreichischen Finanzwirtschaft" édité par Andreae, Innsbruck 1970, 13 et 59.

19. Article 18 de la Loi Constitutionnelle fédérale, § 5 de la Loi portant sur la Constitution fiscale.

ments constitutifs prescrites par la loi. Vu sous cet angle, les activités de l'administration fiscale ayant comme but l'établissement de l'impôt par décision, [20] aboutissent donc dans un acte administratif de nature déclarative, étant donné que ce n'est pas la décision relative à l'imposition qui constitue la dette fiscale, elle est seulement l'instrument de la réalisation d'une dette fiscale déjà existante. Conformément aux principes de la légalité elle est donc la condition préalable de la perception de l'impôt (ordre de paiement et base pour l'exécution).

La procédure fiscale [21] doit tenir compte du caractère public de la créance fiscale et du principe de la légalité en matière de perception fiscale. Dans les lignes qui suivent, nous traiterons des principles dominant la procédure.

Au premier plan se trouve le principe de *la poursuite d'office*, le principe selon lequel l'autorité fiscale détermine elle-même la marche de la procédure; ceci signifie que la procédure fiscale — mis à part des genres de procédures basées sur une demande (par ex. certaines affaires douanières) — doit être ouverte, exécutée et terminée d'office, c'est á dire qu'il est du devoir de l'autorité de constater les faits donnant lieu à l'imposition, le redevable ayant toutefois un devoir de coopération. Ce dernier est obligé sous peine de sanction, d'exposer sa situation revelatrice de l'imposition sans restrictions et conformément à la vérité. En raison des principes de la poursuite et de l'enquête d'office, principes qui sont déterminés par la loi, il incombe à l'administration fiscale de s'occuper entièrement de l'enquête des faits (constatation des faits, exposition des preuves) ce qui signifie que l'autorité fiscale ne doit pas seulement constater d'office des faits générateurs d'un droit d'impôt, mais doit également tenir compte des faits annulant ou atténuant ce droit. Etant donné que conformément aux règles générales de procédure, on ne saurait demander des choses impossibles et inutiles, l'obligation de l'autorité fiscale de faire une enquête d'office pour rechercher les faits trouve une limite au moment où le contribuable n'est pas prêt à coopérer à la recherche de la vérité. Des faits peu courants évoqués par le contribuable et des faits qui ne peuvent pas être supposés doivent être prouvés par celui-ci. En particulier s'il s'agit de faits ayant leur source à l'étranger, le devoir du redevable de coopérer va en croissant dans la mesure où l'obligation de l'administration fiscale de rechercher d'office des faits va en diminuant pour la raison que les possibilités d'enquête dont elle dispose en Autriche lui manquent à l'étranger. Du moment que le redevable n'accomplit pas son devoir de coopération, l'autorité fiscale peut se baser sur les documents et les éléments dont elle dispose sans être obligée de tenir compte de toutes les possibilités pouvant être importantes pour l'énoncé des faits et de prouver toutes les circonstances possibles pouvant être prises en considération.

C'est ainsi qu'on arrive au principe de *la libre appréciation des preuves* dont la nature, ce qui vaut pour chaque procédure moderne, consiste dans le fait qu'il revient à l'administration de juger elle-même, en tenant bien compte des résultats de la procédure d'enquête, de la question de savoir si un fait doit être considéré comme prouvé ou non. La libre appréciation ne dispense pas de l'observation des règles de la recherche des faits. Les conclusions finales basées sur des faits irréfutables et mettant hors de doute l'existence ou la non-existence des faits en question, doivent correspondre aux lois logiques de la pensée. Il faut qu'il y ait un enchaînement rationnel d'une pensée à l'autre et que les considérations et conséquences qui en sont tirées doivent être concluantes, elles doivent être exposées aux redevables pour permettre leur vérification. D'ailleurs, avant la fin de toute procédure d'enquête, les parties doivent avoir l'occasion, en vue de défendre leurs intérêts, de prendre position aux suppositions faites par les autorités, sous forme d'idées opposées, d'objections, d'indications justifiées, pour contribuer à trouver la vérité (*Principe de l'audition des parties*). *La consultation du dossier* qui est également accordée aux parties (y ayant un droit), dans la mesure où il n'est pas porté préjudice à de tiers personnes (des dossiers internes sont également exclus), doit contribuer à faire valoir et à défendre des intérêts bien fondés, de même qu'elle doit servir à faciliter la recherche des faits tels qu'ils se présentent en réalité.

Conformément au but de la procédure qui est de déterminer la dette de droit public et de la constater par décision, tous les faits ayant un rapport avec cette dette doivent être énoncés suivant leur véritable importance. Ce ne sont pas les suppositions évoquées par les parties, souvent non contestées, qui sont décisives, mais il s'agit uniquement de rechercher la vérité matérielle et de la mettre à la base de l'imposition.

La procédure fiscale connaît dans une large mesure le *principe de la forme écrite*. En principe les demandes des parties et les actes de l'administration doivent se présenter toujours sous la forme écrite; il est également prévu de déposer des demandes ou de régler l'affaire oralement, mais seulement dans des cas exceptionnels. La procédure fiscale *n'est pas accessible au public*. L'autorité est soumise à *une obligation très stricte au secret* (sous peine de sanction pénale) en ce qui concerne tous les éléments de situation énoncés ou recherchés par elle.

Dans la mesure où les lois fiscales matérielles ne prévoient pas expressément des délais particuliers dont l'expiration entraîne l'extinction des droits, l'administration fiscale est tenue d'entendre jusqu'au moment où le jugement est passé en force de chose jugée des demandes déposées par les parties (donc encore au cours de la procédure d'appel), des observations de fait et de nature juridique, même si ces demandes et observations n'ont pas encore été déposées par faute ou négligence du contribuable (pas d'interdiction de faire valoir de faits nouveaux, pas de procédure par contumace, donc pas de perte de droit en cas d'inobservation des délais de déclaration, etc.).

Les parties ont le droit, mais non l'obligation, de se faire représenter dans la procédure fiscale (pouvoir de représentation). Quant à l'exercice de ce pouvoir de manière professionnelle, seules les personnes qualifiées ont le droit d'agir au nom du contribuable devant les autorités fiscales autrichiennes. Ce sont avant tout les avocats, agents en brevets et notaires travaillant selon les règles professionnelles autrichiennes, de même que les conseillers fiscaux admis par le droit interne (ordre professionnel des conseillers fiscaux, BGBl. No. 125/1955), tels que les experts-comptables et conseillers économiques. Une licence appropriée acquise à l'étranger ne donne pas droit à la représentation de parties en Autriche, étant donné que le droit autrichien ne prévoit pas cette possibilité et qu'il n'existe pas d'accords internationaux à ce sujet.

Les impôts préscrits par avis qui ne sont pas payés au plus tard le jour de leur échéance sont recouvrables en règle générale à l'expiration d'un mois à compter de la remise en mains propres de la décision. Un recours présenté contre la décision fiscale n'a pas d'effet suspensif, le recouvrement par voie de contrainte ne peut donc pas être évité en prenant la voie d'appel. Pourtant dans le cas où l'acquittement de l'impôt à la date prévue constituerait pour le redevable une grande rigueur, l'autorité fiscale peut par décision (libre appréciation) remettre à un moment ultérieur la date fixée pour le versement de l'impôt (ajournement). Elle peut également admettre que le paiement s'effectue à tempérament, ceci à condition que le sursis de paiement accordé ne mette pas en cause la recouvrabilité des impôts.

Si les frais encourus par les autorités fiscales sont supportés d'office par celles-ci (ceci vaut également pour la procédure de recours) les parties doivent toutefois subvenir personnellement aux frais qui leur incombent par la procédure fiscale (principe de l'acceptation de la charge des frais, la loi n'accordant pas des droit mutuels du remboursement de frais). Dans des cas exceptionnels, à savoir dans la procédure douanière, la procédure en matière d'impôt de consommation, la procédure de monopoles et la procédure d'exécution, peut s'effectuer un remboursement des frais de la part du contribuable à l'administration fiscale.

---

20. La plupart c'est à dire les impôts principaux sont fixés par avis d'impôt. En plus, la législation connaît encore les systèmes de la retenue d'impôt et de la calculation de l'impôt par le contribuable même, les autorités fiscales n'intervenant qu'en cas de défauts de calcul ou d'acquittement.

21. Quant à la procédure fiscale voir en particulier *Reeger-Stoll*, Commentaire à la Loi Fédérale portant sur la procédure fiscale, Vienne 1966 et "Die Bundesabgabenordnung" (manuel), Vienne 1975, de même que *Lager*, Bundesabgabenordnung, Vienne 1975.

C. LA PROTECTION JURIDIQUE EN MATIERE FISCALE

1. Voies de recours administratives

Les décisions prises par les autorités fiscales de première instance (bureaux de finances, bureaux de douane) sont susceptibles d'appel (en dehors de rares exceptions). Le délai de réclamation est d'un mois. Ce délai peut être prolongé pour des raisons dignes d'être prises en considération, si nécessaire, à plusieurs reprises. (En cas d'expédition par la poste dans le délai prévu, le délai est considéré comme respecté, même si le recours parvient plus tard à l'autorité.) Le recours peut être présenté à l'autorité fiscale ayant pris la décision contestée ou également à la Direction Fiscal du "Land" compétente de juger de l'appel.

En cas d'irrecevabilité de l'appel, il est rejeté sans que l'autorité fiscale soit obligée d'intervenir en la matière. Un rejet est prononcé si l'appel n'a pas été déposé dans les délais prévus ou s'il n'est pas possible de faire appel contre une affaire qui est expressément exclue de la voie de recours, ou en cas d'une "*res judicata*" ou bien s'il a été renoncé légalement à déposer un appel, ou encore en raison du fait que le réclamant n'est pas en droit de se prévaloir de l'appel.

Des vices de forme de l'appel (par ex. manque de signature, pas de pouvoir), de même que certains défauts de contenu (pas de déclaration, dans laquelle la décision est contestée et quels changements sont demandés, manque d'un exposé de motifs) ne justifient pas le rejet; l'autorité fiscale doit plutôt inciter le réclamant à régulariser ces vices en indiquant que dans le cas où les vices ne seraient pas régularisés dans un délai approprié, l'appel serait rejeté.

Dans le cas où l'appel est donc présenté dans le délai prévu, et s'il est admissible et sans vices, une décision en la matière doit être prise pour statuer de l'affaire. Cette décision basée sur les faits remplace la décision contestée et peut différer par rapport à la première en tout sens (pas d'interdiction d'une *reformatio in peius*). Des appels injustifiés quant au fond sont rejetés.

L'autorité qui a prononcé la décision contestée, donc l'autorité de première instance, peut tout d'abord décider elle-même du moyen de recours. Une telle *décision préalable d'appel* (Berufungsvorentscheidung) sert à la simplification administrative. Surtout dans le cas où l'autorité ayant prononcé la décision reconnaît le caractère fautif de sa propre décision, elle peut donner suite à la demande d'appel justifiée sans que l'autorité supérieure en soit saisie. Une décision préalable d'appel n'est pas obligatoire. L'autorité de première instance peut, sans prendre de décision préalable, présenter l'appel à l'autorité de recours (Directions Fiscales des "Länder") en vue d'une décision. Pourtant dans le cas où une décision préalable a été prise et que le réclamant — non satisfait — introduit dans le délai d'un mois une demande en vue d'une décision de l'autorité supérieure, la décision préalable d'appel devient sans effet. Dans le cas où le réclamant ne demande pas de décision à la Direction Fiscale du "Land", la décision préalable d'appel a l'effet d'un règlement définitif de l'appel. Cette décision seulement (et non pas la décision contestée) constitue à partir de ce moment la valeur juridique.

Si le bureau de finances n'a pas prononcé de décision préalable d'appel ou que ceci ait été fait, mais que celle-ci soit devenue sans effet en raison d'une demande respective déposée par la partie, la *Direction Fiscale du "Land"* [22] doit statuer sur l'appel. Cette décision tient également compte des faits. La Direction Fiscale du "Land" doit prononcer une décision matérielle qui remplace complètement la décision contestée. Dans la procédure d'appel l'autorité de recours dispose des mêmes droits et devoirs relatifs à la procédure dont dispose l'autorité fiscale de première instance.

Donc, au besoin, elle doit procéder de nouveau à une enquête de fait ou doit compléter la recherche faite en première instance et est tenue à chercher elle-même des preuves. Elle n'est pas liée au contenu de la décision prise en première instance. Elle peut donc modifier la décision en tout sens (donc également pour le pire). Son pouvoir de décision ne se restreint pas aux points faisant l'objet de l'appel, sa décision peut dépasser le cadre de la contestation en cause. La décision résultant du recours de la procédure fiscale autrichienne est donc une décision nouvelle qui ne peut pas être restreinte par des limites formelles ou par des décisions préliminaires, elle doit être prise, quant aux choses réelles et juridiques, comme s'il s'agissait d'une première décision en la matière.

C'est ainsi que la décision de recours remplace comlètement la décision contestée à l'origine, c'est elle seule qui est de valeur juridique.

Il faut encore signaler que, du point de vue de la procédure juridique et de la compétence, le fait qu'il s'agit d'affaires relatives au droit fiscal interne ou au droit international ne fait aucune différence. La procédure de première instance, de même que la procédure de deuxième instance (recours) ne font aucune différence que les parties de la procédure soient Autrichiennes ou étrangères, qu'elles soient des personnes résidant en Autriche ou à l'étranger.

2. Voies de recours judiciaires [23]

En ce qui concerne les voies de recours judiciaires en Autriche l'individu jouit d'une protection juridique contre les activités des autorités administratives de l'Etat non pas auprès des tribunaux ordinaires, mais en principe auprès de la *Cour administrative*. [24] Cette institution a plusieurs dimensions. La Cour administrative est appelée à contrôler l'activité des autorités administratives de l'Etat fédéral, des Länder et des communes (pas de tribunaux administratifs des Länder). Occupant une position de monopole dans l'organisation judiciaire, elle est compétente pour recevoir des plaintes contre des actes de l'administration de toute sorte (il n'y a donc pas de tribunaux administratifs spéciaux, par ex. pour les affaires sociales ou financières), finalement il faut signaler que la juridiction administrative n'a qu'un échelon, c'est à dire que la Cour administrative est la seule instance à décider.

Pour garantir l'observation de la Constitution, une autre Cour de droit public est instituée dont l'activité est parallèle à celle de la Cour administrative (pas de subordination, pas de cour supérieure); il s'agit de la *Cour constitutionnelle*. En dehors de multiples activités prévues par le droit constitutionnel, elle a la fonction d'un tribunal administratif particulier. C'est ainsi que la Cour constitutionnelle doit statuer des réclamations portées à l'encontre des décisions prises par les autorités administratives de dernière instance, elle n'y est pourtant habilitée que dans la mesure (ce qui pose des limites à sa compétence) où le réclamant affirme avoir été lésé dans un droit qui lui est garanti par la loi constitutionnelle [25] (par ex. en cas de violation des droits fondamentaux et des droits de la liberté); pourtant, dans le cas où il fait valoir la violation d'autres droits subjectifs, la plainte doit

---

22. Dans certains cas, en particulier quant aux affaires relatives à l'impôt sur le revenu, sur les sociétés, sur les exploitations, sur le chiffre d'affaires et sur la fortune, la Direction Fiscale Régionale décide par des Sénats. Ces Sénats d'appel ne sont ni des autorités indépendantes (bien que leurs membres ne soient pas soumis à des directives et bien qu'ils n'appartiennent pas tous à l'administration fiscale), ni des tribunaux ou des autorités similaires, mais uniquement des organes appartenant à l'autorité fiscale de deuxième instance, donc aux Directions Fiscales Régionales.

24. Art. 129-136 de la loi portant sur la Constitution fédérale (B-VG), Loi portant sur la Cour administrative de 1965, Bundesgesetzblatt No. 2, *Ermacora*, "Verfassungslehre" 186, 392; *Walter*, Bundesverfassungsrecht 661, *Walter-Mayer*' "Grundriss des österreichischen Bundesverfassungsrechts", 236.

25. Art. 144 de la loi constitutionnelle fédérale (B-VG), Verfassungsgerichtshofgesetz 1953 BGBl. No. 85, *Ermacora*, Verfassungslehre 183, 229, 327, 388; *Walter*, Bundesverfassungsrecht 710, 736, 788; *Walter-Mayer*, Grundriss 254.

être adressée à la Cour administrative (en cas d'illégalité et d'irrégularité d'une décision). La Cour constitutionnelle occupe une position centralisée qui ressemble à celle de la Cour administrative.

La Cour constitutionnelle de même que la Cour administrative sont des tribunaux au sens technique, la juridiction est exercée par des juges (inamovibles, ne pouvant pas être mutés, non liés à des instructions). Dans la procédure de recours, le réclamant et l'autorité accusée (autorité ayant pris la décision contestée en dernière instance) sont des parties à égalité de droits.

La juridiction exposée ci-dessus ne saurait être invoquée qu'à partir du moment où les autorités administratives ont pris leur dernière décision, donc après l'épuisement des voies de recours administratives. Il s'agit donc d'une juridiction *a posteriori*. Les devoirs des deux Cours de droit public ne consistent pas à prendre des décisions définitives en la matière en tant qu'autorité superposées. Elles exercent plutôt uniquement des fonctions de contrôle par rapport aux autorités administratives. C'est à dire qu'elles jugent en cassation si la décision contestée a violé des préscriptions. D'autre part elles rejettent la demande en cas de non-violation du droit. S'il est donné suite au recours, il n'y a pas de nouvelle décision basée sur les faits de la Cour remplaçant la décision attaquée. La décision de la Cour donnant suite au recours se restraint plutôt à l'annulation de la décision contestée. Par la suite il incombe à l'autorité administrative dont la décision a été annulée, de prendre une nouvelle décision en la matière (décision de remplacement) tout en étant liée à la conception juridique de la Cour Suprême.

Il faut signaler également le fait que la compétence des Cours ainsi esquissée est valable peu importe qu'il s'agisse d'appliquer le droit fiscal autonome interne ou le droit fiscal international. Il est de même en général indifférent de savoir si les parties faisant appel aux Cours sont des nationaux, des étrangers, des personnes physiques ou morales, résidant sur le territoire national ou à l'étranger. Le recours doit être présenté dans un délai (ne pouvant pas être prolongé) de 6 semaines, compté à partir de la notification de la décision prise en dernière instance, directement à la Cour. L'appel n'a pas d'effet suspensif. Sur demande particulière la Cour peut pourtant accorder un sursis, dans le cas où l'exécution imminente causerait un dommage ne pouvant plus être réparé et qu'il n'y ait pas d'intérêts publics qui demandent l'exécution immédiate de la décision.

a) Le recours auprès de la Cour administrative [26]

Parmi les exigences requises pour adresser une demande à la Cour administrative afin que celle-ci puisse ouvrir la procédure concrète, se trouve la désignation de l'acte administratif attaqué et de l'autorité ayant pris la décision, une description des faits, une demande en annulation particulière et un exposé des motifs, de même que l'indication du droit (subjectif) dans lequel le réclamant se sent lesé (points de la demande). Tels sont les éléments constitutifs de la procédure et la Cour ne peut statuer qu'uniquement sur les questions évoquées dans la demande. Elle ne peut donc pas dépasser le cadre de la contestation ainsi délimité par la partie.

L'acte en pourvoi (la réclamation) a besoin d'être signé par un avocat (de la nationalité du pays). [27] Dans les autres stades de la procédure, l'obligation de prendre un avocat est limitée: dans la procédure, les parties peuvent défendre leur affaire elles-mêmes, mais si elles veulent se faire représenter, elles ne peuvent confier leur mandat qu'à un avocat de nationalité autrichienne (mais pas par ex. à un conseiller fiscal).

Conformément à la tâche qui lui revient en tant qu'instance de contrôle, la Cour administrative est obligée de vérifier la décision en se basant sur les faits exposés par l'autorité attaquée. Elle n'est pas liée à cette obligation dans le cas où les faits supposés par l'autorité sont contradictoires et ne correspondent pas à la vie réelle ou si les conclusions de l'autorité ayant abouti à l'énoncé des faits contredisent les lois logiques de la pensée ou que la procédure sur la constatation des faits est défectueuse. Dans ce cas également ce n'est pas la Cour qui procède elle-meme à la constatation des faits, elle supprime seulement la décision. Il incombe par la suite à l'autorité contestée de compléter la procédure sur la constatation des faits et de prendre une nouvelle décision. S'il n'y a pas de telles raisons de supprimer la décision, le fait que la Cour est obligée de s'en tenir aux faits constatés entraîne également pour les parties l'interdiction d'énoncer de nouveaux faits qui n'étaient pas exposés au cours de la procédure administrative précédente.

Dans le cas où le contenu de la décision est en contradiction avec la loi, la décision attaquée est supprimée. Il n'y a pas illégalité si la décision se base sur une disposition conférant à l'autorité un pouvoir discrétionnaire et que l'autorité ait donc pris sa décision conformément à la loi. Si par conséquent plusieurs décisions se révèlent conformes à la loi et que l'autorité à choisi une de ces solutions, pour des raisons justifiées, la Cour n'intervient pas, même si une autre solution avait été plus opportune (sa tâche consiste en un contrôle juridique, non pas en une vérification de l'opportunité).

Si une décision attaquée a été rendue par une autorité non compétente, la décision doit être annulée (même si ce défaut n'est pas invoqué); ceci pour la raison que le défaut d'incompétence constitue également une violation des droits fondamentaux (retrait du juge légal — au sens le plus large du terme). La nullité s'opère donc de toute façon, également dans le cas où le contenu de la décision ne paraît pas contraire à la loi (ce qui ne doit plus être vérifié dans ce cas).

La violation d'autres règles de procédure que celles portant sur la compétence (mis à part le défaut selon lequel la décision est contraire au contenu des actes ou le défaut de compléter les faits énoncés) entraînent la suppression de la décision uniquement dans le cas où l'observation des règles de procédure violées aurait pu aboutir à une autre décision (nécessité du caractère essentiel du défaut de procédure).

La partie gagnant la procédure a droit à indemnisation des frais par la partie perdante (un règlement forfaitaire est prévu).

b) Le recours auprès de la Cour constitutionnelle [28]

La Cour constitutionnelle est appelée à juger des mesures prises par une autorité administrative (donc également par une autorité fiscale) résultant de décisions prises en dernière instance, si le réclamant affirme être lésé par la décision dans un droit garanti par la loi constitutionnelle ou bien s'il affirme que la décision en cause a violé ses droits subjectifs par l'application d'un règlement illégal, d'une loi contraire à la Constitution ou d'un traité contraire à la loi.

Les citations doivent comprendre une constatation des faits et de la violation du droit justifiant la compétence de la Cour (quant à la Cour constitutionnelle, ces points ne se limitent pas, contrairement à la Cour administrative, à l'objet de la procédure; les conditions de la procédure une fois remplies, la Cour constitutionnelle vérifie elle-même si un droit du réclamant garanti par la loi constitutionnelle a été violé). Les réclamations doivent être présentées par un avocat autrichien y étant autorisé; la partie peut se faire représenter dans la procédure par cet avocat (et non pas par d'autres personnes, obligation absolue de prendre un avocat).

La Cour constitutionnelle vérifie donc, si l'acte administratif contesté a violé un droit garanti à l'individu par la Constitution (donc un droit subjectif attribué par la Constitution); en Autriche il s'agit particulièrement des droits fondamentaux et des libertés individuelles [29] occupant un rang constitutionnel.

Le redevable peut être lésé par une décision fiscale surtout dan

26. Der Verwaltungsgerichtshof (La Cour administrative), Graz-Vienne-Cologne 1955.
27. *Schimtschek*, "Zur Frage der Mitwirkung von Wirtschaftstreuhänder im Verwaltungsgerichtshofverfahren, FJ 1977, 33.
28. *Ermacora*, "Der Verfassungsgerichtshof", Graz-Vienne-Cologne, 195
29. *Ermacora*, "Handbuch der Grundfreiheiten und Menschenrechte" Vienne, 1963 (manuel).

son droit à *égalité devant la loi*. La violation du droit à l'égalité (art. 2 de la loi fondamentale de l'Etat du 21 décembre 1867, RGBL (Reichsgesetzblatt) No. 142 et art. 7 de la Loi Constitutionnelle fédérale [30]) ne peut être constatée qu'en se référant aux mesures prises à l'égard d'autres personnes. Une violation du droit à l'égalité devant la loi par le pouvoir exécutif ne peut se produire que si l'autorité, pour des raisons non relatives au fond mais uniquement relatives à la personne, traite la partie de manière inégale, donc si l'autorité agit de manière arbitraire (l'autorité ne tient pas compte, sciemment ou par négligence, de dispositions légales pour défavoriser la partie; ceci peut se faire par l'infraction grave à des prescriptions légales se rapportant à la matière ou à la procédure). Il y a aussi violation du droit à l'égalité devant la loi si l'autorité attribue à une disposition légale un sens qui, si la disposition l'avait effectivement, l'opposerait au principe de l'égalité. En règle générale, ce n'est qu'aux personnes de nationalité autrichienne et aux personnes morales autrichiennes que le principe de l'égalité confère un droit subjectif.

Dans cet ordre d'idées il faut attirer l'attention également au droit fondamental de *l'inviolabilité de la propriété* [31] (art 5 de la loi fondamentale de l'Etat et art 1 du protocole additionnel à la Convention des droits de l'homme, Bundesgesetzblatt No. 210, 1958). Cette garantie est donnée toutefois sous réserve de la loi. Des restrictions des droits patrimoniaux par la législation ordinaire sont donc admissibles dans la mesure où elles ne portent pas atteinte au principe essentiel du droit fondamental (ceci signifie que la propriété privée en tant qu'institution du droit objectif est de toute façon inviolable). Le recouvrement d'impôt constitue en quelque sorte toujours une atteinte à la propriété. Si, du point de vue de la protection de la propriété garantie par le droit constitutionnel, la disposition légale ne peut pas être contestée, une atteinte à la propriété contraire à la Constitution pourrait toutefois se produire, d'une part par une décision qui présente un nombre de défauts d'une importance telle qu'elle est considérée comme en sortant de la légalité ou d'autre part par une interprétation de la loi ayant déjà dépassé le cadre des défauts généralement tolérables, de sorte que l'interprétation de la loi est pour ainsi dire inconcevable. De simples inexactitudes usuelles, des incorrections qui ne manquent pas de base légale n'entraînent pas pour la décision une lésion au droit constitutionnel, mais seulement une "illégalité"; l'observation de raisons de telle sorte entre pourtant dans la compétence de la Cour administrative.

La protection de la propriété garantie par le droit constitutionnel revient également aux étrangers de même qu'aux personnes morales étrangères.

En Autriche le *droit à l'institution d'un juge légal* (art. 83, alinéa 2, Loi constitutionnelle fédérale) garanti par le droit constitutionnel s'applique également au droit à la sauvegarde et au maintien des compétences attribuées par la loi aux autorités administratives. La Cour constitutionnelle peut donc également être appelée en cas d'intervention d'autorités incompétentes, de même que si une autorité compétente refuse de prendre une décision prévue par la loi (refus illégal d'une demande justifiée).

Si la Cour constitutionnelle constate une violation de droits garantis par la Constitution, la décision administrative est annulée. L'affaire administrative est remise à l'état dans lequel elle s'est trouvée avant la prise de la décision. Les autorités administratives sont obligées de constituer sans délai la situation juridique répondant à la conception juridique de la Cour.

L'indemnisation des frais de la procédure peut être demandée à la partie perdante.

. Contrôle de constitutionnalité des lois par la Cour constitutionnelle [32]

Dans certaines conditions la Cour constitutionnelle a également le devoir de vérifier des dispositions légales pour savoir si elles sont en concordance avec des prescriptions légales se trouvant à un échelon supérieur (art. 139, 140, 140a de la Loi constitutionnelle fédérale). Donc dans le cas où des ordonnances sont en contradiction avec des lois ordinaires ou avec des dispositions constitutionnelles ou que des lois ordinaires contredisent la loi constitutionnelle, la Cour constitutionnelle doit annuler les dispositions fautives en vertu de l'ordre hiérarchique du droit autrichien (Stufenbaugedanke, Merkl). En général, la Cour constitutionnelle ne doit pas accomplir cette tâche d'office. Il faut la présentation de demandes respectives (prévues par la loi constitutionnelle).

Etant donné que la loi fiscale s'exécute par la notification de décisions, il n'est pas nécessaire de mentionner l'autorisation des individus, introduite par l'amendement à la Constitution de 1975 BGBl. No. 302/1975, de demander une vérification de la loi, s'ils affirment être lésés directement dans leurs droits par cette loi. Pour cette raison le bref aperçu qui suit traite seulement des possibilités d'application les plus importantes.

C'est ainsi que la Cour constitutionnelle introduit une procédure de contrôle de constitutionnalité des lois lorsqu'elle doit appliquer dans le cadre d'un cas contesté une disposition légale dont elle suppose qu'elle est en contradiction avec les dispositions d'une loi d'un rang supérieur (seule exception au principe mentionné ci-dessus de décider sur demande) ou que la Cour administrative pense qu'une règle qu'elle doit appliquer constitue une atteinte aux droits de la manière qui vient d'être exposée et qu'elle présente à la Cour constitutionnelle une demande de contrôler la loi en cause. En cas de conflit, la partie n'a pas de droit formel de présenter une demande visant à une vérification de la loi. Elle a toutefois la possibilité (au cours de la procédure devant la Cour administrative ou devant la Cour constitutionnelle) de signaler l'inconstitutionnalité des dispositions légales venant à application et d'inciter ainsi la Cour administrative de poser une demande adéquate, ou respectivement d'inciter la Cour constitutionnelle d'introduire d'office une procédure de vérification de la loi.

C'est ainsi que l'introduction d'une procédure de vérification suppose le caractère préjudiciel de la disposition légale pour statuer d'un cas contesté. La vérification de la loi par la Cour constitutionnelle et la suppression qui en résulte éventuellement, portent donc uniquement sur des parties de la loi qui deviendraient applicables dans l'affaire juridique en cause. Seulement en cas de constatation d'incompétence de l'organe ayant édicté la loi et en cas de défauts relatifs à sa promulgation, la loi peut être annulée dans sa totalité; ceci vaut également dans le cas où une ordonnance est privée de toute base légale (donc en cas de très graves vices dans la création du droit).

L'annulation de la loi signifie que la décision attaquée est privée dès maintenant de sa base juridique et que c'est également la décision qui est vouée à la suppression. La nouvelle décision de l'administration doit être rédigée comme si la loi annulée n'avait jamais existé (effet *ex tunc*). La loi annulée continue à être appliquée à tous les autres cas concernés n'ayant pas encore force de chose jugée (de telles annulations ne portent pas automatiquement atteinte à la force de chose jugée; il n'y a pas constatation de nullité, mais annulation), dans la mesure où il s'agit de faits qui se sont passés avant la décision de l'annulation (la Cour peut prévoir une exception à cette règle); l'efficacité de l'annulation prend son effet avec la publication de la décision de la Cour Constitu-

30. tionnelle rendant l'annulation effective ou à l'expiration d'un délai fixé par elle (en cas d'ordonnance le délai ne doit pas dépasser six mois, en cas d'annulation d'une loi pas supérieur à un an); ceci pour éviter un vide juridique, étant donné que le législateur peut maintenir la continuité du droit en éditant de nouvelles prescriptions. Mis à part le cas ayant donné lieu à l'annulation, le fait que la loi annulée cesse d'être en vigueur produit son effet seulement aux faits survenus après l'efficacité de l'annulation.

Parmi les raisons entraînant l'annulation de la loi on trouve essentiellement des défauts dans la création du droit, mais on constate également souvent des violations du principe de l'égalité devant la loi qui sont sanctionnées de manière appropriée. La Cour constitutionnelle refuse régulièrement de vérifier des prescriptions fiscales sous l'angle des *droits fondamentaux de l'inviolabilité de la propriété*. Ce principe constitutionnel délimité par la loi ordinaire, doit être interprété au sens historique; la Cour part du principe qu'une *loi* fiscale ne saurait porter atteinte au droit fondamental, à moins qu'il s'agisse d'un abus de formes de la fiscalité. Mais par une interprétation dynamique du *principe de l'égalité* on tâche de sanctionner certaines insuffisances. Voilà ce qui est le critère le plus souvent appliqué dans la vérification des lois en matière fiscale. Conformément à ce critère la législation est obligée de tenir compte exclusivement des caractéristiques objectifs dans le traitement juridique d'un citoyen. Des traitements différentiels sont évidemment admis, mais ceux-ci doivent être en concordance avec des différences effectives de la matière à régler. Des règlements différentiels, des délimitations, mais aussi des mises au pas doivent en principe correspondre à une expérience raisonnable; dans le cas où elles manquent d'objectivité et ne peuvent pas être justifiées par la matière, le législateur viole le principe de l'égalité. A cet égard, la Cour constitutionnelle ne contrôle pas, si la disposition légale causant des traitements différentiels est justifiable dans le cas individuel, mais uniquement si elle peut être justifiée de manière abstraite. C'est ainsi que toute négligence, tout dèsaccord ou toute imperfection, toute contradiction, comme tout défaut de caractère politico-juridique de la part du législateur n'entraîne pas nécessairement l'inconstitutionnalité d'une loi; il y a uniquement contradiction au principe de l'égalité si les dispositions légales se basent sur des décisions non objectives et excessives du législateur.

En Autriche — à la différence de la République Fédérale d'Allemagne — l'objectivité d'une loi ne doit pas être mesurée au système du droit privé. La jurisprudence n'empêche pas le législateur de constituer dans le domaine du droit fiscal un système particulier et même de régler à l'intérieur de ce système certains faits d'une manière non conforme au système, si des raisons objectives le justifient. Le principe de la *justice fiscale* n'a pas de rang constitutionnel, pourtant les règlements législatifs doivent faire apparaître l'effort de la part du législateur de tenir compte du principe général de l'égalité (par rapport au droit constitutionnel positif, la justice fiscale se comprend comme régularité fiscale).

Etant donné qu'en Autriche, dans les domaines en question, *des traités* sont considérés sous l'angle du droit constitutionnel (d'après leur contenu et de leur pouvoir abrogatoire) comme se trouvant au niveau d'ordonnances et de loi (des Conventions tendant à éviter les doubles impositions [33] sont mises en vigueur à l'intérieur de l'Etat comme des lois et ont le même effet que celles-ci), la Cour constitutionnelle décide de l'illégalité de traités en règle générale selon les mêmes principes qu'elle décide du caractère fautif de la loi autonome (art. 140 a de la Loi constitutionnelle fédérale). Dans le cas où un traité intégré au droit interne en tant que ordonnance ou loi, se trouve en contradiction avec des prescriptions légales supérieures, l'illégalité du traité est constatée (pas d'annulation pour ne pas affecter la validité au niveau du droit international). Les effets d'une telle procédure de vérification et d'annulation sont en principe les mêmes du point de vue interne, que ceux qui se produisent en cas d'annulation de prescriptions autrichiennes autonomes.

La constatation de l'illégalité du traité par la Cour constitutionnelle et l'inapplicabilité qui en résulte pour le droit autrichien dès la publication de celle-ci doivent être suivies d'une modification appropriée (devant être réalisée sur la base internationale) du traité qui permettra son intégration au droit interne en conformité avec la Constitution.

The Taxation of Canadian Residents on Foreign Accrual Property Income

by T.G. Hierlihy*

Tax Reform Legislation was introduced in Canada in 1971 with effect as of January 1, 1972. Included were provisions of an anti-avoidance nature aimed at passive income, or "Foreign Accrual Property Income", sheltered outside Canada. Such provisions were originally scheduled for implementation in 1973. This article is intended to describe in general terms the provisions of the Canadian Income Tax Act designed to subject this sheltered passive income to Canadian income tax.

Terminology

The main focal point of these provisions is the accumulation by Canadian residents of such income in foreign corporations and foreign trusts, including discretionary trusts, located in tax haven jurisdictions. Passive income has been termed Foreign Accrual Property Income (FAPI) and the concept of a "foreign affiliate" and a "controlled foreign affiliate" has been introduced.

A "foreign affiliate" of a Canadian resident is a non-resident corporation in which the Canadian resident's equity percentage is at least 10 percent. This equity percentage would include an indirect interest in a non-resident corporation which might be held through share ownership in another corporation having a direct interest in that non-resident corporation. A "controlled foreign affiliate" is a foreign affiliate of a Canadian resident that is controlled directly or indirectly by:

1) that resident,
2) that resident and not more than four other Canadian residents, or
3) a related group which includes that resident.

Pre-1972 legislation

Prior to 1972 the general thrust of Canadian tax legislation was to tax resident individuals on dividends received from foreign corporations while permitting a credit against this tax in respect of any foreign taxes withheld. Dividends from foreign sources received by resident corporations were also included in income, but where more than 25 percent of the voting shares of the foreign payor corporation were held by the recipient corporation, such dividends were deductible in computing taxable income.

While this article pertains to passive income accumulated in foreign jurisdictions, it is appropriate also to note that the Tax Reform Legislation includes provisions intended to subject the active business income earned in tax haven jurisdictions by foreign affiliates of resident corporations to the equivalent of the Canadian rate of tax when such income is passed on to Canada in the form of a dividend. This result is achieved through limiting the deduction allowed in computing taxable income in respect of such a dividend to an amount calculated by reference to the underlying foreign tax, if any, paid by the foreign affiliate on such income and to any foreign tax withheld from the dividend.

The components of FAPI

Foreign Accrual Property Income, or FAPI, comprises income from property, income from businesses other than active businesses, and taxable capital gains (½ of capital gains) arising on dispositions of property to the extent that such capital gains have accrued after the foreign affiliate's 1975 taxation year. Also included in FAPI is the service income of a controlled foreign affiliate where:

1) payment therefor is deductible in computing income from a business carried on in Canada by the person in respect of whom the affiliate is a controlled foreign affiliate or by a person related to that person, or
2) the services are performed by someone described in 1) above who is an individual resident in Canada.

In this regard services include the insurance of Canadian risks but do not include transportation or services related to the purchase or sale of goods.

Specifically excluded from FAPI are:

1) dividends received by a foreign affiliate from another foreign affiliate of the Canadian resident;
2) where the Canadian resident is a corporation, dividends received by an affiliate from certain corporations resident in or carrying on business in Canada which dividends, if they had been received directly by the Canadian resident, would have been deductible by it in computing its taxable income;
3) taxable capital gains from property used in an active business;
4) income from foreign sources, otherwise includable, that pertains to or is incidental to an active business carried on in a foreign jurisdiction by the affiliate or another non-resident corporation not at arm's length with the Canadian resident; and
5) amounts received from another foreign affiliate of, or non-resident corporation not at arm's length with, the Canadian resident to the extent

* Partner Thorne, Riddell & Co., Montreal, Quebec.

that such amounts represent expenses of carrying on an active business in a foreign jurisdiction by that other affiliate or non-resident corporation.

It will be noted that the exclusions referred to in (4) and (5) above would not extend to income derived from, for example, a related foreign partnership.

Application of FAPI provisions

While originally scheduled for implementation in 1973, the effective date was subsequently twice deferred to the current situation where the FAPI provisions apply in respect of taxation years of foreign affiliates commencing after 1975. These time delays were intended to provide sufficient planning time to taxpayers but were also necessitated by problems encountered in designing a workable set of regulations to govern the application of these provisions.

Inasmuch as the FAPI provisions are of an anti-avoidance nature it has been stated that, if they achieve their objective, they will generate no income tax revenue. In other words, Canadian resident taxpayers would no longer attempt to shelter passive income in foreign corporations or trusts as the FAPI provisions would operate to subject such income to full Canadian rates of tax. There seems little doubt that such provisions will in fact generate tax revenue.

How applied

Under the provisions, a Canadian resident is required to include in computing his income an amount determined to be his share of the FAPI of his controlled foreign affiliates. That portion is determined by reference to his direct shareholdings in controlled foreign affiliates and to the "participating percentage" of each such share. The determination of this participating percentage is straightforward where only one class of shares is involved but is subject to fairly extensive regulations where there is more than one class. The intention is that it should represent a reasonable proportionate entitlement of the share upon a hypothetical distribution. An important qualification to the determination of the participating percentage is a stipulation that where the FAPI of the controlled foreign affiliate is not greater than $5,000, the participating percentage in respect of that affiliate is considered to be nil. Accordingly, it is only the FAPI of controlled foreign affiliates with in excess of $5,000 of such income that is subjected to immediate taxation in Canada.

While the participating percentage relates to each share of a controlled foreign affiliate held by a Canadian resident, it extends through that controlled foreign affiliate and through a chain of non-resident corporations to each controlled foreign affiliate of that resident.

A deduction is allowed in determining income for Canadian tax purposes which is computed by reference to the "foreign accrual tax" paid by the controlled foreign affiliates in respect of their FAPI. The computation of this deduction reflects the fact that it is intended that the combined Canadian and foreign taxes on the FAPI should equal the effective Canadian tax rate exigible if that income were received directly by the Canadian taxpayer. For example, the general rule is that an individual is allowed a deduction equal to twice the underlying foreign taxes and this presupposes a 50 percent marginal tax bracket whether or not that is an accurate reflection of the individual's actual marginal rate. As the federal corporate tax rate is presently 46 percent, corporations are allowed a deduction of 2.1739 times the foreign taxes. This deduction cannot exceed the related income amount.

A further deduction in the form of a reserve may also be allowed where it can be established that, because of exchange restrictions in a foreign jurisdiction, it would impose undue hardship on a taxpayer if he were taxed on all his FAPI.

Adjustments to cost base of shares

As FAPI may be taxed in Canada prior to its having been received by the Canadian resident taxpayer, provisions are included whereby the "adjusted cost base" of the shares in respect of which FAPI has been imputed are correspondingly increased. A subsequent dividend from that foreign affiliate would be excluded, or deducted, from income to the extent that it is paid from surplus which has already been effectively taxed in Canada and, of course, there is a provision for a corresponding reduction in the adjusted cost base of the shares. Should the shares have been sold in the interim and prior to the receipt of such a dividend, the fact that the adjusted cost base of those shares had been increased would service to eliminate the double taxation effect reflected in the capital gain which would otherwise be computed with respect to such a disposition.

Segregation of surplus

For the FAPI provisions to be operative, it is necessary to segregate the surplus of foreign affiliates into separate pools which are described in the legislation as "pre-acquisition surplus", "exempt surplus", and "taxable surplus". This segregation is pertinent only for foreign affiliates of corporations resident in Canada. Dividends paid by foreign affiliates of Canadian resident individuals are deemed to have been paid from taxable surplus. This distinction between corporate and individual shareholders is required as corporate shareholders are entitled to deductions in computing taxable income in respect of dividends received from exempt surplus and pre-acquisition surplus.

Pre-acquisition surplus is a notional amount from which any dividend or portion thereof is deemed to have been paid where it is not otherwise stipulated under the legislation to have been paid from exempt surplus or taxable surplus. In effect it represents income and net capital gains accumulated by a non-resident corporation prior to its becoming a foreign affiliate of a Canadian resident.

FAPI earned in the 1976 and subsequent years of a foreign affiliate is included in the taxable surplus of that affiliate which is in turn reduced by any income taxes paid by the affiliate in respect of such income. As was

previously noted, the FAPI of a controlled foreign affiliate for its 1972 to 1975 taxation years inclusive was not required to be immediately included in the income of a Canadian resident. Such income is included in exempt surplus and any dividends therefrom are deductible in computing the taxable income of a corporation resident in Canada.

As the legislation establishes separate surplus pools, this further necessitates the ordering of distributions from the surplus of a foreign affiliate. Essentially, dividends are deemed first to have been paid from exempt surplus, then from taxable surplus and then, notionally, from pre-acquisition surplus.

A summary

At this stage it would be appropriate to summarize, for purposes of emphasis, certain of the more salient points:

1) It is the FAPI of a foreign affiliate which also qualifies as a controlled foreign affiliate that may be subjected to immediate tax in Canada.
2) If the FAPI of a controlled foreign affiliate does not exceed $5,000 in a year, it will not be subjected to tax in Canada in the corresponding taxation year of the Canadian resident.
3) Adjustments to the cost base of the shares held by Canadian residents of foreign affiliates which are or have been controlled foreign affiliates are provided for as a means of avoiding double taxation.
4) The segregation of the surplus of foreign affiliates is of particular significance only for corporations resident in Canada and not for individuals. The Tax Reform Legislation includes provisions similar to the pre-1972 legislation allowing corporations a deduction in computing taxable income in respect of dividends received from affiliates in foreign jurisdictions. These provisions are necessarily more complex than previously and vary in accordance with the nature of the income and the jurisdiction in which earned.

Treatment of dividends

When individuals or corporations resident in Canada receive dividends from their foreign affiliates they are required to be included in income. A deduction is allowed in computing income for tax purposes, or net income, to the extent that a dividend represents previously taxed FAPI. Where the recipient is an individual, the dividend is deemed paid from the taxable surplus of his foreign affiliate and any foreign tax withheld is eligible to be claimed as a credit against tax otherwise payable to the extent that the foreign tax does not exceed 15 percent of the dividend. Any excess over 15 percent may be claimed as a deduction in computing income.

Where the recipient is a corporation, it is first necessary to ascertain from which surplus pool of the foreign affiliate the dividend was paid. If from pre-acquisition or exempt surplus, the dividend may be deducted from income in computing taxable income. If from taxable surplus, a deduction is allowed in computing taxable income which is calculated by reference to the underlying foreign taxes paid by the affiliate and to any foreign tax withheld from the dividend. To the extent that the dividend is from taxable surplus and exceeds these deductions, then the deduction in computing income is available to the extent that the dividend represents previously taxed FAPI. A credit against tax otherwise payable is not available to corporations in respect of foreign taxes attributable to dividends received from their foreign affiliates.

Trusts

It was mentioned at the outset that the FAPI provisions equally apply with respect to income realized by certain foreign trusts. Specifically, such provisions may extend to trusts which are not resident in Canada where a person beneficially interested in the trust is:

1) a person resident in Canada;
2) a corporation or trust with which a person resident in Canada is not dealing at arm's length; or
3) a controlled foreign affiliate of a person resident in Canada.

Essentially, the FAPI provisions will extend to the income of such a trust where it, or a corporation that would be its controlled foreign affiliate if the trust were resident in Canada, has acquired property from a person who is a beneficiary thereof, from specified relatives of such person, or from another trust or corporation not dealing at arm's length with that person or the specified relatives of that person. Where the person from whom the property was acquired is the beneficiary or one of his specified relatives, that person must have been resident in Canada in the 18 month period before the end of the year to which the FAPI provisions are to be applied. If that person has died, the 18 month period is that prior to the date of death. In addition, where that person is an individual he must have been, before the end of that year, resident in Canada for more than 5 years.

It is stipulated that these provisions will not apply to an inter vivos trust created before 1960 by a person who at that time was not resident in Canada or to a testamentary trust arising on the death of an individual where death occurred before 1976.

Non-discretionary trusts

Where the beneficial interest in a trust subject to the FAPI provisions is not subject to any discretionary power, the trust is, with respect to any beneficiary whose interest is valued at not less than 10 percent of the value of all beneficial interests, considered a non-resident corporation controlled by that beneficiary. Accordingly, such a trust would be considered a controlled foreign affiliate of that beneficiary. It is further provided that the trust is considered to have a single class of capital stock divided into 100 issued shares and each beneficiary of the trust is deemed to own shares equal in proportion to the fair value of his beneficial interest in the trust.

In computing the FAPI of such a trust, a deduction is permitted for an amount that would otherwise be in-

cluded but that has been established as having been payable in the year to a beneficiary.

Discretionary trusts

Where a non-resident discretionary trust is involved an equitable basis for the taxation of Canadian beneficiaries is obviously more difficult to establish. The approach adopted under the FAPI provisions has been referred to facetiously, but not necessarily inaccurately, by at least one tax practitioner as the "steam-shovel" approach. Where a discretionary trust is otherwise established, within the criteria noted above, as being subject to the FAPI provisions, it is deemed to be a person resident in Canada whose taxable income for any year includes:

1) the amount that would be its taxable income earned in Canada if it were not a resident of this country;
2) the amount that would be its FAPI for the year if it were not a discretionary trust; and
3) the FAPI of any of its controlled foreign affiliates.

A deduction in computing taxable income is allowed to the extent of amounts otherwise includable in 2) or 3) above that are established as having been payable in the year to a beneficiary.

As not all beneficiaries of such a trust may be resident in Canada, it is provided that only certain persons in addition to the trust will be subject to those provisions of the Act which stipulate the requirements for the filing of tax returns and the payment of income taxes. Generally, it is those persons from whom the trust might have acquired property under such circumstances that the trust would become subject to the FAPI rules. It is further provided, however, that any such person is responsible for the payment of taxes, related penalties and costs only to the extent of amounts paid to him by the trust, amounts which he is entitled to enforce payment of from the trust, or amounts received on the disposition of an interest in the trust.

It is noteworthy that a beneficiary of a non-resident discretionary trust could conceivable find himself in a situation where he pays Canadian tax equal to the full amount he has received from the trust even though he may be the only beneficiary resident in Canada and where one might reasonably expect that the income subject to tax in Canada should be substantially less than the full income of the trust. Again, one is reminded only too clearly of the anti-avoidance nature of the FAPI provisions.

The foregoing summarizes the general trust of the Canadian income tax legislation pertaining to Foreign Accrual Property Income. Not commented on specifically but of obvious importance to Canadian taxpayers are various alleviating provisions related to such as the winding up of foreign affiliates of corporations, inter-affiliate transfers of shares of other foreign affiliates, the election available to a corporation on the disposition of shares of a foreign affiliate to treat a portion of the proceeds as a dividend, and the application of losses of foreign affiliates from active businesses against their otherwise taxable FAPI. Also not specifically commented on are the anti-avoidance provisions included, not surprisingly, with the FAPI provisions which are themselves stated to be of an anti-avoidance nature. Included is a provision that would ignore the issue of additional shares where one of the main reasons therefor can reasonably be considered the reduction or postponement of taxes.

As the FAPI provisions are of recent application, it will be a considerable period before contested assessments are taken before the Courts. One area that seems destined for litigation is that involving the fine-line distinction between an active and inactive business.

Vol. 3 of 'Guides to European Taxation'

*** the taxation of private investment income**

loose-leaf
each chapter follows a common outline
covers 17 European countries + U.S.A.
updated by air

PRICE: Dfl. 375 / US$ 157
including up-to-date basic volume plus airmail supplements through the end of 1978

For residents of the Netherlands: price is exclusive of BTW (value added tax)

Further details freely available upon request

Surveys the provisions under the laws and double taxation treaties of 17 major West European countries AND the U.S.A. (fully illustrated with charts and tables).

Examines the effect on dividends and interest, and also on capital gains realized on the sale of shares and bonds.

Analyses the EFFECTIVE total burden on dividends and interest and includes comparative charts strikingly illustrating —

- the net dividends received on a corporate pre-tax income of 100 units
- the income a corporation must earn for an individual resident in each of the countries to receive a dividend of 100 units (before personal tax)

Convention between the United States of America and the Netherlands Antilles with respect to taxes on income

When on April 29, 1948 the United States and the Netherlands concluded a treaty for the avoidance of double taxation they included an article (Art. XXVII) authorizing the two countries to enter into negotiations for the extension of the treaty to their overseas parts or territories. It took, however, a long time before this provision was implemented since in 1952 only the U.S. and Dutch authorities started exchanging notes with a view to the extension of the treaty to the Netherlands Antilles. These notes and the resulting Protocol of June 15, 1955 deleted and modified a number of the treaty provisions in their application to the Netherlands Antilles. Further deviations between the treaty provisions as they are applicable to the Netherlands proper (i.e. in Europe) and the Netherlands Antilles were introduced by the Protocol of October 23, 1963 (which contains special provisions applicable to Netherlands Antilles holding companies) and the Supplementary Treaty of December 30, 1963 which significantly changed the treaty provisions but only with respect to the Netherlands proper. The result of these numerous amendments and deletions is that the treaty provisions which apply between the U.S. and the Netherlands Antilles are scattered over a number of protocols and treaties and since no official consolidation exists the consideration of the treaty provisions between these two countries requires careful and time consuming research. In order to facilitate the consideration of these provisions the International Bureau of Fiscal Documentation has prepared a consolidation of the text which is reproduced below.

An unofficial consolidated text of the Convention between the United States of America and the Kingdom of the Netherlands for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income signed at Washington on April 29, 1948, as supplemented and modified by Protocol signed at Washington on June 15, 1955, and extended to the Netherlands Antilles by Exchanges of Notes dated at Washington on June 24 and August 7, 1952, September 15 and November 4 and 10, 1955 and again modified and supplemented by the Protocol signed at The Hague on October 23, 1963.

Article I

(1) The taxes which are the subject of the present Convention are:

(a) In the case of the United States: the Federal income taxes.

(b) In the case of the Netherlands Antilles: income taxes and profits taxes.

(2) The present Convention shall apply also to any other taxes of a substantially similar character imposed by either Contracting State subsequently to the date of signature of the present Convention.

(3) In the event of appreciable changes in the fiscal laws of either of the Contracting States the competent authorities of the Contracting States will consult together.

Article II

(1) In the present Convention, unless the context otherwise requires:

(a) The term "United States" means the United States of America, and when used in a geographical sense means the States, the Territories of Alaska and of Hawaii, and the District of Columbia.

(b) The term "Netherlands Antilles" means the group of islands off the coast of Venezuela, including Aruba, Bonaire, Curaçao, Saba, St. Eustatius and St. Martin (Netherlands part).

(c) The term "United States corporation" means a corporation, association or other organization or juridical entity created in the United States or under the laws of the United States or of any State or territory of the United States.

(d) The term "Netherlands Antilles corporation" means a corporation, association or other organization or juridical entity created in the Netherlands Antilles or under the laws of the Netherlands Antilles.

(e) The terms "corporation of one Contracting State" and "corporation of the other Contracting State" mean a United States corporation or a Netherlands Antilles corporation, as the context requires.

(f) The term "United States enterprise" means an industrial or commercial enterprise or undertaking carried on in the United States by a citizen or resident of the United States or by a United States corporation.

(g) The term "Netherlands Antilles enterprise" means an industrial or commercial enterprise or undertaking carried on in the Netherlands Antilles by a citizen or resident of the Netherlands Antilles or by a Netherlands Antilles corporation.

(h) The terms "enterprise of one of the Contracting States" and "enterprise of the other Contracting State" mean a United States enterprise or a Netherlands Antilles enterprise, as the context requires.

(i) The term "permanent establishment", when used with respect to an enterprise of one of the Contracting States, means a branch, factory, or other fixed place of business, but does not include an agency unless the agent has, and habitually exercises, a general authority to negotiate and conclude contracts on behalf of such enterprise or has a stock of merchandise from which he regularly fills orders on behalf of such enterprise. An enterprise of one of the Contracting States shall not be deemed to have a permanent establishment in the other Contracting State merely because it carries on business dealings in such other Contracting State through a *bona fide* commission agent, broker or custodian acting in the ordinary course of his business as such. The fact that an enterprise of one of the Contracting States maintains in the other Contracting State a fixed place of business exclusively

for the purchase of goods or merchandise shall not of itself constitute such fixed place of business a permanent establishment of such enterprise. When a corporation of one Contracting State has a subsidiary corporation which is a corporation of the other Contracting State or which is engaged in trade or business in such other Contracting State, such subsidiary corporation shall not, merely because of that fact, be deemed to be a permanent establishment of its parent corporation.

(j) The term "competent authority" or "competent authorities" means, in the case of the United States, the Commissioner of Internal Revenue or his duly authorized representative; in the case of the Netherlands Antilles the Administrateur van Financiën or his duly authorized representative; and, in the case of any part or territory to which provisions of the present Convention are extended under Article XXVII, the competent authority for the administration in such part or territory of the taxes to which such provisions apply.

(2) In the application of the provisions of the present Convention by either of the Contracting States, any term which is not defined in the present Convention shall, unless the context otherwise requires, have the meaning which that term has under the laws of such Contracting State relating to the taxes which are the subject of the present Convention.

Article III

(1) An enterprise of one of the Contracting States shall not be subject to taxation by the other Contracting State in respect of its industrial or commercial profits unless it is engaged in trade or business in the other Contracting State through a permanent establishment situated therein. If it is so engaged the other Contracting State may impose the tax only upon the income of such enterprise from sources within such other State.

(2) Where an enterprise of one of the Contracting States is engaged in trade or business in the other Contracting State through a permanent establishment situated therein, there shall be attributed to such permanent establishment the industrial or commercial profits which it might be expected to derive if it were an independent enterprise engaged in the same or similar activities under the same or similar conditions and dealing at arm's length with the enterprise of which it is a permanent establishment, and the profits so attributed shall, subject to the law of such other Contracting State, be deemed to be income from sources within such other Contracting State.

(3) In determining the industrial or commercial profits from sources within one of the Contracting States of an enterprise of the other Contracting State, no profits shall be deemed to arise from the mere purchasing of goods or merchandise within the former Contracting State by such enterprise.

(4) The competent authorities of the Contracting States may lay down rules by agreement for the apportionment of industrial or commercial profits.

Article IV

Where an enterprise of one of the Contracting States, by reason of its participation in the management, control or capital of an enterprise of the other Contracting State, makes with or imposes on the latter enterprise, in their commercial or financial relations, conditions different from those which would be made with an independent enterprise, any profits which would, but for those conditions, have accrued to one of the enterprises, may be included in the taxable profits of that enterprise.

Article V

Income of whatever nature derived from real property and interest from mortgages secured by real property shall be taxable only in the Contracting State in which the real property is situated.

Article VI

Income which an enterprise of one of the Contracting States derives from the operation of ships or aircraft registered in that State shall be taxable only in the State in which such ships or aircraft are registered. Income derived by such an enterprise from the operation of ships or aircraft not so registered shall be subject to the provisions of Article III.

Article VII *

(1) The rate of United States tax on dividends derived from a United States corporation by a resident or corporation of the Netherlands Antilles not engaged in trade or business in the United States through a permanent establishment shall not exceed 15 percent: Provided that such rates of tax shall not exceed 5 percent if such Netherlands Antilles corporation controls, directly or indirectly, at least 95 percent of the entire voting power in the corporation paying the dividend, and not more than 25 percent of the gross income of such paying corporation is derived from interest and dividends, other than interest and dividends from its own subsidiary corporation. Such reduction of the rate to 5 percent shall not apply if the relationship of the two corporations has been arranged or is maintained primarily with the intention of securing such reduced rate.

(2) Dividends derived from sources within the Netherlands Antilles by a resident or corporation of the United States not engaged in trade or business in the Netherlands Antilles through a permanent establishment shall be exempt from Netherlands Antilles tax.

(3) Either of the Contracting States may terminate this Article, by giving written notice of termination to the other Contracting State through diplomatic channels, on or before the thirtieth day of June in any year after the first year for which the present Convention becomes effective. In such event this Article shall cease to be effective on and after the first day of January in the year next following that in which such notice is given.

Article VIII *

(1) Interest (on bonds, securities, notes, debentures, or on any other form of indebtedness), other than interest referred to in Article V of the present Convention, derived from sources within the United States by a resident or corporation of the Netherlands Antilles not engaged in trade or business in the United States through a permanent establishment, shall be exempt from United States tax; but such exemption shall not apply to such interest paid by a United States corporation to a Netherlands Antilles corporation controlling, directly or indirectly, more than 50 percent of the entire voting power in the paying corporation.

(2) Interest (on bonds, securities, notes, debentures, or on any other form of indebtedness), other than interest referred to in Article V of the present Convention, derived from sources within the Netherlands Antilles by a resident or corporation of the United States not engaged in trade or business in the Netherlands Antilles through a permanent establishment, shall be exempt from Netherlands Antilles tax; but such exemption shall not apply to such interest paid by a Netherlands Antilles corporation

* See restrictions to Articles VII, VIII, IX in Protocol of October 23, 1963.

to a United States corporation controlling, directly or indirectly, more than 50 percent of the entire voting power in the paying corporation.

Article IX *

Royalties for the right to use copyrights, patents, designs, secret processes and formulae, trade marks, and other analogous property, and royalties, including rentals, in respect of motion picture films or for the use of industrial, commercial or scientific equipment, derived from sources within one of the Contracting States by a resident or corporation of the other Contracting State not engaged in trade or business in the former State through a permanent establishment, shall be exempt from tax imposed by the former State.

Article X

A resident or corporation of one of the Contracting States, deriving from sources within the other Contracting State royalties in respect of the operation of mines, quarries, or natural resources, or rentals from real property, may elect for any taxable year to be subject to the tax of such other Contracting State on such income on a net income basis.

Article XI.

[deleted]

Article XII

Dividends and interest paid by a Netherlands Antilles corporation shall be exempt from United States tax except where the recipient is a citizen, resident, or corporation of the United States.

Article XIII

[deleted]

Article XIV

(1) The United States income tax liability for any taxable year beginning prior to January 1, 1936, of any individual (other than a citizen of the United States) resident in the Netherlands Antilles, or of any Netherlands Antilles corporation, remaining unpaid on the effective date of the present Convention, may be adjusted on a basis satisfactory to the United States Commissioner of Internal Revenue: Provided that the amount to be paid in settlement of such liability shall not exceed the amount of the liability which would have been determined if

(a) the United States Revenue Act of 1936 (except in the case of the Netherlands Antilles corporation in which more than 50 percent of the entire voting power was controlled, directly or indirectly, throughout the latter half of the taxable year, by citizens or residents of the United States), and

(b) Article XII of the present Convention, had been in effect for such year. If the taxpayer was not, within the meaning of such Revenue Act, engaged in trade or business in the United States and had no office or place of business therein during the taxable year, the amount of interest and penalties shall not exceed 50 percent of the amount of the tax with respect to which such interest and penalties have been computed.

(2) The United States income tax unpaid on the effective date of the present Convention for any taxable year beginning after December 31, 1935, and prior to the effective date of the present Convention in the case of an individual (other than a citizen of the United States) resident of the Netherlands Antilles, or in the case of any Netherlands Antilles corporation, shall be determined as if the provisions of Article XII of the present Convention had been in effect for such taxable year.

(3) The provisions of paragraph (1) of this Article shall not apply

(a) unless the taxpayer files with the Commissioner of Internal Revenue within a period of two years following the effective date of the present Convention a request that such tax liability be so adjusted and furnishes such information as the Commissioner may require; or

(b) in any case in which the Commissioner is satisfied that any deficiency in tax is due to fraud with intent to evade the tax.

Article XV

(1) Wages, salaries and similar compensation, and pensions and life annuities, paid either directly by, or from funds created by, one of the Contracting States or the political subdivisions or territories thereof to individuals in the other Contracting State shall be exempt from taxation in the latter State.

(2) Private pensions and life annuities derived from within one of the Contracting States and paid to individuals in the other Contracting State shall be exempt from taxation in the former State.

(3) The term "pensions" as used in this Article means periodic payments made in consideration for services rendered or by way of compensation for injuries received.

(4) The term "life annuities" as used in this Article means a stated sum payable periodically at stated times during life, or during a specified number of years, under an obligation to make the payments in return for adequate and full consideration in money or money's worth.

Article XVI

(1) A resident of the Netherlands Antilles shall be exempt from United States tax upon compensation for labor or personal services performed within the United States if he is temporarily present within the United States for a period or periods not exceeding a total of one hundred eighty-three days during the taxable year and his compensation is received for labor or personal services performed as a worker or employee of, or under contract with, a resident of the Netherlands Antilles, or a Netherlands Antilles corporation, carrying the actual burden of the remuneration.

(2) The provisions of paragraph (1) of this Article shall apply, *mutatis mutandis*, to a resident of the United States deriving compensation for labor or personal services performed within the Netherlands Antilles.

Article XVII

(1) Professors or teachers, residents of one of the Contracting States, who, in accordance with the agreements between the Contracting States or between teaching establishments in the Contracting States for the exchange of professors and teachers, visit the other Contracting State to teach, for a maximum period of two years, in a university, college or other teaching establishment in such other Contracting State, shall not be taxed by such other State with respect to the remuneration which they receive for such teaching.

---

* See restrictions to Articles VII, VIII, IX in Protocol of October 23, 1963.

Article XVIII

Students or business apprentices of one Contracting State residing in the other Contracting State exclusively for the purposes of study or for acquiring business experience shall not be taxable by the latter State in respect of remittances received by them from abroad for the purpose of their maintenance or studies.

Article XIX

(1) Notwithstanding any provisions of the present Convention (other than paragraph (1) of Article XV when applicable in the case of an individual who is deemed by each Contracting State to be a citizen thereof), each of the two Contracting States, in determining the taxes, including all surtaxes, of its citizens or residents or corporations, may include in the basis upon which such taxes are imposed all items of income taxable under its own revenue laws as though this Convention had not come into effect.

(2) As far as may be in accordance with the provisions of the United States Internal Revenue Code, the United States agrees to allow as a deduction from the income taxes imposed by the United States the appropriate amount of taxes paid to the Netherlands, whether paid directly by the taxpayer or by withholding at the tax source.

(3) The Netherlands Antilles shall allow a deduction (or the equivalent thereof) from its tax of the Federal income tax paid to the United States by citizens of the United States resident in the Netherlands Antilles with respect to income of such citizens from sources within the United States, but in an amount not in excess of that proportion of the entire Netherlands Antilles tax which such income tax bears to the entire income subject to such Netherlands Antilles tax.

Article XX

[deleted]

Article XXI

The competent authorities of the Contracting States shall exchange such information (being information which such authorities have in proper order at their disposal) as is necessary for carrying out the provisions of the present Convention or for the prevention of fraud or the administration of statutory provisions against legal avoidance in relation to the taxes which are the subject of the present Convention. Any information so exchanged shall be treated as secret and shall not be disclosed to any person other than those concerned with the assessment and collection of the taxes which are the subject of the present Convention. No information as aforesaid shall be exchanged which would disclose any trade, business, industrial or professional secret or trade process.

Article XXII

(1) The Contracting States undertake to lend assistance and support to each other in the collection of the taxes which are the subject of the present Convention, together with interest, costs, and additions to the taxes and fines not being of a penal character.

(2) In the case of applications for enforcement of taxes, revenue claims of each of the Contracting States which have been finally determined may be accepted for enforcement by the other Contracting State and collected in that State in accordance with the laws applicable to the enforcement and collection of its own taxes. The State to which application is made shall not be required to enforce executory measures for which there is no provision in the law of the State making the application.

(3) Any application shall be accompanied by documents establishing that under the laws of the State making the application the taxes have been finally determined.

(4) The assistance provided for in this Article shall not be accorded with respect to the citizens, corporations, or other entities of the State to which application is made, except as is necessary to insure that the exemption or reduced rate of tax granted under the convention to such citizens, corporations or other entities shall not be enjoyed by persons not entitled to such benefits.

Article XXIII

(1) In no case shall the provisions of Articles XXI and XXII be construed so as to impose upon either of the Contracting States the obligation

(a) to carry out administrative measures at variance with the regulations and practice of either Contracting State, or

(b) to supply particulars which are not procurable under its own legislation or that of the State making application.

(2) The State to which application is made for information or assistance shall comply as soon as possible with the request addressed to it. Nevertheless, such State may refuse to comply with the request for reasons of public policy or if compliance would involve violation of a trade, business, industrial or professional secret or trade process. In such case it shall inform, as soon as possible, the State making the application.

Article XXIV

Where the action of the revenue authorities of the Contracting States has resulted or will result in double taxation contrary to the provisions of the present Convention, the taxpayer shall be entitled to lodge a claim with the State of which he is a citizen or subject or, if he is not a citizen or subject of either of the Contracting States, with the State of which he is a resident, or, if the taxpayer is a corporation, with the State in which it is created or organized. Should the claim be upheld, the competent authority of such State shall undertake to come to an agreement with the competent authority of the other State with a view to equitable avoidance of the double taxation in question.

Article XXV

(1) The provisions of the present Convention shall not be construed to restrict in any manner any exemption, deduction, credit or other allowance accorded by the laws of one of the Contracting States in the determination of the tax imposed by such State.

(2) Should any difficulty or doubt arise as to the interpretation or application of the present Convention, the competent authorities of the Contracting States shall undertake to settle the question by mutual agreement.

(3) The citizens or subjects of one of the Contracting States shall not, while resident in the other Contracting State, be subjected therein to other or more burdensome taxes than are the citizens or subjects of such other Contracting State residing in its territory. The term "citizens" or "subjects" as used in this Article includes all legal persons, partnerships and associations deriving their status from, or created or organized under the laws in force in, the respective Contracting States. In this Article the word "taxes" means taxes of every kind or description whether national, federal, state, provincial or municipal.

Article XXVI

(1) The authorities of each of the Contracting States, in accordance with the practices of that State, may prescribe regulations necessary to carry out the provisions of the present Convention.

(2) With respect to the provisions of the present Convention relating to exchange of information and mutual assistance in the collection of taxes, the competent authorities may, by common agreement, prescribe rules concerning matters of procedure, forms of application and replies thereto, conversion of currency, disposition of amounts collected, minimum amounts subject to collection, and related matters.

Article XXVII

(1) Either of the Contracting States may, at the time of exchange of instruments of ratification or thereafter while the present Convention continues in force, by a written notification of extension given to the other Contracting State through diplomatic channels, declare the desire of the government of any overseas part of the Kingdom (in the case of the Netherlands) or overseas territory (in the case of the United States), which imposes taxes substantially similar in character to those which are the subject of the present Convention, that the operation of the present Convention, either in whole or as to such provisions thereof as may be deemed to have special application, shall extend to such part or territory.

(2) In the event that a notification is given by one of the Contracting States in accordance with paragraph (1) of this Article, the present Convention, or such provisions thereof as may be specified in the notification, shall apply to any part or territory named in such notification on and after the first day of January immediately preceding the date of a written communication through diplomatic channels addressed to such Contracting State by the other Contracting State, after such action by the latter State as may be necessary in accordance with its own procedures stating that such notification is accepted in respect of such part or territory. In the absence of such acceptance, none of the provisions of the present Convention shall apply to such part or territory.

(3) At any time after the expiration of one year from the effective date of an extension made by virtue of paragraphs (1) and (2) of this Article, either of the Contracting States may, by a written notice of termination given to the other Contracting State through diplomatic channels, terminate the application of the present Convention to any part or territory to which the Convention, or any of its provisions, has been extended. In that case, the present Convention, or the provisions thereof specified in the notice of termination, shall cease to be applicable to the part or territory named in such notice of termination on and after the first day of January following the expiration of a period of six months after the date of such notice; provided, however, that this shall not affect the continued application of the Convention, or any of the provisions thereof, to the United States, to the Netherlands, or to any part or territory (not named in the notice of termination) to which the Convention, or such provision thereof, applies.

(4) For the application of the present Convention in relation to any part or territory to which it is extended by notification given by the United States or the Netherlands, references to the "United States" or to "the Netherlands" or to one or the other Contracting State, as the case may be, shall be construed to refer to such part or territory.

Article XXVIII

(1) The present Convention shall be ratified and the instruments of ratification shall be exchanged at Washington as soon as possible.

(2) The present Convention shall become effective on the first day of January in the year last preceding the year in which the exchange of instruments of ratification takes place. It shall continue effective for a period of five years beginning with that date and indefinitely after that period, but may be terminated by either of the Contracting States at the end of the five-year period or at any time thereafter, provided that at least six months' prior notice of termination has been given, the termination to become effective on the first day of January following the expiration of the six-month period.

PROTOCOL

The Government of the United States of America and the Government of the Kingdom of the Netherlands,

Desiring to conclude a further Protocol modifying and supplementing the Extension to the Netherlands Antilles of the Convention for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income and certain other taxes signed at Washington on April 29, 1948, as supplemented by the Protocol signed at Washington on June 15, 1955, and as extended to the Netherlands Antilles by Exchanges of Notes dated at Washington on June 24 and August 7, 1952, September 15 and November 4 and 10, 1955,

Have accordingly appointed their respective representatives for this purpose, who have agreed as follows:

Article I

(1) Articles VII, VIII, and IX of the Convention shall not apply to income derived from sources within the United States by any investment or holding company, corporation, limited partnership or other entity entitled to any of the special tax benefits provided under Article 13, Article 14, or Article 14A of the Netherlands Antilles' National Ordinance on Profit Tax of 1940, as in effect on September 1, 1963, or to substantially similar tax benefits granted under any law of the Netherlands Antilles enacted after such date.

(2) Notwithstanding the provisions of paragraph (1) of the present Article, Articles VII, VIII and IX of the Convention shall

continue to apply to dividends, interest, and royalties derived by any entity, to which the provisions of paragraph (1) of this Article would otherwise apply, if either

(a) the payer of such income is a United States corporation (other than a United States corporation, 60 percent or more of the gross income of which is derived from interest except to the extent derived by a corporation the principal business of which is the making of loans, dividends, royalties, rents from real property, or gain from the sale or other disposition of stock, securities, or real property), 25 percent or more of the stock of which is owned by such entity; or,

(b) all of the stock of such entity is owned
   (i) solely by one or more individual residents of the Netherlands Antilles in their individual capacities,
   (ii) solely by one or more individual residents of the Netherlands in their individual capacities, or
   (iii) solely by one or more corporations of the Netherlands.

Article II

This Article has been incorporated in the main Treaty as Article X.

Article III

(1) The present Protocol shall be ratified and the instruments of ratification shall be exchanged at Washington as soon as possible.

(2) The present Protocol shall come into force on the date of exchange of instruments of ratification.

(3) Article I of the present Protocol shall be applicable with respect to payments made on or after the first day of January of the year immediately following the year in which the exchange of instruments of ratification takes place. Article II of the present Protocol shall be applicable with respect to elections made for taxable years beginning on or after the first day of January of the year immediately following the year in which the exchange of instruments of ratification takes place.

(4) Notwithstanding the provisions of paragraph (3) of this Article, the following provisions shall apply with respect to dividends and interest paid to a corporation or other entity which is organized in the Netherlands Antilles under a notarial deed of incorporation dated on or before May 14, 1963, if Articles VII and VIII of the Convention would not be applicable to such dividends and interest by reason of Article I of the Present Protocol:

(a) In the case of a dividend
   (i) paid during the period of two years beginning on the first day of January, 1964, the provisions of Article VII of the Convention shall continue to apply as though the present Protocol had not yet come into force;
   (ii) paid during the year beginning on the first day of January, 1966, United States tax with respect to such dividend shall be imposed at a rate not exceeding 20 percent; and

(b) In the case of interest paid during the period of three years beginning on the first day of January, 1964, the provisions of Articles VIII shall continue to apply as though the present Protocol had not yet come into force.

IN WITNESS WHEREOF the undersigned representatives, duly authorised for that purpose, have signed the present Protocol.

DONE in duplicate, in the English and Dutch languages, the two texts having equal authenticity, at The Hague, this 23rd day of October, 1963.

UNITED STATES-NETHERLANDS INCOME TAX CONVENTION

Rev. Rul. 65–16

Article I(1) of the protocol of October 23, 1963, to the tax convention between the United States and the Kingdom of the Netherlands, T.D. 5778, C.B. 1950–1, 92, as extended to the Netherlands Antilles, C.B. 1956–2, 1116, provides that Articles VII, VIII, and IX of the convention shall not apply to income derived from sources within the United States by any investment or holding company, corporation, limited partnership, or other entity entitled to any of the special tax benefits provided under Article 13, Article 14, or Article 14A of the Netherlands Antilles National Ordinance on Profit Tax of 1940, as in effect on September 1, 1963, or to substantially similar tax benefits granted under any law of the Netherlands Antilles enacted after such date.

Held, a Netherlands Antilles corporation electing to be taxed, with respect to all of its income from United States sources, under Article 8A of the National Ordinance on Profit Tax of 1940, as added by the National Ordinance of December 30, 1963, will not be entitled to tax benefits which are substantially similar (within the meaning of Article I(1) of the protocol) to those provided under Articles 13, 14, or 14A, and therefore may be entitled to benefits accorded by Articles VII, VIII, and IX of the tax convention between the United States and the Kingdom of the Netherlands, as extended to the Netherlands Antilles.

Tax aspects of east-west business relations — A STATUS REPORT

by W.G. Kuiper *

I. INTRODUCTION

During the last few years, East-West trade relations have intensified and public attention has focused upon the rapidly increasing number of Western commercial contacts throughout Eastern Europe. These contacts have been facilitated by the introduction of a joint-venture legislation in several Eastern European countries and by the conclusion of many tax treaties between the countries of Eastern and Western Europe.

II. JOINT VENTURES

As regards Eastern European countries, the joint venture is a business association of comparatively long duration set up by two or more parties in order to run an enterprise subject to sharing of control, risk and profit. This concept of joint venture is not new: for many years joint ventures with Eastern European countries have been operating outside the territory of these countries. A number of factors, inter alia, the need for technology and hard currency, compelled the Eastern European countries to attract Western investment. As a consequence of this, four Eastern European countries have allowed joint business operations with Western firms on their territory, i.e. Yugoslavia, Romania, Hungary and Poland.

A. YUGOSLAVIA

In 1967, Yugoslavia became the first Eastern European country to allow foreign investment on its territory in the form of a joint venture. In 1973, part of the 1967 Law was replaced by the "Law on Foreign Investments in Domestic Organizations of Associated Labour" which may be considered the most important legal basis for foreign investment in Yugoslavia.

The basis of a joint venture between a Yugoslav and a foreign firm is a contract which, to become effective, must be registered with the Federal Secretariat of the Economy. The contract, inter alia, states the total amount invested, the value of the foreign investment (which may not be less than 1,500,000 dinars and not more than 49 percent) and the foreign partner's share in the profits.

Joint venture income is determined with reference to net income after ordinary and necessary expenses including depreciation have been deducted. Depreciation rates are normally spelled out in the joint venture contract. Profits derived from joint ventures are subject to a federal profits tax which is levied at a flat rate of 35 percent. This tax is not really on the entity itself but is imposed on the share of the profits allocated to the foreign investor. The Yugoslav investor is separately taxed on his share of the profits. The tax on the profits of the foreign partner is actually imposed by the individual republics. [1] The latter may, in fact, levy tax at a lower rate than that envisaged by the Federal Law.

In the case of reinvestment of the profits realized, the tax may be considerably reduced, depending on the amount of the reinvestment. In this case as well, the reduction of tax may differ according to the law of the individual republic which imposes the tax.

Chart I may clarify the impact of the tax reductions and reinvestment incentives in the various republics.

It should be noted that, once the profits tax has been levied, the foreign investor is free to repatriate the profits realized (as far as not reinvested). In that case, no withholding tax on dividends becomes due.

B. ROMANIA

The second Eastern European country which gave permission to foreign business operations on its territory in the form of a joint venture was Romania (under Decrees No. 424 and 425 of November 2, 1972). [2] Joint ventures in Romania must be constituted as joint stock companies or limited liability companies. The organization and operation of these joint ventures must be set up in the "Company's Contract" and in the "Statutes". A foreign ownership of the equity in joint ventures with Romanian enterprises up to 49 percent is allowed.

CHART I — YUGOSLAVIA

Republic	*Reinvested profits (%)*	*Tax on reinvested profits (%)*	*Tax on total profits (%)*

* Staff Member of the International Bureau of Fiscal Documentation.

1. See Ksente Bogoev, *Yugoslavia, Trends in fiscal federalism*, Bulletin for International Fiscal Documentation, Vol. 31, No. 5 at 201 (May 1977).

2. See W.G. Kuiper, *Socialist Republic of Romania, Organization, operation and taxation of joint companies - Taxation of income obtained by non-resident individuals and corporations*, European Taxation, Vol. 16, No. 6 at 190 (June 1976).

The contributions to the capital may consist of a contribution in cash, a contribution in goods required for carrying out the investment activities in which the company is engaged, and a contribution of industrial property rights or other rights.

In general, profits of joint ventures with Romanian and foreign participation are subject to an annual tax of 30 percent.

The taxable base is net profits, i.e. gross income less business expenses, depreciation allowances and legally required reserves. As regards the latter, the creation of a reserve of five percent of the annual taxable profits is mandatory, until the total reserve fund reaches 25 percent of the invested capital.

The Council of Ministers of Romania may grant a full tax exemption for the first year in which taxable profits are made and, additionally, a 50 percent reduction (rate 15 percent) for the following two years. In this respect it should be noted that, in the event the joint venture begins to make profits during the second half of the year, the tax exemption may also be granted for the profits made in the first half of the following year.

A reinvestment allowance is offered in the form of a reduction of 20 percent from the normal tax rate (effective rate 24 percent) for profits reinvested for a period of time of at least five years.

Profits remaining for distribution to the shareholders after payment of taxes shall be taxed at a rate of 10 percent *if such profits are transferred abroad.*

C. HUNGARY

Under Law No. 18/1970 and Decree 28/1972 (as amended by Decree No. 7/1977) Hungary became the third Eastern European country to permit joint ventures on its territory.

The share of the foreign partner in a Hungarian joint venture may not exceed 49 percent. The ownership ratio is fundamental for purposes of profit sharing and financial risks but not necessarily for voting rights. The methods of management of the joint venture are laid down in the "Memorandum of Association".

It is mandatory to set up a risk fund until it reaches ten percent of the capital invested. It must be formed out of the annual profits in accordance with the method laid down in the Memorandum of Association. In addition, the joint venture may set aside an amount in the employee profit sharing fund up to fifteen percent of the annual wages. Both are deductible in computing taxable income.

After deduction of the amounts set aside for the risk fund and the profit sharing fund — both of which reduce the profits — the remainder is the taxable base for purposes of the profits tax, which is levied — after the amendments set forth by Decree 7/1977 — at a uniform rate of 40 percent.

If the joint venture untilizes its taxed profits for increasing its investment capital, part of the profits tax paid may be refunded upon application submitted to the Ministry of Finance.

In addition, joint ventures are subject to a flat 35 percent payroll tax on annual wages.

Capital invested (e.g. in the case of winding-up) and after tax profits can be repatriated tax-free.

D. POLAND

By virtue of Decrees 109 and 110 of May 25, 1976 joint ventures in Poland can be undertaken by individuals or legal entities domiciled abroad, as well as by foreigners living in Poland with a permanent residence permit with entities of the socialist sector. [3] The company's contract should be approved by the competent Minister of the Polish People's Republic.

The contributions to the share capital of a joint venture can consist of a contribution in cash or a contribution in kind. The foreign contribution *in cash* must amount to at least 50 percent of the entire foreign participation. Any contribution made in cash must be paid in convertible currency. The extent of the Western participation is *not* restricted. Thus, in principle, the split could presumably be 80 percent foreign and 20 percent Polish, or any other combination.

The creation of a reserve fund of 20 percent of the after tax profits is mandatory.

Since joint ventures are considered residents of Poland, they are subject to income tax on their world-wide income. Polish tax law does not contain special provisions concerning the taxation of joint ventures.

The Polish income tax system is a schedular one. There are three different schedules aggregating the income from specified sources of income. Consequently, there are three potentially applicable tax tables, the rates of which range from 20 to 85 percent. For corporate entities, however, the highest overall rate is 65 percent.

If the Polish partner holds more than 50 percent of the share capital the 65 percent tax rate is always applicable to the foreign partner, unless it is reduced by the Minister of Finance upon application.
The company's after tax profits, determined on the basis of the existing income tax regulations, can be repatriated in convertible currency. The repatriated profits, however, cannot exceed nine percent of the total foreign investment per year, unless more than one half of the company's products are exported. Repatriated profits are subject to a final withholding tax of 30 percent.

III. OTHER TAX ASPECTS OF DOING BUSINESS WITH EASTERN EUROPE

A. REPRESENTATION OFFICES

Where only four countries have enacted joint venture legislation, representation offices of Western firms are allowed in all Eastern European countries. Such representation offices are, in principle, subject to tax in those countries. However, the Soviet Union, the German Democratic Republic and Bulgaria do not actually tax such representation offices, provided that they do not act in their own name.

In *Czechoslovakia*, on the other hand, representation offices are subject to income tax which is levied at a rate of 65 percent.

In *Poland*, representation offices are subject to income tax which is levied at progressive rates (up to 50 percent), unless the income is derived from transactions concluded through the intermediary of Polish representative offices acting as agents. In the latter case, the representation office is exempt from tax.

In *Yugoslavia*, income earned by representation offices is subject to income tax as levied under the tax laws of the independent Republics. Therefore, the rates may differ considerably.

In *Hungary*, representation offices are subject to the "agency tax". The rates of this tax are either three, five or eight percent (depending on the kind of activity) of the office's turnover less ten percent of the taxable base for expenses incurred in Hungary.

In *Romania*, taxable income of representation offices is established in a lump-sum amount, according to the following scale:

Type of office	*Annual taxable income in le*
A (employing 1-2 people)	100,000
B (employing 3-5 people)	250,000
C (employing 6-8 people)	400,000
D (employing more than 8 people)	800,000

The regular income tax table for enterprises in the private sector applies. The rate is 42 percent for income up to 80,000 le increased by 2 percent for every 15,000 le up to a maximum of 60 percent.

B. WITHHOLDING TAXES

Another interesting question is at what rates taxes are withheld by Eastern European countries with respect to interest and patent royalties paid to Western countries

3. See M. Weralski, *Polish People's Republic: New joint venture legislation*, European Taxation, Vol. 17, No. 4 at 114 (April 1977).

In this respect, it should be noted that, due to the economic and social system of the Eastern European countries, *dividends* can normally be transferred to the West, only if they come from profits derived by a joint venture. The taxes on repatriation of such profits, if any, are discussed above.

Chart II indicates the rates of taxes on interest and patent royalties withheld by Eastern European countries (as far as the information is available).

It should be noted that the rates in chart II may be reduced pursuant to tax treaties concluded between East and West.

IV. TAX TREATIES

As indicated by Chart III, to date 29 treaties for the avoidance of double taxation have been concluded between East and West, while several other treaties are being negotiated.

A study on the provisions of these treaties reveals that they are mainly based on the OECD-Model Convention (except for the pre-war treaties concluded by Hungary and the treaty between the United States and the USSR).

Some interesting exceptions, however, include the following:

— Where Art. 5(2)(g) of the OECD-Model Convention provides that a building site or construction project is considered a permanent establishment if it exists for more than 12 months most (however, not all) East-West tax treaties provide that such building sites or construction projects are deemed permanent establishment after 18 or 24 months or not at all.

— Art. 11 of the OECD-Model Convention provides that interest may be taxed in the State in which it arises; however, the rate may not exceed 10 percent. Most East-West tax treaties (except the ones concluded by Romania) provide for a tax exemption in the State in which the interest arises.

— Some of the tax treaties concluded by Romania contain a provision for commission fees (including a withholding tax of five to twelve and a half percent).

— Under Art. 12 of the OECD-Model Convention royalties are taxable in the State of residence; there is no provision for a tax in the State in which the royalties arise. Most East-West tax treaties however, contain a provision under which royalties may also be taxed in the State in which they arise, in general however, the tax may not exceed five or ten procent. In the light of the predominant flow of technology from the West to the East, the provision for a withholding tax on royalties must be considered to be favourable to the Eastern European countries.

CHART II – WITHHOLDING TAXES

Country	*Interest*	*Patent royalties*
Bulgaria	exempt	uncertain, probably 40%
Czechoslovakia	20%	40%
German Democratic Republic	15%	25%
Hungary	uncertain, probably 30%	20% *
Poland	30%	30%
Romania	15% *	20% *
USSR	exempt	exempt
Yugoslavia	exempt	various rates

* If a non-treaty country taxes one of the above-mentioned types of income paid to residents of the Eastern European country at a higher rate, the above rates may be increased up to the same level, e.g. under the conditions existing prior to the Romania-U.K. tax treaty, the United Kingdom taxes royalties paid abroad at a rate of 35 percent. In that case, Romania could also tax royalties paid to a resident of the United Kingdom at a rate of 35 percent.

CHART III – EAST-WEST TAX TREATIES

	Treaties	*Date of conclusion*
	Czechoslovakia—France	June 1, 1973
	Czechoslovakia—the Netherlands	March 14, 1974
	Czechoslovakia—Finland	January 31, 1975

	Romania—Federal Republic of Germany	June 29, 1973
	Romania—United States	December 4, 1973
	Romania—France	September 27, 1974
	Romania—United Kingdom	September 18, 1975
*	Romania—Japan	February 12, 1976
*	Romania—Austria	September 30, 1976
*	Romania—Belgium	October 14, 1976
*	Romania—Italy	January 14, 1977
	USSR—United States	June 20, 1973
	Yugoslavia—France	March 28, 1974
*	Yugoslavia—Austria	May 7, 1975

All treaties (except the treaties concluded by Hungary with Italy, Sweden and the Federal Republic of Germany and by Romania with Austria, Belgium and Italy), are published by the International Bureau of Fiscal Documentation in the English language in SUPPLEMENTARY SERVICE TO EUROPEAN TAXATION, Sec. C., thus including 4 treaties which were not yet effective at the date of publication of this survey.

* = not yet in force.

1) = published in the English language in: United Nations, Department of Economic and Social Affairs. International Tax Agreements. World Guide.

2) = published in the English language in: League of Nations. Double Taxation and Fiscal Evasion. Collection of International Agreements and Internal Legal Provisions for the Prevention of Double Taxation and Fiscal Evasion.

THE EUROPEAN COMMUNITY'S SCHEME OF GENERALIZED TARIFF PREFERENCES 1978[1]

Source: Information Memo, P-71, July 1977

The 1978 scheme of generalized tariff preferences for the developing countries has just been approved by the Commission. If the Council adopts the Commission's proposals, the volume of imports eligible for preferential treatment will be equivalent to 6,400 million European units of account, [2] of which 5,100 million EUA for industrial semi-manufactures and manufactures and 1,300 million EUA for processed agricultural products.

The main features of the 1978 scheme are a limited increase in the volume of imports eligible for preferential treatment, the maintenance of the present ceilings for certain industries in difficulties, such as steel and textiles, and the emphasis on practical improvements in the operation of the system, particularly as it affects the least developed countries.

The Commission proposals remain within the scope of the offer on generalized tariff preferences made to UNCTAD by the Community in 1969, which the Community was the first industrial power to bring into operation — starting on 1 July 1971. [3] The Commission notes in its communication to the Council that in the present economic climate it is hard for the Community to introduce substantial new improvements to the GSP, particularly since the Community's industrialized partners have not made comparable efforts. For that reason, efforts will be concentrated on making practical improvements and the fullest possible use of existing concessions.

The following are the main outlines of the Commission's proposals:

Agricultural products

Eleven new products are to be added to the list, among them horses for slaughter, certain kinds of crustaceans and molluscs, dried garlic, limes, tropical fruit cocktails and certain kinds of fruit and vegetables during the winter season. The new list would thus cover 307 products, representing a total import volume worth 1,300 million EUA. It will be recalled that in 1977 the Community has substantially improved the GSP as regards agricultural products, in accordance with the Community offer on tropical products made in the GATT multilateral trade negotiations.

The 1977 GSP for agricultural products adds 46 new products and 70 margin of preference improvements to the 1976 scheme, raising the volume of imports from 1,000 million to 1,240 million EUA.

Industrial products

The GSP arrangements for industrial products involve duty-free entry for all industrial manufactures and semi-manufactures without exception, up to a ceiling which is equal to the volume of imports from beneficiary countries in a given reference year, plus an additional amount normally equal to 5% of imports from non-beneficiary, i.e. industrialized countries. The 1978 scheme will use the same basic reference year (1974), but the figures for 1975 have been taken into account in calculating the additional amounts, which means that the general level of the ceilings is raised. [4]

For iron and steel, petroleum and textile products, footwear and plywood, the ceilings will be held at their present level in view of the difficult situation in the industries in question. In proposing that the status quo be maintained for textile products the Commission is also taking account of the current negotiations for the renewal of the MFA.

The Commission is, however, proposing two substantial improvements in the operation of the system:

For "sensitive" products subject to tariff quotas, which until now have been subdivided into national shares, the Commission is continuing its policy of introducing a reserve share aimed at simplifying the operation of the quotas. [5] In the industrial sector, the number of quotas including a 20% reserve share is increased from six to twelve, excluding the quotas for plywood, textile products and ECSC products. It is proposed to introduce reserve shares for all agricultural products subject to quotas.

For semi-sensitive and non-sensitive products subject to ceilings it is proposed that the least developed countries [6] be exempted from reintroduction of the duty in cases where ceilings are exceeded.

In 1977 these countries already enjoy such exemption in connection with the maximum country amounts ("butoirs") — i.e. the maximum amounts that can be exported by a single beneficiary country, which are normally equal to 50%, though sometimes to 20 or 30%, of the ceiling. Special arrangements have also been introduced for these countries in 1977 reserving them 70% of the ceilings for a large number of textile products, in contrast to more competitive countries.

Lastly, two special measures:

As regards coir and jute products, the tariff suspension accorded by the Community as a quid pro quo for the voluntary restraint agreements negotiated with India (jute and coir) and Bangladesh (jute) will be raised from 80% to 100% on 1 January 1978, although in the case of jute total suspension was not due to enter into force until 1 July 1978.

The Commission proposes to extend to Romania the benefit of preferences for a number of additional products as an indication of the Community's readiness to take account of the difficult period that country is going through.

Fuller use of the GSP

The Commission intends to continue its efforts to improve understanding of the operation of the Community's GSP among business operators in the beneficiary countries. Seminars will be organized for them in Brussels, Asia and Latin America, and publication of the Practical Guide to the Use of the GSP, the first edition of which came out in May 1977, will be continued.

The figures below show the growth in the volume of imports eligible for preferential treatment since 1974, together with utilization rates.

	Volume	Utilization (%)
1974	3,250 million u.a.	65
1975	3,680 million u.a.	50
1976	5,600 million u.a.	62
1977	6,230 million u.a.	----
1978	6,400 million u.a.	----

1. COM(77)330.
2. Following the Council's decision to adopt the European unit of account (EUA) from 1978 particularly for the purposes of the Common Customs Tariff, the 1978 GSP is expressed in EUA and not u.a.as was previously the case
3. Japan introduced a generalized preference system in August 1971 and the United States in January 1976. Other developed countries now using such a system are Austria, Finland, Norway, Sweden, Switzerland, Australia, Canada and New Zealand.
4. However, if the application for this rule were to result in a lowering of the ceiling, the ceiling would be maintained at the present level. As regards products for which the calculations result in escessively high growth rates, on the other hand, the ceiling increases will be limited to 50%
5. The current industrial GSP covers 46 sensitive products, 131 semi-sensitive products and about 1,700 non-sensitive products.
6. Countries appearing on the list established by the United Nations Resolution 3487 (XXX) of 12 December 1975.

TAX CHANGES IN Singapore

by Lee Fook Hong, FCIS, FAIA

A — THE INCOME TAX (AMENDMENT) ACT, 1977

Introduction

The Income Tax (Amendment) Bill was published in the Government Gazette Bill Supplement No. 8 dated 2nd June 1977. It was introduced into Parliament and read the first time on 27th May 1977. It was passed by Parliament on 29th June 1977 and assented to by the President of the Republic of Singapore on 5th July 1977. The Amendment Act was published in the Government Gazette Act Supplement No. 4 dated 7th July 1977.

The major tax changes introduced by the Amendment Act are summarised below:

1. The Amendment Act, inter alia, provides for concessional rates of tax for offshore income derived by the Asian Currency Units of financial institutions from advising or confirming offshore letters of credit.

2. The Amendment Act also contains provisions dealing with the concessionary tax treatment of pensions and with the source of certain types of income. Examples of such income are:—

a. Income in connection with any loan or indebtedness;

b. Royalties and other payments for the use of movable property;

c. Payments for the right to use scientific, technical, industrial or commercial knowledge or information;

d. Management fees; and

e. Rents or other payments under any agreement or arrangement for the use of movable property.

3. Under the Act now amended, taxpayers having accounting periods ending on or before 30th September are required to furnish the Comptroller of Income Tax with an estimate of their chargeable income within three months after the end of the accounting period.

4. Provisions are also introduced to impose a late payment penalty on employers for not paying promptly to the Comptroller the tax that has been deducted from employees' emoluments.

The references below are to the Sections of the Singapore Income Tax Act as amended by the Amendment Act.

I. Definition of Permanent Establishment

(Section 2, effective from Y/A 1978)

The definition of "permanent establishment" has now been inserted in Section 2 of The Income Tax Act. Previously the term "permanent establishment" was defined only for the purposes of any Avoidance of Double Taxation Agreements with other countries. The definition now states the meaning of "permanent establishment" for purposes of the Income Tax Act. It stipulates the instances where a person shall be deemed to have "permanent establishment" in Singapore.

"Permanent establishment" means a fixed place where a business is wholly or partly carried on including:

(a) a place or management;
(b) a branch;
(c) an office;
(d) a factory;
(e) a warehouse;
(f) a workshop;
(g) a farm or plantation;
(h) a mine, oil well, quarry or other place of extraction of natural resources;
(i) a building or work site or a construction, installation or assembly project; and,

without prejudice to the generality of the foregoing, a person shall be deemed to have a permanent establishment in Singapore if that person:

(j) carries on supervisory activities in connection with a building or work or a construction, installation or assembly project; or
(k) has another person acting on that person's behalf in Singapore who —
  (i) has and habitually exercises an authority to conclude contracts;
  (ii) maintains a stock of goods or merchandise for the purpose of delivery on behalf of that person; or
  (iii) habitually secures orders wholly or almost wholly for that person or for such other enterprises as are controlled by that person.

Where an avoidance of double taxation agreement exists, the provisions of the Double Taxation Agreement will override the definition in Section 2 of the Income Tax Act.

II. Pensions

(Section 10(6A), effective from Y/A 1977)

Pensions derived by a Singapore resident will now be taxed only on 50 percent of such pension. This concessionary treatment is applicable to all pensions granted under any written law relating to pensions in Singapore and also to private pension schemes approved by the Minister for Finance.

III.(1) Income from a Loan or Indebtedness

(Section 12(6), effective from Y/A 1978)

Subsection (6) of Section 12 of the Income Tax Act which deals with a source of the income in connection with any loan or indebtedness has been amended and a new subsection (7) has been inserted.

These two new subsections 12(6) and 12(7) introduce provisions to deem the following payments to be derived from Singapore.

TABLE OF CONTENTS

A — THE INCOME TAX (AMENDMENT) ACT 1977

Introduction
I. Definition of Permanent Establishment
II. Pensions
III. (1) Income from a Loan or Indebtedness
(2) Royalties, Management Fees, Rents and Other Payments
IV. Asian Dollar Bonds
V. Relief for Dependents who are living with Taxpayer
VI. Concessional Rates of Tax for Off-Shore Income derived by the Asian Currency Unit

X. Tax Credit allowed on income which is subject to Double Taxation Arrangements
XI. Accounting Period of any Trade, Business, Profession or Vocation
XII. Proceedings before Board of Review & High Court
XIII. Employer's Obligation in respect of Tax Deducted from Employee's Emoluments

B — OTHER TAX CHANGES

Taxation of Leave Passages

Senior Partner of Lee Fook Hong & Co., Chartered Secretaries and Management Consultants, Singapore.

(a) (i) When a payment is made by a person resident in Singapore or by a permanent establishment in Singapore; or
(ii) when a payment is deductible against any income accruing in or derived from Singapore; or
(b) Any income derived from loans where the funds provided by such loans are brought into or used in Singapore.

The effect of the new subsection 12(6) is that the term 'loan' has been extended to cover all forms of indebtedness. Therefore not only interest on loans but also any commission, fees or any other payments in connection with any loan or indebtedness or with any arrangement, management, guarantee, or service relating to any loan or indebtedness will be deemed to be derived from Singapore. However all these payments must be borne directly or indirectly by a person resident in Singapore or a permanent establishment in Singapore before they can fall within the 'deeming' provisions.

Another effect of Section 12(6) which is far reaching is that when a loan is brought into the Republic or used in the Republic, any interest or income from such a loan will be deemed to be a Singapore source and liable to Singapore income tax accordingly.

III.(2) Royalties, Management Fees, Rents and Other Payments

(Section 12(7), effective from Y/A 1978)

The new subsection (7) added to Section 12 defines the source of royalties and other payments for the use of movable property etc. It provides that the items mentioned hereunder will be deemed to be derived from Singapore where they —
(i) are borne directly or indirectly by a Singapore resident or a permanent establishment in Singapore; or
(ii) are deductible against any income accruing in or derived from Singapore.

The items under (i) and (ii) above which are deemed to be Singapore source cover the following payments:—
(a) royalty or other payments in one lump sum or otherwise for the use of or the right to use any movable property;
(b) any payment for the use of or the right to use scientific, technical, industrial or commercial knowledge or information or for the rendering of assistance or service in connection with the application or use of such knowledge or information;
(c) any payment for the management or assistance in the management of any trade, business or profession; or
(d) rent or other payments under any agreement or arrangement for the use of any movable property;

For withholding tax from payments to non-residents see VII and VIII, infra.

IV. Asian Dollar Bonds

(Sections 13(1)(v) & 13(2), effective from the date specified by the Ministers' notification in the Gazettes in respect of each case)

Paragraph (v) of subsection (1) of Section 13 of the Income Tax Act is amended so that the exemption in respect of interest received from Asian Dollar Bonds need not be restricted to Asian Dollar Bonds issued in Singapore. Previously only interest from Asian Dollar Bonds issued in Singapore was exempted. Henceforth all approved Asian Dollar Bonds are tax exempt irrespective of the places where they are issued, i.e. whether inside or outside Singapore.

The amendment also extends the power of the Minister to exempt from tax wholly or in part any loan interest, falling under Section 13(2) to any interest, commissions, fees or other payments falling under the new subsection (6) or (7) of Section 12. The exemption may be subject to such conditions as may be imposed by the Minister. In granting the full or partial exemption, the Minister will have regard to whether or not the payments are made for a purpose which will promote or enhance the economic or technical development of Singapore.

V. Relief for Dependents who are Living with the Taxpayer

(Section 39(2)(f), effective from Y/A 1977)

Section 39(2)(f) has been amended to restrict relief to be granted in respect of parents, grandparents or great grandparents. With effect from the Year of Assessment 1977, a taxpayer will only be entitled to such relief if he maintains any such dependents in the same household *in Singapore.* Consequent upon the amendment it is no longer possible to claim relief for maintaining dependents who reside *outside Singapore.*

VI. Concessional Rates of Tax for Off-Shore Income Derived by the Asian Currency Unit

(Section 43A(2), effective from Y/A 1977)

The definition of "off-shore income" in Section 43A has been extended to include "fees, commission or interest received from advising or confirming off-shore letters of credit from transactions in bills drawn on such letters of credit". Such income is now taxed at the reduced rate of 10 percent instead of the normal 40 percent. To qualify as an off-shore letter of credit various conditions have to be fulfilled e.g.
(a) the letter of credit is opened in currencies other than Singapore dollars;
(b) neither the buyer nor the seller who is a party to the letter of credit is a resident of Singapore or a permanent establishment in Singapore; and
(c) the goods covered in the letter of credit are not exported from or imported into Singapore.

VII. Withholding Tax from Payments of Income to Non-Residents

(Section 45A, effective from Y/A 1978)

A new Section 45A is inserted in the Income Tax Act to extend the application of Section 45 (Deduction of tax at source) to the payment of income referred to in subsection (7) of Section 12 (see paragraph III(2) above).

Section 45A imposes an obligation to deduct tax at 40 percent when making payments to non-residents of royalties, management fees, rents or others falling under Section 12(7).

Where an avoidance of double taxation agreement exists the tax to be deducted will be at the rate specified in the Double Taxation Agreement. This tax deducted and withheld must be remitted to the Comptroller within seven days after the payment is made, failing which a penalty of 5 percent of the tax will be imposed. An additional penalty of 1 percent of the tax per month will be charged until the withheld tax and penalty are paid to the Comptroller.

To prevent anyone attempting to circumvent the intention of the provisions of Section 45, it is provided that cases where a payment is re-invested, accumulated, capitalised or carried to any reserve or credited to any reserve or credited to any account is also considered as a payment having been made for the purpose of Section 45. The Minister has once said that anyone who fails to comply with this withholding tax Section may be guilty of a criminal breach of trust. An offence under this Section is regarded as a serious one punishable with penalties similar to those applicable to tax fraud.

In view of the new Section 45A it is important to note that payments falling within the Section 12(7) when made to a non-resident are now subject to deduction of tax.

Persons making payments to non-residents are advised to review their position if they have been paying without deduction of tax, any of the following items:—
(a) interest on indebtedness other than a loan;
(b) management fees or technical assistance fees to parent or associated companies for services rendered in Malaysia or other countries outside Singapore;

(c) rentals or payments for leasing machinery and equipment or other movable property;
(d) charter fees for ships.

VIII. Tax Deducted from Dividends, Interest, Royalties & Other Payments

(Section 46, effective from Y/A 1978)

As a result of the insertion of the new Section 45A, Section 46 has to be amended to include the tax deducted from royalties and other payments for set off for purposes of collection against the tax chargeable on the relevant chargeable income. This is but a consequential amendment arising from the new Section 45A.

IX. For Purposes of Double Taxation Arrangements

(Section 49, effective from Y/A 1978)

The amendment to Section 49 of the Act is to enable Singapore, when entering into any double taxation arrangement to provide for "exemption with progression", i.e., the use of any income, though exempted under the double taxation agreement to be taken into account in determining the effective rate of tax to be charged on other income. The effect of the so-called "exemption with progression" is that the effective tax rate is increased and consequently the tax relief.

The formula to be used in arriving at the "effective rate of tax" is:—

$$\frac{A}{B + C}$$

where
A is the tax payable before allowance of credit under any arrangements having effect under this Section on B + C computed in accordance with the provisions of the Income Tax Act.
B is the exempt income, and
C is the other income.

X. Tax Credit allowed on Income which is subject to Double Taxation Agreements

(Section 50, effective from Y/A 1977)

A new subsection (11) to Section 50 of the Act has been introduced to make it clear that any tax credit allowed on income subject to any double taxation agreement must not have the effect of reducing the tax payable on income accruing in or derived from Singapore.

XI. Accounting Period of Any Trade, Business, Profession or Vocation

(Section 63A, effective from Y/A 1978)

Section 63A is a new Section. It provides that where the accounting period ends on or before the 30th day of September in any year the taxpayer has to furnish to the Comptroller an estimate of his chargeable income within three months after the end of the accounting period. Failure to furnish an estimate will be an offence. The objective of imposing this obligation on the taxpayer is to empower the Comptroller to raise advance assessments so that the tax may be collected on a date closer to the date the profits are earned. Taxpayers who have benefitted from the lapse of time between the end of a financial year and the date of payment of tax will now have to pay tax on their income from trade or business much earlier.

For example, a taxpayer who prepares his annual accounts to 31st July each year may make up his accounts for the accounting year to 31st July 1977. In such a case he must furnish to the Comptroller before 31st October 1977 an estimate of his chargeable income for the financial year to 31st July 1977. Failure to furnish an estimate within 3 months after the end of the financial year will constitute an offence.

The Comptroller has indicated that he will continue to accept proposals for monthly instalment payments. The number of such instalments will not exceed ten. However, the Comptroller may exercise his descretion to allow deserving cases such extension of time to furnish estimates and pay monthly instalments as he thinks fit.

XII. Proceedings before Board of Review and High Court

(Section 83, effective from Y/A 1978)

Section 83 of the Act has been amended to enable Comptroller to apply to the Board of Review or the High Court for a public hearing of an appeal. Before this amendment only the taxpayer had the right to make such an application.

XIII. Employer's obligation in respect of Tax Deducted from Employee's Emoluments

(Section 91(2A), effective from Y/A 1978)

The insertion of a new subsection (2A) to Section 91 of the Act makes it obligatory for the employer to pay over to the Comptroller the tax which has been deducted from the employee's emoluments within 10 days after the date of deduction. Penalties are now payable where the employer does not pay promptly such tax deducted from employee's emoluments. If the amount deducted is not paid to the Comptroller:—

(a) within the said period of ten days, a penalty equal to 5 percent of that amount shall be payable by the employer to the Comptroller.
(b) within one month after the date of deduction, an additional penalty equal to 1 percent of that amount shall be payable by the employer to the Comptroller for each completed month that the amount remains unpaid, but the total additional penalty shall not exceed 12 percent of the amount outstanding.

However, the Comptroller has the discretion to remit wholly or in part the penalties for any good cause shown to him.

B – OTHER TAX CHANGES

Taxation of Leave Passages

Following the negotiations between the Singapore International Chamber of Commerce and the Comptroller, it has been agreed that only 20 percent of the cost of the employees' leave passages paid by the employers in 1977 and subsequent years will be treated as income of the employees for income tax purposes. However, this concession is restricted to one return passage for the employee and his wife and to two passages for each child annually.

The Comptroller has clarified that the concession applies only to those employees whose home country is not Singapore.

COUNTRY BY COUNTRY SURVEY OF LOOSE-LEAF PUBLICATIONS . . .

ERRATUM

INTERNATIONAL

INTERNATIONAL TAX STRATEGY

Edited by Michael Edwardes-Ker.
In-Depth Publishing, Ltd., Alton House, Herbert Street, Dublin-2.
Supplemented: 12 times a year (not as stated on page 265 of the number 6 issue of 1977).

LIECHTENSTEIN

STEUERN IN LIECHTENSTEIN

By Eduard L. Hilti and René H. Melliger. Grafos Verlag AG., Schwefelstrasse 33, Postfach 231, Vaduz.
Supplemented: twice or more times a year.

Loose-leaf publication dealing with all taxes levied in Liechtenstein, the social contribution system, the appeal procedures, fines, the obligation to keep accounts, and tax planning. Texts of the tax statutes and double taxation treaties are appended.

NETHERLANDS ANTILLES

BELASTINGWETGEVING IN DE NEDERLANDSE ANTILLEN

Een samenstelling van belastingteksten voor praktijk en studie. By F. Metry.
De Curaçaosche Courant, N.V., Theaterstraat 11, Willemstad, Curaçao.
Supplemented: annually.

Loose-leaf publication containing compilation of texts of major tax laws in the Netherlands Antilles. The material does not cover import and excise duties, but does cover individual income tax, corporate income tax, tax incentive measures, death duties, stamp duties, and the double taxation treaty between the U.S.A. and the Netherlands Antilles, as well as the Double Taxation Regulation concluded between the Netherlands and the Netherlands Antilles.

NEW ZEALAND

TAX REPORTS

Previously entitled New Zealand Taxation Board of Review Decisions. By J.D. Pope.
Butterworths, 62-28 Waring Tailor St., P.O. Box 472, Wellington.
Supplemented: regularly.

Text of reports of tax cases decided by Judicial Committee of the Privy Council, Court of Appeal, Supreme Court and the Official Reports of the Taxation Review Authorities. The issues are to be filed in loose-leaf binders.

NORWAY

SKATTELOVSAMLING

Jacob Jarφy, Torgeir Vraasgt. 18, 3700 Skien.
Supplemented: once or twice a year.

Loose-leaf publication in three volumes of a compendium of Norwegian tax laws on income and capital. The value added tax is also included. Texts of related circulars and other legislation are appended. A detailed index is also provided. The material is supplemented by the issuance of supplementary pages.

SKATTE-NYTT

A + B
Norsk Skattebetalerforening, Kongensgate 6, Oslo 1.
Supplemented: monthly.

This periodical entitled Tax News appears monthly and is to be filed in a loose-leaf binder. Part A (white paper) contains text of tax amendments and new tax law with respect to Norwegian taxation. Part B (blue paper) is a supplement to Part A and provides information on tax developments and detailed references to other tax provisions.

PERU

IMPUESTO A LOS BIENES Y SERVICIOS

Impuesto y contribuciones sobre remuneraciones por servicios personales; impuestos específicos al consumo.
Editorial Economia y Finanzas, Av. 2 de Mayo 810, San Isidro, Lima.
Supplemented: three times a year.

Loose-leaf publication of a handbook dealing with the value added tax, the turnover tax on services and consumption taxes. Texts of the relevant legislation are appended.

MANUAL DE IMPUESTO A LA RENTA

By Teodoro Nichtawitz and Hernán Valdez Arróspide.
Editorial Economia y Finanzas, Av. 2 de Mayo 810, San Isidro, Lima.
Supplemented: about four times a year.

Loose-leaf publication of a handbook on the taxation of income in Peru. The work explains the taxation of income derived by individuals and corporations. Texts of the income tax law, regulations and related legislations are appended.

MANUAL DE IMPUESTOS INTERNOS

By Teodoro Nichtawitz and César Talledo.
Editorial Economia y Finanzas, Av. 2 de Mayo 810, San Isidro, Lima.
Supplemented: about four times a year.

Loose-leaf publication of a handbook dealing with the taxation of immovable property, registration duty, succession duty, business license fees and some other internal taxes. In addition, ministerial regulations and case law in connection with the taxes are appended.

REGIMENES ESPECIALES DE TRIBUTACION

By Teodoro Nichtawitz and César Talledo with the assistance of Beatrice Merino.
Editorial Economia y Finanzas, Av. 2 de Mayo 810, San Isidro, Lima.
Supplemented: twice a year.

Loose-leaf publication of a handbook on special tax reliefs for industry, fishing, farming, mining, etc.
Summary of the tax reliefs is follow

ed by the text of the relevant legislation. We have been informed by the publisher that the supplementation of this publication has been discontinued as of the middle of 1977.

RHODESIA

JUTA'S RHODESIAN INCOME TAX SERVICE

Legislation Section.
Editor A.S. Silke, assistant editors C. Divaris and M.L. Stein.
Juta & Co., Ltd., 816 Grand Parade Center, P.O. Box 30, Cape Town-8000.
Supplemented: once a year.

Loose-leaf publication containing consolidated text of the income tax act and extracts from the annual amendment acts thereto. Texts of double taxation agreements concluded by Rhodesia and the texts of ancillary legislation are appended. A detailed index is included.

SOUTH AFRICA

BUTTERWORTHS SOUTH AFRICAN INCOME TAX

Legislation Service. Previously entitled Law and Practice of South African Income Tax, Statutes Section.
Butterworths, P.O. Box 792, Durham.
Supplemented: annually.

Loose-leaf publication explaining the South African income tax law with reference to case law. The text of the income tax act and subsidiary legislation is appended. In addition, the texts of double taxation agreements concluded by South Africa as well as extracts from provincial financial relations legislations are appended. A detailed index is included.

From Prentice Hall

An indispensable aid for American businessmen, investors and corporations engaged in or planning foreign operations and for those in foreign countries planning or doing business in the United States —

TAX TREATIES

This definitive guide is indispensable for any businessman or corporation that sells, buys, manufactures, or invests in the United States — as well as for any American businessman or corporation that does business in foreign countries. It tells you:

- How and where to handle your investments while eliminating the chance of double taxation.
- How much of your investment income will be protected by tax treaty exemptions.
- How much business Americans can carry on in a foreign country and vice versa without becoming taxable as a "permanent establishment."
- How to protect your employees who are temporarily at work abroad from a double tax burden.

In Tax Treaties, you'll also find:

1. The full official text of every existing treaty, supplementary treaty, or protocol relating to income taxes and estate and gift taxes between the United States and each of its tax-treaty countries, including model treaties showing the latest trends.
2. Annotated editorial text arranged in a Uniform Paragraph Plan . . . makes for easy direct comparison of provisions of one tax treaty country with another . . . permits a single unified index which works hand in hand with this unique setup. You'll make sure, speedy decisions at the flip of a wrist.
3. Official reports on each treaty giving you the background behind the provisions; why particular treaty articles were included; and what each provision means to you.
4. A Special Finding List at the beginning of the editorial summary for each country . . . speeds you quickly to explanatory and official material that affects you.
5. Monthly REPORT BULLETINS, analyzing the latest treaties, decisions and rulings, keep you right on top of today's fast breaking tax treaty developments . . . (plus Current Matter containing the most recent U.S. court decisions and IRS rulings giving you the latest judicial and official word on tax treaties.)

In today's constantly expanding international commerce, expert tax-managing or tax-counseling of business activities between the United States and each of its treaty countries is a must — so keep up to date with Prentice-Hall's TAX TREATIES.

To order a one-year introductory subscription to this unique publication at the low rate of only $ 120, address Department S-TT-103.

THE FINANCE BILL, 1977

Summary of proposed changes in direct and indirect taxation with extracts of the text of the Finance Minister's 2nd Budget Speech for 1977-78 on June 17, 1977 *

by Kailash C. Khanna**

DIRECT TAXATION

The Finance Bill, 1977, proposes the following changes in regard to corporate and personal taxation.

1. Corporate Taxation

(a) *Corporate tax rate*
It is proposed to withdraw the option at present available to companies to deposit with the Industrial Development Bank of India, an amount equivalent to the surcharge in lieu of the surcharge on corporate tax. Consequently, companies will have to pay the surcharge at the rate of 5 per cent. of corporate tax. As a result, the rates of corporate taxation on total income will be restored to the increased levels prevailing before the 1977/78 assessment year, namely

(i)	domestic widely held company [1]	— 57.75%
(ii)	domestic closely held industrial company [2]	— 63 %
(iii)	foreign company	— 68.25%

Concessional rates of tax will, of course, be available to foreign companies in respect of income from dividends, royalties and technical know-how fees, the respective rates being 25 per cent., 40 per cent., and 40 per cent. of the gross amount.

I shall now address myself to the task of formulating proposals for covering the deficit to the extent feasible.
The proposals, in so far as direct taxes are concerned, which I am presenting before you, are designed to increase corporate savings, channel more funds into productive investment, accelerate the pace of industrial growth and, at the same time, strengthen the redistributive role that direct taxes, to my mind, must be made to play.
In so far as indirect taxes are concerned, I have endeavoured to ensure that may proposals do not impinge on the necessities of life. There, I have sought to raise resources, in the main, from the less essential or luxury items, while giving relief to some deserving sectors, and simplifying and rationalising the central excise tariff structure generally.
Under a provision made last year, companies were given the option, instead of paying 5 per cent. surcharge on income-tax, to deposit an equivalent amount with the Industrial Development Bank of India for a period of five years. I propose to withdraw this option. The Budget accordingly takes credit for an additional tax receipt of Rs. 56 crores [3] on this account.

(b) *Investment Allowance*
It is proposed to extend the existing investment allowance to all industries excepting specified low priority industries, such as cigarettes, cosmetics, alcoholic beverages, refrigerating machinery, watches, electric fans, domestic electric appliances. An enhanced allowance of 35 per cent. will be granted on new plant and machinery installed after 30th June 1977 but before 1st April 1982 by using technology or know-how developed in a public sector company, university or government aided laboratory.

With a view to stimulating industrial development and economic growth, I consider it desirable to widen the scope of the scheme of investment allowance introduced last year. That scheme has unfortunately not laid down any well-defined and clear criteria for selecting industries to which the benefit of the concession was to be extended. This made it difficult to explain to those claiming eligibility why some industries had been given the benefit, while it was denied to others. Since there is a need for encouraging generation of internal resources for financing investment, I consider it best to extend the scope of investment allowance to all industries except those which are engaged in the manufacture of specified low priority items such as cigarettes, cosmetics and alcoholic beverages. This measures will be of great benefit to the economy.
In order to promote scientific and technological self-reliance, I propose to provide an incentive to the users of technical know-how developed in our country. It is accordingly proposed to grant investment allowance at the higher rate of 35 per cent. on machinery and plant installed for the manufacture of any article made in accordance with know-how developed in Government laboratories, public sector companies and universities.

(c) *Rural Development*
Expenditure incurred by a company on approved rural development programme is proposed to be allowed as business expenditure. Rural development programme is intended to include programmes for promoting social and economic welfare of the public in rural areas.

With a view to encouraging companies to involve themselves in the work of rural welfare and uplift, I propose to provide that expenditure incurred by them on approved programmes of rural development will be allowed to be deducted in computing their taxable profits.

(d) *Compulsory distribution of dividends*
At present, closely held domestic companies are required to make a minimum distribution of dividends. It is intended to exempt closely held industrial companies from this statutory requirement.

From the point of view of maximising expansion of industry, I can see litte merit in compelling closely-held industrial companies to distribute a high percentage of their net profits as dividends. I propose, therefore, to exempt such companies from the requirement of compulsory distribution of dividends. I do not propose to extend this relief to all other kinds of closely-held companies.

(e) *Small-scale Industries*
It is intended to grant small-scale industrial undertakings set up in rural areas a deduction from their taxable income of an amount equal to 20 per cent. of the profits and gains for a period of 10 years from commencement of manufacture.

In order to give a direct stimulus for the setting up of small-scale industrial undertakings in rural areas, I intend to accord preferential tax treatment to industries which are set up in such areas, and which begin their manufacturing activity after 30th June, 1977. Such industrial undertakings will be entitled to a deduction in the computation of their taxable profits of an amount equal to 20 per cent. of the profits. The concession will be available for each of the ten years commencing from the year in which the undertaking begins its manufacturing activities.

---

* Extracts of the Budget Speech were inserted by the Editors and printed in italics.

** Kailash C. Khanna & Co., Chartered Accountants, Calcutta, India.

1. Total income exceeds Rs. 1,00,000.
2. Total income exceeds Rs. 2,00,000.
3. One crore is 10 million.

(f) *Revival of sick industries*
With a view to encourage the amalgamation of sick industrial units with healthy ones, it is proposed to allow the carry forward and set off of the accumulated loss and unabsorbed depreciation of the sick undertakings as if the said loss and depreciation were the loss and depreciation of the healthy concern, provided the amalgamation is approved by the Government as being in public interest and prescribed conditions are fulfilled.

Sickness among industrial undertakings is a matter of grave national concern. Closure of any sizeable manufacturing unit in any industry entails social costs in terms of loss of production and employment, and also waste of valuable capital assets. Experience has shown that taking over of such units by Government is not always the most satisfactory or the most economical solution. A more effective course would be to facilitate the voluntary amalgamation of sick industrial units with sound ones by providing certain incentives and by removing impediments in the way of such amalgamation. It is accordingly proposed to provide that where an amalgamation is accepted by the Central Government to be in public interest, the accumulated losses and unabsorbed depreciation of the amalgamating company will be allowed to be carried forward and set off in the hands of the amalgamated company.

2. Personal Taxation

(a) *Rates of Income-tax*
It is proposed to raise the limit of minimum income not liable to income-tax from the existing Rs. 8,000/— to Rs. 10,000. Simultaneously, it is intended to increase the rate of surcharge on personal income-tax from 10 per cent. to 15 per cent., thereby raising the maximum marginal rate of personal income-tax, inclusive of surcharge to 69 per cent. as against the existing 66 per cent.

In fulfilment of an assurance in the Janata Party manifesto, I propose to provide that no income-tax shall be payable by individuals and Hindu undivided families whose taxable income does not exceed Rs. 10,000. In order, however, to keep the sacrifice of revenue to the minimum, the nil *rate slab of income is being retained at Rs. 8,000. Hence, where the taxable income exceeds Rs. 10,000, the excess over Rs. 8,000 will be charged to tax as at present subject to the grant of marginal relief in cases where the taxable income exceeds Rs. 10,000 by a small margin.*
I do not propose to make any change in the basic rates of income-tax. However, in view of the imperative need to raise additional resources, I propose to increase the rate of surcharge on income-tax in the case of all categories of taxpayers, except companies, from 10 per cent. to 15 per cent. With the increase in the rate of surcharge, the maximum marginal rate of personal income-tax will now be 69 per cent., as against 66 per cent. at present.

(b) *Compulsory Deposit Scheme*
The scheme of compulsory deposits in respect of income-tax payers is proposed to be extended for another two years at the existing rates.

As hon'ble Members are aware, Government have already dispensed with the Compulsory Deposit Scheme in its application to additional dearness allowance as from 6th May, 1977. Having regard, however, to the state of the economy and the inflationary pressures that exist, I propose to continue the Compulsory Deposit Scheme for Income-tax Payers for another two years.

(c) *Taxation of capital gains*
(i) Capital assets which are held by a taxpayer for a period exceeding 36 months are proposed to be termed "long-term capital assets"; at present the holding period must exceed 60 months.
(ii) At present, the taxpayer may, in respect of old assets, at his option, substitute the market value of the capital asset as at January 1, 1954 in place of the actual cost of acquisition. It is proposed to replace the market value as at January 1, 1964 in place of January 1, 1954.
(iii) Where sale proceeds, or a part thereof, realised from the transfer of a capital asset are invested in specified assets within a period of six months of the transfer and are so held for a period of three years, the capital gain, or a part thereof, as the case may be, is intended to be exempted from tax. The specified assets include government securities, Units, shares in Indian companies and deposits in banks.

It is my belief that the present structure of capital gains taxation stands in the way of adequate mobility of investible resources, and perpetuates investment in low priority assets. In this view, I am proposing certain changes in our existing scheme of capital gains taxation.
(a) At present capital gains arising from the transfer of a capital asset held by a taxpayer for a period exceeding 60 months alone are entitled to concessional tax treatment. With a view to improving mobility, I propose to reduce the holding period to 36 months.
(b) In respect of capital assets acquired prior to the 1st of January, 1954, a taxpayer has the option of adopting the fair market value of the asset on 1st January, 1954, in place of the actual cost of acquisition. Determination of the fair market value of a capital asset with reference to a date more than 23 years ago presents practical difficulties. Moreover, capital gain arising from the transfer of assets held over a length of time is, in a world of rapid and continuing inflation, to a great extent illusory in nature. On the whole, therefore, it seems to me desirable to advance the notional date by 10 years, namely, to 1st of January, 1964.
(c) Capital gains tax is payable on the sale of a residential house. The existing law provides that if another residental house is either purchased or constructed within a specified time, then the capital gains can be wholly or partially exempted depending upon the amount of capital gains utilised on the new residential house. Similar concessions are not available in respect of capital gains arising from sale of assets, such as jewellery or shares. I see no reason for drawing such a distinction. Accordingly, I propose to exempt the capital gains from tax, if the sale proceeds of any asset are reinvested within six months in shares, bank deposits, units of the Unit Trust or other preferred assets. In order to prevent abuse of this concession, it is required that the assets in which the sale proceeds have been reinvested are held for a period of not less than three years.

(d) *Passage Moneys*
It is proposed to grant tax exemption for passage moneys received by a foreign employee from his employer in respect of his children studying in a foreign institution and proceeding to India during vacation.

(e) *Remuneration received in foreign currency*
50 per cent. of the remuneration received in foreign currency by an employee for approved services rendered outside India is proposed to be exempted from Indian income-tax, whether the remuneration received is from an Indian or a foreign employer.

Fifty per cent. of the remuneration received by Indian technicians from a foreign Government or a foreign enterprise for services rendered outside India is exempt from income-tax. We cannot justifiably deny this concession when the employer happens to be an Indian concern. I propose accordingly to enlarge the scope of this concession to cover Indian technicians employed by Indian concerns in any branch or office outside India.

(f) *Deduction of tax at source*
Non-company shareholders, who do not have taxable income, may receive dividends from a company not exceeding Rs. 250/— without deduction of tax at source, provided they file a declaration in the prescribed form and verified in the prescribed manner with the dividend paying company

Deduction of tax from small dividends has been a source of considerable hardship to a large number of small investors in joint stock companies. With a view to avoiding inconvenience to such investors, and in particular to investors from rural areas, the requirement of deduction of tax at source

from dividends will be waived in cases where the dividend paid does not exceed Rs. 250.

(g) *Rates of wealth-tax*

It is proposed to raise the rates of wealth-tax by ½ per cent. on net wealth exceeding Rs. 2,50,000; however, on net wealth exceeding Rs. 15,00,000, the proposed increase is 1 per cent.

It is my feeling that wealth-tax rates were reduced in the Budget of 1976 to an unjustifiable extent. If the essential objective of a wealth-tax is to be achieved, it must be so devised that while it does not become oppressive and counter-productive, it does have an effect on excessive accumulation of wealth in individual hands. In this view of the matter, I propose to raise the rates of wealth-tax. The existing rate of half per cent. will continue unchanged on the first Rs. 2.5 lakhs [4] of net wealth, but for the higher slabs there will be an increase of half a per cent. over the existing rates, while in the highest slab of over Rs. 15 lakhs, the new rate will be three and a half per cent., that is, an increase of one per cent. over the existing rate. There will be corresponding changes in the rates applicable to Hindu undivided families having one or more members with net wealth exceeding Rs. 1 lakh. The new rate schedule will come into force from the current assessment year and will thus supersede the changes made last year in the rate schedule. These changes will result in an additional revenue of about Rs. 10 crores in 1977-78.

INDIRECT TAXES

1. One per cent. general excise duty levied on commodities not attracting excise duties under any specific head, is proposed to be raised to two per cent.

2. Present system of taxing cinematograph films is intended to be changed to ad-valorem duty. Specific rates of duty on pigments, paints, varnishes, etc. are proposed to be replaced by ad-valorem rates.

3. Excise duties are proposed to be raised/readjusted on

(a) Hand/small tools, weighing machines, watches/clocks, electric light fittings, polish for footwear and acetylene gas etc.

(b) Cigarettes and biris (hand-made Indian cigarettes).

(c) Cars and scooters.

4. Excise duties on products of handloom and power loom are proposed to be reduced or abolished.

5. Relief from excise duty is suggested to small paper mills, match box industry, mini-steel plant, confectionery and electronic industry.

6. Reduction in import duty on newsprint is proposed.

4. One lakh is 100,000.

TACHSHIV IN ISRAEL – An Addendum

In Professor Arye Lapidoth's article on The Israeli experience of using the Tachshiv for estimating the taxable income, *published in this Bulletin's 1977/3 issue at page 99, footnote 12 at page 106 refers to the Income Tax Amendment* Law *(No. 25). This reference is due to a printing error. As clearly appears from the accompanying text the Bill had not yet been enacted at the time the article was written and published.*

*Now the enactment has taken place and the new amendments are embodied — with an essential change as compared to the provisions of the Bill — in the Income Tax Amendment Law No. 25 of 16 March 1977, published in the Book of Laws (*Sefer Ha-Chukkim*) No. 860 of 31 March 1977.*

The essential change concerns the exclusion of the proposed Sections 145A and 153(c). This means that neither the word "tachshiv" nor the "highest obtainable income" assessment have become part of the Law. In this respect, the author's assumption expressed in the last two paragraphs of his article (p. 106) has not materialised.

An up-to-date version of the author's article is contained in Chapter 14 of a comprehensive and comparative study which just appeared as Volume 4 in the series Selected Monographs on Taxation, *a joint publication of Harvard Law School International Tax Program and the International Bureau of Fiscal Documentation:* Arye Lapidoth, *The Use of Estimation for the Assessment of Taxable Business Income (with special emphasis on the problems of taxing small business), Amsterdam 1977, 166 pages. As stated by Professors Oliver Oldman and J. van Hoorn Jr. in their Foreword to Professor Lapidoth's study, "foreign tax experts. . . in lending assistance to developing countries. . . have more than once adverted to the problem of taxing small business effectively". And: "The present monograph. . . examines the full range of literature available in English and organizes it for understanding and adaptation. It gives those who must design practical systems a number of measures to choose from and warns of the difficulties that would undoubtedly be encountered during implementation".*

TAX REFORM IN EGYPT*

Discussion of a reform of the present tax system has been going on since 1974, after the introduction of the new open-door economic policy which aims at encouraging Arab and foreign investment to the country. The proposed tax reform aims at coordinating the present tax system with this new investment policy while at the same time providing more stability and security for the taxpayer and a system which deals more equitably with the poorer elements of the community. A commission including members of parliament, businessmen, academics and members of the profession was set up to examine the possibilities and at the beginning of 1977 a number of amendments was drafted for consideration by parliament — the discussion which had dragged on over several years finally having been speeded up by violent popular demonstrations against massive price increases and the government's need to meet the Budget deficit. The draft amendment can be summarised as follows:

I. TAXATION OF INCOME

1. Consolidation of the tax rate of the schedular taxes; a basic tax is at present levied together with a number of smaller taxes such as defence tax, national security tax and local government tax. Thus, the present tax on industrial and commercial profits is levied as follows: a basic 17 percent + 10.5 percent defence tax + 8 percent national security tax + 1.7 percent local government tax making a total of 37.2 percent. In future one single rate will be levied made up of a basic tax plus the various supplementary taxes.

2. Changes in the rates of the majority of the schedular taxes and of the general income tax. The present and proposed rates are shown below:

A. Schedular Taxes

i) Tax on income from movable capital:
a) present rate (17 percent basic rate + 10.5 percent defence tax + 8 percent national defence tax + 2.55 percent local government tax) = 38.05 percent
b) proposed rates (progressive):

L.E. Up to	*Rate (%)*	*L.E. Up to*	*Rate (%)*
500	29.5	4000	36.5
1000	31.5	Over	
2000	33.5	4000	38.5

A supplementary local government tax of 2.55 percent of the tax base is levied in addition.

ii) Tax on industrial and commercial profits:
a) present rate (17 percent basic rate + 10.5 percent defence tax + 8 percent national security tax + 1.7 percent local government tax) = 37.2 percent
b) proposed rate = 37.2 percent

iii) Tax on salaries, wages etc.:
a) present basic rates:

L.E. Up to	*Rate (%)*	*L.E. Up to*	*Rate (%)*
100	2	1350	11
250	3	1850	13
400	4	2850	15
550	5	4850	18
750	7	Over	
1050	9	4850	22

Plus (1) a defence tax levied as follows:

L.E. Up to	*Rate (%)*	*L.E. Up to*	*Rate (%)*
400	1.5	800 to 1200	5
400 to 800	2.5	Over 1200	6

and (2) a national security tax which is levied as follows:

L.E. Up to	*Rate (%)*	*L.E. Up to*	*Rate (%)*
400	1	800 to 1200	3
400 to 800	1.5	Over 1200	4

b) proposed rates:

L.E. Up to	*Rate (%)*	*L.E. Up to*	*Rate (%)*
60	2	1200	16
120	3	2400	18
180	5	4850	20
240	7	Over 4850	22

The above rates of defence and national security tax will be added to these taxes.

iv) Tax on income from non-commercial professions:
a) present rates:

L.E.	(basic rate	+ defense tax	+ national security tax)	= *total rate*
Up to	%	%	%	%
1500	11	+ 10.5	+ 8	= 29.5
2000	13	+ 10.5	+ 8	= 31.5
3000	15	+ 10.5	+ 8	= 33.5
5000	18	+ 10.5	+ 8	= 36.5
Over 5000	22	+ 10.5	+ 8	= 40.5

b) proposed rates:

L.E. Up to	*Rate (%)*	*L.E. Up to*	*Rate (%)*
1500	29.5	5000	36.6
2000	31.5	Over	
3000	33.5	5000	38.5

B. General Income Tax

a) present rates:

L.E. Up to	*Rate (%)*	*L.E. Up to*	*Rate (%)*
1000	exempted	6000	40
1500	8	7000	50
2000	9	8000	60
3000	10	9000	70
4000	15	10000	80
5000	25	Over 10000	95

b) proposed rates:

L.E. Up to	*Rate (%)*	*L.E. Up to*	*Rate (%)*
1200	exempted	15000	25
2000	8	20000	30
3000	9	30000	35
4000	10	40000	40
5000	11	50000	45
6000	12	60000	50
8000	15	70000	60
10000	20	Over 70000	70

3. Raising of the family allowance from 360 L.E. to 500 L.E. with no ceiling on the maximum income which may benefit from this allowance. This proposal was enacted in February 1977.

4. In order to encourage saving, interest on resident and non-resident bank and post office accounts will be exempt from tax.

5. Introduction of accelerated depreciation rates to encourage capital investment and the renewal of fixed assets. Exemption from tax on interest from bonds and securities in order to activate the stock market.

6. Extension of the tax on industrial and commercial profits to income derived by individuals from cattle breeding and poultry raising, bee-keeping and rental of agricultural machinery and also to income from single transactions such as commission.

7. Application of the general income tax to farming income in excess of 1200 L.E. per annum.

8. Increase in the use of deduction of tax at source; for instance wholesalers will be required to add a certain percentage for tax purposes to their bills to retailers and similar arrangements will apply between contractors and sub-contractors.

II. TAXATION OF WEALTH

1. All taxpayers whose income exceeds 500 L.E. must file a wealth return. Spouses may opt to file a joint return although in the case of sales or gifts between them a joint return is compulsory. The provision regarding the filing of a wealth return was enacted by Law No. 2 of 1977.

2. Introduction of a tax on capital transactions relating to land, buildings and motor vehicles.

It is generally believed that the remaining proposals will be enacted with only minor changes although there is understandably

* Based on information supplied by Dr. Ahmed H. El-Gowainy, Director General of Research, Ministry of Finance, Egypt, U.N. Expert on Finance, Somalia.

strong opposition to the idea of taxing farming income in a predominantly agricultural country like Egypt and the introduction of the wealth tax return has resulted in the shifting of wealth from immovable property to movable and less obvious sources such as gold and foreign currency. Taxpayers' hopes that the supplementary taxes to the basic schedular taxes would eventually be abolished have also finally vanished with their inclusion in the basic rates. It seems unlikely that these tax changes will result in a reduction of the budget deficit since any extensions or increases in taxation or more steeply progressive rates of tax are offset by decreases in taxation or a less steep progression and increases in relief and allowances.

Besides this, the timing of the tax changes is generally felt to be unfortunate since the discussion concerning the amendment has been so prolonged that it has allowed certain taxpayers to alter their present tax position in order to obtain the most favourable results once the new amendments are enacted or to lessen the impact of these amendments on themselves.

XVIII INTER-AMERICAN CENTER OF TAX ADMINISTRATORS TECHNICAL CONFERENCE*

This Conference took place at Montevideo from March 14 to 19, 1977, and was organized by CIAT, a governmental organization formed by countries of North, South and Central America. In addition to the participants from the member countries observers attended from the Federal Republic of Germany, Spain, Italy, Korea, Ghana, Swaziland, Thailand, and ten important international organizations such as the European Economic Community, the International Monetary Fund and the IFA, which I represented.

The only topic considered was "Tax aspects of the activities of multinational companies" and many papers were presented. The conclusions of the Final Report are undoubtedly of international importance, as they represent the official pronouncement of the administrations of an important group of countries including some like Argentina and the members of the Andean Pact, which had adopted a radical position in front of the multinational companies in defense of their fiscal interests. In the scientific area there had been no agreement with this radical position, not even with the Latin American position, as shown in the Seminar of the XXVIII IFA Congress which was held at Mexico in 1974 (this Bulletin, Vol. XXIX, pp. 51, 59, 91, 99 and 179, and *Fiscal Harmonization in the Andean Countries*, International Bureau of Fiscal Documentation, Amsterdam, 1975); at the XXIX Congress at London in 1975 (this Bulletin, Vol. XXX, p. 31); and in the VII Latin American Meeting on Tax Law which took place at Caracas in 1975 (this Bulletin, Vol. XXX, p. 16).

The recommendations approved by this CIAT Conference are distinguished by their moderation and rationality and may be considered similar to the opinions expressed in the seminar mentioned above and in IFA and CLADT resolutions. These characteristics are of particular interest with respect to the tax treatment of contractual relations between a head office and its branches and subsidiaries. In contrast with the solutions of the Andean Pact Model and the Argentine legislation and jurisprudence of the 1971/76 period, the recommendations tacitly accept debits and credits related to royalties, technical assistance and interest when proposing procedures for discouraging tax evasion, first with respect to the arm's length price (Rec. III, b1) and then, more specifically, for combating the remittance of profits abroad under the most favourable tax system, which generally applied to payments of those intangible goods (see last part of the Recommendation, III).

This tacit acceptance did not result in observations or reserves from the Andean Pact members or from Argentina which is no surprise since Argentina as well as Chile has reacted against the position of denying the existence of those contractual relations for tax purposes. The recent law of December 1976 has revoked the prior legislation on multinational companies and at present accepts the effectiveness of those contracts, considering them as being signed by independent enterprises when they fit usual practices of the market, with some limits tending to prevent evasion.

The recommendations of the Conference, Chile's desire to separate from the Andean Pact, and the reform of the Argentine legislation disclose an evolution that leads one to expect a normalization of the criticized prior position in a policy which contemplates both the economic reality, and therefore the rights of the taxpayers, and the legitimate fiscal interests of the countries where they act.

The other recommendations should not cause any problems, as they follow generally admitted solutions. For example, there was not very much advance with respect to the exchange of information by the fiscal administrations (Rec. V). In the fight against tax evasion by the use of tax havens, the solution adopted is the base of assumptions as in the recent French legislation (Rec. IV). Also the final Report contains definitions of some acts and situations connected with the topic discussed that may arise. For example, one observation referred to tax avoidance which is, in my opinion, erroneously identified with violations of the law.

* This summary was supplied by Prof. Ramón Valdés Costa, Montevideo.

TAX GLOSSARY

by H.W.T. PEPPER *

BACHELOR TAX – Most income tax systems contain, in effect, a tax on bachelors (and spinsters) because the reliefs granted to married persons are greater than those to single persons. In addition social security payments are commonly levied at the same level both for single and married persons although the latter stand to gain greater benefits where benefits are payable for wives and children as well as for the contributor. Although a specific bachelor tax is encountered from time to time, in general fiscal systems are sufficiently "loaded" against the single person for a specific additional tax to be unnecessary.

BACK DUTY – The term normally used in Britain to apply to tax for previous years which has been computed in the course of an investigation into cases of tax-evasion.

BACK TO BACK – The term "back to back" is used for the situation where a person or organization obtains financial credit in one country on the strength of his resources in another country. The credit will usually be granted by an international bank or financial organization which does business through branches, subsidiaries or affiliates in both the countries concerned.
Back to back facilities may often be employed legitimately for circumventing difficulties in international trade or investment created by exchange control restrictions.

BAD DEBTS – An allowance for bad debts, or for doubtful debts where the probable loss is precisely estimated, is usually authorized in income tax and sales tax law where the income or sales are calculated on the EARNINGS or ACCRUALS basis (q.v.) to include sales, or the potential profit from sales in advance of such sales being actually paid for. No such allowance is possible where cash income or cash sales are taxed since the unpaid debts never rank in the tax calculation in the first place.

BADGES OF FRAUD – Penalties for tax offences are usually steeper where there has been wilful evasion, as distinct from inadvertent omission. Professor Oldman has listed a number of "Badges of Fraud" to identify situations where there is an inference of fraudulent evasion leading to possible prosecution, or the imposition of heavier penalties, as follows:—

1. Repeated claiming of improper deductions over several years especially where the taxpayer might be presumed to know better.
2. Where omissions made are of such a character and magnitude that a taxpayer cannot reasonably claim to have overlooked them or to have been unaware that liability existed.
3. False statements, especially if made under oaths about material facts.
4. Keeping a double set of books.
5. False entries or alterations in books and records, false invoices or other documents.
6. Destruction of records or books, especially if done in anticipation of investigation and for non-statute-barred periods.
7. Failure to keep records after having been advised or required to keep them.
8. Concealment of assets by use of aliases or nominees.
9. Consistent concealment, without adequate explanations, of large sums of cash, or the unexplained use of cash in business transactions.
10. Concealment of income in secret bank accounts, or by conducting a brokerage or commission account under a false name, or by use of safety deposit boxes.
11. Claiming non-existent dependents.
12. Use of multiple addresses or frequent address changes without apparent business reason.

BADGES OF TRADE – In the case of isolated transactions not forming part of a regular trade or business it is necessary to consider the circumstances surrounding transactions in order to decide whether any profit or loss arising may be regarded as arising from trade. Various factors have been identified in case law as forming the "Badges of Trade", an expression used by Lord Radcliffe in his judgement in Edwards v Bairstow and Harrison (36, T.C. at page 230). If one of the badges of trade is present there is an inference that the transactions were in the nature of trade.
The items identified as badges of trade are:—

(a) the existence of an organization, or a degree of organization, with regard to the transactions;
(b) activities which lead to the materialising of the assets to be sold;
(c) the existence of a special skill or of special opportunities in connection with the article to be dealt with; or
(d) the fact that the *nature* of the asset lends itself to commercial transactions.

BALANCING ALLOWANCES AND CHARGES – Adjustments made on the sale of assets which have been the subject of depreciation or capital allowances for tax purposes. When the assets are sold, destroyed, or scrapped the sum received from the sale, insurance policy, or scrap proceeds is compared with the depreciated or written-down value and any deficit or shortfall below that value is allowed as a deduction to the taxpayer. Where the depreciation deductions already given for tax purposes exceed the actual deficiency between cost price and disposal proceeds the surplus may be made the subject of a charge in the taxpayer's tax computation.

BAREMA/BAREME – Tax table (Belgium).

BAREME – Tax table (France).

---

* *With the assistance of the staff of the International Bureau of Fiscal Documentation.*

BARTER – Barter transactions have significance, e.g., for income tax, in that one trader may supply goods or services to another and obtain reciprocation in kind in the course of friendly and legitimate arrangements which may, however, not be properly recorded for income tax computation purposes. Where goods are supplied without payment it is necessary in order for the value of what is supplied to be credited that there have been a corresponding debit in the trader's accounts when he purchased the relevant goods (see also CONTRA ACCOUNTS and CAPTIVE USE).

BASE STOCK – This term denotes the stock of materials necessary in certain industries as an irreducible minimum because of the need to "clothe" the machinery in continuous processes, particularly in textiles. Briefly, no production can be obtained until a certain quantity has been fed in and the usable product is what is obtained after the initial "clothing" process. The base stock cannot be extracted and disposed of in practive because it would then be necessary to re-clothe the machinery (an expensive operation) before new production could be commenced. The term applies equally to oil or other substances in a pipeline, or semi-manufactured or processed materials in plant. One theory is that the stock "in process" should not be revalued each year but treated, in effect, as part of the cost of the plant or machinery since the latter cannot function without the former. Some countries have allowed the use of the L.I.F.O. method of valuation of stock (q.v.) which effectively incorporates a static value for base stock. A somewhat analogous situation arose in connection with a stock of parts (knives and lasts) which had to be fitted to machinery in a leather factory to adapt it successively to manufacturing different products. In that case, however (Hinton v Maden and Ireland, 38 T.C. 39), the "parts" were held to be "plant and machinery".
exempt if his income fell below a certain figure, or he might be entitled to various allowances or deductions in computing taxable income or his "tax base". (See also CASH BASIS, EARNINGS BASIS, TAX-INCLUSIVE and TAX-EXCLUSIVE BASIS.)

ASIS OF ASSESSMENT – See ASSESSMENT and BASE, TAX.

EARER LEVY – "Bearer" securities are often preferred to registered stock by investors because of greater ease in transferring ownership. Some, however, use the anonymity of a bearer holding to evade income tax. Accordingly, some countries impose a withholding tax on the income from bearer securities. The holder can only obtain credit for the tax withheld if he declares the investment income on his tax returns.

BEDRIJF – Enterprise (Holland).

BEDRIJFSINKOMSTEN – Earned income (Belgium) (Note: in Holland – income from a business).

BEDRIJFSMIDDELEN – Fixed assets (Holland).

BEDRIJFSVOORHEFFING – Wage tax (Belgium).

BELASTING – Tax (Holland).

BELASTING DER NIETVERBLIJFHOUDERS – Income tax on non-resident individuals and entities (Belgium).

BELASTINGKREDIET – Tax credit, see also AVOIR FISCAL (Belgium).

BELASTING OP DE TOEGEVOEGDE WAARDE – Value added tax: "BTW" (Holland).

BELASTINGPLICHTIGE – Taxpayer (Holland).

BELASTINGVERDRAG – Tax treaty (Holland).

BELEGGINGSINSTELLING – Tax exempt investment fund.

BENEFICE – Gain or profit.

BENEFICE CONSOLIDE – Aggregation of the income of a French domestic company and of its foreign subsidiaries for tax purposes.

BENEFICE MONDIAL – Aggregation of the income of a French company and its foreign permanent establishments.

BENEFICIAL OCCUPATION – The occupation of land or real property either rent-free or at a rent less than the rent which could be obtained in an arms' length letting. The value of the beneficial occupation, i.e., what the property is worth on annual letting, less what, if anything, is paid for occupation, may represent taxable income to the occupier. Where beneficial occupation is a perquisite attached to an appointment the benefit obtained may be statutorily regarded as part of the remuneration of the employment. The occupation or use of real property is usually dealt with slightly differently from, say, the free use of a motor-car or yacht and other types of fringe benefits the value of which, however, may also be subject to taxation upon the beneficiary.

BENEFITS IN KIND – Also sometimes included in "fringe benefits", the term refers to earnings, usually from an employment, other than those received in cash. Examples are free or subsidised housing, free use of a car, free or subsidised meals. In the case of income tax some or all of the benefits may be valued and added to the cash income in assessing the income charge. For sales tax the entrepreneur may benefit from taking goods etc. from stock for his own use and most sales tax codes provide for the value of such benefits to be included in the tax charge. Some benefits in kind (e.g., free coal to miners) are traditionally exempt from tax on recipients in certain countries, notably the U.K., which, however, has legislated to make certain benefits specifically taxable on directors and higher salaried employees to prevent abuse. (See also FRINGE BENEFITS.)

BEQUEST TAX – Also sometimes known as "legacy duty", "transmission tax", or "succession duty", the tax is levied on assets of a decreased person bequeathed to an heir. The tax may be accompanied by a tax on the estate as a whole, often at graduated rates on the aggregated assets.

BETRIEB (also GEWERBEBETRIEB) – Enterprise.

BETRIEBSAUSGABEN – Business expenses.

BETRIEBSEINNAHMEN – Business income.

BETRIEBSTÄTTE (also BETRIEBSSTÄTTE) – Permanent establishment.

BETRIEBSVERMÖGEN – Capital invested in a business.

BETRIEBSVERMÖGEN, GEWILLKÜRTES – That part of the taxpayer's capital which he may elect to consider either to belong to his business capital or to his private capital.

BETRIEBSVERMÖGEN, NOTWENDIGES – That part of the taxpayer's capital investment which belongs necessarily to his business capital.

BETTERMENT TAX – The term is used in three different senses, (a) to refer to taxes based on rent or annual or capital value of lands and property bene-

fitting from drainage, irrigation, or other improvement schemes. The pre-improvement tax base is usually increased by a percentage varying with the amount of improvement the land has received. The next type of tax (b) is that on the increase in value of a piece of land when permission has been given by the Planning Authority to change its use, e.g., from agricultural to residential to office-block development. Another instance (c) is where there has been improvement of the kind referred to in (a) or where a wilderness has been given a value because of governmental expenditure on roads and on making public utilities available.

In the case of (b) the charge to tax may be made when permission to develop or "convert" to another use is given or else when the development or conversion takes place. The increase in value within (c) may be taxed by making periodical valuations of the land affected by the state's development schemes and charging tax on the increase in value over the period.

BETTING TAX – This tax is usually a "sales" or turnover tax on bets made, either through a totalisator, in which case it is a simple matter to compute a percentage of the gross amounts wagered, or on the bets waged with bookmakers on race-courses or in betting-shops off the course. In addition the tax may be levied on the amounts staked on football pools, and on the "house" percentage in the case of a casino (where it would usually be impracticable to tax the gross amounts staked). It is usual to charge a slightly lower tax rate on bets made on the course than on off-course bets, e.g., in the U.K. course betting is taxed at 5 percent, while 6 percent is charged on the betting shops.

BEWERTUNG – Valuation.

BEWERTUNGSFREIHEIT – Term used to indicate that certain business assets (usually those whose purchase price is relatively low) may be written off in the year in which they were acquired. (See also FREE DEPRECIATION.)

BEWIRTUNG (AUFWENDUNGEN FÜR DIE) – Entertainment (expenses).

BICYCLE TAX – A tax levied in some countries on the use of bicycles, usually as a small annual licence fee. The subject has been discussed from time to time in Britain but as a means of raising revenue is marred by the comparatively high cost of collection even if it were socially acceptable. Such a tax would be unlikely to be initiated in countries where there is concern over the pollution and road and environmental hazards, caused by the sedentary habit of car-driving where there was already a move towards greater use of bicycles for healthy recreation. In some small countries the bicycle tax, involving registration and identification number for each machine, has been a factor limiting to some extent the scope for bicycle thieves. The island of Guernsey which raises annual revenue of £90 from a £0.125 bicycle tax is currently considering abolition.

BIENS D'INVESTISSEMENT – Fixed assets (capital goods) (term in particular used in Belgian VAT law. In France, usually, "immobilisations").

BIJHUIS – Branch office (Belgium).

BILLS OF EXCHANGE TAX – A tax on bills of exchange and other commercial documents is an example of a tax on transactions which is often resorted to to raise revenue, usually on the basis of a low rate of tax applied to a fairly wide tax base. A disadvantage is that particular forms of transactions are penalised and the tax may be avoided by completing the transaction in some other form so that equity is lost and there is distortion of the form that commercial transactions take. There is also a serious lack of equity where some goods pass through more distribution stages than others and so attract more applications of tax.

BINGO DUTY – A tax at 2½ percent levied in Britain, effectively on amounts staked in Bingo games. Duty is also charged at 1/39th of any amount by which the value of the prizes exceeds the duty-exclusive value of the stakes. (Other names for Bingo include "Housey-Housey", "Lotto" and "Tombola".)

BLIND SPOT – Term originally used by Professor John Due to refer to gaps in price ranges of goods under British Purchase Tax at time when tax was not levied on "utility" goods made to certain specifications and price, but on goods of the same type when produced to higher quality and price. Goods at a slightly higher (taxed) price could not be produced or sold so that there developed an unusual gap in the price range. The phenomenon may also occur where goods which for some reason are tax-free (e.g., clothing specially designed for industrial use) compete with other goods (e.g., fashion clothes) where substitution has become possible because of fad or fashion changes.

BLUE RETURN SYSTEM – A feature of Japanese income tax administration is that where an individual or corporation can satisfy the tax department that his book-keeping standards are reasonably good, he may be permitted to make his tax declarations on blue return forms. In that case he will not be subjected to arbitrary estimated assessments and will be entitled to certain tax privileges. The most important privileges are the right to carry a net tax loss back one year and forward for five years, and the right to claim the special increased depreciation on fixed assets and other extra depreciation allowances. In addition, the blue return (individual) taxpayer may deduct from taxable income an allowance based on the volume of export sales and a corporation may claim a special incentive credit where it can show an increase in research and experimental expenditure.

BODY OF PERSONS – Income Tax is usually levied at graduated rates on individuals and at a flat rate on companies and corporations. The term "body of persons" is a collective one usually referring to impersonal entities such as companies (corporations), statutory undertakings, associations, societies, unions, and trusts. Partnerships of individuals are not, however, regarded as bodies of persons for tax purposes since tax will be calculated by reference to the respective circumstances of the individual partners. Some bodies of persons may be entitled to exemption or special tax treatment because of the charitable nature of their activities or for other reasons, but apart from that consideration tax will usually be charged upon them at a flat rate without reliefs or abatements.

BONDED WAREHOUSE – A warehouse where dutiable or taxable goods may be stored without payment of tax, the latter being payable when goods are withdrawn from the warehouse for sale or delivery to a buyer. The warehouse is often kept under two locks the key of one of which is retained by the tax department who supervise the taxing of the goods withdrawn when the trader wishes to remove some of the goods stored. In addition the trader or owner of the warehouse is normally required to put up a bond to cover the amount of tax that might be at risk if there were irregular withdrawals with the connivance of the trader or theft or burglary by others. The system is particularly used for highly taxed goods such as spirits and tobacco.

BONDS — The word has more than one meaning — the most widely used meaning is that of an interest-bearing loan to a government or entrepreneur. A "bond" is also the security given by a taxpayer for the payment of taxes and may consist of a deposit of cash in advance of payment becoming due, or merely an arrangement with a bank or other guarantor that a certain sum will be paid on the taxpayer's behalf in the case of his tax default. In some countries the putting up of bonds on a taxpayer's behalf for a consideration has been developed by professional bondsmen, the best example being the U.S. "Bonds" in the first-mentioned sense also are sometimes sold to those who are able to pay their tax in advance. The bonds* in question can usually be proffered directly in payment, and bear interest, for the period held, which may be tax-free. (*See TAX RESERVE CERTIFICATES.)

BOND-WASHING — The method, usually adopted by individuals in HIGH INCOME TAX BRACKETS (q.v.), to avoid receiving (taxable) income from bonds and other investments they hold. The bonds are sold cum-dividend and later re-purchased ex-dividend so that the taxpayer does not receive income but makes a profit on the higher capital value attached to cum-dividend, as compared with ex-dividend, bonds.

BONI DE LIQUIDATION — Liquidation distribution.

BONUS SHARE TAX — Bonus shares, also known as "stock dividends" are a recurring subject for suggestions that they should be taxable, usually from a misconception that they represent income to the recipient. An ordinary issue of shares, however, merely increases the nominal value of a taxpayer's holding of shares in a particular company without increasing his total share in the equity capital. Where, however, a company distributes redeemable loan capital, or shares in other companies, there is a real distribution of money's worth and tax liability will arise.

BOOKS, STATUTORY — In most countries certain standards of book-keeping, involving compulsory keeping of certain types of records, are enjoined by law, either in the general commercial code or in laws specifically relating to corporate bodies or other forms of commercial entities. It is fairly common for Customs and Excise laws to stipulate that certain types of records should be kept and in some countries such stipulations are also contained in sales tax and income tax legislation.

BORDER ADJUSTMENTS — The term used to refer to (a) adjustments, normally refunds, of sales tax on the export of goods from one country to another, particularly the European Common Market countries where VAT (and previously cascade taxes) are embodied in goods up to the time they reach the frontier for export; and (b) the imposition on imports of taxes corresponding to the internal taxes of the importing country. (See also AUSGLEICHSTEUER, AUXILIARY, CATALYST.)

BOYCOTT, INTERNATIONAL — If a (USA) person or company takes part in an international boycott in the course of his business, foreign tax relating to the income attributable to the boycott factor would not be allowed in computing his foreign tax credit. (Lesser) Relief may, however, be allowed by deducting the disallowed tax in computing profits for tax purposes.

BRACKETS — The term used to refer to the range of taxable income subjected to a particular rate of income tax, and to other taxable items, e.g., wealth or capital, which are charged to tax at graduated rates. For example the first $1,000 of income might be taxed at 10 percent, the next $1,000 at 20 percent and so on. A person with an income of $1,500 would be regarded as falling within the $1,001 to $2,000 "brackets". The concept is also used for other taxes whereby a scale of specific tax charges is constructed to avoid the fractions that would arise by using a strict ad valorem calculation. For example, a car tax might be charged at $30 for up to 1,000 c.c.s. cylinder capacity, $60 for those between 1,000 and 2,000 c.c.s.

BRAIN TAX — See ACADEMIC TAX.

BRANCH OF FOREIGN COMPANY — See FILIALE DI SOCIETA ESTERA (Italy).
See BIJHUIS (Belgium).

BRANCH TAX — Treatment of branches for French corporate tax is subject to certain options — see BENEFICE CONSOLIDE and BENEFICE MONDIAL.

BRIBES, FOREIGN — The USA now has specific provisions taxing illegal foreign bribes, kickbacks, or similar payments as if they were distributions to U.S. shareholders under Subpart F.

BRITISH PREFERENTIAL TARIFF — To qualify for the British Preferential Tariff, goods imported into *Canada* must have 50 percent British (or Commonwealth) content and be shipped direct from a British (or Commonwealth) port. The tariff applies favourable duty rates to goods from British Commonwealth countries.

BROUGHT-IN ASSETS — A term used in connection with British PETROLEUM REVENUE TAX (q.v.), applying to plant used in exploiting North Sea oil. Allowances up to 175 percent of value may be given on plant (including ships) brought into the area of the mineral deposit working, provided allowances have not already been given in the same field for the same plant.

BRUSSELS DEFINITION OF VALUE — The "Brussels definition" of value for customs purposes has been widely adopted not only by countries using the Brussels nomenclature but by others using different systems, largely because it is important to have internationally-accepted methods of valuation of goods entering into international commerce. The basic definition (Article I (1)) is "For the purpose of levying duties or customs, the value of any goods imported for home consumption shall be taken to be the normal price, that is to say, the price which they would fetch at the time when the duty becomes payable on a sale in the open market between buyer and seller independent of each other". The various terms used in this definition are defined at length in the remainder of Article I and in Articles II and III and in the interpretative notes and addenda to those Articles.

BRUSSELS TARIFF NOMENCLATURE (BTN) — The Brussels Tariff Nomenclature (BTN) is the internationally recognised standard classification of goods for *customs* purposes. The BTN is intended to provide a systematic classification covering all goods in world trade thus providing a "common customs language" to simplify international tariff negotiations. Over 100 countries, providing about 80 percent of the world's export and import trade, have adopted BTN and others are in the course of adopting it.
For *statistical* purposes the S.I.T.C. (Standard International Trade Classification) established by the United Nations Statistical office is usually adopted and current editions of the BTN provide correlated S.I.T.C. reference numbers.

BUFFER RULE — The rule, in the French V.A.T. system, whereby when credits

for the V.A.T. content in purchases cannot be wholly offset against the tax due on deliveries, the unrelieved excess could be carried forward for offset against the tax due in subsequent tax periods. Formerly the excess credits could not, however, be repaid as France had no refund provisions, except in respect of goods exported. Currently the Decree of February 4, 1972 provides for the refund of excess credit. Special provisions exist for excess credits which have been accumulated in the past.

BUILDING SOCIETY ARRANGEMENT — The interest due to depositors is paid at a percentage rate which is "tax-compounded", i.e., tax is paid at a composite rate by the society. The calculation of tax payable by the society is made by sampling the depositors and obtaining details of the average rate at which they each pay tax.

BUILDINGS TAX - See IMPOSTA SUL REDDITO DEI FABRICATI.

BUITENGEWONE LASTEN — Extraordinary financial burdens, personal expenses not connected with the acquisition of income, which are deductible under Dutch individual income tax law, if they are deemed to be more burdensome than they would have been for the average individual taxpayer.

"BUNCHED GAINS" — The term sometimes used to refer to accumulated gains in the value of assets which have been held for a number of years in a period of rising values, the gains being subject to capital gains tax wholly in the year the assets are disposed of.

BUOYANCY — The buoyancy of tax revenue is the expression used to describe the position where the yield keeps pace with or exceeds the rate of growth of a country's G.N.P. or rise in the retail price index. With income tax, buoyancy or increased yield is normally automatic where the tax rates are graduated because income increases put the taxpayer into higher tax brackets. In the case of sales taxes the same result is obtained where luxuries and semi-luxuries are taxed at higher rates than necessities because with greater affluence taxpayers spend a higher proportion of their incomes on the higher-taxed goods. In each case the tax revenue is arithmetically certain to rise at a more rapid rate than G.N.P. or retail sales provided evasion and avoidance are kept within bounds.

BURDEN, TAX — The "tax burden" is usually computed as the percentage which the tax yield bears to the national income (G.N.P. or G.D.P.). There is some degree of shading possible as to whether taxation should include all kinds of social security contributions, retirement provisions etc. as well as the more normal direct or indirect taxes. Where social security "taxes" are included there will be disparities in comparing one country with another, where one country has a state-run welfare scheme and the other leaves social security provision and insurances to the private sector.

BURIAL TAX — A tax sometimes levied to produce local government revenue, sometimes payable as a relic of manorial dues from the Middle Ages, but sometimes justified as an administration levy where the local government has responsibilities to ensure that burials are carried out with due regard to the relevant laws regarding certification of death, and with regard to sanitation etc.

BUSINESS ACTIVITIES TAX — The name sometimes given to taxes levied on the gross receipts of the business (see also, BUSINESS TAX, GROSS RECEIPTS TAX, TRANSACTIONS TAX). The term has also been applied by the state of Michigan to its tax introduced in 1953, in the form of an embryonic V.A.T., charged at low rates varying from 0.2 to 0.75 percent on sales and levied with the object, inter alia, of producing unhypothecated revenue for the State.

BUSINESS CYCLE EQUALISATION RESERVES — A system used in Sweden allows companies to make tax-free income tax reserves from business or agricultural income up to 40 percent (10 percent in the case of forestry).
46 percent of such reserves must be deposited by the company in a blocked account with the Swedish National Bank but the remainder may be invested elsewhere. The government may authorise expenditure of the reserves in particular ways or issue instructions as to their use in either of which instance a deduction from taxable profits would be allowed of 10 percent of the amount of reserves withdrawn. Where no special withdrawal permission is given, the company may commence withdrawal after 5 years, initially up to 30 percent of the reserves.
The purpose of the income tax allowances, which enable companies to defer payment of tax and profits, and in some cases to obtain a 10 percent deduction for reserves employed in business investments, is to spread investment more evenly over the business cycle, i.e., to try to even out fluctuations in the rate of investment which ordinarily is sensitive to upturns and downswings in the economy. In some instances the instructions by the government on the use of the reserves are to direct investment to particular regions where there is underinvestment.

BUSINESS TAX — The name given to certain taxes on businesses, often at a low percentage rate on sales, e.g., as a TRANSACTIONS TAX (q.v.) or GROSS RECEIPTS TAX (q.v.), rather than a tax on income. In effect such taxes are a form of sales tax.

BUTLERAGE — The name given to the tax on wine introducted in the reign of Edward I in the 13th century in Britain.

[to be continued]

U.S. TAXATION and the ARAB BOYCOTT

The U.S. Tax Reform Act of 1976 contained, inter alia, provisions denying certain tax benefits for U.S. taxpayers who participate in international boycotts. These provisions were general in many respects, delegating power to the Secretary of the Treasury to establish regulations which would implement the application of these provisions. One of the areas left to be established was a procedure whereby a taxpayer could get a determination by the Internal Revenue Service of whether an existing or contemplated activity would constitute participation in an illegal boycott. The Internal Revenue Service has now issued Revenue Procedure 77-9, which sets forth the procedure for obtaining such a determination. The Revenue Procedure is reprinted in full here.

A Brief Description of the New Rules

In setting forth the procedures for requesting a determination of participation in an illegal boycott, the Internal Revenue Service has separated the cases into two categories: where the person making the request is not under active examination or audit concerning the activity forming the basis of his request and where the person making the request is under active examination or audit. The information required of taxpayers in either category is essentially the same, however.

The taxpayer must provide a complete statement of all relevant facts. This includes the names of all interested parties. Copies of contracts and other documents must be provided, though this does not relieve the taxpayer of the duty to describe their contents in his statement. The taxpayer must express his opinion as to whether the activity in question is a participation in an international boycott and must cite authority for his view.

Where the taxpayer is not under active audit, a determination issued then will not be revoked or modified retroactively if there was no misstatement of facts, the actual developments did not vary materially from what was anticipated, the applicable law has not changed, the determination applied to a proposed transaction and the taxpayer relied in good faith on the determination.

When the taxpayer is under active audit, the conclusions of the National Office on boycott participation will be transmitted to the District Director of the district in which the audit is taking place. The District Director will proceed to process the taxpayer's case based on these conclusions or will ask for a reconsideration. A determination by the National Office will have retroactive effect where favourable for the taxpayer. It will have retroactive effect where unfavourable unless the Secretary of the Treasury exercises his discretionary power to limit the retroactive effect.

IRS REVENUE PROCEDURE 77-9 ON OBTAINING DETERMINATIONS AS TO WHETHER A PARTICULAR OPERATION CONSTITUTES PARTICIPATION IN ARAB BOYCOTT

SECTION 1.
Purpose.

This Revenue Procedure sets forth the procedures of the Internal Revenue Service pertaining to the issuance of determinations under section 999(d) of the Internal Revenue Code of 1954, relating to whether a particular operation of a person, or of a member of a controlled group (within the meaning of section 993(a)(3)) that includes that person, constitutes participation in or cooperation with an international boycott as defined in section 999(b)(3).

SEC. 2.
Background and General Information.

.01 Sections 1061 through 1064, and 1066(a) of the Tax Reform Act of 1976 (Pub. L. No. 94-445, 94th Cong., 2d Sess. (October 4, 1976)) (the Act) deny certain benefits of the foreign tax credit, deferral of earnings of foreign subsidiaries, and domestic international sales corporation (DISC) to a person, if that person, or a member of a controlled group (within the meaning of section 993(a)(3) of the Code) that includes that person, or a foreign corporation of which a member of the controlled group is a United States shareholder, agrees to participate in or cooperate with an international boycott.

.02 Generally, the provisions of the Act relating to the denial of such benefits are effective with respect to participation in or cooperation with an international boycott after November 3, 1976.

.03 In the case of operations that constitute participation in or cooperation with an international boycott and that are carried out in accordance with the terms of a binding contract entered into before September 2, 1976, the provisions of the Act apply to such participation or cooperation after December 31, 1977.

.04 Section 999(d) of the Code, added by the Act, provides, in part, that upon a request made by the taxpayer, the Secretary of the Treasury or the Secretary's delegate shall issue a determination with respect to whether a particular operation of a person, or a member of a controlled group that includes such person, constitutes participation in or cooperation with an international boycott.

.05 In Treasury News Release WS-1156, dated November 4, 1976, the Treasury issued guidelines relating to the anti-boycott provisions of the Act. The guidelines were also published in 41 FR 49923 on November 11, 1976. In those guidelines and in IR-1697, dated November 16, 1976, procedures for obtaining a determination under section 999(d) of the Code were announced. Pending the issuance of final regulations, determinations under section 999(d) will be made by the National Office of the Service concerning issues specifically addressed in published Treasury guidelines. If an issue arises that is not specifically addressed in published guidelines, the National Office will not make a determination until it has brought the issue to the attention of the Assistant Secretaries of the Treasury for International Affairs and for Tax Policy and a new or modified guideline that specifically addresses the issue is published by the Secretary.

.06 The National Office will issue taxpayer requested determinations with respect to whether a particular operation of a person or of a member of a controlled group that includes that person constitutes participation in or cooperation with an international boycott. However, the National Office will issue determinations only with respect to operations that occurred after, or are contemplated to occur after:

(1) December 31, 1977, or

(2) November 3, 1976, but before December 31, 1977, provided that the operations are not carried out in accordance with the terms of a binding contract entered into before September 2, 1976.

Determinations in advance of an operation will be issued only in those circumstances that are of such a nature that an advance determination is possible and

appropriate. The National Office may defer issuing determinations until after the close of the taxable year, even though the determination requests are made either before the particular operation is commenced or before the end of the taxable year.

.07 Section 3 of this Revenue Procedure sets forth the procedures for requesting determinations under section 999(d) of the Code of issues not present in the return of a person (or a member of a controlled group that includes a person) that is under active examination or audit by a district office or is being considered by a regional appellate division. The effects of determinations issued pursuant to a request made under section 3 are set forth in section 9. Section 4 of this Revenue Procedure sets forth the procedures for requesting determinations under section 999(d) of issues present in the return of a person (or a member of a controlled group that includes that person) that is under active examination or audit by a district office. The effects of determinations issued pursuant to a request made under section 4 are set forth in section 10. Section 5 of this Revenue Procedure sets forth the procedures for requesting determinations under section 999(d) of issues present in a return of a person (or a member of a controlled group that includes that person) that is being considered by a regional appellate division. The procedures set forth in sections 6, 7, 8 and 11 are applicable to determinations requested under both sections 3 and 4 of this Revenue Procedure.

.08 Nothing in this Revenue Procedure will preclude a District Director from requesting technical advice, in accordance with the procedures set forth in Rev. Proc. 73-8, 1973-1 C.B. 754, on the District Director's own initiative on any issue under the anti-boycott provisions of the Act.

.09 For purposes of section 3.08 and 6.02 of this Revenue Procedure, a determination is a ruling. Thus, the amendments to the Statement of Procedural Rules, 26 CFR 601, published in the Federal Register on November 5, 1976, 41 FR 48740, and Rev. Proc. 76-29, 1976-29 I.R.B. 17, are applicable. A determination is also a ruling for purposes of section 7805(b) of the Code.

.10 For purposes of this Revenue Procedure, any reference to District Director or district office also includes, where appropriate, the Office of the Director, Office of International Operations.

SEC. 3.

Requests for Determinations under Section 999(d) of Issues not present in a Return under Active Examination or Audit or under Consideration by a Regional Appellate Division.

.01 Section 3.02 through 3.15 of this Revenue Procedure set forth the procedures under which a request should be made of the National Office for determinations under section 999(d) of the Code with respect to issues not present in the return of a person (or a member of a controlled group that includes that person) that is under active examination or audit by a district office or is being considered by a regional appellate division.

.02 A request for a determination is to be submitted in duplicate if (1) more than one issue is presented in the request or (2) a closing agreement is requested with respect to the issue presented.

.03 Each request for a determination must contain a complete statement of all relevant facts relating to the operation. Such facts include names, addresses, and taxpayer identifying numbers of all interested parties; the location of the district office that has or will have audit jurisdiction over the return or report of each party; a full and precise statement of the business reasons for the operation; and a carefully detailed description of the operation. In addition, copies of all contracts, wills, deeds, agreements, instruments, and other documents involved in the transaction must be submitted with the request. Original documents should not be submitted because documents and exhibits become a part of the Service file that cannot be returned.

Relevant facts reflected in documents submitted must be included in the taxpayer's statement and not merely incorporated by reference, and must be accompanied by an analysis of their bearing on the issue or issues, specifying the pertinent provisions. The request must contain a statement whether, to the best of the knowledge of the taxpayer or the taxpayer's representative, the identical issue is being considered by any field office of the Service in connection with an active examination or audit of a tax return of the taxpayer (or a member of the controlled group that includes the taxpayer) already filed or is being considered by a regional appellate division.

Where the request pertains to only one step of a larger integrated operation, the facts, circumstances, etc., must be submitted with respect to the entire operation.

.04 As an alternative procedure for requesting determinations on prospective operations, the taxpayer may submit a summary statement of the facts it considers controlling the issue, in addition to the complete statement required for a determination by section 3.03 above. Assuming agreement with the taxpayer's summary statement, the Service will use it as the basis for the determination. Any taxpayer wishing to adopt this procedure should submit with the request for determination:

(1) A complete statement of facts relating to the operation, together with related documents, as required by section 3.03 above; and

(2) A summary statement of the facts that the taxpayer believes should be controlling in reaching the requested conclusion. Where the taxpayer's statement of controlling facts is accepted, the determination will be based on these facts and only this statement will ordinarily be incorporated in the determination. It is emphasized, however, that:

(a) This procedure for a "two-part" determination request is elective with the taxpayer and is not to be considered a required substitute for the regular procedures contained in this Revenue Procedure;

(b) Taxpayers' rights and responsibilities are the same under the "two-part" determination request procedure as those provided in this Revenue Procedure; and

(c) The Service reserves the right to make the determination on the basis of a more complete statement of facts it considers controlling and to seek further information in developing facts and restating them for determination purposes.

.05 The taxpayer must state its views as to whether the proposed or prospective operation constitutes participation in or cooperation with an international boycott and must furnish a statement of relevant authorities to support such views.

.06 A request by or for a taxpayer must be signed by the taxpayer or the taxpayer's authorized representative. If the request is signed by a representative of the taxpayer, or if the representative is to appear before the Service in connection with the request, the representative must be:

(1) an attorney who is a member in good standing of the bar of the highest court of any State, possession, territory, Commonwealth, or the District of Columbia, and who files with the Service a written declaration that such attorney is currently qualified as an attorney and is authorized to represent the principal;

(2) a certified public accountant who is duly qualified to practice in any State, possession, territory, Commonwealth, or the District of Columbia, and who files with the Service a written declaration that such accountant is currently qualified as a certified public accountant and is authorized to represent the principal; or

(3) a person, other than an attorney or certified public accountant, enrolled to practice before the Service, and who files with the Service a written declaration that such person is currently enrolled (including in the declaration either such person's enrollment number or the expiration date of such person's enrollment card) and that such person is authorized to represent the principal. (See Treasury Department Circular No. 230. Revised, 1966-2 C.B. 1171, as amended, 1967-1 C.B. 433, and 1970-2 C.B. 644, for the rules on who may practice

before the Service.) The above requirements do not apply to an individual representing such individual's full-time employer, or to a bona fide officer, administrator, trustee, etc., representing a corporation, trust, estate, association, or organized group.

An unenrolled preparer of a return (other than an attorney or certified public accountant referred to in clauses (1) and (2) above) who is not a full-time employee or a bona fide officer, administrator, trustee etc., may not represent a taxpayer with respect to a determination. Any authorized representative, whether or not enrolled to practice, must also comply with the conference and practice requirements of the Statement of Procedural Rules. Forms 2848, Power of Attorney, and 2848-D, Authorization and Declaration, may be used with regard to determinations requested under this Revenue Procedure.

.07 A request for a determination under section 999(d) of the Code should be addressed to the Commissioner of Internal Revenue, Attention: T:C:C:3, Washington, D.C. 20224.

.08 Determinations issued to taxpayers under section 999(d) of the Code will be made open to public inspection under the procedures in section 6110, the regulations thereunder, and the Statement of Procedural Rules.

Amendments to the Statement of Procedural Rules, 26 CFR Part 601, published in the Federal Register on November 5, 1976, 41 FR 48740, require a taxpayer requesting a ruling to make proposals concerning the deletions to be made, pursuant to section 6110(c), in the documents open to public inspection and to sign, under penalties of perjury, a declaration that the facts in the request are true, correct and complete.

.09 Any request for a determination that does not comply with all the provisions of this Revenue Procedure will be acknowledged by the National Office, and the requirements that have not been met will be pointed out. If a request for a determination lacks essential information, the taxpayer or the taxpayer's representative will be advised that if the information is not forthcoming within 30 days, the request will be closed.

If the information is received after the request is closed, the request will be reopened and treated as a new request as of the date of the receipt of the essential information. Priority treatment of such request will be granted only in rare cases upon the approval of the Director, Corporation Tax Division.

.10 A taxpayer or a taxpayer's representative that desires an oral discussion of the issue or issues involved should indicate such desire in writing when filing the request or soon thereafter in order that the conference may be arranged at the stage of the consideration when it will be most helpful.

.11 It is the practice of the Service to process requests for determinations in regular order and as expeditiously as possible. Compliance with a request for consideration of a particular matter ahead of its regular order, or by a specified time, tends to delay the disposition of other matters. Requests for processing ahead of the regular order, made in writing in a separate request submitted with the request or subsequent thereto and showing clear need for such treatment, will be given consideration as the particular circumstances warrant.

However, no assurance can be given that any letter will be processed by the time requested. For example, the scheduling of a closing date for a transaction or a meeting of the Board of Directors or shareholders of a corporation without due regard to the time it may take to obtain a determination will not be deemed sufficient reason for handling a request ahead of its regular order. Requests by telegram will be treated in the same manner as requests by letter. Determinations ordinarily will not be issued by telegram.

.12 The Assistant Commissioner (Technical) has primary responsibility for issuing determinations under section 999(d) of the Code.

.13 A taxpayer or its representative desiring to obtain information as to the status of its case may do so by contacting:
Group Chief, T:C:C:3:2 (202) 566-3261

.14 Determinations issued by the National Office will be furnished to the taxpayer and to the District Director having audit jurisdiction over the return or report of the taxpayer.

.15 When a taxpayer receives a determination prior to the filing of its return with respect to any operation that has been consummated and that is relevant to the return being filed, a copy of the determination should be attached to the return.

SEC. 4.
Requests for Determinations under Section 999(d) of Issues present in a Return under Active Examination or Audit.

.01 Section 4.02 through 4.06 of this Revenue Procedure set forth the procedures under which a request should be made of the National Office for determinations under section 999(d) of the Code with respect to issues present in the return of a person (or a member of the controlled group that includes that person) that is under active examination or audit by a district office.

.02 A request for a determination made pursuant to this section must be made in accordance with the procedures set forth in sections 3.03, 3.05 through 3.13 and 4.02 through 4.06 of this Revenue Procedure.

.03 The request for a determination under section 999(d) of the Code made pursuant to this section should be addressed to the Commissioner of Internal Revenue, Attention: T:C:C:3, Washington, D.C. 20224, but must be submitted to the examining officer or district conferee along with copies of all relevant materials.

The taxpayer should submit to the examining officer or district conferee the number of copies of the relevant documents specified in section 3.02 of this Revenue Procedure, plus one additional copy for the use of the examining officer or district conferee.

A determination request submitted to the examining officer or district conferee that does not comply with the provisions of this Revenue Procedure (other than the provisions of section 3.08) will be returned by the examining officer or district conferee for completion prior to sending it to the National Office for a determination.

If a request for a determination lacks essential information, the taxpayer or the taxpayer's representative will be advised by the examining officer or the district conferee that if the information is not forthcoming within 30 days, the request will be returned to the taxpayer. If the request is returned to the taxpayer, it will be treated as a new request as of the date of the receipt of the essential information.

.04 After receipt of the determination request and relevant documents that meet the requirements of this Revenue Procedure, the examining officer or district conferee must indicate in writing to the taxpayer the extent, if any, to which such examining officer or district conferee may not be in complete agreement as to the facts and the specific points at issue.

Every effort should be made to reach agreement as to the facts and the specific points at issue. If agreement cannot be reached, the examining officer or district conferee may submit to the National Office a statement of such examining officer's or district conferee's understanding as to the specific point or points at issue and a statement of position on the issues, citing precedents believed relevant to the case.

If such a statement is submitted to the National Office, a copy of the statement must be submitted to the taxpayer at the time the statement is submitted to the National Office. The examining officer or district conferee must forward such determination request, statements, and all relevant documents to the National Office for determination within 30 days of receipt of the determination request and relevant documents that contain all essential information.

.05 The National Office may submit a proposed determination to the District Director for comment before issuing the determination to the taxpayer.

.06 Determinations issued pursuant to a request made under section 4 will be sent to both the taxpayer and the District Director.

SEC. 5.

Requests for Determinations under Section 999(d) of Issues present in a Case under Consideration by a Regional Appellate Division.

If a request is made for a determination under section 999(d) of the Code with respect to issues present in a case of a person (or a member of the controlled group that includes that person) under consideration by a regional appellate division, such division will immediately relinquish jurisdiction and return the entire case to the district office having audit jurisdiction over the return, for processing the taxpayer's request for a determination.

All the procedures set forth in section 4, and all other procedures set forth in this Revenue Procedure that are applicable to determinations requested under section 4, shall apply. The case will remain with that district office until a determination has been made by the National Office.

SEC. 6.

Conferences in the National Office.

.01 Except as otherwise provided herein, this section applies to determinations requested under both sections 3 and 4 of this Revenue Procedure.

.02 In accordance with Rev. Proc. 76-29, the taxpayer or the taxpayer's authorized representative will be contacted by a Service representative to informally discuss the procedural and substantive issues involved within 15 working days after receipt of the determination request by the National Office.

.03 If a conference has been requested, the taxpayer will be notified of the time and place of the conference. A conference is normally scheduled only when the Service deems it will be helpful in deciding the case or an adverse decision is indicated. If conferences are being arranged with respect to more than one request for a determination involving the same taxpayer, they will be so scheduled as to cause the least inconvenience to the taxpayer.

The conference will be arranged by telephone, if possible, and must be held within 21 calendar days after contact has been made. Extensions of time will be granted only if justified in writing by the taxpayer and approved by the Chief, Corporation Tax Branch.

.04 A taxpayer is entitled, as a matter of right, to only one conference in the National Office unless one of the circumstances discussed in section 6.05 develops. This conference will be held by the office of the Assistant Commissioner (Technical). In appropriate cases involving a determination requested pursuant to section 4 of this Revenue Procedure, the examining officer or district conferee may also attend the conference to clarify the facts in the case.

If more than one operation is to be discussed at the conference, the discussion will constitute a conference with respect to each operation. In order to promote a free and open discussion of the issues, the conference will usually be held after the National Office has had an opportunity to study the case.

However, at the request of the taxpayer or its representative, the conference may be held at an earlier stage in the consideration of the case than the Service would ordinarily designate. No taxpayer has a "right" to appeal the action of the Assistant Commissioner (Technical) to the Commissioner or to any other office of the Service, nor is a taxpayer entitled as a matter of right, to a separate conference in the Chief Counsel's office or the Treasury on a request for a determination.

.05 In the process of considering a determination proposed at a conference, it may appear that the final answer will involve a reversal of the determination proposed at the conference with a result less favorable to the taxpayer. Or it may appear that an adverse determination proposed at the conference will be approved, but on different grounds than those mentioned at the conference.

Under either of these circumstances, the taxpayer or its representative will be invited to another conference. The provisions of this Revenue Procedure limiting the number of conferences to which a taxpayer is entitled will not foreclose the invitation of a taxpayer to attend further conferences when, in the opinion of National Office personnel, such need arises. All additional conferences of the type discussed in this paragraph are held only at the invitation of the Service.

.06 It is the responsibility of the taxpayer to furnish to the National Office, within 21 calendar days after the conference, a written record of any additional data, line of reasoning, precedents, etc., that were proposed by the taxpayer and discussed at the conference but were not previously or adequately presented in writing. Extensions of time will be granted only if justified in writing by the taxpayer and approved by the Chief, Corporation Tax Branch.

The additional material should be addressed to and sent to the National Office. In the case of a determination requested under section 4, a duplicate copy of the additional material must also be submitted to the National Office for forwarding to the appropriate examining officer or district conferee.

.07 In the case of a determination requested pursuant to section 4 of this Revenue Procedure, the examining officer or district conferee will be requested to give the additional material prompt attention. The examining officer or conferee may verify the additional facts and data and comment on it to the extent deemed appropriate.

SEC. 7.

Withdrawal of Requests.

The taxpayer's request for a determination may be withdrawn at any time prior to the signing of the determination. However, in such a case, the National Office may furnish its views to the District Director whose office has or will have audit jurisdiction of the taxpayer's return or to the examining officer or district conferee.

The District Director, the examining officer or district conferee will consider the information submitted in any current or subsequent audit or examination of the taxpayer's return. Even though a request is withdrawn, all correspondence and exhibits will be retained in the Service and will not be returned to the taxpayer.

SEC. 8.

Oral Advice to Taxpayers.

.01 The Service will not issue determinations upon oral requests. Furthermore, National Office officials and employees ordinarily will not discuss a substantive tax issue with a taxpayer or a taxpayer's representative prior to the receipt of a written request for a determination since oral determinations are not binding on the Service.

This should not be construed as preventing a taxpayer or a taxpayer's respresentative from inquiring whether the Service will rule on a particular question. In such cases, however, the name and identifying number must be disclosed. The Service will also discuss questions relating to procedural matters with regard to submitting a request for a determination, including the application of the provisions of sections 3 and 4 above to the particular case.

.02 A taxpayer may, of course, seek oral advice from a district office in the preparation of the taxpayer's return or report, pursuant to other established procedures. Such oral advice is advisory only and the Service is not bound to recognize it in the examination of the taxpayer's return.

SEC. 9.

Effect of Determinations of Issues not present in a Return under Active Examination or Audit or under Consideration by a Regional Appellate Division.

.01 The procedures set forth in sections 9.02 through 9.09 of this Revenue Procedure apply to determinations issued pursuant to a request made under section 3.

.02 A taxpayer may not rely on a determination issued to another taxpayer. A determination, except to the extent incorporated in a closing agreement, may be revoked or modified at any time in the wise administration of the taxing statutes. See section 2.07 of Rev. Proc. 72-3, 1972-1 C.B. 698, for the effect of a closing agreement.

If a determination is revoked or modified, the revocation or modification applies to all open years under the statutes, unless the Secretary or the Secretary's delegate exercises the discretionary authority under section 7805(b) of the Code to limit the retroactive effect of the revocation or modification. The manner in which the Secretary or the Secretary's delegate generally will exercise this authority is set forth in this section.

.03 As part of the determination of a taxpayer's liability, it is the responsibility of the District Director to ascertain whether any determination previously issued to the taxpayer has been properly applied. It should be determined whether the representations upon which the determination was based reflected an accurate statement of the material facts and whether the operation actually was carried out substantially as proposed.

If, in the course of the determination of the tax liability, it is the view of the District Director that a determination previously issued to the taxpayer should be modified or revoked, the findings and recommendations of that office will be forwarded to the National Office for consideration prior to further action.

Such reference to the National Office will be treated as a request for technical advice and the procedures of Rev. Proc. 73-8 will be followed. Otherwise, the determination is to be applied by the district office in its determination of the taxpayer's liability.

.04 Appropriate coordination with the National Office will be undertaken in the event that any field official having jurisdiction of a return or other matter proposes to reach a conclusion contrary to a determination previously issued or contemplated to be issued to the taxpayer.

.05 A determination found to be in error or not in accord with the current views of the Treasury may be modified or revoked by the National Office. Modification or revocation may be effected by a notice to the taxpayer to whom the determination originally was issued, or by a guideline or other statement published in the Internal Revenue Bulletin.

.06 Except in rare or unusual circumstances, the revocation or modification of a determination will not be applied retroactively with respect to the taxpayer to whom the determination was originally issued or to a taxpayer whose tax liability was directly involved in such determination if (1) there has been no misstatement or omission of material facts, (2) the facts subsequently developed are not materially different from the facts on which the determination is based, (3) there has been no change in the applicable law, (4) the determination was originally issued with respect to a prospective or proposed transaction, and (5) the taxpayer directly involved in the determination acted in good faith in reliance upon the determination and the retroactive revocation would be to its detriment.

Where a determination issued to a taxpayer is revoked with retroactive effect, the notice to such taxpayer will, except in fraud cases, set forth the grounds upon which the revocation is being made and the reasons why the revocation is being applied retroactively.

.07 A determination issued to a taxpayer with respect to a particular operation represents a holding of the Service on that operation only. However, the application of that determination to the operation will not be affected by the subsequent issuance of guidelines or regulations (either temporary or final) if the conditions specified in section 9.06 above are met.

If the determination is later found to be in error or no longer in accord with the holding of the Treasury, it will afford the taxpayer no protection with respect to a like operation in the same or subsequent year, except to the extent provided in section 9.08.

.08 If a determination is issued covering a continuing operation or a series of operations and it is determined that the determination was in error or no longer in accord with the holding of the Treasury, the Secretary or the Secretary's delegate ordinarily will limit the retroactivity of the revocation or modification to a date not earlier than that on which the original determination is modified or revoked.

If a determination relates to a continuing operation or a series of operations, the determination will be applied until the date of issuance of applicable guidelines or regulations holding otherwise, or until specifically withdrawn. Publication of a notice of porposed rulemaking will not affect the application of any determination issued under the procedures set forth herein.

.09 In the case of determinations involving completed operations, other than those described in section 9.08 above, taxpayers will not be afforded the protection against retroactive revocation provided in section 9.06 above in the case of proposed operations since they will not have entered into the operations in reliance of the determination.

SEC. 10.

Effect on Determinations of Issues present in a Return under Active Examination or Audit.

.01 The procedures set forth in sections 10.02 and 10.03 of this Revenue Procedure apply to determinations pursuant to a request made under section 4.

.02 Unless the District Director believes that the conclusions reached by the National Office in a determination should be reconsidered and promptly requests such reconsideration, the District Director's office will proceed to process the taxpayer's case on the basis of the conclusions expressed in the determination. If the District Director believes that the conclusions reached by the National Office in a determination should be reconsidered, the procedure set forth in section 9.03 of this Revenue Procedure shall be applicable.

.03 Except in rare or unusual circumstances, a determination that is favorable to the taxpayer is applied retroactively. Moreover, a determination that is adverse to the taxpayer is also applied retroactively unless the Secretary or the Secretary's delegate exercises the discretionary authority under section 7805(b) of the Code to limit the retroactive effect of the determination.

Likewise, a determination that modifies or revokes a prior determination will also be applied retroactively, with one exception. If the new determination is less favorable to the taxpayer, it will generally not be applied to the period in which the taxpayer relied on the prior determination in situations involving continuing operations of the type described in section 9.08 of this Revenue Procedure.

SEC. 11.

Effective Date.

This Revenue Procedure is effective February 3, 1977.

HOW TO SAVE TIME AND MONEY IN FILING YOUR 1976 PERSONAL TAX RETURN

Individual federal income tax specimen returns for filing in 1977. Englewood Cliffs, Prentice-Hall, Inc., 1977. 62 pp. (B. 100.349)

INTERNAL REVENUE CUMULATIVE BULLETIN

1976-2, July-December. Washington, Internal Revenue Service, Department of the Treasury, 1977. 698 pp.
This volume contains a consolidation of all items of a permanent nature published in the weekly Bulletins 1976-27 through 1976-52 for the period July 1 through December 31, 1976. It includes a cumulative list of announcements relating to decisions of the Tax Court published in the Internal Revenue Bulletins (B. 100.455)

INTERNAL REVENUE CUMULATIVE BULLETIN

1976-3. Volume 1. Text of Law and Joint Committee Summary. Washington, Internal Revenue Service, Department of the Treasury, 1977. 555 pp.
This Cumulative Bulletin 1976-3 is printed in three volumes and devoted solely to Public Law 94-455, the Tax Reform Act of 1976 and related Committee and Conference reports which were not published in the weekly Bulletins. (B. 100.456)

INTERNAL REVENUE CUMULATIVE BULLETIN

1976-3. Volume 2. Joint Committee Explanation and House Committee on Ways and Means Report. Washington, Internal Revenue Service, Department of the Treasury, 1977. 1117 pp.
This volume 2 is devoted solely to Public Law 94-455, the Tax Reform Act of 1976 and related Committee and Conference reports. Cumulative Bulletin 1976-3 is printed in three volumes. (B. 100.417)

NORTH AMERICAN GASOLINE TAX CONFERENCE

Biloxi, Mississippi, November 7-10, 1976. Proceedings of the fiftieth annual meeting. Chicago, Federation of Tax Administrators, 1976. 93 pp. (B. 100.393)

BUTTERWORTHS CAPITAL TRANSFER TAX TABLES, 1977

Edited by Butterworths Editorial Staff.

The tables show at a glance the cumulative C.T.T. at both lifetime and death scales. They cover amounts of gross chargeable transfers up to £500,000 and amounts of net chargeable transfers up to £276,125. Several examples show how to use the tables even for complex calculations. The new edition includes a grossing up table at death rates, due to the Finance Act 1976 s. 96 and tables showing the transitional reduced rates (on gross and net) for discretionary settlements.

Price £2.00 net Limp 0 406 50530 6

BUTTERWORTHS ORANGE TAX HANDBOOK 1977-78

Edited by Butterworths Editorial Staff.

October 1976 saw the publication of the first edition of this new annual handbook, a companion volume to the long-established "Yellow Book". Three new taxes are covered by the "Orange Book", namely, Capital Transfer Tax, Development Land Tax and Value Added Tax, for all of which the book sets out the current amended legislation. The 1977-78 edition is being expanded to include stamp duties legislation.

To be published shortly.
Price to be announced. Limp 0 406 50822 4

BUTTERWORTHS YELLOW TAX HANDBOOK 1977-78

Edited by DAVID ROBERTS of Butterworths Editorial Staff.

This is the sixteenth edition of this popular annual handbook which deals with Capital Gains Tax, Corporation Tax and Income Tax. All the enactments relating to these taxes are set out in amended form as operative for the current year of assessment, or, for corporation tax purposes, as operative for accounting periods ending in that year of assessment. The legislation is arranged in chronological sequence and is extensively indexed for each tax.

To be published shortly.
Price to be announced. Limp 0 406 50993 X

TAX PRACTITIONER'S DIARY 1977-78

Edited by Butterworths Editorial Staff.

Widely acclaimed by tax practitioners and accountants for its comprehensive, compact and convenient presentation of essential tax information, this handy pocket-sized diary comes in a soft durable PVC cover. The diary covers fifteen months from the beginning of October, ensuring that the contents include the provisions of each year's Finance Act.

To be published shortly.
£3.50 + 28 p. VAT 0 406 53955 3

WHILLANS'S TAX TABLES 1977-78

Thirtieth edition. By GEORGE WHILLANS, F.T.I.I., F.I.B., F.R. Econ. S.

This annual publication is printed on stiff card and covers all aspects of taxation from tax ready-reckoner tables to foreign exchange rates, National Insurance benefits, personal reliefs and stamp duties. The enormous annual demand for WHILLANS'S TAX TABLES shows how valuable they are in minimising the time spent on calculations. The information is arranged clearly and logically in compact form for easy reference.

Price £1.40 net. Limp 0 406 54312 7

From Prentice Hall

An indispensable aid for American businessmen, investors and corporations engaged in or planning foreign operations and for those in foreign countries planning or doing business in the United States —

TAX TREATIES

This definitive guide is indispensable for any businessman or corporation that sells, buys, manufactures, or invests in the United States — as well as for any American businessman or corporation that does business in foreign countries. It tells you:

- How and where to handle your investments while eliminating the chance of double taxation.
- How much of your investment income will be protected by tax treaty exemptions.
- How much business Americans can carry on in a foreign country and vice versa without becoming taxable as a "permanent establishment."
- How to protect your employees who are temporarily at work abroad from a double tax burden.

In Tax Treaties, you'll also find:

1. The full official text of every existing treaty, supplementary treaty, or protocol relating to income taxes and estate and gift taxes between the United States and each of its tax-treaty countries, including model treaties showing the latest trends.
2. Annotated editorial text arranged in a Uniform Paragraph Plan . . . makes for easy direct comparison of provisions of one tax treaty country with another . . . permits a single unified index which works hand in hand with this unique setup. You'll make sure, speedy decisions at the flip of a wrist.
3. Official reports on each treaty giving you the background behind the provisions; why particular treaty articles were included; and what each provision means to you.
4. A Special Finding List at the beginning of the editorial summary for each country . . . speeds you quickly to explanatory and official material that affects you.
5. Monthly REPORT BULLETINS, analyzing the latest treaties, decisions and rulings, keep you right on top of today's fast breaking tax treaty developments . . . (plus Current Matter containing the most recent U.S. court decisions and IRS rulings giving you the latest judicial and official word on tax treaties.)

In today's constantly expanding international commerce, expert tax-managing or tax-counseling of business activities between the United States and each of its treaty countries is a must — so keep up to date with Prentice-Hall's TAX TREATIES.

I. INTRODUCTION

Only a few years ago it was customary in considering the design of income taxes to contrast the schedular and the global approaches to taxing income. Today the latter approach has triumphed, at least in principle, throughout the world. The income tax in virtually every high-income developed country is now global in concept, although there are still important gaps in most countries and the move is very recent in others (e.g., 1974 in Italy). Among the developing countries, those influenced by British colonial administrations have long had global-type income taxes, and almost no country in the world now has a pure schedular system, with completely separate taxes on income derived from different sources. The prevalent form of income tax in much of Latin America, as in Francophone Africa, is probably still the "mixed" system (schedular taxes capped by a complementary global tax), but present indications are that any changes in this situation will likely be in the direction of increased globalization. As Plasschaert notes, ". . . to our knowledge no reverse sequence, from a global to a schedular or mixed frame, can be mentioned." [1]

This worldwide move towards a "global" income tax has both an economic and a equity rationale. Although equity rationales are of course always matters of social judgment (and hence disputable), it is widely accepted in principle that income, broadly defined to include all accretions to economic power (potential spending power), provides a particularly suitable measure of ability to pay and hence the best basis for personal taxation. From an equity point of view, then, the tax implications of an additional dollar of net income (thus defined) should be the same, regardless of the source of that income.

Exactly the same rule is advisable from an economic point of view to avoid distorting unduly the pattern of economic activity by diverting resources into relatively lightly-taxed activities. This assumes, of course, that such neutrality is an appropriate characteristic of the tax system, which may not always be the case, especially in developing countries where a main aim of policy is often precisely to change the prevalent pattern of resource allocation.

No country, even the most highly developed, has currently gone all the way to a truly global income tax.

Arguments such as this are one reason why no country, even the most highly-developed, has actually gone all the way to a truly comprehensive or global income tax — although detailed proposals along these lines have been made both in Canada (by the Royal Commission on Taxation in 1967) and, more recently and more tentatively, in the United States (in a report entitled *Blueprints for Tax Reform* issued by the U.S. Treasury Department early in 1977).

1. S.R.F. Plasschaert, "First Principles About Schedular and Global Frames of Taxation," *Bulletin for International Fiscal Documentation*, 30 (March 1976), 99-111.

Three reasons for the common retention of (often significant) schedular elements even in the most globalized income tax systems may be distinguished: principle, policy, and administration. Perhaps the major question of principle concerns the appropriate tax treatment of "earned" and "unearned" income: it is discussed in Section II of this paper. A secondary issue that may perhaps also be decided on grounds of principle concerns the treatment of gifts and bequests. In practice, such receipts are rarely (a partial exception exists in Colombia) taxed as income to the recipient, although both Henry Simons, one of the intellectual parents of global income taxes, and the Canadian Royal Commission argued that they should be so taxed.

In addition to the possible "incentive" motivation for desiring differential tax treatment of, say, income from certain sectors (or, more usually, of certain uses of income, e.g., investment), other "policy" issues also arise with respect to the treatment of international income (income going to foreigners and foreign income going to residents) and such matters as personal deductions, the treatment of pension income, and so on. A few of these issues are discussed briefly later in this paper.

Finally, and in practice perhaps most importantly, administrative realities have forced considerable modification of the ideal of a truly global income tax even in the most highly-developed countries. As a rule, the easiest income to tax effectively is wage and salary income: everything else gives rise to problems of varying difficulty. In the past, many countries apparently concluded that the resulting lower probability of catching a dollar of capital (or self-employment) income in the tax net should be recognized by imposing a higher tax rate on such dollars than on wage income. The trouble with this approach is twofold: (1) it leads to neglect of the need to improve the administration of the tax on non-wage income (precisely because of the belief that the differential rates take care of the problem); and (2) the belief that the differential rates take care of the problem is almost certainly wrong (precisely because the neglect of administration means that evasion will tend to escalate to offset the differential).

Abolishing schedular taxes resolves no problems

The argument in the preceding paragraph is, of course, by now widely accepted. What seems to be less widely understood, however, is that simply abolishing the various schedular taxes resolves no problems. [2] Indeed, unless the move to globalization is accompanied by significant administrative tightening on non-wage income, its immediate effect may perhaps even be to increase the taxes on wage and salary earners relative to those receiving other forms of income (as appears to have happened in Bolivia in early 1976). Much of the present paper is concerned with pointing out the sorts of steps which are needed to reach income from property effectively under an income tax.

The focus of this paper is thus on certain problems of principle, policy, and administration likely to be encountered in the course of transition from a schedular or mixed system to a more global income tax. Globalization in this sense is essentially a question of the *base* of the income tax. Sometimes the requisite base-broadening has been made more politically palatable by reducing tax *rates* (as in Canada) or raising personal *exemptions* (as also in Canada, and as proposed in the recent report of the Fiscal Reform Mission in Bolivia), but the determination of the appropriate structure of rates and exemptions for personal income tax is really a quite different matter that cannot be discussed here. Similarly, the present paper does not discuss such important related, but separate, issues in the design of a personal income tax as the appropriate tax unit (individual or family) and personal deductions (e.g., the merits of credits vs. deductions), let alone the even more complex issue of the tax treatment of juridical entities (and its relation to the personal income tax).

In short, the discussion in this paper is limited to certain questions concerning the base of the personal income tax, with particular attention to those issues which experience in other countries suggests may give rise to differentiation even within the framework of a global income tax. Most of the issues mentioned here have been treated quite differently in different countries. For reasons of time and prior knowledge, this discussion draws mainly on the experience of a few countries, particularly the United States, Canada, France, Venezuela, Colombia, and Bolivia. The text discussion blends experience from these different countries in a brief analytical fashion, often without specific country attribution.

II. THE TREATMENT OF EARNED INCOME

There appear to be two principal rationales for differentiating in favor of earned income (apart from the administration argument noted in Section I). The first is the argument that a dollar of income received from investment carries with it a greater inherent "capacity to pay" than a dollar recieved from work — for example, because he who receives the former dollar (the "man of property") receives two substantial additional benefits: the income flows without taking much, if any, of his time or effort, and his source of income, his wealth, provides a sense of security and power over and above that of the job of the man who works.

Without developing this line of thought further, it may simply be noted here (a) that it flatly contradicts the underlying rationale of a global income tax ("a dollar is a dollar is a dollar"), and (b) that, if true, it points more to the desirability of an additional tax on wealth as such rather than lighter income taxes on earned income. Nevertheless, arguments such as this help explain such income tax differentiations as the important earned income credit in Britain, the former surtax on investment income in Canada, and perhaps also the large exclusions from earned income found in such countries as Bolivia.

2. For a rare exception, see the interesting paper by Fernando Rezende, "Income Taxation and Fiscal Equity," *Brazilian Economic Studies*, No. 2, 1976, pp. 105-45.

Sometimes such arguments for special treatment of one *source* of income are confused with arguments for favoritism to lower *levels* of income, e.g., when the earnings of those receiving the minimum wage are exempted. It should be clear, however, that these two questions are quite distinct in principle: if there is a case for exempting low-income earners — and there is — that case does not depend on the *source* of their low earnings.

Income from labor is less "pure" than income from capital

More consistent with the general framework of a global income tax is the view that income from labor is, so to speak, less "pure" (or net) than income from capital (e.g., because of the lack of explicit tax provision for the costs of acquiring and maintaining "human capital"). What this argument seems to reduce to is the view that inadequate allowance is made for expenses of earning labor income compared to capital income. Presumably the income of the self-employed — usually "mixed" income — would come in between on this scale.

Within the framework of the personal income tax, two broad approaches to differentiating earned and unearned income may be distinguished in different countries, with the dividing line to some extent perhaps reflecting the two rationales noted above (as witness the treatment of the self-employed).

In the United States, for example, earned income from personal services is entitled to a credit of 10% up to $4,000 of earned income, with the credit being reduced for higher incomes until it vanishes completely at $8,000 of earned income. Until the 1940's, the U.S. followed a different appreach, giving a 10% credit without limit for earned income. At the other end of the income scale, the maximum tax *rate* now applicable to earned income in the U.S. is 50%, even though 70% is the general top marginal rate otherwise applicable. (A quite different approach towards rate differentials was employed at one time in Canada, where before 1961 all investment income was subject to a *surtax* of 4%.) In contrast, Bolivian recipients of labor income are entitled to a *deduction* from gross income of 25% of such income up to a maximum of $b. 70,000 (which is quite high in Bolivian terms), not to mention exemptions for vacation and severance pay. All of these provisions apply whether the income is earned through employment or self-employment.

There are also in most countries, even in those which do not have special tax treatment for all labor income, special provisions for employees only. These provisions are of two types: exclusion of various fringe benefits paid by the employer (such as in the Bolivian case mentioned above), and, more closely related to the basic issue of differentiation by source of income, some allowance for employment expenses.

There is indeed a case in most tax systems for providing some recognition of the "costs" of earning labor income. Different countries have done this in various ways. In principle, optional deduction of itemized employment expenses (excluding such basic costs of living as food, shelter, and commuting expense) is probably the best system. In practice, some countries provide a small "standard" deduction of a certain percentage of employment income (often up to some maximum, e.g., 3% up to $250 in Canada), for administrative convenience. The United States and Canada also recognize, within limits, moving expenses incurred by employees who change their place of residence and work. To some extent, a case can also be made along these lines for tax recognition of certain educational expenditures. [3]

Since self-employed taxpayers can usually deduct all costs of earning income anyway, they are not usually extended any special deduction for "employment" expenses: indeed in their case the problem is often the opposite, to limit the deduction of what are really "personal" expenses (e.g., for the use of an automobile). Many countries have therefore imposed arbitrary limits on the deductibility of expenses by the self-employed; for example, Canada has complex rules on personal use of automobiles and the U.S. has severely restricted deductions for offices located at home. [4] Furthermore, since withholding is, by definition, not readily applicable to the incomes of this group, they should in principle be required to pay on a "current payment" basis, as is now required in Colombia, for example. In addition, the self-employed are often subject to special review and "estimated income" procedures. Small business, professionals, and farmers (especially the latter) are subject to such procedures in many countries: The recent report of the Fiscal Reform Mission in Bolivia provides a particularly detailed account of such special rules (which are perhaps most developed in practice in Israel).

III. THE TREATMENT OF INCOME FROM CAPITAL

The rationale for special treatment of income from capital rests not on principle but on considerations of policy and administration. Perhaps the most important policy rationale for taxing income from capital lightly arises from the desire to increase savings and investment. In addition to exempting (or otherwise favoring) income that is saved or invested, many countries provide favorable tax treatment for some or all income from capital (e.g., interest or capital gains) either in order to raise the rate of return on such activity and hence make it more attractive or else on the presumption that such income is more likely to be "used" in a socially useful way (i.e., saved). The fact that the efficiency of such incentive measures has been severely questioned in most empirical studies has not, apparently, weakened their attractiveness to policy-makers. A closely related set of issues concerns the appropriate treatment of investment income accruing to foreigners.

---

3. For a careful discussion of this question, see Richard Goode, *The Individual Income Tax* (Rev'd ed.; Washington: The Brookings Institution, 1976), pp. 80-92. Canada in fact permits the deduction of tuition expenses by students (not their parents), as Goode recommends.

4. The complex issues involved in devising such rules are discussed in W.D. Popkin, *The Deduction for Business Expenses and Losses* (International Tax Program, Harvard Law School, 1973).

Many varieties of exclusions, exemptions, deductions, and credits for income that is saved or invested (or for income *from* savings or investment) may be found in different countries (e.g., Canada, Venezuela). It is not possible to summarize these measures here: instead, we shall simply note that this area of income tax design is particularly difficult to generalize about because what is best for any country depends so heavily on factors specific to that country, such as its degree of openness (linkages to the international capital market), its preference for financial vs. fiscal means of mobilizing and channelling savings, the efficiency of tax-induced changes in the rate of return, and other difficult (and often largely unknown) matters.

One might well think that the *administrative* problem in taxing income from capital would be much less severe than in the case of the self-employed, at least to the extent that such income is received from such organized modern-sector institutions as corporations and banks. One complication in this regard occurs when bearer securities are important, as they are in Canada and most Latin American countries. Even in this case, however, it would appear in principle easy to avoid income tax collection problems by requiring the paying institution to withhold tax at a high rate: ideally, at the highest rate in the income tax rate scale (which, it should be noted, would therefore probably have to be lower than that which is often levied, in effect, only on high-salaried groups). The withheld tax would then be fully creditable against income tax otherwise due. This system would be equally suitable for bearer and nominative securities were it not for the fact that the former also provide a means of avoiding capital gains and wealth taxes (whether levied annually or at the time of gift or death): for this reason, a higher rate on bearer shares may be advisable, as in Bolivia and Mexico. Another possible approach would be to levy a higher tax on the retained earnings of corporations whose shares are not registered, in order to obtain at least some compensation for the revenue thus foregone on capital gains, gifts and inheritances.

Interest, dividends and royalties are easy to tax

Despite these problems, interest, dividends, and royalties should all be fairly easy to tax. The fact that they are not in most countries very effectively taxed thus in a sense reflects as much policy as administrative factors.

The administrative problem is much more severe with regard to property incomes paid by other than large enterprises, e.g., most rents, interest to moneylenders, etc. Administrative problems are particularly severe with regard to the imputed income on owner-occupied houses: the partial attempt to tax such income in the United Kingdom was abandoned some years ago and even the ambitious Royal Commission Report did not recommend that such income be taxed in Canada. Indeed, it may well be that the most effective, albeit crude, way to reach such income is through a simple annual tax on real property.

There seems no easy way to collect tax on such generally unorganized sources of capital income except by techniques similar to those alluded to in Section II for self-employed taxpayers. As in the case of the self-employed, there is no short-cut to an alert and well-informed tax administration.

Problems exist with respect to capital gains

Even such an administration will have a great many problems in taxing one particular type of capital income, namely, capital gains. Where such a tax exists, it cannot be enforced effectively even on shares (usually the easiest case) if bearer shares exist. Nor can it be enforced effectively on real property in the absence of an up-to-date and accurate cadaster. Furthermore, gains on closely-held businesses, objets d'art and similar items tax the taxman in the most advanced countries — witness the cases of France and Canada — so severely that it seems hopeless to expect less developed fiscal administrations to be able to deal with them very effectively.

Finally, even where large corporations are concerned, there is always a serious problem in controlling the conversion of ordinary income of corporations into non-taxable (or partly taxable) capital gains. *Any* differential between the rate of personal income tax levied on, say, dividends and interest and that imposed on capital gains gives rise to many avoidance possibilities which have to be anticipated and blocked in one way or another if the "global" character of the income tax is not to remain in large part a mere illusion.

The only way to avoid serious administrative problems in this respect is by approximating as closely as possible to a position in which *all* payments from corporations to shareholders are taxed similarly, no matter how they are labeled. This aim can, of course, be achieved by lowering all taxes on income from capital to the rate levied on capital gains (which is more or less what Canada did in 1977, only 5 years after introducing a tax on gains in the first place). In effect, of course, this policy then introduces a substantial degree of discrimination against labor income.

A more desirable approach, and one more consistent with the concept of a global income tax, would be to treat all such payments (including those arising through liquidation, "thin capitalization," full and partial redemptions, and so on) as ordinary income of shareholders. Obviously, a fairly harsh and arbitrary set of administrative rules would be needed to achieve this aim, but there is no other way even to approach the goal of an equitable global income tax. Some further thoughts bearing on this point are sketched in Section V below.

IV. SOME SPECIAL PROBLEMS

Many other particular problems have been encountered in different countries in the process of "globalizing" the base of the personal income tax. As in the case of the more basic issue of the relative treatment of income from labor and income from capital, the solutions found to these problems in different systems illustrate a chang

ing and varied mixture of rationales derived from principle, policy, and administrative need.

In the case of *pensions*, for example, the U.S. treatment (non-deduction of individual social security contributions and exemption of benefits) may be contrasted to the Canadian (and Bolivian) treatment (deductibility of contributions, taxation of benefits). An additional important question on the treatment of pensions in general is the extent to which analogous treatment is extended to private pension schemes — from which the more highly-paid generally receive most benefit. In Canada, for example, pressure from the self-employed has led to the allowance of considerable deductions from income for contributions to such private schemes.

In the case of *international income*, the U.S. (and to a lesser extent Canadian) treatment (taxation of foreign income of residents — citizens in the U.S. — and flat-rate taxation of most payments to non-residents) may be contrasted to the Bolivian (and Venezuelan) application of the territorial principle (exempting foreign income of residents, though still taxing payments to non-residents). This whole area, of course, poses some of the most difficult questions in income tax design.

All countries make considerable use of a wide variety of *tax incentives*, the usual effect of which is to lighten the weight of taxes on income from capital. Most countries also have significant *sectoral differentiation*, with special regimes (at least with respect to the determination of net income) for industries such as agriculture, mining, and the financial sector (banking and insurance).

A problem of special interest in many countries in recent years has been the impact of inflation on the tax system

Some countries such as Canada and the Netherlands have introduced automatic indexation schemes for personal exemptions and rates; others, such as the U.S., have preferred to rely on discretionary adjustments in personal tax structure to offset undesired tax increases as a result of inflation. Still others — including perhaps many of the developing countries — may even welcome such inflationary increases as a relatively painless way of increasing tax revenues. Still more difficult questions are posed with regard to adjusting the *base* of the income tax for the effects of inflation. The principal areas of difficulty here are depreciation, inventory valuation and — an often-neglected but important offset to the other two — financial items on the balance sheet. (The important point here is that those who owe money in fixed nominal currency amounts, as do many business firms, gain in inflation.) While some countries (e.g., Brazil and Argentina) have gone much further than others in dealing with these problems, it seems fair to say that there is as yet no real consensus in either theory or practice as to how best to recognize inflation in income tax structure. A partial solution, such as commonly advocated by business, may be worse from a social point of view then no action, while a comprehensive solution seems beyond the reach of even the most advanced country at this time.

In all these (and other) cases, there are no simple answers to the question of the appropriate tax treatment of many items, whether one is operating within the framework of a global system or not. Perhaps the major contribution of the notion of globality in this context is to serve as a standard (or principle) requiring all deviations in treatment from the treatment applied to the "standard case" of wage income to be specially justified in terms of the social benefits to be achieved from such deviation (policy) or the social costs of not so deviating (administration). This is no small contribution, but it does bring out again the important point that the adoption of a global framework alone does little to resolve the hard problems of designing an effective personal income tax in an evolving society.

V. CONCLUSION

Much of this brief paper has been concerned with sketching some of the many problems countries have encountered in moving towards a more global personal income tax base.

Although in principle globalization means the treatment of all income alike, regardless of source, in practice different degrees of "netness," "policy" rationales, and the various administrative problems alluded to above mean that no tax system anywhere really treats all forms of income alike. Nor does it seem reasonable to posit this as a short-run goal in any developing country. [5] Instead, attention should be focused on (1) strengthening administration in those areas in which it is inherently weakest — the self-employed, rental incomes, etc. — and (2) considering carefully the extent to which policy objectives (or simply politics?) require more favorable treatment of certain types of income than seems warranted in the name of the principle of globalization. To the extent that such schedular elements remain, it must also be carefully considered whether it is best to mark them out explicitly (e.g., by special tax rates on interest income) or to allow them to exist in practice but not in form (as with agricultural income in many countries). [6] The former would seem better in principle, but the latter is clearly the more common practice.

These qualifications do not, however, mean that one ought to give up on globalization as an appropriate goal

One important function of law in any country is to state or announce social ideals or goals, even if they cannot, for the moment, be fully or adequately implemented. In this sense, the imposition of a global framework for the income tax may serve an important role as a statement of goals which may provide administrators and judges

5. Indeed, Rezende (in the paper cited earlier) has gone so far as to argue that a revised form of schedular taxation would be more suitable for most developing countries than further moves toward ineffective globalization.

6. For a careful discussion of agricultural income taxes, see G.E. Lent, "Taxation of Agricultural Income in Developing Countries," *Bulletin for International Fiscal Documentation*, 27 (August 1973), 324-343.

alike with some basis for deciding difficult cases of interpretation.

One way to achieve this purpose is by providing, for example in a preamble to the taxing statute, that any tax avoidance scheme intended to circumvent the statute will fail to do so if it is determined to violate the broad intent of the statute (i.e., to tax equally all forms of income received by persons). The Canadian income tax law, for instance, contains more or less just such a provision (Sec. 246) permitting the Treasury Board (a committee of cabinet ministers and hence a political body) to so rule. The fact that this provision has seldom been used, and not at all for several decades, is in the present context perhaps less important than the mere fact of its existence — as it were, as a kind of ultimate deterrent. An even stronger provision in Australia, giving considerable powers to the Commissioner of Taxes (an official), appears similarly to have been so effective that it has had to be used only once (in 1960). [7]

In addition to the general "anti-avoidance" provision, the administrative structure of the Canadian income tax contains several related provisions of more specialized scope but operating below cabinet level. There is, first, a general provision (Sec. 247) that, at the discretion of the Revenue Minister, transactions involving the "stripping" of dividends from a corporation (and their conversion into capital gains) can be disregarded and the proceeds taxed as ordinary income. Secondly, there are general (not discretionary) anti-avoidance provisions, e.g., that transactions that "artificially or unduly" reduce capital gains or increase losses will be ignored for tax purposes (Sec. 55) and a similarly-worded provision on certain pension payments to company executives (Sec. 245). Such broadly-worded statements in effect confer substantial power on the tax administration. The very vagueness of the language employed, while it invariably annoys and disturbs taxpayers — and especially their lawyers — increases the effectiveness of the law (and hence presumably its compliance with the goal of globalization) at the expense of reducing its certainty and perhaps increasing its arbitrariness.

In turn, these broad provisions in the Canadian law are supported by dozens of detailed provisions intended to prevent and block off particular modes of tax avoidance. To use a military metaphor, these detailed provisions are like snipers aiming at well-identified targets, supported by the machine guns of the broader provisions against avoidance in such contentious fields as capital gains, dividend-stripping, associated corporations, and pensions, and backed up ultimately by the "big gun" of a general anti-avoidance provision. (In addition, in recent years Canadian courts, as had U.S. courts long before, have begun to disregard certain legal maneuvers on the grounds that they are simply "shams" intended to achieve no purpose except to reduce taxes. [8])

Obviously, the legal (and political) situation varies in every country. The point of including this brief account here is not to put forth Canada as a model but simply to bring out clearly the need, even in developed countries with a very "global" tax structure and generally high levels of administrative competence and taxpayer compliance, to support the legal transition of the personal income tax to a more global concept with an effective legal structure for tax administration (and, of course, an effective administration). Global income taxes make sense in both equity and economic terms, as noted in Section I; they also may make sense, as at least an aspiration, even when they cannot be effectively enforced, as noted earlier in the present section; but there is no getting around the fact that the key to moving towards an effectively global income tax lies in improved tax administration at many levels. For this reason, the present brief account of some of the issues encountered in different countries in the course of making such a transition has heavily stressed the administrative aspect.

Questions of principle and policy are of course important and even decisive in many instances — and much more could be said about them than has been done here. But what can be said without fear of contradiction is that in the end the administrative constraint will very likely be a decisive consideration on what can actually be done in any country about globalizing its income tax. Moreover, for this and other reasons, a strong case can, we believe, be made for avoiding large, sudden changes, especially in the taxation of income from capital: too often such changes lead to over-reaction, especially in periods of economic distress. "Nature", said Alfred Marshall, the well-known English economist, "does not proceed by jumps" — and neither should tax reforms in such delicate economic and administrative areas as this. Small, regular changes (e.g., gradual increases in withholding rates) may be absorbed more easily, and hence seem in general a better way to go, both providing less occasion for adverse extreme reaction and more time for the necessary accompanying administrative improvement.

---

7. "Every contract, agreement or arrangement . . . . shall so far as it has or purports to have the purpose or effect of in any way, directly or indirectly . . . . defeating, evading or avoiding any duty or liability imposed on any person by this Act . . . . shall be absolutely void, as against the Commissioner." (Sec. 260, *Income Tax Act*, Australia.)

8. The anti-avoidance provisions in the U.S. Internal Revenue Code include such broad provisions as Section 482, which gives the Commissioner of Internal Revenue and his staff the power to reallocate income and expenses between related persons and entities in order more properly to reflect each taxpayer's taxable income. Other provisions deal with acquisitions made for the purpose of avoiding tax (Section 269), transfers to avoid income tax (Sections 1491-1494), and specifically blocked actions or transactions (e.g., Sections 531-565). Also, the courts have developed anti-avoidance doctrines such as the "business purpose test" in *Gregory v. Helvering*, 293 U.S. 465 (1935).

APPENDIX

UNITED STATES

Background

While the United States Federal Government had short-lived income taxes during the last century for a decade in the 1860's and for a few months in 1894, when the tax was held unconstitutional, the modern income tax dates from 1913, after a constitutional amendment was adopted. That act imposed taxes on individuals at rates from 1% on the first $20,000 to 6% on amounts above $500,000. The tax was annually reenacted until a permanent code was adopted in 1939 and revised in 1954. The 1954 Internal Revenue Code, as amended from time to time, is the current law. While generally regarded as a global income tax applying to all types of income and all income wherever located geographically, numerous exceptions exist to the broadest concepts of globalization.

These notes will not go into the wide variety of special rules applicable to different types of business income in reaching the figure of net income, which is then subject to tax like other income. Such special rules for calculating net income exist for banking, insurance, so called public utilities, mining, oil, farming, ship building, and a number of other particular types of manufacturing.

Personal Services

Earned income from personal services is entitled to a credit of 10% up to $4,000 of earned income, but the credit is reduced as income increases beyond $4,000, so that at the $8,000 level the credit vanishes completely. At the other end of the income scale, the maximum rate of tax applicable to earned income is 50%, even though 70% is the top marginal rate otherwise applicable to individuals.

Accident and health plan benefits provided by employers to employees are exempt.

Employer contributions to pensions, profit sharing benefits, stock bonuses, and stock options, are either exempt to the employee or given special treatment in the form of reduced taxes. (At the same time employers generally get to deduct from their income the costs of these contributions.)

Social Security taxes are based upon the employee's wages and are paid in part by the employee through deduction from his wages and in part by the employer. The employer part is deductible from the employer's income but is not included in the taxable income of the employee either at that time or later as benefits. The employee's part is not deductible by him from the wage income taxed to him, but the payments made to the employee after retirement from the social security scheme are exempt income at that time.

Meals and lodging furnished by the employer for his convenience are deductible by the employer, but not taxable as income to the employee.

Various other fringe benefits paid for by the employer are generally deductible for the employer and not taxable to the employee, with exceptions.

Prizes and awards are generally exempt, subject to special rules.

Scholarships and fellowships are also generally exempt from income tax to the recipient, but are subject to ceilings and to special rules.

Military personnel also have a variety of exemptions for combat pay and exclusions of subsistence and uniform allowances and other payments.

Personal Deductions

Interest paid by individuals on borrowed funds is deductible even though the funds are used for such personal purposes as buying homes, TV sets, and automobiles.

Taxes paid to state and local governments if levied on sales, property, income, and gasoline are deductible by the individual even though none of these taxes has been incurred for business reasons.

Medical expenses are deductible by individuals if they exceed 3% of income.

Contributions made by individuals to charitable, educational, and religious organizations are deductible up to 15% or 30% of income depending on the type of organization.

Losses suffered by individuals through casualties (for example, storms) or thefts are deductible to the extent they exceed $100 for each loss incurred.

Exclusions from Income

Gifts and inheritances are excluded from taxable income.

Life insurance proceeds are excluded, as are portions of annuities.

A portion of pay received while injured or sick has been excluded under the Internal Revenue Code for a number of years, but the sick pay exclusion has been repealed beginning in 1977.

Interest received on bonds and other forms of indebtedness issued by state and local governments is exempt from the Federal income tax (similarly, federal bond interest is exempt from state and local income taxes).

Capital Gains

Long term capital gains, that is, realized gains on property held for more than a year, are subject to a maximum tax of 35%, but may be taxed even less. Extremely complicated rules exist for the definition and taxation of capital gains and losses.

Minimum Tax on Preference Income

A tax of 15% (10% before 1977) is levied on items of

tax preference, which now include itemized deductions in excess of 60% of adjusted gross income, accelerated depreciation in excess of straight line depreciation on all personal property subject to a lease, long term capital gains, percentage depletion, intangible drilling costs, and certain other items. This minimum tax represents an attempt to reduce the benefits received by high income taxpayers from a variety of what are widely regarded as tax preferences.

Miscellaneous

The Tax Reform Act of 1976 made a number of changes, including limiting an individual's ability to deduct expenses attributable to the use of a portion of his home for business purposes. Similarly, deductions for expenses of attending conventions, educational seminars, and other meetings outside the United States have been considerably curtailed. Benefits of employee stock options have been reduced. Moving expense deductions when changing jobs have been increased to $1500, plus certain other benefits. Gain on the sale of a residence by elderly persons is excluded from income to the extent of $35,000. Employer contributions to group legal service plans for the benefit of employees are excluded. This new provision is applicable for 5 years on an experimental basis.

State and Local Taxes

While a number of the states of the United States have personal income taxes, many of them "piggy-back" on the federal tax. But not all of them do. Many have fewer personal expense deductions or broader tax bases. The State of Massachusetts, for example, allows deductions only for medical expenses. In addition, the State of Massachusetts not only taxes 100% of long term capital gains, but applies a rate twice as high to them as to earned income. This high rate also applies to interest and dividend income. Most other states use graduated rates applicable to all income, but these rates exceed 10% in only a few states.

CANADA

A. General

Canada has a fully developed global income tax. Nevertheless, there are various structural and administrative differences in the treatment of different types of income (and uses of income). These notes are intended simply as a brief sketch of certain features of this complex system and must not be construed as being either complete or fully accurate.

B. Earned Income

Traditionally no special treatment of earned income has existed in Canada. At one time, however, income from investments (e.g., interest and dividends) was subject to a surtax of 4 percent. In 1961, the base of this surtax was reduced to investment income from sources outside Canada, and a few years later it was dropped completely.

All wage and salary income (except for certain limited occupations) was long considered to be net income and consequently fully subject to taxation with no allowance for any expenses incurred in earning the income. The 1966 Royal Commission on Taxation criticized this treatment as discriminatory (compared with the ability of the self-employed to deduct such expenses) and recommended that employees be able to deduct certain employment expenses or else claim an optional deduction of 3 percent of earned income up to a maximum of $500. The new tax law introduced in 1972 instead granted an automatic deduction of 3 percent of wage and salary income, with a maximum of $150. This amount was increased to $250 in 1977 (but has not been indexed, although both the rate structure and personal exemptions were indexed in 1973).

C. Capital Income

1. *Interest.* Traditionally, there has been no withholding at source. Instead, payèrs must issue information slips (T5), at least for amounts over $50. When interest is paid on a bearer bond, the payer similarly issues an information slip (T600): it appears, however, that there has been no real control over such interest payments since not only can anyone ("straw men") collect them but also the identification number of recipient need not be on the form. In March 1977, this omission was fully rectified when Revenue Canada required that residents of Canada cashing bond interest coupons either provide a "correct" social insurance number or pay a 25 percent withholding tax.

Since 1974 the first $1000 of interest income received has been exempt from tax. Originally, this exemption was to be extended only to net interest receipts, that is, after deducting interest paid and claimed as a tax deduction (in Canada, only interest paid on money borrowed to aquire income-producing assets), but the actual legislation extended the exemption to gross interest. In 1977, the exemption was again restricted to net interest. Dividends and capital gains from the sale of Canadian stock may also be included in this $1000 exemption. In 1975, any unused portion of this exemption was made transferable between spouses, a not insignificant concession given the individual tax unit in Canada. The stated rationale for the interest exemption was to offset the effects of inflation.

2. *Dividends.* The administrative system is the same as for interest payments except that *all* dividend payments give rise to information slips (T5), regardless of their amount. The reason for this difference is that dividends (of Canadian companies) carry with them a federal tax credit owing to the partial integration system described below. Bearer shares appear to be legally possible but are seldom if ever issued: many shares are, however, held in "street names" which means, in effect, that much of the task of the tax administration is handled by the brokerage houses.

Since 1949 Canada has granted special tax treatment to dividends: from 1952 to 1971, for example, dividend recipients were entitled to deduct from their taxable income an amount equal to 20 percent of dividends received. This system was severely criticized by the Royal

Commission on Taxation as inequitable (in that it provided larger tax savings to high-income than to low-income taxpayers) and inefficient (in that it did not accurately "offset" the corporate tax). The Commission's own proposal was for a system of full integration of the corporate and personal taxes, in effect including all corporate profits (including undistributed profits) in shareholders' income and allowing the corporate tax as a credit against personal tax due on such "grossed-up" income. The system actually introduced in 1972 does not go nearly so far but does amount to full integration for small businesses (which are subject to a lower corporate rate) which fully distribute their profits.

In general, the present system amounts to a partial "gross-up-and-credit" system, with recipients adding about one-third of actual cash dividends, as well as the dividends themselves, to their income, calculating the tax due on income including this grossed-up amount and then subtracting a federal tax credit amount to about 50 percent of the dividend from this tax. Until 1977, the credit was about 33-1/3 percent: one apparent reason for the increase was to reduce the pressure to avoid dividend taxes by "converting" dividends into capital gains, which were taxed at a lower rate. The increase means that dividends are also taxed at almost as low a rate, relative to wage and salary income. All the relevant amounts needed for this calculation are shown on the T5 information slip. (Owing to the complex relations between federal and provincial income taxes in Canada, all statements on percentages are approximate and vary from province to province.)

D. Capital Gains

For many years capital gains as such were not taxed in Canada (although about 25 percent of receipts treated as gains in the U.S. were taxed as income in Canada). The Royal Commission on Taxation recommended full taxation of realized gains at regular income tax rates, together with deemed realization of accrued gains on property transferred by gift or bequest as well as when an individual ceased to be a resident of Canada. As actually introduced in 1972, however, only one-half of gains realized on assets held over one year are subject to income tax, with accrued gains being subject to the same tax on death, gift, or change of residence. The main exemption was for "principal residences", sales of which are completely exempt from income tax (regardless of whether the vendor acquires another house). Recent concessions include a doubling of the amount of capital losses that can be offset against ordinary income (to $2000) and, more importantly, exemption of certain stock options and stock dividends that had previously been subject to tax and also of gains on the sales of businesses and farms, provided the money is reinvested in a similar activity.

The major administrative problems encountered in introducing this system have arisen in connection with the valuation of closely-held business. Simplifying slightly, only gains arising after the end of 1971 are subject to tax (on the difference between sales price and cost or value as of end-1971). Official "Valuation Day" prices for all quoted shares have been issued. No account is taken of inflationary price increases, although the subject is under discussion.

The only special concession made to the "lumpiness" problem is in the case of deemed realizations at death where a six-year payment option is available (see also section G). Gains income is also taken into account in an automatic "general averaging" system and, more importantly, qualifies for a special scheme under which tax on certain types of income (*not* including wage and salary income) may be postponed for up to 15 years by purchasing an income-averaging annuity contract (IAAC). The proceeds of the contract are then taxed as received. (A somewhat similar system had been suggested by the Royal Commission on Taxation, with the important difference that under the Commission's proposal interest would have been charged on the postponed tax.)

E. Pensions

The present treatment of pensions was basically introduced in 1946. The essential idea is that inflows into registered pension plans are untaxed (whether from employee or employer), as is any interest earned by the fund, while all withdrawals are subject to tax. Prior to 1972 (and still, for amounts then accrued) special reduced rates were applied to lump-sum withdrawals: currently, the averaging provisions discussed in section D apply.

With the introduction of the Canada Pension Plan (CPP) in 1966, similar treatment was extended to public pensions, with contributions being deductible and benefits taxable. The basis Old Age Security payment had long been taxed (although contributions were not deductible since it was financed from general revenues). Following the recommendation of the Royal Commission on Taxation, unemployment insurance contributions and benefits have been treated like the CPP since 1972 and family allowance payments have been taxable since 1974. Other public transfer payments, however — war disability pensions, workmen's compensation benefits, the Guaranteed Income Supplement (paid to old age pensioners below certain income levels), and various provincial welfare payments — are still exempt.

Following arguments in the 1950's from the self-employed of discriminatory treatment, the registered pension plan system described above was extended to encompass what are called Registered Retirement Savings Plans (RRSPs). In recent years these plans have become much more important: they are outlined further in section F.

Recently a special exemption of $1000 was granted to pension income (other than that from the indexed public pension plans) purportedly as an offset for inflation. This exemption is transferable between spouses (see section C1).

F. Savings

The major exemption for savings in Canada is for income paid into RRSPs (see section E). The original limits for this exemption were $1500 if the taxpayer was

also a participant in a registered pension plan (section E) or $2500 if he was not a participant in such a plan. In 1972, these limits were raised to $2500 and $4000 respectively. Effective in 1977, the limits are now $3500 and $5000. A self-employed Canadian taxpayer can exempt up to $5000 a year from income taxes by investing it in one of the wide variety of RRSPs offered by financial institutions or by setting up his own RRSP. RRSPs may consist of holdings of a wide range of shares, mortgages, bonds, and similar financial assets. In addition to the initial exemption, the taxpayer also benefits from a similar exemption of all returns accruing to the funds invested in an RRSP. He is subject to tax on all withdrawals from an RRSP, however, and must, in the end, convert his RRSP funds to an IAAC (see section D) when he is 70. In 1974 contributions to "spousal RRSPs" were permitted, thus opening a way to splitting income for many taxpayers.

In 1974 a new savings exemption was created in the form of the Registered Home Ownership Savings Plan (RHOSP), allegedly intended to foster home ownership in Canada. The mechanics of this plan are rather like that of the RRSP except that each taxpayer is entitled to only one RHOSP in his life (there is no limit on the number of RRSPs anyone can have) and that only those who do not own any interest in real property can open a RHOSP. Subject to these limitations, taxpayers can exempt from tax up to $1000 a year for up to 10 years by investing in an RHOSP. As with the RRSP, returns accruing to the funds so invested are also exempted. In addition, however, the funds placed in an RHOSP may escape tax *completely* if on withdrawal they are used to purchase a house. In 1977, the RHOSP rules were substantially tightened to reduce flagrant abuses that had been taking place.

G. Gifts and Bequests

Death taxes were first introduced by some provinces in the 1890's. In 1941 the federal government introduced its own tax, first on an inheritance and then on an estate basis. (A federal gift tax had been introduced in 1935.) The Royal Commission on Taxation recommended that all special taxes on gifts and bequests should be abolished and that such transfers should be subject to the regular income tax. Federal taxes on gifts and bequests were in fact abolished in 1971, allegedly because of the simultaneous introduction of the capital gains tax on gains deemed to be realized on property transferred by death or gift (section D). These transfers were not, however, otherwise made subject to income tax and this gains tax is now the only federal tax on gifts or bequests. Since 1972, 7 of the 10 provinces have also abolished transfer taxes on gifts and bequests, and two other provinces have substantially lightened the impact of such taxes by repeatedly reducing rates (Quebec) or raising exemptions (Ontario).

H. Hard-to-Tax Groups

No special techniques are emplayed (other than administratively) to deal with such groups.

I. Other Topics

1. *Agricultural Income.* At least three special features exist with respect to agricultural income: (a) Farmers (and fishermen) have since 1949 been able to utilize an optional five-year block averaging system. Despite the introduction of general averaging in 1972, they still have this option. (b) The amount of farm losses that can be claimed by taxpayers ("hobby farmers") whose principal income is from nonfarming sources is severely restricted; (c) Farmers are given more option to treat certain income and expenses on a cash rather than accrual basis than are other taxpayers.

2. *International Income.* Since 1933 all payments to non-residents not engaged in business in Canada have been subject to withholding tax. Originally at 5 percent, this rate was raised to 15 percent on gross payments of interest, royalties, etc. for many years, with a lower rate of 10 percent being granted by treaty. The Royal Commission recommended that the rate be raised to 30 percent; in fact, it was raised to 25 percent in 1976, with a lower rate of 15 percent being granted by treaty. (The treatment of dividends is different and more complex owing to the partial integration system discussed in C2; it is not discussed here.) Interest paid to non-resident holders of government and long-term bonds is, however, exempted from withholding tax.

All foreign income received by Canadian residents is subject to income tax, with a tax credit being granted (in a somewhat unusual manner) for taxes paid abroad on such income.

3. *Mining.* The importance of the extractive sector in Canada is reflected in the importance and complexity of the federal and provincial taxes imposed on the mining and oil industries. Following the report of the Royal Commission on Taxation, the previous three-year exemption of income from new mines was abolished in 1974, as was the previous system of percentage depletion. The latter was replaced by a new concept of "earned depletion" which in essence amounts to more than 100 percent immediate write-off of exploration expenditures. Further discussion of this subject would be so complex that it cannot be undertaken here.

4. *Incentives.* Other than those already mentioned, the major incentives in Canada are probably those to fixed investment in manufacturing and processing industries. In addition to a two-year write-off of machinery and equipment, such firms (and firms in the resource industry) have since 1975 benefitted from a 5 percent investment credit on both buildings and machinery, as does all expenditure on scientific research and development. As noted in Section C2, small business corporations are also subjected to a lower tax rate (approximately half the usual corporate rate), and some provinces have special incentives for investment in such businesses. In the past extensive use was also made of regional development incentives, but these are now all grants except for investment credits of 7.5 and 10 percent (rather than the usual 5 percent) extended in 1977 to certain investments in certain regions. There are also various minor tax incentives (e.g., two-year write-off of pollution control equipment).

FRANCE

The most useful way to get a handle on France is to read pages 79-93 of the well known volume, produced by the Harvard Law School International Tax Program, *World Tax Series: Taxation in France* (by Martin Norr and Pierre Kerlan, and published in 1966 by Commerce Clearing House in Chicago). In these few pages one observes the sweep of history over the centuries to modern times. France was an early user of forms of income taxes, but not until the 1959 reform did France get a modern global income tax. France's progress through various stages of schedular taxation illustrates the impact of changes in economic structure and tax techniques and administrative capability through the 19th century and the first half of the 20th century. Since the second world war France has, of course, been under the pressure of the European Economic Community (Common Market) to conform its income tax structure to those of its major competitors. Italy has been under the same pressure.

The detailed examination of the French changes over time would be appropriate as a part of implementation studies for changes in Mexican law. For present purposes it hardly seems necessary to do more than note the availability of the information in the World Tax Series volume, excerpts from which begin below.

One exception to the foregoing, however, is the recent French experience with broadening its taxation of capital gains. This past year a modest capital gains tax was adopted by the French Government to apply to individuals with gains on transferable securities. The opposition of the business community following enactment has led to a substantial pull-back in the implementation of the new provisions. Recent action by the French Government postpones the effective date of the new capital gains provisions to January 1, 1979. All this activity has taken place in context of a law which already taxes the capital gains of business firms and certain gains of individuals on real estate transactions and on securities where the shareholder and his family have ownership of more than 25 percent of the total shares at any time within 5 years before the transaction.

Excerpt from WTS: France, pp. 90-93 (original footnote numbers retained)

THE TAX REFORMS OF THE FIFTH REPUBLIC

1. *Income tax.* Reform of the French tax structure paralleled the economic transformation of France that occurred following World War II (1/2.1). Reform began under the Fourth Republic with the adoption of a separate corporate income tax in 1948 (2/1.2e) and of the value-added tax in 1954-1955 (2/1.2f). The Fifth Republic carried tax reform forward with new vigor after it came to power in 1958. [108]

The first major tax measure was the reform law of 28 December 1959. [109] Probably the most important aspect of that law was the reform of the individual income tax. Schedular taxation was abolished; both the proportional tax (schedular in nature) and the progressive surtax were repealed. In their place, there was established a new individual income tax (*impôt sur le revenu des personnes physiques* or IRPP), global in nature and modern in design, resembling in its essentials the individual income taxes of the United Kingdom, Germany, and the United States. Indeed, the desire to conform the French income tax structure to those of its major competitors in the Common Market was an important factor in the reform: [110]

Finally, the European economic community requires that the tax structure of our country be comparable to that of competing nations. A tax reform should be the occasion for a harmonization of the principal aspects of the legislation and not the pretext for the establishment of a "tax moat."

Thus, the 1959 reform has been hailed as "the first stage in the process of aligning the tax systems of the Common Market." [111]

Because of revenue requirements, however, the abolition of the proportional tax was not immediately made effective in all respects. As a temporary supplement to the new individual income tax, a flat-rate complementary tax (*taxe complémentaire*) was enacted. The tax applied only to certain special categories of income. The scope and rate of the complementary tax have been steadily reduced, and the tax is scheduled for abolition by 1968 (16/1).

The 1959 tax reform also marked the beginning of a process of reducing the weight of the individual income tax, which had become increasingly heavy as inflation pushed taxpayers into higher tax brackets without fully commensurate increases in real income. Almost every finance act since the 1959 reform has made some reduction in income tax rates (12/1.5a).

Fewer changes were required in the corporation income tax, a modern tax that had been adopted during the reform of 1948 (2/1.2e).

One of the earliest achievements of the de Gaulle regime was to put a stop to rampant inflation and monetary depreciation. The 1959 reform abolished the complicated tax provisions permitting the revaluation of depreciable assets (6/6.2) and the setting aside of special deductible reserves for the maintenance of essential inventory (6/5.2). In addition, the reform provided for the abolition over a five-year period of the straight-line depreciation system and for the adoption, in its place, of a modern declining-balance system like the systems then used in Germany and the United States (7/3.4). Indeed, the new depreciation rules, like new inventory valuation rules adopted at the same time (6/5.2), were modeled after Germany's rules and marked another step in the process of aligning the income tax structures of the Common Market countries.

2. *Succession tax.* Another accomplishment of the 1959 tax reform law was the reform of succession and gift taxes (3/2, 3/3). Before 1959, France had two death taxes: a succession tax and an estate tax. The reform abolished the two-tax system, leaving France with only the succession tax. Moreover, for transfers between spouses or in the direct line, the reform made sharp reductions in the burden of the succession tax.

3. *Registration and stamp taxes and the taxation of real property transactions.* In addition to reforms of the income tax and of succession and gift taxes, the 1959 reform made certain changes in the registration tax system, but these changes were not extensive. In 1961, the Ministry of Finance proposed a major reform of registration taxes, which, after certain changes, became law in 1963. [112] The new law simplified and modernized registration taxes (3/4.1d) and stamp taxes (4/10.1), but its major effects were in the taxation of housing construction and the taxation of capital gains realized by individuals.

To encourage the construction of housing and to eliminate inequalities in tax burden resulting from the different forms taken by construction operations, the 1963 reform extended the value-added tax to all operations involved in the construction and delivery of housing and eliminated the registration taxes previously imposed on certain of those operations (3/4.2, 14/2.3a5).

108. Tax reform was, of course, only one aspect of the reform aims of the de Gaulle government, a government that "had efficiency and the modernization of the country for its objective, taking up the task of national renewal where Mendès-France had been forced to halt a half-decade earlier." Hughes, *Contemporary Europe: A History* 474.
109. L. 59-1472, 28 December 1959. Because the reform went into effect on 1 January 1960, it is sometimes known as the "1960 reform."
110. "La réforme fiscale," *Stat. et Etudes Fin.*, no. 136, 349 (1960).
111. Nortcliffe, *Common Market Fiscal Systems* v.
112. L. 63-254, 15 March 1963.

Another accomplishment of the 1963 reform was to subject to income tax capital gains realized by individuals in a variety of real property transactions (9/8.3, 9/8.4, 9/8.5). [113]

4. *Tax procedures.* The government of the Fifth Republic has accomplished procedural as well as substantive reforms. One feature of the French tax system is its reliance on a variety of taxes (2/1.1c). Over the years, different procedures for the assessment and collection of these different taxes, as well as different penalties and different rules governing protests, refunds, and statutes of limitation, had developed. In 1963, Parliament enacted a far-reaching procedural reform proposed by the Ministry of Finance; the new law provided for the harmonization and unification of the rules governing audit, refund, and litigation procedures, as well as the rules governing penalties, interest, and statutes of limitation (13/1.2). [114]

Legislation enacted in 1963, moreover, provided for reform of customs procedures, many of which had remained unchanged since the days of sailing ships and horse-drawn wagons (4/6.1). [115]

5. *Proposed reform of the sales tax system.* The de Gaulle government has also propsed extensive reforms of other aspects of the system. One of these is a proposal for reform of the sales or turnover tax system (*taxes sur le chiffre d'affaires*). This reform would abolish the local tax on retail sales (14/4) and expand the scope of the value-added tax, already the most important single tax in the French tax structure. The proposal was first introduced as part of the 1959 tax proposal, [116] but was vigorously opposed in Parliament by representatives of local government units, who objected to the abolition of the local sales tax. Parliament directed the government to come forward with a new proposal for reform of the sales tax system by 1 May 1960; if the new proposal were to provide for abolition of the local tax, the government was to provide, for local government units, another source of revenue capable of expanding with local economic development. [117]

The Ministry of Finance submitted its second reform proposal in the spring of 1960, but Parliament took no action (14/1.3). A third proposal, again calling for abolition of the local tax and for expansion of the value-added tax, was submitted by the Ministry of Finance in 1965. [118]

6. *Proposed reform of the local tax system.* The proposal to abolish the local tax is discussed at 2/1.2g5. The other major elements of the local tax structure are direct descendants of the "old four" taxes of the Revolution. The Ministry of Finance has also proposed modernization of these taxes (15/1.3).

7. *Proposed reform of the taxation of corporations and shareholders.* At present, corporations are subject to the corporation income tax at a flat rate of 50 percent; no distinction is made between distributed and undistributed profits. Distributed profits, in turn, are subject to income tax in the hands of shareholders, and no credit is available for any part of the corporation income tax paid by the distributing entity. [119] As an incentive to French capital markets, however, a reform of the taxation of corporations and shareholders was proposed by the Ministry of Finance in 1965. [120] The corporation income tax rate would remain 50 percent on all profits, distributed and undistributed, but the shareholder would, in effect, receive a credit for one half of the corporation income tax borne by the corporation with respect to distributed profits. [121] This reform also provides for abolition of withholding of preliminary tax from dividends.

The 1965 proposal called for other changes in business taxation, including simplification of the taxation of capital gains realized by business enterprises (9/8.8) and the experimental or voluntary abandonment of the territorial rule of the corporation income tax (11/1.3).

With the enactment of the proposed reforms, in addition to those already adopted, the Fifth Republic will have modernized and reformed every major element of the French tax structure: the individual income tax, the succession and gift taxes, the value-added and other sales taxes, registration and stamp taxes, the local tax system, the taxation of real property transactions and capital gains, the taxation of corporations and shareholders, and tax and customs procedures.

VENEZUELA

A. General

Venezuela has had an income tax since 1942. In 1959 a thorough review of the system (Shoup Report by Carl S. Shoup and others, *The Fiscal System of Venezuela*, Johns Hopkins University Press) recommended that the existing system, which consisted of 9 flat-rate schedular taxes plus a complementary progressive tax, be converted into a more modern unitary global tax (plus separate corporate tax). In 1967 this change was made. The system still retains significant schedular elements, however, some of which are noted below. Note that the present account is not based on fully-up-to-date or complete information.

B. Earned Income

Until 1967 salaries and wages were taxed at a 1% flat rate (in addition to the complementary tax), which was significantly lower than the rates applied to other types of income. The Shoup report recommended that if differentiation in favour of earned income were considered desirable, it should be achieved by some device such as a credit of 2% of earned income up to some (low) maximum figure. The 1967 reform, which subjected wages and salaries along with other forms of income to a lower progressive rate schedule than "commercial and business income", followed this recommendation in part by giving wage and salary earners a special credit of Bs.234 provided they had no other income and their income did not exceed Bs.19,800. In 1974, however, those with incomes of less than Bs.24,000 were completely exempted from tax, in effect removing this credit.

C. Income from Capital

1. *Interest.* Most interest paid in Venezuela is probably exempt from tax. All interest from savings and loan accounts is exempt, as is interest on certain public bonds and interest up to 8% on mortgage bonds issued by authorized financial institutions. Interest received on the first Bs.100,000 — a figure raised from Bs.10,000 to Bs.50,000 in 1967 and subsequently to Bs.100,000 in 1974 — of savings bonds and deposits appears also to be exempt. There appear to be no special withholding provisions on interest paid to resident individuals.

113. Part of this reform of the taxation of capital gains from real property transactions was carried out by the Finance Act of 1964, L. 63-1241, 19 December 1963.
114. L. 63-1316, 27 December 1963.
115. L. 63-1351, 31 December 1963.
The reform of customs procedures parallels the sharp reduction in French customs duties carried out under the terms of the Treaty of Rome establishing the European Common Market (4/6.1).

118. *Projet de loi*, no. 663, 1 June 1960; *Projet de loi*, no. 1420, 4 June 1965.
119. Rules to prevent double taxation of intercorporate dividends are discussed at 9/2.13.
120. *Projet de loi*, no. 1309, 7 April 1965.
121. The reform would also advance the harmonization of tax systems within the Common Market; in effect, the new French system would resemble the differential taxation of distributed profits already in force in Germany and Belgium. *Projet de loi*, no. 1309, 7 April 1965, p. 10.

2. *Dividends.* Until 1967 dividends were not taxed as personal income. In that year they were made subject to personal income tax (as had been recommended in the Shoup Report). At the same time, however, resident recipients were allowed to claim a credit equal to the amount of the dividend times 40% of the effective rate applied to the paying company in the previous year. This credit reportedly eliminates the tax for most recipients. Note that there is no "gross-up", as had been recommended in the Shoup report, so that the main effect of the credit is simply to lower taxes on dividends rather than to effectuate any real "integration" between the personal and corporate taxes.

Venezuela imposed a 30% withholding tax on bearer shares (in lieu of any other tax: see also section G). Although all such shares were supposed to be converted to nominative shares after the 1974 ratification of the Andean Pact's Decision 24 this has not apparently been done. In addition, a 1% tax is withheld on dividends on nominative shares and identified bearer shares paid to resident individuals.

3. *Rents.* Deduction of maintenance and administrative expenses are limited to 15% and 5%, respectively, of gross rental income. (See also section D on some exemptions.) Taxpayers can deduct up to Bs.1000 a month for rent if they do not own any real estate (and the same amount for mortgage or loan interest connected with a house if they do).

D. Capital Gains

Capital gains have, at least in principle, always been taxed as ordinary income in Venezuela, with no apparent special provisions for inflation or averaging (the latter had been recommended by the Shoup Report). Capital gains derived from sales of real property are subject to the (higher) rate schedule applied to commercial and business income, although a law presently before Congress would significantly reduce the progressivity of this higher rate scale. In 1974, however, gains (and rentals) from real estate used for housing, commercial and industrial construction, schools, tourism, hotels and recreational facilities were all exonerated from tax (see also Section F).

Fortuitous gains such as lottery prizes and pari-mutuel winnings are subject to a flat-rate withholding tax (30% and 15%, respectively).

E. Pensions

Retirement and disability pensions are exempt. In addition, taxpayers can deduct 100% of social security contributions if they earn less than Bs.80,000 and 50% if they earn between Bs.80,000 and Bs.100,000.

F. Savings

As noted in section C1 most interest on savings is probably exempted by one provision or another. In addition, the government may authorize exemptions to investors in the SAICAs (Sociedad Anonima Inscrita de Capital Abierto) established in the 1973 Capital Markets Law, of both dividend and interest income and of profits on the sale of shares, provided the proceeds are reinvested. Apparently no such exemptions have yet been authorized. Finally, life insurance premiums (which may incorporate some saving element) paid in Venezuela are allowed as a deduction in the same fashion as social security contributions (see Section E).

G. Gifts and Bequests

There has apparently never been any consideration of the possibility of taxing gifts and bequests under the income tax. The inheritance and gift tax introduced in 1936 was substantially modified in 1967 (along lines suggested in the Shoup Report). An interesting provision of this law (first introduced in 1961) is the imposition of a tax of 50% of the total capital of any company seeking to convert its stock into bearer shares: thereafter, however, such shares are excluded from the base of the inheritance and gift tax.

H. Hard-to-Tax Groups

No information available.

I. Other Topics

1. *Agricultural Income.* Income from agriculture has always received specially favorable treatment in Venezuela. Under the schedular system agricultural profits were taxed at a flat rate of 2%, but a special exemption of Bs.30,000 was allowed provided agricultural income did not exceed Bs.30,000. The new tax law in 1967 continued this exemption for income not exceeding Bs.60,000, provided receipts from agricultural sources form at least 75% of total gross income; this limit was later changed to Bs.120,000. Most recently, a 1974 decree simply exonerated income from agricultural pursuits from all income tax. Income from capital invested in the agricultural sector is also exonerated from tax for 10 years.

2. *International Income.* The Venezuelan income tax has always been, and remains, on a territorial basis, excluding all income earned by Venezuelan residents from non-Venezuelan sources. Remuneration paid to non-residents is subject to a withholding tax of 12% (18% for professional fees). A similar flat-rate tax of 15% is levied on dividends paid abroad, while royalties and interest paid abroad (as well as fees paid to "professional societies" not domiciled in Venezuela) are to be withheld in accordance with the progressive rate scale (calculated on the cumulative total of payments made in the taxable year).

3. *Mining.* Oil and mining income, insofar as it still accrues to private hands, is subject to a special tax regime in Venezuela which is too complicated to report here.

4. *Incentives.* In addition to the exemptions noted above in section I1, Ci, and F, the government has wide powers to grant incentives to almost any activity. Such exemptions are apparently especially important with regard to income from construction and tourism. In ad-

dition, taxpayers may claim a tax credit equal to 15% of the amount of investment in fixed assets destined for the production of income. There is also a tax credit system for exporters based on the percentage of value added in Venezuela.

COLOMBIA

In 1927 Colombia abandoned the schedular system upon the recommendations of the first Kemmerer mission to Colombia in 1923. A progressive income tax with rates from 1 to 8% was levied on all income. The World Tax Series volume on Colombia (prepared for the Harvard Law School International Tax Program by G. Eder, J. Chommie and H. Becerra; published by Commerce Clearing House, Chicago, in 1964) goes on to describe major changes in that law thereafter and sets forth in considerable detail the laws that existed in 1964. As the excerpts below from the 1968-69 Musgrave mission to Colombia indicate, the Colombian law was far from truly global as of 1968. For the most part these recommendations were designed to make the base of the individual income tax more comprehensive.

R.A. Musgrave and M. Gillis (Eds.), Fiscal Reform for Colombia (Harvard Law School International Tax Program, 1971)

Summary of Recommendations

INDIVIDUAL INCOME TAXATION

Exempt Income

11.45 In order to limit the erosion of the tax base through the exemption of various income items, the Commission recommends the following:

1. Employer contributions to social security should continue to be exempted from the individual income tax, but benefit payments should be taxable when received, subject of course to the deduction of the personal exemption.

2. Certain disability payments (compensation for medical payments and personal injury) should continue to be exempted, but payments in lieu of salary should be taxed. Payments at death which were financed by the decedent's employer should similarly be taxable, but those financed by the decedent himself should not.

3. The present exemption of severance pay, service bonuses, and vacation pay should be discontinued.

4. The limited dividend exclusion now provided should be raised to P 20,000.

5. The present exemption of interest from the first P 150,000 of deposit accounts should be replaced by an exemption of the first P 20,000 of interest received, such exemption being subject to the vanishing formula. Other forms of interest exemption now provided should be terminated as promptly as feasible.

Special Exemptions and Deductions

11.46 With regard to special exemptions and deductions, the following recommendations have been made:

1. The present tax treatment of housing should be changed to provide for either (a) continuing the taxation of imputed rent and deductibility of mortgage interest and disallowing the special rent exemption, or (b) dropping the taxation of imputed rent, disallowing mortgage interest, and retaining the rental exemption.

2. Taxes now disallowed as deductions should so continue. Property tax deductions should be disallowed if the taxation of imputed rent is to be discontinued.

3. The exemption of nonmedical payments to professionals should be discontinued.

4. Payments for doctors and dentists should be included in the exemption for medical and dental expenses; the exemption should be raised to P 2,000 and should be included in the vanishing provisions.

* * *

6. The allowance for charitable contributions should be limited to contributions in excess of 3% of net income, with an upper limit of 30% of taxable income before subtracting the deduction.

7. Instead of itemizing special exemptions, the taxpayer should be permitted a standard special exemption of 5% of taxable income or P 2,000, whichever is less. Taxpayers making use of the standard exemption would file a simplified return.

Capital Gains

11.47 The following proposals have been made regarding the tax treatment of capital gains:

1. The tax should be extended to include gains on the sale or exchange of all assets in addition to real estate, except assets held in the ordinary course of trade.

2. The value of taxable gains should be based on the 1960 asset value.

3. Gains should be taxed at the time of realization, subject to a prorating factor of five or, alternatively, a factor equal to the number of years the asset was held, with a maximum of five years.

4. Unrealized gains should be taxed at the time of death or gift.

5. The present provision by which the realized gain is reduced by 10% for each year that it is held should be discontinued.

6. Two approaches to the taxation of gains at the time of realization have been suggested; the Commission has made no choice between them.

Plan A: No inflation adjustment would be applied, but gains would be taxed at a rate five percentage points below that otherwise applicable under the prorating procedure.

Plan B: An inflation adjustment would be applied to the cost base, and gains thus adjusted would be taxed at the full rate applicable under the averaging procedure. The inflation adjustment would be established by the Ministry of Finance and could be equal to approximately one half of the increase in the cost-of-living index or, alternatively, to the full increase in this same index.

7. Capital losses should be set off against capital gains. If a net capital loss resulted, this amount could be applied against ordinary income up to P 5,000. Any excess would be carried forward to the five subsequent years, applicable first against capital gains, then against up to P 5,000 of ordinary income in each year.

8. Capital gains incurred on the sale of assets related to the taxpayer's business activity should not receive the preferential treatment described in (6) above, but should receive the benefit of the prorating device.

9. Short-term gains derived from assets held less than two years should not receive either the special treatment described in (6) or the benefit of prorating but should be taxed as ordinary income.

Vanishing Provision

11.49 The benefit from personal exemptions, as well as from special exemptions and from whatever exempt income remains, should be concentrated at the lower end of the income scale and reduced at the upper end. For this purpose, the Commission recommends that the amount eligible for exemption be reduced as income increases. The vanishing provision should begin to apply

at a taxable income of P 40,000 and should proceed at a rate of 1:4. Certain items, such as charitable contributions, should be excluded from the vanishing rule.

11.50 As an alternative to the vanishing formula, the respective exemptions and allowances might be translated into a deduction from (credit against) tax so that the tax saving per peso of exemption would not rise with the taxpayer's bracket rate.

A number of reforms were adopted in Colombia subsequent to the report of the Musgrave Mission. The most extensive of these were enacted during the last 4 months of 1974 under emergency powers. Under these reforms a number of income tax deductions and special exemptions were converted to credits, a number of exemptions were eliminated, a presumption that income is at least 8% of the taxpayer's net wealth was added, and the taxation of capital gains was broadened.

A number of personal and other allowances were converted under the 1974 law from deductions or vanishing deductions where these had been adopted before 1974 pursuant to the recommendations of the Musgrave Mission. Individuals now receive (1) a personal credit of Col.$ 1,000 for the taxpayer, 1,000 for the spouse and 500 per each additional dependent, (2) a "special" credit for the greater of 1,000 or the sum of 10% of medical expenses and expenses for primary and secondary education plus 20% of the first 10,000 of rent and 5% of the excess, (3) a credit of 20% of charitable contributions, subject to a ceiling of 20% of the income tax liability, and (4) a credit of 20% of the first 40,000 of income from savings deposits, dividends, and mutual funds for taxpayers whose net wealth does not exceed 2,000,000.

Previously existing exemptions for interest on mortgages and government securities, monetary corrections on constant purchasing power bank deposits, and (under the net wealth tax) for jewelry, works of art, government securities, and other items were all eliminated. Also eliminated were some business income exemptions, such as for amounts placed in extraordinary reserves or as investments in private electric companies.

Because many wealthy Colombians in agriculture or other activities for which income was low, not taxable, or not easily discoverable were paying little or no income taxes, the 1974 law added an amount of income equal to 8% of net wealth. It was expected that substantial additional amounts would become newly subject to personal income taxation through this presumption.

Capital gains taxation coverage was broadened under the 1974 law beyond the real estate transactions previously covered. The new category of irregular or occasional income applies to property held for more than 2 years, gambling receipts, and 80% of net inheritances and gifts received. Of the total amount of net irregular income, 20% is added to ordinary income in a tentative calculation. The marginal rate that turns out to be applicable to that additional 20% is then reduced by 10 percentage points and applied to the total amount of irregular income. No constructive realization of capital gains at death is provided.

One remaining aspect of the 1974 Colombia reforms must be noted. The initially proposed reforms contained a number of changes in the administrative provisions of the tax law which were designed to strengthen the tax administration's ability to frustrate taxpayer attempts to delay assessment and collection of taxes through the appeals process. Important among these provisions was one extending the statute of limitations for re-assessment of taxes to four years instead of two years. All the administrative (or procedural) changes in the emergency legislation were successfully challenged in court by taxpayers. The courts held that such changes could not be made by emergency decree, but required the approval of Congress. So far, the Congress has not yet approved these changes, with the result that the substantive changes in the law may be some time in becoming fully effective.

BOLIVIA

A. General

These notes are based primarily on material collected in the course of the Musgrave - Bolivia Fiscal Reform Study in 1976. (The Report of the Study Group is planned for publication in Spanish by the Bolivian Government and in English in early 1978 by the Harvard Law School International Tax Program.) Bolivia seems worth considering in the context of this study largely because it affords perhaps the most recent example of the process of converting a schedular into a global system — as well as an instance of a detailed appraisal of this process by a high-level advisory group.

B. Earned Income

Until 1976, Bolivia levied both a separate progressive income tax on labor income and a complementary progressive tax on "total" income. The new system which came into force in that year carried over significant features of this earlier system, including especially a 25% (previously 20%) deduction from gross income (up to a maximum of $b.70,000) for recipients of labor income. This concession is available to both employees and self-employed persons. In addition, the former receive an extra personal exemption of $b.600 (or $b.3,600 compared to the usual $b.3,000), and, more importantly, are entitled to exclude from income received one month's salary each year (the "patriotic bonus") plus $b.655 (or more) a month received in compensation "bonus" for inflation. Finally, various family allowances received by employees under the social security law are also exempted from tax. The result of all these exclusions and deductions is to exempt from income tax about 30% of the average wage received by employees in the modern sector.

The Musgrave mission recommended that *all* income received by employees be subject to tax, that personal exemptions be raised to keep taxes on employees more or less constant, and that a small credit be introduced to allow for expenses of employment. The result of these recommendations would of course be to reduce substantially the present overt degree of discrimination in favour of earned income in Bolivia.

C. Income from Capital

1. *Interest.* Until 1976, interest income was subject to a flat rate levy of 25%. In that year, the new income tax supposedly subjected interest income to the new progressive rate scale (enforced by a 25% withholding creditable against final tax liability). In fact, however, because taxpayers were permitted to exclude from income for tax purposes interest received on deposits in financial institutions most of the effect of the new law was vitiated. The Musgrave mission recommended that this exclusion be replaced by a limited deduction of up to $b.5,000 in interest income.

2. *Dividends.* Bolivia has no public stock market. Dividends paid on bearer shares are supposed to be withheld at a rate of 30% in addition to being, in principle, subject to personal income tax. There is no provision for withholding on other dividends although a system similar to that for interest (section C1) was proposed by the Musgrave mission. There is no integration between the corporate and personal taxes, nor was any proposed by the mission.

3. *Rents.* Prior to 1976, rental income from urban real property was subjected to a schedular tax of 12% on monthly rents up to $b.600 and 15% on higher rents. The new law subjects rental income to the regular income tax with the only special provision being the limitation of (deductible) maintenance expenses to 5% of the cadastral value of the property. The Musgrave Mission recommended that this deduction be limited to 5% of the value of structures.

4. *Royalties.* The new law permits recipients of royalty income to treat up to 20% of gross income as a deduction to cover costs but otherwise subjects such income to the regular income tax.

D. Capital Gains

Gains became subject to tax with the advent of the new income tax law at full rates with no provision for averaging and only crude provision for inflation. For both shares and real property, relatively simple administrative systems are applied. At present, only share gains are taxable at death or gift, with other gains being apparently exempt. There has as yet really been no experience in managing the new capital gains tax. Gains on sales of principal residences with cadastral value of less than $b.400,000 are exempt.

E. Pensions

Prior to 1976 all pension income was tax exempt, although social security contributions were also tax deductible. The deductibility of such contributions was carried forth to the new system while at the same time pension income was made taxable. This treatment was supported by the Musgrave mission.

F. Savings

See section C1.

G. Gifts and Bequests

Apart from the provision to tax accrued share gains at death or gift, gifts and bequests in Bolivia are subject not to the income tax but to a separate transfer tax.

H. Hard-to-Tax Groups

One of the most interesting features of the Bolivian income tax concerns its attempt to reach such hard-to-tax groups as small tradesmen and professionals. The recent tax reform included several special regimes intended for this purpose. Not all of these have yet been put into force, however, and the Musgrave mission has proposed some significant changes in this system. Basically, the Musgrave proposal is for a three-stage approach to the problem of "hard-to-tax" groups: (1) exempt very small taxpayers; (2) subject small taxpayers to a *presumptive* tax in lieu of income and sales taxes, with this tax being determined by a categorization of taxpayers; (3) all other taxpayers will file tax returns, but the hard-to-tax group will have to pay a minimum tax based on income as *estimated* by the tax administration. The difference between the estimated and presumptive systems is that the former allows to some extent for the individual characteristics of the taxpayers while the latter levies the same tax on all taxpayers placed in the same category (determined by type of activity and estimated gross sales). To make the estimated system work, it is proposed to establish specific sets of guidelines for estimated income for each major activity. The same system should be applied to professionals.

I. Other Topics

1. *Agricultural Income.* At present agricultural income is supposedly subject to the income tax but in fact no effort has been made to apply the tax even in the modern sector of agriculture. The Musgrave mission proposed that a new land tax (presumed income tax) be applied to agricultural income, without attempting to integrate it into the regular income tax for the time being.

2. *International Income.* Only income from Bolivian sources is subject to income tax. In general a 30% withholding rate is applied to payments abroad.

3. *Mining.* As Bolivia's major modern sector activity, mining is, not surprisingly, subject to a completely separate tax regime. This regime was recently the subject of a detailed study by a Harvard mission (the Gillis Report).

4. *Incentives.* Incentives to investment are granted both under the income tax law and under the Investment Law, with the latter being subject to specific approval. At present the income tax law provides for an investment credit, but this provision is not yet in force, and the Musgrave mission recommended that it be replaced by a 50% expense allowance.

To meet the future information needs of the international businessman and his financial and legal advisers, the International Bureau of Fiscal Documentation announces the MAJOR e-x-p-a-n-s-i-o-n of its key loose-leaf management information service —

The Taxation of Companies in Europe

(Vol. 2 of Guides to European Taxation)

Loose-Leaf

Each chapter follows a common outline

Four Binders

Updated quarterly by air

THE TAXATION OF COMPANIES IN EUROPE:

— provides you with reliable up-to-date background data at a fraction of the normal cost of gathering the information yourself

— although the continued importance of seeking local professional advice before making major corporate decisions is emphasized, it enables you to reduce the cost of those "first steps", AND HELPS YOU TO ASK THE RIGHT QUESTIONS!

Dfl. 850

including up-to-date basic volume in four binders PLUS AN AIRMAIL SUBSCRIPTION TO THE QUARTERLY UPDATING SUPPLEMENTS THROUGH THE END OF 1978.

For residents of the Netherlands: prices are exclusive of BTW (value added tax)

A RELIABLE GUIDE to the practical aspects of all taxes encountered at the different stages in the life of a company. Specially designed for the businessman with serious international interests, and his professional advisers.

Already covering the NINE Member States of the EEC NOW e-x-p-a-n-d-e-d to cover also MAJOR Non-EEC Countries:

Austria
Greece
Norway
Sweden
Switzerland

This radical new concept in management information services now becomes one of the most authoritative sources of reference in its field, in the English language.

What's New?

In the latest updating supplements... tax changes in Denmark (depreciation); new French professional tax, also headquarters tax, deductibility of director's remuneration, and inflation levy; new German Fiscal Code (effective January 1, 1977), expected reform of corporate income tax system, also new co-determination law and loss carry back; new Irish corporate income tax system, and Budget speech; changes in investment allowance provisions in Luxembourg and the Netherlands; United Kingdom Finance Bill 1976. Changes in Netherlands company law.

Recent Developments in Excise and Sales Taxation

by Sijbren Cnossen*

This article updates the information on the structure and coverage of taxes on goods and services in over a hundred countries that was presented in a 1975 study based on data collected in 1973. [1] *General taxes on goods and services, referred to as sales taxes, were classified according to the level(s) of production and distribution at which they were imposed; selective taxes, called excises, were classified on the basis of their coverage. Both taxes were further characterized in the light of certain widely accepted equity and efficiency criteria relating to the treatment of basic necessities, luxury items, and producer goods; the coverage of services was also dealt with.*

Since the earlier publication, a number of changes have taken place that are worth reviewing. Several countries have adopted a different form of sales tax or introduced such a tax for the first time and modified the coverage of their excise system. Rates have also been increased in the quest for more revenue, or to make up for the revenue foregone owing to an increase in the number of exempted items. Also, more information has become available that makes it possible to improve the earlier presentation.

The first section of the article briefly reviews certain definitional issues that are essential in understanding the basic classification that has been followed. The second section then summarizes the available information on sales tax and excise systems in 128 countries. The revenue importance of these taxes is also shown in summary form. [2] *A concluding section broadly evaluates the changes that have taken place since 1973.*

I. DEFINITIONAL ISSUES

Sales taxes and excises are defined to include all taxes other than import duties levied on the production, sale, transfer, leasing or delivery of goods and services, irrespective of whether they are domestically produced or imported. Sales taxes and excises thus emerge as twin branches of the same tree, although there are important differences between the two that are worth noting.

First, sales taxes are general in intent, the tax base being typically defined to include all commodities for sale other than those specifically exempted. Excises, on the other hand, apply to particular commodities or a limited range of commodites that are individually enumerated in the law. The scope of a sales tax is also broader than that of an excise system, because in almost all countries it includes imports, whereas, at least historically, excises have been associated with domestically produced commodities, with any countervailing duty on goods coming from abroad being incorporated in the import duty. [3] In practice, the tax base may be similar, particularly between a sales tax with a large number of exemptions and an excise system with an extended coverage.

A second difference is that sales taxes have mostly been introduced to meet general revenue needs, but excises, though often producing much revenue, are frequently rationalized as serving a special purpose. Among the reasons that have been advanced to justify the imposition of excise type levies are the control of the consumption of items that are considered immoral or unhealthy, the discriminatory taxation of luxury commodities considered proxies for taxpaying capacity, the benefit-received taxation of road services rendered by government, the control of the discharge of pollutants, the curtailment of the use of energy, or yet the provision of incentives to promote the use of idle productive capacity or changes in factor proportions and product mix in favor of labor-intensive production processes.

Third, the discriminatory intent of excises, whether sumptuary or regulatory, generally involves some quantitative measurement of taxable output and the imposi-

2. The first and the second sections draw on chapter 2 of the author's treatise, *Excise Systems: A Global Study of the Selective Taxation of Goods and Services* (Baltimore and London: The Johns Hopkins University Press, 1977).
3. Ethiopia, Egypt, the Sudan, Turkey, and most francophone African countries designate countervailing import duties as excises. In the literature of the Organization of Economic Cooperation and Development, duties on tobacco products, alcoholic beverages, and petroleum products levied at the import stage are regarded as excises. That treatment is also followed in this paper.

tion of physical controls to ensure compliance with the law — a manner of assessing and enforcing the liability to tax, though, that is usually also applied to excises levied solely for revenue. Historically, excise taxation on the basis of physical characteristics has involved the application of specific rates, that is fixed amounts per unit of production or number of services rendered. In contrast, sales taxes are almost always assessed on the basis of the value of goods and services sold, following the submission of returns by taxpayers who apply ad valorem rates to compute the tax liability. In turn, the latter is verified through checks upon written records. Therefore, excise procedures are similar to customs operations, whereas methods to establish the sales tax liability are more akin to audit techniques for business income taxes.

1. FORM AND STRUCTURE OF SALES TAXES

Sales taxes may apply to all or nearly all stages of production and distribution. They are then called turnover taxes that are imposed on gross receipts of a business or trade, or value-added taxes that are levied on turnover after subtracting payments for purchases (technically achieved by allowing a tax credit for purchases against the tax payable on sales). Other sales taxes are intended to apply to only one stage of production or distribution and are called production, manufacturers', wholesale, or retail sales taxes. The retail/wholesale tax is a hybrid form that aims at the retail stage, but for administrative reasons excludes small outlets and instead levies the tax at the preceding wholesale stage.

All sales taxes other than turnover taxes attempt to ensure that the actual tax borne by various products does not vary capriciously depending upon the number of times that any particular product changes hands before it reaches the consumer and the percentage of total value added at earlier rather than later stages in the process of production and distribution. Effective rates expressing the tax as a percentage of the final consumer price that are not uniform in relation to the nominal or statutory rates distort competition and stimulate uneconomic vertical integration, inhibiting in particular the development of wholesale activities and the subcontracting of specialized industrial processes. The techniques employed to prevent such changes in forms or methods of doing business include the exemption of raw materials, intermediate products, and capital goods (collectively referred to as producer goods); the subtraction of taxable purchases from taxable sales; the suspension of the liability to tax on transactions between registered firms; or the provision of a credit for tax paid at a previous stage. [4]

Unintended distortions are likely to be smallest under the value-added and retail forms of sales taxation. They remain to some extent under manufacturers' and wholesale taxes owing to differences in trading margins among various commodities and the location of distribution functions. By definition few attempts to mitigate cumulative effects are made under turnover taxes, although many producer goods are often exempted. Distortions should also occur under production taxes that can be described as turnover taxes with anticascading features that are not as systematic and comprehensive in design as those of manufacturers' taxes.

The various forms of sales taxation that are in use and the manner in which cumulative effects are mitigated, are shown in Table 1.

2. COVERAGE AND FORMS OF EXCISE SYSTEMS

Historical precedence and usage in many countries support a broad application of the excise label to include selective taxes on goods, on services, and on motoring; these three groupings may be said to comprise an excise system. Selective taxes on goods consist of taxes on traditional excise goods: tobacco products, alcoholic beverages, petroleum products; foods and nonalcoholic beverages: sugar, soft drinks, and various "breakfast table" items; and other nontraditional excise goods: textiles, footwear, matches, soap, luxury items, and producer goods. Selective taxes on services include levies on transportation, travel, banking, insurance, hotel and restaurant services, and betting, gaming, and entertainment activities. Selective taxes on motoring cover all duties, charges, and license fees levied on road use except excises on gasoline and diesel fuel.

Depending on the range of goods and services covered, excise systems may be of the limited, intermediate, or extended type. While all types of excise systems include selective taxes on traditional excise goods, road use, entertainment services, and items such as sugar, soft drinks, and cement, the coverage of intermediate systems usually extends to a number of other nontraditional excise goods such as textiles, paints, cosmetics, perfumery, and specified services such as insurance and travel. Extended excise systems include, in addition, a large number of taxes on luxury items and producer goods. A more precise classification is given in Table 2.

II. OVERVIEW OF SALES TAX AND EXCISE SYSTEMS

On the basis of the definitions presented in the preceding section, The Appendix gives an overview of the sales tax and excise systems in 128 countries grouped into 11 regions. The most common or standard sales tax rate, computed exclusive of the tax itself, is shown for each country, as are the lower or higher rates of tax imposed to lessen the regressivity or further the progressivity of the tax. The treatment of services under various sales taxes is denoted separately. Excise systems are classified according to their coverage; products for which fiscal monopolies are operated are listed separately. The data on the revenue importance of each tax, although of older date, should also be of interest.

4. The tax credit principle is in use under value-added taxes as well as some manufacturers' taxes. However, the tax credit is a *conditio sine qua non* in design under the former whereas under the latter it is merely one of the techniques to eliminate cumulative effects. Furthermore, manufacturers' taxes are not levied on trading activities per se, while value-added taxes extend through the wholesale stage if not always the retail stage. Also value-added taxes are not concerned with defining manufacturing.

Table 1. Forms of Sales Taxation

1. Turnover taxes: collected on sales at all or nearly all production and distribution stages; because of their cumulative effects these taxes are also referred to as cascade taxes.

2. Production taxes: collected on sales by producers to wholesalers, retailers, or other producers; transactions prior to the sale by the last producer are often partially exempted or taxed at reduced rates:

a. *French-type production taxes:* exempt domestically produced raw materials and intermediate goods as well as imported goods that have not been further processed.

b. *Other production taxes:* exempt producer goods or apply reduced rates, while trading activities per se are excluded from the tax.

3. Manufacturers' taxes: collected on sales by manufacturers to wholesalers or retailers, including occasional direct sales to consumers. While capital goods are usually exempted outright, various techniques have been designed to counter the cumulative effects of the taxation of raw materials and intermediate goods:

a. *The suspension method:* permits the tax-free purchase of inputs by traders and manufacturers registered for that purpose, the tax being levied when products leave the "ring" and are sold to unregistered persons.

b. *The subtraction technique:* allows for a deduction of taxable purchases from taxable sales; this can be done for:
(1) physically incorporated inputs only or
(2) on some other basis such as a deduction for inputs taxed at the same rate as the finished product.

c. *The tax credit principle:* provides for a credit for tax paid on purchases against tax payable on sales.

4. Wholesale taxes: collected on sales by the last wholesaler or manufacturer to retailers, including occasional direct sales to consumers. Capital goods are usually exempted outright, while the suspension method applies to raw materials and intermediate goods.

5. Retail/wholesale taxes (hybrid systems): collected on the sales of retailers to final consumers and of wholesalers or manufacturers to retailers whose operations are considered too small for separate taxation. Producer goods are treated similarly as under wholesale taxes.

6. Retail taxes: collected on sales by retailers to final consumers, including wholesalers or manufacturers selling occasionally to consumers; producer goods are generally excluded by definition.

7. Value-added taxes: collected on sales at all or nearly all production and distribution stages, with each stage receiving a credit for tax paid on purchases from the preceding stage.

a. *The EEC model:* extends through the retail stage and provides for a credit for tax paid on all producer goods.

b. *Other types:* may not cover the retail stage and sometimes do not give credit for tax paid on certain fixed assets.

1. SALES TAXES

a. Sales tax coverage

The most favored form of sales tax is the variant imposed at the manufacturing stage. Thirty-two countries, or 37 per cent of all those with sales taxes, collect the tax at this level. The manufacturers' sales tax is particularly popular in Africa where two out of every three countries with sales taxes use it. For developing countries this tax is probably the easiest to administer as it is collected at a level where the number of taxpayers is smallest and record keeping the best. The close relationship with previously imposed production excises, and the corresponding duties collectible at the import stage are other administrative advantages.

The various techniques applied to eliminate cumulative effects are approximately evenly divided among countries that impose manufacturers' sales taxes. The subtraction technique, limiting deductions to inputs which are physically incorporated in produced goods, is exclusively a francophone African phenomenon. The suspension method and the tax credit principle are widely employed in other parts of Africa, but also in Asia and South America. These three techniques are probably equally feasible from an administrative view and given the same base and rate revenue yields should not differ. The subtraction technique and the tax credit principle have the advantage that collections are spread over more taxpayers, but the suspension method ties up less business working capital. Cumulative effects of sales taxes are partially eliminated under production taxes through the exemption or lower taxation of producer goods. This form is found in 15 countries, 6 of which were formerly associated with France.

Twenty-three countries, or 26 per cent of all those with sales taxes, now have a value-added tax, all but one of the pure consumption type. [5] Although initially confined to the European Economic Community (EEC) and associated countries, the value-added tax is increasingly being used in Latin America. The EEC type of value-added tax is the most broadly based tax; elsewhere services and retail establishments are only partially taxed and producer goods are often exempted outright.

Eleven countries collect a sales tax at one of the distribution stages, or operate the hybrid form of retail/wholesale tax. The retail tax is particularly suitable for countries, such as Canada and the United States, with large local tax jurisdictions. In developing countries this tax would face severe compliance and administrative problems. The wholesale tax is often difficult to distinguish from the manufacturers' tax operating under the suspension method. The major distinction between these two forms of sales taxation concerns the treatment of imports, which is more in line with the domestic base under the wholesale tax. The retail/wholesale tax is mainly a device to ease collection problems for small retailers; this form is being used less than before. Finally, six countries still levy multistage turnover taxes, coveted by governments in earlier times because of their

5. Under the consumption type of value-added tax, the tax base for any one firm equals sales minus purchases of producer goods; the sum of all individual tax bases equals consumption. Under the income type of value-added tax, the base for each firm equals sales minus purchases of raw materials and intermediate goods, and depreciation for capital goods; the sum of these bases in turn equals national income. This form is partially in use in Argentina. Finally, under the product form, not used anywhere, no deduction at all would be allowed for the tax paid on capital goods; the aggregated base of this variant would be gross domestic product.

revenue potential owing to the imposition of a low rate on a large base, but condemned by economists because of their cumulative effects.

The treatment of services under various sales taxes strongly follows legal traditions. Services are generally included under sales taxes in countries that follow French and Spanish taxing customs, but not in countries that have adopted features of the British tax system, reflecting a reluctance to tax transportation, banking, insurance, communications, or public utility services. Even when taxed, services are usually not fully covered under single-stage taxes, but generally enumerated individually in the law because many are personal, socially important, or simply hard to reach. The broadest coverage is under the EEC type of value-added tax that excludes only financial services, education, health, and cultural activities.

Out of 128 countries surveyed, 44 countries, or 1 out of 3, do not impose a sales tax at all. These countries are found mostly in the Caribbean, the Middle East and Africa. Many Caribbean countries operate extended excise systems instead of a sales tax, and in the Middle East broad-based sales taxes are not needed as most revenue is collected from petroleum. In some African countries the economic base may be too small to justify the introduction of a sales tax, and import duties together with selective excises still fulfill the revenue function adequately.

b. Sales tax rates and exemptions

The level of the standard sales tax rate depends on such factors as revenue requirements, the tax base (which is larger under a multistage tax than under a single-stage tax), the availability of alternative sources of revenue, and society's views on the role of sales taxes versus income taxes. Rate comparisions on the basis of The Appendix are most meaningful between countries at a similar stage of economic development that have the same kind of sales tax and follow the same taxing tradition. As expected, rates are generally higher under production and manufacturers' taxes than under turnover taxes. Rates are often also higher in high-income countries as shown by the value-added taxes in the EEC and associated countries. Twenty-two countries out of 84 with sales taxes use tax-inclusive rates that are primarily a French tradition.

To lessen the regressivity of their sales taxes, most countries have adopted a differentiated rate structure with lower rates or exemptions applying to necessities generally defined to include foods, medicines, fuel, books, newspapers, footwear, soap, and certain clothing items. In a few countries with value-added taxes, some necessities (and exports) are zero-rated, which involves a net refund for tax paid at the previous stage. In addition, to improve the progressivity higher rates of tax are often levied on cosmetics, perfumery, jewelry, various appliances, television sets, musical instruments, phonographic and photographic equipment, sporting goods, automobiles, pleasure boats, and hotel and restaurant services. Higher rates of sales tax are easiest to administer under manufacturers' taxes owing to the greater degree of business specialization at this stage.

2. EXCISE SYSTEMS

a. Excise coverage

One half of all countries listed in The Appendix have limited excise systems that comprise traditional excise goods, motor vehicles, entertainment services, and a few other commodities. Geographically, this form of excise system is heavily concentrated in North and West Africa, and in South America. One out of every four countries operates an intermediate excise system; they are predominantly a European and Central, East, and Southern African phenomenon. In Europe various food products are widely taxed, as well as some other items of widespread consumption. In Central Africa the intermediate systems comprise the *taxe unique* that is imposed on goods produced and traded in the Central African Customs and Economic Union, replacing the import duties and sales taxes collected previously.

Extended excise systems that comprise virtually all industrial activities in a country are found in 20 countries, mainly in Asia, the Caribbean and Central America. In Asia, the excise systems of the Indian subcontinent and the commodity taxes in the Republic of China, Japan, and Korea are of the extended type. In the Caribbean, the excise system comprises the consumption and purchase taxes of the countries belonging to the Caribbean Community (Caricom) that impose selective taxes on products for which trade restrictions and import duties were lifted by agreement. Most of the 9 countries that do not levy excises at all are located in the Middle East, where alternative sources of revenue are available from petroleum and transit dues.

Sugar, salt, soft drinks, and their substitutes are the most widely excised food products. Thus, of 110 countries known to impose non-traditonal excises, 65 collect an excise on sugar, 29 on salt, and 71 on soft drinks. Matches, another favored product, are subject to an excise in as many as 65 countries. Like salt, its inelastic demand features and implicit revenue properties made it commonly subject to tax in early times; at present mechanical lighters are often taxed concurrently. At least 17 governments collect an excise on playing cards, which yield only a little revenue. Among luxury items, cosmetics, perfumery, and toilet articles are subject to excises in at least 27 countries, and jewelry in 20. Producer goods that are taxed frequently — by at least 27 countries — include cement and building materials. Among services, a separate levy on insurance is imposed in 40 countries; travel in one form or another is taxed in 50 countries; hotel and restaurant services are taxed in 31 countries. Some excises are peculiarly regional, including the taxation of biscuits in East Africa, wheat flour in Central American countries, and dairy products and pharmaceuticals in Scandinavian countries.

b. Fiscal monopolies

In a large number of countries, the production or distribution of products such as tobacco, matches, alcohol, sugar, salt, and occasionally some other goods or services is reserved by law to government. The manufacturing or selling enterprises are usually referred to as fiscal monopolies; the surpluses that they generate are

economically similar to excises. Although fiscal monopolies can produce much revenue, there is no evidence that they contribute more to the fisc than countries that rely solely on excises. [6] In addition to their revenue objective, fiscal monopolies often fulfill important regulatory functions, including the control of the quality and consumption of certain goods, and the stabilization of the production and prices of the primary producers.

The most common fiscal monopolies are operated for tobacco products (26 countries), alcoholic beverages (22 countries), and matches (15 countries). Tobacco monopolies are heavily concentrated in the Mediterranean and Middle Eastern area, indicating their historic association with French and Spanish taxing traditions and mercantilistic economic policies. Tobacco monopolies are also found in the Far East and Eastern Africa. Match monopolies, mostly established at the turn of the century, are generally administered by tobacco monopolies. Geographically, alcoholic monopolies are found mainly in northern Europe, North America, and some Latin American countries where social traditions favor the control of alcohol consumption. Fiscal monopolies for sugar (6 countries) and salt (9 countries) appear to have been formed mainly for revenue purposes. Other products for which fiscal monopolies exist are listed in the footnotes to The Appendix.

3. REVENUE ASPECTS

An analysis of the revenue data shown in The Appendix indicates that sales taxes and excise systems together contribute on average about 38 per cent of total tax revenue in industrial as well as developing countries. In high-income countries the share of sales taxes is 14 per cent, while excise systems contribute 23 per cent; in low-income countries, these figures are 11 per cent and 27 per cent respectively. [7] Thus excise systems emerge as an important source of revenue: limited systems contribute 22 per cent of total tax revenue, intermediate systems 25 per cent, and extended systems 34 per cent.

The traditional excise goods are the most widely and heavily taxed, contributing on average 70 per cent of excise receipts or 18 per cent of total tax revenue. When taxes on motor fuel, vehicles, and other road user charges are considered jointly, the automotive field is the single most important source of excise revenue. In several countries its contribution to total tax revenue ranges from 10 per cent to 16 per cent, compared with 8 per cent to 14 per cent for tobacco products and for alcoholic beverages. Other goods and services that are heavily taxed include sugar, soft drinks, cement, textiles, and lotteries.

Further examination of the revenue data reveals that in several low-income countries the sales tax in fact is little more than a supplementary import duty. This is because there is no local production of the taxed items, such production is exempted, or because sales tax rates levied on imports are higher than on domestically produced goods. When the excise yield is compared with that of the sales tax relating to the domestic base, the revenue from the sales tax is often not nearly as great as receipts from a single traditional excise good. In most low-income countries, sales tax collections derive almost exclusively from typical excise goods — an indication of how small the domestic base of their sales tax really is. There is also evidence that the buoyancy and elasticity of excises in low-income countries is sufficiently high to ensure a growing source of revenue that exceeds relative increments in income. Moreover, in times of inflation, the system of physical controls that is maintained for most excises appears to be more helpful in enforcing timely payment of tax liabilities than the voluntary compliance producers of sales taxes.

Table 2. Forms of Excise Systems

1. Limited excise systems comprise at least the traditional excise goods: tobacco products, alcoholic beverages, and petroleum products — as well as motor vehicles and various forms of entertainment. In addition, some food products such as sugar, salt, soft drinks and, for instance, matches, cement, or insurance may be included. However, all in all, the coverage of limited systems would not exceed 10 to 15 commodity groups with closely related products (various petroleum products, or sugar and saccharine, for instance) being treated as one excisable item.

2. Intermediate excise systems consist of between 15 and 30 commodity groups. In addition to the items covered under limited systems, they include more food products such as various dairy and grain products. Other items of widespread consumption, such as textiles, footwear, and pharmaceuticals, may also be covered, as well as a few luxury items, for instance, cosmetics and perfumes. The producer goods that may be part of intermediate systems are cement, building materials, paints, and varnishes. As a rule, a number of services such as insurance, banking, transportation, and public utilities are taxed.

3. Extended excise systems comprise more than 30 commodity groups spanning almost the whole range of production activities in a particular country. In addition to the items taxed under intermediate systems, many luxury and producer goods are excisable. Invariably, high excises are imposed on electrical and gas-operated appliances, radios, television sets, and musical and photographic equipment. Extended systems are the only excise systems that cover a wide range of producer goods: steel and aluminum products, plastics and resins, rubber products, wood products, and sometimes machinery.

III. DEVELOPMENTS SINCE 1973

The most notable development since 1973, when the information for the previous study was compiled, is the further spread of value-added taxation. This trend is reviewed below. An attempt is also made to assess some of the experience with this relatively new form of sales taxation; more dispassion may be needed than displayed by its early proponents. In addition, there have been changes in other sales taxes and in some of the excise systems.

6. Most countries with fiscal monopolies also levy excises, particularly on tobacco products and alcoholic beverages.

7. Based on simple arithmetic averages of a representative sample of 33 low-income countries and 30 high-income countries taking US $600 as the dividing line between the two groups.

1. COUNTRIES THAT ADOPTED THE VALUE-ADDED TAX

The value-added tax has been adopted by several Latin American countries during the period under review. In 1975, Argentina and Chile introduced a value-added tax, replacing previously applicable manufacturers' taxes. In addition to broadening the base, both countries took the opportunity to raise effective sales tax rates substantially. In a further move, in 1977 Chile eliminated most of the exemptions for foods, newspapers, and books, and took steps to integrate the tax on services more closely with the basic levy. The Argentine variant resembles an income type of value-added tax that permits a credit for the tax paid on capital goods in three annual consecutive installments.

Costa Rica and Honduras followed the example of their southern neighbors in 1976, but instead of drafting new legislation a tax credit provision was grafted onto the existing retail/wholesale taxes operating under the suspension method. Costa Rica increased the standard rate of tax by 60 per cent, but Honduras reduced its rate. Panama, which has not had experience with a sales tax so far, introduced the value-added tax in 1977 at the rate of 5 per cent, permitting the usual exemptions for foods, medicines, pharmaceuticals, and fuel. In view of the narrow industrial base of the country, it may be surmised that much of the tax will be collected at the import stage. Mexico is also considering the feasibility of a value-added tax; if adopted the tax would replace a 4 per cent multistage turnover tax.

Outside Latin America, Israel introduced a value-added tax at the end of 1976, but retained much of the purchase tax that is noteworthy for its highly differentiated rate structure; the latter can now be more appropriately classified as an extended excise system. In Korea, a value-added tax of the EEC type levied at a uniform rate of 10 per cent was introduced on July 1, 1977. The tax will be supplemented by an excise system, similar in coverage to the Japanese commodity tax, with 29 categories of luxury goods and services and rates ranging from 10 per cent to 160 per cent. In the Republic of China, the changeover to a value-added tax from a highly complex system of commodity taxes, similar to that in Korea, is also in an advanced stage of preparation, but still awaits parliamentary approval.

A government proposal for a value-added tax has been shelved in Japan in the face of strong opposition that the tax would increase prices and the overall tax burden as well as the regressivity of the tax system. In Switzerland, a government-appointed commission reporting in 1974 advocated a value-added tax of the EEC type that would eliminate some of the distortions of the present retail/wholesale tax (exacerbated by recent rate increases), such as backward integration by retailers and the taxation of capital goods, as well as provide for a potentially more productive source of revenue. [8] But the proposal was rejected by a referendum in June 1977.

2. EVALUATION OF VALUE-ADDED TAX EXPERIENCE

Value-added taxation was strongly advocated in the late sixties and early seventies because of its so-called neutrality: the credit approach would not give rise to distortions in the location of production and distribution functions, would permit an accurate refund of the tax at the export stage, and would ensure equivalency between statutory rates and effective rates of tax. Recently there has been a growing recognition, however, that the value-added tax is not nearly the ideal tax that it was once made out to be. Efficiency need not always be improved by a tax that is ostensibly more neutral in design because it ignores the adjustment process that has taken place under the previous tax. Moreover, the value-added tax is not a fully general consumption tax; even in its broadest forms in the EEC and Chile, for instance, it covers little more than one half of all personal consumption expenditures. Thus, consumer as well as producer excess burdens remain to some extent.

In developing countries the base of a potential value-added tax may have to be narrowed further for practical reasons. For instance, it would be difficult to incorporate the numerous small retailers that do not keep adequate accounts in a value-added tax. Similar problems arise with the handicraft and small-scale manufacturing sectors that may account for as much as one half of total industrial output. Agricultural activities would also have to be exempted, as would most services because of the small size of many firms and the nature of their activities. These exclusions would in effect mean that the tax would extend only through the wholesale or manufacturing stage, thus entailing the same basic economic distortions as the equivalent single-stage sales tax variants. Moreover, politically, a value-added tax is, of course, subject to the same pressures to differentiate the rate structure and widen the exemptions as was the sales tax that it replaced. Yet refinements in a value-added tax can add up to an administrative burden for business firms and the tax office that is substantially more complex than that of any other sales tax.

A much overrated advantage of the value-added tax is the built-in self enforcement aspect of collection that permits the matching of tax credits against tax payable at the previous stage. Even when there are no significant limitations on administrative capacity, such a check is of little value at the retail stage because consumers are not accountable for the tax paid on their purchases. This flaw can be serious because retail margins are generally higher than the margins of wholesalers and manufacturers, who may be in a position to push some of their value-added forward to the retail stage where the tax is easier to escape. In developing countries, the conditions that would make cross-checking possible, i.e., the keeping of adequate accounts and the provision of audit facilities, may not exist. In such a situation, the scope for tax evasion should be as great or even greater than, say, under a manufacturers' tax because of the larger number of taxpayers from whom the tax has to be collected.

Furthermore, a value-added tax does not solve the basic problem of any tax based on voluntary compliance, that

8. For a brief review, see John F. Due, "Swiss Experience and the Canadian Wholesale Sales Tax Proposal," *Canadian Tax Journal*, Vol. 24 (March-April 1976), pp. 103-10.

is, obtaining reliable returns for the tax payable on sales, the tax credited for purchases, and the net tax due. Instructive in this respect is the Irish experience with value-added taxation. Even after four years of operation, the delinquency rate for filing returns is 50 per cent at the time a first reminder notice is sent out to taxpayers (two weeks after the due date for the return), 40 per cent at the time of the final reminder (two weeks after the first notice), and 30 per cent at the time that the tax office prepares an estimate of the tax due for collection. Of the 600 largest firms, 30 per cent do not pay on time. Also despite the use of a suspension rule for the tax payable at the import stage, the administration has difficulties handling the large number of refunds for exports, firms that accumulate inventory, and building contractors whose activities are subject to a lower rate of tax than applies to building materials. [9]

The Irish experience, not necessarily unique among industrial and developing countries, shows that the time that should be spent on auditing accounts is fully preempted by ensuring that returns are filed, by properly estimating tax liabilities where returns are not forthcoming, and by refunding overpaid taxes. More generally, as under other sales taxes, no shortcuts appear to be available under a value-added tax that would enable the tax administration to avoid the problems, first, of ensuring the submission of proper returns and, second, of adequate verification.

In conclusion, the basic conditions for the successful application of value-added taxation are probably met in countries where manufacturing activities are mostly on a fairly large scale and where the distribution sector is relatively well organized, thereby permitting the inclusion of retailers. A value-added tax may also be an improvement in a country that has a highly complex system of turnover and commodity taxes. In this situation, conflicting interests on tax reform may be best resolved by starting with a clean slate. This would appear to be the case, for instance, in the Republic of China and Korea, both of which have efficient tax administrations capable of handling a broad-based value-added tax.[10] Even then taxpayers' fears that their tax burden will increase, now or later, cannot be fully discounted, because the government acquires a potentially powerful tax instrument capable of yielding large amounts of revenue, as is evident from the European experience. In countries where industrial development is still at the initial stage, where distribution activities are fragmented, and where there is a high dependence on foreign trade, a value-added tax should probably not be adopted; a manufacturers' sales tax with imports included in the tax base would be more appropriate.

3. OTHER CHANGES IN SALES TAXATION

Actual changes in the structure of other sales taxes have been few, although additional information has made it possible to improve the classification with respect to a number of countries. Mention should be made of Colombia's manufacturers' tax, which was completely revamped in the latter part of 1974. While the tax credit principle of the old tax was maintained, the tax base was expanded to include raw materials and specified services. Capital goods, previously exempted, are now taxed at 6 per cent (with a few at 15 per cent) and luxury goods at 35 per cent, against 25 per cent under the previous law. The Colombian sales tax reform, which aimed at enlarging the base and enhancing the progressivity of the tax, stands out as an example of what can be done within the framework of an existing tax. If income tax administration is weak, as it is in Colombia, progressivity is likely to be achieved most effectively under a sales tax levied at the manufacturing stage where the number of taxpayers is relatively small, specialization greater, and records better.

In Barbados a 5 per cent retail sales tax was introduced from December 1, 1974. Unlike almost all other sales taxes, the levy was confined to domestic sales; imports were not covered. However, the government, in keeping with its election promise, has announced that the tax will be abolished from October 7, 1977. The abolition of this tax may not affect revenues seriously, as Barbados will retain its extended excise system that includes a broadly itemized consumption tax. Finally, Nepal moved its retail/wholesale tax to the production stages, but continues to use appraised retail values for the computation of the tax liability.

Another noteworthy point is the large number of countries that have increased their sales tax rates. Out of 84 countries with sales taxes, 26 increased the standard rate of tax to augment general government revenues. Inclusive of the countries that introduced a sales tax for the first time or changed the existing form, rate increases of two percentage points or more were enacted in Argentina, Austria, Barbados, Benin, Chile, Colombia, the Congo, Costa Rica, Iceland, Ireland, Israel, Ivory Coast, Kenya, Malawi, the Netherlands, Panama, Peru, Portugal, Senegal, Switzerland, Thailand, Upper Volta, Uruguay, and Zaire. In contrast, France and the United Kingdom reduced their value-added taxes from 20 per cent to 17.6 per cent and from 10 per cent to 8 per cent, respectively. Denmark lowered the rate temporarily from 15 per cent to 9.25 per cent in 1975, but rescinded the measure in 1976. These countries believed that a reduction in sales tax rates would moderate price increases which in turn might dampen wage demands. It is also possible that the resulting increase in the budget deficit was rationalized by some as a stimulus to the economy.

10. Japan, on the other hand, does not have a business turnover tax nor is its commodity tax as broad-based and complex as the Chinese and Korean commodity taxes. For a proposal to reconcile business and intergovernmental interests by replacing a manufacturers' tax with a value-added tax, see Sijbren Cnossen, "What Kind of Sales Tax? — Critique of a Government Discussion Paper," *Canadian Tax Journal*, Vol. 23 (November-December 1975), pp. 505-19.

4. DEVELOPMENTS IN EXCISE TAXATION

Changes in the excise field have been less numerous, perhaps owing to their more traditional character. Afghanistan introduced an intermediate excise system, called consumption tax, covering soft drinks, vegetable oils, macaroni, textiles, shoes, soap, cement, batteries, plastics and steel products — all typically goods manufactured by first-stage import substituting industries. The excise system of the People's Democratic Republic of Yemen was similarly extended with the imposition of duties on domestically produced cottonseed oil, emulsions and paints, tomato paste, textiles, aluminium utensils, rubber foam, and perfumes. El Salvador also expanded its excise system with a consumption tax on several processed foods, luxury items, and automobiles. Uruguay consolidated various excises on traditional excise goods, soft drinks, and toilet articles. In Italy, many goods previously taxed under an extended excise system are now included under the value-added tax; the remaining excises are therefore more appropriately classified as intermediate in coverage. The change in the Israeli excise system has already been mentioned.

Most specific excise rates were adjusted following recent increases in price. The erosion of excise revenues in OECD countries that took place in the late sixties and early seventies owing to lags in rate adjustments appears to have been corrected. Industrial and developing countries increased taxes on gasoline by 8 per cent and 37 per cent, respectively, following the big upsurge in the price of crude oil during the second half of 1973 and early 1974.[11] No country changed its specific excise rates to ad valorem ones, often favored by economists. Specific excise rates tend to distort consumer choices regarding low-priced items, but ad valorem rates discriminate against forward integrated producers. On the whole, few moves were made to eliminate some of the very regressive or small excises such as those on salt, flour, bread, matches, lighters, and playing cards. However, more attention is being paid to the use of excises to combat pollution and to conserve energy. Finally, the EEC issued further directives to harmonize excises on traditional excise goods and road user charges.

11. See Katrine W. Saito, "Petroleum taxes: how high and why?", *Finance and Development*, Vol. 12 (December 1975), p. 19, Table 1.

APPENDIX: Sales Taxes, Excise Systems and Fiscal Monopolies of the World [1]

Footnotes

1. Information on structural aspects relates to the situation in the summer of 1977; however, some source material was of older date and sometimes incomplete. Sales taxes and excise systems in socialist economies are not included, first because data are not sufficient and second because the role of taxation in centrally planned economies differs fundamentally from that in market-oriented or mixed economic systems.
2. Revenue data are averages covering fiscal years 1969-71; generally all levels of government are included. A dash (— —) indicates that revenue is nil; dots (...) indicate that data are not available. Sales tax revenues include receipts collected at the import stage; in Barbados, Ghana, and Upper Volta imported goods are not subject to sales tax. Revenues from traditional excise goods include receipts collected under a sales tax or at the import stage. One dagger (†) indicates that revenue data are incomplete or cannot be fully disaggregated; a double dagger (††) indicates that revenues do not include receipts from tobacco products (Benin, Liberia, Trinidad and Tobago), or petroleum products (Nepal, Somalia, Zambia).
3. (L), (P), or (S) indicate that the sales tax is levied by local, provincial, or state governments.
4. NT indicates that services are not included in the sales tax base, T that they are included, and ST that some services are subject to sales tax.
5. An asterisk (*) indicates that sales tax rates, standard and other, are legally defined on a tax-inclusive basis. The relationship between tax-exclusive rates (t_e) and tax-inclusive rates (t_i) can be expressed by the formula: $t_e = \frac{1}{1 - t_i}$
6. The table shows the most common products for which fiscal monopolies are operated — tobacco, matches, alcoholic beverages, sugar, and salt. In addition, there are fiscal monopolies for cigarette paper (Ethiopia, Greece, Venezuela), saccharine (Greece), caviar (Iran), tea (Iran, Turkey), coffee (Turkey), ginseng (Korea), camphor (Japan), cement (Syrian Arab Republic), playing cards (Greece, Tunisia), gunpowder (France, Tunisia), and emery (Colombia, Greece). Historically, the production and trade in petroleum products can be considered fiscal monopolies in Afghanistan, Brazil, Greece, Haiti, Iran, Mexico, Spain, and Uruguay. A case can also be made for classifying government lotteries as fiscal monopolies.
7. Cumulative effects mitigated through tax credit principle.
8. Cumulative effects mitigated through subtraction technique.
9. Cumulative effects mitigated through suspension method.
10. The tax-inclusive rate applies only to imports.
11. Includes consumption tax levied on the same base at various rates.
12. French-type production tax.
13. East Cameroon levies a manufacturers' sales tax at a rate of 6.4 per cent; services are not taxed, except construction.
14. Excise system includes wide range of selective taxes known as *taxe unique* (Cameroon, Central African Empire, Chad, Congo, Gabon; in all countries, except Chad, an excise on goods produced in one member country of the Central African Customs and Economic Union, but marketed also in other member countries), consumption tax (Afghanistan, Barbados, Central African Empire, Costa Rica, Egypt, El Salvador, Grenada, Jamaica, Nicaragua, Somalia, Sudan, Trinidad and Tobago, Uruguay), purchase tax (Israel), additional tax (Jordan), commodity tax (Republic of China, Japan, Korea), or luxury tax (Spain, Uruguay).
15. The Central African Empire also levies a transaction tax at 1.01 per cent* on goods and services not subject to the production tax or excises.
16. Includes additional sales tax applied at 5.3 per cent* to the first sale of a good and at 3.1 per cent* to the first rendering of a service. The bases of the production tax and the additional sales tax are not completely identical.
17. In addition, Gabon administers a 1 per cent turnover tax on commercial and industrial activities not covered by the production tax.
18. The manufacturers' sales taxes of Botswana, Lesotho, and Swaziland are identical to the South African sales tax. At the import stage South Africa collects the sales tax together with import duties and excises in the form of a customs union pool, after which they are distributed to the partners according to agreed formulas.
19. Sales tax introduced subsequent to the fiscal years for which revenue data were collected.
20. The Uganda Sales Tax Act provides for the taxation of services by statutory order, but so far this provision has not been applied.
21. The sales tax picture in India is extremely complicated. There are not only single-point and multipoint taxes, but two states also operated mixed single-point and double-point systems. In addition, states with multipoint systems impose various special single-point taxes particularly on luxuries and semiluxuries. Also, a sales tax is collected by the central government on the interstate sale of goods which are chargeable at 3 per cent in the state of origin.
22. In addition, Nicaragua imposes a gross receipts tax at 0.2 per cent.
23. Also, each of the 24 departments in Argentina imposes a 1.1 per cent gross receipts tax with surcharges ranging from 20 per cent to 600 per cent.
24. Services are taxed under a separate statute at rates ranging from 2 per cent to 10 per cent.
25. In addition, Brazil levies a gross receipts tax at 0.75 per cent.
26. Generally, services are covered under separate municipal sales taxes.
27. Local governments in Venezuela impose gross receipts taxes, generally at a rate of 0.5 per cent.
28. Value-added tax based on EEC model.
29. Also known as production and expenditure tax. In addition, Turkey imposes a retail sales tax on certain goods and services, called an operation tax.

COUNTRY BY COUNTRY SURVEY OF LOOSE-LEAF PUBLICATIONS . . .

SWITZERLAND

DOPPELBESTEUERUNGSABKOMMEN DEUTSCHLAND-SCHWEIZ

Texte und Kommentar nebst Zusätzen und Aussensteuergesetz.
By H.J. Meyer-Marsilius and D. Hangarter.
Handelskammer Deutschland-Schweiz, Talacker 41, CH-8001 Zürich.
Supplemented: once or twice a year.

Loose-leaf publication designed to provide an updated work in four volumes, in which text, implementing provisions, relevant statutes, case law, rulings, comments and literature from both Switzerland and the German Federal Republic pertaining to the 1971 double taxation treaty in respect of income and capital are systematically arranged by treaty article.

DOPPELBESTEUERUNGSABKOMMEN SCHWEIZ-DEUTSCHLAND 1971

Steuern vom Einkommen und Vermögen. Textausgabe und Praxis.
By K. Locher, W. Meier and R. von Riebenthal.
Verlag für Recht und Gesellschaft AG., Bundesstrasse 15, 4054 Basel.
Supplemented: annually.

Loose-leaf publication in two volumes entitled "Double Taxation Treaty Switzerland-Germany 1971: Taxes on Income and Capital, Text and Practice". This work contains the text of the 1971 tax treaty and relevant texts in connection thereto from Swiss and German official sources.

HANDBUCH UND PRAXIS DER SCHWEIZERISCH-AMERIKANISCHEN DOPPELBESTEUERUNGSABKOMMEN

Einkommens- und Erbschaftssteuern.
By Kurt Locher.
Verlag für Recht und Gesellschaft AG., Bundesstrasse 15, 4054 Basel.
Supplemented: as necessitated.

Loose-leaf publication in two volumes containing text and comment of the 1951 double taxation treaty between the U.S.A. and Switzerland with respect to income tax and death duties.

INTERNATIONALES STEUERRECHT DER SCHWEIZ

Prepared and published by the Eidgenössische Steuerverwaltung/l'Administration fédérale des contributions, Bundesgasse 32, 3003 Bern.
Supplemented: regularly.

Loose-leaf publication in the German language consisting of three volumes containing: texts of comprehensive double taxation treaties on income and capital concluded by Switzerland, agreements with respect to profits from aircraft and shipping enterprises, the OECD draft conventions for the avoidance of double taxation on income and capital, and on estates and inheritances, and, other agreements such as those regarding taxation of international road transports and tax privileges for diplomatic missions and international organizations and their staff personnel. Relevant Swiss enforcement regulations with respect to double taxation treaties are included. A French version of the same publication is available entitled "Droit fiscal international de la Suisse".

DIE PRAXIS DER BUNDESSTEUERN

By J. and E. Henggeler, E. Wyss and K. Locher.
Verlag für Recht und Gesellschaft AG., Bundesstrasse 15, 4054 Basel.
Supplemented: regularly.

Loose-leaf publication entitled "The Practice of Federal Taxes" in three parts containing the texts of statutes, case law and literature with respect to the Swiss federal defence tax (in three volumes), the stamp duty and federal anticipatory tax (in three volumes) and the Swiss intercantonal double taxation law (in three volumes). Part One, contains text and comment on the federal defence tax which governs the corporate income tax, net worth tax and individual income tax. Part Two, contains text and comment on stamp duties and anticipatory tax (federal withholding tax) on dividends and interest.

PRAXIS DES UMSATZSTEUERRECHTS

By Hans Herold.
Verlag für Recht und Gesellschaft AG., Bundesstrasse 15, 4054 Basel.
Supplemented: as necessitated.

Loose-leaf publication providing text, comment and literature on the Swiss sales tax law. A register is appended.

RECHTSBUCH DER SCHWEIZERISCHEN BUNDESSTEUERN

By Anton Pestalozzi.
Verlag für Recht und Gesellschaft AG., Bundesstrasse 15, 4054 Basel.
Supplemented: two or three times a year.

Loose-leaf publication in seven volumes which is a compendium of texts of federal tax laws (defence tax, anticipatory tax, sales tax, stamp tax, death and gift duties), including international double taxation treaties and other international agreements. Not dealt with are customs duties and excise duties on tobacco and beer. A detailed register is appended.

DIE STEUERN DER SCHWEIZ/LES IMPOTS DE LA SUISSE

Prepared by the Federal Tax Administration in co-operation with the Cantonal Tax Administrations.
Verlag für Recht und Gesellschaft AG., Bundesstrasse 15, 4054 Basel.
Supplemented: twice a year.

Loose-leaf publication in four parts, each consisting of several volumes, containing texts of the Swiss federal tax laws as well as tax laws in the cantons and municipalities of Switzerland. Part One deals with income tax and net wealth tax of individuals. Part Two: income tax and net worth tax of corporations. Part Three: death duties and gift taxes, taxes on the transfer of capital and consumption taxes. Part Four: (seven volumes) contains text of federal, cantonal and municipal direct taxes including church taxes, systematically arranged per canton.

ON THE UTILITY OF TAX PERFORMANCE INDICES:
Notes with Reference to Venezuela's Tax System

by Arthur J. Mann*

In a recent article Richard Bird [1] directed serious criticism at the comparative quantitative approach to tax performance assessment in developing nations. He called attention to the fact that the tax ratio and average regression approaches to the measurement of taxable capacity and tax effort are essentially without significance, for there is "no meaningful sense in which the average can be considered a standard, *nor is it conceptually useful .... to take the average as showing what is feasible in any particular country." [2] It thus follows that use of such international comparisons may serve merely to cloud the tax structure and tax performance problems in a given developing country, and that further tax capacity and tax effort analyses would be more rewarding if focused on "particular problems in particular countries."[3]*

Using as background material data recently gathered in Venezuela, I fully concur with the Bird critiques. What follows, then, is a brief discussion based upon Venezuelan tax (and national income) data designed to support the validity of the points set forth by Bird. [4]

As the point of departure, *Table 1* presents a cursory glance at the Venezuelan central government revenue structure for selected years over the 1960-1976 time period. [5] The preponderant role of taxes levied on the petroleum industry is immediately obvious. With reference to the last line of the table, it is noted that the petroleum sector d*irectly* [6] accounted for 58.2 percent of total recurrent [7] central government income in 1960; in 1976 the corresponding figure was 73.6 percent. The January, 1976 nationalization of the petroleum industry had no effect on the central government's tax structure, nor did it affect the form in which the entities comprising the industry are taxed.

Given the predominant role of taxes levied on the petroleum industry in the overall fiscal structure, and given the fact that until 1976 non-Venezuelan companies comprised over 90 percent (by output) of this essentially export industry, the proportional amount of taxes paid directly and indirectly by Venezuelan taxpayers was relatively low. In other words, the domestic aggregate tax burden (ex-petroleum levies), as measured by the proportion between non-exported taxes and GNP, was relatively light, for most — if not all — petroleum associated taxes can be assumed exported to foreigners. One can argue that nationalization did not really alter this situation, even though petroleum related taxes are now imposed on a wholly domestically-owned industry, for they remain shiftable and exportable.

The most encompassing published studies of national tax ratios, their determinants, and tax effort indices have been carried out by the International Monetary Fund (IMF). From the tax ratio determinant equation(s) the IMF has proceeded to rank the included countries according to the derived tax effort index for each country. In the most recent published analysis [8] the Venezuelan tax ratios (taxes as a percent of GNP) for the 1966-68 and 1969-71 time periods were calculated as 20.7 and 20.4 respectively. [9] Comparing these ratios with the averages for the 47-country sample of

2. Ibid., p. 258.
3. Ibid., p. 258.
4. The choice of Venezuela to support the Bird critiques might be objected to on the grounds that Venezuela, with its mineral wealth, is not a "typical" or "average" developing country. However, petroleum plays an important part in the fiscal structures of numerous developing countries, and, moreover, it is not at all clear exactly which elements of economic and fiscal structures are associated with a "typical" developing country; i.e., is there really such an entity?
5. In Venezuela's politico-administrative and fiscal organization there do exist regional and municipal governments with very limited fiscal capacities. On the expenditure side these subordinate levels do make substantial expenditures financed principally by inter-governmental transfers, while on the income side their tax-levying abilities are severely restricted. In the years 1971-1975, of total *net* (of transfers) recurrent income (tax and non-tax) received by all three governmental levels, the central government never accounted for less than 95.3 percent; this percentage 98.1 in 1974. See Banco Central de Venezuela, Informe Economico, 1975 (Caracas: 1976).
6. The petroleum sector is also indirectly responsible for part of tax and non-tax revenues under varied income sources; e.g., customs duties, stamp taxes, exchange operations (eliminated as of 1977).
7. The recurrent income concept excludes incomes from public borrowings. These latter flows amounted to (in millions of bolívares) 1,179.5, 56.2, 351.0, and 5,010.3 in 1960, 1967, 1972, and 1976 respectively.
8. See R.J. Chelliah, H.J. Baas, and M.R. Kelly, "Tax Ratios and Tax Effort in Developing Countries, 1969-71," IMF *Staff Papers*, V. 22 (March, 1975), pp. 187-205.
9. An earlier study convering the periods 1953-55 and 1966-68 was R.J. Chelliah, "Trends in Taxation in Developing Countries", IMF *Staff Papers*, V.18 (July, 1971), pp. 254-331.

TABLE 1

THE NET RECURRENT INCOME STRUCTURE [a] OF THE CENTRAL GOVERNMENT OF VENEZUELA, SELECTED YEARS, 1960-1976
(millions of bolívares)

Income Source	1960 Amount	1960 % of Total	1967 Amount	1967 % of Total	1972 Amount	1972 % of Total	1976 Amount	1976 % of Total
Tax income	*2720.7*	*54.8*	*5369.4*	*62.9*	*8811.8*	*72.3*	*29,242.7*	*76.7*

Petroleum Sector Revenues as Proportion of Total	58.2		66.4		64.7		73.6	

Source: Sector Financiamiento, Dirección Nacional de Presupuesto, Ministerio de Hacienda de Venezuela, work sheets.

a) This classification is used by the Venezuelan Ministry of Finance. It can readily be argued that conceptually the most important non-tax sources (petroleum exploitation, exchange operations, and some of the fees) are, in reality, taxes. Nevertheless, the classification is presented here in unaltered form.

13.6 and 15.1 respectively, placed Venezuela near the top of the "tax effort" index in terms of comparative tax ratios. During the 1966-68 period only three of the forty-seven developing nations had a higher tax ratio than Venezuela, whereas during the 1969-71 time span six out of forty-seven countries had a superior tax ratio. [10]

Table 2 presents Venezuelan tax ratios for varying time periods. In all cases the denominator is represented by GNP, whereas the numerator is represented by total central government recurrent income and by tax income, both including and excluding petroleum--associated levies. The choice of the 1966-68 and 1969-71 time periods is intentional in that they correspond to the two periods covered in the Chelliah, Baas, and Kelly study. The tax ratios presented in column (1) of Table 2 are slightly higher than those of the IMF study for the 1966-68 and 1969-71 periods (20.7 and 20.4 in the IMF analysis versus 21.9 and 20.6 here) due to the use in this article of revised GNP data and to the lumping together of all recurrent income sources as a measure of taxes. Conceptually, some of the inclusions in recurrent income are not taxes, but this does not affect the points to be subsequently made.

To reiterate, on an internationally comparative basis Venezuela ranks near the top of a large group of developing nations *in terms of its relatively high tax ratio.* If the 1974-76 period is added it appears that, based on columns (1) and (2) of Table 2, that Venezuelan tax effort has increased substantially since the mid-1960s. However, a glance at columns (3) and (4) belies this impression. From these columns it is noted that the tax ratios pertinent to total recurrent income and tax income "ex-petroleum" have remained virtually constant (or have decreased) over the last ten years. Under this tax effort and/or tax performance proxy index, then, the only notable phenomenon is precisely the lack of increased internal tax effort; Venezuelan membership in the Organization of Petroleum Exporting Countries (OPEC) and OPEC-inspired crude petroleum price rises, obviously exogenous factors (to Venezuela), have accounted for whatever change occurred.

10. Reference is being made here to Table 1 of the Chelliah Baas, and Kelly study.

TABLE 2

TAXES AS PERCENT OF GROSS NATIONAL PRODUCT, VENEZUELA, SELECTED YEARS, 1960-1976

	Tax Ratios			
	(1)	(2)	(3)	(4)
Time Period	Total Recurrent Income	Tax Income	Total Recurrent Income Less Petroleum Incomes	Tax Income Less Petroleum Funds
1960	20.9	11.5	8.7	6.2
1967	22.3	14.0	7.5	6.4
1972	20.8	15.1	7.4	6.4
1976	28.6	21.9	7.6	6.0
1966-68	21.9	13.8	7.6	6.5
1969-71	20.6	13.7	7.6	6.5
1974-76	34.3	25.5	7.2	5.5

Sources: GNP data from the Banco Central de Venezuela; the 1976 figure only became available in August of 1977 due to estimation problems caused by the nationalization of the petroleum industry. The GNP figures for the entire 1960-76 period are to be revised in 1978. All tax data are from the Table 1 source.

Not only is the absence of internal change noteworthy, but the lack of correlation between the overall tax ratio — of column (1) — and the internal tax burden stands out. To repeat a point made previously, since Venezuelan petroleum taxes are exported through shifting to foreigners (in the form of higher crude petroleum prices), roughly three-quarters of central fisc inflows are financed by non-Venezuelans. Moreover, the recent jump in the overall tax ratio has not raised the tax burden on the average Venezuelan taxpayer (assuming, of course, 100 percent forward shifting of petroleum-related taxes).

In terms of the Venezuelan index of tax effort as derived by the (average) regression approach (calculated by dividing the actual tax ratio by the "predicted" ratio), Venezuela falls slightly below unity in both 1966-68 (0.971) and 1969-71 (0.958). Thus, although in some vague fashion Venezuela is not apparently fully taking advantage of its "taxable capacity" — whatever this may mean — its tax performance appears quite "reasonable." [11]

Undoubtedly, if and when its tax effort index is computed (using the regression approach) for the 1974-76 period, the value will fall well above unity. Thus, the superficial conclusion may be reached that Venezuela is making greater use of its taxable capacity; i.e., its tax effort/performance has increased. But reference to columns (3) and (4) of Table 2 gives lie to the correspondence between a higher tax effort index and a truly increased internal tax effort and/or domestic tax burden.

Of course, to be able to reach such a final conclusion one must have knowledge of the particular circumstances of a particular country. As illustrated, deriving the average of a group of countries as some sort of standard, and then comparing the performance of a specific country to that standard, really bears little meaning for both policy-making and academic purposes.

To carry out the assessment of tax performance in a developing country, Bird suggests use of other measures in addition to the "least meaningful" tax ratio. The buoyancy and the elasticity of the tax system (and of individual taxes) are two of these measures. The first measure, buoyancy, refers to the income-elasticity of a tax, where the tax figures include both automatic and discretionary changes; the elasticity measure excludes the effects of discretionary changes.

Unfortunately, it is not possible to readily separate the automatic from the discretionary changes in Venezuela's tax structure, for no governmental entity has systematically quantified them. However, these discretionary changes have been almost minimal in the last ten years. In 1974-75 the withholding system with respect to salaries was modified along with increased personal deductions associated with the personal income tax; in 1976 customs duties were converted to an ad valorem base. Thus, in recent years administrative and political efforts to raise effective tax rates have not been forceful.

TABLE 3

INCOME ELASTICITY COEFFICIENTS [a] OF TAXES, VENEZUELA, 1967-1976

Line	Tax/Income Source [b]	Value of Coefficient [c]
1.	Total Recurrent Income	1.15
2.	Tax Income	1.24
3.	Non-Tax Income	0.87
4.	Petroleum Firms	1.37
5.	Petroleum Exploitation	0.77
6.	Total Petroleum (lines 4 plus 5)	1.20
7.	Total Recurrent Income Ex of Petroleum-Related Income	1.00
8.	Tax Income Ex of Petroleum-Related Income	0.95
9.	Personal Income	0.95
10.	Other Corporations	1.05
11.	Customs Duties	1.15
12.	Production and Consumption	0.60
	(a) Liquors	0.61
	(b) Cigarettes	0.43
	(c) Gasoline	0.99
13.	Fees	0.59

Sources: See Table 2 sources.

a) Computed using the formula: $E_{ty} = \frac{T_1 - T_2}{T_1 + T_2} \div \frac{Y_1 - Y_2}{Y_1 + Y_2}$,
where T = taxes/income sources
Y = GNP.

b) Correspond to the breakdown of Table 1.

c) Some of these coefficients were additionally computed by the equation $\log T_t^i = a + b \log Y_t$, where T_t^i = income from tax i in the year t and Y_t = GNP. The values of b derived from this methodology did not vary significantly from those given in this table.

11. Bird (op.cit., pp.254-258) presents an excellent critique of this and other points related to the econometric construction of tax effort indices.

Employing "uncleaned" revenue series, some income-elasticity coefficients pertinent to the Venezuelan tax structure for the 1967-76 period are presented in Table 3. [12] Although the elasticities of the overall tax system and of tax income fall above unity (1.15 and 1.24 respectively), the coefficients of lines 7 and 8, which exclude directly related petroleum revenues from the calculations, reveal that the income-elasticity of the entire tax structure was due to the petroleum sector. Thus, the elasticity coefficient of 1.00 for total recurrent income exclusive of petroleum-related recurrent income reveals an underlying structure which generates no proportional growth in the tax ratio.

With respect to some of the components of the non-petroleum income sources, it is observed that personal income taxes are slightly income inelastic, whereas "other" corporate income taxes and customs duties are moderately income elastic. On the other hand, taxes on production and consumption and fees are quite income inelastic (they are specific levies). Thus, what might be gleaned from *Table 3* is the apparent "unwillingness" of the authorities to take discretionary measures to increase the relative tax burden. Not that this is necessary, of course, for petroleum-related public incomes have carried total public incomes to higher proportional levels. The point is that this conclusion does *not* surface from the general (and average) type surveys carried out by (for example) the IMF.

In conclusion, what has been attempted is an illustration, using the Venezuelan case, of the validity of the original Bird criticisms leveled at international comparative methodologies ostensibly aimed at measuring tax performance in developing countries. These "average" approaches bear little or no relevance to the specific situations found in particular countries. Rather, what is needed are separate analyses of conditions in individual countries. This type of "work will be more useful to policy-makers the more it focuses on changes and details, for the actual reality and basic issues of policy lie there." [13]

---

12. Due to the low number of discretionary changes which were introduced over this period, there is actually little difference between the buoyancy and elasticity coefficients.

Pakistan: SUMMARY OF TAX PROPOSALS FOR 1977-78 BUDGET

Extract from the Pakistan budget for fiscal year 1977-78 as announced by Finance Minister Abdul Hafeez Pirzada on June 11, 1977

A. DIRECT TAXES

In the field of direct taxation, certain tax reform measures are being introduced for the convenience of taxpayers. Measures are also being taken to encourage investments and to provide relief.

1. Income tax

A new scheme of self-assessment is being introduced for the convenience of the taxpayers. Assessments in all cases, except where a detailed scrutiny of the accounts is necessary, would be made on the basis of returns. Such assessments would also be completed within the financial year in which the returns are filed.

The procedure for the registration of firms for income-tax purposes is also being simplified. All applications for registration will be decided within three months of the date of filing of the return or six months of the close of the accounting period, whichever is earlier, failing which the firm will automatically be treated as a registered firm.

The rate of additional refund for delayed issue of refund is being raised from five to one percent above the bank rate. Further, all applications for refund will be disposed of before the end of the financial year next following the year in which such application is filed, otherwise the amount of refund claimed will ipso facto become due to the taxpayer.

To encourage investments in the corporate sector, two measures have been proposed: (i) Dividends received by taxpayers (other than companies) from public companies incorporated between July 1, 1977 and June 30, 1982 will be exempt from tax, and (ii) The rate of intercorporate tax in the case of private companies is being reduced from 50 to 30 percent.

Tax relief is also being provided to Pakistanis working abroad who maintain a house in Pakistan for their families. The mere maintenance of a house will no longer render a taxpayer liable to tax on foreign income. Further, the condition regarding short visits to Pakistan is also being relaxed and any taxpayer whose stay in Pakistan does not extend beyond 60 days will not incur any extra tax liability.

Income from fish-farming is being exempted from tax for a period of five years. Income from poultry-farming, dairy farming, fish-catching and cattle and sheep breeding is already exempt.

Pakistani companies providing technical services to foreign companies will not be liable to tax on the remittances made by them out of royalties, commissions, fees, etc.

The rate of additional tax for delayed payment of tax is being raised from 8 to 15 percent.

The upper limit of the value fixed for purposes of allowing depreciation in the case of motor vehicles is being raised from Rs. 40,000 to Rs. 75,000.

2. Estate duty

The exemption limit is being raised from Rs. 1 lakh to Rs. 3 lakh. [1]

Tax-free gratuities payable to the dependents of the deceased are being exempted from estate duty.

3. Wealth tax

The requirement regarding the production of wealth tax clearance certificate for transfer of assets is being removed.

B. INDIRECT TAXES

1. Customs

Tea other than tea in retail packings has been exempted from duty. Imported tea in retail packing has, however, been subjected to 40 percent duty.

Duty on 12 items of minerals reduced from the present 72.5-60 percent to 40 percent.

Duty on tyres and tubes for scooters and rickshaws reduced from 85 percent to 60 percent.

Duties on iron and steel in its basic and semi-rolled forms reduced from 42.5 percent and 47.5 percent to 30 percent and 40 percent respectively.

Duty on copper and copper wire reduced from 42.5 percent and 92.5 percent to 30 percent and 60 percent respectively.

Duty on timber increased from 60 percent to 100 percent.

Duty on imported machinery increased from 20 percent to 25 percent.

Adjustment of duties on manufactured items, other than tractors, tractor parts, petroleum products, man-made fibre and yarn, wood pulp, has been effected as a measure of rationalisation. Items at present exempt from duty continue to remain so. Specific rates of duties have been converted to metric rates and duties.

2. Central excise

Tea has been completely exempted from the excise duty.

The first schedule to the Central Excises and Salt Act, 1944 is being brought into the international metric system of weights and measures.

The tariff is being rationalised by including cement paints under the head "paints". Paper and paper-board are being combined into one item. Knitting yarn of wool and synthetic fibre are being combined into one item. Duty on wires and cables is being raised from 7.5 to 10 percent.

3. Sales tax

Locally manufactured iron and steel has been exempted.

4. Others

Passenger fares for all classes of railways are proposed to be increased by 20 percent

---

1. One lakh is one hundred thousand.

from July 1 next with the exception that commuter fares for suburban areas of major cities of Lahore and Karachi will be left unchanged.

Freight rates for goods carried by rail are proposed to be increased by 12.5 percent.

Tea totally exempted from both excise and import duties but all types of packaged tea imports which cater for the rich subjected to import duty of 40 percent ad valorem.

Present rates of duty on timber and building boards increased from 60 and 85 percent to 100 percent.

Local call rates for telephones are proposed to be increased from 25 paisa to 35 paisa per call and correspondingly the charges for STD calls will be increased by 40 percent.

Manual trunk call rates are also being increased by 50 percent.

Rentals for telephone connections, telex rentals and other charges for telex are also proposed to be increased and rationalised.

Rates for telegrams, other than Press telegrams, are proposed to be increased by 23 percent.

The annual fee for TV sets is proposed to be increased from Rs. 100 to RS. 150 per annum.

The power rates of WAPDA are proposed to be increased by 15 percent. The present power rates for the domestic consumers viz. 22 paisa for first 20 units and 25 paisa for additional units, will however remain unchanged. The rates for tubewells will also remain unaltered.

The power tariff of Karachi Electric Supply Corporation (KESCO) is being rationalised and revised upward by about 18 percent. It is proposed that the present rate of 20 paisa per unit which applies for first 50 units may also apply to any additional units.

The price of cement is proposed to be increased from Rs. 350 per ton to Rs. 440 per ton.

Passport fee increased from Rs. 400 to Rs. 600 for urgent and from Rs. 100 to Rs. 200 for ordinary passports.

SWEET & MAXWELL PUBLICATIONS

British Tax Review

Editors: Philip Lawton and John Avery Jones **Six times a year**

Each issue contains:

Current notes on tax topics, critical comment and guidance on practical issues and points of controversy.

Authorititative articles covering the whole sweep of tax subjects

Special surveys of the Finance Bill and Finance Act

Notes of recent cases

Book reviews

Current Tax Intelligence,
which appears in each issue and gives, in digest form, all developments of importance and relevance to the tax practitioner. This feature now takes up twenty to thirty pages of each issue of the Review and surveys Inland Revenue practice statements, statutory instruments, cases, decisions, announcements, notices, double taxation agreements, EEC developments, VAT Tribunal decisions and Parliamentary statements relating to capital allowances, capital gains tax, car tax, corporation tax, capital transfer tax, development land tax, double taxation, income tax, stamp duty and VAT.

Subscription rate: £12.00 per annum.

British Tax Encyclopedia

General Editor: G.S.A. Wheatcroft

In three bound and five loose-leaf volumes:

Bound: **1. Income Tax**
by P. Whiteman and G.S.A. Wheatcroft 1976
2. Taxation of Companies
by R. Bramwell 1973 (with 1974 supplement)
3. Capital Gains Tax
by G.S.A. Wheatcroft and P. Whiteman 1973
(with 1975 supplement)
These books are kept up-to-date by annual supplements

Loose-leaf: **1. Table of Cases and Statutes and Annotated Text of the Income and Corporation Acts 1970.**
2. Income Tax and General Legislation prior to 1970.
3. Acts from 1970
(excluding the Income and Corporation Acts 1970)
4. Income Tax Circulars, Profits Tax Acts, Profits Tax Regulations, Profits Tax Circulars, Income Tax and Profits Tax Examples.
5. Double Tax Regulations, Double Tax Circulars, Double Tax Examples.

All volumes contain a comprehensive index and all are kept permanently up-to-date by additional or replacement pages issued at regular intervals throughout the year on a subscription basis.

Price: £65.00, including full supplementary service to bound volumes and loose-leaf volumes to the end of the year of purchase.

DETERMINATION OF THE TAXABLE PROFIT OF CORPORATIONS

Deventer, Kluwer, 1977. Cahiers de Droit Fiscal International, Volume LXIIb, Vienna, 1977. 480 pp.
Congress report for the International Fiscal Association containing national reports on the above-mentioned subject. A summary of each report in English, French, German and Spanish is append-

NEW OECD MODEL DOUBLE TAXATION CONVENTION

The report by the Committee on Fiscal Affairs presenting the new OECD Model Double Taxation Convention on Income and Capital is just out. Approved by the Council of OECD in April 1977, the Model Convention has been the subject of a new recommendation to Governments of Member countries to base their bilateral negotiations on the new text and to pursue generally their efforts to avoid international double taxation.

The 1977 Model Convention replaces an OECD Draft Convention issued in 1963 and, like its predecessor, is expected to exert a considerable influence on the numbers and the content of bilateral conventions concluded by OECD Member countries both with other Member and with non-Member countries. The new bilateral convention follows, in the main, the pattern and reproduces the essential provisions of the 1963 Draft. But the 1977 Model also takes account of the experience gained by Member countries in negotiating and applying bilateral conventions based on the 1963 Convention, as well as of changes in systems of taxation, the increased complexity of international fiscal relations and the development of new sectors of business activity that have been a feature of the international economy since the earlier text was drafted.

New provisions have been inserted in the 1977 Model to modify the scope of some Articles and, in a few cases, the rules laid down in the 1963 Draft Convention, where this was found necessary in the light of practical experience. However, the main work of the Committee on Fiscal Affairs has been to clarify, update and expand the Commentaries which are designed to illustrate and interpret the provisions of the Articles.

The most important modifications concern the taxation of permanent establishments (Article 5), Associated Enterprises (Article 9), Dividends (Article 10), Artistes and Athletes (Article 17) as well as non-discrimination by reason of nationality or residence (Article 24) and Exchange of information between tax administrations (Article 26).

These modifications are designed, inter alia, both to give additional protection to taxpayers against the possibility of double taxation and to facilitate the task of national administrations in combatting tax avoidance and evasion. To reduce the possibility of economic double taxation, a new provision requires the tax authorities of one contracting State to be prepared to make an appropriate reduction to the profits of an enterprise, when they are satisfied that the tax authorities of the other contracting state have correctly increased the taxable profits therein, provided the paying enterprise has acted in good faith (amendment to Article 9). An example of reducing abuse of double taxation conventions is that Article 17 of the Model Convention now makes it clear that its provisions should not apply to certain athletes and entertainers whose income is paid to companies established for the purpose of avoiding tax. Of more general importance in this field is the emphasis in the Commentary to Article 26 that exchanges of information between tax administrations can be far more extensive and take many more varied forms than was sometimes found in the interpretation of the 1963 texts.

The implementation of the new Model Convention, as the revision of existing conventions and the conclusion of new ones proceed, will permit the achievement of further progress towards the harmonisation of conventions and the elimination of double taxation, for the benefit of taxpayers from Member countries who undertake trading, industrial or financial activities in other Member countries.

PRENTICE~HALL,INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

Prentice Hall Announces:

The most strikingly different new tax guide ever published for taxpayers with income from foreign sources.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Continuously Supplemented. . . . . Always Up - to - Date

This outstanding new Service is created specifically to help save money for:

U.S. INDIVIDUALS
with investments and/or earned income from a foreign source

U.S. CORPORATIONS
with income from foreign sources

FOREIGN CORPORATIONS
with income earned or taxable in the U.S.

NONRESIDENT ALIENS
receiving income from, or taxable in the U.S.

If you fit any of these categories — or if you counsel, advise, or in any way service any of these categories — U.S. TAXATION OF INTERNATIONAL OPERATIONS will be an invaluable new tool for you.

It will deliver management benefits — operations benefits — tax benefits.

In clear, direct language, backed up by practical, tested practices of acknowledged experts in international business operations, the new work spells out how the taxpayer can best take full advantage of every popular, every sophisticated, and every little-known tax-saving device.

Authoritative, specific guidance from one source devoted exclusively to this kind of vital help has been non-existent — until now.
With the first 1972 publication of the innovative U.S. TAXATION OF INTERNATIONAL OPERATIONS this important need is now fulfilled. And bi-weekly "Report Bulletins" will keep the guide as new and up to the minute as the day you receive it.

Personal response to this new publication has been even more enthusiastic than our most optimistic projections. Subscriptions are now being accepted by mail for $ 186 a year.

Address your request to Dept. S-RR-103, Prentice-Hall Inc., Englewood Cliffs, N.J. 07632 and specify U.S. TAXATION OF INTERNATIONAL OPERATIONS, 1-year introduetory charter subscription.

Annual payment is not due until 20 days after receipt of the new, ready-for-reference volume.

The Polish Tax on INHERITANCES AND GIFTS

by Dr. Apoloniusz Kostecki

The Law of December 19, 1975, on the inheritance and gift tax — which came into force on January 1, 1976 [1] — constitutes the legal basis for the taxation of inheritances and gifts in Poland and forms part of the changes in the Polish tax system. [2] Strictly speaking, the inheritance and gift tax is a new feature in the Polish tax system but its basic elements had already been included in the provisions of the Decree of February 3, 1947, on the property acquisition tax. [3] The reasons for the abolition of the provisions of that Decree are not quite clear. The argument that the structure of the tax was too sophisticated and not understandable for taxpayers does not seem a cogent enough one for abolition of the above-mentioned Decree.

The introduction of the tax on acquisition of property into the Polish tax system in 1947 reflected an interesting process which brought together principles of taxation relating to identical or similar subject matter in one legislative act. That correct process of integration resulted in a simplification of the tax system since it limited the number of taxes relating to the same or similar subject matter. It also eliminated the possibility of tax being assessed twice on the same subject matter. In the case of the tax on property acquisition, related phenomena such as gratuitous transfers and transfers for a consideration of property were consolidated in one act dealing with the tax on acquisition of property. This tax was created on the basis of the tax regulations existing between World War I and II in the following manner:
— with regard to the gratuitous acquisition of property it replaced the obsolete provisions of the inheritance and gift tax,
— with regard to non-gratuitous acquisitions it covered a portion of the stamp duties structure of that time.

It should be noted that the introduction of the present tax on inheritances and gifts resulted from a process contrary to the one which had been in operation in 1947 when the tax on acquisition of property was created. Thus the present tax was formed as the result of a process of division of the subject matter of taxation, this being now partly covered by the tax on inheritances and gifts and partly by the law on stamp duties.

To recapitulate, the tax on inheritances and gifts took over the functions of the tax on acquisition of property which was in force until December 31, 1975, as far as gratuitous acquisition of property was concerned. It explains the fact that some structural elements of the tax on property acquisition have been taken over by the tax on inheritances and gifts.

The inheritance and gift tax will be applicable only to individuals and legal entities and not to any unit of the socialized economy. Therefore, such subject matters of socialized economy as state enterprises, cooperatives and other social organizations dealing with economic activities have been excluded from the scope of this tax.

Under Article 1 item 1 of the Law, *the acquisition of the ownership of property and/or property rights* (by means of inheritance or gift) is subject to tax. Where ownership of property is deemed to be a property right, the property rights acquired by means of inheritance or gift might, in substance, be regarded as the subject matter of taxation. However, the scope of the tax has been extended in accordance with the provisions of Article 1 item 2 of the Law. Thus, it also covers the acquisition of savings deposit rights carried out on the depositor's instruction in contemplation of death [4] as well as acquisition of property by means of usucaption. [5] This extension of the scope of the tax resulted in considerable assimilation of the scope of both the inheritance and gift tax and its predecessor, the property acquisition tax, in relation to gratuitous transfers. Therefore, the definition of that tax as a tax on inheritances and gifts is not a precise one, particularly with respect to property acquired by means of usucaption.

It also follows from the rule contained in Article 1 of the Law that only transfers of rights relating to the acquisition of property and property rights situated and exercised in Poland will be subject to the inheritance and gift tax. If, however, the recipient is a Polish citizen or has a place of permanent residence in Poland at the time of the inheritance coming into existence, then acquisition of property or property rights situated or exercised abroad will also be subject to taxation.

By virtue of this principle, the obligation to pay the tax on inheritances and gifts on the acquisition of property or property rights situated or exercised in Poland arises irrespective of citizenship or domicile of both the recipient and decedent or donor.

---

1. Dziennik Ustaw (Journal of Laws of the Polish People's Republic) No. 45 item 228.
2. The trends and nature of these changes were described in more general form in Bulletin for International Fiscal Documentation No. 10 of 1976. It was then proposed that the structure of the inheritances and gifts tax would be discussed in more detail in a separate article.
3. Dziennik Ustaw No. 27 item 106. The Decree was amended three times and after the first and second amendment the uniform text was published (the first one in Dziennik Ustaw No. 53 item 418 of 1949 and the second one in Dziennik Ustaw No. 9 item 74 of 1951). The third amendment was published in Dziennik Ustaw No. 7 item 77 of 1971.
4. It should be mentioned that by virtue of Article 40 para. 1 item 2, and para. 3 of Law of June 12, 1975 — Bank Law (Dziennik Ustaw No. 20 item 108) saving deposits of up to a total of 200,000 zloty are excluded from an estate which had been bequeathed by the depositor in writing to close relatives (spouse, children, parents, grandchildren, brothers and sisters).
5. Usucaption is a term denoting a mode of acquisition of property corresponding very nearly to prescription, i.e. the acquisition of ownership through the expiration of a certain period of time. (Editor's note.)

However, in the interests of reality, certain exclusions from the above principle have been made. Namely, acquisitions are not taxable if at the time of the inheritance coming into existence or the signing of the deed of gift, neither the recipient nor the decedent nor donor were Polish citizens nor had a permanent place of residence in Poland (Article 3 item 1). However, it follows from this rule that this exemption does not include the acquisition of rights in *real estate* situated in Poland.

In this article we shall deal with the details of the exemptions relating to transfers between Poland and abroad as well as those relating to agricultural real property.

The first exemption refers to the situation covered by Article 2 of the Law. In the case of gifts, this exemption applies when foreign currency has been transferred to the recipient's bank account in Poland after property or property rights situated or exercised abroad have been sold. Where the estate involved is situated abroad the exemption will apply when the amount due has been encashed by the Polish Consulate or — where there is no consulate in the decedent's country — when it has been transferred to the recipient's account in Poland. The purpose of the above-mentioned exemption is clear enough.

The second kind of exemption refers to the acquisition of property in private farms by means of inheritance, gift and usucaption. The exemption covers the acquisition of real property and other property rights in private farms or in a part thereof. This exemption, however, is not of universal application. It does not cover, for example, private farms situated within the bigger towns (i.e. towns of more than 100,000 inhabitants) nor apartment buildings forming part of a private farm within such a town.

In certain cases the exemption from the tax on property acquisition, in relation to specific components of private farms, is of a conditional nature. Such components are, in particular, buildings occupied for purposes of chicken farms and fur farms, greenhouses, hotbeds, refrigerating plant, buildings for the storage of fruit and others, as well as the excess value of orchards of an area larger than 3 hectares. Such components are exempted on condition that the property has been acquired by the spouse or descendants who must also make a written statement that they will run the farm for a period of at least five years from the moment of acquisition of the rights.

Property acquired by units of the socialized economy is always exempted and in that case the exemption is of a general nature.

The structure of the tax results in the tax liability falling on persons acquiring property. In the case of gifts, however, the donor and donee are jointly and severally liable. Because of its definition of the tax base the tax on inheritances and gifts is in fact a tax on the increase of net wealth. Namely, the tax base is the *net value* of the property acquired, i.e. the value free of debts and encumbrances. The value of the property acquired is calculated on the basis of (1) *the state of this property on the day of acquisition thereof*, (2) *the market price of this property on the day of the tax assessment.* Since the tax may be assessed a long time after the property has been acquired, the above principle may have a disadvantageous effect on the taxpayer's financial position, for example where the property has been sold before the tax is assessed and at prices lower than those prevailing on the day of the tax assessment.

In accordance with the executive regulations, [6] the market value of property is to be determined on the basis of average prices noted in the transfer of property of the same kind in a given locality on the day of the tax assessment. The legislature took this into consideration and foresaw the possibility of the state of the property changing during the period between the day of the acquisition of the property and the day of tax assessment due to reasons beyond the taxpayer's control. Such reasons have, however, been limited to force majeure only. In that case, the value of the property will be determined on the basis of their state on the day of the tax assessment, while the amount of any possible insurance indemnification will increase the taxable base.

Debts and encumbrances to be deducted from the value of the property acquired include the decedent's funeral costs, costs of inheritance proceedings, remuneration of the executor, legacies to be paid and orders to be carried out in accordance with the will.

The provisions of the Law state that the value of the property rights is the one declared by the acquirer. This value must equal the market value (see my explanation above) applied to goods of the same kind. Only the value of savings deposits and of apartments and other buildings is excluded from that principle. In the first case, the real amount of savings forms the tax base and in the second one the base consists of the value of the buildings where this is not lower than that estimated for fire insurance purposes in any given tax year. The regulations provide for special proceedings where a person acquires property for no consideration or the value given by him is lower than the market value. In the first stage of such proceedings the person acquiring the property is requested to estimate the value of the property acquired or to give a statement of the full value increase within 14 days. If such statement is not filed by the purchaser, then in the next stage of proceedings the value of the property will be established by a tax assessment body on the basis of expert opinion. If the value initially given by the purchaser was 33 percent lower than that fixed by the experts he will be obliged to pay the costs of the expert report. The limit of acceptable error has been relatively high.

The legislature employs two kinds of cumulation in calculating the tax. The first kind, which is of general application and objective character, consists of the taxation of the aggregate value of the property acquired *from the same person* over a period of six years. The cumulation is effected so that the value of property acquired from the same person over a period of five years preceding the year of the last acquisition is added to the value of the property

6. Ruling of Minister of Finance of December 30, 1975, on execution of Law on the inheritance and gift tax (Dziennik Ustaw No. 46 item 256).

last acquired. The tax previously levied on the property acquired at an earlier date is then deducted from the tax computed on the aggregate value of the property. The other kind of cumulation goes further but its application is limited to property acquired from abroad by way of gift. Here the cumulation has a subjective character and operates on two levels. On the one hand, the value of all property acquired by the donee from abroad by way of gift in any one calendar year is added together irrespective of the number of donors. On the other hand, the cumulation pertains to the value of the property received from abroad by all the family members of a joint household; all family members who receive gifts are liable to tax jointly and severally.

Both kinds of cumulation prevent evasion of tax by the taxpayer taking advantage of the institution of the exempted amounts and also evasion of the consequences resulting from the progressive nature of the tax.

The provisions relating to the tax exempted amounts provide for variation in the tax amount depending on the taxpayers' group in which the person acquiring the property is included. Under Article 9 item 1 acquisition of property is exempted if its value does not exceed 50,000 zloty where the taxpayer is included in Group I and 30,000 zloty where the taxpayer is included in one of the other three groups.

The tax on inheritances and gifts is progressive and varies according to the group to which the taxpayer belongs.

Taxpayers are divided into four groups depending on the relationship of the recipient to the deceased or donor. it should be noted that the present solution makes a more consistent classification of beneficiaries than the previous provisions, i.e. it classifies:

among Group I: spouse, descendants, adopted and step-children, sons- and daughters-in-law,

among Group II: ascendants and brothers and sisters,

among Group III: descendants of brothers and sisters,

among Group IV: other beneficiaries.

It seems doubtful whether it was necessary to separate Group III, which includes only descendants of brothers and sisters, who could have been included together with brothers and sisters in Group II. That would have simplified the progressive structure of the tax without contravening the accepted principles. Persons who acquire property by means of usucaption are treated uniformly by the Legislature and are included in Group IV which is subject to the highest level of taxation.

There is an exception to the principle that the kinship between the recipient and deceased or donor determines in which of the four groups the taxpayer will be classified. The exemption concerns acquisition of property by way of gift from abroad. In that case, the amount of tax will be determined purely on the basis of whether the taxpayer is an individual or a legal entity. With respect to individuals the tax is fixed irrespective of the kinship between the donor and recipient at an amount provided for Group III taxpayers. In the case of legal entities the amount of tax will be in accordance with that provided for Group IV taxpayers ("other beneficiaries").

There are separate tax tables for each tax group:

a) Tax table for Group I

Basis of taxation in zloty over	up to	*Tax amount in zloty*
50,000	100,000	10% of the excess over 50,000
100,000	200,000	5,000 + 12% of the excess over 100,000
200,000	400,000	17,000 + 14% of the excess over 200,000
400,000	600,000	45,000 + 16% of the excess over 400,000
600,000	800,000	77,000 + 18% of the excess over 600,000
800,000	1,000,000	113,000 + 20% of the excess over 800,000
1,000,000	1,200,000	153,000 + 22% of the excess over 1,000,000
1,200,000	—	197,000 + 24% of the excess over 1,200,000

b) Tax table for Group II

Basis of taxation in zloty over	up to	*Tax amount in zloty*
30,000	50,000	10% of the excess over 30,000
50,000	100,000	2,000 + 15% of the excess over 50,000
100,000	200,000	9,500 + 18% of the excess over 100,000
200,000	400,000	27,500 + 21% of the excess over 200,000
400,000	600,000	69,500 + 24% of the excess over 400,000
600,000	800,000	117,500 + 27% of the excess over 600,000
800,000	1,000,000	171,500 + 30% of the excess over 800,000
1,000,000	1,200,000	231,500 + 33% of the excess over 1,000,000
1,200,000	—	297,500 + 36% of the excess over 1,200,000

c) Tax table for Group III

Basis of the taxation in zloty over	up to	*Tax amount in zloty*
30,000	50,000	15% of the excess over 30,000
50,000	100,000	3,000 + 20% of the excess over 50,000
100,000	200,000	13,000 + 24% of the excess over 100,000
200,000	400,000	37,000 + 28% of the excess over 200,000
400,000	600,000	93,000 + 32% of the excess over 400,000
600,000	800,000	157,000 + 36% of the excess over 600,000
800,000	1,000,000	229,000 + 40% of the excess over 800,000
1,000,000	1,200,000	309,000 + 44% of the excess over 1,000,000
1,200,000	—	397,000 + 48% of the excess over 1,200,000

d) Tax table for Group IV

Basis of taxation in zloty over	up to	*Tax amount in zloty*
30,000	50,000	30% of the excess over 30,000
50,000	100,000	6,000 + 40% of the excess over 50,000
100,000	200,000	26,000 + 49% of the excess over 100,000
200,000	400,000	74,000 + 54% of the excess over 200,000
400,000	600,000	182,000 + 59% of the excess over 400,000
600,000	800,000	300,000 + 64% of the excess over 600,000
800,000	1,000,000	428,000 + 67% of the excess over 800,000
1,000,000	1,200,000	562,000 + 70% of the excess over 1,000,000
1,200,000	—	702,000 + 77% of the excess over 1,200,000

Even a rough analysis of the tax tables shows considerable difference in the tax burden put on the taxpayers of Group I and on the other groups. The differences between Group I and Group IV are particularly wide. Equitable considerations led the legislature to fix the tax burden for the taxpayers of Group I on a much lower level than for those included in the other groups. In addition, preferential treatment such as the increased tax exemption up to an amount of 50,000 zloty granted to Group I and lower tax rates up to a limit of 24 percent of the net value of the property seem inadequate with respect to those persons in Group I who, as a rule, have contributed in a direct or indirect way to the formation of or increase in property which afterwards is acquired by them by means of inheritance and gift. In the first place, it concerns the spouse and children of the deceased or donor. Undoubtedly, those were the reasons motivating the legislature to modify in certain cases the tax burden on those persons. For example, a special kind of tax reduction is given to the spouse and descendants of the donor which consists of a reduction in the tax on inheritances and gifts by 50 percent where a single-family house or apartment or rights to a cooperative apartment have been acquired by such persons by way of inheritance. However, that happens only on condition that the heirs were living in the above-mentioned house or apartment until the date when the inheritance came into existence.

These tax reductions are based on premises similar to the previously mentioned exemptions of certain elements of agricultural real property (being an object of inheritance or gift) acquired by the spouse or descendants.

In order to complete the picture of the scope of the exemptions from the tax, it should also be mentioned that some property acquired by means of inheritance is exempted on the grounds of the Ruling of the Ministry Council of December 29, 1975. [7] Among others, the exemption covers acquisition of:

a) furnishings (with a few exceptions) as well as household tools, subject to their being acquired by persons included in Group I of the tax.
b) objets d'art produced by the decedent and literary materials where the decedent was engaged in artistic production, research, fiction, journalism or educational activities.
c) Movable objets d'art as well as certain kinds of collections.
d) rights to the use of an apartment and its furnishings by the spouse and other close relatives of the deceased who had been staying with him until the day of his death, for a period of three months from that very day.

Also, property rights in machines, equipment and tools acquired by a craftsman by way of gift from abroad are exempted. This kind of exemption is quite significant since it is an exception to the above-mentioned principle of cumulation of the value of the property acquired by gift from abroad. However, that exemption is subject to the taxpayer's statement that the machines, equipment and tools which form the gift from abroad will be installed in his workshop and will not be sold or transferred free of charge to other persons for a period of three years from the day of acquisition.

In conclusion it should be noted that the structure of the tax on inheritances and gifts is — generally — a more modern one than the structure of the previous tax on acquisition of property. This can be seen in particular with respect to the structure of tax rates which, moreover, to a much higher degree ensure sufficiently high tax receipt for their government. This results mainly from the increase in the tax burden in the lower ranges.

IFA INTERNATIONAL FISCAL ASSOCIATION NEWS

VIENNA - CONGRESS 1977

GOODBYE DR. GMUER

On October 7, 1977 Dr. Paul Gmuer resigned as President of IFA after having led this Association successfully during four eventful years. The General Assembly, wishing to honor Dr. Gmuer's outstanding services rendered to IFA, unanimously elected him Honorary President. The International Bureau of Fiscal Documentation is happy to congratulate him on his election and expresses the wish that IFA may for many years benefit from his wisdom and experience.

WELCOME MR. DAVIES

On October 7, 1977 the General Assembly of IFA elected Vice-President Alun G. Davies President of its Association. The International Bureau of Fiscal Documentation, which is proud to have Mr. Davies as a Member of its Board of Trustees, congratulates him on his election and wishes him the best of luck.

SOME HIGHLIGHTS FROM THE SECRETARY GENERAL'S 1976-77 ANNUAL REPORT

At the highly successful 31st Congress of the International Fiscal Association held from October 4-8, 1977 in Vienna, the Secretary General, Professor Dr. Jan H. Christiaanse, presented his Annual Report on IFA's weal and woe during the past year. Fortunately there was very much weal and if there was any woe it is hardly worth mentioning. The following highlights appeared in the Annual Report:

- During 1976-77 the Norwegian National Branch — IFA's 26th branch — was recognized at the meeting of IFA's General Council in Jerusalem, while it was proposed that the New Zealand National Branch be recognized at the Vienna Congress. [1]
- On March 15, 1977 the total membership of IFA amounted to 5,014, a slight decrease compared with the previous year but resulting only from a more careful screening of membership lists.
- During the meeting of the Permanent Scientific Committee in Jerusalem it was decided to invite national reporters from countries where IFA has no branch to participate in the discussion of Subject I — Taxation of the extractive industries — of the 32nd IFA Congress to be held in Sydney (see the Conference Diary). Since this subject might be of minor importance in some of the countries where IFA does have a branch, their Secretaries were asked whether they intended to nominate national reporters for this subject. A negative answer was received from 7 Secretaries whereupon the General Secretariat nominated 7 national reporters (in addition to the national branch reporters) from non-branch countries, i.e. from Colombia, Indonesia, Iran, Nigeria, the Philippines, Saudi Arabia and Venezuela.
- The 33rd Congress will be held in Copenhagen (Denmark) from September 4-8, 1979. Subject I to be discussed at this Congress was phrased as: "The Taxation of transfers of ownership on death or inter vivos gifts with special reference to the continuity of family-held enterprises". The second subject was formulated (provisionally): "The effects of losses in a country on the tax treatment of the enterprise or group". For the Seminars the following subjects were suggested: "Trends in income tax treaties involving developing countries, with special reference to the U.N. Group of Experts" and "Trends in Scandinavian Taxation". The General Reporter for Subject I is Prof. T. Nielsen (Denmark), and for Subject II is Dr. Gerhard Laule (Germany).
- The United Nations Group of Experts on Tax Treaties between Developed and Developing Countries meets every second year and this did not get together during the period under review. The next meeting is scheduled in Geneva from October 25 to November 4, 1977. In addition to Mr. Sidney I. Roberts, Dr. Raoul Lenz — the Chairman of IFA's P.S.C. — has been nominated as co-Liaison Officer to attend this meeting on behalf of IFA.

In Jerusalem two meetings of the Executive Committee took place under the chairmanship of Dr. P. Gmuer, President of

1. The Vienna Congress accepted the New Zealand Branch as its 27th Branch.

IFA. Mr. Alun G. Davies and Dr. K. Antal had to withdraw, not being eligible for re-election. It was decided that they would be replaced, for a period of two years, by Dr. R. Bechinie and Mr. G.L. Herring, presidents of the Austrian and the Australian Branches respectively.

— On May 2, 1977 the Spring Meeting of the Executive Committee was held in Vienna. Mr. A.G. Davies attended the meeting in his capacity of President Elect. Dr. R. Halpern attended the meeting, representing the Austrian Congress organizing Branch; and Mr. P.V. Mayes came all the way from Australia to represent the Australian Congress organizing Committee. (Mr. Herring was not able to attend the meeting.) During this meeting the Executive Committee decided to recommend to the General Council and the General Assembly during the Vienna Congress that fees for 1978 be increased to US$ 30.-- for individual members of National IFA Branches, US$ 32.-- for direct individual members of IFA, and US$ 70.-- for corporate members, both direct and of National Branches. [2]

RESUME OF SUBJECT I: INFLATION AND TAXATION [3]

At the end of the Vienna Conference of IFA the following resumé was issued reflecting the results of the discussions of the first subject:

RESUME

The XXXIst IFA Congress dealt with the Subject "Inflation and Taxation". While it was generally recognized that the subject had a bearing on all categories of taxation, the discussion was concentrated on taxation of individual and corporate income including capital gains. In the following resumé, the main points of the proceedings are high-lighted.

Inflation seriously distorts the amount and the distribution of the burden of taxes on individual and corporate income unless tax laws are adjusted in order to reflect inflation. The conclusion to the General Report enumerates three relevant areas:

1. Tax brackets, credits and allowances.
2. The time lag between earning income and paying tax.
3. The basis of calculating the taxable income (tax base).

Ad. 1. The majority of countries adjust tax brackets, credits and allowances from time to time. Some do so at regular intervals with full or partial indexation, whilst others do so at their discretion without adhering to fixed periods or rates of adjustment. There have been in the past strong objections against inflation adjustments because the increase of the real rate of taxes was considered as a counterweight to inflationary pressure, functioning as a built-in stabilizer. While there remain supporters for that view, a growing number of countries have recently used inflation adjustments as an element of anti-inflationary policy.

Ad 2. Inflationary conditions, the different timing of tax payments may lead to either gains or losses for the taxpayers. Some countries deliberately refrain from adjusting the tax payable by adding interest or by index linking, because they consider the gain for the taxpayer from late tax payment as compensating for any loss caused by the absence of inflation adjustment. On the other hand — if inflation adjustments are made — the absence of interest or index linking would give undue benefits to taxpayers benefitting from such adjustments; moreover, it would cause inequities among different categories of taxpayers.

Ad 3. The principle of adjusting the method of calculating taxable income (the tax base) for the effects of inflation received strong support. Opposite views were, however, expressed, in particular with reference to such undesirable redistributive effects of inflation as are not offset and might even be aggravated by tax measures.
There are considerable difficulties in implementing inflation adjustments:
A. A full system of inflation adjustment would have to deal with such items as machinery and plant, inventories, monetary assets and liabilities, interest income and expenditure and capital gains. The methods would be different for each of these items.
B. There are various approaches to the adjustment, mainly general price level adjustment and current cost method. Other technicalities of adjustment are still under discussion. The development of generally accepted accountancy principles for inflation adjustment is seen as an important preparatory step.
C. Owing to the difficulties of implementing a full inflation adjustment, many countries, especially those with low rates of inflation and those which consider inflation to be temporary, have restricted themselves to granting various measures of relief as substitutes for full inflation adjustment, for instance accelerated depreciation allowances, liberal inventory valuation rules and reduced rates on certain items of income or gain.
Some participants opposed those limited measures because they do not always reduce the extent of distortion in the distribution of the tax burden created by inflation, especially where these substitute adjustments do not cover monetary assets and liabilities.
Any incomplete system of inflation adjustment may lead to new distortions in the distribution of the tax burden and only a fully-integrated system can avoid them. Opinions varied whether either for reasons of principle or owing to the high social cost of compliance, in a fully-integrated system, systems of partial adjustment would nevertheless be preferable.
D. Because there appears to be no other way to remove the distortions, those countries with higher rates of inflation and which expect those rates to continue move gradually towards systems which fully reflect inflation. So far it seems that difficulties of implementation rather than objections of principle set the pace of progress.
While specifically dealing with the adjustment of tax systems to inflation, the Congress recognized the overriding importance of all measures, fiscal and others, to combat the world-wide evil of inflation.

NATIONAL BRANCHES

NETHERLANDS BRANCH

On November 5, 1977 the Netherlands Branch held its annual meeting in Amsterdam. The discussion focussed mainly on the reports drafted for the 1978 Sydney Congress.
It was also announced that the Dutch and German Branches envisage organizing a joint conference (tentatively on May 19-20, 1978) in Hamburg. The subjects to be discussed will be made known at a later date.

U.S.A. BRANCH

The principal topic for discussion at the National Meeting of the U.S.A. Branch to be held January 12-13, 1978 in New York City's Plaza Hotel has now been selected: "International and comparative aspects of corporation-shareholder integration". This subject will be broken down into two parts: Part I — "Towards

2. The contribution increase was approved by the Vienna Congress.
3. The original version is in the English language. No resolutions or resumé were proposed regarding Subject II: Determination of the taxable profits of corporations.

tax reform in the United States"; and Part II — "The view from outside the United States". The speakers for Part I include Prof. Bernard Wolfman of Harvard University (Background on integration in the U.S.A.); Dr. Lawrence Woodworth, U.S. Assistant Secretary of the Treasury for Tax Policy (The position of the Carter Administration); Prof. David Bradford of Princetown University (The economic viewpoint); and Mr. Jennings Smith of Exxon (Implementation at corporate level): For Part II some prominent foreign speakers have been invited, including Mr. Pierre Kerlan (France) and Dr. Albert Rädler (Germany).

In addition, a portion of the program will be devoted to highlights of the U.S. national reports. Speakers on Subject I (Taxation of extractive industries) will be Mr. Edward C. Osterberg and Mr. Francis J. Walsh and speakers on Subject II (Differences in tax treatment between local and foreign tax investors and the effects of international treaties) will be Mr. Samuel M. Frohlich and Mr. James O'Brien.

It has also been announced that Mr. Richard M. Hammer will resign as President of the U.S.A. Branch and will be succeeded by the present Executive Vice President, Mr. Richard C. Pugh.

OECD Council Recommendation on Tax Avoidance and Evasion*

OECD's 24 Member countries have decided to strengthen their co-operation in combatting tax avoidance and evasion. At a meeting today the OECD Council approved the following Recommendation, which was prepared by the Organisation's Committee on Fiscal Affairs.

Under the terms of the Recommendation, Member governments are called upon in particular, to strengthen, where necessary, their national powers to detect and prevent tax avoidance and evasion, and to develop exchanges of information between national tax administrations in this respect, notably by making more use of existing international agreements, and seeking new arrangements as appropriate.

As part of the working programme on this subject, a special two-day meeting of 75 tax inspectors from Member countries opened today at OECD headquarters. The meeting is devoted to exchanges of views and experiences on detection of tax evasion during tax audit.

RECOMMENDATION OF THE COUNCIL ON TAX AVOIDANCE AND EVASION

The Council,

Having regard to Article 5(b) of the Convention on the Organisation for Economic Co-operation and Development of 14th December, 1960;

Considering that tax avoidance and evasion are contrary to fiscaly equity, have serious budgetary effects and distort international competition;

Noting that tax avoidance and evasion schemes involving international transactions have become increasingly complex and more difficult to detect;

Considering that effective action against such schemes requires strengthened co-operation between OECD Member countries;

I. RECOMMENDS Governments of Member countries:
   a) to strengthen, where necessary, their legal, regulatory or administrative provisions and their powers of investigation for the detection and prevention of tax avoidance and evasion, with regard to both their domestic and international aspects, and to exchange experiences with respect to such action;
   b) to facilitate, improve and extend exchanges of information between their national tax administrations, with a view to combatting tax avoidance and evasion, notably by making more intensive use of international conventions or instruments in force and by seeking new arrangements of a bilateral or multilateral character, with due regard to the provision of adequate safeguards for taxpayers;
   c) to exchange experiences on a continuing basis on tax avoidance and evasion practices, on techniques for detecting and preventing them and on ways and means of improving tax compliance in general.

II. INSTRUCTS the Committee on Fiscal Affairs to pursue its work with a view to facilitating the achievement of the above aims and to submit to the Council, as appropriate, specific proposals for increased co-operation between Member countries in this field.

---

* Press-release of September 21, 1977.

COUNTRY BY COUNTRY SURVEY OF LOOSE-LEAF PUBLICATIONS . . .

UNITED KINGDOM

BRITISH TAX ENCYCLOPEDIA

G.S.A. Wheatcroft.
General Editor Philip Lawton.
Consulting Editor G.S.A. Wheatcroft.
Sweet & Maxwell Ltd., 11 New Fetter Lane, London EC4.
Supplemented: regularly.

Loose-leaf publication in five volumes comprising annotated text of the income tax, corporation tax and capital gains tax laws. The commentaries and explanations thereto are published in separate bound textbooks entitled Whiteman & Wheatcroft on Income Tax; Wheatcroft and Whiteman on Capital Gains Tax, and Richard Bramwell Taxation of Companies, which are supplied automatically to subscribers to the British Tax Encyclopedia, but which are also sold as separate publications.

BRITISH TAX GUIDE

Commerce Clearing House, Inc., 4025 W. Peterson Av., Chicago, Illinois 60646, U.S.A.
Supplemented: monthly.

Loose-leaf publication in four volumes primarily concerned with commentary to and reproduction of legal texts relating to income tax, corporation tax and capital gains tax levied in the United Kingdom designed primarily for the use by firms and tax consultants in the United States and Canada. The commentaries are reproduced by special arrangements from the bound volumes accompanying the British Tax Encyclopedia published by Sweet & Maxwell Ltd., London.

CAPITAL TAXES ENCYCLOPAEDIA

Capital Transfer Tax.
Editorial Board Sir John Foster, B.J. Sims and E.E. Ray. Editor for Scottish Law W.F. Bowes.
Managing Editor Leslie J.P. Livens and many contributors.
Butterworth & Co., 88 Kingsway, London WC2B 6AB.
Supplemented: at irregular intervals.

Loose-leaf publication in two volumes comprising explanation, statutes and regulations relating to capital transfer tax.

DE VOIL ON VALUE ADDED TAX

By Paul W. de Voil.
Butterworth & Co., 88 Kingsway, London WC2B 6AB.
Supplemented: monthly.

Loose-leaf publication containing an extensive description of the value added tax legislation followed by the reproduction of all the relevant statutes and regulations, cross references, annotated and indexed.

TAX ON PROPERTY

Industrial and commercial aspects (inc. property investors, developers and dealers generally).
By A.D. Weatherall.
Kluwer-Harrap Handbooks, Rembrand House, 539 London Road, Isleworth, Middlesex TW7 4DA.
Supplemented: regularly.

Loose-leaf publication of a handbook primarily concerned with transactions relating to industrial and commercial properties; private residences, agricultural property and woodlands are outside the scope of this work. Taxes covered include income tax and corporation tax, capital gains tax, development land tax and its predecessor, development gains tax.

SIMON'S TAXES

Editorial Board: Sir John Foster, K.S. Carmichael and B.J. Sims.
Editor for Scottish Law: W. Menzies Campbell. Managing Editor: John Jeffrey-Cook.
Butterworth & Co., 88 Kingsway, London WC2B 6AB.
Supplemented: at least four times annually.

Loose-leaf publication in nine volumes covering income tax, corporation tax and capital gains tax. Volumes A, B and C deal with administration, procedure and computation of these taxes. Volume D deals with the taxation of companies and Volume E with the taxation of individuals and trusts. Volume F is devoted to double taxation relief. Volume G and H contain Acts, statutory instruments and extra-statutory concessions. Each of these volumes has its own index, while Volume I comprises a comprehensive index to the whole work, together with Tables of Cases and Statutes.

SIMON'S WEEKLY TAX SERVICE

Butterworth & Co., 88 Kingsway, London WC2B 6AB.
Supplemented: weekly.

Loose-leaf publication entitled SIMON'S WEEKLY TAX SERVICE comprising SIMON'S TAX INTELLIGENCE and SIMON'S TAX CASES each with its own binders.
(1) SIMON'S TAX INTELLIGENCE, edited by John Jeffrey-Cook, records recent developments on tax matters, provides detailed summaries of all tax cases decided during the week, all relevant statutory instruments reproduced in full, all press releases issued by the Inland Revenue and by the Customs and Excise regarding value added tax and announcements as to the publication of Command Papers and explanatory booklets, Finance Bill Amendments, etc.
(2) SIMON'S TAX CASES, edited by Rengan Krishnan, John Jeffrey-Cook and R.N.G. Harrison, records United Kingdom tax cases, covering income tax, corporation tax, capital gains tax, capital transfer tax, stamp duty and value added tax. All tax cases decided by the Courts are included. Cross-references to SIMON'S TAXES are made.

Income tax on real estate transactions in Brazil

by Aleksas Juocys*

Real estate transactions have become very important in Brazil in view of the rapid increase of value of real property as a result of the continuous development of residential, commercial and industrial areas. Inflation may be considered another reason for the growth of the real estate market. Investments in real property are nowadays still a safe recourse to avoid the dilution of savings by inflation. The prices of real estate have accompanied — and have often exceeded — inflation, particularly in some areas where residential, commercial or industrial progress has resulted in an increase of value of the property. In view of the important position that real estate transactions occupy in the Brazilian economy, specific legislation has been enacted in this area, also affecting the income tax on the profit earned by the purchase and sale of real estate.

Individuals or legal entities resident or established abroad may acquire Brazilian real estate, although subject to some exceptions, which include the acquisition of rural land for which a specific Governmental authorization is required. The direct purchase of real estate by foreign residents is, however, not of great interest at the moment, since the Central Bank of Brazil is not willing to register the foreign currency remittance as a "foreign investment" in Brazil. This means that the funds obtained at the time of sale of the property may not be remitted abroad and that not even the original sum invested may be repatriated.

For this reason, foreign purchases of Brazilian real property are usually made through Brazilian companies incorporated with the funds remitted by foreign residents. However, rural *real estate acquisitions made by these Brazilian companies funded with foreign capital are subject to the same restrictions as direct acquisitions by foreign residents if the share capital of the Brazilian company is controlled by one or more foreign residents. In the event of transfer of residence from Brazil to another country or of decease leaving a foreign resident heir, the Central Bank of Brazil has permitted the sales proceeds of local real estate to be remitted abroad, although only after specific examination of each case.*

In order to examine the income tax levied on the profit made in real estate transactions, we have divided this study into three sections:

1— sales of real estate by individuals;
2— sales of real estate by companies and other legal entities not engaged in real estate activities;
3— sales of real estate by companies and other legal entities engaged in purchases and sales of real estate.

1. Sales of real estate by individuals

1.1. Real estate transactions effected by individuals resident in Brazil are generally not subject to income tax. This exemption is naturally only of interest in cases in which there is a positive difference between the purchase and sales price of the property. Any profit thus made by an individual will not be subject to income tax. In Brazil, as explained, it is very rare for real property to be sold at a loss, i.e. at a price below the purchase price.

1.2. In the event that real estate transactions effected by an individual become habitual or refer to land division or "building incorporation", [1] the law holds the transactions equivalent to taxable commercial operations. There are several circumstances which may lead to this possibility and the law even makes a distinction between property acquired before and after June 30, 1977 for this purpose.

1.3. The individual will thus be subject to income tax as a commercial firm if he:

i) sells real estate to a company with which he is connected, provided that the purchasing company in any way engages in real estate construction or sale or in forestation or reforestation activities;
ii) habitually sells real estate in his own name; or
iii) provides for the incorporation of condominium buildings or land divisions.

1.4. The transfer of real property to a company to pay up subscribed capital is also deemed to be a sale as mentioned in i) above. The habitualness mentioned in ii) above arises if more than three properties acquired over a two-year period are sold during the same two-year period, or if more than five properties acquired over a five-year period are sold over the same five-year period. This rule applies to property acquired after June 30, 1977 and sold after such date. As an exception to this rule, an individual who sells in 1977 more than three properties acquired in 1977 or who sells more than six properties acquired in the periods from 1975 to 1977 or 1976 to 1978 in these same three-year periods, will also be held equivalent to a commercial firm.

1. Ed. note: i.e. the promotion of the creation of condominium property.

1.5. This same rule will apply in the case of incorporation of a building or land division when the documents are filed for registration by the Real Estate Registry. Another instance is when a land owner, although not having filed "building incorporation" or land division documents, provides for the construction of a building with more than two real estate units or for a land division and then starts selling the real estate units or divided land during the 60 months following the date of approval of the building or division by the Real Estate Registry.

1.6. When an individual is held to be equivalent to a commercial firm, he will be obliged to determine his profits as if he actually were a commercial firm. The annual profit earned by the individual will automatically be considered as a profit distributed in the base year and a balance sheet will have to be drawn up as of each December 31st to have the profit taxed with the 30 percent corporate income tax which applies to commercial companies in general. This tax is payable in portions of twelfths during the following fiscal year. The total tax is deducted from the profit and the result is considered as automatically distributed to the individual, who may opt between having the distributed sum taxed at source at the rate of 10 percent payable within 90 days, or including the distributed sum in his annual income tax return for taxation at progressive rates which may reach 50 percent in the case of net income in excess of Cr$ 675,000.00 in the fiscal year 1977.

2. Sales of real estate by companies and other legal entities not engaged in real estate activities

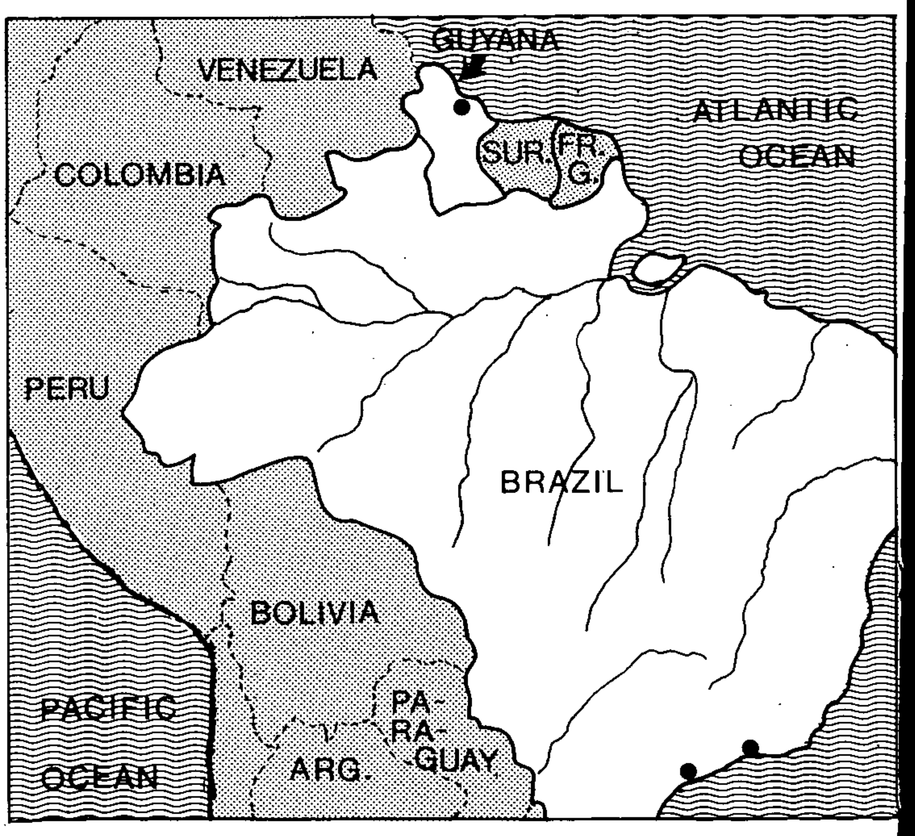
2.1. Companies and other legal entities engaged in the most diversified lines of business but not in real estate transactions often have fixed assets in the form of real property used for the installation of their plants, offices, warehouses and the like. These companies are free to sell the property at their convenience but the profit or loss ascertained in these sales will reflect on their taxable income.

2.2. Consequently, the sales price of real estate will be included in the company's income subject to income tax and will thus be computed in the annual balance sheet for purposes of determining the annual net profit which will be subject to the 30 percent corporate tax. The ascertainment of the profit made on the sale of real estate should consider the annual monetary correction of the book value of the acquisition of the property according to the Government inflation correction indices, as well as the depreciation.

2.3. The exception to this rule is that companies which have had real estate in their fixed assets for more than five years may sell such real estate exempt from income tax, provided that the sale is effected prior to December 31, 1978 and that the sale proceeds are used to increase the company's capital. The shares or quotas distributed as a result of such capitalization are also exempt from income tax in the hands of the recipients, regardless of whether they are resident in Brazil or abroad. The Central Bank of Brazil has, however, been refusing to register such capital increases as a "foreign investment" in cases in which the partners of the company are resident abroad.

3. Sales of real estate by companies and other legal entities engaged in purchases and sales of real estate

3.1. Brazilian commercial companies in general draw up their annual balance sheets on an accrual basis including all sales of goods even if their value has not yet been realized.



3.2. Real estate companies are, however, permitted to determine their profits on a cash basis by considering only the amounts actually received for real estate sales.

3.3. Companies which engage in selling real property or rights on a credit basis or in constructing buildings for a credit sale, i.e. sale with immediate delivery of possession but with deferred payment, should keep separate accounts for the installments received in each fiscal year by way of:

a) interest;
b) cost of acquisition or of construction of the property or rights sold;
c) profit from the transaction;
d) monetary correction of the outstanding balance of real estate contracts according to the monetary correction criteria applied to tax debts.

3.4. Companies engaged in such activities may correct the monetary expression of the cost of the land or buildings according to the same correction indices applicable for the monetary correction of the fixed assets of companies in general. The variations determined are thus added to the cost of the land or buildings transacted, for the purposes of ascertaining the taxable income.

3.5. The profit is determined annually in the balance sheet, the net profit being subject to 30 percent corporate tax payable in portions of twelfths during the fiscal year following the base year.

Taxation in developing countries
A Case Appraisal of Guyana

by Kempe R. Hope

I. INTRODUCTION

The most salient characteristic of taxation is its compulsory nature. There is no quid pro quo *relationship of taxes paid and benefits received by the citizenry. So far, all attempts to establish a relationship between taxes paid and benefits received by the citizenry have failed. There is no way of "ascertaining the true benefits".* [1] *Where public goods are relatively "pure" and the exclusion principle does not apply, there are "no discrete outputs that are appropriable by individuals".* [2] *However, the generally accepted goals of taxation are (1) efficient resource allocation; (2) full employment with price stability; (3) a satisfactory distribution of income; and (4) a high stable rate of economic growth. These generally accepted goals of taxation have to be judged by certain criteria as how they are fulfilled.*

Four general criteria can be developed to evaluate taxes. These are (1) allocational efficiency; (2) equity; (3) administrative feasibility; and (4) revenue productivity. The first criterion, allocational efficiency, is concerned with the economic effects of taxation on the pattern of resource allocation. Equity refers to different taxes and how each tax redistributes income and wealth among the citizens in such a way as to narrow the gap between the poor and rich. Administrative feasibility encompasses the problems dealing with how efficiently a particular tax can be administered. And finally, revenue productivity deals with the ability of a tax to maximise government revenues. These are standard criteria used in taxation theory for the purpose of evaluating various taxes. However, while the criteria for evaluating various taxes are generally agreed upon, there is no agreement on an ideal tax system for all countries. A country's tax system must be reviewed periodically as development proceeds. Dependence on various taxes for revenues must be modified as the economy of a country changes. The aim should always be a tax system that will be adequate, flexible, and in harmony with the emerging pattern of economic activity. [3] *Furthermore, these general criteria for appraising a tax system may be in conflict with each other. Neutrality may be in conflict with revenue productivity criteria, and revenue productivity may be in conflict with equity criteria. This paper first examines taxation in developing countries in terms of the theoretical literature and then appraises, within that framework, taxation in Guyana.*

II. TAXATION IN DEVELOPING COUNTRIES

In examining the literature on tax structure in Less Developed Countries (LDC's) it is found that almost all of the authors seem to agree that the tax system must transfer resources from the private to the public sector so that the public sector will have the capability to carry out those functions which are basic to the role of government as well as those functions which are related to the development of the countries. [4] The tax system must also induce a transfer of resources within the private sector away from low-priority toward high-priority uses. Taxes put resources in the hands of governments and these resources can be used for carrying out certain investment programs which are supposed to be productive to the economy, especially in the long-run.

In the early stages of the economic development of the United Kingdom and the United States, their fiscal structure as a whole favoured the act of accumulation and capital formation and discriminated against the act of consumption. The economic development of these countries has been brought about largely by the efforts of a dynamic private enterprise; and to enable it to plough back its increasing incomes into investment, the structure of taxation was made highly regressive and the fiscal structure as a whole tended to redistribute the national income in favour of the investors and savers.

But in the LDC's, as the public sector is obliged to play an increasingly important role in accelerating development, it may not be reasonable to finance the development outlay of the public sector by depending entirely on regressive taxes. In a democratic type of country, such a distribution of tax burden, apart from being, as Kaldor points out, "contrary to the sense of justice and equity of a democratic society", [5] may also create social discontent which may hinder the process of economic development itself. Besides, there exists a much greater concentration of income and wealth in the hands of a very small proportion of the population in a developing

country, and the process of economic development itself will tend to magnify these concentrations. Some of these concentrations of income and wealth emanate from non-entrepreneurial sources such as rent and interest, and the persons in possession of such wealth and income have no tradition of saving and productive investment; but they are inclined to dissipate their incomes into non-functional consumption and unproductive investment.

Therefore, as noted by Tripathy, "tax policy in the developing country, as an instrument of development finance for the public sector, has to be geared effectively to the taxation of non-entrepreneurial incomes, providing at the same time adequate incentive to the private sector undertaking useful production and essential investment." [6]

Though in the early stages of the economic development of the United Kingdom and the United States, the tax structure was predominantly regressive with complete dependence of the tax system on outlay taxes, the position has been fundamentally reversed in modern times, and the taxes on income and wealth are more important in their tax structure than the taxes on outlay.

Public savings in the developing countries are bound to remain small if their tax-income ratios are not substantially raised. The existing tax structure in many developing countries is not conducive to a rapid growth of tax revenues unless there are frequent changes in coverage and rates of taxation. In a 1971 publication, Chelliah found that the average tax ratio in developing countries was 13.6 percent compared to 15.1 percent in his 1975 publication. [7] But in spite of this general increase in tax ratios, the average level of taxation in these countries is still considerably less than in developed countries. The primary reason for this difference is, of course, the wide difference in per capita income levels. When a comparison is made between the two groups of countries, per capita income differences are clearly seen to be associated with tax level differences. [8]

Tax ratios measure the level of taxation in a country. This is usually judged in terms of the ratio of taxes to some measure of national product. What elements should be included in the numerator and the denominator of the ratio depend on what aspects of the governmental role one wishes this ratio to reflect or signify and what one intends to show by international comparisons of tax levels. The standard approach has been to use the ratio of all taxes and tax-like charges to gross national product at market prices. Hence, the overall tax ratio shows the proportion of national income that is "compulsorily" transferred from private hands into the government sector for public purposes. As such, the ratio gives an idea of (a) the division of responsibilities between the public and private sectors and (b) the degree of control that the government can potentially exercise over the disposition of purchasing power in the economy. [9]

Tax ratios and changes in them over time are matters that are subject to control by governments. Nevertheless, the changes in tax ratios brought about in different developing countries are partly dependent on major characteristics of the economy that have a bearing on taxable capacity.

Tax ratios have been widely regarded as an index of the size of the public sector, and many authors have attempted to explain the variations in the size of the public sector as reflected in tax ratio differences between different countries as well as over time. These studies have tried to discover whether there is any measurable relationship between economic characteristics including the existing level of development and tax ratios. The majority of the studies have been in the nature of cross-section analysis.

The pioneering study of tax ratio variations, explained by different economic and sociopolitical factors, was done by Martin and Lewis. [10] They concluded that the proportion of national income spent on basic public services varies not so much with income as with the "progressiveness" of the rules or electorate of the state. Williamson used per capita income as an indicator of the stage of development and fitted an exponential function to data for a sample of 33 developed countries. [11] His result indicated that there was a significant positive relationship between the revenue ratio and per capita income, although differences in the revenue share were less pronounced than those in per capita income.

Plasschaert used per capita income and import/GNP ratio as determinants to explain variations in the ratio of government revenue to GNP. [12] The import ratio turned out to be significant both when used alone and when used in conjunction with per capita income, per capita income itself did not emerge as a significant determinant of the revenue ratio. Hinrichs also found that "openness", as measured by the import ratio, not per capita income, is a major determinant of government revenue shares of gross national product. [13]

Lotz and Morss in their 1967 publication sought to examine the relationship between tax ratio differences and differences in per capita income and degree of openness. [14] They used the ratio of the sum of imports and

exports to GNP, rather than the import ratio or the export ratio, as the index of openness. They found both income and openness to be significant explanatory factors positively related to the tax ratio; and together they explained a high proportion of the variance.

In a later paper, Lotz and Morss introduced new variables to the above-mentioned analysis. [15] The introduction of the degree of monetisation as an explanatory factor resulted in a significant increase in the explained variance but lowered considerably the significance of per capita income. While important gaps remain to be covered, their results suggested that the availability of taxable bases is a more important determinant of tax levels in developing countries than variations in the demand for government expenditures. Their suggestion was based on findings that factors measuring tax administrative capacity, while not very meaningful as indicators of demand for public services, are highly significant in explaining the tax ratios in developing countries.

It can be claimed that, "conceptually, the tax ratio or share of national income appropriated by the government can be determined by four broad groups of factors." [16] On the demand for government services side, there may be two groups of factors. These are (1) the need for services arising out of "objective" conditions, and (2) the preferences of the people and the leaders as between public and private services, including the institutional arrangements arising from them. On the side of raising resources or supply of funds, two operative factors may be suggested. The first one being the ability of the people to pay taxes and the second factor being the ability of the government to collect taxes.

However, while a simple comparision of tax ratios gives some indication of the relative levels of taxation in various areas, any inferences on tax performance or effort based merely on such a comparison fails to take into account the fact that some countries are more favourably placed to levy taxes. That is, they can be said to have greater taxable capacity than others. It has been pointed out though, that the successful measurement of taxable capacity, used in many studies, depends critically on the *a priori* justification of the explanatory variables as affecting only taxable capacity and not at all either demands for higher public expenditures or willingness to tax. [17] It is not surprising, therefore, that Richard Bird has argued quite convincingly that the distinction between "capacity" and "willingness" is a very fuzzy one and indeed "it is inherently extremely difficult to specify correctly any model of (usable) taxable capacity to quantify what Musgrave has called the "tax handles" available to a country." [18]

Accepting, however, that something called "taxable capacity" exists, then the next step is that of calculation of tax effort. Tax effort is defined as the ratio of the actual tax ratio in a particular country to that which would be predicted on the basis of the taxable capacity concept. A tax effort ratio of less than one is usually taken to mean that the country exploits its estimated tax potential less than the average, in other words, that it has a preference for a level of taxation below the average, or a low tax effort.

Tax effort is a process which may take several forms, including reform of existing taxes, improvement in administration, and introduction of new taxes. The indices of tax effort should not be used in a mechanistic way but rather should be considered useful additional information in judging the scope for more taxes.

The tax ratio and tax effort concepts discussed above are based on two sets of techniques for comparative analysis. One technique equates tax effort to the ratio of taxes (or revenues) to income. Such a straightforward comparison implicitly assumes total income to be the only relevant indicator of intercountry differences in taxable capacity. The second technique, a stochastic approach, gives markedly different results. It involves the assumption that the tax ratio (T/Y) is an appropriate reflection of taxable capacity if it is adjusted for intercountry variations in factors that are assumed to reflect intercountry differences in the size of the tax base and the ability to collect taxes.

While clearly preferable to a straight tax ratio for comparative purposes, the stochastic approach has a number of methodological problems. In general, the aggregative regression approach does not allow a desirable examination of the kinds of explicit relationships between particular taxes and particular economic structure variables that would seem useful for purposes of making intercountry comparisons of taxable capacity and tax effort.

Bearing these facts in mind, therefore, Roy Bahl proceeded to develop an alternative method for making intercountry tax effort comparisons in which the tax effort index derived may be related to the intensity of use of specific taxes. [19] He designated his methodology as the "representative tax system approach", and it involves application of average effective rates to a standard set of tax bases. This approach does allow an examination of marginal effects. Taxable capacity is defined in this approach as the total tax amount that would be collected if each country applied an identical set of effective rates to the selected tax bases, that is, as the yield of a representative tax system.

The application of the representative tax system approach gave a distribution that did not differ significantly from that obtained in the analyses employing the aggregate regression approach. [20] However, three general observations can be pointed out. First, the level of taxable capacity responds most to changes originating in basic sector income. Second, the yield of a representa-

tive system is more responsive to a change in income generated in a particular sector if it is accompanied by a change in total income than if it reflects only a sectoral redistribution of some constant amount of income. Third, the criticism that tax effort indices and rankings vary erratically with changes in the estimating procedure used was not strengthened by the representative approach.

Other studies, in recent times, have attempted other approaches to measure what essentially seems to be tax ratios and tax efforts. Peter Heller developed a utility maximisation model of the fiscal behaviour of the public sector by assuming that the public sector reflects the actions of a set of public decision makers. [21] His results confirmed that only a small proportion of marginal tax increases is allocated to investment, with the bulk used for public consumption. Hence, increases in tax revenue positively influence the expenditure categories, tend to reduce total borrowing and vice versa. [22]

Tax effort studies and methodologies, however, have not been immune from criticism. The IMF itself, where most of these studies were conducted, pointed out that "due caution must be exercised in interpreting the tax effort indices". [23] Vito Tanzi noted with regard to tax structure development that clearly up to now the marriage between the general theories and the statistical analysis carried on thus far to verify those theories has not taken place yet. [24] He further stated that "the truth of the matter is that we still do not have an answer to the question of what kind of tax structure a country should have at a given stage of economic development." [25]

Richard Bird postulated five propositions which he considered to be his basic criticisms of the tax effort studies. [26] These are: (1) There is inadequate *a priori* justification for the use of the selected variables as measures of taxable capacity; (2) The data are very bad. These data problems are very serious, and no one can truthfully claim to be aware of all the biases they impart to the result; (3) Virtually all of the work which has been done on quantitative international comparisons is cross-sectional in nature: yet the policy inferences which are drawn from this work are invariably concerned with changes in particular areas; (4) The nature of the norms applied in tax effort analysis lend themselves to distortions. Further, the implicit norm in the usual use of the tax effort index may also be criticised as being proportional; (5) The conventional tax effort exercise lends itself too readily to misuse to be worth further attention at this stage of our knowledge.

Despite these worthy criticisms, however, the general tendency has been to use these studies, particularly in the international lending agencies, as the background for policy decisions.

Apart from tax structure, tax effort, and tax ratio studies, a significant amount of work has been done on tax incidence in developing countries. It seems though that the major reason for that amount of work has been "the desire to provide quatitative, and therefore supposedly definitive, support for particular policy positions — which usually means to demonstrate the case for a more progressive tax system." [27] Luc DeWulf has provided a survey and critique of the major studies. [28]

The shifting assumptions used in those studies are the traditional ones. Indirect taxes were generally assumed to be shifted forward, and direct taxes unshifted. Corporate profits taxes were assumed to be shifted forward in various proportions, but no backward shifting was considered. The shifting assumptions adopted on property and wealth taxes varied. Some studies assumed no shifting while others allowed for some forward shifting of the property tax on rental property. The proportion of this tax that is assumed to be shifted forward varried greatly from study to study.

Three major reasons for making tax incidence studies can propably be distinguished. First, most studies wanted to analyse the redistribution of income through the fiscal system and concentrated on the effects of taxes on different income size classes of the population. They were concerned with vertical equity.

A second group of incidence studies concentrated on the differential tax burden between the rural and the urban sectors and on the transfer of resources between these two sectors. This emphasis stems from concern with both horizontal equity and policy for development.

The third category of studies was also concerned with the horizontal equity between various geographical areas or between various ethnic components of a country.

All of the studies favoured redistribution of income from the rich to the poor. A progressive tax system was also deemed a desirable feature of fiscal policy and, as such, results showing the redistributive effects of fiscal policy were welcomed even though the lowest-income classes were often found to contribute a considerable fraction of their incomes in taxes, and those showing regressive taxes led to recommendations for the elimination of the regressivity.

Basically, both from a conceptual and statistical point of view, tax incidence studies are too questionable to bear the weight of interpretation that is sometimes put upon them. "At most, properly constructed and heavily qualified incidence estimates can be a useful supplement to efforts to appraise and improve tax systems in developing countries: they cannot in themselves provide a road map to the better world, however". [29]

III. MAJOR TAXES IN GUYANA

The major taxes in Guyana are the personal income tax, the company tax, the withholding tax, the property tax, import duties, the consumption tax, excise duties, and export duties. [30]

The personal income tax is levied on chargeable income. Chargeable income is defined as aggregate income minus applicable personal allowances and deduction. All persons whose chargeable incomes are less than G$500 [31] are exempt. Since 1974, there has also been a National Development Surtax of 5 percent on the chargeable income of all individuals, including unincorporated enterprises. The Surtax is levied on the chargeable income in excess of G$500.

Company taxes are levied partly through an income tax and partly through a corporation tax. The major difference between a company income tax and a corporation tax in Guyana is that the shareholders receiving dividends can claim credit against their income tax liability for the former, but not the latter. For the computation of taxable income, all expenses wholly and exclusively incurred in the production of income are allowed. The major restrictions are as follows:

(a) "Expenses in excess of the amount which the Commissioner considers reasonable and necessary, having regard to the requirement of the trade and business", are not deductible.
(b) No deduction is allowed for head office expenses in excess of 1½ percent of sales or gross income in the case of a commercial company and 1 percent in the case of a company other than a commercial one.
(c) Property tax payable cannot be deducted.

A withholding tax is imposed on all "distributions" made to non-resident individuals and all companies, resident as well as non-resident. It is also imposed on "payments", which constitute income arising in Guyana, made to non-resident individuals and companies. The recipient of such income is liable for the tax, but the person (including a company) making "payments" and "distributions" is required to collect the amount of tax due. In addition, some insurance transactions are also subject to the withholding tax. [32]

Guyana's property tax is imposed on net property. The definition of property includes immovable and movable property situated in Guyana or elsewhere. Net property is defined as the aggregate value of the property minus the aggregate value of the allowable debts. In the case of an individual, debts in excess of 50 percent of the value of the property are not taken into account, whereas companies can only deduct debts up to 20 percent of the value of the property. These limitations do not apply to the deposit liabilities of banks and the liabilities of insurance companies in respect of life assurance policies.

Specified individuals, corporations, and institutions such as ecclesiastical and educational institutions are exempt from the scope of the tax. Any company granted a tax holiday under the Income Tax Ordinance is also exempt during the tax holiday period in respect of property employed in business, income from which is exempt from income tax.

Import duties are applicable to all imports except those originating in the Caribbean Common Market Area (CARICOM). A product is considered to be of regional origin if materials imported from outside the region do not exceed 50 percent of the export price of the product. Apart from a few exceptions, Guyana adopted a common external tariff on joining CARICOM.

The consumption tax was introduced in 1969 to counteract the revenue loss resulting from the removal of import duties on goods originating from the other members of the then Caribbean Free Trade Association. The tax is applicable to specified goods, whether imported or locally manufactured, except goods utilised as materials by a registered manufacturer, are taxable. Exports are exempt from the tax.

Excise duties are levied on specified domestically produced goods. However, similar goods imported from CARICOM bear import duties ar rates equivalent to the rates of excise duties. Thus, in effect, locally-produced goods and goods originating from CARICOM can be regarded as constituting the tax base for excise duties.

Export duties are confined to specified commodities exported to non-CARICOM countries. The CARICOM treaty prohibits the imposition of export duties on goods exported by one member State to another.

IV. IMPACT OF TAXATION IN GUYANA

As shown in Table 1, indirect taxes constitute the major component of tax revenues in Guyana. Indirect taxes are comprised primarily of import and excise duties. From the data given in the table, it can be seen that indirect taxes increased from G$29.9 million in 1960 to G$75.7 million in 1973 while direct taxes increased from G$17.7 million to G$67.5 million from 1960 to 1973. At the present time, company taxes constitute the major direct tax. The personal income tax is still the major direct tax on individuals.

The personal income tax is a compulsory payment to government that is now imposed by legislation. Tax systems differ markedly from country to country because of differences in history, political systems and attitudes toward government — apart from other reasons. The more developed nations characteristically have higher ratios of taxation to domestic product than do developing countries. In the developed nations tax ratios are usually 30 to 40 percent of national product compared

Gangadin, "Guyana: A Brief Outline of the Imposition in Guyana of Income Tax, Corporation Tax, Capital Gains Tax, Withholding Tax and Property Tax with Special Reference to Foreign Corporations Operating in Guyana, Through a Branch Establishment or an Agency", *Bulletin for International Fiscal Documentation* 27 (November 1973), pp. 455-463.

TABLE 1

TAX REVENUE IN GUYANA, 1960-1973
(Millions of Guyana Dollars)

Year	Indirect taxes	Direct taxes	Total
1960	29.9	17.7	47.6
1961	31.5	19.4	50.9
1962	29.3	20.2	49.5
1963	30.4	23.2	53.6
1964	35.0	22.9	57.9
1965	40.5	25.3	65.8
1966	47.1	25.4	72.5
1967	51.6	29.0	80.6
1968	54.1	36.3	90.4
1969	61.4	35.9	97.3
1970	66.5	52.5	119.0
1971	66.4	45.8	112.2
1972	68.2	71.9	140.1
1973	75.7	67.5	143.2

to 10 or 15 percent in developing countries. In Guyana the ratio of taxes to domestic product is a little more than 23 percent.

During the past five years, tax revenues in Guyana grew at an average annual rate of approximately 9 percent. Indirect taxes had a growth rate of just about 3 percent while direct taxes had a growth rate of approximately 5 percent. From 1970 onwards, government revenue from company taxes increased at an annual average rate of 19 percent. This resulted from the introduction in 1970 of a withholding tax; a distinction between commercial and non-commercial companies; a corporation tax to replace the income tax on companies; and the implementation of restrictions on the deductibility of the headquarters expenses of companies.

TABLE 2

TAX REVENUE AS A PERCENTAGE OF TOTAL REVENUE AND GNP AT MARKET PRICES, 1960-1973
(Millions of Guyana Dollars & Percentages)

Year	Tax revenue	Total revenue	GNP	Tax Revenue as a % of total revenue	Tax Revenue as a % of GNP
1960	47.6	56.2	267.8	84.7	17.8
1961	50.9	60.0	297.3	84.8	17.1
1962	49.5	59.8	296.4	82.8	16.7
1963	53.6	64.0	272.7	83.8	19.7
1964	57.9	67.7	304.5	85.5	19.0
1965	65.8	79.0	334.9	83.3	19.6
1966	72.5	85.4	355.9	84.9	20.4
1967	80.6	93.0	392.0	86.7	20.6
1968	90.4	110.4	429.2	81.9	21.1
1969	97.3	116.9	456.8	83.2	21.3
1970	119.0	135.8	490.5	87.6	24.3
1971	112.2	132.0	524.9	85.0	21.4
1972	140.1	152.7	576.0	91.7	24.3
1973	143.2	164.0	617.0	87.3	23.2

Sources: Same as for Table 1.

Tax revenues represent the major proportion of all revenues collected in Guyana by the Central government. Currently, tax revenues are about 87 percent of total revenue. Taxes, therefore, constitute an important part of the public finances of the Guyana economy and as such a very significant fiscal tool. In examining taxes and tax structure, it is important not only to look at the aggregate but at the component parts also. By far the most impactful component are the indirect taxes. Indirect taxes in developing countries tend to work positively, for the most part, by encouraging saving and conserving foreign exchange for the necessary import of capital goods. Such taxes also help to prevent prices from rising too rapidly when ongoing investment is increasing personal incomes faster than the output of finished goods and services is rising.

While indirect taxes are inadequate, by usual standards, as sole measures of tax capacity, it would seem that Guyana's prevailing indirect tax structure is satisfactory both from a point of view of equity and from the criteria of income elasticity. This argument may be further strengthened from the premise that there is effective enforcement of income and property taxes and accordingly, it is not necessary to rely on the indirect taxes more heavily than would otherwise be regarded as optimal.

Indirect taxes in Guyana have also been instrumental in bringing about an allocation of resources to priority uses. Excise taxes have resulted in the reduction of the production of goods not regarded as essential for development and thus, resources have been channeled into the production of high priority goods under the assumption that demand is not perfectly inelastic.

In general, indirect taxes in Guyana have played a key role in the development process. To what extent, if any, they have affected the level of employment and prices cannot be determined in this study due to the paucity of data.

For the past five years, indirect taxes in Guyana have been growing both in magnitude and as an important source of revenue. This has been brought about by increases in company taxes and the effective administration of personal income taxes. Income taxes logically belong to a fairly advanced stage of economic development; yet they are found in operation in a large number of developing nations. The reasons being quite simply that everyone is expected to contribute toward the expenditures that lead to development. This contribution being derived from income.

Taxation of net income in Guyana is complicated by numerous problems relating to permissible business expenses, including treatment of depreciation, exemptions and credits, capital gains or casual profits, and loss offsets. Hence, the measurement of net income for tax purposes is difficult and, as such, requires a high standard of administration for equitable results.

Quite unlike most developing countries, personal income taxes in Guyana have been reasonably effective in reaching wage and salary income, where concealment is difficult, and also business income, where concealment is much easier, especially so, since many business transactions are conducted in cash rather than through cheque payments. The reason for this has been the sudden and recent campaign of the Guyana government to collect all taxes that have been deemed legitimately due. A rather interesting feature of the administration of taxes in Guyana is the amount of power vested in the Tax Commissioner. He can aritrarily make decisions on tax returns and enforce them in the name of the government. It sounds dictatorial and indeed has been seen to be that way. Many businessmen have been heard to say that the Tax Commissioner, by his decisions, determines whether they remain in business or become bankrupt.

Direct taxes, or more specifically income taxation, is a very convenient device for introducing the principle of equity in tax structure. Due to its capacity to introduce an element of built-in flexibility in the tax structure, it is regarded even in advanced countries as a very important counter-cyclical device for achieving economic stabilisation. Thus, in the analysis of taxation in developing economies, the traditional objectives of progressivity and equity in taxation, have pointed strongly to, and have resulted in, more aggressive use of net income and wealth taxation.

Though a highly progressive income tax with high marginal rates on upper income ranges is a very desirable fiscal instrument both on grounds of resource mobilisation for the public sector and redistributive considerations which are very important in less developed countries, it tends to conflict with the criteria of economic efficiency and progress in a context where the growth of private savings and investment occupies an important place in the process of economic development, as is the case in Guyana, where current attempts are being made to finance the expenditure of the public sector through internal sources of funds.

The increasing importance of the taxation of income and corporate profits in Guyana underlines the need therefore, for encouraging the growth of individual and business savings, and the ploughing back of retained profits of businesses into the expansion of investment. The tax policy should therefore be directed to further mobilisation of resources for development and allocating them according to development planning priorities.

Tax revenues in Guyana are rather high, amounting to more than 23 percent of gross national product. The yield from taxation has shown the response that might be expected in a period of growing output as the country moves forward on its path to development. The incidence of taxation on various income groups, economic sectors, and regions cannot be analysed at present for lack of comprehensive studies on family budgets and on distribution of personal and rural-urban incomes. The fragmentary data available permits, however, some broad judgments. It appears that direct taxation has borne more heavily on non-agricultural than on agricultural incomes. The indirect taxes have fallen on both the urban and rural sectors, but their incidence seems to have been greater on the urban sector in view of its consumption pattern and its monetised character.

V. CONCLUSION

Guyana is heavily dependent on indirect taxes which account for 53 percent of total tax revenue. However, in recent years the relative importance of direct taxes has increased. The share of direct taxes increased from 25 percent of total tax revenues in 1969 to 46 percent in 1973.

In the past, tax policy in Guyana has been guided more by the need for revenue than by the requirements for capital formation. This meant that the tax system lacked a clear focus. The broader economic implications of some taxes, like the consumption tax, were not given sufficient weight compared with their revenue-yielding aspects and tax policy was not, and still is not used, extensively as an anti-inflationary device.

Given the level of revenue now received from taxation, then Guyana's tax system need only to be directed increasingly towards meeting the long-term needs of development. This will imply a tax system with more administrative flexibility, one where incidence can be rationalised, and one which can be used as a means for controlling inflation — a significant problem in the Guyana economy.

1977
OECD Model Convention

The 1977 Model Convention which replaces the OECD Draft Convention issued in 1973 is expected to exert a considerable influence on the number and content of the tax treaties to be concluded by OECD member countries, both with other member countries and non-member countries. The OECD Model Convention has also been used — with certain adjustments — as a basis for the conclusion of tax treaties between Western and Eastern European countries and between industrialised countries and developing countries. Considering its significance the text of the 1977 Model Convention is reproduced below.

CHAPTER I
SCOPE OF THE CONVENTION

Article 1
Personal scope

This Convention shall apply to persons who are residents of one or both of the Contracting States.

Article 2
Taxes covered

1. This Convention shall apply to taxes on income and on capital imposed on behalf of a Contracting State or of its political subdivisions or local authorities, irrespective of the manner in which they are levied.

2. There shall be regarded as taxes on income and on capital all taxes imposed on total income, on total capital, or on elements of income or of capital, including taxes on gains from the alienation of movable or immovable property, taxes on the total amounts of wages or salaries paid by enterprises, as well as taxes on capital appreciation.

3. The existing taxes to which the Convention shall apply are in particular:

a) (in State A): . . . . . .

. . . . . .

b) (in State B): . . . . . .

. . . . . .

4. The Convention shall apply also to any identical or substantially similar taxes which are imposed after the date of signature of the Convention in addition to, or in place of, the existing taxes. At the end of each year, the competent authorities of the Contracting States shall notify each other of changes which have been made in their respective taxation laws.

CHAPTER II
DEFINITIONS

Article 3
General definitions

1. For the purposes of this Convention, unless the context otherwise requires:

a) the term "person" includes an individual, a company and any other body of persons;

b) the term "company" means any body corporate or any entity which is treated as a body corporate for tax purposes;

c) the terms "enterprise of a Contracting State" and "enterprise of the other Contracting State" mean respectively an enterprise carried on by a resident of a Contracting State and an enterprise carried on by a resident of the other Contracting State;

d) the term "international traffic" means any transport by a ship or aircraft operated by an enterprise which has its place of effective management in a Contracting State, except when the ship or aircraft is operated solely between places in the other Contracting State;

e) the term "competent authority" means:

(i) (in State A): . . . . . .

. . . . . .

(ii) (in State B): . . . . . .

. . . . . .

2. As regards the application of the Convention by a Contracting State any term not defined therein shall, unless the context otherwise requires, have the meaning which it has under the law of that State concerning the taxes to which the Convention applies.

Article 4
Resident

1. For further purposes of this Convention, the term "resident of a Contracting State" means any person who, under the laws of that State, is liable to tax therein by reason of his domicile, residence, place of management or any other criterion of a similar nature. But this term does not include any person who is liable to tax in that State in respect only of income from sources in that State or capital situated therein.

2. Where by reason of the provisions of paragraph 1 an individual is a resident of both Contracting States, then his status shall be determined as follows:

a) he shall be deemed to be a resident of the State in which he has a permanent home available to him; if he has a permanent home available to him in both States, he shall be deemed to be a resident of the State with which his personal and economic relations are closer (centre of vital interests);

b) if the State in which he has his centre of vital interests cannot be determined, or if he has not a permanent home available to him in either State, he shall be deemed to be a resident of the State in which he has an habitual abode;

c) if he has an habitual abode in both States or in neither of them, he shall be deemed to be a resident of the State of which he is a national;

d) if he is a national of both States or of neither of them, the competent authorities of the Contracting States shall settle the question by mutual agreement.

3. Where by reason of the provisions of paragraph 1 a person other than an individual is a resident of both Contracting States, then it shall be deemed to be a resident of the State in which its place of effective management is situated.

Article 5
Permanent establishment

1. For the purposes of this Convention, the term "permanent establishment" means a fixed place of business through which the business of an enterprise is wholly or partly carried on.

2. The term "permanent establishment" includes especially:

a) a place of management;
b) a branch;
c) an office;
d) a factory;
e) a workshop, and
f) a mine, an oil or gas well, a quarry or any other place of extraction of natural resources.

3. A building site or construction or installation project constitutes a permanent establishment only if it lasts more than twelve months.

4. Notwithstanding the preceding provisions of this Article, the term "permanent establishment" shall be deemed not to include:

a) the use of facilities solely for the

purpose of storage, display or delivery of goods or merchandise belonging to the enterprise;

b) the maintenance of a stock of goods or merchandise belonging to the enterprise solely for the purpose of storage, display or delivery;

c) the maintenance of a stock of goods or merchandise belonging to the enterprise solely for the purpose of processing by by another enterprise;

d) the maintenance of a fixed place of business solely for the purpose of purchasing goods or merchandise or of collecting information, for the enterprise;

e) the maintenance of a fixed place of business solely for the purpose of carrying on, for the enterprise, any other activity of a preparatory or auxiliary character;

f) the maintenance of a fixed place of business solely for any combination of activities mentioned in sub-paragraphs a) to e), provided that the overall activity of the fixed place of business resulting from this combination is of a preparatory or auxiliary character.

5. Notwithstanding the provisions of paragraphs 1 and 2, where a person — other than an agent of an independent status to whom paragraph 6 applies — is acting on behalf of an enterprise and has, and habitually exercises, in a Contracting State an authority to conclude contracts in the name of the enterprise, that enterprise shall be deemed to have a permanent establishment in that State in respect of any activities which that person undertakes for the enterprise, unless the activities of such person are limited to those mentioned in paragraph 4 which, if exercised through a fixed place of business, would not make this fixed place of business a permanent establishment under the provisions of that paragraph.

6. An enterprise shall not be deemed to have a permanent establishment in a Contracting State merely because it carries on business in that State through a broker, general commission agent or any other agent of an independent status, provided that such persons are acting in the ordinary course of their business.

7. The fact that a company which is a resident of a Contracting State controls or is controlled by a company which is a resident of the other Contracting State, or which carries on business in that other State (whether through a permanent establishment or otherwise), shall not of itself constitute either company a permanent establishment of the other.

CHAPTER III
TAXATION OF INCOME

Article 6
Income from immovable property

1. Income derived by a resident of a Contracting State from immovable property (including income from agriculture or forestry) situated in the other Contracting State may be taxed in that other State.

2. The term "immovable property" shall have the meaning which it has under the law of the Contracting State in which the property in question is situated. The term shall in any case include property accessory to immovable property, livestock and equipment used in agriculture and forestry, rights to which the provisions of general law respecting landed property apply, usufruct of immovable property and rights to variable or fixed payments as consideration for the working of, or the right to work, mineral deposits, sources and other natural resources; ships, boats and aircraft shall not be regarded as immovable property.

3. The provisions of paragraph 1 shall apply to income derived from the direct use, letting, or use in any other form of immovable property.

4. The provisions of paragraphs 1 and 3 shall also apply to the income from immovable property of an enterprise and to income from immovable property used for the performance of independent personal services.

Article 7
Business profits

1. The profits of an enterprise of a Contracting State shall be taxable only in that State unless the enterprise carries on business in the other Contracting State through a permanent establishment situated therein. If the enterprise carries on business as aforesaid, the proftis of the enterprise may be taxed in the other State but only so much of them as is attributable to that permanent establishment.

2. Subject to the provisions of paragraph 3, where an enterprise of a Contracting State carries on business in the other Contracting State through a permanent establishment situated therein, there shall in each Contracting State be attributed to that permanent establishment the profits which it might be expected to make if it were a distinct and separate enterprise engaged in the same or similar activities under the same or similar conditions and dealing wholly independently with the enterprise of which it is a permanent establishment.

3. In determining the profits of a permanent establishment, there shall be allowed as deductions expenses which are incurred for the purposes of the permanent establishment, including executive and general administrative expenses so incurred, whether in the State in which the permanent establishment is situated or elsewhere.

4. Insofar as it has been customary in a Contracting State to determine the profits to be attributed to a permanent establishment on the basis of an apportionment of the total profits of the enterprise to its various parts, nothing in paragraph 2 shall preclude that Contracting State from determining the profits to be taxed by such an apportionment as may be customary; the method of apportionment adopted shall, however, be such that the result shall be in accordance with the principles contained in this Article.

5. No profits shall be attributed to a permanent establishment by reason of the mere purchase by that permanent establishment of goods or merchandise for the enterprise.

6. For the purposes of the preceding paragraphs, the profits to be attributed to the permanent establishment shall be determined by the same method year by year unless there is good and sufficient reason to the contrary.

7. Where profits include items of income which are dealt with separately in other Articles of this Convention, then the provisions of those Articles shall not be affected by the provisions of this Article.

Article 8
Shipping, inland waterways transport and air transport

1. Profits from the operation of ships or aircraft in international traffic shall be taxable only in the Contracting State in which the place of effective management of the enterprise is situated.

2. Profits from the operation of boats engaged in inland waterways transport shall be taxable only in the Contracting State in which the place of effective management of the enterprise is situated.

3. If the place of effective management of a shipping enterprise or of an inland waterways transport enterprise is aboard a ship or boat, then it shall be deemed to be situated in the Contracting State in which the home harbour of the ship or boat is situated, or, if there is no such home harbour, in the Contracting State of which the operator of the ship or boat is a resident.

4. The provisions of paragraph 1 shall also apply to profits from the participation in a pool, a joint business or an international operating agency.

Article 9
Associated enterprises

1. Where
a) an enterprise of a Contracting State participates directly or indirectly in the management, control or capital of an enterprise of the other Contracting State, or
b) the same persons participate directly or indirectly in the management, control or capital of an enterprise of a Contracting State and an enterprise of the other Contracting State,

and in either case conditions are made or imposed between the two enterprises in their commercial or financial relations which differ from those which would be made between independent enterprises, then any profits which would, but for those conditions, have accrued to one of the enterprises, but, by reason of those conditions, have not so accued, may be included in the profits of that enterprise and taxed accordingly.

2. Where a Contracting State includes in the profits of an enterprise of that State — and taxes accordingly — profits on which an enterprise of the other Contracting State has been charged to tax in that other State and the profits so included are profits which would have accrued to the enterprise of the first-mentioned State if the conditions made between the two enterprises had been those which would have been made between independent enterprises, then that other State shall make an appropriate adjustment to the amount of the tax charged therein on those profits. In determining such adjustment, due regard shall be had to the other provisions of this Convention and the competent authorities of the Contracting States shall if necessary consult each other.

Article 10
Dividends

1. Dividends paid by a company which is a resident of a Contracting State to a resident of the other Contracting State may be taxed in that other State.

2. However, such dividends may also be taxed in the Contracting State of which the company paying the dividends is a resident and according to the laws of that State, but if the recipient is the beneficial owner of the dividends the tax so charged shall not exceed:
a) 5 percent of the gross amount of the dividends if the beneficial owner is a company (other than a partnership) which holds directly at least 25 percent of the capital of the company paying the dividends;
b) 15 percent of the gross amount of the dividends in all other cases.

The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of these limitations. This paragraph shall not affect the taxation of the company in respect of the profits out of which the dividends are paid.

3. The term "dividends" as used in this Article means income from shares, "jouissance" shares or "jouissance" rights, mining shares, founders' shares or other rights, not being debt-claims, participating in profits, as well as income from other corporate rights which is subjected to the same taxation treatment as income from shares by the laws of the State of which the company making the distribution is a resident.

4. The provisions of paragraphs 1 and 2 shall not apply if the beneficial owner of the dividends, being a resident of a Contracting State, carries on business in the other Contracting State of which the company paying the dividends is a resident, through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the holding in respect of which the dividends are paid is effectively connected with such permanent establishment or fixed base. In such case the provisions of Article 7 or Article 14, as the case may be, shall apply.

5. Where a company which is a resident of a Contracting State derives profits or income from the other Contracting State, that other State may not impose any tax on the dividends paid by the company, except insofar as such dividends are paid to a resident of that other State or insofar as the holding in respect of which the dividends are paid is effectively connected with a permanent establishment or a fixed base situated in that other State, nor subject the company's undistributed profits to a tax on the company's undistributed profits, even if the dividends paid or the undistributed profits consist wholly or partly of profits or income arising in such other State.

Article 11
Interest

1. Interest arising in a Contracting State and paid to a resident of the other Contracting State may be taxed in that other State.

2. However, such interest may also be taxed in the Contracting State in which it arises and according to the laws of that State, but if the recipient is the beneficial owner of the interest the tax so charged shall not exceed 10 percent of the gross amount of the interest. The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of this limitation.

3. The term "interest" as used in this Article means income from debt-claims of every kind, whether or not secured by mortgage and whether or not carrying a right to participate in the debtor's profits, and in particular, income from government securities and income from bonds or debentures, including premiums and prizes attaching to such securities, bonds or debentures. Penalty charges for late payment shall not be regarded as interest for the purpose of this Article.

4. The provisions of paragraphs 1 and 2 shall not apply if the beneficial owner of the interest, being a resident of a Contracting State, carries on business in the other Contracting State in which the interest arises, through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the debt-claim in respect of which the interest is paid is effectively connected with such permanent establishment or fixed base. In such case the provisions of Article 7 or Article 14, as the case may be, shall apply.

5. Interest shall be deemed to arise in a Contracting State when the payer is that State itself, a political subdivision, a local authority or a resident of that State. Where, however, the person paying the interest, whether he is a resident of a Contracting State or not, has in a Contracting State a permanent establishment or a fixed base in connection with which the indebtedness on which the interest is paid was incurred, and such interest is borne by such permanent establishment or fixed base, then such interest shall be deemed to arise in the State in which the permanent establishment or fixed base is situated.

6. Where, by reason of a special relationship between the payer and the beneficial owner or between both of them and some other person, the amount of the interest, having regard to the debt-claim for which it is paid, exceeds the amount which would have been agreed upon by the payer and the beneficial owner in the absence of such relationship, the provisions of this Article shall apply only to the last-mentioned amount. In such case, the excess part of the payments shall remain taxable according to the laws of each Contracting State, due regard being had to the other provisions of this Convention.

Article 12
Royalties

1. Royalties arising in a Contracting State and paid to a resident of the other Contracting State shall be taxable only in that other State if such resident is the beneficial owner of the royalties.

2. The term "royalties" as used in this Article means payments of any kind received as a consideration for the use of, or the right to use, any copyright of literary, artistic or scientific work including cinematograph films, any patent, trade mark, design or model, plan, secret formula or

process, or for the use of, or the right to use, industrial, commercial, or scientific equipment, or for information concerning industrial, commercial or scientific experience.

3. The provisions of paragraph 1 shall not apply if the beneficial owner of the royalties, being a resident of a Contracting State, carries on business in the other Contracting State in which the royalties arise, through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the right or property in respect of which the royalties are paid is effectively connected with such permanent establishment or fixed base. In such case the provsions of Article 7 or Article 14, as the case may be, shall apply.

4. Where, by reason of a special relationship between the payer and the beneficial owner or between both of them and some other person, the amount of the royalties, having regard to the use, right or information for which they are paid, exceeds the amount which would have been agreed upon by the payer and the beneficial owner in the absence of such relationship, the provisions of this Article shall apply only to the last-mentioned amount. In such case, the excess part of the payments shall remain taxable according to the laws of each Contracting State, due regard being had to the other provisions of this Convention.

Article 13
Capital gains

1. Gains derived by a resident of a Contracting State from the alienation of immovable property referred to in Article 6 and situated in the other Contracting State may be taxed in that other State.

2. Gains from the alienation of movable property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contracting State or of movable property pertaining to a fixed base available to a resident of a Contracting State in the other Contracting State for the purpose of performing independent personal services, including such gains from the alienation of such a permanent establishment (alone or with the whole enterprise) or of such fixed base, may be taxed in that other State.

3. Gains from the alienation of ships or aircraft operated in international traffic, boats engaged in inland waterways transport or movable property pertaining to the operation of such ships, aircraft or boats, shall be taxable only in the Contracting State in which the place of effective management of the enterprise is situated.

4. Gains from the alienation of any property other than that referred to in paragraphs 1, 2 and 3, shall be taxable only in the Contracting State of which the alienator is a resident.

Article 14
Independent personal services

1. Income derived by a resident of a Contracting State in respect of professional services or other activities of an independent character shall be taxable only in that State unless he has a fixed base regularly available to him in the other Contracting State for the purpose of performing his activities. If he has such a fixed base, the income may be taxed in the other State but only so much of it as is attributable to that fixed base.

2. The term "professional services" includes especially independent scientific, literary, artistic, educational or teaching activities as well as the independent activities of physicians, lawyers, engineers, architects, dentists and accountants.

Article 15
Dependent personal services

1. Subject to the provisions of Articles 16, 18 and 19, salaries, wages and other similar remuneration derived by a resident of a Contracting State in respect of an employment shall be taxable only in that State unless the employment is exercised in the other Contracting State. If the employment is so exercised, such remuneration as is derived therefrom may be taxed in that other State.

2. Notwithstanding the provisions of paragraph 1, remuneration derived by a resident of a Contracting State in respect of an employment exercised in the other Contracting State shall be taxable only in the first-mentioned State if:

a) the recipient is present in the other State for a period or periods not exceeding in the aggregate 183 days in the fiscal year concerned, and
b) the remuneration is paid by, or on behalf of, an employer who is not a resident of the other State, and
c) the remuneration is not borne by a permanent establishment or a fixed base which the employer has in the other State.

3. Notwithstanding the preceding provisions of this Article, remuneration derived in respect of an employment exercised aboard a ship or aircraft operated in international traffic, or aboard a boat engaged in inland waterways transport, may be taxed in the Contracting State in which the place of effective management of the enterprise is situated.

Article 16
Directors' fees

Directors' fees and other similar payments derived by a resident of a Contracting State in his capacity as a member of the board of directors of a company which is a resident of the other Contracting State may be taxed in that other State.

Article 17
Artistes and athletes

1. Notwithstanding the provisions of Articles 14 and 15, income derived by a resident of a Contracting State as an entertainer, such as a theatre, motion picture, radio or television artiste, or a musician, or as an athlete, from his personal activities as such exercised in the other Contracting State, may be taxed in that other State.

2. Where income in respect of personal activities exercised by an entertainer or an athlete in his capacity as such accrues not to the entertainer or athlete himself but to another person, that income may, notwithstanding the provisions of Articles 7, 14 and 15, be taxed in the Contracting State in which the activities of the entertainer or athlete are exercised.

Article 18
Pensions

Subject to the provisions of paragraph 2 of Article 19, pensions and other similar remuneration paid to a resident of a Contracting State in consideration of past employment shall be taxable only in that State.

Article 19
Government service

1. a) Remuneration, other than a pension, paid by a Contracting State or a political subdivision or a local authority thereof to an individual in respect of services rendered to that State or subdivision or authority shall be taxable only in that State.
   b) However, such remuneration shall be taxable only in the other Contracting State if the services are rendered in that State and the individual is a resident of that State who:
      (i) is a national of that State, or
      (ii) did not become a resident of that State solely for the purpose of rendering the services.

2. a) Any pension paid by, or out of funds created by, a Contracting State or a political subdivision or a local authority thereof to an individual in respect of services rendered to that State or subdivision or authority shall be taxable only in that State.
   b) However, such pension shall be taxable only in the other Contracting State if the individual is a resident of, and a national of, that State.

3. The provisions of Articles 15, 16 and 18 shall apply to remuneration and pen

sions in respect of services rendered in connection with a business carried on by a Contracting State or a political subdivision or a local authority thereof.

Article 20
Students

Payments which a student or business apprentice who is or was immediately before visiting a Contracting State a resident of the other Contracting State and who is present in the first-mentioned State solely for the purpose of his education or training receives for the purpose of his maintenance, education or training shall not be taxed in that State, provided that such payments arise from sources outside that State.

Article 21
Other income

1. Items of income of a resident of a Contracting State, wherever arising, not dealt with in the foregoing Articles of this Convention shall be taxable only in that State.

2. The provisions of paragraph 1 shall not apply to income, other than income from immovable property as defined in paragraph 2 of Article 6, if the recipient of such income, being a resident of a Contracting State, carries on business in the other Contracting State through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the right or property in respect of which the income is paid is effectively connected with such permanent establishment or fixed base. In such case the provisions of Article 7 or Article 14, as the case may be, shall apply.

CHAPTER IV
TAXATION OF CAPITAL

Article 22
Capital

1. Capital represented by immovable property referred to in Article 6, owned by a resident of a Contracting State and situated in the other Contracting State, may be taxed in that other State.

2. Capital represented by movable property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contrracting State or by movable property pertaining to a fixed base available to a resident of a Contracting State in the other Contracting State for the purpose of performing independent personal services, may be taxed in that other State.

3. Capital represented by ships and aircraft operated in international traffic and by boats engaged in inland waterways transport, and by movable property pertaining to the operation of such ships, aircraft and boats, shall be taxable only in the Contracting State in which the place of effective management of the enterprise is situated.

4. All other elements of capital of a resident of a Contracting State shall be taxable only in that State.

CHAPTER V
METHODS FOR ELIMINATION OF DOUBLE TAXATION

Article 23A
Exemption method

1. Where a resident of a Contracting State derives income or owns capital which, in accordance with the provisions of this Convention, may be taxed in the other Contracting State, the first-mentioned State shall, subject to the provisions of paragraphs 2 and 3, exempt such income or capital from tax.

2. Where a resident of a Contracting State derives items of income which, in accordance with the provisions of Articles 10 and 11, may be taxed in the other Contracting State, the first-mentioned State shall allow as a deduction from the tax on the income of that resident an amount equal to the tax paid in that other State. Such deduction shall not, however, exceed that part of the tax, as computed before the deduction is given, which is attributable to such items of income derived from that other State.

3. Where in accordance with any provision of the Convention income derived or capital owned by a resident of a Contracting State is exempt from tax in that State, such State may nevertheless, in calculating the amount of tax on the remaining income or capital of such resident, take into account the exempted income or capital.

Article 23B
Credit method

1. Where a resident of a Contracting State derives income or owns capital which, in accordance with the provisions of this Convention, may be taxed in the other Contracting State, the first-mentioned State shall allow:

a) as a deduction from the tax on the income of that resident, an amount equal to the income tax paid in that other State;
b) as a deduction from the tax on the capital of that resident, an amount equal to the capital tax paid in that other State.

Such deduction in either case shall not, however, exceed that part of the income tax or capital tax, as computed before the deduction is given, which is attributable, as the case may be, to the income or the capital which may be taxed in that other State.

2. Where in accordance with any provision of the Convention income derived or capital owned by a resident of a Contracting State is exempt from tax in that State, such State may nevertheless, in calculating the amount of tax on the remaining income or capital of such resident, take into account the exempted income or capital.

CHAPTER VI
SPECIAL PROVISIONS

Article 24
Non-discrimination

1. Nationals of a Contracting State shall not be subjected in the other Contracting State to any taxation or any requirement connected therewith, which is other or more burdensome than the taxation and connected requirements to which nationals of that other State in the same circumstances are or may be subjected. This provision shall, notwithstanding the provisions of Article 1, also apply to persons who are not residents of one or both of the Contracting States.

2. The term "nationals" means:

a) all individuals possessing the nationality of a Contracting State;
b) all legal persons, partnerships and associations deriving their status as such from the laws in force in a Contracting State.

3. Stateless persons who are residents of a Contracting State shall not be subjected in either Contracting State to any taxation or any requirement connected therewith, which is other or more burdensome than the taxation and connected requirements to which nationals of the State concerned in the same circumstances are or may be subjected.

4. The taxation on a permanent establishment which an enterprise of a Contracting State has in the other Contracting State shall not be less favourably levied in that other State than the taxation levied on enterprises of that other State carrying on the same activities. This provision shall not be construed as obliging a Contracting State to grant to residents of the other Contracting State any persoanl allowances, reliefs and reductions for taxation purposes on account of civil status or family responsibilities which it grants to its own residents.

5. Except where the provisions of paragraph 1 of Article 9, paragraph 6 of Article 11, or paragraph 4 of Article 12, apply, interest, royalties and other disbursements paid by an enterprise of a Contracting State to a resident of the other Contracting State shall, for the purpose of determining the taxable profits of such enter-

prise, be deductible under the same conditions as if they had been paid to a resident of the first-mentioned State. Similarly, any debts of an enterprise of a Contracting State to a resident of the other Contracting State shall, for the purpose of determining the taxable capital of such enterprise, be deductible under the same conditions as if they had been contracted to a resident of the first-mentioned State.

6. Enterprises of a Contracting State, the capital of which is wholly or partly owned or controlled, directly or indirectly, by one or more residents of the other Contracting State, shall not be subjected in the first-mentioned State to any taxation or any requirement connected therewith which is other or more burdensome than the taxation and connected requirements to which other similar enterprises of the first-mentioned State are or may be subjected.

7. The provisions of this Article shall, notwithstanding the provisions of Article 2, apply to taxes of every kind and description.

Article 25
Mutual agreement procedure

1. Where a person considers that the actions of one or both of the Contracting States result or will result for him in taxation not in accordance with the provisions of this Convention, he may, irrespective of the remedies provided by the domestic law of those States, present his case to the competent authority of the Contracting State of which he is a resident or, if his case comes under paragraph 1 of Article 24, to that of the Contracting State of which he is a national. The case must be presented within three years from the first notification of the action resulting in taxation not in accordance with the provisions of the Convention.

2. The competent authority shall endeavour, if the objection appears to it to be justified and if it is not itself able to arrive at a satisfactory solution, to resolve the case by mutual agreement with the competent authority of the other Contracting State, with a view to the avoidance of taxation which is not in accordance with the Convention. Any agreement reached shall be implemented notwithstanding any time limits in the domestic law of the Contracting States.

3. The competent authorities of the Contracting States shall endeavour to resolve by mutual agreement any difficulties or doubts arising as to the interpretation or application of the Convention. They may also consult together for the elimination of double taxation in cases not provided for in the Convention.

4. The competent authorities of the Contracting States may communicate with each other directly for the purpose of reaching an agreement in the sense of the preceding paragraphs. When it seems advisable in order to reach agreement to have an oral exchange of opinions, such exchange may take place through a Commission consisting of representatives of the competent authorities of the Contracting States.

Article 26
Exchange of information

1. The competent authorities of the Contracting States shall exchange such information as is necessary for carrying out the provisions of this Convention or of the domestic laws of the Contracting States concerning taxes covered by the Convention insofar as the taxation thereunder is not contrary to the Convention. The exchange of information is not restricted by Article 1. Any information received by a Contracting State shall be treated as secret in the same manner as information obtained under the domestic laws of that State and shall be disclosed only to persons or authorities (including courts and administrative bodies) involved in the assessment or collection of, the enforcement or prosecution in respect of, or the determination of appeals in relation to, the taxes covered by the Convention. Such persons or authorities shall use the information only for such purposes. They may disclose the information in public court proceedings or in judicial decisions.

2. In no case shall the provisions of paragraph 1 be construed so as to impose on a Contracting State the obligation:

a) to carry out administrative measures at variance with the laws and administrative practice of that or of the other Contracting State;
b) to supply information which is not obtainable under the laws or in the normal course of the administration of that or of the other Contracting State;
c) to supply information which would disclose any trade, business, industrial, commercial or professional secret or trade process, or information, the disclosure of which would be contrary to public policy (ordre public).

Article 27
Diplomatic agents and consular officers

Nothing in this Convention shall affect the fiscal privileges of diplomatic agents or consular officers under the general rules of international law or under the provisions of special agreements.

Article 28
Territorial extension

1. This Convention may be extended, either in its entirety or with any necessary modifications [to any part of the territory of (State A) or of (State B) which is specifically excluded from the application of the Convention or], to any State or territory for whose international relations (State A) or (State B) is responsible, which imposes taxes substantially similar in character to those to which the Convention applies. Any such extension shall take effect from such date and subject to such modifications and conditions, including conditions as to termination, as may be specified and agreed between the Contracting States in notes to be exchanged through diplomatic channels or in any other manner in accordance with their constitutional procedures.

2. Unless otherwise agreed by both Contracting States, the termination of the Convention by one of them under Article 30 shall also terminate, in the manner provided for in that Article, the application of the Convention [to any part of the territory of (State A) or of (State B) or] to any State or territory to which it has been extended under this Article.

NOTE: The terminal clause concerning the signing shall be drafted in accordance with the constitutional procedure of both Contracting States.

CHAPTER VII
FINAL PROVISIONS

Article 29
Entry into force

1. This Convention shall be ratified and the instruments of ratification shall be exchanged at .....
as soon as possible.

2. The Convention shall enter into force upon the exchange of instruments of ratification and its provisions shall have effect:

a) (in State A): .....
.....
b) (in State B): .....
.....

Article 30
Termination

This Convention shall remain in force until terminated by a Contracting State. Either Contracting State may terminate the Convention, through diplomatic channels, by giving notice of termination at least six months before the end of any calendar year after the year .....
In such event, the Convention shall cease to have effect:

a) (in State A): .....
.....
b) (in State B): .....
.....

TERMINAL CLAUSE

NOTE: The words between brackets are of relevance when, by special provision, a part of the territory of a Contracting State is excluded from the application of the Convention.

Some observations on five sales taxes –

Sudan ~ Guyana ~ Bolivia ~ Mexico ~ Brazil

by John F. Due*

Through the work of Sijbren Cnossen, now at Erasmus University in Rotterdam, [1] *other persons who have been on the staff of the Fiscal Affairs Department of the International Monetary Fund, and others, the literature on world experience with sales taxation has expanded rapidly. But there remain dark corners and missing information, with which this article primarily deals, as a supplement to the author's article that appeared in the November-December, 1976 issue of the* Bulletin. [2] *Specifically, the article summarizes the sales tax (called the development tax) in the Sudan, the rather complex manufacturers sales tax in the Republic of Guyana, and the little-known value added tax in Bolivia, all relatively new levies, and offers some comments on two long-established taxes, those of Mexico and Brazil.*

THE SUDAN [3]

The Middle East and the Caribbean are the last areas in the world in which sales taxes are still uncommon. One of the few countries in Northern Africa to move into the field is the Sudan — in a sense a bridge country between the countries of North and Tropical Africa. Sudan uses a very extensive system of excises, with 32 categories and a number of subcategories, and the sales tax was placed on top of this excise structure. The tax was imposed in the 1974-75 budget, based on a similar levy imposed by the Southern Region government 18 months before.

The levy, called the development tax, is essentially a manufacturers sales tax, but with some cascade elements, and thus would be classified as a production tax under the Cnossen terminology. The coverage of the tax is very broad; only four types of manufactured goods are exempt: medicines, wheat flour, compressed dates, and milk for babies. Domestically produced fruit and vegetables are not taxed because they do not pass through a manufacturing stage, but import of these goods is taxed (except for wheat, specifically exempted). The tax does not apply to services. This is one of the few sales taxes that applies to exports as well as imports and domestically produced goods.

The tax is confined to the manufacturing level, but at that level some cascading is involved, since there is no general system for excluding from impact of the tax products that enter into other products as materials or are otherwise used in the production process. Domestically produced raw materials are not taxed if not passing through a manufacturing process, but imported materials are taxed as well as the finished products made with them.

There is no exemption of small manufacturers, per se, although handicraft producers not using machinery are not subject.

The development tax also applies to income, but this is essentially a supplement to the income tax and is treated as such.

The sales tax is administered by the Excise Division of the Customs and Excise Department, so far as domestic production is concerned, in conjunction with the administration of the exercises, and by the Customs Division on imports. As of May 1977, there were 510 firms registered for excise taxes and sales (development) tax and an additional 316 firms registered for development tax alone, for a total of 826. About half of the firms are in the Khartoum area, the center of manufacturing in the country. Government-owned firms are subject as well as private firms. The administration is relatively decentralized. A ledger card for each firm is kept in the district office and a master index in Khartoum, firms are required to file returns every two weeks (30 days for some) together with a statement of withdrawals or merchandise from the factory and copies of all invoices and information on purchases. An annual return is also required. Actual payment, however, is not made in the usual fashion, but in either of two ways, the first primarily used for excises, the second for sales tax:

1. Provision of a deposit, payments being made by the firm on roughly ten day intervals, charges made against it whenever goods are withdrawn from the factory.
2. Provision of a bank guarantee, covering tax for a two week period. Actual payments must be made every two weeks or the guarantee will be exhausted.

* Professor of Economics, University of Illinois, Urbana.

1. "Sales and Excise Systems of the World", *Finanzarchiv*, Vol. 33, No. 2 (1975), pp. 177-236, "Recent Developments in Excise and Sales Taxation", *Bulletin for International Fiscal Documentation*, Vol. 31, No. 10 (1977) p. 457 and more recent unpublished material.

2. "A Comparison of Four Manufacturers Sales Taxes and Two Retail Sales Taxes — Ghana, Kenya, Tanzania, Zambia, Barbados, Iceland", *Bulletin for International Fiscal Documentation*, Vol. 30 (Nov.-Dec., 1976), pp. 464-76.

3. The author is indebted to officials of the Ministry of Planning and the Ministry of Finance in the Sudan for their assistance.

Traditional excise controls, involving the stationing of a Customs and Excise officer within the plant to ensure payment of both excise and sales tax by making physical checks, are used for most firms. Usual accounting controls are employed for the others.

The system used for control of delinquents differs from the common pattern: if the deposit is exhausted or payment is not made on the basis of the bank guarantee, further shipment of merchandise from the factory is stopped — by locking the gates if necessary. This action is rarely necessary, as the threat to stop shipments is usually adequate. Customs and Excise has power to close a firm down and put it out of business — but in fact has never found this necessary. As in other countries, some of the more difficult problems have arisen with government owned corporations when disputes arise over payment.

The tax rate, initially 2 percent, went to 3 percent and then to 5 percent in the 1976-77 budget. The tax yielded about 7 percent of the total tax revenue in 1976-77 compared to 35 percent for customs duties and 19 percent for excises. Indirect taxes as a whole, including the exchange tax, yield 86 percent of total government tax revenues — one of the highest percentages in the world. Of sales tax revenues, domestic production yields 21 percent, imports 49 percent, and exports 30 percent.

The tax as it stands was introduced essentially as an emergency measure to raise revenue quickly. It should be regarded only as a transitional step to a more common form of sales tax, likely on the pattern of the usual manufacturers sales tax. The objections to the cascade features in the tax are recognized.

BOLIVIA

One of the lesser known value added taxes is that of Bolivia, established in 1972 to replace a turnover tax. Technically *Impuesto sobre Ventas*, the tax has the usual characteristics of value added tax, employing the tax credit technique, applying to domestic sales and all imports by unregistered firms and excluding exports. However, it is highly restrictive with respect to tax credit on capital goods, credit being allowed only for tax on purchases of materials, parts, and other goods used directly in production but not constituting fixed assets. Imports by registered firms are not subject to tax. The tax applies throughout production and distribution channels, including retailers, but small firms — those with annual gross sales in excess of $B200,000 (US$10,000) are not subject to the tax (tax therefore applying to their purchases). Firms are required to issue invoices and indicate the tax separately. The actual sale price is the taxable price except on sales not at arm's length. On imports by non-registered persons, a 50 percent markup is applied to the CIF value, reflecting typical margins.

The tax, like that of Brazil, does not apply to services, real property, securities, or to vehicles subject to special taxes. The coverage of commodities is relatively broad; exemption is limited to the following:

1. Basic foods, but not most processed foods.
2. All grain, including livestock feed and seed, live animals.
3. Soap, candles.
4. Petroleum products, coal, cement.
5. Other articles subject to excises, such as liquor and tobacco products.
6. Books, periodicals, newspapers and newsprint.
7. Raw materials and semi-finished goods used in manufacture (many are exempt outright; on others, of course, the purchasing firm receives a tax credit).

The tax rate is a uniform 5 percent. There is no provision for cash refunds when tax on purchases exceeds tax due on sales. The excess can be carried forward or used to meet other obligations. The tax is administered by *Renta Interna*, the income tax administration, even at importation.

Registration is required of all firms making sales in excess of the specified figure; there are about 2,000 registered firms, about half of which are in the La Paz area. Firms are required to file bi-monthly returns with payment of tax. Return forms are not provided. The returns which must be filed in person, not may mail, are filed in the regional offices, and are kept in these offices; payments are recorded on ledger cards, although there are plans for computerization. Delinquency is determined manually, intent being to do so within 24 hours after the due date. An automatic penalty of 50 percent is applied for late filing, but frequently arrangements are made for deferred payment. The delinquency rate has been high, averaging about 30 percent, despite the severe penalty. The audit program has been under development in the last two years; initially there was essentially no audit at all.

Bolivia employs the same type of "lottery" system as Chile long used to aid enforcement. Vendors are required to issue invoices on all sales over $B100 and to indicate the tax as a separate item, an unusual rule with regard to sales to consumers. Invoices must be issued on prescribed numbered forms. Purchasers, in turn, may exchange the invoices for lottery tickets, to an amount depending on the amount of tax. The possibility of winning lottery prizes is designed to make persons more interested in obtaining invoices. Inspectors are sent out by Renta Interna to ensure that the sellers have reported and paid the amounts of tax indicated on the invoices.

The tax has yielded relatively small amounts — in 1974 only 4 percent of the total tax revenue. So far the tax has not been effectively implemented; it would appear that many firms are not registered; delinquency is heavy; and underreporting of sales and tax is believed to be widespread. But there are extensive plans for computerization, delinquency control and audit. The extreme decentralization of tax administration may be an obstacle to effective operation.

GUYANA

The Republic of Guyana in South America, the former British Guiana, introduced a sales tax in 1969 as a result of the establishment of CARICOM, the Caribbean area community, which lessened each member country's flexibility in the use of customs duties and reduced customs yields in two ways — by ending customs revenue on imports from other member countries, and by reducing customs rates to a common level.

The tax, designated as consumption tax, is essentially a manufacturers sales tax on the importation and manufacture of finished products. It applies uniformly to imports and domestic manufacture, but not to exports. As of 1975, 62 percent of the revenue was collected at importation, 38 percent on domestic manufacture. Registered firms can import free of tax, thus reducing the relative revenue collected at importation.

The tax differs from most sales taxes in that the rates are specified by BTN category, as under the Brazil federal tax and the levies of Uganda and Tanzania, rather than being imposed in general form. There are 27 different ad valorem rates and nine specific rates, with an overall range from 2 to 76 percent. There is a continuous spectrum from 2 and 2 1/2 to 20 percent, missing only the figure 19, plus the higher figures. The particular figures were designed to ensure that each commodity class would provide the same revenue as the amount that was being lost by the revision of the customs tariff, and thus the differentials largely reflect the principle of the customs tariff of placing higher rates on luxury goods. The coverage of the tax is relatively broad, only unprocessed food and some goods used in production being excluded from coverage. Gasoline, diesel oil, cigarettes, liquor, soft drinks, and garments are the largest revenue categories.

The tax applies to the actual selling price on domestic goods, to the CIF value plus customs duties on imports.

Cascading is largely eliminated by the rule that allows manufacturers to buy materials and parts free of tax, under the same pattern as the Canadian manufacturers sales tax. Not all goods used in industrial production or in distribution are excluded from tax, however.

The tax is administered by the Customs and Excise Department rather than by Inland Revenue. The portion at importation is collected in conjunction with the customs duties, that on domestic firms on the basis of monthly returns. A bond is required through a commercial bank to ensure payment. Firms are required to keep separate records on their "registered stock" — materials, etc. bought tax free. The returns must show statements of receipts, delivery, and inventory balances of materials acquired free of tax. There is a small consumption tax division in Customs and Excise, personnel of which check the returns and inspect the stocks of materials and finished goods on the firms' premises.

To avoid the problems of control of small firms, those with annual turnover under G$10,000 (G$50,000 in the furniture and jewelry industries) are exempt from the registration requirement, and thus tax applies to their purchases. The G$10,000 figure is approximately US$ 4,000. There were, as of 1975, only 134 registered manufacturers, approximately one-third of them in two categories — clothing and furniture.

In 1973 the tax yielded 12 percent of total tax revenue, compared to 19 percent for excises, 22 percent for import duties, and 44 percent for income tax; few LDCs make more effective use of the income tax than Guyana. Figures for years following 1973 were distorted by the high temporary yield of the sugar export tax.

The government has given some consideration to reform of the tax, particularly to reduce materially the number of rates, and possibly to shift to a value added tax. But thus far no change has been made.

Of the other major CARICOM countries, Barbados imposed a retail sales tax, but in 1976 suspended it as a new government pledged to the elimination of it, mainly because of complaints of retailers, was elected. The tax appeared to be working reasonably well. The other two, Trinidad and Jamaica, have not introduced sales taxes, but make substantial use of excises. The purchase tax in Trinidad applies to a wide range of commodities at the manufacturing level, and approaches a manufacturers sales tax in coverage.

MEXICO [4]

Mexico is one of the few remaining countries to employ the old turnover cascade form of sales tax, and substantial attention is being given to its replacement.

The tax, Impuesto Federal sobre Ingresos Mercantiles, is imposed upon all transactions through which commodities pass on the way from initial production to final sale to the consumer, with the exception of the sale of unprocessed farm produce by the farmer and certain basic materials subject to special levies. The tax is therefore cumulative, producing an overall burden relative to consumer spending far in excess of the nominal rate. The tax, technically a levy upon receipts of business firms, does not apply to imports. Receipts for exports are freed from tax, and a refund is given at export provided at least 30 percent of the value is of domestic origin, the amount of refund depending upon the percentage. The refund, given to a manufacturer or a firm buying directly from the manufacturer, is intended to reimburse the exporter only for tax paid on purchases of the good itself and parts and materials entering into it.

The tax has relatively broad coverage of both commodities and services, though less so on the latter. Except those specifically exempted, all commodities and all services rendered to consumers as distinct from those rendered to employers are taxable. Retailers are included in the scope of the tax. The tax applies to rentals other than of real property and to commission charges.

The major exemptions include:

1. Basic foods, but not most processed foods. The principal exempt items are water, maize, rice, wheat, sugar, salt, fresh meat and fish; poultry,

4. The tax is described in great detail in Secretaria de Hacienda Y Credito Publico, *Impuesto Sobre La Renta E Ingresos Mercantiles*, Mexico City, 1976.

eggs, fresh fruit and vegetables, flour, and milk in all forms.
2. Coal, electricity, and gas.
3. Books and magazines.
4. Banking, insurance, transportation, and professional services.
5. Sales by farmers of unprocessed farm products.
6. Sales by small business firms, including small repair and work shops.
7. Sales by certain industries exempted from tax as "new or necessary".

The basic rate of the tax is 4 percent (3 percent prior to 1973), but higher rates are applied to a group of commodities and services regarded as luxury in character:

5%	subcompact cars
10%	compact cars, motorcycles
	cigarette lighters
	cosmetics, lotions, perfumes, etc.
	certain fishing equipment
	expensive furniture
	cameras
	electrical appliances (specified types)
15%	standard automobiles; auto accessories
	cabarets, night clubs, bars, restaurants serving liquor
30%	expensive automobiles
	yachts, private planes
	expensive watches
	precious stones, jewelry
	fur coats
	firearms
	sporting goods
	cable television service

The tax is administered by the states, under agreement with the Federal government, and the revenue is shared on the basis of 60 percent to the states and 40 percent to the Federal, but with substantial Federal supervision. The tax is a major revenue source for the states, and yields about 13 percent of Federal revenue. State administration is a possible obstacle to optimal operation but politically would be difficult to eliminate. The operation of the tax is more or less standard; firms are registered and file and pay on the basis of monthly returns. Large firms are required to keep detailed records, while smaller firms are assessed on a *forfait* basis. The exact number of registrants is not available, but is estimated to be in the neighborhood of 700,000.

Mexico has a long history of indirect taxation, dating back to the *alcavala* of Spanish rule. The present tax was introduced in 1948, replacing a number of state levies and Federal stamp taxes. In the mid-1960s, there was extensive discussion of the defects of the tax, and a value added tax was developed, [5] but was never introduced, stress being placed on income tax reform. In 1976-77, once again, attention was directed to the replacement of the tax by a value added levy. Concern has been expressed throughout the last decade that firms would not reduce prices when the turnover tax was eliminated but would add on the value added tax, thus boosting prices. There has been little evidence of this in other countries when the value added tax has replaced other forms of sales tax.

BRAZIL

Brazil is one of the few countries in the world in which sales taxation is of primary importance at both the state and Federal levels. The details of the state taxes have been described in detail by Michèle Guerard, [6] and will not be repeated here; only some of the most significant features of the two taxes and their relationship will be noted.

The Federal Tax (referred to in Brazil as IPI) is essentially a value added tax, but it is limited to manufactured goods and basically the manufacturing (and import) sector levels and therefore is usually classified as a manufacturers sales tax. The state levies (ICM) are value added taxes of the usual form, applying to all sectors, and therefore overlapping the Federal tax at the import-manufacturing sector.

The backgrounds of the two taxes are very different. The Federal tax evolved out of an extensive system of excises imposed at the manufacturing level, some dating back many decades. Ultimately the coverage became so broad that the tax came to be regarded as a sales tax, and the value added feature was introduced into it. But the tax still applies to specified commodities, listed by BTN category; and the rates vary widely — from 3 to 365 percent — but most are in the 10 percent to 20 percent range. The usual tax credit form of VAT is used. By contrast, the state levies resulted from a reform of their previous cascade turnover taxes; Federal legislation forced the change in 1965, over opposition of some of the states. The transition was relatively simple, since the firms were already registered under the turnover taxes and the machinery had been developed for dealing with large numbers of papers. The state levies differ from the Federal in two major respects: a uniform rate is used (prescribed by Federal legislation) and the tax is not confined to manufactured goods or to the manufacturing sector. In most other respects, such as the use of the tax credit feature, the two taxes are identical.

The Federal tax is the largest single source of Federal revenue, yielding 40 percent of total revenue in 1976, compared to 28 percent for the income tax, 10 percent for import duties, 9 percent for fuel taxes, and 13 percent for other taxes.

At the state level the value added tax is dominant; for the state of Rio de Janeiro in 1976, the tax yielded 95 percent of state tax revenues and 86 percent of all state revenues. The local governments receive 20 percent of the ICM collected in the state; this amounted to 31 percent of the revenues of the municipal district of Rio de Janeiro in 1976, for example. Of locally collected taxes, the tax on services is by far the most important, yielding 54 percent of the total; the tax on real estate yielded 25 percent and other 21 percent (Rio de Janeiro).

5. A. Guiterrez Kirchner, "Estudio sobre Impuesto a las Ventas en Mexico", in Centro Interamericano de Administradores Tributarios, Estado Actual de la Legislación Comparada Relativo al Impuesto Sobre Ventas, Panama, 1970; *Investigación Fiscal* (Mexico), January 1969 issue.
6. Michèle Guerard, "The Brazilian State Value Added Tax", *International Monetary Fund Staff Papers*, Vol. 20 (March 1973), pp. 118-69.

The total number of firms paying the Federal IPI is 135,000; while no total figure is available for the ICMs, in the state of Rio de Janeiro there are 131,000 taxpaying firms.

A few major features of the taxes will be noted briefly. Exports are free of both taxes, with credit for IPI and ICM accumulated up to the point of export. The Federal government will pay cash refunds, but the states in general do not, but authorize credit against other taxes. Imports from abroad are taxed under both levies. Credit is allowed for value added tax paid on purchases of goods for resale, materials, packaging, industrial machinery, and other goods used directly in the production process, but not building materials, office supplies and equipment, and some other items. Thus the levies are not as pure consumption taxes as are those of the EEC countries but there is little cascading.

There is no exemption of small firms as such under either Federal or state levies, but there is widespread use of the *forfait* system; small firms are assessed a fixed amount based on the inspector's estimates of likely sales. They do not receive credit for tax paid on purchases. Farmers are not subject to the Federal tax (confined to manufactured goods) but are not formally exempted from the state levies in most states. The smaller ones are not in fact subjected to tax, though larger commercial ones are. Basic farm inputs — feed, seed, fertilizer — are exempted from tax to avoid cascading since unregistered firms cannot receive credit for tax paid on purchases.

The Federal levy, applied to specified classes of commodities, exempts most foods and some other necessities, and zero rates exports and ships and some other items. All ICMs have broad coverage, with some variation among the states. Some states exempt food; others do not. Services are not taxed, being subjected to separate municipal levies. Rentals are not taxed; builders are treated as final consumers.

The interstate tax relationships are somewhat different than in most Federal countries. The state of origin ap-

plies its tax on sales for delivery in another state, but at a reduced rate — 11 percent instead of 14 percent — and the state of destination, which gives credit for tax paid the state of origin, therefore receives 3 percent. By contrast to retail sales taxes, a value added tax based primarily on origin gives much more of the total sales tax revenue to the manufacturing states. This has been a source of substantial contention in Brazil, since manufacturing is heavily concentrated, particularly in São Paulo, and the non-manufacturing states complain that they do not receive a reasonable share of the total.

The system of operation is comparable to that for sales taxes in other countries. Firms are registered and file monthly returns. The system is highly computerized in the larger states. Rio is moving toward cross checking of data supplied by various firms by computer. Check is made on delinquents, and most firms receive at least a brief check each year; Rio de Janeiro state, for example, 95 percent of all vendors were contacted during 1976. Many of these visits would, of course, not constitute a true audit. During that year, 31 percent of the firms were penalized for late filing or other offenses. Enforcement is facilitated by the fact that much of the revenue comes from relatively large firms; in Rio, 100 companies provide 80 percent of the tax revenue. It is widely recognized that there is considerable evasion by small firms; estimates have been made ranging from 15 to 20 percent in Rio to as much as 50 percent in some states.

There is substantial overlap of Federal and state sales tax administration but as yet little coordination.

Summary

Table I presents in summary fashion the basic information about the taxes in the five countries. The taxes are in various stages of development; the Brazilian levies are the best developed and most sophisticated ones, with extensive use of computers in operation and long experience in dealing with numerous taxpayers. The duplication of Federal and state administration in the manufacturing sector is of course wasteful and the use of the *forfait* system for small firms is always open to question; outright exemption (and taxation of sales to these firms) may be preferable. These taxes yield unusually high percentages of the total tax revenue of the country. The long-standing Mexican tax, one of the last turnover taxes left in the world, is basically defective, a fact long recognized in Mexico, being tolerated as long as it has only because the rate has been relatively low. But reform in the form of conversion to a value added tax is likely to occur in the next several years. Brazil and Mexico, both Federal (or at least semi-Federal) states, use quite different approaches to the intergovernmental problem. Mexico avoids duplication by allowing the states to administer the states tax and share the revenue with the Federal government, but the states have no control over the rate or the tax structure. Brazil specifies the rates of the state levies, and limits power to vary coverage. The origin rule is basically used to allocate revenue by state, but the interstate sales are subject to a lower rate, so that the state of destination gets 3/14ths of the revenue.

The other three levies are much less fully developed. Bolivia has made the shift to value added, but essentially of the product variety, one of the few such taxes that take this form, since no credit is allowed for tax on capital goods. The Guyana and Sudan manufacturers taxes employ a form of tax basically satisfactory for countries relatively early in the development process, but both require modifications — in Guyana to lessen the number of rates, in the Sudan to eliminate cascade features. The Sudan still relies very heavily upon custums duties; Guyana by contrast has successfully moved to substantial reliance on income taxation.

Hungary:
Standing Representation of Foreign Financial Institutions*

Under Decree No. 1/1977 of the Hungarian Minister of Finance foreign financial institutions can obtain permission to establish a standing representation in Hungary in order to develop international financial banking relations. Such a representation may carry out activities within the scope determined in the permit issued by the Hungarian Minister of Finance. It carries out this activity for and on behalf of the foreign financial institution; such activity and the income derived therefrom will be exempt from Hungarian tax.
Additional permission is required for representation activities on behalf of other foreign individual firms and companies; in that case, the representation is subject to the Hungarian agency tax in accordance with the rules laid down in Decree 18/1975. The rates of this tax are 3, 5 or 8 percent of the agency's turnover (depending on the type of activity).

The text of the Decree reads as follows:

In agreement with the President of the National Bank of Hungary I decree as follows:

§ 1

(1) Foreign financial institutions may establish a standing representation in the Hungarian People's Republic, with the permission of the Minister of Finance, in order to develop international financial and banking relations. The standing representation is discharged by the representatives of the foreign financial institutions delegated to Hungary.

(2) For the implementation of the present decree the representation is a standing one if

a) the stay of the delegate in the territory of Hungary exceeds three months on one occasion, or a total of six months in a calendar year on several occasions, or
b) the stay in the territory of Hungary of several representatives of the same financial institution consecutively exceeds a total of six months in one calendar year. In calculating the period of the stay, any stay shorter than 14 days must be disregarded.

(3) The representation is a standing one, if the delegate carries out his activity — irrespective of the length of the stay — in conditions indicating a standing character (e.g. leasing of premises, designating such premises as a representation, etc.).

§ 2

(1) The representation may carry out activities within the scope determined in the permit issued by the Minister of Finance. It carries out this activity for and on behalf of the foreign financial institution, while complying with the dispositions of Hungarian domestic legislation. Within this activity it can maintain contacts with Hungarian enterprises by appointment of its financial institution. Within the scope of its activity it may mediate banking transactions, but is not permitted to conclude or to implement such transactions.

(2) The National Bank of Hungary observes and assists the activity of the representation.

§ 3

(1) If the representation carries out activity beyond that of bank representation not by appointment of the foreign financial institution but of an other foreign individual firm, enterprise, company, other business organization or institution as a standing representation, it must obtain for this in advance also the permission of the competent minister (head of organ of nationwide competency).

(2) The representation may carry out commercial representative activity on the basis of the effective statutes only with the permission of the Minister for Foreign Trade.

(3) The permission mentioned in paragraphs (1) and (2) above must be obtained through the National Bank of Hungary.

§ 4

(1) The application for the establishment of the representation must be submitted to the President of the National Bank of Hungary.

(2) The application must contain:

a) the name of the foreign financial institution, the form of its incorporation, its domicile, the date and place of its incorporation,
b) the nominal and actual paid-up capital of the foreign financial institution, as well as the scope of its activity,
c) the scope of activity of the representation that it is intended to establish, the number of alien and Hungarian citizens desired to be employed by it, the planned period of time for its operation.

(3) In addition to the particulars contained in paragraph (2) above, the application may contain all information and data which are apt to serve as a foundation for the consideration of the organ issuing the permit, including primarily plans and ideas concerning financial co-operation, especially those which promote the achievement of the goal defined in Section 1 above.

(4) In order to decide the application, the organ issuing the permit may ask for further information and data, as well as the authentification of the data.

§ 5

(1) The President of the National Bank of Hungary forwards the applications presented to him to the Minister of Finance with his opinion.

(2) The Minister for Finance decides in respect of the permit for operation within three months after receipt of the application. But if the Minister of Finance requests a supplementary measure from the applicant in order to decide the application (paragraph (4) of Section 4), the dead-line must be counted from the fulfilment of this request. The decision of the Minister for Finance is communicated to the applicant by the National Bank of Hungary.

(3) In the resolution entertaining the application the following must be laid down:

a) the scope of activity of the representation;
b) the number of alien and Hungarian citizens that may be employed with the representation;
c) the period of time for which the permit is valid or that the permit is issued for an indefinite period, as well as
d) other provisions concerning the activity of the representation.

(4) The Minister of Finance may withdraw the permit concerning the operation of the representation if the authorized does not carry out its activity in accordance with the conditions laid down in the permit or with the provisions of the statutes of law.

(5) No reasons must be given for the resolution made concerning the application or for the withdrawal of the permit for operation.

* HUNGAROPRESS, No. 4/1977 at SD 35.

§ 6

The activity carried out by the standing representation of the foreign financial institution in accordance with paragraph (1) Section 2 above is tax-free. But if the representation carries out beyond the activity of bank representation such activity defined in Section 3 above for which by virtue of the said Section separate permission is needed, it must be taxed in accordance with Decree No. 18/1975/IV.23/ PM on the taxation of the commercial and other business representations of aliens.

§ 7

(1) The National Bank of Hungary must be advised of

- the alien employees of the foreign financial institution working at the representation before the start of their activity, with communication of their personal data,
- the address of the office of the representation, before beginning operation.

The person concerned may begin his activity and the representation its operation only when the National Bank of Hungary has advised the informant of the acknowledgement of the information.

(2) The National Bank of Hungary keeps a register of the representations.

§ 8

The contents of the present Decree do not affect the validity of the provisions contained in Decree No. 24/1966 (IX.25.) Korm. on the entry and exit of aliens as well as their sojourn on the territory of Hungary and the statutes issued in implementtation of this Government Decree, nor the statutes on the employment of aliens on the territory of the Hungarian People's Republic and the entry of Hungarian citizens into the employment of alien employers, nor those on the taxation of the employees of representations.

§ 9

This Decree enters into force on the day of its promulgation. Its provisions must be applied also to the representations already existing at the entry into force of the Decree, provided that the Decree does not affect the validity of the permission already issued.

TAX GLOSSARY

by H.W.T. PEPPER *

CABARET TAX — A tax, either in the form of levy on the admission price (whether separately identified or included as a "cover charge" in the customer's bill) or on the total charged to the customer by cabarets, nightclubs, etc. The tax is sometimes collected as a form of local revenue and sometimes levied by the central government. In either case it represents a luxury tax, with some connotations of a registration levy, since the government will be responsible for supervising, to a greater or less degree, the activities of such institutions, e.g., to protect the customer from "exploitation", to ensure compliance with liquor laws, fire safety regulations, etc.

CANONS OF TAXATION — The name given to the four rules of taxation propounded by Adam Smith in his *Wealth of Nations* and still valid today. The four points were:

1. Equity. The tax payable should accord with ability to pay or TAXABLE CAPACITY (q.v.).
2. Certainty. The taxpayer should know exactly what tax he has to pay, which means that the law should be clear and the Tax Department's interpretation of it should be readily available.
3. Convenience. The tax should be payable in a manner and at a time convenient to the taxpayer, e.g., tax on salaries when the salary is due (now generally achieved by PAYE Schemes). For example, taxes on farmers might be made payable when the proceeds of their products were received (such results are achieved, e.g., by export duties levied on agricultural produce when exported).
4. Economy. A tax should be economical to collect. In present times the "ideal" expense ratio may be regarded as not more than 1 percent of the tax yield for sales taxes and not more than $2\frac{1}{2}$ percent for income tax and other direct taxes but these percentages are in practice only likely to be achieved in industrialised countries where there is reasonably good tax compliance. Small countries are unlikely to achieve comparable ratios because the minimum administrative headquarters and "overhead" expenditure are spread over a relatively small number of taxpayers.

CAPITAL ALLOWANCES — Allowances normally intended to give relief for depreciation of assets used in a business. In Britain the term covers initial allowances, granted when assets are first acquired and calculated as a percentage of cost, annual allowances also calculated as a fixed annual percentage, either on original cost (straight-line method) or on the REDUCING BALANCE (q.v.), and BALANCING ALLOWANCES or CHARGES (q.v.) which adjust the total capital allowances to the difference between original cost and final proceeds when the depreciated asset is disposed of. Capital allowances are usually granted in respect of factories or other industrial buildings and works, agricultural buildings, plant and machinery including vehicles. They are less commonly applied to commercial buildings such as office blocks, hotels, and blocks of flats.

The original reason for the distinction between industrial and commercial properties was that the former were subject to *material* wear and tear, e.g. vibration from machinery. But the argument cannot be carried to a completely logical conclusion. In general, governments try to encourage both new industries, and the re-equipment of old industries with modern machinery, and therefore grant depreciation allowances on a more or less generous basis. For revenue reasons it is often not possible to grant such reliefs also to commercial and residential properties. Moreover, especially where the non-industrial building and lands are in the same ownership, values do not usually diminish, whereas there may be actual depreciation of value in the case of industries, particularly where technological changes may cause the termination of one type of industrial activity and its replacement by an entirely different type of activity. (See also DEPLETION, DEPRECIATION.)

CAPITAL DISTRIBUTION — A distribution, e.g., by a company, not of profits but of capital generated either (a) by the sale of assets at a profit or (b) by return of capital where a company finds its capital greater than the foreseeable needs of its business. A *return of capital* to shareholders will not normally attract income taxation but a *distribution of capital* may require examination to ascertain whether (i) capital gains tax applies or (ii) whether transactions giving rise to the profit or surplus should be regarded as transactions forming part of the ordinary trade of the company, such that income tax would apply.

CAPITAL GAINS DIVIDENDS — (U.S.A. term) See REGULATED INVESTMENT COMPANIES.

CAPITAL GAINS TAX — A tax charged on the disposal, other than in the course of carrying on a business or trade, of ASSETS and CHATTELS (q.v.) at a price higher than was paid for them. The tax usually extends to assets acquired by bequest or gift, as well as by purchase.

Where the asset was already owned by the taxpayer when the tax was introduced, it is usual to allow substitution of the value at the inception of the tax for the purchase price at the taxpayer's option. Where the option is not exercised, the total gain over the period from acquisition to disposal is usually apportioned so that only the proportion of gain relative to the period since the tax came into force is taxed. "Disposal" is usually defined as covering a sale or gift, and may sometimes be applied to bequests or transmissions on the death of the owner of the asset.

The tax is usually justified by the argument that realised gains on capital are equivalent to income in that the taxpayer may use such gains in the same way as income. Where the gain arises merely on a change of investments (including an involuntary change where one company is taken over by another on a share-exchange basis), there may be no spendable gain, the old proceeds being totally absorbed in the new investment. In such cases some tax codes allow ROLL-OVER RELIEF (q.v.) such that no taxable

---

* *With the assistance of the staff of the International Bureau of Fiscal Documentation.*

gain arises. Some taxable gains arise from monetary inflation rather than real increases in value and a few tax systems allow indexed relief in computing the taxable gain. (See MONETARY CORRECTION and INDEX-LINKED ADJUSTMENTS.)
In Italy, capital gains in respect of real estate, ships, and securities owned for not less than 3 years and not otherwise taxed are taxed as business profits, subject to roll-over relief if the proceeds are re-invested. (See also SHORT-TERM GAINS TAX, LONG-TERM GAINS TAX.)

CAPITAL GOODS — The term is used in sales taxation to distinguish goods that are purchased for use in a business as part of the fixed capital of that business as distinct from goods for processing or re-sale. Where a sales tax is intended to be purely a consumption tax, there may be an exemption of capital goods from the incidence of the tax. Under a V.A.T. system, no special exemption is necessary because an offset of (input) tax on such goods is made against the tax payable on the sale of products. (Capital goods may also be known as "Production Goods".)

CAPITAL LEVY — A tax on a taxpayer's capital, or one which is based on his income at a rate higher than 100 percent and thus has to be met partly out of capital. The commonest example of a capital levy in general use is the death, inheritance, or succession duty payable on the assets of a deceased person. There have also been several examples of capital levies on the living, e.g., Federal Germany and Norway imposed such taxes after World War II and Britain has imposed two quasi capital levies, a SPECIAL CONTRIBUTION (q.v.) and a SPECIAL CHARGE (q.v.) which were based on investment income but in fact were graduated so as to exceed the income, when added to income tax thereon, where that income was above certain limits. A fairly recent example is the 1971-72 Sri Lanka levy of 5 percent on the capital of companies in excess of Rs. 1,000,000, accompanied by corresponding levies on individuals.

CAPITAL LOSSES — In countries which have capital *gains* taxation, it is usual and logical to give allowances for capital losses. Such losses may generally be offset against capital gains of the same year or subsequent years. It is not usual to allow capital losses other than on disposal of plant and machinery used in a business to be offset against income. One reason is that if relief were available, taxpayers might take advantage of a severe drop in stock market values by selling stocks and shares at a loss and offsetting the loss against their income with disastrous effects on income tax yield to Governments in years of depression. (See also CASUALTY LOSS.)

CAPITAL TAX — The term has two meanings, either as a tax on wealth (see WEALTH TAX) or as a tax on the capital of companies (see also FORMATION TAX).
It is fairly common to charge a small tax on the nominal or issued capital, which may be in the form of an initial or annual stamp duty. These latter taxes may be regarded as "administration" taxes since the government must exercise supervision over the activities of corporate bodies in order to protect shareholders' interests. Alternatively, such taxation may be regarded as a fee for the privilege of limited liability.

CAPITAL TRANSFER TAX — This term may refer to taxes on the transfer of real property (see TRANSFER TAXES) and also to levies which apply to gifts and bequests (thus combining gift taxation and DEATH or SUCCESSION TAXES q.v.).
Such a tax has recently been adopted in Britain in succession to ESTATE DUTY (q.v.) and consists of levies on gifts out of capital made during a person's lifetime as well as to bequests on his death, the liability being determined on a cumulative basis where the same beneficiary receives more than one "capital transfer". Transfers between spouses are not taxed and there are annual exemptions for small transfers (under £100) and "lifetime exemptions" up to £15,000, as well as annual exemptions of £2,000 to any person, subject to the cumulative total of £15,000.

CAPITAL VALUE TAX — This term may be used to relate to a CAPITAL or WEALTH TAX (q.v.) or may relate to real property taxation based on capital values rather than annual values.

CAPTIVE USE — When a manufacturer makes machinery or equipment or other goods and takes some for use in his own business, this is termed "captive" use — the term is also sometimes applied to goods extracted from a person's buisness for personal or domestic consumption. For income tax and sales tax purposes it is usual to add an appropriate sum to profits or sales to represent the value of goods thus used.

CAROUSEL — A method of avoidance or evasion of indirect taxation, based either on loopholes in the customs duty and sales tax codes, or on fraudulent mis-classification or mis-description of goods. Typically the goods are brought into a country paying the duty and tax applicable to a low-tax classification on entry and are then immediately re-exported under a high-tax classification, when a greater refund of duty or tax is obtained. The process of import and re-export may be repeated with the same goods.
The classification schedules of goods chargable at different rates of duty and tax have to be drafted with considerable precision. If there is any imprecision it may be possible for goods which are capable of being classified in different ways to be "legally" imported in a low-rated classification and then entered in a high-rated classification for export refund purposes. Fraudulent mis-classification on the other hnad may result in loss of tax only when the fraud has not been discovered by inspection of the goods by the tax authorities on export.

CARRIAGE TAX — A tax imposed in Britain in 1747 as one of a series on "outward and visible signs of wealth". A tax on ARMORIAL BEARINGS (q.v.), where such devices were impressed on carriages, etc., continued well into the 20th century. (See also EXTERNAL INDICIA OF WEALTH.)

CARRY BACK — Some income tax codes provide for retrospective (or "carry back") relief where a business makes losses in its final years of trading (see TERMINAL LOSSES) or is entitled to DEPRECIATION or CAPITAL ALLOWANCES (q.v.) which cannot be fully offset against current income, if any. By carrying back reliefs which would otherwise be frustrated, the ideal situation may be achieved whereby the total assessment of profits to tax is equal to the total net profits actually achieved during the existence of the business.
A limiting factor is that for budgeting purposes it is desirable that incoming revenue should be as final as possible, so that the income tax yield is not subject to a double erosion in times of recession. The modern tendency, however, is to give more emphasis to equity, especially in a context of high corporate and personal taxation rates.

CARRY FORWARD — Most income tax codes provide for the carry forward of unexhausted reliefs for losses and DEPRECIATION and CAPITAL ALLOWANCES (q.v.). Apart from according with equity (i.e., the running total of net profits is enabled to correspond with the tax assessments on profits) the practice ensures the cash flow benefit to the new venture which is intended by the enhanced capital allowances or FREE DEPRECIATION (q.v.) now provided in some tax systems.

CASCADE TAX — A sales tax imposed on traders at all levels of economic activity and at all stages in the chain of distribution of goods and services, without offset for tax paid at an earlier stage. The tax thus "cascades" on all traders, except any specifically exempted or excluded, and repeatedly on goods passing through more than one stage of distribution. The imperfections of the tax, which falls unevenly on different parcels of the same goods if they pass through differing channels of distribution — some passing through more stages than others — have led to its replacement in some countries by Value Added Tax.

CASCATA — CASCADE TAX (q.v.).

CASE LAW — Where the tax law charges tax on fairly brief and simple concepts such as the "profits of a trade or business", disputes commonly arise as to what is covered by the terms used and these disputes are continued by the appeal procedures into the law courts. Decisions on such matters by the Judiciary form a body of case law which supplements or clarifies statute law.

CASH BASIS — In the case of certain liberal professions the taxpayers are sometimes permitted to adopt the "cash" basis instead of being assessed on "earnings". The cash basis applies such that the taxpayer is allowed to compute profits on cash in-comings less cash out-goings relating to his profession instead of by reference to amounts "earned", i.e., work done during the basis year for which bills will be sent to clients. One justification for the adoption of this basis was the former reluctance of professionals to take drastic action to recover fees due to them, an inhibition not necessarily affecting a trader. The tax department will normally not allow adoption of the cash basis until the earnings of the professional commencing to practice have reached a certain level and once the system is operating will endeavor to ensure that the inflow of cash is not unduly depressed by, for example, delays in sending out bills.

CASH VOUCHERS — A form of FRINGE BENEFIT (q.v.) whereby an employer gives his employee vouchers having a fixed cash value, e.g., to exchange for goods or services. Anti-avoidance legislation may specifically levy tax on such vouchers, particularly where they are seen as an attempt to avoid tax, rather than as a small goodwill amenity for employees, and especially where they may be readily converted into cash. In Britain examples of taxable items include "savings certificates", a form of investment repayable with interest after a fixed number of years, but which may also be cashed at original face-value immediately after acquisition. On the other hand, luncheon vouchers, a benefit sometimes afforded by employers in Britain to employees for whom no canteen facilities exist, are exempted from tax up to a certain limit of value per employee.

CASINO TAX — A tax levied on casinos and other places where legalised gambling takes place (usually on such games as roulette, chemin de fer, baccarat). The tax may be on the gross turnover but is more usually levied upon the commission which comes to the proprietors of the establishment ("house percentage"), for example the casino management will take the money placed on roulette bets where the number coming up is 0 or 00 and may also make an admission charge. (The admission fee may however be subjected to separate taxation — see ADMISSION TAXES.) It is now becoming more usual for the taxation of a casino to be embodied in a license agreement between government and casino proprietors.

CASUALTY LOSS — A loss relating to non-business assets resulting from theft, fire, storm, shipwreck, or other "casualty" is allowable for income tax purposes in the *U.S.A.* The relief is primarily of concern to individual taxpayers sustaining damage to non-business property.

Similar relief is also due from *Japanese* income tax in respect of loss of non-business assets arising from earthquake, storm, fire, theft, etc. The relief given in Japan is the proportion of the loss which exceeds 10 percent of total income. In addition, the resident taxpayer may claim a deduction for fire, etc., and insurance premiums payable on his residence and its contents.

CATALYST — In chemistry a "catalyst" is a substance which must be present before certain types of chemical change can take place, or which speeds up changes which would otherwise occur more slowly. The catalyst itself is unchanged during the chemical action it assists. In sales tax parlance, the meaning given to "catalysts" includes the strict technical meaning but is often slightly wider to include such items as lubricants which are "consumed" in the manufacturing process but are not physically embodied in the products.

CATCH-ALL — The term sometimes given to a tax provision, especially one to embrace, for example, (a) all types of activity or income in making a tax as wide in scope as possible, or (b) in anti-avoidance legislation, e.g. to set aside all transactions which have the effect of reducing tax liability. The last example clearly goes too far since it would set aside a marriage where the tax code provided tax relief for a wife!

CEILING TAX — Sometimes the impact of direct taxation on an individual is subject to a "ceiling", for example, the U.S.A. Federal Income Tax Code applies graduated rates rising to 70 percent on earned income, but the maximum or ceiling tax is 50 percent of gross earnings. The maximum charge to both income tax and wealth tax in Sweden is limited to 80 percent, and in Norway the ceiling is 85 percent of income. In the British Solomon Islands the top personal rate of tax is 35 percent but the maximum or ceiling tax is 25 percent of the gross income excluding reliefs.

CEMETERY TAX — See BURIAL TAX.

CENTIMES ADDITIONNELS — A Belgian term meaning a surcharge.

CERTAINTY — One of Adam Smith's CANONS OF TAXATION (q.v.).

CESS — A levy, usually upon the gross receipts from, e.g., a plantation crop to provide funds for government-directed research or improvement schemes such as re-planting with high yielding planting materials. The device is commonly found in countries with plantation crops such as rubber, oil-palms, coconut palms (and sometimes cesses are similarly levied on minerals extracted) and differs from an ordinary tax in that the proceeds are specifically "ploughed-back" into the industry.

CESSATION ADJUSTMENTS — Certain extra adjustments are necessary in computing the income tax of a business on its cessation than occur in the ordinary year-to-year computations. For example, reserves against possible future provisions can be substituted by actual expenditure, stock-in-trade may be valued at its precise final disposal price, and unused capital and other allowances may be allowed, e.g., if there are CARRY-BACK (q.v.) provisions. If assessments have been made on a conventional basis, e.g., on the profits of the previous year, there will normally be some statutory provision, (a) for making an automatic adjustment of the final year's assessment to actual profits, and (b) some form of anti-avoidance provision to adjust earlier years' assessments as well if there is evidence (sometimes even if there is not) of attempts to "load" extra profits into a year the profits of which would not ordinarily enter into the calculation of tax liability.

CHAIN SUCCESSION RELIEF — See QUICK SUCCESSION RELIEF.

CHARGES — A concept used in the British income tax system in connection with deduction of tax at the source, a principle which is widely employed in Britain. When one person has legal liability to pay an annual sum to another for example, interest on a private mortgage, he is required to deduct tax at the STANDARD RATE (q.v.) and account for this tax along with his own income tax liability. The recipient of income from which tax has been deducted at source receives a credit for such tax deduction when his income tax liability is computed.

CHARITIES, DONATIONS — Some income tax systems provide relief to taxpayers who make donations to charities. To qualify for the application of this relief a charity will have to be registered under the law governing charities but sometimes (and preferably, if the tax department is to keep reasonable control of the situation) there will be special rules regarding registration of charities for tax purposes. A narrower concept of the term "charity" may be desirable in order to limit the amount of tax relief which may be granted in this way. (See also COVENANTS.)

CHARITIES, EXEMPTION OF INCOME — It is fairly common for the income of charities to be exempted from income tax. As mentioned above, charities for this purpose normally have to be registered and submit annual accounts and other information to the registrar. The prinicple favouring exemption is that charities might undertake welfare work which would otherwise have to be undertaken and paid for by the government. The tax relief may therefore be a cheaper way for the government to achieve the charitable or social object than if the full expenditure was incurred directly by a public department of social welfare.

CHATTELS — A chattel may be described as a tangible, movable property and would include jewelery, furniture, motor-cars, yachts, and oil paintings, among many other items. Capital gains tax systems may charge to tax gains made on the disposal of chattels (there is a £1,000 lower limit on chargeable chattels in Britain) as well as on the more usual subjects of charge, real property, stocks and shares. Inclusion of chattels in the scope of gains tax (and WEALTH TAX, q.v.) varies from country to country. There are obvious difficulties in securing compliance with tax laws on articles which are movable, and often quite portable. (See also NATIONAL HERITAGE RELIEF.)

CHILD — A "child" for certain tax purposes is not necessarily the same as an INFANT (q.v.). It is fairly common in income tax codes for relief to be given to a taxpayer for each child of himself or his wife below a certain age (usually the school-leaving age). Relief is also given for older children provided they are in full-time education at a college, university, etc.

Similar tax codes aggregate for tax purposes the income of children, settled on them by their parents, with the income of the parents as an anti-tax-avoidance measure. Such measures are designed to set aside schemes whereby a parent divests himself of income, but, placing it in the name of his children, is still able to maintain effective control of the divested income. (See also FAMILY ALLOWANCES.)

CHINA TRADE ACT CORPORATION — Under U.S. Federal income tax law, a corporation trading in Hong Kong or Formosa (Taiwan) and satisfying the provisions of the China Trade Act could claim special deductions in computing taxable income from sources within Hong Kong and Taiwan. Shareholders in such corporations who were resident in either of those countries could exclude dividends from the corporations in computing their gross income. The relief is being phased out and will disappear altogether for fiscal years commencing in 1978.

C.I.F. VALUE — The value of imported goods which includes carriage, insurance, and freight, C.I.F. value is the base usually adopted for the purpose of levying customs duty and sales taxation on imports since it normally corresponds with the landed price. A few countries use F.O.B. value, or domestic market price in the country of origin, as the base for customs duties in which case higher *rates* of duty have to be imposed to produce the same level of taxation as duties charged on C.I.F. value.

CIGAR TAX — Taxes on tobacco products are usually charged mainly on the import or production of the tobacco leaf but sometimes an additional "luxury" tax is charged upon cigars, usually as a specific rather than an ad valorem levy. (See also CIGARETTE TAX.)

CIGARETTE TAX — Some countries adopt a system of taxing cigarettes by the "piece" or "stick", in addition to any tax which may have been imposed at the factory, and are often highly productive where tax administration is efficient owing to the present tendency for cigarettes to contain less tobacco and more filter materials. Such taxes are not, however, equitable in their impact on cigarettes of different size and length since the "king-size" cigarettes pay the same duty as the smallest sizes.

CINEMA TAX — A tax on admissions to cinemas (see ADMISSION TAXES) which is usually levied as a series of graduated specific charges increasing with the price of the seats so that each ticket may bear a specific tax charge or as a percentage of receipts which may or may not be graduated upwards on the higher seat prices.

CINEMATOGRAPH FILM TAX — A tax on the "rent" or hire charge paid by exhibitors to producers and distributors for the right to exhibit films commercially. There are some examples of the tax being charged at a specific rate per foot of length of the film (see FOOTAGE TAX), but it is preferably levied at a flat percentage rate on the hire charges. Sometimes a tax is levied on the notional profits of the producers from the exhibition of the film where the producer is outside the tax jurisdiction of the country in which the films are exhibited. For this purpose a certain percentage of the gross rent will be deemed to represent profit and a tax in the form of income tax charged on this notional profit. This may be advantageous to the producer who is able to offset notional income tax against the income tax in his home country on his total film production profits.

"CIRCUIT BREAKER" – TAX RELIEF — A U.S. system for relieving low income groups from property tax in excess of their ability to pay. Typically the property tax will be restricted to a certain percentage (e.g. 7 percent in Vermont) of the total family income. The assessed tax will either be credited against other state tax liability or rebated in cash. (See also NEGATIVE INCOME TAX.)

CITY PLANNING TAX — Because of the opportunities for making profits in respect of the development of sites in a city, once planning permission has been granted, some countries have endeavoured to gain some extra tax, apart from ordinary income tax, on the development profits. One example is the City Planning Tax in Japan, another the DEVELOPMENT LAND TAX (q.v.) in Britain.

Some countries, e.g., New Zealand, make another form of levy as the price of granting permission to develop. The developer will be required to yield up part of his land for a public garden or playground, and will be expected to provide adequate parking or garaging facilities for those who would work or reside on the developed

property. (See also LAND DEVELOPMENT TAX.)

CLASSIC SYSTEM — The term applied to the system of charging corporation tax on the income of corporate bodies and income tax on the shareholders when that corporate income is distributed to them as dividends, without giving any credit to the shareholders for the tax paid on the corporate income.

CLEARANCE — The term is used in connection with customs duty; goods being imported and a vessel coming into the customs' jurisdiction must be "cleared" by the Customs Department. Vessels leaving port must also be cleared, e.g., in regard to duty-free stores on board to ensure that such stores, commonly sealed while a ship is in port, have not been disposed of irregularly.

In dealing with CLOSE or CLOSELY HELD COMPANIES (q.v.) for corporation tax, there is sometimes a "clearance" procedure. Usually such companies are required to distribute minimum proportions of their profits to shareholders (who are then taxed thereon at the higher personal rates of tax). There is usually some discretion to the Tax Department if there are special circumstances such as the need to conserve capital for re-equipment or expansion. A company may ask for a "clearance" from the tax office for the distribution policy it is proposed to pursue. (See also TAX CLEARANCE.)

CLIENTELE — GOODWILL (q.v.) in Belgium.

CLOSE ("CLOSELY-HELD") COMPANY — A close company (the term is used, e.g., in connection with the 1965 corporation tax on corporate income in the U.K.) is a company which is under the control of not more than five persons or which is controlled by its directors (as defined in U.K. legislation). In income tax or corporation tax codes there are usually special provisions in respect of such companies of an anti-avoidance nature, in particular directed at such devices as under-distribution of corporate income (to avoid or defer additional personal income tax on the shareholders) or excessive payments of directors' remuneration (where such remuneration would attract a lower rate of tax than dividends) and against special arrangements made between a corporate body and those who control it in respect of such matters as loans, payments for restrictive covenants and benefits in kind.

CLOSED-END FUND — In the U.S.A., a domestic corporation formed to invest shareholders' funds in securities. Dividends out of investment income and capital gains from the realisation of investments are usually fully distributed. Unlike UNIT TRUSTS (q.v.) and OPEN-END FUNDS (q.v.) the share capital of the fund is fixed. (See also REGULATED INVESTMENT CORPORATIONS.)

CLUB — A club is usually run as a "mutual" organisation, by and for its members, and thus cannot make a "profit" in the commercial sense (see also MUTUALITY PRINCIPLE). In practice it *may* "trade" with non-members by allowing the use of facilities, provided for members, by outsiders for a fee, such as the "greens fees" charged by golf clubs. Income tax liability usually extends to income from non-members and from investments, and some tax codes provide a formula for computing liability which is designed to cope with cases where a business seeks to avoid tax by pretending to be a club.

CODE, TAX — The tax law consisting of the statutes, rules, and regulations which impose a tax in a country.

CODING — A term used in connection with PAYE (q.v.) schemes. The reliefs allowable to an individual employee in computing his income tax liability are convertible to a factor, code, or "coding" which is applied to tables supplied to the employer by the tax department, and from which the tax applicable to the week's or month's pay can be read off at a glance.

COLLAPSIBLE CORPORATION — A tax avoidance device whereby an enterprise would be conducted by a company set up for the purpose. Instead of selling the product (e.g., the device was used in the making of films) the company was liquidated, involving "capital" profit. Such profits attract capital gains taxation instead of income taxation on what would otherwise have been the earned income profits of the entrepreneurs.

COMMENCING ADJUSTMENTS — When a person sets up in a business or profession, it is not usually possible to determine his income tax liability *during* the first year or two, since accounts of the profit or loss made will not be available until after the accounting year-end. In a few countries, tax relating to year 1 income is payable in year 2, tax on income of year 2 is payable in year 3 and so on. More usually tax payments are looked for in the income year, so that provisional figures are used (in *U.S.A.*) which are corrected after the end of the year. In the *U.K.*, a similar procedure is adopted for year 1, but the liability of year 2 is based on the income of the first 12 months' trading, and that of year 3 on the profits of the accounting year ended within year 2: there is an option to have the actual profits for years 2 and 3 substituted for the CONVENTIONAL BASIS (q.v.) if this is more favourable to the taxpayer. In *Australia*, tax is always based on the actual income of the year, but tax is provisionally charged — as from year 2 — on the income of the previous year, the assessment being in due course "corrected" to the actual income.

COMMISSION SECRETE — Bribe money (BELGIUM).

COMMODITY TAX — A Sales Tax on commodities, usually at the import/manufacture or wholesale level. The tax may be selectively based on a limited number of commodities or more broadly on commodities in general consumption. The tax may take the form of a MANUFACTURERS' TAX (q.v.) or a WHOLESALE TAX (q.v.), but the term is not normally applied to a retail tax. The "manufacturers' tax" is broadly similar to the comparable Canadian levy and to the U.S. federal excises, and the retail tax to the Provincial and State retail taxes in Canada and the U.S.

COMMON AGRICULTURAL POLICY (C.A.P.) — A feature of the E.E.C. arrangement which protects food-stuffs produced within the member countries, such as wheat, rye, barley, maize and rice, pig meat, beef and veal, eggs and poultry, milk and milk products, sugar, fruit and vegetables and wine. C.A.P. involves the maintenance of high farm incomes by means of support prices fixed well above world market prices, involves variable levies on imports to ensure protection in the E.E.C. market for domestic producers and the subsidising of agricultural exports to other regions. Exports of surpluses are subsidised through the European Agricultural Guidance and Guarantee Fund (FEOGA) which was set up in 1962 and funded from annual contributions from member states and receipts from import levies.

COMMON MARKET — See EUROPEAN ECONOMIC COMMUNITY.

[to be continued]

U.S.A.: Visiting Professors

The U.S. Revenue Service recently ruled (Rev. Rul. 77-242) that a United Kingdom professor who visits the United States to teach at universities for short periods of time twice a year is entitled to the tax exemption on U.S. source income offered under Article XVIII of the U.K.-U.S. tax treaty of April 16, 1945 (as amended by the Supplementary Protocols of June 6, 1946, May 25, 1954 and August 19, 1957).

This Article provides:

"A professor or teacher from the territory of one of the Contracting Parties who visits the territory of the other Contracting Party for the purpose of teaching, for a period not exceeding two years, at a university, college, school or other educational institution in the territory of such other Contracting Party shall be exempted by such other Contracting Party from tax on his remuneration for such teaching for such period."

The full text of the Ruling reads as follows:

"Advice has been requested wheter, under the circumstances described below, Article XVIII of the United States-United Kingdome Income Tax Convention (Convention), T.D. 5569, 1947-2 C.B. 100 is applicable.

The taxpayer, an individual, is a resident of the United Kingdom and a professor at a university located in that country. Since 1974, the taxpayer has been making annual trips to the United States to lecture at various educational institutions. During 1974, the taxpayer was present in the United States from February 8 to March 23 and from September 26 to November 8; during 1975, the taxpayer was present in the United States from March 12 to April 28 and from September 28 to November 13; and during 1976, the taxpayer was present in the United States from April 2 to May 23 and from October 5 to November 18. These visits were each arranged pursuant to agreements covering certain stated periods and had to be separately approved by the respective boards of trustees of the various schools the taxpayer visited in the United States.

The question presented is whether the taxpayer's United States sourced income from these teaching engagements is exempt from United States income tax for the taxable years in question pursuant to Article XVIII of the Convention.

Article XVIII of the Convention provides, in part, that a professor or teacher from the United Kingdom who visits the United States for the purpose of teaching, for a period not exceeding 2 years, at a university, college, school, or other educational institution in the United States shall be exempted by the United States from tax on remuneration for such teaching for such period.

A technical memorandum of the Treasury Department explaining the operation of the articles of the Convention was incorporated into the *Senate Executive Report No. 6*, 79th Cong., 1st Sess. 14, dated July 3, 1945. With regard to Article XVIII, the memorandum reads, in part, as follows:

. . . Its effect is to exempt from United States tax, upon a reciprocal basis, compensation for personal services rendered in the United States by a resident of the United Kingdom who is temporarily present in the United States for the purpose of teaching at a United States university or other educational institution in the United States. The intent is to allow an exemption for 2 years in any event. Thus, if the individual comes to the United States under circumstances which indicate a stay within the United States in excess of 2 years, the exemption will apply in such case for the first 2 years.

. . . It is the purpose of the article that such exemption shall cease at the end of 2 years from the date of his initial arrival in the United States. Thus, if he reaches the United States on July 1, 1945, he is exempt with respect to his remuneration earned in the United States up to June 30, 1947. If he then leaves the United States on vacation but resumes his duties in the United States at the beginning of the school term in the fall of 1947, he is not exempt with respect to his remuneration earned thereafter. If, however, he leaves the United States for an entire year or more and then returns to the United States, it is the intendment of the article that he will enter upon another exemption period of 2 years.

Rev. Rul. 56-164, 1956-1 C. B. 848, holds that the exemption language in Article XVII of the United States-Netherlands Income Tax Convention, T. D. 5778, 1950-1 C. B. 92, which is similar to that contained in Article XVIII of the United States-United Kingdom Convention, requires a visiting Netherlands teacher to be absent at least 1 year from the United States before a new 2-year exemption period can begin, based on the above-quoted explanation of Article XVIII in the Treasury Department technical memorandum. Rev. Rul. 56-164 further provides that the principles set forth with respect to the United States-Netherlands Income Tax Convention also apply to other income tax conventions that contain similar language, including the United States-United Kingdom Income Tax Convention.

The taxpayer in the subject case, who is a resident of the United Kingdom, has completed a "visit. . . for a period not exceeding two years," pursuant to Article XVIII of the Convention, on November 13, 1975, which was the last day that the taxpayer was present in the United States for the purpose of teaching within the 2-year period beginning on February 8, 1974, and ending on February 7, 1976. In order to become entitled to another such exemption period the taxpayer must be absent from the United States for at least 1 year, commencing November 14, 1975, and still meet the requirements of Article XVIII. The requirement is not affected by the fact that each of the taxpayer's visits to the United States was a relatively brief duration (approximately 1½ months) as opposed to a continuous stay of 2 years as may be inferred was the case in Rev. Rul. 56-164.

Accordingly, the taxpayer's United States sourced income for teaching in the United States during taxable years 1974 and 1975 is exempt from United States income tax pursuant to Article XVIII of the Convention. The taxpayer's United States sourced income for 1976 is taxable income and subject to withholding at source pursuant to Section 1441 of the Internal Revenue Code of 1954."

Bibliography

Books

The publications listed in this bibliography have recently been acquired by the Bureau's library which will gladly supply further information upon request (please quote the reference numbers). They should, however, be ordered through a bookseller or direct from the publisher indicated, and not through the Bureau.

BRAZIL

ALGUNS ASPECTOS DA CORREÇÃO MONETARIA EM TERMOS DE DIREITO FINANCEIRO E TRIBUTARIO

By Antonio J. Franco de Campos. Campinas, Antonio J. Franco de Campos, 1974. 23 pp.
Financial and taxation aspects of the monetary corrections in Brazil. (B.15.652)

DIREITO TRIBUTARIO INTERNACIONAL DO BRASIL

By Alberto Xavier. São Paulo, Editora Resenha Tributária, 1977. 350 pp.
Study on international tax law covering general principles of international law, and unilateral and conventional rules dealing with special reference to the Brazilian case. (B.15.643)

INCENTIVOS FISCAIS E FINANCEIROS PARA O NORDESTE

Recife, SUDENE, 1976. 52 pp.
This book explains fiscal and financial incentives available in order to promote the Northeast development in Brazil. (B.15.661)

Announcing the publication of No. 24 in the series, "Publications of the International Bureau of Fiscal Documentation":

the oecd draft influence on united states income tax treaties

by Herbert I. Lazerow.

1976. ISBN 90 70125 064. 84 pp.

The OECD draft double taxation convention on income and capital is the culmination of half a century of attempts at model conventions dating back to the League of Nations. While the draft reflects attempts to induce countries to harmonize their tax treaties, the author points out the continuing tension between "harmonization" and "improvement" – namely, the conflict between a country's need to harmonize its tax treaties to secure a uniform body of law concerning its foreign tax relations, and its goal of improving treaty provisions to provide more certainty to the taxpayer. The present OECD Draft has been accepted by member and non-member countries to be a general model (partly because the draft includes alternative provisions often required by non-member countries) but is not always copied in its entirety.

Dfl. 45.00 / US$ 18.00 including postage

(airmail: Dfl. 2.50 / US$ 1.00 extra, outside Europe)

Korn/Dietz/Debatin
Doppelbesteuerung

Sammlung der zwischen der Bundesrepublik Deutschland und dem Ausland bestehenden Abkommen über die Vermeidung der Doppelbesteuerung

Loseblatt-Kommentar. Von Prof. Dr. Helmut Debatin, LLM. Ministerialdirigent, Beigeordneter Generalsekretär der Vereinten Nationen (Finanzwesen); Rechtsanwalt Dr. Georg Dietz (†) und Dr. Rudolf Korn, Ministerialrat a. D., unter Mitarbeit von P. Hellwig, Regierungsdirektor am Bundesfinanzhof, und F. Hundt, Amtsrat im Bundesministerium der Finanzen

6. Auflage. 1977. Rund 4100 Seiten 8°. In zwei Plastikordnern DM 98.–
ISBN 3 406 06810 3

Was ist der Korn/Dietz/Debatin?

Der Korn/Dietz/Debatin ist der führende Kommentar zum Thema Doppelbesteuerung. Er erfaßt und erläutert zeitnah und lückenlos dieses weite und oft unübersichtliche Rechtsgebiet und ist die entscheidende Arbeitshilfe für jeden, der sich auf dem Gebiet des internationalen Steuerrechts betätigt.

Wer bearbeitet den Korn/Dietz/Debatin?

Der Korn/Dietz/Debatin wird von ausgewiesenen Sachkennern des internationalen Steuerrechts bearbeitet, die gleichermaßen die Vorbereitung, Verhandlung, Paraphierung und den Abschluß von Doppelbesteuerungsabkommen, wie auch die einschlägige, höchstrichterliche Rechtsprechung der laufenden Anwendung überblicken.

Wie ist der Korn/Dietz/Debatin aufgebaut?

Der Korn/Dietz/Debatin gliedert sich in zwei große Abschnitte:

1. Allgemeiner Teil: Er enthält

a) ein umfassendes Kompendium des gesamten internationalen Steuerrechts,
b) einen über 200 Seiten umfassenden Grundriß des deutschen Außensteuerrechts,
c) das OECD-Musterabkommen von 1963/1977 mit dem aus dem Bericht des OECD-Steuerausschusses stammenden offiziösen Kommentar,
d) die zusätzlich ergangenen Verwaltungsvorschriften,
e) eine Übersicht über die für das Doppelbesteuerungsrecht einschlägige Rechtsprechung des RFH, BFH und der Finanzgerichte.

2. Besonderer Teil:

Er enthält gegenwärtig 50 einzelne Abkommen und die entsprechenden Erläuterungen dazu und wird laufend um neuabgeschlossene Abkommen erweitert. Die Vertragstexte werden sowohl in deutscher Sprache, als auch in der Sprache des Doppelbesteuerungspartners aufgeführt.

Abkommen mit folgenden Ländern sind kommentiert:

Äthiopien – Afghanistan – Argentinien – Australien – Belgien – Brasilien – Ceylon – Chile – Dänemark – Finnland – Frankreich – Griechenland – Großbritannien – Indien – Iran – Irland – Island – Israel – Italien – Jamaica – Japan – Jugoslawien – Kanada – Kolumbien – Libanon – Liberia – Luxemburg – Malta – Marokko – Niederlande – Norwegen – Österreich – Pakistan – Polen – Rumänien – Sambia – Schweden – Schweiz – Singapur – Spanien – Sri Lanka – Südafrika – Thailand – Trinidad und Tobago – Tunesien – Türkei – Uruguay – USA – Vereinigte Arabische Republik (Ägypten) – Zypern

Limits to International Tax Planning*

by Prof. Dr. F. H. M. Grapperhaus**

Long before Rome rose to power the Etruscans chose Italy as their home. At that time, the country was threatened by wars with Gallic forces. These drained the country's resources to such an extent that the government was compelled to introduce emergency measures in the form of high taxation. The effect of these taxes was to drive many wealthy Etruscans to the tax haven of Carthage, where they settled and lived happily and prosperously ever after.

As far as I am aware this is the first known example of international tax planning in history.

If we accept that certain limits should be imposed on tax planning — and I hope, in the course of my speech, to convince you of this — we can also extend our view to maintain that certain limits should be imposed on those persons who are professionally occupied with international tax planning, namely entrepreneurs and their advisors. And with that we have already arrived at the much farther reaching issue of free enterprise. In my speech I should like first to pay some attention to free enterprise in general and then to free enterprise in particular, as outlined in national and international fiscal law.

Less room for freedom of enterprise but still enough to make business exciting.

There can, in my opinion, be no further argument that during the past decades in many, if not most, countries of the Western world — to which I should like to limit my remarks — freedom of enterprise has decreased, not only because this freedom has been more and more limited by laws and regulations, but also because of the growing awareness of the entrepreneur's responsibility for the "external effects" of his operations. In this connection I would mention the responsibility of the entrepreneur, together with the government and the trade unions, for maintaining full employment, and the requirements of the environment which are increasingly met by the entrepreneur. Besides, the freedom of the entrepreneur has been limited as a result of the fact that his movements have been restricted in the markets in which he operates. The labour market forms a clear example. The fact should also be mentioned that in many countries the government has taken over wholly or partly the shares of private companies or in another way acts as an entrepreneur. In contrast to the limitations imposed on free enterprise, the field of the entrepreneur has been enlarged by the increased prosperity — and notwithstanding the pessimism shown by many in this respect, I expect a sustained increase in the near future — by an internationalization that is growing in significance and by rapid technological progress.

All these factors give new dimensions to enterprise and open up new fields for expansion while leading to more sophisticated and improved products and services.

I presume that there is freedom of enterprise if and as far as the entrepreneur can make a real choice out of available alternatives, both in deciding which goods and services to provide and in the organization of the production process directed towards the most favourable combination of production factors.

This freedom entails his accepting the uncertain consequences of that choice: uncertain because the production process must be established in anticipation of the uncertain or at least unknown demand for goods and services of consumers and consequently of other entrepreneurs. Even though the entrepreneur attempts to influence this demand, the apt description of enterprise, given by the present Prime Minister of The Netherlands, *Mr. Den Uyl*, in 1967, still stands: "enterprise still means choosing between uncertainties".

The freedom of the entrepreneur is limited by laws and regulations and by current political and ethical concepts about what an entrepreneur may (still) or may not (any longer) do. However, even although margins have narrowed in this respect, it seems that there is still enough elbow room left for the entrepreneur to make enterprise as equally exciting an occupation as, for instance, science or politics.

In addition to those concrete matters which can be expressed in terms of money, the entrepreneur has to consider imponderables, which certainly are of no less importance. In this respect we might think of employment, job satisfaction, environment, international distribution of labour, etc. One entrepreneur will be more advanced in his thinking than another, but neither is able, by himself and according to his own personal conviction, to dispense with the importance he would attach to these imponderable values in doing business. As a result, the entrepreneur may attempt to influence the balance on the market in a certain way. Here we are aware of a comparison with the politician. Both are called upon to translate the wishes of the consumer, or,

*) Speech held at the 7th International Planning Conference, November 9-10, 1977, Amsterdam.

**) Professor extraordinary in the Faculty of Tax Law at Leiden University, Special Advisor to Peat, Marwick, Mitchell & Co., Member of the Board of Trustees of the International Bureau of Fiscal Documentation, former Under Secretary of Finance of the Dutch Government.

more generally, the citizen, into more concrete matters, while both, I may add, try to influence those wishes. Just as his personal conviction can constitute for the entrepreneur an addition to and, if necessary, a correction of the market mechanism, so the people's representative has the right, nay, the duty, when voting, to act according to his conscience even if he were to vote against the policy of his party.

Freedom of enterprise in tax law: the tax authorities may not evaluate business decisions.

In dealing with the question of the freedom of the entrepreneur in tax law I should like to state that this freedom exists if, and in so far as, the entrepreneur can make his choice from a number of possibilities and make decisions which influence or may influence his legal relationship with the tax authorities in one or more countries, as the case may be.

With regard to these entrepreneurial decisions I should like to distinguish between, on the one hand, decisions which might entail tax consequences resulting from certain transactions, regardless of whether these consequences were intended or only assumed, decisions therefore without a fiscal purpose, and, on the other hand, decisions with a prime or even secondary fiscal motive. For the sake of simplicity I shall limit my remarks to taxation on profit, even though I realize that the question of entrepreneurial freedom may arise with other taxes too.

If in a certain country freedom of enterprise exists, it then follows that from a fiscal standpoint the entrepreneur has in principle freedom of action with regard to his management policy, and consequently may influence the tax due, namely by making more or less taxable profit. I have, of course, only stated the principle of this, which needs further elaboration dependent on the country concerned. Because of the time element I shall only elaborate in general terms and I hope I can describe the relevant criteria in such a way that each of you can relate what I say to the situation in your own country.

Please bear in mind that in my elaboration I have been guided by the ideas prevalent in my own country.

In the Netherlands, freedom of enterprise in fiscal law is still considered of great importance. Put into plain words this means that the tax inspector cannot assume the position of the entrepreneur. In its jurisprudence the High Court — in the Netherlands the supreme judge in fiscal matters — has constantly and carefully guarded against the fiscal administration or fiscal judge pronouncing judgment on the question whether an expense based on business considerations is also commercially justified.

The underlying philosophy is that the basis for the levying of income and corporation tax is the business profit which was actually realized and not the business profit which, in a careful and prudent business practice, might have been realized.

Consequently, the tax authorities have to await the result of the business transactions. Whether the entrepreneur is successful or not, whether he passed by opportunities for profit or did not control his expenses, all this must be accepted by the tax authorities. Their undoubted neutral position in the Netherlands towards the final results of business enterprise could be considered a special aspect of a universal legal principle to the effect that in general the law should be applied to the facts as they have occurred. This attitude of the tax authorities implies that fiscally the entrepreneur is free to determine his own management policy. In the Netherlands this neutrality towards business practice is maintained to such an extent that expenses incurred because of unlawful activities, such as fines, are deductible, while profits illegally obtained are taxed, which causes some people to accuse the tax authorities of immorality. In my opinion this accusation is unfounded. In order to be able to assess the actual financial capacity, the tax authorities must consider the facts, past or present, and should not enter into what ought to have happened.

Shift in public opinion: bribes and fines no longer tax deductible.

In the meantime, public opinion on this subject is shifting. One hears more and more demands that the illegal bribes and fines for illegal business transactions should no longer be treated as deductible. In a number of countries, for instance in the U.S.A., tax laws have been adjusted accordingly. I do not want to delve deeper into this subject, but will merely point out that, no matter how much illegal practices should be opposed, one should not close one's eyes to the fact that it would mean an infringement of the principle of freedom of enterprise in tax law, if such items were no longer deductible. [1] Weighing up the respective interests, I would rather that illegal practices be countered by means other than by an improper use of the concept of tax profit which should not, after all, be considered from an ethical point of view. In my opinion profit is a concept which varies in accordance with the development of social needs, aiming at a fair division of overall burdens while taking an objective view of the freedom of action and of evaluation of the entrepreneur.

A question which arises regularly is whether it would not be advisable to consider some specific expenses for luxury goods as non-deductible business expenses.

It is, for instance, the intention of President Carter — if the newspapers quoted him correctly — to make business lunches and dinners no longer completely deductible. To exclude certain expenses by specifying them, however, would mean an arbitrary interference in the concept of tax profit. It would be wrong in principle if the tax authorities were to be able to intervene in management policy, unless in a given situation intervention were called for because of the necessity for a fair division of tax burdens which would then prevail over the

1. Editor's note: see "Tax treatment of bribes" in 16 EUROPEAN TAXATION 382 (November 1976).

principle of neutrality with regard to enterprise and oblige the fiscal legislator to deviate from this principle.

My comments do not mean that an infringement of the principle of freedom of enterprise in tax law would never be justified, but that there would be a deviation from a generally prevailing system. I would describe this system thus, that economically profit should be considered as a remainder, which should be accepted as it stands as a source of taxation by the tax legislator and consequently by the tax authorities. The question arises as to in which cases the tax legislator might intervene in the principle of tax profit. To answer that question I should like to distinguish the main object of tax law from secondary objects and treat them here consecutively.

The main object of tax law is to raise revenue for the Government, secondary objects include affecting business decisions.

In my opinion the main object of tax law is to create room for government expenditure. This object entails a number of rules peculiar to tax law, which I have summarized before as the necessity to have a fair division of tax burdens.

I should now like to pay attention to those cases in which the tax legislator, on the basis of a secondary object of tax law, attempts to influence the final results of the management policy of the enterprise. This secondary object should then be considered of sufficient importance for the national economy to justify the use of taxation as a means to realise this object, even if it were at the cost of a fair division of tax burdens. In the fiscal literature this is referred to as tax incentives and tax expenditures. There are several examples in which the tax legislation, on the basis of such a secondary object, attempts to influence management decisions as, for instance, the investment incentives which have been adopted by many countries.

The purpose of these incentives is to exercise influence on business investment apparently with success. The tax legislator is then, of course, no longer neutral towards that particular aspect of business practice. But that does not imply that freedom of enterprise has disappeared because of this government intervention. Just as freedom of enterprise consists of selecting genuine possibilities from a number of alternatives while taking into consideration the positive and negative factors, this is also the case with freedom of investment, in which the fiscal investment incentive is neither more nor less than one of many factors influencing this choice, next to the wage level, the level of interest and the anticipated profit. Freedom of enterprise is not fundamentally affected by all this: the actual business activities are only affected by the investment deduction and perhaps not very strongly at that.

Sometimes business decisions are taken with a view to reducing the entrepreneur's tax liabilities.

While accepting on the one hand the fiscal legislator's influence on the entrepreneur's activities, on the other hand these activities can be directed by him towards an alleviation of his total tax burden.

Now I have arrived at business decisions with a fiscal object in view, which could be described more explicitly as decisions which are exclusively, mainly or partially directed towards influencing the legal relationship with the tax authorities. There are numerous other business decisions with a fiscal object or secondary motive such as establishing a company in a country with low taxation rates or investing with the object of acquiring investment incentives; decisions regarding the company's financial structure, participations, investments, insurances and many others and, generally speaking, activities with a view to securing the most favourable tax position in one or more countries.

The question arises to what extent the entrepreneur is free to make decisions which are mainly or partly aimed at influencing the legal relationship with the revenue authorities or, in other words, when is the entrepreneur overstepping legal bounds in his attempt to effect lawful tax savings. In this connection I would distinguish between "legal" and "moral" freedom, and pay attention to the legal aspect first.

Apart from fraud, which is obviously unlawful, and apart from bogus transactions, to which by definition the law cannot be applied, I assume that there is unlawful tax saving only in those cases where methods are used which, on close inspection and irrespective of the legal point of view, are considered to be artificial while the desired fiscal end is contrary to the purport of the law and the attained legal position does not in any real sense deviate from a position acquired through so-called normal channels.

Freedom of enterprise in searching for tax savings is legally limited. The entrepreneur is free to search for tax savings but will be transgressing "legal" bounds if he should act improperly. Thus it appears that such is the case if he should pursue tax savings contrary to the purport of the law and by means of an artificial method, leading moreover to a final result not or hardly different from any which could have been achieved through the normal channels.

In order to explain the "ethical" aspect I should like to expound on the element "contrary to the purport of the law". The purport of a law or legal regulation should be viewed in the context of the relevant section of the fiscal legislation as well as of the fiscal legislation as a whole. Now tax law is unquestionably very complicated in most countries. Its complexity does not only reflect a society with a sophisticated system of labour allocation but also the product of striving for perfection and the result of exaggerated expectations regarding the possibility of using taxation as an instrument for government purposes. One can definitely not maintain that the system is so clear-cut and comprehensive that it is always evident what tax should be paid according to the tax system. This applies both to the entire fiscal system and to the individual tax laws. Even if the entrepreneur as a member of society is, to a certain extent, morally co-responsible for the observance of the law, this responsibility decreases according to the extent to which

the fiscal legislation is less clear to him and is applied less strictly.

To answer the question whether, in principle, he is morally free to look for the fiscally most advantageous procedure — even if as a result less tax is paid, or revenues are paid at a later stage than is required according to the tax system — I repeat that the manner in which freedom of enterprise is used is bound not only by law and by right, but also by the concepts of morality and decency upheld by the society in which we live. In the quickly changing world we live in, concepts of morality and decency constantly vary. The entrepreneur, active in an important section of economic life, namely, the provision of goods and services, must constantly remain conscious of the difference between the concepts of today and those of tomorrow. In the last instance, however, he is the final judge of his own actions. This also applies to the question of how far he may go morally in his pursuit of tax savings. The legal freedom of enterprise within tax law is ultimately endorsed by the ethical freedom to decide, according to one's own personal convictions, where to draw the line morally in one's pursuit of tax savings.

What I have said previously about the relation between the taxpayer and the national tax authorities also applies to an international situation when more than one country and consequently various tax authorities are involved. That in many cases international tax planning is a matter of avoiding double taxation — notwithstanding the numerous treaties between nations — is still not readily understood by the public at large. Considering the far more complicated relations governed by international tax law I would say that the above is still more applicable in an international situation.

As far as the legal aspect is concerned, I would stress that the three points I have made are of a much more complex nature when viewed within international relations than within national tax law. As you will remember, these points are: the purport of the law, the question of whether an artificial method has been used, and the question of whether that method has led to the same result as if the normal channels had been used.

With regard to the ethical aspect, it is quite certain that the differences in opinion on ethics are even greater between individuals on an international basis than already exist at a national level.

Does this mean that within international tax planning there exist no limitations whatsoever from the legal or ethical point of view? No, indeed. This is not so. The principles which I touched on briefly before apply in the same way. The only difference is that it is more difficult to ascertain where the limits are.

However, where tax is fundamentally a price for government services then international tax planning means a sophisticated solution on the part of the entrepreneur and his advisors to this special aspect of the market mechanism, and finds therein its justification.

Vol. 3 of 'Guides to European Taxation'

* the taxation of private investment income

loose-leaf

each chapter follows a common outline

covers 17 European countries + U.S.A.

updated by air

PRICE: Dfl. 375 / US$ 157
including up-to-date basic volume plus airmail supplements through the end of 1978

For residents of the Netherlands: price is exclusive of BTW (value added tax)

Further details freely available upon request

Surveys the provisions under the laws and double taxation treaties of 17 major West European countries AND the U.S.A. (fully illustrated with charts and tables).

Examines the effect on dividends and interest, and also on capital gains realized on the sale of shares and bonds.

Analyses the EFFECTIVE total burden on dividends and interest and includes comparative charts strikingly illustrating —

- the net dividends received on a corporate pre-tax income of 100 units
- the income a corporation must earn for an individual resident in each of the countries to receive a dividend of 100 units (before personal tax)

The Definition of Gross Taxable Income in Schedular or Global Income Taxes*

by Prof. Dr. Sylvain R.F. Plasschaert**

I. INTRODUCTORY REMARKS

A. Schedular and global income taxes defined

From a structural viewpoint, two basic types of income tax systems can be distinguished. In a previous article the two basic types of income taxation were described as follows, as a first attempt:

- *in a* schedular *income tax system, each of the various* incomes *— such as salaries, dividends or business profits — that flow to the same taxpayer is subjected to a separate tax. In other words, the schedular system of income taxation consists of a co-ordinated set of separate taxes on various types of* income;
- *in a* global *income tax, all partial* incomes, *from whatever source, that accue to the same taxpayer are taxed jointly, as a single mass of* income;
- *a* mixed or composite *system consists merely of the juxtaposition of a set of schedular taxes and of a global-type tax, that both apply to the same income. Thus, a mixed frame of income taxation is not original, structurally speaking.*

It was also emphasized that, nowadays, a set of schedular taxes [1] *seldom exists in pure fashion. Usually, the schedular taxes are the mainstay (from a revenue viewpoint) in a so-called mixed system. In the latter, a complementary tax on global income is added to the schedular taxes. It follows that if a taxpayer obtains income subject to a given schedular tax, say, the wage tax, the same income item is, in addition, taxed by the complementary tax — provided that income exceeds the exemption level specified in the complementary tax.* [2]

B. Tax design and compatibility test

Any income tax system, whether of schedular or global mold, ought to provide technical answers to such questions as how to define the taxable object and the taxpaying unit, the geographical reach of the country's fiscal claims, the applicable tax formulas (rates), etc. The techniques used in those different segments of the income tax law must not only be consistent among each other, but also be compatible with the tax canons which the legislator intends to implement. In other words, the tax parameters must meet what we may call a "compatibility test". In fact, the same test can be applied to the schedular and global frames of income taxation respectively which, in essence, are technical devices. One may ask, for example, whether the schedular set-up is compatible, in a rational system, with the ability-to-pay principle. By a rational system is meant the set of technical arrangements, i.e. of the tax design, that allow implementation of intended tax principles, without entailing inconsistencies and distortions.

The above does not imply that only one technique is available to implement a given tax principle. Progressive rate scales, for example, can be modulated in many different ways. One should also remember that existing or historical phenotypes of income taxation do not entirely conform to the rule-book or rational prototypes. In case the actual arrangements deviate from the prescriptions of a rational system, it is worthwhile to ascertain why such divergencies occur; there may, for example, be a trade-off between two tax principles, such as when deductions, intended as an incentive towards savings, conflict with the ability-to-pay principle.

On account of the great variety in (a) tax techniques, (b) tax canons, as adhered to in different countries, and (c) the wide dispersion in economic, political and cultural circumstances between various countries, it is advisable to have a look at the arrangements adopted in a number of existing income tax systems. Such an approach usefully complements the teachings of public finance theory. Hence, the Appendix illustrates how in a selected number of countries the definition of gross taxable income has been designed. The selection comprises both developed and developing countries.

---

* This article is part of an extensive enquiry into the tax design and tax policy aspects of alternative income tax patterns, with particular reference to developing countries.

** Professor at the University of Antwerp, University Faculties St. Ignatius (Belgium).

1. *Sylvain R.F. Plasschaert,* "First Principles about Schedular and Global Frames of Income Taxation", Bulletin for International Fiscal Documentation 1976, No. 3, p. 99-111.
2. A variant is the present Mexican system, outlined in the Appendix, in which, depending on the level of the total taxable income, either schedular taxes or the global tax apply.

C. Taxable gross income

The first step which is required in designing a system of income taxation consists in ascertaining gross taxable income, i.e. which receipts, for tax purposes, are to be viewed as income.

No tax design problem, except perhaps the treatment of the corporation, has elicited as much literature and discussion, both on the academic and the political level. No such extensive analysis of the stubborn problem of defining gross income can and should be attempted here. Before discussing the conformity of given definitions of gross income with the respective schedular and global prototypes, and examining whether developed and developing countries tend to behave differently, a summary of the conflicting theories that have been evolved to define gross taxable income, of their relevance and limitations, is in order.

II. TWO DIVERGING THEORIES

The proper definition of gross taxable income was, long ago, the subject matter of considerable debate and give rise to two competing theories. A considerable number of publications was devoted to it in Continental Europe, especially in Germany, during the latter part of the 19th century. In 1938, in the United States, Henry Simons canvassed most of the relevant German-language literature and added some valuable insights of his own. [3]

The two theories are known respectively as the "Source Theory" ("Quellentheorie) and the "Net Accretion Theory" ("Reinvermögenszugangstheorie"). In theoretical writings, nowadays, there is general consensus that only the net accretion theory provides adequate tax criteria. And, yet, we shall be led to discover that, in existing tax systems, the net accretion theory is far from being fully implemented — a fact which calls for explanation.

A. The source theory

The "source theory", which has been defended by Adolf Wagner amongst others, was described as follows by Fritz Neumark: "only those receipts should be viewed as components of (taxable) income which arise from a "source" whose permanence allows for the regular flow of the receipts". [4] The source theory, however, is not monolithic. Various scholars, especially among the early writers on the subject, postulated that the flow of receipts from a given permanent source should also be regular. As against such a restrictive version, the more widespread view, as represented in the citation from Neumark, posits that even irregular receipts are taxable, provided the source from which they originate has a permanent character. For example, to the novelist, the proceeds from a best-seller, while normally an exceptional event would then be included in gross taxable income, on account of the permanent availability of literary talent and the fact that literary output can be repeated ("Wiederholbarheit"). While the expression "source" is by no means perfectly clear, it is usually linked to the traditional categories in the functional distribution theory, i.e. land, capital, labour and entrepreneurship.

This source approach fundamentally contrasts yields to a permanent source, or, in other words, income to capital. Seltzer has noticed that this conception derives from the "harvest tradition" in agricultural societies, where land produces its fruits at regular intervals. [5] In that conception, the appreciation in the value of the capital itself, or, the so-called capital gains, should not be subjected to income tax. Not the value of the capital but its yield, not the appreciation of the tree but the value of the fruit is the proper object of taxation.

The non-taxability of non-recurrent receipts, such as lottery proceeds and more particularly of capital gains, that cannot be traced to one of the traditional permanent sources of income was objectionable to a great many scholars. Such gains do provide spendable income, indeed. Their irregular occurrence should not prevent taxability. Some ethical connotation is also involved. A person who realizes with no effort a substantial gain when selling land which he inherited twenty years ago and who has benefited from the increase in land value as a result of the suburbanization process should not be favored as against the salary earner. Such discrimination usually offends accepted feelings of equity.

B. The net accretion theory

In a topical article, in 1891, Georg von Schanz enunciated the "net accretion theory", by defining gross taxable income as follows: "hence, we include in income all net proceeds and benefits ("Nutzungen"), the money value of services rendered by third persons, all gifts, inheritances, legacies, lottery gains, payment of insurance capital and annuities, cyclical gains of whatever sort ("Konjunkturgewinne"), we deduct all interest liabilities and capital losses".

This definition proceeds in a casuistic manner, by way of itemizing a variety of taxable receipts, many of which would normally be disallowed under the source theory. Schanz wanted to convey a dual message. First, taxable gross income is a comprehensive concept. It includes capital gains and, more generally, irregular, "windfall" receipts. Besides, as a corollary to the taxability of capital gains, the statute should provide for the deductibility of losses on capital assets.

Subsequently, other scholars have attempted to reformulate Schanz' Reinvermögenstheorie in an analytically

more satisfactory fashion. *R.M. Haig*'s formulation (1921) has become widely quoted in the United States. Income is: "the increase or accretion of one's power to satisfy his wants in a given period in so far as that power consists of (a) money itself or, (b) anything susceptible of valuation in money terms". [6] In other words, receipts in kind should also be taxable. Besides, Haig stresses the fact that the addition to purchasing power, from whatever origin, is the relevant criterion.

Henry Simons defined personal (gross taxable) income as: "the algebraic sum of (i) the market value of rights exercised in consumption and (ii) the change in the value of the store of property rights between the beginning and end of the period in question" (p.50). Or, "in other words, it implies estimate of consumption and accumulation" (p. 48). In the same vein he writes: "the essential connotation of income, to repeat, is *gain* [Simon's italics] — gain to someone during a specified period and measured according to objective market standards" (p. 51). [7]

In our view, a more useful definition of the net accretion theory, which avoids some of the vague expressions in the citations above, is given by *John Due*. Gross taxable income contains three ingredients:

"(i) the total amount received from other persons during the period,
(ii) the value of consumption activity enjoyed by the person, which does not involve receipt or money or goods from other persons during the period,
(iii) the increase in the value of assets, held during the period". [8]

These components relate to areas in which the problems of defining gross taxable income have proven more stubborn. Due's first ingredient covers not only cash receipts but also *receipts in kind* in consideration of the services rendered by the taxpayer himself (labor input) or by his capital assets. Due's first sentence can also be interpreted as encompassing so-called *transfer receipts*, such as social security benefits, which are obtained without any *quid pro quo* from the taxpayer. Due's second category refers to so-called *imputed income*, whereby the taxpayer is both the producer and the consumer of a given commodity or service. By definition, no market transaction is thereby involved; yet, the "enjoyment" by the taxpayer amounts to the avoidance of an outlay which otherwise he would have to defray in order to purchase the commodity or service on the open market.

We shall briefly mention some of the difficult problems, both conceptually and in terms of implementation, that arise with respect to each of the above items. We focus primarily on capital gains, the area where the source and the net accretion theories basically diverge.

III. LIMITATIONS AND AMBIGUITIES OF THE NET ACCRETION THEORY

A. Income in kind

When remuneration for services rendered is paid for in kind, instead of cash, difficult evaluation problems arise. In given cases, one may wonder whether such receipts-in-kind should be taxed at all, even when one adopts the tenets of the accretion theory. Free luncheons, for example, should, in principle, be taxable. They add to real income of the employee, as they substitute for basic expenses which otherwise would have to be defrayed out of his own packet; they are an element of "indirect" salaries or wages. Already, the question arises whether they should be evaluated at cost to the employer or in terms of the probably higher sum which the employee would pay if he had to go to a restaurant. The problems become even less manageable when a business executive is entertaining his business contacts in the fanciest restaurant in town. Such "expense account" entertaining may be quite conducive to fruitful business contracts and results, and the executive may feel elated in having access, at no cost, to upper-class restaurants. Yet, he may also view the dinner-party as a tedious obligation and fear the damage to his liver. Should the price of the menu be included in his gross taxable income? Or should he be taxed only at the price of a more modest dinner which he would have ordered if he had not been "on duty" and which represents the cost-saving which the business dinner has made possible? Should the perquisite be taxed at all, as the cost is primarily incurred in the interest of the employer?

Similar examples could be construed almost *ad libitum* and have been described by some writers at length, and with obvious delight, indeed. Kleinwächter, for example, mentioned the Kaiser's Flügeladjudant, who accompanied his sovereign to the Opera but was allergic to music. [9] Such cases are picturesque but as, fortunately, they are unimportant in aggregate terms and even to the enjoyer-of-income-in-kind, they may be rightly overlooked by the legislator. Perfectionism would be self-defeating, anyhow.

Yet, even with due regard to the difficult valuation problems involved, a blanket exemption of income-in-kind, received in consideration for services rendered or commodities transferred to others, cannot possibly be rationalized. Such overall exemption would transgress the principles of both the source and net accretion theories. This can adequately be demonstrated by the two following cases. First, if the above-mentioned fringe-benefits to employees, and especially to executives, were not subject to taxation with the recipient and remained fully deductible with the company, tax-avoiding schemes of remuneration, with large fringe-benefits content, would be eagerly devised. Understandably, most countries have taken action to strictly control, taxwise, such benefits-in-kind. Second, in a great many de-

veloping countries, such as the heavily-populated Indian subcontinent, the (high) rents paid by the tenant tend to be discharged, to a large extent, in kind by way of sharing the crop with the landlord. Considering the highly unequal distribution of land and of incomes in many developing countries, the exemption of such income-in-kind would obviously be inequitable and remove a sizeable portion of the national income from the reach of taxation.

The arrangements in actual tax laws tend to be pragmatic, even at the risk of not conforming well to theoretical principles. In many countries, meals and other benefits granted to employees freely or at concessional prices tend to be exempted for the recipients and are even encouraged by affording some degree of deductibility for the company. In India, statutory provisions with respect to fringe benefits and other perquisites are quite elaborate, whereas in Mexico the same perquisites appear largely and explicitly to escape taxation.

B. Transfer incomes

Such incomes are here defined as those which are received by the taxpayer from other persons or through the government, with out any *quid pro quo*. They result from a secondary circuit of income distribution which somewhat alters the primary one, whereby the taxpayer receives income on account of his role as a producer. Two typical examples may be cited. Alimony payments are normally legally due by the divorced income-earner to his non-working spouse and the children in her custody. Various benefits that are meted out through more or less comprehensive (in terms of workers covered and types of benefits) social security systems have become quantitatively much more important.

In the case of alimony payments, purchasing power is transferred from the husband to the spouse and the latter's household. The compulsory nature of these payments and common sense would anyhow overrule any strict interpretation of the source theory whereby income would remain taxable when and where it originates in the primary production cycle, i.e. with the husband. Social security benefits, such as family cash subsidies, would also come, in principle, within the compass of gross taxable income as they are ingredients of indirect wages and salaries. According to the net accretion theory any reshuffling of primary income distribution patterns through secondary redistribution schemes should be acknowledged and income made taxable with the ultimate income recipient. In both cases, and under either theory, the husband, employer and employee, contributors to the transfer incomes would be entitled to deduct the sums paid or contributed from their gross income. [10]

Thus, on the level of basic tax principles, transfer payments should not create any major problem. Income should be taxed, and only once, with the income recipient. And yet, existing systems frequently exempt social security benefits, without disallowing the deductibility of the contributions made. In countries as diverse as the United States, Mexico and Colombia, for example, fairly whosesale exemptions of social security benefits exist.

Such exemptions may be rationalized by the social objectives they intend to foster and by the fact that, if the benefits were taxable, the government might have to compensate by raising the amount (before tax). In similar fashion, family cash subsidies in countries with low birth rates may be linked to demographic objectives. It is clear, however, that one item of purchasing power and of income is thus withdrawn from the gross income tax base. Besides, as global-type systems should rationally feature progressive rate scales and treat the household as the taxpaying unit, the exemption of, say, family allowances does entail some distortion in the tax liabilities of households with the same number of dependents but at different levels of total income, as the higher-income unit would benefit from a proportionately higher reduction in its tax liability.

C. Imputed income

The receipts comprised in Due's third category also accrue in kind. But imputed receipts raise an additional difficulty. They do not arise from a market transaction, at arm's length, between unrelated parties, but imply the production and the consumption of a commodity or a service by the taxpayer himself.

Tax legislators have, on the whole, restricted their claims to two fairly important items of imputed income. The first relates to the services which dwellings yield to the occupying owner. If he did not occupy his house, he would have to rent another house in order to meet the need for shelter; or he could have rented his house to a tenant. Obviously, any income tax should tax the (net) cash and income-in-kind from rented dwellings. Exemption of the services from owner-occupied dwellings does discriminate against tenants and in favor of occupying owners. Countries such as Belgium, Italy and Colombia do impose the imputed income from owner-occupied dwellings on the basis of a notional, rental value, which in principle is intended to approximate the (net) cash rents which owners obtain from dwellings of similar location and quality. A system of cadastral records becomes a prerequisite for an efficient implementation, but cadastral records are frequently deficient. In the United States and many other countries, the imputed rents remain tax exempt.

Another major item of imputed incomes consists of the agricultural products, particularly food, which are not marketed but are consumed on the farms themselves. In recent decades, in high-income countries such auto-consumption has tended to substantially decline. [11] In low-income countries, however, with a dominating agricultural sector, auto-consumption is relatively much more

---

10. Problems deriving from a time lag between the contributions made and the benefits enjoyed by the same person are ignored.

11. According to Department of Commerce estimates, the value of food and farm produce in the United States declined from 6.3 percent in 1950 to a mere 1.4 percent in 1970. See *Richard Goode*, "The Individual Income Tax", revised edition, The Brookings Institution, 1975, p. 142.

important. [12] Some countries do attempt to reach such income-in-kind albeit quite inadequately and through simple rules of thumb. The prevalence of low-income peasantry in developing countries, anyway, greatly reduces the wisdom of such an approach, as such income-earners should largely be left out of the reach of the income tax, both on equity and on administrative grounds.

The criteria that justify the taxability of imputed incomes emerge from the two previous examples. The income a person obtains from making available factors of production — land, a housing unit or his labor force — to somebody else is taxable, beyond any doubt. The commodities and services that accrue to the producer-consumer "in a closed circuit" should not escape taxation on account of their origin outside the framework of the (interpersonal) division of labor that characterizes modern society. As a matter of fact, the auto-consumption which such person enjoys allows him to economize on consumption outlays in the market.

But, according to the same logic, a great many items beyond the two above-mentioned cases would, in principle, have to be brought under the gross income concept, including the services which self-use of various consumer durables — such as cars, refrigerators — yields to its owner. Equally, the vegetables grown in one's garden add to the owner's income, when consumed. What about the flowers? They economize on purchases in the market. But perhaps the owner would not buy flowers, anyhow. And should the product of his gardening, practised as a hobby, outside his office hours, also be made subject to taxation? If the answer is yes, the (net) expenses which men economize by shaving themselves, instead of availing themselves of the services of the specialist, i.e. the barber, could also be held taxable. Along the same lines, the cost-saving which the wife's services allow to the household would also qualify for inclusion. For, as Vickrey notices "if two housewives were to do each other's work for pay, the income under present laws would be greater than if they each do their own work". [13]

In actual fact, existing tax laws do not extend the reach of the income tax to the types of imputed incomes mentioned in the preceding paragraph. The reasons are manifold and fairly obvious. First, the value of many items is comparatively small and would not be worth the substantial trouble which the assessment would involve. More importantly, one reaches areas of human activities in which the borderline between production and leisure-enjoyment becomes tenuous. At those outposts of the income concept, the inherent "welfare" connotations of income cannot be approached in easily quantifiable categories of physical output, but differences in psychic dispositions and the taxpayer's preferences between production and leisure would have to be taken into account. Such endeavors would engage the tax authorities in next to impossible evaluations which excessively intrude on privacy.

Anyhow, somewhere, and on pragmatic grounds, the boundaries of the taxable domain with respect to imputed goods and services would have to be drawn. And no clear-cut criteria would be available, as the definition of income itself, when extended as in the net accretion theory to the consumption of goods and services, remains uncertain and somewhat ambiguous — as economists readily admit. [14]

D. Capital gains

As already intimated, the main difference between the source and the net accretion theories relates to the taxability of capital gains. As the latter are non-recurrent and do not flow from a permanent source, they should not be subject to income taxation, according to the source theory, whereas they are rightly part of taxable income, on the premises of the net accretion theory. And yet, as documented in the Appendix, despite some discernible tendencies towards inclusion of capital gains in the income tax network, no country, to our knowledge, has succeeded in or even dared to fully implement the net accretion theory, which implies taxation at ordinary income tax rates of the full spectrum of capital assets.

The many reasons for the wide gap between theory and practice are more technical than conceptual. As a matter of fact, capital gains could be comprehensively assessed if each taxpayer were to keep a "balance sheet" of his assets. They would be listed and evaluated every year. The appreciation during the taxable year would constitute the total capital gain, after deducting any losses on capital assets. There would be serious evaluation problems, especially as regards assets that are not commonly brought to market, but some rules of thumb could conceivably be applied. This approach to capital gains accruing to the individual taxpayer would in essence be similar to the one commonly adopted in most countries to corporate bodies which maintain orderly balance sheets. Such enterprises lend themselves to the assessment of profit taxes on the basis of the changes in net wealth between two tax assessment dates, recorded in the balance sheets. The taxable profits, then, encompass both the ordinary profits and the capital gains on the assets used in the business unit. In fact, as shown in the Appendix, several countries proceed in that way. Capital gains are then a component of total income and are taxed on an accrual basis, i.e. imposition of the gains is not conditional upon actual realization — sale or exchange — of the asset.

Obliging individuals to maintain accounting records as to the value of a great many capital assets — such as household appliances, furniture, etc. — would be utterly unenforceable and politically unacceptable. Such an approach would also extend the reach of taxation to gains on assets that are not held for investment but that yield consumption services. Consequently, the taxation of

---

12. Household budget survey in Tanzania, carried out in 1969, found that about 40 percent of total income and 65 percent of food and drink was in-kind. See *Yukon Huang*, "Distribution of the Tax Burden in Tanzania", Economic Journal, 1969, I, p. 73-86.

13. *William Vickrey*, "Agenda for Progressive Taxation", The Ronald Press, New York, 1947.

14. See *Nicholas Kaldor*, "An Expenditure Tax", Allen & Unwin, 1955, p. 54-78.

capital gains as regards individuals tends to be restricted to a few, selected capital assets among which real estate and securities are by far the most prominent.

But, even then, the application of the accrual criterion cannot easily be implemented. First, as already indicated, the taxpayer would have to evaluate annually the taxable assets. While an easy task for securities listed on the stock exchange, such assessment would be based on less objective standards for assets which are not traded on open markets, such as real estate, with their greatly differentiated locational and other features.

Besides, accrued capital gains only produce cash when the capital assets are sold, i.e. realized. The need for liquidity to pay tax may therefore force the taxpayer to liquidate his assets prematurely and in less favorable circumstances. For those reasons, capital gains legislation tends to hit only realized capital assets — at least as regards individuals, not companies.

But adoption of the realization test, in turn, raises another thorny problem. Although the gain may have matured over a span of many years, the "bunching" of the gain in the year of realization entails heavy tax liabilities, when progressive rates apply. This drawback, however, could be alleviated or even eliminated by averaging schemes, which base tax liabilities on the average income over a number of years. [15]

Under inflationary conditions, nominal capital gains may be largely illusory. This may, however, be remedied, by an upward adjustment of the base, i.e. of the initial value of the capital asset by an appropriate index. But assets differ greatly in their ability to offset inflation through higher prices.

Transfer of ownership by way of inheritance raises a problem. If such a transfer is not deemed to be a realization, capital gains (some of them substantial, as they have matured during the life of the decedent) would be left untaxed. Actual income tax practice, however, generally forsakes taxing the gains at the time of death, as such property is normally subjected to death or inheritance taxes. The latter, however, are a species of wealth taxes whose base is the current value, not the appreciation in the value. Similar remarks apply to gifts of appreciated and taxable capital assets. [16]

To this incomplete list of the difficulties involved in the taxation of capital gains, various economic considerations should be added. However, the available empirical findings on the allegedly negative impact of the tax on such economic variables as the turnover rate of assets or risk-taking are controversial. [17]

In the circumstances, the finding, in countries where conscious attempts are made to impose capital gains, that the statutory provisions are very complex and that the actual arrangements differ greatly between countries should not come as a surprise. In the Appendix, the main features of actual tax regimes with respect to capital gains are recorded for a selected set of countries.

One should add that the revenue significance of capital gains taxation is usually very limited. In the U.S.A., in the 1950-1968 period, the yield from capital gains tax only averaged 5 percent of the proceeds from the individual income tax. [18] In France, the additional yield from capital gains taxation, in 1976, was officially reported as quite minor. The limited contribution to tax revenue also stems from the need to allow realised losses on capital assets to be deductible as an indispensable counterpart to the imposition of capital gains, if (interpersonal) equity is to be preserved.

And yet, the same considerations of equity provide a strong case for taxing capital gains as comprehensively as appears feasible. Otherwise, receipts are left untaxed which do provide the taxpayer with spending power and which are frequently obtained through a stroke of luck and/or with little effort. Such "unearned increments" should not receive preferential treatment. Besides, capital gains tend to be heavily concentrated in the higher income echelons, as evidenced by data on the United States and on Colombia. [19] Leaving them unscathed, taxwise, would undermine the intended vertical distribution of tax burdens, which a nominal scale of progressive rates obviously intends to achieve. Exemption of capital gains also allows the avoidance of taxes on distributed company profits. As a matter of fact, retained company profits tend to improve the market value of shares; upon the sale of the shares, the incremental value could then be realised, tax-free.

IV. DEFINITIONS OF GROSS TAXABLE INCOME AND TREATMENT OF CAPITAL GAINS IN ACTUAL INCOME TAX SYSTEMS

Amidst the thick forest of various statutory arrangements that are surveyed in the Appendix, it is not easy to discern the paths of more generally applicable principles or yardsticks. But the following findings appear to be well substantiated.

A. Definition of gross taxable income

None of the statutes surveyed, and indeed no other country, to our knowledge really adopts one of the academic definitions, discussed above. Two different for-

15. On problems and devices for averaging fluctuating incomes, see, among other sources, *R. Goode*, cit., p. 192-193 and a set of contributions in "Compendium of Papers on Broadening the Tax Base", submitted to the *Committee of Ways and Means*, U.S. Government Printing Office, 1959, Volume I, p. 579-678.

16. Perhaps the most ambitious proposals for a comprehensive imposition of capital gains were formulated by the so-called *Carter Commission in Canada* (1967). Realized capital gains would become taxable at ordinary income tax rates. Transfers at death or by way of gifts would be construed as realisations. Gift and estate taxes would be abolished. See, for a summary of the proposals, "Excerpts from the Report of the Royal Commission on Taxation", *Canadian Tax Journal* 1967 II. The proposals with respect to capital gains were not implemented by the Government.

17. For an appraisal of the empirical studies in the United States, see *Richard Goode*, "The Individual Income", cit., Ch. 8. See also, *Gary P. Gillum*, "Capital Gains — Perennial Subject for the Tax Reform Debate", Federal Reserve Bank of Philadelphia Business Review, September 1973, p. 3-11.

18. *R. Goode*, ibid., p. 187.

19. *R. Goode*, ibid., p. 188 and (with respect to shareholdings)

mulas appear to be in use. According to the first approach, which is adopted in the United States, a rather losse enumeration of taxable items, comprising a catch-all clause, is given. This allows a wide scope for income tax, but remains vague in some respects. The residual clause is intended to avoid any overtly restrictive interpretation of the realm of taxable receipts.

In another approach, gross income is defined as the sum total of various incomes, assessed in exhaustively listed categories, which may be called "heads" (India) or "schedules" (Great Britain). The connotation is that incomes which cannot be interpreted as belonging to one of the schedules are left untaxed. But the tax legislator has taken care to provide for a residual category, where specific items can be located. Yet, most of the countries surveyed have attempted to extend the reach of gross taxable income beyond the confines of the source theory proper, although the practical and conceptual difficulties, already mentioned, seriously constrain the implementation of the broader concept of income. In a way, the restriction of income taxation to specifically enumerated items can be viewed as a remnant of the schedular approach to income tax. However, as will be recalled at a somewhat later stage, a global tax base can only be construed by way of adding the different items of net income flowing to the same taxpayer.

One should not at all exaggerate the discrepency between the two approaches. The most important and traditional categories of receipts, such as wages, profits or rents, are unquestionably part of gross taxable income. When the second approach, i.e. the exhaustive itemization, is adopted, an extension of the objective reach of the income tax is easily achieved by way of specifically locating the corresponding item in a special category or schedule — as happened in Great Britain in recent years with respect to capital gains and lottery proceeds. And finally, for borderline cases, one must closely investigate how tax law and judiciary interpretation shape the tax treatment of a particular item.

B. Capital gains

The statutes, surveyed in the Appendix, also show a great variety in treatment, but some fairly general features or major alternatives nonetheless clearly emerge. Capital gains, when realized or recorded within a business unit, now appear to be taxable, although in many countries (among them, the United States) at a separate, preferential rate. As regards individuals, some countries (e.g. Belgium) do not have a generalized system of capital gains taxation. Elsewhere, as in the United States and the United Kingdom, a large set of private capital assets are subject to tax, but at rates — which considering the concentration of the capital gains in the higher income echelons — are usually concessional. Several countries attempt to distinguish speculative and investment gains: only the length of the asset-holding period appears to provide an operational criterion to distinguish between those two categories.

All in all, there appears to be a trend towards inclusion of capital gains, albeit in a haphazard fashion and at preferential rates. Such a differentiated statute significantly adds to the complexity of income tax legislation, the more that concessional treatment, and *a fortiori* exemption of capital gains, provides a strong inducement to clothe some transactions in the capital gains instead of the ordinary income category, particularly as the borderline between the two categories is rather blurred in some cases.

V. EXEMPTIONS FROM GROSS TAXABLE INCOME

For proper perspective, the steps undertaken, so far, in our analysis, should be recalled. Defining gross taxable income is the first, unavoidable task for the income tax draftsmen. Although fiscal economists have convincingly stated the case for a comprehensive concept of gross taxable income, it was found that the existing laws adopt an essentially pragmatic attitude. The combination of conceptual ambiguities, technical constraints and economic considerations results in a situation whereby several receipts that are conceivably part of gross taxable income are tacitly left untaxed — or, as in the case of capital gains, given special treatment.

Exemptions, as the term is usually understood in fiscal jargon, also refer to untaxed receipts. But the difference from the above untaxed items lies in the fact that exemptions represent items which the statute explicitly frees from the income tax, although they unquestionably qualify as gross income. Exemptions are also conventionally distinguished from deductions and allowances. The latter also result in amounts of income becoming freed from income tax, but they result from steps which reduce gross taxable to net taxable income.

Exemptions may be granted to specific items of receipts or to given sets of taxpayers. It would be of little relevance for our purposes to attempt a full listing of the large number of exemptions contained in the actual tax statutes of the countries covered in the Appendix. A few illustrations may be given. In many countries, interest from government bonds, or from specific issues or types of saving instruments, are exempted. As already mentioned, social security benefits also tend to be exempted, in a wholesale fashion. Some exemptions may be peculiar to given countries. In Colombia, for example, Catholic priests are exempted. A pseudo or partial exemption is granted in Mexico on profits from publishing books.

Exemptions should be based on solid arguments. They carry a cost, as they imply some distortion in vertical and horizontal tax burdens. Hence, a conflict between different objectives arises and a trade-off becomes unavoidable. The need to promote savings and real capital accumulation, on the one hand, and equity, on the other hand, provides a well-known and frequent example. If equity is based on the principle of ability-to-pay, it follows that the progressive tax rates should be administered to the taxpayer's total (net) taxable in-

---

Andrew C. Quale, jr., "The Capital Gains Tax" in Fiscal Reform for Colombia. Final Report and Staff Papers of the Colombian Commissions on Tax Report, Harvard Law School, International Tax Program 1973, p. 349-86.

come. If receipts are explicitly exempted, the theoretically valid perimeter of taxable receipts is narrowed. Given the concentration of income with well-to-do taxpayers, exemptions normally result in proportionally larger tax reductions to higher than to lower income classes.

VI. GROSS TAXABLE INCOME DEFINITIONS AND THE SCHEDULAR OR GLOBAL PROTOTYPES

We may now attempt to answer the question whether the adoption of a schedular or global approach to the design of an income tax system, also calls for a specific definition of gross taxable income. More specifically, should one conclude that the source theory conforms to the schedular approach, whereas the net accretion theory meets the conformity test with respect to the global system? The following remarks, in our view, allow a qualified answer.

First and foremost, the taxpayer's total income, which the modern income tax ought to reach, results from the aggregation of various (partial) (net) incomes, in the event a given taxpaying unit obtains income from various "sources". The different taxable receipts or the partial incomes, not total income, are originally given: those items of income are prior, both logically and chronologically, to the taxpayer's aggregate income. Furthermore, each of those taxable receipts displays some specific economic features (e.g. profits are a residual, calculated by subtracting production costs from gross receipts) and assessment possibilities or difficulties (wages and dividends, for example, can be taxed at source, profits not). Hence, unavoidably, even in a global-type system, the tax statute contains rules differentiated between types of income.

The difference between the schedular and the global system is, so to say, of a "second order" nature. In the words of a previous article:

> ". . . Hence, there exists a *first-stage concordance* between schedular and global income tax systems, in the sense that both require the "analysis" or identification of (partial) incomes, that may accrue to a given taxpayer. Once those partial incomes have been identified, however, the two income tax systems part ways and display a *second stage dissimilarity*. According to what we might call the "schedular principle" — or, at the cost of a neologism, the "compartmentalization principle" — each of the various types of income is assessed separately and subjected to the rate set in the corresponding schedule. When the "global" or, "aggregation-principle" prevails, the assessment proceeds with a "synthesis" of the primary schedular incomes and subjects their sum total to a single progressive rate scheme." [20]

It follows that, in essence, there is no foundation in the claim that a global system necessarily postulates the net accretion theory and the taxation of capital gains, whereas the more restrictive source theory would be inherent in the schedular system. As some of the examples in the Appendix suggest, even at a fairly early stage some schedular systems provided for the taxation of capital gains, whereas several global systems refrained for a long time from taxing capital gains. Not the width of the income concept, i.e. the number of taxable receipts, but whether those incomes are taxed separately or aggregately determines the schedular or global character of an income tax system.

And yet, one cannot deny all affinity between the two prototypes of income taxation and the two competing concepts of gross taxable income. The aggregation of (partial) incomes under the global tax intends subjecting total (net) taxable income to a progressive tax. Both this aggregation and the progressive rates are instruments to distribute interpersonal tax burdens, vertically and horizontally, according to the ability-to-pay principle. All incomes, all the purchasing power flowing to the taxpayer, contribute to that ability-to-pay (taxes). Hence, the global-type system logically asks for as comprehensive a gross income concept as feasible. Hence, the taxation of capital gains is an inherent ingredient of a global prototype. As indicated in Sec. III, however, practical constraints and conceptual ambiguities do not allow the ful implementation of the comprehensive income concept, à la *Simons*, not even as regards capital gains. In many global systems the imposition of capital gains at preferential rates, in fact, introduces a schedular element (i.e. a separate rate for a given income category) in an otherwise global structure.

There also exists an affinity, to a degree, between a schedular frame and the source definition of income. Admittedly a schedular system would still retain the same basic form, if an additional schedule, on capital gains, were added. In some developing countries today, and at earlier times in some developed countries, some types of capital gains are or were brought within a schedular income tax system. But the schedular prototype is quite compatible with a more restrictive concept of taxable income. In a schedular system, as emphasized at length by the earlier German fiscal theorists, the emphasis is on the tax object and on the moment income is produced. Schedular taxes, according to those authors, are close to, or even coterminous with, "taxes on produce" (Ertragsteuern) which do not take into account the personal circumstances of the taxpayer. [21] Equally, in the source theory, the "objective" side of taxation is also stressed. As mentioned with respect to imputed income, attention is centered on the production of the goods and services that give rise to income.

When looking at existing tax systems, one notices that schedular taxes (despite the possible adjunction of a complementary global-type income tax) did adhere mainly to the source theory. This coincidence is not without significance. In our view, however, the link is not a direct one but should be related to a less advanced

---

20. *Sylvain R.F. Plasschaert*, ibid., p. 102.

21. The German authors have mainly approached this issue within a stage theory of fiscal development. The use of the term "Ertragsteuern" is not monolithic. For example, *Fritz Neumark*, in his writings, tends to view schedular taxes as Ertragsteuern, not as genuine income taxes.

level of development. It was mentioned earlier that the source theory seems well suited, intellectually and operationally, to a predominantly agricultural society, in which, apart from rural and urban real estate, there are fewer types of other capital assets. On the basis of the historical record, schedular prototypes appear to be typical for countries at less advanced levels of development, as suggested by the shift in quite a few countries in recent years from a schedular-mixed to a global prototype. [22] But it would be misleading to carry this argument too far. The prevalence of the schedular pattern cannot only be explained by "objective" economic variables, but also owes much to "cultural" factors. The schedular prototype is typically a Latin phenomenon, both in Southern Europe and in those (present-day) developing countries in which the administrative and fiscal set-up was profoundly shaped by French and Spanish influences.

VII. THE DESIGN OF GROSS TAXABLE INCOME IN DEVELOPING COUNTRIES

The question here is whether on the positive level there appears to be a systematic difference in the tax arrangements of developing as compared to highly-industrialized countries with respect to the definition of income, and whether, in normative terms, the developing countries should be advised to adhere to a specific concept of taxable gross income. We may restrict the discussion to the main issue that emerges from the previous discussion, i.e. the taxability of capital gains.

The Appendix contains some indications of the actual statutory arrangements in a few developing countries, but that sample is too small to draw solid conclusions. Fortunately, a 1968 article has covered the capital gains matter in greater detail and on the basis of the experience of about 20 developing countries. [23]

Typically, even in developing countries with a global system the taxation of capital gains — other than those on business assets, which are normally taxed as ordinary corporate profits — tends to be restricted mainly to gains on real estate; in some cases, only urban real estate is encompassed. Only in a few countries, as in India, are gains on the realization of securities made taxable.

This almost exclusive emphasis on real estate is quite understandable. In less industrialized societies, real estate is the main category of wealth, as evidenced by some statistical data. [24] Its yield may be fairly high, particularly in rapidly expanding cities or where the cultivable land/population ratio is low. Real estate ownership is highly concentrated in upper-income classes. In fact, the implementation of an effective land reform is held by several development economists as a deterrent not only of a more equitable distribution of wealth and income but of economic development itself. [25] Land ownership tends to bestow prestige and political power. Real estate also functions as a preferred conduit for speculation and hence for "unearned increments". Investments in real estate, except in agricultural land, are of low social priority. For all those reasons, a strong theoretical case exists for taxing capital gains on real estate thus inhibiting, hopefully, the allocation of resources in such assets. A fair number of developing countries appear to have taken action, to this effect, although any capital gains taxation should be carefully dovetailed with other forms of taxation on real estate.

The scope for extending taxation to gains on other capital assets appears much more limited on practical grounds. As in developed countries, capital gains on personal assets, even if the latter (such as gold and jewelry) tie up investments of low priority, cannot easily be detected. Security markets are thin for many reasons. The number of actual and potential shareholders is naturally limited to a small group of well-to-do people. Most indigenous companies are of the closely-held, family type, in which the transfer of ownership rights does not occur frequently or through open, stock-exchange mechanisms. The shares of local subsidiaries of foreign multinational companies tend to be held, wholly or predominantly, by the foreign parent company. The prevalence of bearer shares, especially in Latin America, renders the imposition of stock exchange transactions less practicable and opens wide avenues for evasion.

Another argument supports the view that, in developing countries, and extension of the capital gains taxation beyond the case of real estate should only be attempted after careful consideration. The capital gains tax is a sophisticated piece of fiscal engineering. It is also a major source of complexity in the tax statutes; preferential schemes induce the search for legal arrangements that qualify deals as a capital transaction and not as income. Capital gains taxation, therefore, puts a comparatively heavy burden on scarce administrative resources, which could possibly be better allocated to strengthen the implementation of the other existing segments of the income tax law.

VIII. SUMMARY AND CONCLUSIONS

The following major conclusions can be reported as emerging from our analysis:

(a) In terms of modern tax principles, and more particularly of the ability-to-pay principle, the comprehensive definition of taxable income, known as the "net accretion" theory — which implies the inclusion of capital gains — is superior to the more restrictive "source" definition of income.
(b) Adherence to the extensive income concept is not postulated by the choice of the global technique to tax income — as against the schedular approach — although a global prototype calls for as extensive an income concept as feasible.

23. *Juanita D. Amatong*, "Taxation of Capital Gains in Developing Countries", IMF Staff Papers, July 1968, p. 344-384. We shall draw heavily on this paper and on *Quale*, cit. Quale, however, advocates a fairly comprehensive capital gains tax.
24. *Amatong*, cit., p. 346-348.
25. See, for example, various contributions of *Irma Ade[illegible]an.*

(c) Conceptual ambiguities (with respect to imputed income) and technical constraints (more particularly in the capital gains area), however, result in a wide gap between actual arrangements and the extensive, net accretion theory.
(d) On the whole, there appears to be some tendency towards including capital gains in taxable income. The treatment of capital gains, however, is usually very complex and restrictive, both in terms of its coverage and of the applicable rates.
(e) It cannot be claimed that the restrictive income concept is a prerequisite for a schedular prototype of income taxation, and that the extensive net accretion income concept is essential to the global prototype. But a degree of afffinity between the above pairs cannot be denied, both theoretically and as suggested by historical experience.
(f) Specific economic features and the need to use scarce tax-administrative resources efficiently reduce the scope for taxing capital gains in developing countries. Several among them, however, have taken more or less successful steps to tackle the most prevalent type of capital gains, namely on real estate — assets with low social priority.

Appendix

RELEVANT FEATURES OF THE DEFINITION OF GROSS INCOME IN SELECTED COUNTRIES

1. The purpose here consists in outlining the main features of the statutory provisions in a selected group of countries as to the treatment of taxable income — disregarding exemptions. Three aspects are examined. First, we indicate whether the system can be labeled as schedular, global or mixed. Second, we investigate whether the statute — and/or, to the extent the available materials allow a clear statement, the "living practice" of income tax, as resulting from the interpretation by the tax authorities and the Judiciary — contains an explicit or implicit definition of gross taxable income. Finally, the main lines of the treatment of capital gains are mentioned. Again, no detailed description is intended for use by tax practitioners but only those features of the income tax structure that are of relevance to the fiscal economist are mentioned.

2. It is appropriate to start with *Great Britain*, the country where a modern income tax system was first introduced (1799-83). Scholars are generally agreed that the system evolved from an originally schedular pattern to a global system which, for purposes of applying the tax rates, views all types of income aggregately.

— "The term 'income' is nowhere defined in the statute and is but loosely defined in the court decisions. Instead, the law lists in so-called 'Schedules' certain described types of income (interests, rents, annuities, etc.) and income from certain designated sources (trades, professions, employments, securities, etc.) which are subject to tax. Thus, not all benefits which might be considered as income in a generic sense are subject to tax but only the types of income set out in the schedules" (World Tax Series, p. 37). The Royal Commission which investigated in depth the income tax system during the early fifties thought that: '. . . no real advantage could possibly result from the introduction of a general definition that had to cover so multifarious a subject as taxable income" and stuck to the schedular approach for defining taxable income (Royal Commission, p. 7). Since 1803, taxable income has been divided into five Schedules, some of them further subdivided in "Cases". As of 1975/76, not less than 16 such categories can be distinguished. One of them is of a residual nature and comprises incomes not enumerated in other Schedules.

— The income tax system as strictly defined did not provide for the taxation of capital gains. In other words, the British system adhered to the source theory, even with respect to fixed assets used in the business. In 1962, short-term capital gains were made taxable and located in a new "case". The speculative character of transactions in capital gains was derived from the short span of time between acquisition and realization. After this attempt at taxing capital gains quickly proved to be a failure, a full-fledged capital gains tax was introduced in 1965. Although legally distinct, capital gains tax can, in terms of substance, be viewed as integrated with the income tax system. Some exemptions notwithstanding (as on small-fry gains), the sweep of the new tax extends to a comprehensive set of capital assets. A flat rate applies to gains realized by individuals. A similar treatment is secured for companies, as only a given fraction of the capital gains base is subject to the company tax (flat) rate. As of 1971/72, the distinction between the short-term and long-term capital gains of individuals was discontinued.

3. From its inception (1913), the Federal income tax system in the *United States* was undoubtedly of a global nature.

— "The U.S. Statutes do not attempt a general definition of income; they rely mainly on the enumeration of items to be included, excluded or deducted. However,

the statutory listing is not exhaustive"! The Internal Revenue Code, quoting the language of the Sixteenth Amendment, refers "to income from whatever source derived and states that taxable income includes 'but (is) not limited to' the enumerated items. The limits of the income concept have to be determined by administrators and the courts on a case-by-case basis. Although the courts have tended to become more permissive and to allow a broadening of the concept, many important items that qualify as realized income are omitted from the tax base in the United States" (Richard Goode, p. 14).

— The capital gains statute has undergone several profound legislative changes and is still the subject matter of much controversy. A broad range of capital assets are subject to tax; among them even some "pseudo" capital gains, such as income from cutting or disposal of timber. There are many special rules and exemptions, e.g. with regard to the taxpayer's principal residence. Short-term gains viewed as speculative are added to ordinary income. Only half of the long-term gains of individuals is taxable or total capital gains are subjected to a 25 percent rate — whichever is lower. The preferential treatment of capital gains also extends to corporations, although the techniques are somewhat different.

4. In *Belgium*, the mixed system, with a distinct preponderance of the schedular layer that had been introduced in 1919, was replaced by a global-type income tax in 1963. As several deductions which elsewhere would be applied to global income are linked to one of the Schedules, the global structure is somewhat "impure".

— The general statutory definition of gross income holds that the taxable income is the sum of the net incomes, assessed in four categories. Such a definition, however, is not very helpful, as it does not state how the income items in the various Schedules ought to be defined. There is a category of "miscellaneous incomes" but the latter are exhaustively enumerated. Except for a special tax on gains from unbuilt land, no capital gains tax applies to individuals. Gains on corporate assets were subjected to tax in 1936, after the judiciary had been wavering between the source and net accretion theories. There are some exceptions to the general rule.

5. *Italy* effectuated the change-over from a mixed system (that originated when a global "complementary tax" in 1925 was added to a pre-existing set of schedular taxes) to a global-type tax in 1974. Taxable income is now enumerated in five categories. The last one lists specified "miscellaneous income".

– Under the previous mixed system the source theory was adhered to, in principle; yet, it became largely breached by the judiciary as speculative gains were considered taxable income. The speculative nature had to be inferred from the intentions of the taxpayer — a test difficult to administer. In 1956, capital gains in the corporate field were made taxable. Under the new 1974 legislation, as regards individuals, certain capital gains, considered to be of a speculative nature on account of the type of asset (basically real estate or art objects) or of the short holding period, are subjected to income taxation, as a specified item in the category of "miscellaneous income". The new law, contrary to the previous one, contains a general statement on taxable gross income. The possession of income, in cash or in kind, originating from whatever source, regularly or occasionally, gives rise to taxability. This implies clearly an explicit conversion to the net accretion theory. Total gross income, however, is the sum of the net incomes assessed in the exhaustively listed categories.

6. Turning now to developing countries, *Colombia*, which received a more than proportionate share of advice on taxation reforms by high-level missions, provides a rather interesting case. Colombia was apparently the first country in the Western Hemisphere to follow Great Britain's lead. It introduced a short-lived income tax, of a schedular-type, in 1821. In 1918, the income tax system was resurrected, again in schedular form. In 1920, upon the recommendations of the first Kemmener mission, the schedular system was replaced by a global one. A major, and badly overdue, overhaul of the system, in 1960, maintained the global set-up. Administratively and legally, however, two complementary taxes, respectively on excess profits and on net wealth, are part and parcel of a single income tax.

— "The fundamental criterion for income under the 1960 Income Tax Law is enrichment. Anything that adds to the taxpayer's wealth (and hence to his capacity to pay) is income, unless expressly excluded or exempted by law. Hence, gross income comprises all receipts, ordinary and extraordinary. . ." (World Tax Series, p. 115).

— The actual treatment of capital gains, however, falls short of the wide sweep of the above enrichment concept, rooted in an equivalent expression of the net accretion theory. Gains on business assets are part of ordinary taxable profits. Individuals are only taxable on real estate capital gains, with the taxable gains progressively being scaled down as the holding period lengthens. Securities held by individuals are exempted.

7. In 1860 *India* instituted income tax legislation which was structurally similar to the (then existing) British system. It was repealed in 1865. A general income tax was introduced in 1886 and has been maintained since. Graduated rates were introduced only in 1916. One peculiarity in India is that the Constitution vests the right to tax (agricultural) incomes with the States. Thus, the global income tax, at the Center, does not reach agricultural income. In 1973/74, a measure was introduced to partially remedy this dichotomy. Henceforth, the Center will notionally include agricultural incomes in the tax base for purposes of calculating the global tax liability.

— Although the Center's income tax relates to total income "from whatever source" derived, the term "income", as such, has not been defined. Receipts are only taxable when they fall within one of the six "heads" into which taxable income has been divided. Casual and non-recurring receipts are also interpreted as non-taxable, although in 1972 gambling and lottery gains were specifically brought under the tax law. It follows that the "source theory" has a strong impact in shaping actual income tax practice and in restricting somewhat the reach of the tax. One of the six heads of the income tax

system relates to capital gains. Short-term gains are consolidated with ordinary income (individuals) and profits (companies). Longer-term gains are taxed at a special rate which is clearly concessional for individuals but much less for companies.

8. For the last two developing countries in this survey, the available materials do not afford as much detail as for the previous countries.

— In *Mexico*, a schedular system with seven schedules was introduced in 1925. This pattern remained basically unchanged until 1961 when, after an abortive attempt in 1953, a global tax was super-imposed on taxpayers with comparatively high total income, provided such total income derived from more than one schedule. In 1964, the mixed system was largely abandoned and replaced by a structurally hybrid system. Lower income recipients are subject to one or two schedular taxes, those on labor incomes and on capital incomes. If total income exceeds a given amount, the tax on global income applies. Thus, unlike the usual mixed system in which the higher income is subject to both the complementary and the schedular taxes, in Mexico the taxpayer only owes the tax on global income and the schedular taxes are reserved to lower income taxpayers.

— Until 1971, gains on corporate assets were taxed, separately, at a special rate. Since 1971, they are part of ordinary profits. Individuals are subject to a tax on gains on urban real estate.

9. In the *Sudan*, the system is of schedular type, in the sense that three categories of income are distinguished, (a) business profits, (b) land rent income and (c) personal income, i.e. income from dependent and independent labor, respectively. There are — slightly different — progressive rate scales for the first two classes, and also for the third one. In other words, each schedule is taxed separately. There is no global-type complementary tax. Capital gains are apparently not subject to tax.

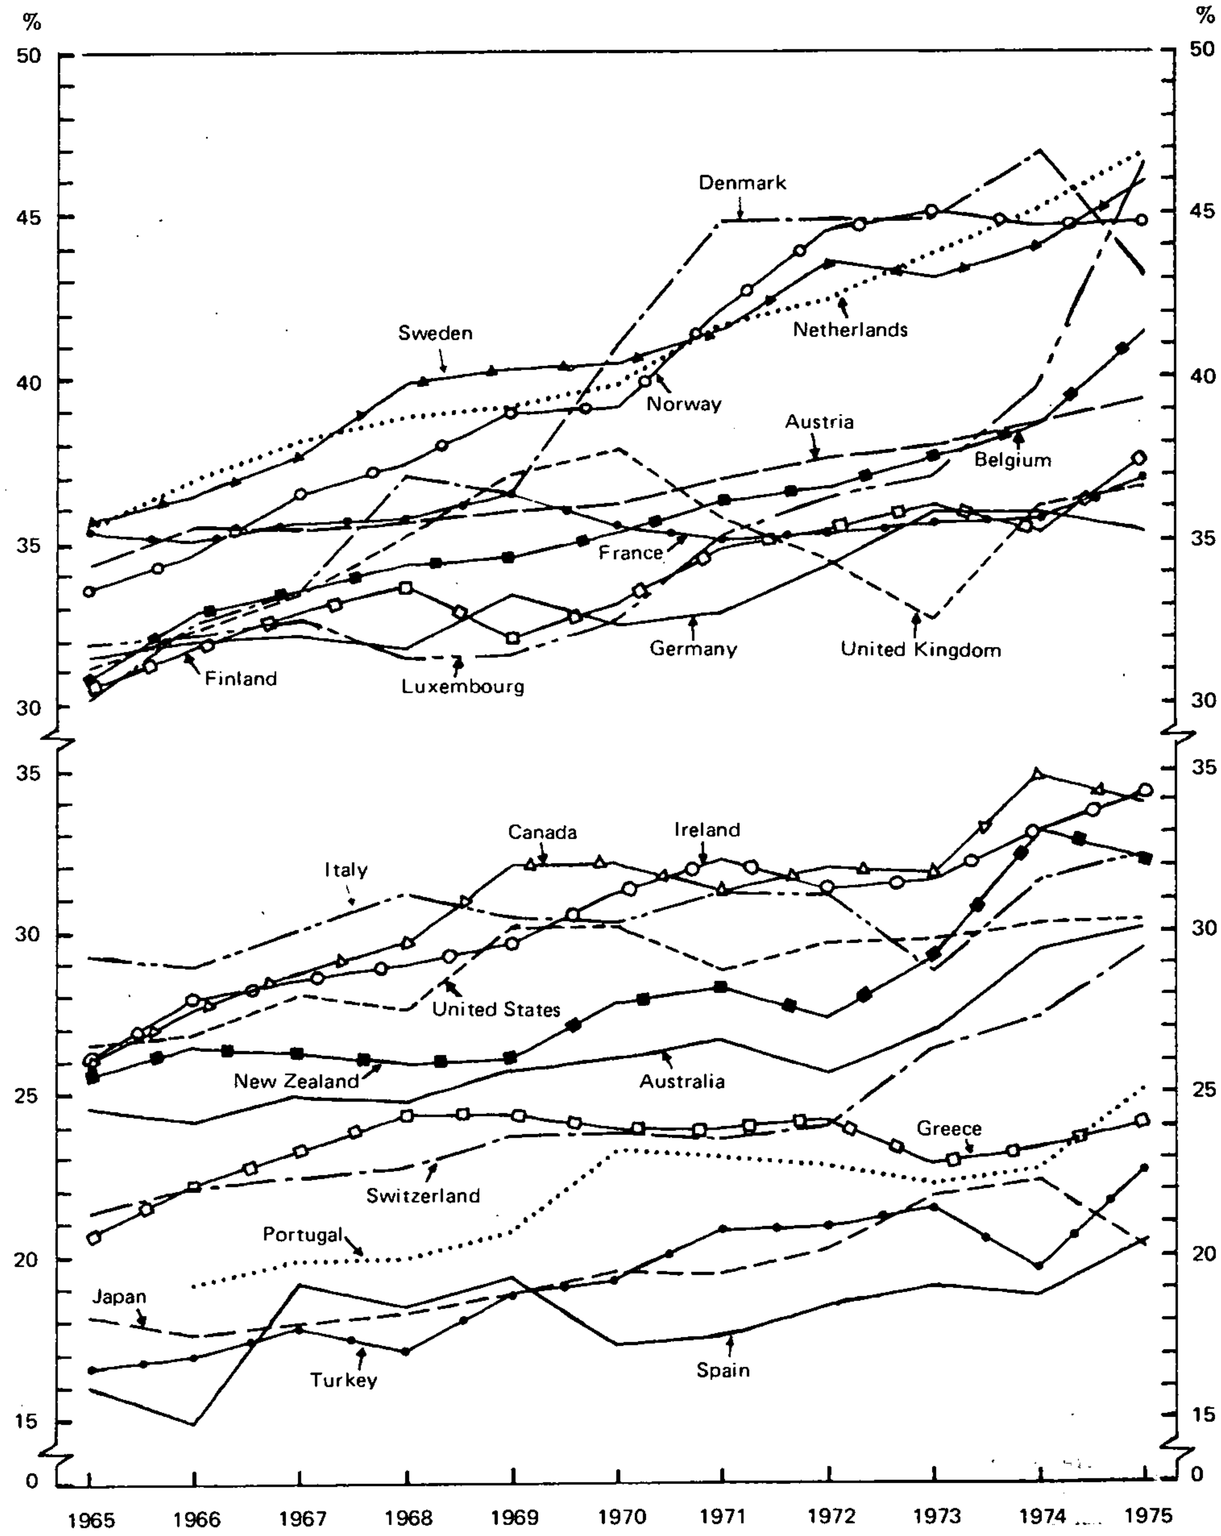
Tax Levels and Structures in OECD Member Countries*

The OECD has just published its annual statistical bulletin on tax levels and structures in OECD Member countries. [1] The bulletin contains the most comprehensive information that is at present available on an internationally comparable basis, concerning the amounts of receipts collected by OECD Member countries and the varying ways in which these receipts are raised.



The 35 comparative tables contained in the report, as well as the numerous country tables, show how countries differ in the proportion of their Gross Domestic Product taken in taxes and the different reliance that they place on the various kinds of taxes: income taxes, social security contributions, consumption taxes, etc. The commentary which accompanies the tables draws attention to how the level and composition of tax revenues have changed between 1965 and 1975. In all countries the ratio of tax-to-GDP has increased during this period and in the Nordic countries, Belgium, Luxembourg and the Netherlands, this increase has been very large. Most countries have tended to place more reliance on personal income taxes and/or social security contributions as well as value added taxes, while corporation taxes, property taxes and taxes on tobacco and alcoholic drinks have somewhat declined.

A special feature of this edition is that for the first time, provisional estimates for the main categories of tax for the previous calendar year (in this case 1976) have been provided for most OECD countries. [2] Even though these estimates are subject to revision, and for this reason are reproduced in an annex in order not to confuse them

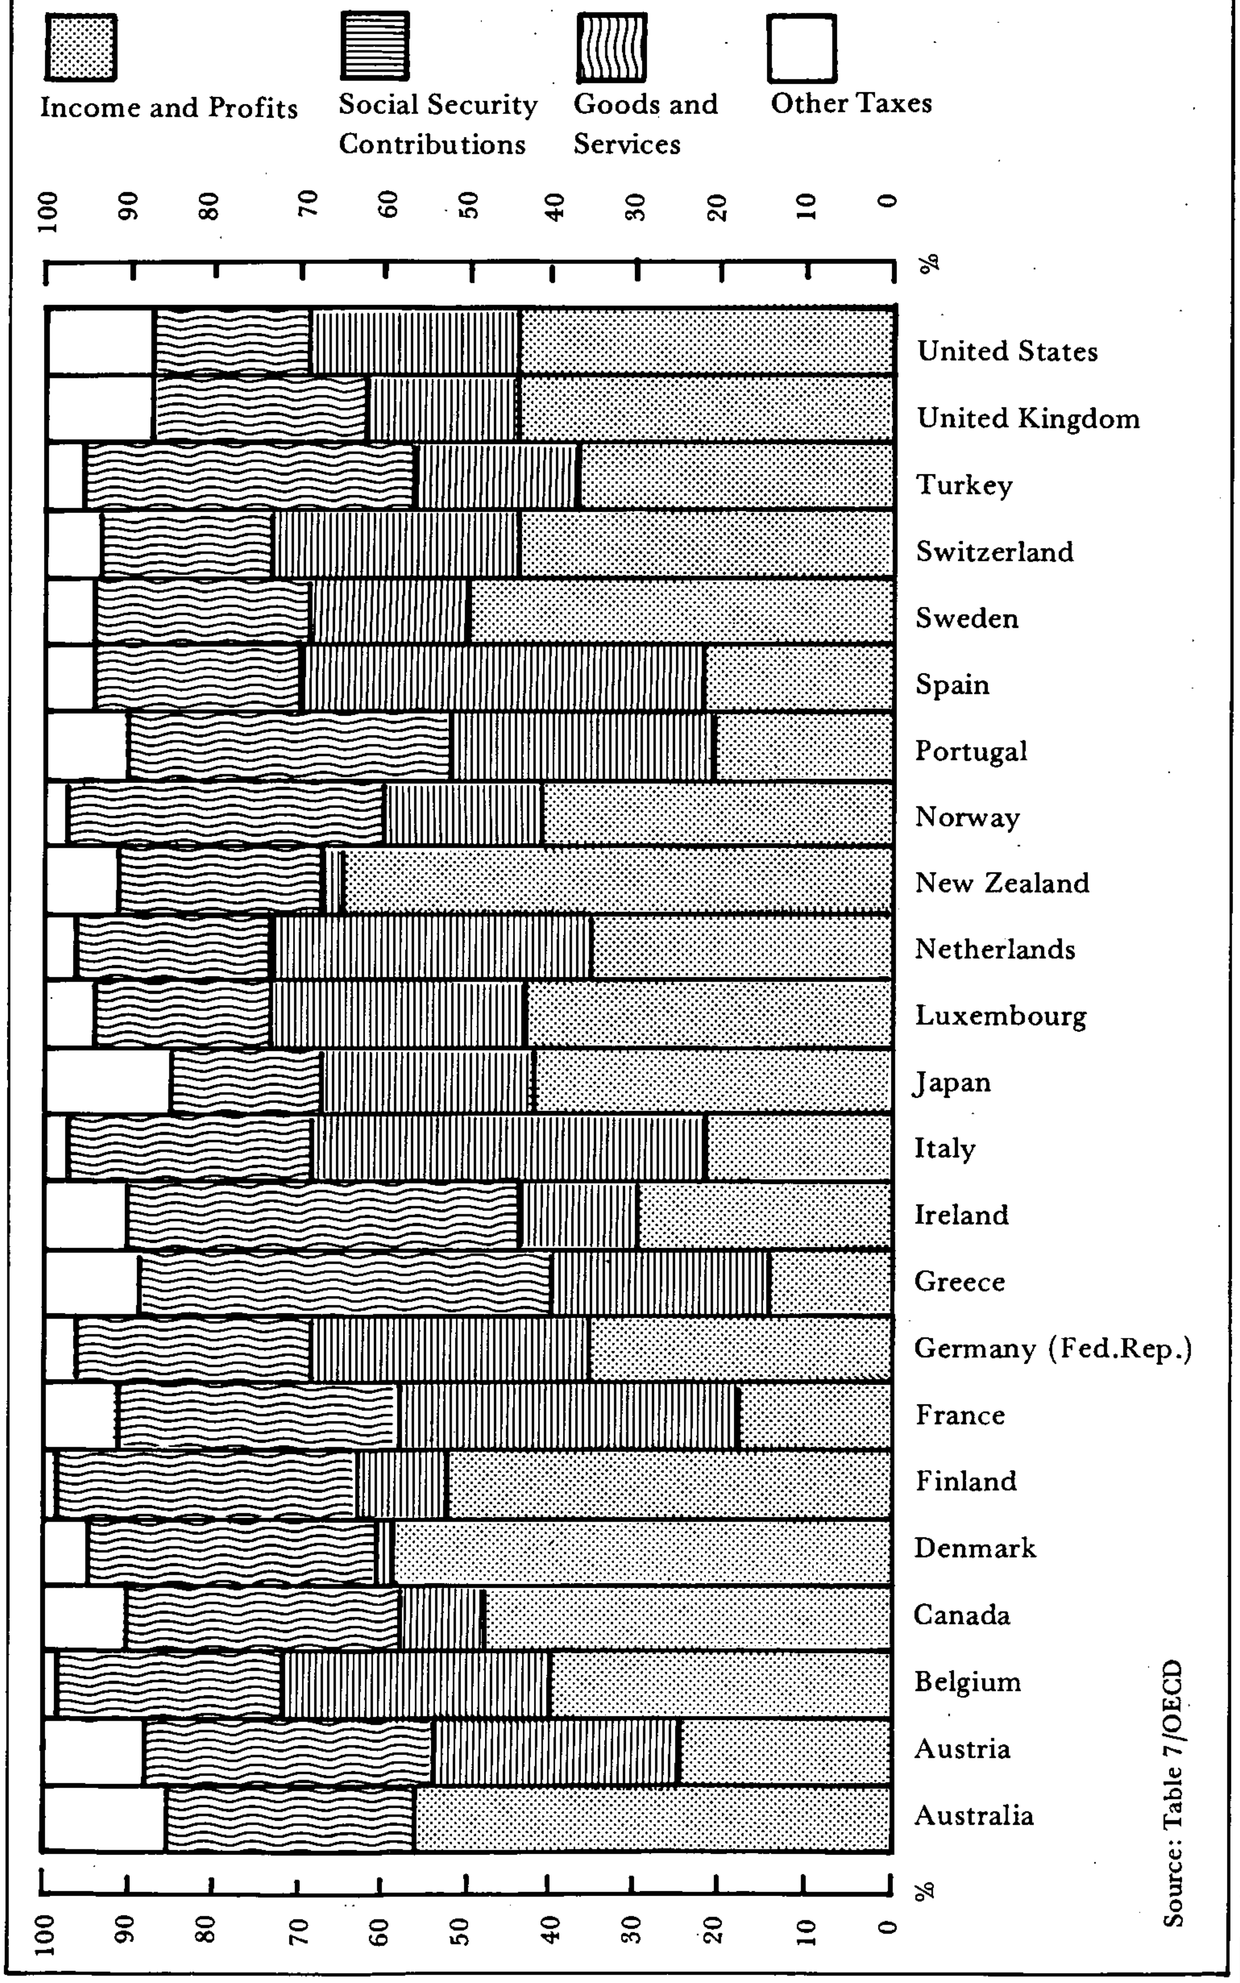
Proceeds from taxes and social security contributions as a percentage of the gross national product (1965-1975)

with the more definitive data in the main body of the publication, some interesting tentative results emerge as to what has been happening to tax levels and structures in the most recent period.

In Finland, France, Greece, Ireland and Sweden, there appears to have been a large increase in the tax-to-GDP ratio between 1975 and 1976. This contrasts with the situation in Austria, Belgium, Netherlands and the United States, where this ratio declined somewhat. In the remaining countries for which information is available (Canada, Germany, Japan, Luxembourg, Norway, Switzerland and the United Kingdom), there was a small increase in this ratio. These differences may to some extent reflect short term economic policy changes and some of them may indeed disappear when the data are eventually revised. Countries' relative reliance on the three main groups of taxes — taxes on income and profits, social security contributions and taxes on goods and services — has slightly altered, the general tendency appearing to be to place somewhat greater emphasis on social security contributions, in comparison with taxes on goods and services. Personal income taxes continue to be the most important source of revenue for most countries.

Another feature of this year's edition is the inclusion of data on the allocation of tax revenues by levels of government during 1973 and 1974. The report highlights the wide differences in the proportion of tax revenues accruing to each level of government and the vaying methods that are used to finance local government. The definitions used in each country when making the breakdown should be carefully noted.

A table attached to this press release compares the total taxes in OECD Member countries, as a ratio of GDP, in 1975 and a graph indicates how this ratio has changed since 1965. A second graph illustrates the structure of government tax receipts.



Review copies of the report may be obtained from the OECD News Division, 2 rue André Pascal, 75775 Paris Cedex 16 (Tel: 524 80 89).

COUNTRY BY COUNTRY SURVEY OF LOOSE-LEAF PUBLICATIONS . . .

U.S.A.

FEDERAL TAX GUIDE

Prentice-Hall, Inc., Englewood Cliffs, NJ 07632.
Supplemented: monthly.

Loose-leaf publication consisting of four volumes designed to provide information on the federal income tax code. The text of the Internal Revenue Code and the income tax regulations cover three volumes. Explanation, current reports on changes and index comprise another volume. Supplements update the material.

FEDERAL TAX GUIDE REPORTS

Commerce Clearing House, Inc., 4025 W. Peterson Av., Chicago, Illinois 60646.
Supplemented: weekly.

Annual loose-leaf publication consisting of four volumes comprising information on the federal income tax code. The text of the Internal Revenue Code and the income tax regulations cover three volumes. Supplements update the material. Explanation, current reports on new developments and index comprise the fourth volume, which is completely renewed every year.

INCOME TAXATION OF FOREIGN RELATED TRANSACTIONS

By Rufus v. Thülen Rhoades.
Matthew Bender & Co., Inc., 235 East 45th Street, New York, NY 10017.
Supplemented: twice a year.

Loose-leaf publication in two volumes comprising basic text on aspects of U.S. taxation of income earned or invested by U.S. citizens or businesses abroad. Discussed are topics such as Western Hemisphere Trade Corporations; DISC; Subpart F-controlled foreign corporations; foreign personal holding companies; the rules for when to withhold payments made to aliens; foreign tax credits.

STATE TAX GUIDE

All States.
Commerce Clearing House, Inc., 4025 W. Peterson Av., Chicago, Illinois 60646.
Supplemented: twice a month.

Loose-leaf publication in one volume comprising summaries and outlines of state tax statutes from each state. Consideration is given to personal income tax, corporate income tax, property taxes, commerce fees, alcoholic beverage taxes, sales taxes, gasoline, motor fuel taxes, etc.

TAX GUIDE TO INTERNATIONAL OPERATIONS

By Steven Auderieth and Elmer M. Pergament.
Panel Publishers, Inc., 45 Glen Cove Road, Greenvale, N.Y. 11548.
Supplemented: twice a month.

Loose-leaf publication primarily focussing on basic U.S. taxation on international income operations. The summary of contents includes such topics as foreign tax credit; employment of U.S. citizens abroad; foreign government tax incentives; operating internationally through a foreign branch; a foreign corporation; a special type of foreign corporation; a special type of domestic corporation, operating internationally through licensing arrangements, etc.

TAX IDEAS — REPORT BULLETIN

Prentice-Hall, Inc., Englewood Cliffs, NJ 07632.
Supplemented: regularly.

Loose-leaf publication in two volumes comprising tax savings ideas compiled by the staff of Prentice-Hall and articles contributed by other experts in the field of taxation.

TAX TREATIES

Commerce Clearing House, Inc., 4025 W. Peterson Av., Chicago, Illinois 60646.
Supplemented: monthly.

Loose-leaf publication in two volumes comprising full official text of every treaty, supplementary treaty, or protocol relating to income taxes and estate and gift taxes. Official documents are appended such as the Treasury Department Technical Explanation to the convention and Report of the Department of State on the relevant convention.

TAX TREATIES

Prentice-Hall, Inc., Englewood Cliffs, NJ 07632.
Supplemented: regularly.

Loose-leaf publication reproducing the full official text of every treaty, supplementary treaty, or protocol relating to income taxes and estate and gift taxes. Model treaties are appended.
The monthly REPORT BULLETIN analyses current treaties, decisions and rulings while CURRENT MATTER contains the complete texts of recent decisions and rulings and provides the latest judicial and official ruling on tax treaties.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Prentice-Hall, Inc., Englewood Cliffs, NJ 07632.
Supplemented: twice a month.

Loose-leaf publication comprising articles by experts in the field of taxation of international operations for all firms, individuals and their tax advisers engaged in foreign operations, as well as those considering expansion into international transactions.

VENEZUELA

REGIMEN DEL MERCADO ANDINO

By Jorge Gomez Vanegas.
Legislación Economica Ltda., Torre Phelps, piso 2, Plaza Venezuela, Apartado 6354, Caracas.
Supplemented: two or three times a year.

Loose-leaf publication in two volumes comprising text of official documents concerning the establishment of the Andean Group, the Cartagena Agreement, designed to coordinate and harmonise, among others, the fiscal policies in the region. .

REGIMEN VENEZOLANO DEL IMPUESTO SOBRE LA RENTA

By Herman Torres-Fernandez.
Legislación Economica Ltda., Torre Phelps, piso 2, Plaza Venezuela, Apartado 6354, Caracas.
Supplemented: once a year.

Loose-leaf publication of a guide on income tax levied in Venezuela comprising annotated text of the law and regulations with reference to case law, administrative practice, forms, working examples and comments by the author.

A New Task for Judges?

According to a recent decision of the German Supreme Tax Court, it is possible that a taxpayer who has withdrawn a complaint against the tax administration in Court, has given his statement concerning the withdrawal of the complaint under psychological duress. The taxpayer reasoned that he was so impressed by the authority of the President of the Court, that he was unable to assert his claim.
The Supreme Court remanded the case to the Lower Tax Court in order to examine whether or not the taxpayer had suffered from a mental derangement which influenced his capability to appear in court at the moment of the withdrawal of the complaint.....

Supreme Tax Court, February 15, 1977, No. VII R 42/74 BLICK DURCH DIE WIRTSCHAFT, June 6, 1977, at 4.

SAUNDERS: TAX PLANNING FOR BUSINESSES IN EUROPE
1977. *By M.R. Saunders, A.C.A.*

Over recent years there has been a growing awareness among the tax regimes of many countries that steps must be taken to encourage international trade and direct investment. Bi-lateral agreements have been made to avoid the double taxation of profits earned by legitimate multinational companies, and these agreements must be considered in the light of anti-avoidance legislation of each country. In all, it has become increasingly difficult for multi-national companies to keep up with this rapidly growing body of tax legislation.

This work provides an understanding of the differing systems of corporate taxation in various countries, and each chapter of it contains a separate study of a country's tax legislation, the major countries involved being the United Kingdom, France, Germany, Belgium, Luxembourg, Switzerland and The Netherlands. In addition, the Channel Islands, Liechtenstein, and the Netherlands Antilles are included as they are all associated in one way or another with one of the major countries already named.

Each chapter of the book may be divided into various sub-headings which are as follows: Introduction; Types of Commercial Enterprises; Exchange Control Restrictions; Liability to Tax; System of Corporation Tax; Corporate Taxes on Income and Capital: Deductibility of Expenditure against Taxable Income; Dividend Distribution Requirements; Personal Taxation; Tax Treatment of Income from Abroad; Tax Treatment of Payments to Non-Residents. Sub-sections within each chapter may vary according to the differing situations and laws of that country; for example, the United Kingdom chapter has a section on "schemes for tax avoidance, deferment and reduction, anti-avoidance legislation", while the chapters on Switzerland and The Netherlands have sections on "fiscally beneficial entities".

The purchase of this book will provide professional advisers, including accountants, lawyers, financial directors and other directors or senior personnel of major international companies with examples of tax avoidance and means of reducing the tax burden of international companies large and small. Everyone who reads this book can be an international tax consultant in his own right, reducing the tax burden of his clients, whilst at the same time thoroughly understanding the underlying tax legislation of European countries. There are many worked examples of profit extraction and tax avoidance for each of the European countries involved.

SPITZ: TAX HAVENS ENCYCLOPAEDIA

General Editor: BARRY SPITZ, Doctor (Summa cum laude) of the University of Paris (Law), B.A., LL.B. (Rand.)

This authoritative loose-leaf work covers all the relevant material to enable the tax practitioner to assess the relative advantages and disadvantages of various tax havens.

An introductory chapter sets out the basic principles of choosing a tax haven. Part I deals with the law and practice of certain major countries with regard to tax haven operations, including the United Kingdom, the United States, France, Germany and Canada with others to follow.

Each chapter in Part II covers a tax haven jurisdiction and is presented in a parallel style. Local laws are covered in detail.

Countries already covered in Part II are:

Bahamas, Bermuda, Cayman Islands, Gibraltar, Guernsey, Hong Kong, Isel of Man, Israel, Jersey, Liberia, Liechtenstein, Luxembourg, Malta, Monaco, Nauru, Netherlands Antilles, New Hebrides, Panama, Switzerland, Turks and Caicos Islands. Marginal Tax Havens — General Survey.

Complete work £50.00 net (US$100.00).

Subsequent Service Issues will be charged on publication.

INDIA:

Taxation and Government Consumption

by G.Thimmaiah*

During the post-war era of too much publicized economic planning for achieving rapid development of underdeveloped countries, the role of Government expenditure in initiating development processes was overemphasized. [1] *As a consequence of this, opposition to growing public expenditure, expanding the public sector and mobilization of financial resources through fiscal measures lost its ground. But after a generation, doubts have come to be slowly raised about the achievement of the public expenditure and the results of an enormous increase in the size of the Government revenue particularly in developing countries. In recent years these doubts have become more vocal. Economists have started gathering circumstantial as well as empirical evidence to show the futility of the Government expenditure in developing countries. For instance, Mr. Stanley Please* [2] *has analysed the influence of the growth of tax revenue on the consumption expenditure of the Governments in developing countries. His analysis has become a subject of discussion in some recent studies* [3] *of the World Bank relating to taxation and savings.*

1. PLEASE'S HYPOTHESIS

Mr. Please has emphasized what could be considered as a most obvious fact that when Governments in developing countries find more revenue, the tendency is to spend more for non-productive purposes. He has maintained that "The disappointing behaviour of public savings in the less developed countries in spite of impressive records of tax performance is due to the growth of Government's current expenditure, and this is a phenomenon which is widely recognised". [4] Further, he has pointed out that "the gloomy record of inadequate budget surpluses, despite increased tax performance over the years such as that for a development strategy, based on increased compulsory savings underestimated and more frequently ignored the effect that the increase in taxation might have on public consumption. In these circumstances, there is a danger that those who recommend increased taxation in the interest of economic growth might be looking at a mirage". [5] Therefore, he has concluded that "In particular, pressures to spend are made less resistable when it is apparent to everyone that the funds are immediately available to the Government in the exchequer". [6] Mr. Please's views on the effects of increased tax revenue on Government savings and consumption have evoked much interest as is evident from the attempts made to test his views empirically. For the purpose of these empirical studies, his statements had to be precisely formulated and specified. But it has also been alleged by Mr. J. Holsen [7] that some of the empirical studies like that of Mr. Elliott R. Morss, have not properly specified Mr. Please's hypothesis.

Mr. Holsen has maintained that Mr. Please's statements imply two hypotheses: a weak and a strong one. This point of view has been accepted by Mr. Please himself

* Senior Fellow in Economics, and Head of the Economics Unit, Institute for Social & Economic Change, Bangalore, India.

1. A well known fact is that during pre-war years J.M. Keynes was responsible for justifying the expansion of public expenditure for maintaing economic stability. During the post-war years, perhaps Gunnar Myrdal was the most vocal advocate of the role of Government in initiating a development process in underdeveloped countries. See his *Economic Theory and Underdeveloped Regions.* Gerald Duckworth & Co., London, 1957, and *Beyond the Welfare State,* Gerald Duckworth & Co., London, 1960.
2. "Saving Through Taxation — Reality or Mirage?", *Fund and Bank Review: Finance and Development,* March 1967. A similar opinion has been expressed by Mr. C. Northcote Parkinson with reference to Governments in general. Mr. Parkinson, in his usual sarcastic way, has observed that when Governments find more revenue the only economy they make is in thinking how to spend it. This is called Parkinson's second law. This law when carried to its logical end ultimately means the same as the Please hypothesis. See C. Northcote Parkinson, *The Law and the Profits.* John Murrey, London, 1960, p. 1.
3. See for instance K. Krishnamurthy, "Savings and Taxation in Developing Countries: An Empirical Study". *IBRD Working Paper No. 23,* August 1968; E. Dziadek, "Government Savings in LDC's". *AID,* February 15, 1968; Ratan J. Bhatia, "A Note on Consumption, Income and Taxes". *IMF. DM/67/70,* November 2, 1967; Elliot R. Morss, "Fiscal Policy, Savings, and Economic Growth in Developing Countries: An Empirical Study", *Finanzarchiv,* Vol. 28, No. 3, August 1969; J. Holsen, "Savings, Taxation and the 'Please Hypothesis' ". *IBRD Memorandum,* August 5, 1968, and S.K. Singh, "The Determinants of Aggregate Savings", *IBRD Working Paper No. 127.* March 1972.
4. *Op.cit.,* p. 25.
5. *Op.cit.,* p. 26.
6. *Op.cit.,* p. 32.
7. *Op.cit.*

in his subsequent paper where he has observed that "what comes out from the empirical work that has been undertaken. . ., is that I should have distinguished more clearly than I did between what might be called the "weak" hypothesis and the "strong" hypothesis. The former simply argues, . . . that the increase in Government current expenditure which accompanies higher tax revenue makes such large inroads into the additional revenue that the effect upon Government savings is small. The strong hypothesis states that this effect of the policy on Government savings is so small that it is more than offset by the decline in private savings and thus aggregate savings are reduced". [8] Perhaps, the only empirical study which has specified both these hypotheses is that of Mr. S.K. Singh. In his own words, "The hypothesis may be formulated in terms of the size of the marginal propensity to save of the Government out of its revenue. If the Government's MPS is lower than the MPS of the rest of the economy, rising of the tax rate would lower the overall saving rate. This would be "stronger version". . . However, it is the weaker version of the Please hypothesis which has interest and the overall reading of his paper clearly points to the weaker version. What Please emphasizes is that the increase in the tax rate is not going to solve the problem of a significant step up in saving investment rate because current expenditure rises too. The *weaker* version while admitting that the overall saving rate may increase would *posit that the increase* is not likely to be very substantial". [9] In fact, Mr. Singh has tried to point out the similarity between Please's hypothesis and Parkinson's second law. To quote him again, "Another interpretation of Please hypothesis would be something suggestive of Parkinson's Law: If revenue surpluses are available, Government expenditure rises faster than what would have been otherwise". [10]

In this study of fiscal policy and savings relating to 46 developing countries, Mr. Elliot R. Morss has christened Please's hypothesis as "Please effect". He has observed that ". . . Please has noted that higher taxes need not go into investment. Indeed, he has even suggested that total consumption may well increase when taxes are raised because Government consumption will increase by more than the cutback in private consumption".[11]

It would appear from the foregoing discussion that Mr. Please's views can be formulated in terms of the weaker version of the hypothesis attributed to him which is very similar to Parkinson's second law. However, Mr. Please has maintained that this statements do imply two hypotheses as shown above and he has made his point very clear by observing that "For what the hypotheses state is that the rate of growth of current expenditure is *causally related to revenue* growth". [12] Further, he has particularly stressed "that it is only through institutional studies that the hypothesis can be substantiated. This means, in effect, that such studies must be on a country-by-country basis". [13]

The empirical studies carried out by the World Bank experts have revealed contradictory results. For instance, Sing's cross-section study of 54 developing countries including India, has supported the weaker version of Please's hypothesis. He has found that "In the weaker form the "Please Hypothesis" is clearly confirmed". [14] However, Krishnamurthy's study has shown that "the results for India revealed a significant negative association between the tax rate and the marginal rates of private and total consumption and hence a positive link to the saving rate. Inclusion of other variables did not alter the result for the tax variables". [15] Even Morss's study based on a cross-section analysis of 46 developing countries, excluding India, has disproved Please's hypothesis. He has found that "The . . . relationship is contrary to any widespread "Please effect", i.e., of a negative relationship between domestic savings and taxes. The result suggests that on the average, savings increase by 64 percent of any tax increase. Putting it another way, it is clear that the reduction in private consumption resulting from a tax increase more than offsets any accompanying increase in public consumption". [16]

This contradiction may be due to may reasons. Sing has obtained his conclusions by testing directly the influence of marginal taxation on marginal Government savings whereas Krishnamurthy and even Morss have derived their conclusions indirectly by relating taxation to total savings and/or private and total consumption which may not be an adequate method. Further, the periods of their study differ. This may be a probable reason for the contradiction in the results of their studies. But we cannot attribute the entire contradiction to this reason alone. Therefore, it would be rewarding to make a fresh study of Indian experience based on the data for recent years. This would also be in keeping with Mr. Please's recent opinion that this hypothesis should be empirically tested with reference to individual developing countries like India.

2. TAXATION AND GOVERNMENT CONSUMPTION IN INDIA

An attempt is made in this paper to study the influence of taxation on the Government's consumption in India. The period of this study is between 1960-61 and 1972-73. The choice of this period is mainly dictated by the availability of uniform and fairly reliable data for recent years published by the Central Statistical Organisation. [17] The choice of this period can also be justified on the ground that most of the additional tax measures intro-

duced by the Central and the State Governments in India became effectively productive during the Third Five Year Plan period. The package of direct tax measures originating from Kaldor's report were introduced in the middle of the Second Five Year Plan whose yield stabilized in the Third Five Year Plan period. Further, during the Third Five Year Plan period, the target of additional taxation was exceeded and this trend continued even during the Fourth Five Year Plan period. For instance, the originally estimated targets of additional resource mobilization (including additional taxation and surplus from public enterprises), where Rs. 1,710 crores and Rs. 3,198 croses (1 crore = 10 million) during the Third and Fourth Five Year Plan periods respectively. The actual targets achieved were Rs. 2,892 crores and Rs. 4,238 crores respectively. Furthermore, in this process of mobilizing additional resources mainly through taxation, additional tax efforts were directed more towards indirect taxes, particularly Union Excise duties and States' sales taxes. As a result the relative importance of indirect taxes in the Indian tax structure has increased particularly from the period of the Third Five Year Plan. This is evident from the fact that nearly 80 percent of the total tax revenue is yielded by indirect taxes. Direct tax revenue as a proportion of GNP contituted about two percent in 1960-61 and has increased to only 3.5 percent in 1972-73 whereas indirect taxes as a proportion of GNP have increased from 7 percent in 1960-61 to 11.5 percent in 1972-73. Though the total tax revenue/GNP ratio has increased by more than fifty percent during these thirteen years, this increase has been achieved through the increased importance of indirect taxes. In other words, the Indian tax structure has changed during the thirteen years in favour of indirect taxes without at the same time decreasing the importance of the direct taxes in terms of the relative share of their yield in the GNP.

Juxtaposed to this impressive increase in the tax revenue in India, the importance of Government savings in the total domestic savings has been declining. [18] Correspondingly, the share of Government's consumption in the total tax revenue has been increasing. An alarming trend is that the non-development expenditure at times exceeded the total tax revenue of the Government as is evident from Table 1. This circumstantial evidence indicates that additional taxation might not have gone to increase the Government savings but instead might have gone to meet increasing Government consumption expenditure as hypothesized by Mr. Please. However, this broad statement will have to be qualified by a further investigation into the influence of taxation on Governments consumption expenditure and savings by using some statistical methods.

TABLE 1
Relative shares of Government consumption and non-development expenditure in total tax revenue in India

Year	Government consumption expenditure as % of total tax revenue	Non-development expenditure of the Government as % of total tax revenue
1960-61	71.40	79.40
1961-62	69.80	69.90
1962-63	70.60	86.70
1963-64	74.60	88.50
1964-65	71.50	91.00
1965-66	73.30	85.10
1966-67	71.30	100.30
1967-68	74.70	95.90
1968-69	75.60	86.30
1969-70	75.50	85.10
1970-71	73.70	89.00
1971-72	73.10	85.70
1972-73	70.20	75.70

Notes:

a) Government consumption refers to the consumption expenditure of the Central Government including centrally administered territories, consumption expenditure of the State Governments and of local authorities.

b) The Government's non-development expenditure refers to the non-development expenditure of the Central Government including centrally administered territories and of the State Governments.

3. EMPIRICAL RESULTS

For this purpose we have used the linear multiple regression analysis. In order to estimate the extent of influence of taxation on Government consumption, we have regressed marginal Government consumption on marginal direct tax and indirect tax ratios along with marginal per capita income, rate of growth of income and rate of increase in the price level. Though what is relevant for our purpose is the influence of taxation on Government consumption, that influence operates on Government consumption along with the influence of other important variables. Hence, we have included other important variables to isolate the effect of taxation on Government consumption.

Further, in order to verify the results obtained in this way, we have also examined the influence of taxation on Government savings. This would confirm any conclusion derived from the analysis of the relation between taxation and Government consumption. Besides, following Krishnamurthy and Morss, we have also tried to make indirect verification by studying the influence of taxation on total domestic savings and on private consumption.

The consumption expenditure of the Government includes current expenditure on purchase of goods and services and payment of wages and salaries to the employees and excludes interest charges, subsidies and other current transfer payments. The price index used here is the Economic Adviser's wholesale price index whose base is shifted back from 1961-62 to 1960-61. [19]

18. See G. Thimmaiah, "India: Taxation and Government Savings", *Bulletin for International Fiscal Documentation*, June 1977, Table 2.
19. *Reserve Bank of India Bulletins.*

It would have been more appropriate to use the all India consumer price index or cost of living index. However, such price indices are not available for the entire population of the country. Hence we have used the wholesale price index.

As we have noted earlier, additional taxation has been used to divert an increasing portion of the national income to savings. In order to investigate whether taxation has achieved this objective or not, it is only appropriate to study the relation between marginal tax revenue and marginal Government consumption and savings. Further, we have assumed that marginal Government consumption and savings are influenced (if at all) by marginal tax revenue in the same fiscal year without any time lag.

The results relating to the relationship between marginal Government consumption and marginal tax ratios are as follows:

$$\left(\frac{\Delta Cg}{\Delta NNP}\right) = \underset{}{0.03449} \underset{(0.73689)}{-1.35227}\left(\frac{\Delta Td}{\Delta NNP}\right) + \underset{(11.13589)}{1.62441}{}^{*}\left(\frac{\Delta Ti}{\Delta NNP}\right)$$

$$\underset{(-1.66009)}{-0.01663}\left(\frac{\Delta NNP}{\Delta P}\right) + \underset{(17.5654)}{214.28015}\left(\frac{\Delta NNP}{NNP}\right) \underset{(-1.67112)}{-9.13277}\left(\frac{\Delta PW}{PW}\right) \quad \ldots\ldots\ldots\ldots\ldots (1)$$

$$\bar{R}^{2} = 0.91935$$

Where:

Cg	= Government consumption expenditure at current prices	Δ	= Change in the revelant variable over the fiscal year
NNP	= Net National product at current prices	$\bar{R}^{2}$	= Adjusted coefficient of multiple determination
Td	= Revenue from direct taxation	*	= t-coefficient (shown in parentheses) is significant at 1 percent level
Ti	= Revenue from indirect taxation		
P	= Population of the country		
Pw	= Wholesale price index with 1960-61 base		

The foregoing results indicate that Government consumption varies inversely with direct taxation and directly with indirect taxation. However, only the direct association between indirect taxation and Government consumption is significant. This would imply that as the yield from indirect taxation has been increasing by leaps and bounds, the Government has been encouraged to go on increasing its consumption expenditure. Though direct taxation shows a negative influence any such influence is not statistically significant.

It would be necessary, however, to examine the relation between taxation and Government savings with a view to verifying the results obtained above. The results regarding the influence of taxation on marginal Government savings are as follows:

$$\left(\frac{\Delta Sgn}{\Delta NNP}\right) = \underset{}{0.41354} \underset{(-1.03172)}{-0.57398}\left(\frac{\Delta Ta}{\Delta NNP}\right) \underset{(-1.80517)***}{-0.38581}\left(\frac{\Delta Ti}{\Delta NNP}\right)$$

$$\underset{(0.48866)}{+0.00179}\left(\frac{\Delta NNP}{\Delta P}\right) \underset{(-0.43761)}{-20.38641}\left(\frac{\Delta NNP}{NNP}\right) \underset{(-2.17572)***}{-1.71654}$$

$$\left(\frac{\Delta Pw}{Pw}\right) \underset{(1.40713)}{+0.18549}\left(\frac{\Delta Cg}{\Delta NNP}\right) \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (2)$$

$$\bar{R}^{2} = 0.61148$$

Where:

Sgn	= Net Government savings at current prices
SgG	= Gross Government savings at current prices
GNP	= Gross National product at current prices
***	= t-coefficient is significant at 10 percent level
**	= t-coefficient is significant at 5 percent level

$$\left(\frac{\Delta SgG}{\Delta GNP}\right) = \underset{}{0.35264} \quad \underset{(1.16292)}{-0.93762}\left(\frac{\Delta Td}{\Delta GNP}\right) \quad \underset{(-1.95820)^{**}}{-0.88984}\left(\frac{\Delta Ti}{\Delta GNP}\right)$$

$$\underset{(-1.39925)}{-0.00760}\left(\frac{\Delta GNP}{\Delta P}\right) + \underset{(0.10784)}{0.08577}\left(\frac{\Delta GNP}{GNP}\right)$$

$$\underset{(-1.28172)}{-0.88974}\left(\frac{\Delta Pw}{Pw}\right) + \underset{(1.45974)}{0.46692}\left(\frac{\Delta Cg}{\Delta GNP}\right) \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (3)$$

$$\bar{R}^2 = 0.22249$$

Where:

Sgn	= Net Government savings at current prices
SgG	= Gross Government savings at current prices
GNP	= Gross National product at current prices
***	= t-coefficient is significant at 10 percent level
**	= t-coefficient is significant at 5 percent level

Thus it becomes clear that both net and gross marginal savings ratios of the Government are inversely associated with taxation. But the negative influence of indirect taxation on Government savings is significant in both these equations which corresponds to the earlier finding of the significant positive influence of indirect taxation on Government consumption.

The foregoing results indicate the significant direct influence of taxation on Government consumption. However, in order to verify these results indirectly, we have to study the influence of taxation on total domestic savings and on private consumption. It is all too well known that domestic savings of a country are influenced by various economic and non-economic factors. However, we have selected only some important economic determinants of domestic savings for the purpose of this study. We have related marginal net domestic savings to direct tax revenue, indirect tax revenue, per capita income, rate of growth of net national product, wholesale price index and interest rate. As we have already observed earlier, though we have included important economic determinants of domestic savings in the regression, we are interested only in finding out the nature and extent of influence which taxation yields on marginal net domestic savings. The results obtained are as follows:

$$\left(\frac{\Delta Sn}{\Delta NNP}\right) = -0.79601 + \underset{(0.46695)}{2.63037}\left(\frac{\Delta Td}{\Delta NNP}\right) + \underset{(2.21097)^{***}}{0.89280}\left(\frac{\Delta Ti}{\Delta NNP}\right)$$

$$+ \underset{(0.06116)}{0.00175}\left(\frac{\Delta NNP}{\Delta P}\right) \underset{(-0.06223)}{-22.67882}\left(\frac{\Delta NNP}{NNP}\right)$$

$$+ \underset{(0.44942)}{6.90163}\left(\frac{\Delta Pw}{Pw}\right) \underset{(-0.74338)}{-1.18744}(\Delta r) \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (4)$$

$$\bar{R}^2 = 0.03481$$

Where:

Sn	= Net domestic savings at current prices
r	= average rate of interest on one-year deposits
***	= t-coefficient is significant at 10 percent level

The foregoing results indicate that both direct and indirect taxation exert a positive influence on marginal net domestic savings. So do per capita income and wholesale prices. But the t-coefficients for those variables are not significant. This is true of the t-coefficient for direct taxation also. However, the regression coefficient for indirect taxation is significant thereby indicating the substantial positive influence of indirect taxation on marginal net domestic savings.

But here again, in order to confirm the influence of taxation on marginal net domestic savings, we must study the alleged restraining influence of taxation, particularly indirect taxation, on private consumption. Ac-

cordingly, we have examined the nature of the influence of taxation on private consumption in the following way:

$$\left(\frac{\Delta Cp}{\Delta GNP}\right) = -0.76815 + \underset{(0.46486)}{1.94026}\left(\frac{\Delta Td}{\Delta GNP}\right) + \underset{(1.30145)}{2.99601}\left(\frac{\Delta Ti}{\Delta GNP}\right) + \underset{(2.01830)***}{0.05247}\left(\frac{\Delta GNP}{\Delta P}\right) + \underset{(0.27949)}{1.23584}\left(\frac{\Delta GNP}{GNP}\right) \underset{(-0.88004)}{-4.62621}\left(\frac{\Delta NNP}{NNP}\right)$$

$$\bar{R}^2 = 0.64595$$

Where:
Cp = Private consumption expenditure at current prices
*** = t-coefficient is significant at 10 percent level

The results indicate that direct and indirect taxation do not exert any restraining influence on private consumption. However, such non-restraining influence is not significant as evidenced by the low value of t-coefficients. Therefore, we cannot come to any definite conclusion in regard to the effect of taxation on private consumption.

TABLE 2
Changing composition of the Indian tax structure

Composition of tax structure	1951-52		1956-57		1961-62		1966-67		1971-72	
	Rupees crores	% of appropriate group	Rupees crores	% of appropriate group	Rupees crores	% of appropriate group	Rupees crores	% of appropriate group	Rupees crores	% of appropriate group
1	2	3	4	5	6	7	8	9	10	11
I. *Direct Taxes:*										
1) Corporation Tax	41	(17)	51	(17)	157	(33)	331	(40)	472	(37)
2) Other Income taxes	152	(62)	163	(56)	223	(48)	422	(51)	716	(56)
3) Land Revenue	50	(21)	79	(27)	87	(19)	79	(9)	87	(7)
Total Direct Taxes	243	(28)	293	(27)	467	(27)	832	(24)	1,275	(21)
II. *Indirect Taxes:*										
1) Customs duties	235	(44)	174	(27)	213	(18)	586	(23)	696	(15)
2) Excise duties (including sales tax)	135	(25)	235	(36)	727	(61)	1,552	(60)	3,132	(69)
3) Stamps	24	(5)	29	(4)	44	(04)	71	(03)	123	(03)
4) Other taxes and duties	137	(26)	208	(33)	206	(17)	385	(14)	564	(13)
Total Indirect Taxes	531	(61)	646	(59)	1,190	(69)	2,594	(74)	4,515	(74)
III. Total Tax *Miscellaneous:* Receipts	100	(11)	150	(14)	71	(4)	83	(2)	274	(5)
Total Tax Revenue	874	(100)	1,089	(100)	1,728	(100)	3,509	(100)	6,,064	(100)

Notes: 1. The percentage in the case of each tax relates to its appropriate group. The percentages of direct taxes and indirect taxes relate to the total tax revenue.
2. All figures are at current prices.
3. Tax Revenue includes the yield from Central, State and Local Government's taxes.

Source: *C.S.O. Estimates of National Product, Savings and Capital Formation* (February 1964, Table No. 6, p. 11 and November 1971, Table No. 4, p. 5) and January 1975, Table 21, page 46.

4. CONCLUSIONS

The empirical results of this study support the weaker version of Please's hypothesis that taxation does not necessarily contribute to the increase in Government savings in India. These results agree with those obtained by Singh but differ from the results obtained by Krishnamurthy and Morss. In the case of Morss's study India was not included and hence we cannot strictly compare our findings with his. Even in the case of Krishnamurthy's study, the results refer to the period preceding our period of study. All these lead us to certain broad conclusions: (1) the influence of taxation on Government consumption and savings differ from one developing country to another within the group of developing countries, (2) more statistical tests cannot be taken for granted as they have to be backed by other relevant circumstantial evidence, (3) the influence of taxation on Government consumption cannot be inferred indirectly by merely studying the influence of taxation on total savings and on private consumption, and (4) this study reveals that both direct and indirect results and circumstantial evidence support the operation of Please's hypothesis in India.

TAX TREATY BETWEEN JAPAN AND CZECHOSLOVAKIA

On October 11, 1977 Japan and the Czechoslovak Socialist Republic concluded a comprehensive income tax treaty, the text of which was recently released by the Japanese authorities. The official text is in the English language, so that in case of litigation only this text is authoritative.

The treaty applies to persons (including legal entities) who are resident of one of the Contracting States or — which will rarely be the case — who are resident in both States. However, where the treaty applies to a "resident of a Contracting State", the case of dual residence will be resolved by mutual agreement of the competent authorities of the two Contracting States. The taxes which are the subject of the treaty are (i) in Japan: the income tax, the corporation tax and the local inhabitant taxes and (ii) in Czechoslovakia: the taxes on profits, the wages tax, the tax on income from literary and artistic activities, the agricultural tax, the tax on population income and the house tax. The treaty will also apply to any identical or similar taxes which may be introduced at a later date.

The new treaty is largely based on the O.E.C.D. Model Convention and contains only few deviations. Some of the most significant features are discussed below.

Business income derived by an enterprise established in one of the States is only taxable in the other State if it can be attributed to a permanent establishment situated in the latter State (Art. 7). For the purposes of the computation of the income of such a permanent establishment it will be deemed to be a distinct and separate enterprise engaged in the same or similar activities under the same or similar conditions and dealing wholly independently with the enterprise of which it is a permanent establishment. Executive and general administrative expenses will be deductible. However, where it is customary in a Contracting State to determine the income of a permanent establishment by way of apportionment this will also be allowed.

The definition of the term "permanent establishment" is the usual one and comprises a place of management, branch, office, factory, workshop, a mine quarry etc, and a building site or construction or assembly project existing for more than 12 months (Art. 5).

Dividends distributed by a company of one of the countries to a shareholder resident in the other country will be subject to a tax which may not exceed 15 percent of their gross amount. Where the recipient is a company which owns at least 25 percent of the voting shares of the distributing company the rate of tax will be further reduced to 10 percent (Art. 10).

Interest paid by a debtor resident in one of the countries to a creditor in the other country may be subject to tax at a maximum rate of 10 percent of its gross amount in the country from which it has been derived. However, a complete exemption is available in two cases, i.e. if the interest is received by the government of the other Contracting State, including local authorities, the Central Bank or any financial institution wholly owned by that government and if the interest is received by any other resident of the other Contracting State provided that the interest pertains to debt-claims guaranteed or indirectly financed by the government of the other Contracting State or any other of its institutions listed above (Art. 11).

Royalties paid by a person resident in one of the Contracting States to a resident of the other State will be subject to a maximum rate of tax of 10 percent in the State from which they are derived if they are "industrial royalties" but will be completely exempt if they are "cultural royalties". "Industrial royalties" include consideration for the use of, or the right to use, patents, formulae, processes, designs etc. "Cultural royalties" denote consideration paid for the use of, or the right to use, copyright of literary, artistic or scientific work including movies and films or tapes for radio and television broadcasts (Art. 12).

Income derived from professional services rendered by physicians, lawyers, engineers, architects and the like and from activities of a scientific, literary, artistic, educational or teaching nature independently carried out will only be subject to tax if attributable to a fixed base in one of the countries (Art. 14).

As far as employment income is concerned, the usual rules apply, i.e. wages and salaries will be taxed in the country where the employment is exercised. Special rules apply if the employee is present in the other country for a period or periods of time not exceeding 183 days in the calendar year concerned (Art. 15). Remuneration received by a resident of one of the countries in his capacity as a member of the Board of Directors of a company established in the other country is subject to tax in the latter country (Art. 16).

With respect to the prevention of double taxation Japan will apply the tax credit method and Czechoslovakia either the exemption with progression method or — for dividends, interest, royalties, remuneration of company directors and income derived by entertainers — the credit method (Art. 23).

The treaty is subject to ratification and it will enter into force on the 30th day after ratification. It will then become effective for income of the tax year beginning on or after January 1 of the calendar year next following the year in which the treaty entered into force (Art. 28).

POLISH PEOPLE'S REPUBLIC:

The Principles of Taxation of Income Derived by Foreign Individuals and Legal Entities

by Dr. Apoloniusz Kostecki

The increase of international economic cooperation between Poland and other countries on a permanent basis has led to activities being carried out by foreign individuals and legal entities on the territory of the Polish People's Republic. Such foreign individuals and legal entities are regarded as being domiciled abroad. It may also be the case that, although such persons do not carry out any direct activity, they derive income or receive a salary in respect of those activities in Poland. It should be pointed out that the principles of taxation of the foreign individuals are also applied to those individuals who have obtained permission for a permanent stay in Poland and are carrying on activities — such as handicrafts, domestic trade, catering and hotel services, as well as other services — by virtue of the permission granted by administrative bodies. However, those principles are applicable to the above mentioned individuals only for a period of ten years.

Under Polish tax law, income derived from such activities carried out by taxpayers of the non-socialized economy (apart from agricultural activities) will be liable to different taxes. In this connection, the following taxes are of primary importance: turnover tax, [1] *income tax,* [2] *and the tax on salaries* [3] *which will be levied depending on the kind of activities carried out. Under certain conditions, the taxpayers in question may also be liable to the equalization tax which is fairly high, being an additional tax on those incomes which exceed a certain fixed limit.* [4] *The way in which the said taxes apply in relation to foreign individuals and legal entities varies and depends directly or indirectly on the Act regulating any given tax. Specific regulations regarding the scope of the taxes are included in the provisions of the Laws on turnover tax, income tax and the tax on salaries.*

I. IN GENERAL

A. TURNOVER TAX

Pursuant to the provisions of Article 1 of the Law on turnover tax, any activity in the field of handicrafts, trade, industry and services — as well as other activities — will be taxable when carried out within the Polish territory by individuals, partnerships which are not legal entities and legal entities which are not units of the socialized economy. The provisions of that article stipulate unequivocally that taxpayers living or domiciled abroad are also subject to tax. It is immaterial whether their activities are carried out personally, or through agents operating from offices in Poland or other permanent establishments within the Polish territory.

B. INCOME TAX

It follows from Article 1 item 1 and Article 3 of the Law on income tax that foreign individuals and legal entities are subject to income tax *only* with respect to income derived from activities on the territory of the Polish People's Republic. It should be mentioned that they will be liable to tax irrespective of the location of the source of income if they have been in Poland for a period of time exceeding six months.

C. TAX ON SALARIES

In turn, Article 2 item 1 of the Law on the tax on salaries stipulates that individuals whose salaries are paid on Polish territory are obliged to pay the tax on salaries irrespective of their address or place of permanent residence. The Law itself, however, provides for certain exceptions from that principle with respect to foreign

2. See the Law of December 16, 1972 on income tax (Dziennik Ustaw No. 53 item 339) and amendment Dziennik Ustaw 1976, No. 40, item 231.
3. See the Law of February 4, 1949 on the tax on salaries (Dziennik Ustaw No. 7) and amendments in Dziennik Ustaw 1956 (No. 44 item 201), Dziennik Ustaw 1959 (No. 11 item 60) and Dziennik Ustaw 1963 (No. 57 item 309).
4. See the Law of December 19, 1975 on equalization tax (Dziennik Ustaw, No. 45 item 227) and amendment in Dziennik Ustaw 1976 (No. 40 item 233).

individuals. The Legislature, for various reasons, introduced three kinds of exemptions from the tax.

The first kind of exemption relates to salaries paid out of funds of a foreign country, funds of self-governed associations and other public funds of the same kind.

Another exemption relates to salaries paid in the territory of a foreign country, but for activities carried out within the Polish territory. This exemption is of a conditional nature. Namely, it must be proven that the salary is liable to the same kind of tax abroad and that the foreign country concerned applies the reciprocity principle concerning such salaries from sources in Poland as well as salaries paid within the Polish territory for work carried out in the foreign country.

The third exemption relates to salaries received by diplomatic and consular representatives of foreign countries as well as by their officials and other employees who are foreigners. The exemption from the tax on salaries for persons who are exempt from tax under international tax agreements or international law is based on the same reasons.

II. PRIVILEGED TREATMENT FOR FOREIGN TAXPAYERS

It should be stressed that, with regard to foreign individuals and legal entities, there are some exceptions from the taxation provisions which normally apply. These exceptions are, to a great extent, of an advantageous nature. The provisions of the Ruling of the Minister of Finance of November 2, 1973, regarding taxation of persons living or domiciled abroad and deriving income from the territory of the Polish People's Republic, [5] constituted the legal basis for the above mentioned exceptions in the taxation of foreign individuals and legal entities until June 30, 1977. These provisions have been abolished and, on July 1, 1977, substituted by the Ruling of The Minister of Finance of May 23, 1977 regarding taxation of foreign individuals and legal entities. [6] Only in those cases which the Ruling does not provide for, will the provisions which normally apply to Polish individuals and legal entities (not being units of the socialized economy) be applied. Moreover, if a tax agreement between the Polish People's Republic and another country lays down specific rules of taxation the provisions of the Ruling will not be applied.

A. EQUALIZATION TAX

The first main exception from the general rules of taxation — to the advantage of foreign individuals — provides that they are not subject to the particularly heavy *equalization tax*. [7] Until December 31, 1975, the legal basis for that specific tax privilege was contained in the above-mentioned Ruling of the Minister of Finance of 1973. Instead, it follows a contrario from the amended provisions of the Law on the Equalization Tax (in force as from January 1, 1976) that its provisions do not apply to foreign individuals, i.e. the provisions of Article 1 item 1 of the Law state quite definitely that individuals domiciled *in the territory of the Polish People's Republic* are liable to the equalization tax. It should be noted that the Law which had previously been in force did not include such a provision. Therefore, the exemption was introduced only by the above-mentioned provision of paragraph 14 of the Ruling of the Minister of Finance of 1973 which provided for the equalization tax not being levied on income derived by foreign individuals.

Apart from that general exclusion from taxation, foreign individuals and legal entities also benefit from specific exemptions from turnover tax and income tax.

Generally speaking, these taxpayers are entitled to exemptions on condition that their activities are carried out mainly for the benefit of or through the Polish units of the socialized economy.

B. TURNOVER TAX

As far as the *turnover tax* is concerned, the above-mentioned taxpayers are entitled to the exemption therefrom without any limitations, provided that they are building or assembling for the benefit of the units of the socialized economy. However, income derived from such activities is only exempted from income tax for a specific period of time. Namely, the exemption will only apply if the building or assembling works last no longer than six months. In that regulation one can see some encouragement to the intensification of the investment process.

Export-import activities are also exempt from turnover tax, on the condition that they are carried out for their own account and that trade partners are represented *exclusively* by the Polish units of the socialized economy. Where all commercial operations are performed by foreign taxpayers through Polish agency enterprises — apart from the offices they have established on the territory of the Polish People's Republic — they will benefit in addition from the exemption from income tax with respect to income derived from that activity. It would be noted that, unlike commercial activities carried out for their own account, export-import activies carried out by foreign individuals and legal entities on behalf of and for the account of other foreign individuals will not benefit from the tax exemptions. Such taxpayers will be obliged to pay turnover tax up to an amount of 10 percent out of the commission received. It should also be noted that the temporary exemption from the turnover tax relates also to those foreign individuals and legal entities who are carrying on activities such as hotel services, handicrafts, domestic trade, catering and other services, by virtue of the permission granted by administrative bodies. Hotel services are exempted for a period of three years, other activities for two years. That exemption is also an interesting innovation in the system of taxation of foreign individuals and legal entities.

---

5. Dziennik Ustaw, No. 46 item 274.
6. Dziennik Ustaw, No. 18 item 71.
7. This tax was discussed in general in BULLETIN FOR INTERNATIONAL FISCAL DOCUMENTATION, No. 10 at 421 (October 1976).

C. INCOME TAX

In some cases, the exemption from taxation of gross income and net income derived by foreign individuals and legal entities is based on the reciprocity principle. Thus, sea and air navigation enterprises of those countries which do not tax Polish enterprises of that kind are exempted from Polish income and turnover tax. The reciprocity principle also constitutes a reason for exemption from turnover tax and income tax of activities carried out in cultural centers of foreign countries. On the basis of the same principle, those individuals and legal entities living or domiciled abroad who derive income from interest on loans granted to the Polish units of socialized economy are also entitled to an exemption. Such an exemption was not included in the principles of taxation of foreign individuals and legal entities previously in force.

III. REGULAR TURNOVER AND INCOME TAX LAW

In cases not covered by the exemptions from turnover tax and income tax discussed above, tax will be computed on the basis of the rules which normally apply or on the basis of special rules laid down in specific Acts as well as in the Ruling of the Minister of Finance of 23rd May, 1977.

A. TURNOVER TAX

As far as turnover tax is concerned, taxation is in general based on the provisions which normally apply to Polish taxpayers on the non-socialized economy, i.e. on the above-mentioned law of December 16, 1972 on turnover tax, as amended by the law of December 18, 1976.

Rates of turnover tax vary greatly and differ according to the kind of work carried out. The rates are as follows:

a)	publishing activities	1%
b)	commercial activities	5%
c)	catering activities consisting of the sale of drinks containing more than 18% alcohol	8%
d)	agency agreements, immediate job orders, brokerage and commission business, the sale of tobacco and matches: of the commission fee	10%
e)	hotel business	15%
f)	entertainment and sporting activities	30%
g)	for other activities, rates are fixed by the Minister of Finance between	1 and 6%

As can be seen from the amounts of the turnover tax specified above, the taxpayers dealing in the hotel business by virtue of the permission granted by administrative bodies are benefitted by a marked tax relief. Namely, the respective tax will be decreased to 8% for a period of ten years from the date of the beginning of the activity. Guest houses and tourist camps have been excluded from such relief.

In order to avoid a possible misunderstanding in interpretation of the concept of the turnover in foreign trade activities, the Legislature has stated explicitly (paragraph 7 item 2 of the above-cited Ruling) that by turnover it is meant the value of goods sold to Polish customers, with the place of contract signing being irrelevant. Such value is equal to the contract price, with the freight and insurance costs deducted.

B. INCOME TAX

As from January 1, 1977 (the date when the provisions amending the Law on income tax of December 16, 1972 came into force) a considerable simplification was introduced in relation to the taxation of income of foreign individuals and legal entities. Namely, they will be taxed at a rate of 50 percent of their income derived from the Polish territory. In this way, the progressive rates previously used which varied according to the source of income have been replaced by proportional taxation which represents a rare phenomenon in the field of income tax.

That principle has been abandoned in relation to those foreign individuals and legal entities who — by virtue of

the permission granted by administrative bodies — are carrying on activities in the hotel business, handicrafts, domestic trade, catering and other services. In those cases, the taxation is advantageous for the taxpayers since the lowest — i.e. the first — of the tax rates will be applied, with the additional reservation that the income tax must not be higher than 50%.

1. *Basic exemptions*

The difference between that kind of taxation and the rules normally applicable will be better understood if we outline the principles applicable to Polish taxpayers. The Law on income tax of 1972, as amended by the provisions of the Law of December 18, 1976, [8] gives three tax tables according to the sources of income involved. It is significant that the tax exempt basic amount has been fixed at a relatively high level, i.e. at 72,000 zloties per year. This amount will be increased by the amount of personal social insurance paid by the taxpayer, i.e. 24,000 zloties if the taxpayer is married, and also by an amount of 12,000 zloties for each child supported by the taxpayer as well as for his parents and spouse and each brother and sister who are incapable of working and financially dependent on the taxpayer. Note that with respect to certain kinds of income derived from other than the taxpayer's labor and business activities (e.g. capital income), a lower basic tax exempt amount of 30,000 zloties will apply.

2. *Rates*

The Polish income tax system is a schedular one. There are three different schedules aggregating the income from certain defined sources of income. Consequently, there are three appropriate tax tables.

As can be seen from an analysis of the tax tables the taxation of foreign individuals and legal entities is, in general, more favourable only in relation to the higher incomes. However, those taxpayers will not be eligible for the basic tax exempt amount.

Tax table I applies to income from hotel services, restaurants (not selling alcoholic beverages), some transportation services, income from some independent services such as scientific, artistic, literary, journalistic and educational activities and income from handicrafts. This tax table is as follows:

Annual income in zloties (in excess of the lump-sum tax-free amount)		*Annual tax*	
over	up to	zloties	zloties
	24,000	20%	
24,000—	48,000	4,800 + 25% for any sum over	24,000
48,000—	72,000	10,800 + 30% for any sum over	48,000
72,000—	96,000	18,000 + 40% for any sum over	72,000
96,000—	120,000	27,600 + 50% for any sum over	96,000
120,000—	240,000	39,600 + 60% for any sum over	120,000
240,000—	360,000	111,600 + 70% for any sum over	240,000
360,000—	480,000	195,600 + 80% for any sum over	360,000
480,000		291,600 + 85% for any sum over	480,000

Tax table II applies to income from commercial and industrial activities and from services other than those mentioned under tax table I. It is as follows:

Annual income in zloties (in excess of the lump-sum tax-free amount)		*Annual tax*	
over	up to	zloties	zloties
	24,000	25%	
24,000—	48,000	6,000 + 30% for any sum over	24,000
48,000—	72,000	13,200 + 40% for any sum over	48,000
72,000—	96,000	22,800 + 50% for any sum over	72,000
96,000—	120,000	34,800 + 60% for any sum over	96,000
120,000—	240,000	49,200 + 70% for any sum over	120,000
240,000—	360,000	133,200 + 75% for any sum over	240,000
360,000—	480,000	223,200 + 80% for any sum over	360,000
480,000		319,200 + 85% for any sum over	480,000

Table III applies to income, e.g. income from property rights and from capital (i.e. income from annuities granted by donation or inheritance, income from copyright royalties and patent royalties, income from the leasing of films, interest from loans, dividends and other income distributed by legal entities). This table is as follows:

Annual income in zloties (in excess of the lump-sum tax-free amount)		*Annual tax*	
over	up to	zloties	zloties
	24,000	30%	
24,000—	48,000	7,200 + 40% for any sum over	24,000
48,000—	72,000	16,800 + 50% for any sum over	48,000
72,000—	96,000	28,800 + 60% for any sum over	72,000
96,000—	120,000	43,200 + 65% for any sum over	96,000
120,000—	240,000	58,800 + 70% for any sum over	120,000
240,000—	360,000	142,800 + 75% for any sum over	240,000
360,000—	480,000	232,800 + 80% for any sum over	360,000
480,000		328,800 + 85% for any sum over	480,000

IV. MODIFICATIONS

Until the Law on income tax was amended, foreign individuals and legal entities were taxed in accordance with the tax tables which normally applied, with certain modifications resulting from the provisions of the Ruling of the Minister of Finance of November 2, 1973.

A. TOP RATES

The main modifications introduced by the latter provisions consisted of fixing the top rate of tax at 30 percent in respect of income derived from property rights and capital with a steeper progression, and at 50 percent in respect of income derived from other sources, however, with a less steep progression. It is necessary to explain that income derived from property rights and capital is defined in the provisions of the Ruling as

8. Dziennik Ustaw 1976, No. 40 item 231.

THE EFFECT OF POLISH TAX TREATIES

A. 30% tax on dividends, interest and royalties paid to non-residents:

1. *Dividends*
— reduced to 15% (or 5% in the case of a 25% holding) under the tax treaties concluded by Poland with the Federal Republic of Germany, Sweden, Denmark and the United Kingdom;
— reduced to 15% (or 5% in the case of 10% holding) under the tax treaties concluded by Poland with the United States and France;
— reduced to 15% (only in the case of a 33 1/3% holding) under the tax treaty between Poland and Pakistan; and
— reduced to 10% (in all cases) under the tax treaty between Poland and Austria;

2. *Interest*
— only taxable in State of residence (the Polish tax thus being reduced to zero) under all treaties concluded by Poland, except the Poland — Pakistan tax treaty;

3. *Royalties*
— reduced to zero under the tax treaties concluded by Poland with the Federal Republic of Germany and Austria;
— reduced to 10% under the tax treaties concluded by Poland with the United States, Sweden, France, Denmark and the United Kingdom; and
— reduced to 20% (cultural royalties) or 15% (patent royalties) under the Poland — Pakistan tax treaty.

B. Employment income earned by foreigners who are present in Poland for a period of time not exceeding 183 days is not subject to the Polish tax on salaries according to the tax treaties concluded by Poland. Moreover, this term is extended to one year under the tax treaty between Poland and Austria.

follows: dividends and other income from sharing of profits of legal entities, interest on loans, patent royalties, charges for the hire of films, for the showing of films on television and in the cinema, etc. It should be noted that the tax on dividends and other income from the sharing of profits of legal entities may be reduced in specific cases upon application to the Minister of Foreign Trade.

B. LUMP-SUM TAXATION

The system of taxation of foreign individuals and legal entities also contains a characteristic solution which consists of the turnover tax and income tax being assessed in the form of a lump-sum. This will only apply to certain kinds of activities carried on by such taxpayers. Apart from simplifying the tax assessment, the lump-sum assessment contains substantial tax relief. The lump-sum turnover and income tax assessment will apply, in the first place, to income from show business, entertainment and sporting activities carried on by foreign entrepreneurs but organized by Polish show business, etc. enterprises. The lump-sum tax amounts to 12 percent of the fee for the services rendered. A lump-sum assessment of 10 percent will also apply to foreign air navigation and merchant shipping enterprises if the above-mentioned tax exemptions are not applicable. The lump sum assessment will apply to such enterprises with respect to income derived from Poland; however, as regards merchant shipping enterprises it will apply to income derived from the transport of goods and passengers *from* Polish ports (except for transit traffic).

C. TAX ON SALARIES

Some kinds of income have been granted special tax privileges, the Legislature having made them subject to the above-mentioned tax on salaries instead of the income tax. Generally speaking, the kinds of income involved are derived from job agreements or immediate job agreements as well as from employment. The first group of income, subject to the tax on salaries, includes income from creative work, research, artistic production, fiction writing, journalistic and educational activities and the like. They are taxed in accordance with the Ruling of the Minister of Finance of May 23, 1977 at a rate of 30 percent of the salary which is transferred abroad *in foreign currency*. It should be noted that, in this case, costs incurred in generating the income may not be deducted, unlike in the case of salaries paid in Poland for the same kinds of activities.

The tax on salaries is progressive. The same amount of tax is collected from foreign individuals as from Polish individuals. To give an example, in relation to earnings from employment it may amount to up to 12 percent of the salary received from the first employer [9] and, in relation to earnings from an immediate order agreement for a job agreement to up to 21 percent of the salary received from the first principal orderer. The taxation of earnings from further employers or principal orderers is levied at considerably higher rates.

9. At present the tax on earnings from employment is of much less importance in Poland, since in relation to employees of the socialized economic units it has been replaced by a tax on payroll which is levied on the employers.

D. PROCEDURE

There are certain provisions of a procedural nature which apply to foreign individuals that are worthwhile mentioning. The provisions of paragraph 7 item 1 of the Ruling of May 23, 1977 are particularly interesting. They provide that in the absence of accounts or if it is impossible to determine income because of insufficient records, taxable income will be estimated at the following standard profits in relation to the turnover:
10% — from building or assembling activities;
5% — from export-import activities;
20% — from other activities; and
60% — from brokerage.

In such a case, the taxpayer involved may prove that the portion of profit in the turnover resulting from all activities both abroad and within the territory of the Polish People's Republic is, according to the balance sheet, lower than that calculated as above. The income will then be fixed for tax purposes within the amount proved; however, not at less than 3%.

Still, the above-mentioned principles will not be applied to those foreign individuals and legal entities who are carrying on economic activity on the basis of permission granted by administrative bodies. The above taxpayers are not obliged to keep accounts and so neither are those who derive income from property rights and capital, creative work, research, educational activities, artistic production, fiction writing and journalism, as well as income subject to lump-sum assessment.

In order to improve the tax collection procedure, the tax is collected by the Polish units of the socialized economy at the moment the earnings are received by the above-mentioned taxpayers.

U.S.A.:

Economic Prospects

Just at a time when there is a need for tax reduction to assure that the economic recovery continues next year, the immediate prospect is for actual increases in federal taxes for individuals and corporations. The most imminent change will be the sharp rise in Social Security taxes for workers and businesses next year. Then there will be added energy costs, once Congress finishes its energy program. The economic impact of these measures, along with the new higher minimum wage for next year and possible oil price increases by the oil nations, cannot yet be fully known until their details are worked out. Even before the added tax costs on the new Social Security financing plan are known, there is a legislated increase in that area for next year for both workers and employers. There is also a higher cost of unemployment insurance to be borne by employers next year. These two existing programs alone will add about $8.5 billion to government revenues, out of taxpayers' pockets.

The President has announced that he is delaying his tax plan for next year. This will allow the tax reform to take into account the final Social Security and energy legislation. Some analysts outside the government think the greatest benefit of the delay will be a bigger, and less complex, tax package. Another analyst felt that it might cause the tax program to emphasize the encouragement of private investment to spur the economy and create more jobs, rather than the consumption side, as originally expected. There could also be less immediate interest on the part of the administration in eliminating the special treatment of capital gains.

The international Bureau of Fiscal Documentation envisages to report on these and other tax developments in the U.S.A. in upcoming issues.

TAX GLOSSARY

by H.W.T. PEPPER *

COMMONWEALTH PREFERENCE — Most goods imported from the Commonwealth are entitled to admission to the U.K. free of PROTECTIVE DUTY (q.v.). Certain manufactured goods are excluded from preference (e.g., motor vehicles, watches, silk). ("Commonwealth" for preference purposes includes Burma, Eire, and South Africa which are not members of the Commonwealth.)

COMMUNITY PROPERTY — A U.S. citizen married to a non-resident alien may, under a community property regime, reduce his/her income tax bill by attributing one half the community income to the non-resident spouse. Where no election is made, there are now rules for allocating the various types of income accruing to the two spouses.

Some countries have rules relating to DEATH DUTIES (q.v.) regarding property acquired by husband and wife during marriage, when applying duty or tax on the death of one spouse. (See also INCOME-SPLITTING.)

COMMUTATION — During the currency of succession duty in Britain it was possible to commute the duty in certain circumstances, for example, where the purchaser of property subject to duty stipulated that he wished to buy the property clear of prospective liability to duty. Where duty was prospectively payable on the death of a person the duty on the property could be commuted in his lifetime by the tax department in certain circumstances.

It is unusual in the ordinary way for tax to be commutable, but it is fairly common for *tax plus penalties* to be commuted, for a figure smaller than the maximum exigible under the tax law, in settling a tax evasion case. There have also been examples of tax liability being commuted at less than normal tax rates when tax amnesties have been granted in certain countries to give tax evaders and defaulters an opportunity to wipe the slate clean.

COMPANY TAX — Income tax on the income of companies and corporate bodies (see also CORPORATION TAX). Occasionally the term may be applied to other types of levies on companies such as an annual percentage charge on nominal or issued capital, particularly in countries which have no income taxation.

COMPENSATION, LOSS OF EMPLOYMENT — Non-contractual compensation for the loss of employment is commonly exempted from income tax but some countries have taken steps to deem such receipts chargeable to tax. In Britain tax is payable on the excess of such compensation over £5000, this measure having been introduced to combat tax avoidance in the case of compensation to directors and others in CLOSE COMPANY (q.v.) situations.

COMPENSATORY TAX — A tax included by the E.E.C. as one of the harmonisation proposals for Community countries, and based broadly on the French and British systems of company tax. If dividends are paid out of corporate resources not, or not fully, charged to tax, compensatory tax would be levied equal to the amount of the tax credit relevant to the dividends, less any tax actually charged on the distributed income. In France the credit is the AVOIR FISCAL (q.v.) and a PRECOMPTE (q.v.) is levied when the company tax is deficient. In Britain the A.C.T. (ADVANCE CORPORATION TAX, q.v.) is levied when dividends are paid, may be offset against MAINSTREAM TAX (q.v.), but is not refundable if it exceeds mainstream tax. Under the French system a deficiency for compensatory tax purposes arises where profits, otherwise available to cover dividends, were earned more than 5 years ago — in Britain there is a 2-year limitation.

COMPLEMENTARY TAX — A tax sometimes imposed on total income in SCHEDULAR TAX SYSTEMS (q.v.). Under a schedular system the tax is usually charged at flat rates on various classes of income, a complementary tax being introduced to apply an element of graduation to the wealthier taxpayers who have greater TAXABLE CAPACITY (q.v.).

COMPLIANCE, TAX — The degree to which taxpayers fulfil their duties of correctly declaring their liability to tax and paying the tax due.

COMPONENT — In sales taxation care is usually taken to avoid double taxation which may ensue, e.g., if sales tax is levied both on the finished product and on the parts or components which are used in making that product. The term "component" may also be used broadly to cover all types of parts or ingredients which form part of the finished product.

COMPOUNDING — See COMMUTATION.

COMPOSITE RATE — In Britain, building societies pay tax at a composite rate (based on the average marginal personal tax rates of their depositors) in respect of the collective income tax liability of the depositors on the interest received from money deposited with the societies. (See BUILDING SOCIETY ARRANGEMENT.)

CONCESSIONS, EXTRA-STATUTORY — In the administration of taxes some anomalies or hardships which were not intended by, and are not within the spirit of, the tax law may be corrected by the administration's granting a concession. In some cases such concessions may merely precede projected changes in the law — in other cases it may be more convenient not to try to mould a law to deal with all types of exceptional cases but to continue to deal with these by concession. Obviously great care has to be exercised in granting such concessions and to control the way in which the concessions are implemented by the tax department. In Britain the extra-statutory concessions granted by the Board of Inland Revenue are published in booklet form for the information of the public.

CONCESSIONS, LAND OR MINERAL — Sometimes territorial concessions are made to entrepreneurs on the basis that they will have the sole rights within a particular area to prospect for and extract minerals. Formerly such concessions might have extended to exempt the entrepreneurs, e.g., from customs duties on their equipment and consumable stores although it is not usual to exempt such items as income

* With the assistance of the staff of the International Bureau of Fiscal Documentation.

tax on staff salaries, profits from the undertaking (unless fixed by clauses in the concessions agreement) or duties on personal consumption of goods by personnel.

CONDUIT COMPANIES — A company may be set up in connection with a scheme for tax avoidance whereby income is paid into such a company so giving the income the new identity of distributions by that company when paid out to the shareholders. There will normally be a favourable tax situation for the company in question through its being situated in a tax haven, or in a country which has a low rate of company taxation and beneficial tax treaties with other countries. The promoters of the company use the company as a "conduit" for the income which it is desired should be "franked", or taxed at a reduced rate under the avoidance scheme. Such companies are known as "conduit" companies.

CONSANGUINITY — A feature of many ESTATE DUTY (q.v.), SUCCESSION DUTY (q.v.) and GIFT TAX (q.v.) regimes is that lower duty is often charged on bequests or gifts made to nearer rather than more distant relatives, i.e., according to the degree of consanguinity. Between spouses, who are thus regarded as "one flesh" for tax purposes, there is often no duty at all.

Curiously, however, where gifts or bequests to charities (where there is no relationship to the testator or donor at all) are exempt, the exemption seems inconsistent with the "consanguinity principle", although charitable gifts are socially desirable.

A taxpayer usually has a legal as well as a moral liability to provide for his children and widow and this factor is the main reason for favouring, for tax purposes, transfers of wealth in those directions.

CONSEIL FISCAL — TAX CONSULTANT (France, Belgium, Luxembourg).

CONSOMME SUR PLACE — Expression used in France to describe services which are "consumed" or expended the moment they are rendered, as distinct, e.g., from the, hopefully, more lasting services of plumbers, electricians, carpenters and plasterers. The ephemeral type of service includes those rendered by restaurants and places of entertainment and many of those rendered by hairdressers and barbers.

CONSORTIA — Companies may come together ("consort") for the purpose of a particular venture or ventures sharing profits or losses, providing capital, etc., in fixed ratios. The joint enterprise may take corporate form, the share capital being divided appropriately among the consorting group. In such cases special tax treatment is usually afforded on the same basis as that accorded to GROUPS (q.v.). Under U.K. tax law the consortia treatment is granted where five or fewer companies jointly own another (trading) company, either directly or through an investment company.

CONSUMPTION TAX — A sales tax on goods and services in general consumption as distinct from a tax on luxuries. The term "consumption taxation" is, however, sometimes applied to taxes on all forms of consumption whether of necessities, semi-luxuries, or luxuries.

CONTINENTAL SHELF AREAS — The sea-bed off a country's coasts is referred to as the "continental shelf" and is defined by international convention as

"(i) the seabed and subsoil of the submarine areas adjacent to the coast but outside the area of the territorial sea to a depth of 200 metres, or beyond that limit where the depth of the superjacent waters admits the exploitation of the natural resources of the area, and

(ii) to the seabed and subsoil of similar sub-marine areas adjacent to the coast of islands."

Such areas are now divided between littoral states mainly for the purposes of oil, gas, and other mineral exploration and exploitation. Where an ocean or sea separates two states and the seabed between them is entirely or partly continental shelf it is usual to divide the "shelf" by a "median line".

CONTRA ACCOUNTS — Where goods or services are transferred to or performed by one trader or professional for another and there are two-way transactions of this kind, settlement may be made only as to the net balance at the end of an accounting period. For income tax and sales tax purposes, however, it is normally necessary to bring the gross figures into account both for in-comings and outgoings in order to compute the liability correctly. (See also BARTER.)

CONTRACT OR ESTIMATE BASIS — Where the records kept, particularly by small traders, are inadequate for the precise calculation of sales tax — in some cases income tax also — the tax due may be assessed on the basis of calculations made annually, biennially, or at longer intervals on the basis of the best information that can be obtained by the tax department. (See also ESTIMATIVA and FORFAIT.)

CONTRIBUTION — Tax (France, Belgium, Luxembourg).

CONTRIBUTION FONCIERE — Land tax (France).

CONTRIBUTION DES PATENTES — Business tax (France).

"CONTROL" — The difficulty of computing liability, particularly income tax, but in some cases sales tax also, may be increased where one taxpayer is controlled by another with whom he has business dealings or where two such taxpayers are controlled by a third. The reason is that transactions between them may be entered into other than on the ordinary trading terms which would apply if the taxpayers were at arms' length. (See also ARMS' LENGTH TRANSACTIONS.) It is often a matter of some difficulty to define "control" in such a way as to cover all situations where control is effectively exercised and this is one of the subjects within the province of ANTI-AVOIDANCE MEASURES (q.v.) in general.

CONTROLLED COMPANY (CORPORATION) — In tax parlance, a controlled company is usually one in which the voting share capital is owned or controlled by another company — the two companies then form a GROUP (q.v.). A company controlled by one person or a small number of persons may be a CLOSE (or CLOSELY-HELD) COMPANY (q.v.). The degree of control may vary for different tax and company law purposes, e.g., 51 percent may constitute control for GROUP TREATMENT, but 75 percent and 100 percent control may be significant for certain other purposes. (See also CONSORTIA.)

CONVENIENCE — One of Adam Smith's CANONS OF TAXATION (q.v.).

CONVENTIONAL BASIS OF ASSESSMENT — A system adopted in the British tax code for taxing the profits of businesses and professions on current income, but measured on a conventional basis, usally as the income of the previous year. Other bases are adopted during the commencement year and two following years, and the cessation and two previous years. (See also CESSATION ADJUSTMENTS and COMMENCING ADJUSTMENTS.)

CONVEYANCE TAX — This term has two meanings and may relate to the levying of stamp or other duties (usually charged on an ad valorem basis) levied when real property is legally "conveyed" from one person to another.

The term may also relate to taxes on conveyances, i.e., vehicles. (See CARRIAGE TAX, ROAD TAXES, VEHICLE TAXES.)

CO-OPERATIVE SOCIETIES, TAXATION OF — In many countries co-operative societies are exempted from income tax and other forms of taxation either by application of the MUTUALITY PRINCIPLE (q.v.) or as a means of encouraging development of such organisations. Such societies are often promoted by governments as a means of fostering self-help, as well as greater prosperity, among small traders and farmers; and consumers may set up retail or wholesale co-operative societies in order to obtain their supplies at competitive prices.

COPYRIGHT — Payments for use of copyright, whether by ROYALTIES (q.v.) or outright purchase, are generally taxable. The latter type of payment may occasionally not be regarded as income if it does not arise out of the owner's trade or profession.

Copyrights are of two kinds, (a) industrial or commercial, and (b) literary, musical, and artistic, and royalties for the two groups are frequently dealt with in a double taxation treaty in the case where the owner is in one country and the licensee in another. As a subdivision of group (b), cinematograph royalties may be treated separately, as such "royalties" normally constitute a gross receipt rather than a net income to the recipient.

CORPORATION PROFITS TAX — This tax (C.P.T.) was imposed at the rate of 5 percent on the profits of companies in Britain during the period 1920 to 1924. C.P.T. was a special tax additional to income tax on corporate bodies, the latter tax being often known simply as CORPORATION TAX (q.v.).

CORPORATION TAX — The term applied to income tax on corporate profits, often where such profits are taxed under the CLASSIC SYSTEM (q.v.) or some variant of that system. Corporation tax in Britain was introduced in 1965 on the income of corporate bodies.

The term corporation tax is sometimes applied to levies on the income of corporate bodies on the footing that such bodies do not "die" and are therefore never subject to death duties, corporation tax, therefore, being a substitute for the periodic levying of death duties. Such taxes are imperfect instruments, however, since death duties will be payable by individual shareholders in respect of their holdings in corporate bodies and it would be a matter of some complexity to draft a corporation tax to apply only to that part of the income of a corporate body which was not ultimately likely to form part of the estate of a deceased person.

COST OF COLLECTION — The cost of collecting a tax is partly the administration cost incurred by the government in providing a tax department (see also ADMINISTRATION COST, EXPENSES RATIO), but also includes the additional cost to the private sector of compliance with the tax laws. Complaints are sometimes made by the private sector about the cost to them, for example of collecting employees' income tax by deduction at source from salaries and wages and of keeping special books or special types of records in order to comply with sales tax requirements, especially in multi-rate systems. Some of the states in the U.S.A. and some of the provinces in Canada allow a small percentage deduction to businesses to compensate them for the cost of complying with state or provincial retail sales tax laws. Such allowances are, however, the exception to the general rule that governments do not normally make any contribution towards the cost of tax compliance by the private sector except to the extent that such expenses may be deductible in arriving at profits for income tax purposes.

COUNTERVAILING DUTIES — This term is used in two senses:

(1) In Britain there are countervailing duties in respect of goods which are imported and which are of the same type as locally produced goods upon which excise duties are charged. For example, there is an excise duty on British manufactured beer and a countervailing customs duty on imported beer.

(2) The other sense in which duties may be said to countervail other duties is where some goods may be substituted for others. For example, in Britain matches are taxed fairly heavily (approximately 1 p — U.S. 2.5 cents — per 100) and mechanical cigarette and gas lighters which could serve as a substitute for matches are subjected to a specific tax of from 30 p to 35 p per unit, apart from the duties on the fuel used by some types of lighters.

COUNTY SALES TAX — In some parts of the U.S.A. retail sales taxes are levied by counties (e.g., in Calafornia). The administration of such taxes is usually undertaken jointly with that of the municipalities' and the states' retail taxes.

COUPON TAX — Dividends and interest on bearer securities are normally claimed by the owner clipping a coupon from the sheet of coupons issued with the security on purchase. Since the owner of a bearer security may not be known to the tax authority, some tax codes provide for tax (i.e., a coupon tax) to be deducted at source from all coupon payments. Should the deduction exceed the holder's tax liability he may normally reclaim the excess, declaring (if he has not already done so) his ownership of the security.

COVENANTS — Deductions for charitable donations are permitted in some countries' tax codes, and may be allowable on general principles where the charity has some relevance to the taxpayer's business, or the welfare of his employees. In Britain deductions are due for donations to registered charities where made in the form of a contractual annuity under a covenant for a period of not less than 7 years. (See also CHARGES; CHARITIES, DONATIONS.)

CREDIT BAIL — A French term, meaning the hire purchase of real property.

CREDIT D'IMPOT — A term used for credits against income tax in France in respect of tax withheld at an earlier stage (see also AVOIR FISCAL); in Belgium more particularly a credit similar to the French "avoir fiscal".

CREDIT, POST WAR — A system introduced in World War II in Britain whereby additional tax was charged to take money out of circulation and thus restrict consumer spending but with the provision that the extra money would be refunded after the war. The process of repaying the credits has, however, been extended beyond what was intended originally by linking payment of the credit to either the death or the reaching of retirement age by the person entitled to a refund. A final refund of the amounts outstanding was begun in 1972 (see also POST WAR REFUNDS). A somewhat similar system in South Africa which has functioned on a continuing basis during the last two decades but which was not related to the specific crisis of the second World War is referred to under LOAN LEVY.

CREDIT, PRECOMPTE AND PAYMENT — Where tax is deducted or withheld at source from certain income a credit is normally allowed in making the assessment on the income in the hands of its recipient by making a credit for the tax actually deducted against the total tax charged in the assessment.

CREDIT, TAX, DOUBLE TAXATION RELIEF — Most countries give relief in their assessments on the foreign income of their resident taxpayers in respect of tax charged on such income in the country of origin. The relief is usually given in the form of a credit for the foreign tax or a part thereof against the tax charged on that income in the country of residence. (See also DOUBLE TAXATION.)

CREDIT, V.A.T. — Under value added tax systems tax is normally charged on the total value of the sale at each level of distribution but a credit is given for the tax paid on the same goods by the seller when he himself acquired them. (See VALUE ADDED TAX.)

CREDITABILITY — The term used to label the tax relevant to a particular item of income, which if it may be credited under the tax law against other tax liability is said to have "creditability" or be "creditable".

CREMATORIA TAX — A tax, sometimes levied by a local authority on the use of crematoria. (See BURIAL TAX and CEMETERY TAX.)

CRIMINAL PENALTIES — The penalties applied where a taxpayer has been guilty of tax fraud rather than mere neglect of his duties and responsibilities under the tax code.

CROWN CORK TAX — A method of levying consumption tax on aerated drinks which are sealed by means of crown corks. The tax is normally a flat rate levy on the crown corks which may be administered efficiently by keeping tight administrative control of the output of the crown cork factory. The disadvantage is that the tax cannot be related to value and therefore falls unevenly, in ad valorem terms, on drinks of different quality and on bottles of different sizes which take the same size of crown cork. Moreover the tax is discriminatory against aerated drinks and does not fall upon what may be a substantial consumption of non-aerated beverages. Avoidance may occur by use of other methods of sealing bottles.

CUMULATIVE SYSTEM OF PAYE DEDUCTIONS — Under the British system of withholding tax on employees' remuneration from the salaries and wages paid to them the tax is calculated on a cumulative basis by reference to the total remuneration accrued from the date of commencement of the tax year to the date of payment of the remuneration, the tables being prepared on the assumption that the remuneration paid to date will continue at the same rate for the whole year, a deduction being made, however, for the tax already deducted from previous payments of remuneration within the same tax year. This is a refinement compared with most other tax deduction schemes for employees which normally apply the rate of tax deduction appropriate to the salaries or wages of each particular month or week on the assumption that the level of remuneration is the rate which will apply to the full year. Under the British system the total tax calculated is in fact adjusted cumulatively at each pay day so that at the end of the tax year no further adjustment is necessary. Under non-cumulative systems an annual comparison has to be made between the total deductions and the actual liability, a refund then being made or an additional amount being collected.

CUMULATIVE TAX — A sales tax which is charged on a commodity which applies at each level of distribution so that the total tax incidence is cumulative. Also known as CASCADE TAX.

CURRENT USE VALUE — A concept used in the BRITISH DEVELOPMENT LAND TAX (q.v.) in connection with the computation of the development gain, which is defined as not (inter alia) to exceed proceeds of sale less 110 percent of current use value. Current Use Value is itself defined to take account only of the "non-material" development, a term which includes use for agriculture, forestry, and advertising.

CUSTOMS, DUTIES — Customs duties are levied on goods imported into a country, usually on the AD VALOREM (q.v.) basis, but sometimes on the basis of specific duties being charged on particular items. Where imported goods are not to be consumed immediately or where they may later be re-exported, they may be kept in BONDED WAREHOUSES (q.v.) in which case duty will be charged only when the goods are brought out of bond for consumption within the importing country. (See also FREE PORT, FREE TRADE AREA.)

CUSTOMS, HANDLING CHARGES, ATTENDANCE FEES — In some countries small charges are made on all goods imported as a form of EAR-MARKED REVENUE (q.v.), ostensibly to cover the cost of providing customs checks on goods imported (see also PACKAGE TAX). Although the imposing of customs handling charges is now rather rare it is quite usual for countries to charge attendance fees for customs officers' services when these services are supplied for the convenience of traders in order that goods may be imported or withdrawn from bond at times outside normal working hours.

CUSTOMS REGULATOR — Provision in U.K. (renewable annually by Parliament) by means of which Treasury can make an Order increasing or decreasing the principle revenue duties by up to 10 percent. (See also REGULATOR TAX.)

CUSTOMS UNION — A union of countries which maintains tariffs against the rest of the world but aims at free trade among union members. A historical example is the German Zollverein which provided for duty-free movement of goods within German states before their unification under Bismarck. In modern times free trade areas and Common Market combinations are forms of customs unions.

Bibliography

Books

The publications listed in this bibliography have recently been acquired by the Bureau's library which will gladly supply further information upon request (please quote the reference numbers). They should, however, be ordered through a bookseller or direct from the publisher indicated, and not through the Bureau.

AUSTRIA

DIE UNTERNEHMUNGSFINANZIERUNG AUS DER SICHT DER STEUERBEGÜNSTIGUNGEN DES EINKOMMENSTEUERRECHTES

By Franz Gasselberger. Vienna, Wirtschaftsverlag Dr. Anton Orac, 1977. Aktuelle Beiträge zum österreichischen Abgabenrecht, Heft 2. 99 pp.
Booklet discussing the various income tax incentives in Austrian tax law and their effect upon enterprise financing. (B. 100.453)

CANADA

ACQUISITIONS AND MERGERS IN CANADA

Second edition, Edited by Desmond B. Morin, Warren Chippindale. Toronto, Methuen, 1977. 407 pp.
The book contains a range of articles on the various subjects concerning acquisitions and mergers, such as taxation, legal aspects, financial alternatives, securities regulations, valuation guidelines, etc. (B. 100.597)

A NON-RESIDENT'S GUIDE TO CANADIAN TAXATION

By Peter F. Cumyn. Toronto, Richard de Boo., Ltd., 1977, 156 pp., $ 10.—.
The guide provides a description of the general effect of legislative rules for non-resident taxpayers, taking into consideration the developments and legislative changes up to March 31, 1977. (B. 100.605)

PREPARING YOUR INCOME TAX RETURNS; CANADA AND PROVINCES

1977 Edition for 1976 tax returns. By R.A. Lachance and G.D. Eriks. Don Mills, CCH Canadian Limited, 1977. 307 pp.
Practical guide for taxpayers to prepare their own income tax returns, covering both federal and provincial income taxes.
(B. 100.540)

COSTA RICA

L'IMPOSIZIONE MOBILIARE NELLA REPUBBLICA DI COSTA RICA DELLE SOCIETÀ COMMERCIALI

By Andrea d'Ambrosio. San José, Andrea d'Ambrosio, 1977. 50 pp.
Brochure explaining the corporate income tax in Costa Rica. (B. 15.663)

EUROPE

TAXATION IN EUROPE 1977

By Deloitte & Co., Chartered Accountants. London, Farrington Publishing Co., Ltd., 1977. 180 pp.
Information on taxation of business of corporate entities in Europe. The position is as of April 1, 1977 and includes the following countries: Austria, Belgium, Channel Islands, Cyprus, Denmark, Finland, France, German Federal Republic, Gibraltar, Greece, Ireland, Isle of Man, Italy, Liechtenstein, Luxembourg, Malta, the Netherlands, Norway, Portugal, Spain, Sweden and Switzerland. (B. 100.580)

TAX PLANNING FOR BUSINESSES IN EUROPE

By M. Roy Saunders. London, Butterworths, 1977. 334 pp., £ 12.—.
Study on tax planning affecting international trade in Europe. Each chapter is a separate study of a country's tax legislation, the major countries involved being the United Kingdom, France, Germany, Belgium, Luxembourg, Switzerland and the Netherlands. Three other tax regimes are also dealt with (the Channel Islands, Liechtenstein and the Netherlands Antilles) since they are closely affiliated to one of the above countries situated in Europe. (B. 100.397)

FINLAND

ALLMÄN TULLAGSTIFTNING

Helsinki, Board of Customs, 1977. Supplement 1/1977 to the Tullverkets Handbok I — Lagstiftning (Legislation).
Loose-leaf publication concerning customs duty and related levies on importation and exportation in Finland. (B. 100.582)

GERMAN FEDERAL REPUBLIC

AO-HANDBUCH

Handbuch des steuerlichen Verwaltungs- und Verfahrensrechts 1977. Munich, C.H. Beck, 1977. 659 pp., DM 45.—.
Compilation of the text of the new Fiscal Code relevant for the assessment year 1977 with related material. (B. 100.603)

GmbH-GESETZ

Gesetz betreffend die Gesellschaften mit beschränkter Haftung. Deutsch-englische Textausgabe. 3. erweiterte Auflage. Frankfurt, Fritz Knapp Verlag, 1977. 102 pp., £ 4.—.
German text with synoptic English translation of the German law concerning limited liability companies. (B. 100.542)

HANDBUCH DER FINANZWISSENSCHAFT

Dritte, gänzlich neubearbeitete Auflage unter Mitwirkung von Norbert Andel und Heinz Haller. Herausgegeben von Fritz Neumark, Lieferung 10. Tübingen, J.C.B. Mohr (Paul Siebeck), 1977. 90 pp., DM 16.50.
Third complete revised edition of a handbook on public finance prepared by Norbert Andel and Heinz Haller and edited by Fritz Neumark. Supplement 10 has been issued dealing in particular with the theory of public expenditure. (B. 100.045)

HANDBUCH DER STILLEN GESELLSCHAFT

Nachtrag 1977 zur 2. Auflage. By Heinz Paulick. Cologne, Verlag Dr. Otto Schmidt, 1977. 48 pp., DM 8.—.
Supplement to the second edition of the Handbook on Silent Partnership containing recent case law and literature on this subject. (B. 100.486)

HANDBUCH ZUR VERMÖGENSTEUER-HAUPTVERANLAGUNG

Munich, C.H. Beck, 1977. 442 pp.
Handbook on the 1977 main-assessment of net worth tax. (B. 100.519)

PRIVATER HAUSBESITZ IM STEUERRECHT

Steuern für Miethaus, Einfamilienhaus und Eigentumswohnung. By Max Troll. Stuttgart-Wiesbaden, Forkel Verlag, 1977. 348 pp.
Book containing a compilation of all tax aspects with respect to the private ownership of real property in Germany, e.g. deductibility of expenses, depreciation, lease income, capital gains taxation, net worth tax, etc. (B. 100.608)

STEUERGUTACHTEN AUS DEM JAHRE 1785

Faksimiledruck mit einer Einleitung von Dr. Alfons Pausch. 2. Auflage. By Johann Wolfgang von Goethe. Cologne, Peter Deubner Verlag, 1977. 32 pp., DM 12.80.
Selected pages from an opinion on the reform of taxation written in 1785 by Johann Wolfgang von Goethe in his function as privy councillor at the Court of Weimar. (B. 100.463)

HONG KONG

ANNUAL DEPARTMENTAL REPORT

By the Commissioner of Inland Revenue R.V. Giddy for the Financial Year 1975-76 (1st April 1975 — 31st March 1976). Hong Kong, Government Printer, 1976. 50 pp. (B. 50.835)

APPROVAL OF RETIREMENT SCHEMES UNDER THE INLAND REVENUE ORDINANCE

Cap. 112 of the Laws of Hong Kong. Information pamphlet Inland Revenue Department, Hong Kong, 1977. Hong Kong, Government Printer, 1977. 20 pp.
Summary of the tax consequences of approval of retirement schemes under the Inland Revenue Ordinance of Hong Kong. (B. 50.833)

DOING BUSINESS IN HONG KONG

By Michele Kay. Hong Kong, South China Morning Post Limited, in conjunction with Amcham Publications Limited, American Chamber of Commerce in Hong Kong, 1976. 307 pp., HK$ 35.—.
Information handbook describing everything a businessman wants to know about doing business with Hong Kong. From government policies, industrial facilities to taxation (14 pages) and general business practices. (B. 50.825)

HONG KONG TAXATION

A taxpayer's guide. By E. Newton. Fifth printing 1976 of third revised edition of 1974. Hong Kong, Chinese University of Hong Kong, Department of Extramural Studies. 184 pp.
Guide designed to outline the Hong Kong Inland Revenue Ordinance as stated in the revised 1973 edition. The work gives an overall view of the salaries tax, profits tax, interest tax, property tax and personal assessment. (B. 50.782)

INTERNATIONAL

ERSTELLUNG UND PRÜFUNG DES KONZERNABSCHLUSSES

Prepared by the Kommission für Buchprüfung der U.E.C., Düsseldorf, IdW-Verlag, 1977. 150 pp., DM 49.—.
Comparative study of the principles, practice and control of consolidated accounts. (B. 100.514)

THE FINANCIAL TIMES WORLD INSURANCE YEARBOOK 1976/77

The Financial Times, 10 Bolt Court, Fleet Street, London, EC4A-3HL, 1976. 296 pp.
Survey of world's principal companies and groups, with a trilingual vocabulary of insurance words and phrases, including data of more than 40 national insurance markets and insurance supplying countries. (B. 100.596)

THE INTERNATIONAL TAXATION OF MULTINATIONAL ENTERPRISES IN DEVELOPED COUNTRIES

By J.D.R. Adams and J. Whalley. London, Associated Business Programmes, 1977. 178 pp., £ 9.95.

WERKENDE GEHUWDE VROUWEN IN NEDERLAND

By P.D. Bouma and W.H. Somermeyer. Deventer, Kluwer; Alphen a.d. Rijn, Samsom, 1977. Burger en Belastingen, bevindingen uit een enquête, No. 2. 125 pp., Dfl. 27.50.
Printed results of a poll inquiry concerning personal income taxation in the Netherlands entitled "Citizen versus Taxation", No. 2 in this series entitled "Working married women in the Netherlands", covers the impact of income taxation on working married women in the Netherlands. (B. 100.574)

NEW ZEALAND

BUTTERWORTHS TAXATION LIBRARY

By F.D. O'Flynn and J. Rodgers. Wellington, Butterworths, 1976.
Loose-leaf publication in two volumes. Volume 1 (Statutes and Regulations) contains, inter alia, the text of the Income Tax Act 1976 and the Land Tax Act 1976, which have replaced the Land and Income Tax Act 1954 (as amended); the Inland Revenue Department Act 1974; and various Regulations pertaining to the imposition of income tax. Volume 2 (Income Tax: Practice Notes), contains an extensive commentary to the income tax law and practice, arranged in alphabetical order of major topics, as well as the text of the various double taxation agreements to which New Zealand is a partner. (B. 100.652)

PHILIPPINES

FOREIGN INVESTMENT AND TAX ADMINISTRATION

Manila, National Tax Research Center, 1976. 188 pp.
Summary of taxation and administration of taxes in the Philippines. (B. 50.836)

TAX INCENTIVES BY INDUSTRY

(Up to December 1975.) Manila, National Tax Research Center, 1976. 98 pp. (B. 50.838)

TAX RESEARCH: THE PHILIPPINE EXPERIENCE

A dissertation presented to the Graduate School Centro Escolar University, March 1976. By Angel Q. Yoingco. Manila, National Tax Research Center, 1976. 375 pp. (B. 50.837)

SWEDEN

SKATTEHANDBOK

Del I. By E. Geijer, E. Rosenqvist and H. Sterner. Stockholm, Norstedts, 1977. 1250 pp.
Eighth revised and extended edition of handbook containing comment on and the text of the national and local income taxes, the national net worth tax, and other related taxes stated as of the end of 1976. This eighth edition is drafted like the 1972 seventh edition and has been prepared by Harry Sterner, Gösta Ekman and Sven Crabo. (B. 100.602)

UNITED KINGDOM

BRITISH TAX LAW

Income tax; corporation tax; capital gains tax. By Mervyn Lewis. Plymouth, Macdonald & Evans, Ltd., 1977. 592 pp., £ 7.50.
The aim of this work is to provide a sound understanding of the nature, scope and relationship of the main direct taxes and their related legal theory. The British taxes dealt with in this work are income tax, corporation tax and capital gains tax. (B. 100.641)

CAPITAL TRANSFER TAX

By C. Ronald. Plymouth, Macdonald & Evans, Ltd., 1977. 352 pp., £ 3.—.
Introductory textbook on the capital transfer tax which replaced estate duty (March 12, 1975). The law is stated as of May 1, 1977 including the Finance Bill, 1977. (B. 100.581)

TAXATION OF DIRECTORS AND EMPLOYEES

The Law under Schedule E. By John M. Andrews. London, Institute of Chartered Accountants in England and Wales, 1977. 244 pp., £ 5.95.
Survey of the Schedule E provisions in this guide entitled "Taxation of Directors and Employees" covers all forms of emolument (salaries, fees, wages, perquisites and profits) as well as pensions, expenses and other permitted deductions and problems of overseas residence. (B. 100.609)

TOLLEY'S TAX CASES

Second edition. By Victor Grout. Croydon, Tolley Publishing Co., Ltd., 1977. 355 pp., £ 6.50.
A comprehensive digest of reported tax cases applicable to current legislation as of March 31, 1977. This second edition covers United Kingdom cases, whether or not in the Official Reports, and decisions of the Privy Council and of the Irish cases turning on legislation similar to United Kingdom legislation. (B. 100.643)

U.S.A.

ESTATE AND GIFT TAX AFTER TAX REFORM

By Michael J. Weinberger. Published by Practising Law Institute, 810 Seventh Avenue, New York, N.Y. 10019, 1977. 315 pp.
Discussion of the federal estate and gift tax as effected by the Tax Reform Act of 1976. (B. 100.601)

FUNDAMENTALS OF INTERNATIONAL TAXATION

By Jon E. Bischel and Robert Feinschreiber. Published by Practising Law Institute, 810 Seventh Avenue, New York, N.Y. 10019, 1977. 445 pp.
Discussion of the United States tax laws that affect international business, including international trade, investment and finance as of Tax Reform Act of 1976. (B. 100.598)

TAX SHELTERS AFTER TAX REFORM

Edited by Ruth G. Schapiro. Published by Practising Law Institute, 810 Seventh Avenue, New York, N.Y. 10019, 1977. 315 pp.
Compilation of essays on tax shelters after the Tax Reform Act of 1976. The following authors have contributed on various topics: Limitation of losses to amounts at risk by Ruth G. Schapiro; Partnerships by Alan J.B. Aronsohn; Real estate by Alan S. Rosenberg and Herbert T. Weinstein; Oil and gas tax shelters by Hugh M. Dougan; Motion pictures by Peter M. Fass and Robert D. Howard etc. Forms, instructions to forms, revenue ruling and informations are appended. (B. 100.599)

Prof. L. Hart Wright, Professor of Law, University of Michigan, Ann Arbor, Michigan.

Uruguay
Prof. Dr. Ramón Valdes Costa, Montevideo.

PURPOSE

The International Bureau of Fiscal Documentation was founded in 1938. For reasons of organizing character this Bureau is established as a separate foundation according to Netherlands law. The Bureau is a scientific, independent, non-profit making, non-political foundation of which the purpose is defined in the articles as follows:

(Art. 2) The Foundation, International Bureau of Fiscal Documentation, established as a foundation of the International Fiscal Association (hereinafter referred to as I.F.A.) shall strive towards a fruitful cooperation with the I.F.A.

The objectives of the Foundation are to set up and maintain an international documentation bureau for the purpose of disseminating information concerning tax legislation and the application of taxation law, as well as for furthering the pursuit of knowledge about taxation.

L'OBJET DU BUREAU

Le Bureau International de Documentation Fiscale fut fondé en 1938. Pour des raisons d'organisation, ce Bureau est établi comme une fondation séparée conformément au droit civil néerlandais. Le Bureau est une institution scientifique, indépendante, sans but lucratif et sans objet politique, dont le but est défini dans les statuts comme suit:

(Art. 2) La Fondation, Bureau International de Documentation Fiscale, instituée comme fondation de l'Association Fiscale Internationale (ci-après désignée I.F.A.) s'efforcera d'établir une coopération fructueuse avec l'I.F.A.

Les objectifs de la Fondation sont d'établir et assurer le fonctionnement d'un bureau de documentation international dans le but de diffuser des informations concernant la législation fiscale et l'application des lois fiscales, et de faire progresser la recherche en matière d'imposition.

(Art. 3) The Foundation shall endeavour to achieve these objectives:
a. by setting up a library of tax legislation, together with relevant books, journals and other publications;
b. by supplying detailed and general information;
c. by allowing the inspection of works acquired by the library, with the permission of the director and subject to the conditions imposed by him (which may also be of a financial nature);
d. by producing publications;
e. by cooperating with the publications of others;
f. by all other lawful means.

In close cooperation with the I.F.A., and with the aid of expert correspondents throughout the world, the Bureau acquires as much information as possible in the field of international and comparative tax law. The Bureau is thus able to supply data (but not advice) on specific tax problems. A fee, necessary for the maintenance and extension of the Bureau, is charged on a time/cost basis. The Bureau has published several series of monographs including "Selected Monographs on Taxation" (a joint venture with Harvard Law School, International Tax Program).

The Bureau also publishes *European Taxation,* a monthly journal on the tax systems of Europe. *Tax News Service,* published twice per month, provides rapid information on world-wide tax development. *Supplementary Service to European Taxation* is a loose-leaf reference work.

The loose-leaf series *Guides to European Taxation* comprises "The Taxation of Patent Royalties, Dividends, Interest, in Europe", "The Taxation of Companies in Europe", "The Taxation of Private Investment Income", "Value Added Taxation in Europe" and "Taxation in European Socialist Countries".

The loose-leaf series *Tax Treaty Guides* comprises "Handbook on the U.S.–German Tax Convention" and "Handbook on the Dutch–German Tax Convention" (in German). The Bureau has also published four other reference works, *Corporate Taxation in Latin America, African Tax Systems, Taxes and Investment in the Middle East* and *Taxes and Investment in Asia and the Pacific.*

(Art. 3) La Fondation s'efforcera de réaliser ces objectifs:
a. en constituant une bibliothèque de législation fiscale, ensemble avec les livres s'y rapportant, des revues et autres publications;
b. en communiquant des informations détaillées et générales;
c. en permettant l'étude des travaux acquis par la bibliothèque, avec la permission du directeur et sous les conditions imposées par lui (qui peuvent être de nature financière);
d. en éditant des publications;
e. en coopérant à la publication des autres;
f. par tout autre moyen légal.

Par une coopération étroite avec l'IFA et avec l'aide de correspondants à travers le monde, le Bureau rassemble toutes les données possibles en matière de droit fiscal international et comparé. De cette façon, le Bureau est à même de fournir des renseignements, mais non des avis, concernant des problèmes fiscaux spéciaux. Des honoraires, nécessaires au maintien et à l'expansion du Bureau, sont demandés en fonction du temps nécessaire et du coût. Le Bureau a publié un certain nombre de monographies dont des monographies sur la fiscalité (études réalisées en association avec Harvard Law School, International Tax Program).

Le Bureau publie aussi *European Taxation,* revue mensuelle sur les systèmes fiscaux européens. *Tax News Service,* publié deux fois par mois, donne une information rapide, à l'échelle mondiale, de tout ce qui touche à la fiscalité. *Supplementary Service to European Taxation* est un ouvrage de référence présentée sous feuilles mobiles.

Guides to European Taxation, également une publication sous feuilles mobiles, comprend "The Taxation of Patent Royalties, Dividends, Interest, in Europe", "The Taxation of Companies in Europe", "The Taxation of Private Investment Income", "Value Added Taxation in Europe" et "Taxation in European Socialist Countries".

Tax Treaty Guides, une autre publication sous feuilles mobiles, comprend le "Handbook on the U.S.–German Tax Convention" et le "Handbook on the Dutch–German Tax Convention" (en langue allemande). Le Bureau a également publié, *Corporate Taxation in Latin America, Systèmes Fiscaux Africains, Taxes and Investment in the Middle East* et *Taxes and Investment in Asia and the Pacific,* ouvrages d'information sous feuilles mobiles.

M. Marin Ariaz (Spain)
C.A. Poissant (Canada)
Dr. A. Toffoli Tavolaro (Brazil)

The I.F.A. was founded on the 12th of February 1938 by tax experts of a number of countries. Purpose and working-method are defined as follows in the Articles:

Aim – Article 2
The aim of the Association is the study and advancement of international and comparative law in regard to public finance and especially international and comparative fiscal law and the financial and economic aspects of taxation.

Plan of Action – Article 3
The Association shall endeavour by all legal means to realise this aim: a) by scientific research; b) by holding congresses and conferences; c) by publications; d) by cooperation with all data collecting organisations, especially the International Bureau of Fiscal Documentation in Amsterdam; e) by all other appropriate methods.

I.F.A. has branches in 31 countries. Residents in any of these countries (I.F.A. members or candidates for membership) can approach the secretary of the local Branch.

Members who live in countries where I.F.A. has no Branch are registered as direct members of the Association. They can get in touch with the General Secretariat of I.F.A. (this also applies to candidates for membership).

Conditions of direct membership of I.F.A. for 1983 are: individuals US$ 40.– p.a.; corporations US$ 90.– p.a.

Contents

of the January 1982 issue

John F. Due and Jean M. Due:

THE FINANCING OF THE SOUTHERN REGION AND OTHER REGIONAL GOVERNMENTS OF THE SUDAN 4

Paper reviewing the methods of financing the Southern Region and the significance this financing may have for the newly created regional governments in the rest of the country.

U.S.A.: DRAFT MODEL INCOME TAX TREATY 15

Text of the new U.S. Model Income Tax Treaty of 16 June 1981.

Elizabeth de Brauw-Hay:

GHANA: THE INVESTMENT CODE 1981 21

Discussion of the new investment code – Act 437 of 1981 – to replace the existing investment legislation which, because of its deficiencies, was acting as a severe deterrent to foreign investment.

Ahmad Khan:

PAKISTAN'S BUDGET FOR 1981-82: FISCAL MEASURES FOR DEVELOPMENT 25

Pakistan's Budget for the fiscal year 1981-82 aims at the acceleration of the pace of economic development through the participation of both the public and private sectors and to reach a further degree of self sufficiency in the production of industrial and agricultural goods.

Abdul Waheed:

PAKISTAN: SUMMARY OF NEW TAX CONCESSIONS IN BUDGET 1981-82 28

PAKISTAN: BUDGET 1981-82 29

Extract from the Budget speech pronounced on 26 June 1981 by Mr. Ghulam Ishaq Khan, Finance Minister.

MALAYSIA: BRITISH COMPANY HAVING NO PERMANENT ESTABLISHMENT NOT SUBJECT TO TAX ON MANAGEMENT FEES 33

K.A. Gofran:

BANGLADESH: 1981 INCOME TAX AMENDMENTS 34

The author deals with those amendments which are of primary importance to non-resident investors, such as the introduction of a tax holiday for the expansion of an existing industrial undertaking and the restriction of the investment allowance.

U.S.A.: RETURN OF TAX TREATIES (BRITISH VIRGIN ISLANDS AND CYPRUS) 35

The Foreign Relations Committee recommends renegotiation of the treaties with the British Virigin Islands and Cyprus in order to introduce meaningful anti-shopping provisions.

From Prentice Hall

An indispensable aid for American businessmen, investors and corporations engaged in or planning foreign operations and for those in foreign countries planning or doing business in the United States —

TAX TREATIES

This definitive guide is indispensable for any businessman or corporation that sells, buys, manufactures, or invests in the United States — as well as for any American businessman or corporation that does business in foreign countries. It tells you:

- How and where to handle your investments while eliminating the chance of double taxation.
- How much of your investment income will be protected by tax treaty exemptions.
- How much business Americans can carry on in a foreign country and vice versa without becoming taxable as a "permanent establishment."
- How to protect your employees who are temporarily at work abroad from a double tax burden.

In Tax Treaties, you'll also find:

1. The full official text of every existing treaty, supplementary treaty, or protocol relating to income taxes and estate and gift taxes between the United States and each of its tax-treaty countries, including model treaties showing the latest trends.
2. Annotated editorial text arranged in a Uniform Paragraph Plan . . . makes for easy direct comparison of provisions of one tax treaty country with another . . . permits a single unified index which works hand in hand with this unique setup. You'll make sure, speedy decisions at the flip of a wrist.
3. Official reports on each treaty giving you the background behind the provisions; why particular treaty articles were included; and what each provision means to you.
4. A Special Finding List at the beginning of the editorial summary for each country . . . speeds you quickly to explanatory and official material that affects you.
5. Monthly REPORT BULLETINS, analyzing the latest treaties, decisions and rulings, keep you right on top of today's fast breaking tax treaty developments . . . (plus Current Matter containing the most recent U.S. court decisions and IRS rulings giving you the latest judicial and official word on tax treaties.)

In today's constantly expanding international commerce, expert tax-managing or tax-counseling of business activities between the United States and each of its treaty countries is a must — so keep up to date with Prentice-Hall's TAX TREATIES.

To order a one-year introductory subscription to this unique publication at the low rate of only $156, address Department S-TT-103.

The Financing of the Southern Region and other Regional Governments of the Sudan

by John F. Due and Jean M. Due*

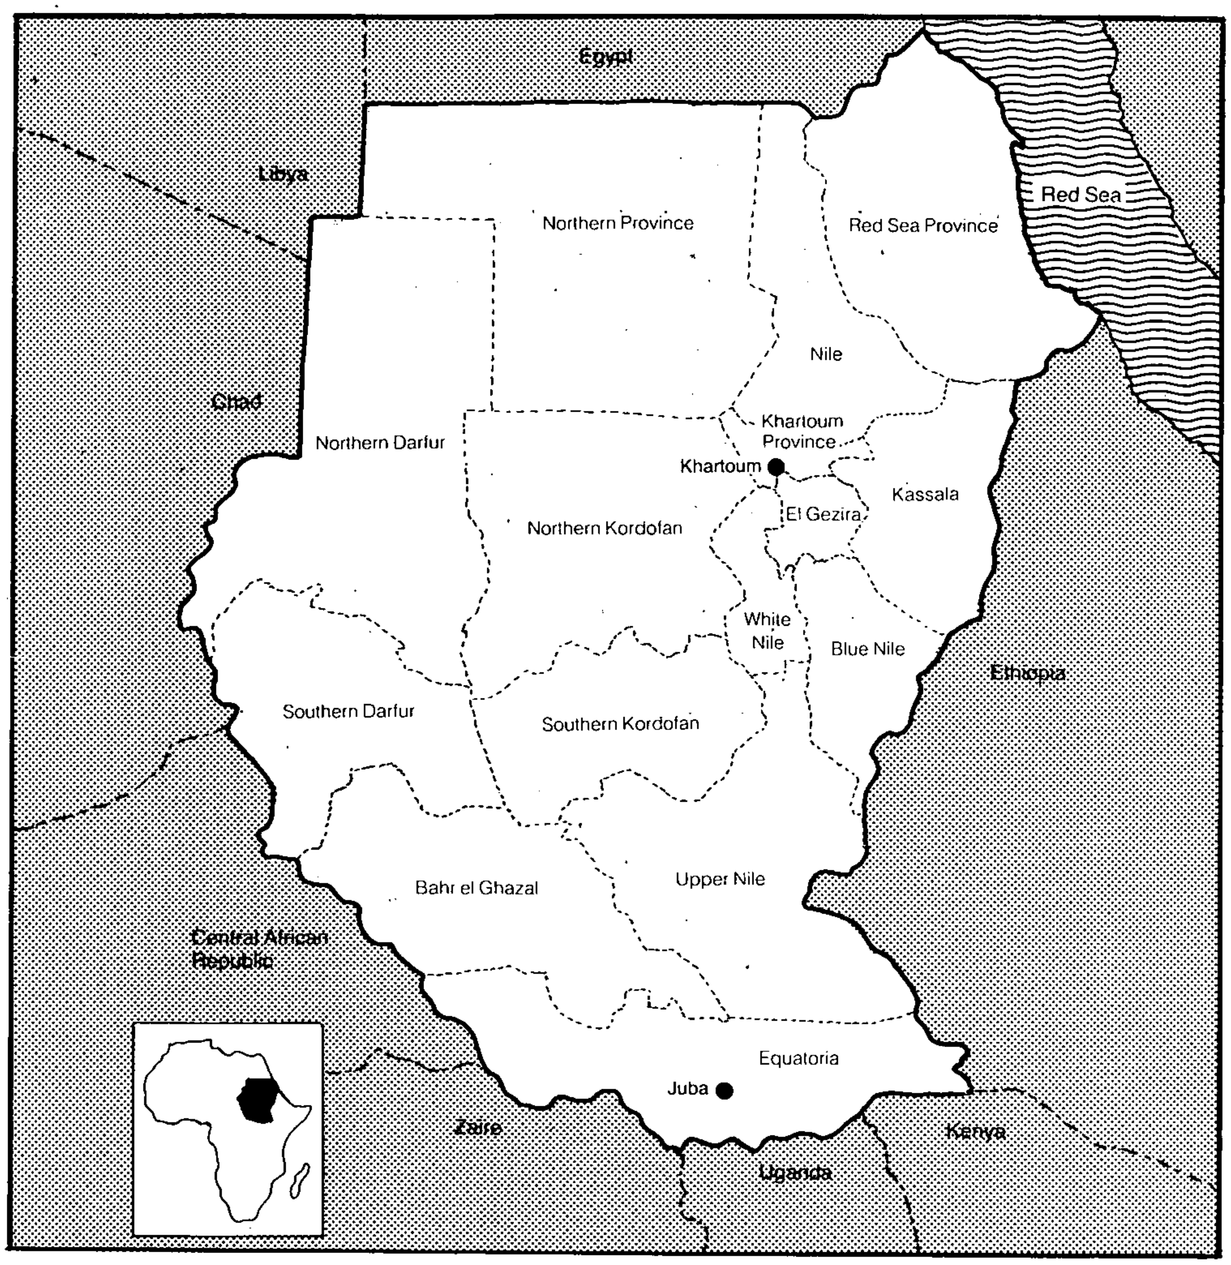

Table of contents

I. Introduction
II. The tax system of the Central Government
  A. Direct taxes
  B. Indirect taxes
III. The Southern Region (SR)
  A. The financing of the Southern Region
  B. Taxes imposed by the Central Government, but collected by the Regional Government and retained for its own use
  C. Taxes imposed and collected by the Central Government but the revenue shared with the SR
  D. Taxes imposed and collected by the Southern Region Government
  E. Budgeted versus actual receipts
  F. Tax administration
  G. Provincial revenue sources
  H. Local government taxes
  I. Overall recurrent budget picture in the Southern Region
  J. Evaluation of the revenue system
  K. Potential for additional tax revenue
IV. The new Regional Governments
V. Approaches to improved financing of the regions
VI. Conclusion.

I. INTRODUCTION

The Southern Region of the Sudan was given a high degree of autonomy in 1972, as a move to end the seventeen-year civil war. The Southern Region (SR) has its own elected assembly, cabinet, and president, who is also vice president of the Central Government. Most governmental functions in the South, other than defense, foreign relations, and services of a national character, such as the post office, were given to the SR government. The SR is relatively isolated from the rest of the country, and differs sharply in other respects; it is primarily non-Moslem, with English, not Arabic, as the common language. The semi-subsistence typically tropical agriculture, the basis of the livelihood of most of the population, contrasts with the irrigated and dry land mechanized farming of the rest of the country.

It is the purpose of this paper to review the methods of financing of the SR, and the significance that this financing may have for the newly-created (December 1980) regional governments in the rest of the country.

* The authors are Professor of Economics and Professor of Agricultural Economics at the University of Illinois, Urbana. They are indebted to the officials of the government of the Southern Region of the Sudan for their assistance, and particularly to Dr. David Bassiouni, Director General of Agriculture of the Southern Region.
This paper is based upon a study of the financing of agricultural development projects in the Southern Region for the government of the Southern Region, under World Bank auspices in 1980, and additional study in Khartoum in 1981.

II. THE TAX SYSTEM OF THE CENTRAL GOVERNMENT

The financing of the subordinate units in a Federal system must be considered in the light of the central government tax structure. A brief review will suffice. Table 1 provides the figures for 1979/80 and the revised budget figures for the 1980/81 fiscal year (ending June 30, 1981). The relative figures have not changed greatly over the last decade. There are several significant features. The relative reliance on direct taxes is one of the lowest in the world, even among developing countries. The percentage reliance on customs duties is very high by present day standards, nearly half of the revenue raised from this source. The figure is, however, somewhat misleading, since imports by government, which constitute about half of the total, are subject to the duties.

A few major characteristics of the tax system can be summarized.

A. Direct taxes

The direct tax system is schedular; the most important revenue element is the business profits tax, applied to all businesses, corporate and noncorporate. The rate ranges from 15 to 60% on resident individuals, 25 to 60% on corporations and non-resident individuals. The personal income tax, collected largely through withholding, applies only to wage and salary incomes, with rates from 15 to 70%, and a flat LS 1,000[1] exemption regardless of family size. Wives are treated as separate taxpayers. The other two elements in the income tax structure, land rent (taxed at the same rates as business profits) and capital gains, with rates ranging from 5 to 25% (40% on limited companies), are of minor revenue importance.

B. Indirect taxes

1. *Customs duties*

The tariff is very complex, with over 25 ad valorem rates and a number of specific rates. The basic rate is approximately 40%. Exemptions are very limited, to medicine, a few foods, and some items used in farming.

2. *Excises*

There is an unusually wide range of excises – 33 as of 1981 – applying to most domestic production, with compensating levies on imports, called consumption duties, on five major commodities. The majority of the excises have ad valorem rates, but some are specific.

3. *Development tax*

In 1974-75 the government introduced a general sales tax at the manufacturing level, called a development tax. The rate is currently 5%. Exemptions are very limited, although unprocessed foods are not reached. At times the levy has applied to imports as well, but not currently; it does apply to exports, an unusual policy.

There is also a 10% tax on specified services, including hotels and restaurants, called a sales tax.

TABLE 1

Current revenue sources, Democratic Republic of the Sudan
1979/80 – 1981/82

	Revenues, millions of LS			*Percentage of total tax revenue*		
	1979/80	1980/81 [1]	1981/82 [2]	1979/80	1980/81	1981/82

4. *Export duties*

There is a substantial list of export duties, all with ad valorem rates, most between 5 and 15%. The major one, revenue wise, on cotton was eliminated in 1980 to increase cotton exports.

The tax system has undergone little basic change for several decades, apart from the introduction of the development tax.

III. THE SOUTHERN REGION (SR)

The SR contains about 650,000 square kilometers, about one-fourth of the total area of Sudan, and is somewhat larger than Kenya. The population is about three and three-fourths million, about one-fifth of the country's total population. The per capita income data in the Sudan are by no means accurate; the figure for the South is estimated to be $ 150, or one-third the average for the entire country. The South is highly dependent on agriculture, including livestock. Most cultivation is semisubsistence, with shifting cultivation comparable to that of tropical Africa. Rainfall is adequate without irrigation. Dura, a form of sorghum, is the most important food crop, plus maize, millet, groundnuts and sesame. Currently there is little production of previous export crops: cotton, coffee and tobacco.

Recurrent expenditures of the SR government are made for a number of purposes: the largest items are education and agriculture and natural resources, each 13% of the total, followed by roads, health and welfare, and general administration. The provinces of the Region – there are currently six – concentrate their activities on education, health and welfare, and prisons, which together account for about 80% of their total spending (1980). In the development budget, agriculture and health are the major items (each 17%), followed by communications and roads. The development budget totals are typically far in excess of the actual amounts spent, which are restricted by availability of funds. At the provincial level, agriculture, industry, and transportation are the chief elements in the development budget, agriculture alone reaching nearly 50% in Western Equatoria province.

A. The financing of the Southern Region

Table 2 shows the overall recurrent budget data for 1980/81; grants from the Central Government constitute two-thirds of the total. In other words, the SR is far from being autonomous in terms of financing its activities.

The tax structure of the SR government is very complex. There are three distinct types of levy:

B. Taxes imposed by the Central Government, but collected by the Regional Government and retained for its own use

These consist of the income taxes plus the stamp duty. For a time the provinces collected the business profits tax on small firms and retained the revenue; in more recent years SR government has collected the tax.

TABLE 2

Summary of the recurrent budgets of the Government of the Southern Region of the Sudan in LS, 1977/78 – 1980/81.*

	1977/78	1978/79	1979/80	1980/81
Recurrent expenditures:				
Own recurrent expenditures	23,393,680	28,138,624	34,236,068	38,203,407
Transfer to development budget	2,400,000	2,500,000	2,500,000	2,500,000
Transfer to the provinces	8,935,460	9,300,000	19,800,000	20,707,000
Total	34,629,140	39,939,624	56,536,068	61,410,407
Recurrent revenues:				
Tax revenue	8,427,400	11,412,000	14,370,700	15,053,700
Nontax revenues	5,601,140	5,026,624	6,165,368	6,356,707
Total, own revenue	14,028,540	16,438,624	20,536,068	21,410,407
Grants from Central Government [1]	20,800,000	23,500,000	36,000,000	40,000,000
Total	34,828,540	39,938,624	56,536,068	61,410,407

1. Including funds transmitted to the provinces.

* *Source:* Democratic Republic of the Sudan, Southern Region, ***Budget Speeches,*** respective years, 1977/78–1980/81.

C. Taxes imposed and collected by the Central Government but the revenue shared with the SR

Most are indirect taxes, but customs duties are not shared:

a. Excises. The revenue of three excises, cigarettes, beer and liquor, are shared with the SR, on the basis of destination. These are collected at the factory.

b. Consumption duties, the counterparts of certain ex-

© 1982 International Bureau of Fiscal Documentation – BULLETIN

cises on imports. The revenue of these is shared with the SR government on the basis of destination of the goods.

c. Export duties, on goods exported from the SR to foreign countries. As such exports are now negligible, this is not a significant source of revenue.

D. Taxes imposed and collected by the Southern Region Government

The SR government has imposed a large number of taxes, which yield nearly half of its total tax revenue.

a. Surcharge on imports. When the Central Government removed comparable taxes in 1979-80, the SR imposed a 10% surcharge on imports into the region from other countries, collected by SR personnel at the borders (most of the imports come in via Kenya or Uganda, and some from Zaire). Ultimately the plan is that this tax will be collected by Sudan Customs.

b. A number of separate levies called development taxes.

1) On incomes, with rates from 1 to 11%, collected by the SR government in conjunction with the income tax. Most is collected from employers monthly.
2) On license holders, as for example on motor vehicles, LS 1 a year.
3) On profits of government corporations, 5%. The tax yields little, as most are not profitable.
4) Taxes upon the sales of a number of commodities and the provision of services:
   i) Sugar – 5 piastres (p)[2] per rottle, paid to the tax office to obtain a certificate to buy sugar. Sale of sugar is controlled.
   ii) Petrol and diesel fuel – 5p. per gallon; collected from the seller.
   iii) Telegrams – 5p. each.
   iv) Hotels – 10%.
   v) Airport embarkation – LS 1.
   vi) Dates – LS 20 per bag (100 kg).
   vii) Sale of products of mechanized farms: from Renk, dura (10p. per sack), sesame (50p. per sack); from Aweil, rice, grade 1, LS 3 per sack, grade 2, LS 2, grade 3, LS 1.
   viii) Cigarettes, which are produced at the Haggar cigarette factory in Juba, 2 p. per 10 cigarettes.
   ix) Taxes on certain imports:
   Vehicles – LS 35 on autos, LS 25 on heavy vehicles.
   Miscellaneous appliances – LS 5 to LS 20 each.
   Liquor – LS 1 per half litre.
   Coffee – LS 150 per ton.
   Tea – 8 p. per kg.
   These are collected at the border points, by the SR tax offices, with cooperation of the police and customs guards, with an attempt to catch goods smuggled in, as for example, at Yei, coffee from Zaire. Tax applies regardless of final destination.
   x) Crocodile skins, 5p. per inch.
   xi) Exports from the SR to foreign destinations:
   Fish.
   Salt.
   Soap.
   Edible oil.
   Ready made clothes.
   Dumuria and dabalan (types of textiles), 20% factory price.
   Utensils.
   Onions.
   Aspro (aspirin), 20% factory price.
   Bicycles and parts, 20% of export price.
   These are collected at border points on locally produced or imported goods when reexported.
   xii) Road tolls, on entrance into the Sudan of foreign registered vehicles. Present rates: truck, LS 35, with trailer, LS 70. Much of the revenue is collected in Nairobi on departure of the trucks for the Sudan.
   xiii) Contracts, made in the SR by firms located elsewhere and not subject to profits tax, LS 100 to LS 200 per LS 10 million.

c. Purchase tax on second hand motor vehicles.

d. Share of the profits of the sugar monopoly, classified as a tax, based upon total consumption of sugar in the SR as a percentage of the national total (4%), remitted by the Central Government.

Other taxes have been used in recent years. Until 1980/81 a 5% tax was applied to the construction cost of new Central Government capital projects in the SR; this was eliminated in the belief that it was hampering development. Until 1979, an education tax was imposed as a supplement to the tax on wages and salaries and license holders (comparable to the present development tax). This had replaced school fees, which were believed to be restricting school attendance.

The government has planned a sales tax, to apply to local manufacturing and to goods brought into the SR and resold, on the pattern of Kenya's manufacturers sales tax. But implementation has been delayed because of concern about administration.

Table 3 provides an overall picture of taxes and other nongrant revenues of the SR government for recent years. Table A-1 in the appendix provides a detailed breakdown of expected revenues by individual tax. As these tables show, over 40% of the tax revenue is collected for the SR by the Central Government. The most important tax revenue sources are the personal income tax; the share of Central Government excises and consumption duties; the surcharge on imports and exports, now locally collected but to be centrally collected; the personal income tax and the development tax on wages and salaries; the tax on sugar; and the profits of the sugar monopoly. Another major hoped-for source is additional revenue arising from revision of Decree 39, which allocated various taxes to the SR, to give the latter a share of excise taxes on additional commodities.

By usual definitions, about 17% of the total revenue other than grants is derived from direct taxes, the remainder from indirect. Since the Central Government revenue from direct taxes is 17% of its total tax revenue, on the whole in the SR the direct levies are providing less than 20% of the total tax revenue.

E. Budgeted versus actual receipts

A major deficiency in the statistics is the lack of availability of actual revenue collected by fiscal year from various tax and nontax sources; the figures shown in Table 3 are the budget estimates. In the budget speeches, actual collections are shown up to May 1. Table 4 shows the budget figures for the three years 1977/78 through 1979/80, the actual amounts collected, as of May, and these actual collections projected by the authors of this paper through June 30 by simply adding one-fifth. Data are not available to do this by individual tax. It is obvious that much of the shortfall is due to the failure to obtain additional excise revenue on the basis of revision of Presidential Decree 39. The shortfall in the actual collections of nontax sources (fees, charges, etc.) is about as great as that on taxes.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

F. Tax administration

Tax administration in the SR is in the hands of the Tax Department, in the Ministry of Finance and Economic Planning. There is a junior staff of 98 (1980) secondary school graduates, with the primary task of identifying commodities and making collections. Their training is provided in Juba (the SR capital Elementary accountancy instruction is provided at the Regional Accounting Training Center in Juba, established to provide this type of training for a number of government agencies. The senior tax staff, 20 in 1980, consists of university graduates, many with their degrees from the University of Nairobi. Several have been sent abroad for training, and the Head of the Tax Department has been seeking to find more satisfactory places for training.

Local tax offices are located at Renk, Wau, Malakal, Juba, Rumbek, Aweil, Yambio, Yei, and Kapoeta.

The Tax Department operates under serious difficulties: the lack of communication with the local offices, long distances, poor roads and shortage of motor fuel, inadequate background and training of personnel of the junior staff, and the lack of data processing facilities. Our general reaction is that the top level personnel are competent and have excellent ideas of what should be done but lack the means to implement the administration of the taxes effectively.

* *Source:* Data in Table A-2.

G. Provincial revenue sources

Table 5 shows the percentage distribution of the revenues of the six SR provinces by source, and Table A2 the actual figure.

The provinces expected to raise, in 1980/81, approximately LS 525,000 from taxes, LS 140,700 from licenses, and LS 2,004,450 from charges[3] and other own-

3. This includes a "shadow element" of LS 750,750 of charge revenues of the Mechanical Transport Department for other governmental agencies.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

sources. They receive a total of LS 19,293,000 from the SR government, most of which is provided by the Central Government.

Their major own tax source is the business profits tax. Bahr el Ghazal and Western Equatoria impose import and export taxes on farm products, thus compounding still more the emphasis on these levies. Otherwise, the provinces collect only license taxes and miscellaneous charges and fees. They thus have only a very limited degree of financial autonomy, much less even than the local governments. The provinces and the local councils have been unable in recent years to collect more than half of the budget revenues and thus their actual own-collections are much lower than the budgeted figures.[4]

H. Local government taxes

There are two types of local councils, urban and rural, and the tax sources differ somewhat.

1. Social services tax. This is by far the major local tax from a revenue standpoint, yielding 64% of local council revenue. This is a poll tax, levied on all adult males, the rate varying by council area, and even by ethnic group within a council area.

2. Gibana, the tax on the sale of agricultural products in local markets.

3. Rates, used primarily by the town councils, imposed on the value of real property.

In addition revenue is received from licenses on traders, sellers of liquor, bicycles, and health-related activities (e.g., slaughter houses). Serious questions have been raised about the effectiveness of collection of these taxes. The percentage distribution of the revenues is shown in Table 6, the detailed figures in table A-3.

TABLE 6

Relative distribution of expected revenues by source, local councils, Government of the Southern Region of the Sudan, 1980/81 *

Percentage of total revenues from	*Township local councils*	*Rural local councils*	*Total*
Taxes	52	53	53
Licenses	13	4	5
Fees, rents	31	15	17
Province	4	28	25
Total	100	100	100
Percentage of tax revenues from			
Social services tax (Poll)	17	70	64
Gibana (Sale of produce)	20	16	16
Rates	27	9	11
Other	36	5	9
Total	100	100	100

* *Source:* Data in Table A-3.

In addition the local councils receive substantial grant funds, about 25% of total revenues, from the Central and SR governments.

For the provinces and the local councils combined, in 1977/78-1979/80 the total revenue sources were as follows:

	Expenditures LS 000	*Own revenues LS 000*	*Percent from own sources*
1977/78	15,671	7,307	46
1978/79	17,241	7,418	43
1979/80	29,990	7,143	23

Source: Democratic Republic of the Sudan, Southern Region, People's Executive Councils, *Annual Budgets for Fiscal Year 1980/81.*

I. Overall recurrent budget picture in the Southern Region

The overall recurrent budget picture for 1980/81 including SR government, provincial, and local revenues and expenditures, but excluding expenditures from donor financing, is shown in Table 7.

Thus the total recurrent government expenditure by the SR government and its subordinate units was projected to be LS 68.3 million in the 1980/81 fiscal year. Of this, LS 40 million was received in grants from the Central Government, while LS 28.5 million was to be raised locally, by taxes and charges.

The estimated per capita GNP in the SR is $150 or LS 120; thus the total GNP, assuming a population of 4 million, is LS 480,000,000. Thus the total taxes and charges constitute 6% of GNP, or taxes alone about 4%. When it is considered that the heavy Central Government customs duties and other indirect levies are also borne to some degree in the SR, the percentage collected in taxes does not appear to be extremely low by comparison with other LDCs, given the low incomes and undeveloped state of the economy.

J. Evaluation of the revenue system

As noted the SR government is highly dependent upon funds provided by the Central Government. In the 1980-81 fiscal year, if all budget funds were received, the grants from the Central Government would have provided 65% of the recurrent budget and 85% of the development budget. Furthermore, nearly half of the SR's tax revenues are collected for it by the Central Government. At times at least, the Central Government has been slow to remit these funds to the SR, creating a liquidity crisis. But the more serious problem is that the taxes involved are indirect taxes, with the intent that the SR's share depend on the destination of the taxed goods in the SR. But at the time of importation or sale by the factory, the ultimate destination is often now known, or even if it is, it may not be reported accurately, especially, in view of the SR's import surcharge. The same problem arises with the profits of the sugar monopoly.

For its own source, the SR government has imposed a large number of separate taxes, many of them with nominal yield, and many related to either import or export transactions. This is a consequence of the difficulties of implementing broad based taxes and the very limited potential tax base that does not involve either import or export activities. But there are several limitations:

a) Without "fiscal frontiers," that is, control points at the borders with the remainder of the country, it is difficult to ensure appropriate collections. Smuggling appears to be relatively widespread, further complicating collections on foreign imports or exports.
b) The use of a large number of separate taxes inevitably complicates application of the taxes and produces arbitrary borderlines between taxable and non-taxable goods.
c) The taxes upon exports can easily discourage domestic production for export. Such production is only nominal at present, but hopefully it will increase. The general objection to export taxes is well known.
d) The surcharge on imports and the other taxes on imports encourage firms importing into the Sudan or producing in the north for shipment to the SR to misstate destination.
e) Taxes on products of basic consumption, such as dura, tend to burden the urban poor – a feature that can be questioned on equity grounds.

Taxes on manufactured goods produced in the SR or sold subject to controls (gasoline, sugar) or on services are much more satisfactory.

K. Potential for additional tax revenue

The potential for additional tax revenue in the SR, to lessen dependence on the Central Government and to finance continuation of various agricultural development projects and other activities now financed by donor groups, is not substantial. The inherent problem is that the SR is a very undeveloped area compared to much of Tropical Africa. Semi-subsistence agriculture dominates, and commercial activity is limited. Any significant increase in tax base, unless significant oil discoveries are made, can occur only with increased production for the market and for export, including processing of agricultural products, production of beer, cigarettes, and other articles of widespread consumption, and increased importation of consumption goods. These changes, in turn, require, more than anything else, improved transportation and communication. It would appear that the primary immediate constraint on development in the SR, and thus increase in tax capacity, is the isolation and inadequate infrastructure. Improvements in these, some beyond the control of the SR government, are the most urgently needed steps toward economic development and greater revenues.

Meanwhile, it should be possible to simplify the tax structure, reducing the number of separate taxes and lessening the heavy reliance on taxes related to imports and exports. At the same time, further strengthening of tax administration is urgently needed – as is well recognized by the SR government.

IV. THE NEW REGIONAL GOVERNMENTS

The basic philosophy of the government of the Sudan for the last decade has been to move toward greater decentralization of government, given the size and diversity of the country. After creating the SR government, the Central Government took the next major step in 1980, when it created five new regional governments and gave Khartoum special provincial status. As of late 1981, the new regional governments are functioning, but with their tax systems not yet fully developed. The Regional Government Act, which created the regions, contains a general statement that the new regions have power to levy direct and indirect taxes, but then prohibits taxes on imports and exports, interregional trade, and capital profits and "commercial dealings." The regions were specifically authorized to impose those taxes now levied by the provinces and the local governments. Thus the taxing powers are more restrictive than those of the SR.

The existing taxes of the new Regional Governments

The existing taxes of the Regions, inherited from the provinces and local governments, are as follows:

1. Primarily in urban areas: two levies on land and buildings, a general rate and a house (buildings) tax, now collected together. They are imposed upon annual rental value, as high as 30% in some areas. Assessment is in the hands of local committees of laymen rather than trained appraisers. The tax burden is typically relatively light.

2. In rural areas, there are four forms of tax, but in general no wealth or activity reached by more than one:

a. Land taxes, imposed on irrigated land, a fixed amount per feddan (approximately an acre) on smaller projects, as a percentage of the gross receipts from the crop, often 12%, on the larger. In the Gezira, in lieu of taxes the Gezira Board, which buys all cotton, pays 2% of its net profit from cotton (not from other crops) to the government.
b. The ushur, or tax on produce, called cess in much of Africa. In non-irrigated mechanized farming areas, a tax, typically 12% of the value of the produce is imposed, in lieu of property taxes. The tax is now usu-

© 1982 International Bureau of Fiscal Documentation – BULLETIN

ally collected in the markets, from the buyers. The tax primarily applies to the crops shipped in bulk for export or to other parts of the country.

c. The tax on date trees, in the North, a fixed amount per tree (of which there are about 3 million). The rate is now 8p.
d. The animal tax, applied per head of livestock, in virtually all rural council areas, but of primary importance in the Blue Nile and Darfur areas. The rate varies with the type of animal (highest on camels), and with the area. The tax is generally not administered well and reaches only a small fraction of the total number of animals.
e. Licenses: on motor vehicles and on traders.
f. Entertainment tax, on sporting events and movies.

These taxes, plus nontax revenues, which in many areas approach the taxes in total yield are expected to provide no more than 20% of the total revenues of the regions and local councils.

The remainder of the Regional revenue currently is made up of grants from the Central Government. These are not based upon a scientific formula, although obviously population plays a part. These are essentially block grants, the amount determined, after bargaining, very largely by the prospective deficit. It is generally recognized that the system is unsatisfactory, to some extent lessening the pressure to attain efficiency and to raise taxes.

V. APPROACHES TO IMPROVED FINANCING OF THE REGIONS

There are several possible approaches to the financing of the regions, including the SR.

First, emphasis can be placed upon maintaining a high degree of integration of the entire economy and effective tax administration. This approach would concentrate taxation in the hands of the Central Government, with uniform tax rates, throughout the country (apart from some local taxes). This would minimize interference with free flow of economic activity and economic distortions. But this approach, of course, does not provide financial autonomy for the Regions, keeping them dependent upon the Central Government.

At the opposite extreme, prime emphasis can be placed upon maximizing financial autonomy of the Regions, allowing them free use of major forms of taxes, with lessened use by the Central Government. But this approach would, unless the system was developed with great care, likely result in serious barriers to free flow of trade and interference with national tariff policy, because of the necessity of relying heavily upon indirect taxes. It is unlikely that the Central Government would be willing to surrender income taxes to the Regional governments, as it did to the SR.

The third alternative is, of course, a compromise: preservation of national uniformity and administration with major tax sources, but with strengthened revenue sources for the regions, and an improved system of grants, which would preserve regional expenditure autonomy, if not revenue autonomy. The experience in the SR does not offer much encouragement for the other regions so far as taxes are concerned, although levies on particular commodity sales and services offer substantially greater revenue potential than they do in the SR. Other taxes that are tolerable in the SR because of its relative isolation, such as those on exports from and imports to the region, would be intolerable in the other areas and are prohibited by the Act establishing the new Regions. But clearly some improvements and strengthening of regional and local tax administration are also possible.

Improvements in the grant system involve in part the issue of whether the Central Government payments should be of a shared revenue or grant nature. The problem with shared revenues is that many levies are not suitable for allocation on an origin basis. For example, importation and most industrial production are concentrated in a few areas, and allocation, on a destination basis, for indirect taxes is difficult administratively. The system has not worked well for the SR. Thus substantial reliance on block grants, but ones allocated on a formula basis, must be the primary basis for financing. But, above all, a workable formula, rather than political bargaining, is imperative.

VI. CONCLUSION

The Sudan provides an interesting case of deliberate decentralization of government and of revenue sources. The first major step was the creation of the SR government, granted substantial autonomy in 1972. The SR, the poorest area of the Sudan, though with great potential agricultural resources, has been able to generate a portion of its own tax revenue, but still depends heavily on the Central Government for grants, and a portion of its tax revenue is collected for it by the Central Government. It does administer the income and business profits tax in the region. In an effort to gain revenue, the SR has introduced a number of taxes, some relating to imports and exports. Some have potentially harmful effects, others provide negligible yield.

The second major step was the creation of five additional regions in 1980, with substantial governmental functions transferred to them. Thus far they have been able to implement only the taxes formerly used by the provinces and local councils: taxes on land and building rents, on the local sales of produce, on animals, and on date trees. While they have greater potential for tax revenue on local sales of various products such as gasoline and sugar and on various services than the SR, it is obvious that they must continue to rely heavily on Central Government grants. Under the circumstances of the Sudan the subordinate units of a decentralized system simply cannot, on their own, finance extensive government activities.

U.S.A.:

Draft Model Income Tax Treaty of 16 June 1981

MODEL OF. . . . . , 1981
CONVENTION BETWEEN THE UNITED STATES OF AMERICA
AND . . . . . .
FOR THE AVOIDANCE OF DOUBLE TAXATION AND
THE PREVENTION OF FISCAL EVASION
WITH RESPECT TO TAXES ON INCOME AND
CAPITAL

The United States of America and . . . . . ., desiring to conclude a convention for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income and capital, have agreed as follows:

Article 1
General scope

1. This Convention shall apply to persons who are residents of one or both of the Contracting States, except as otherwise provided in the Convention.

2. The Convention shall not restrict in any manner any exclusion, exemption, deduction, credit, or other allowance now or hereafter accorded
a) by the laws of either Contracting State; or
b) by any other agreement between the Contracting States.

3. Notwithstanding any provision of the Convention except paragraph 4, a Contracting State may tax its residents (as determined under Article 4 (Residence)), and by reason of citizenship may tax its citizens, as if the Convention had not come into effect. For this purpose, the term "citizen" shall include a former citizen whose loss of citizenship had as one of its principal purposes the avoidance of income tax, but only for a period of 10 years following such loss.

4. The provisions of paragraph 3 shall not affect
a) the benefits conferred by a Contracting State under paragraph 2 of Article 9 (Associated Enterprises), under paragraphs 1 b) and 4 of Article 18 (Pensions, Annuities, Alimony, and Child Support), and under Articles 23 (Relief From Double Taxation), 24 (Non-discrimination), and 25 (Mutual Agreement Procedure); and
b) the benefits conferred by a Contracting State under Articles 19 (Government Service), 20 (Students and Trainees), and 27 (Diplomatic Agents and Consular Officers), upon individuals who are neither citizens of, nor have immigrant status in, that State.

Article 2
Taxes covered

1. The existing taxes to which this Convention shall apply are
a) in the United States: the Federal income taxes imposed by the Internal Revenue Code (but excluding the accumulated earnings tax, the personal holding company tax, and social security taxes), and the excise taxes imposed on insurance premiums paid to foreign insurers and with respect to private foundations. The Convention shall, however, apply to the excise taxes imposed on insurance premiums paid to foreign insurers only to the extent that the risks covered by such premiums are not reinsured with a person not entitled to the benefits of this or any other convention which applies to these taxes;
b) in . . . . . :
. . . . . .
. . . . . .

2. The Convention shall apply also to any identical or substantially similar taxes which are imposed after the date of signature of the Convention in addition to, or in place of, the existing taxes. The competent authorities of the Contracting States shall notify each other of any significant changes which have been made in their respective taxation laws and of any official published material concerning the application of the Convention, including explanations, regulations, or judicial decisions.

Article 3
General definitions

1. For the purposes of this Convention, unless the context otherwise requires
a) the term "person" includes an individual, an estate, a trust, a partnership, a company, and any other body of persons;
b) the term "company" means any body corporate or any entity which is treated as a body corporate for tax purposes;
c) the terms "enterprise of a Contracting State" and "enterprise of the other Contracting State" mean respectively an enterprise carried on by a resident of a Contracting State and an entrerprise carried on by a resident of the other Contracting State;
d) the term "international traffic" means any transport by a ship or aircraft, except when such transport is solely between places in the other Contracting State;
e) the term "competent authority" means
(i) in the United States: the Secretary of the Treasury or his delegate; and
(ii) in . . . . . :
. . . . . .
. . . . . .
f) the term "United States" means the United States of America, but does not include Puerto Rico, the Virgin Islands, Guam, or any other United States possession or territory;
g) the term . . . . . means
. . . . . .

2. As regards the application of the Convention by a Contracting State any term not defined therein shall, unless the context otherwise requires or the competent authorities agree to a common meaning pursuant to the provisions of Article 25 (Mutual Agreement Procedure), have the meaning which it has under the laws of that State concerning the taxes to which the Convention applies.

Article 4
Residence

1. For the purposes of this Convention, the term "resident of a Contracting State" means any person who, under the laws of that State, is liable to tax therein by reason of this domicile, residence, citizenship, place of management, place of incorporation, or any other criterion of a similar nature, provided, however, that
a) this term does not include any person who is liable to tax in that State in respect only of income from sources in that State or capital situated therein; and
b) in the case of income derived or paid by a partnership, estate, or trust, this term applies only to the extent that the income derived by such partnership, estate, or trust is subject to tax in that State as the income of a resident, either in its hands or in the hands of its partners or beneficiaries.

2. Where by reason of the provisions of paragraph 1, an individual is a resident of

© 1982 International Bureau of Fiscal Documentation – BULLETIN

both Contracting States, then his status shall be determined as follows:

a) he shall be deemed to be a resident of the State in which he has a permanent home available to him; if he has a permanent home available to him in both States, he shall be deemed to be a resident of the State with which his personal and economic relations are closer (center of vital interest);
b) if the State in which he has his center of vital interests cannot be determined, or if he does not have a permanent home available to him in either State, he shall be deemed to be a resident of the State in which he has an habitual abode;
c) if he has an habitual abode in both States or in neither of them, he shall be deemed to be a resident of the State of which he is a national;
d) if he has a national of both States or of neither of them, the competent authorities of the Contracting States shall settle the question by mutual agreement.

3. Where by reason of the provisions of paragraph 1 a company is a resident of both Contracting States, then if it is created under the laws of a Contracting State or a political subdivision thereof, it shall be deemed to be a resident of that State.

4. Where by reason of the provisions of paragraph 1 a person other than an individual or a company is a resident of both Contracting States, the competent authorities of the Contracting States shall settle the question by mutual agreement and determine the mode of application of the Convention to such person.

Article 5
Permanent establishment

1. For the purposes of this Convention, the term "permanent establishment" means a fixed place of business through which the business of an enterprise is wholly or partly carried on.

2. The term "permanent establishment" includes especially

a) a place of management;
b) a branch;
c) an office;
d) a factory;
e) a workshop; and
f) a mine, an oil or gas well, a quarry, or any other place of extraction of natural resources.

3. A building site or construction or installation project, or an installation or drilling rig or ship used for the exploration or exploitation of natural resources, constitutes a permanent establishment only if it lasts more than twelve months.

4. Nothwitstanding the preceding provisions of this Article, the term "permanent establishment" shall be deemed not to include

a) the use of facilities solely for the purpose of storage, display, or delivery of goods or merchandise belonging to the enterprise;
b) the maintenance of a stock of goods or merchandise belonging to the enterprise solely for the purpose of storage, display, or delivery;
c) the maintenance of a stock of goods or merchandise belonging to the enterprise solely for the purpose of processing by another enterprise;
d) the maintenance of a fixed place of business solely for the purpose of purchasing goods or merchandise, or of collecting information, for the enterprise;
e) the maintenance of a fixed place of business solely for the purpose of carrying on, for the enterprise, any other activity of a preparatory or auxiliary character;
f) the maintenance of a fixed place of business solely for any combination of the activities mentioned in subparagraphs a) to e).

5. Notwithstanding the provisions of paragraphs 1 and 2, where a person – other than an agent of an independent status to whom paragraph 6 applies – is acting on behalf of an enterprise and has and habitually exercises in a Contracting State an authority to conclude contracts in the name of the enterprise shall be deemed to have a permanent establishment in that State in respect of any activities which that person undertakes for the enterprise, unless the activities of such person are limited to those mentioned in paragraph 4 which, if exercised through a fixed place of business, would not make this fixed place of business a permanent establishment under the provisions of that paragraph.

6. An enterprise shall not be deemed to have a permanent establishment in a Contracting State merely because it carries on business in that State through a broker, general commission agent, or any other agent of an independent status, provided that such persons are acting in the ordinary course of their business.

7. The fact that a company which is a resident of a Contracting State controls or is controlled by a company which is a resident of the other Contracting State, or which carries on business in that other State (whether through a permanent establishment or otherwise), shall not of itself constitute either company a permanent establishment of the other.

Article 6
Income from real property (immovable property)

1. Income derived by a resident of a Contracting State from real property (including income from agriculture or forestry) situated in the other Contracting State may be taxed in that other State.

2. The term "real property" shall have the meaning which it has under the law of the Contracting State in which the property in question is situated.

3. The provisions of paragraph 1 shall apply to income derived from the direct use, letting, or use in any other form of real property.

4. The provisions of paragraphs 1 and 3 shall also apply to the income from real property of an enterprise and to income from real property used for the performance of independent personal services.

5. A resident of a Contracting State who is liable to tax in the other Contracting State on income from real property situated in the other Contracting State may elect for any taxable year to compute the tax on such income on a net basis as if such income were attributable to a permanent establishment in such other State. Any such election shall be binding for the taxable year of the election and all subsequent taxable years unless the competent authorities of the Contracting States, pursuant to a request by the taxpayer made to the competent authority of the Contracting State in which the taxpayer is a resident, agree to terminate the election.

Article 7
Business profits

1. The business profits of an enterprise of a Contracting State shall be taxable only in that State unless the enterprise carries on business in the other Contracting State through a permanent establishment situated therein. If the enterprise carries on business as aforesaid, the business profits of the enterprise may be taxed in the other State but only so much of them as is attributable to that permanent establishment.

2. Subject to the provisions of paragraph 3, where an enterprise of a Contracting State carries on business in the other Contracting State through a permanent establishment situated therein, there shall in each Contracting State be attributed to that permanent establishment the business profits which it might be expected to make if it were a distinct and independent enterprise engaged in the same or similar activities under the same or similar conditions.

3. In determining the business profits of a permanent establishment, there shall be allowed as deductions expenses which are incurred for the purposes of the permanent establishment, including a reasonable allocation of executive and general administrative expenses, research and development expenses, interest, and other expenses incurred for the purposes of the enterprise as a whole (or the part therof which includes the permanent establishment), whether incurred in the State in which the permanent establishment is situated or elsewhere.

4. No business profits shall be attributed to a permanent establishment by reason of the mere purchase by that permanent establishment of goods or merchandise for the enterprise.

5. For the purposes of this Convention, the business profits to be attributed to the permanent establishment shall include only the profits derived from the assets or activities of the permanent establishment and shall be determined by the same method year by year unless there is good and sufficient reason to the contrary.

6. Where business profits include items of income which are dealt with separately in other Articles of the Convention, then the provisions of thos Articles shall not be affected by the provisions of this Article.

7. For the purposes of the Convention, the term "business profits" means income derived from any trade or business, including the rental of tangible personal property and the rental or licensing of cinematographic films or films or tapes used for radio or television broadcasting.

Article 8
Shipping and air transport

1. Profits of an enterprise of a Contracting State from the operation of ships or aircraft in

© 1982 International Bureau of Fiscal Documentation – BULLETIN

international traffic shall be taxable only in that State.

2. For the purposes of this Article, profits from the operation of ships or aircraft in international traffic include profits derived from the rental of ships or aircraft if such ships or aircraft are operated in international traffic by the lessee or if such rental profits are incidental to other profits described in paragraph 1.

3. Profits of an enterprise of a Contracting State from the use, maintenance, or rental of containers (including trailers, barges, and related equipment for the transport of containers) used in international traffic shall be taxable only in that State.

4. The provisions of paragraphs 1 and 3 shall also apply to profits from participations in a pool, a joint business, or an international operating agency.

Article 9
Associated enterprises

1. Where
a) an enterprise of a Contracting State participates directly or indirectly in the management, control or capital of an enterprise of the other Contracting State; or
b) the same persons participate directly or indirectly in the management, control, or capital of an enterprise of a Contracting State and an enterprise of the other Contracting State, and in either case conditions are made or imposed between the two enterprises in their commercial or financial relations which differ from those which would be made between independent enterprises, then any profits which, but for those conditions would have accrued to one of the enterprises, but by reason of those conditions have not so accrued, may be included in the profits of that enterprise and taxed accordingly.

2. Where a Contracting State includes in the profits of an enterprise of that State, and taxes accordingly, profits on which an enterprise of the other Contracting State has been charged to tax in that other State, and the profits so included are profits which would have accrued to the enterprise of the first-mentioned Stated if the conditions made between the two enterprises had been those which would have been made between independent enterprises, then that other State shall make an appropriate adjustment to the amount of the tax charged therein on those profits. In determining such adjustment, due regard shall be paid to the other provisions of this Convention and the competent authorities of the Contracting States shall if necessary consult each other.

3. The provisions of paragraph 1 shall not limit any provisions of the law of either Contracting State which permit the distribution, apportionment, or allocation of income, deductions, credits, or allowances between persons, whether or nor residents of a Contracting State, owned or controlled directly or indirectly by the same interests when necessary in order to prevent evasion of taxes or clearly to reflect the income of any of such persons.

Article 10
Dividends

1. Dividends paid by a company which is a resident of a Contracting State to a resident of the other Contracting State may be taxed in that other State.

2. However, such dividends may also be taxed in the Contracting State of which the company paying the dividends is a resident, and according to the laws of that State, but if the beneficial owner of the dividends is a resident of the other Contracting State, the tax so charged shall not exceed
a) 5% of the gross amount of the dividends of the beneficial owner is a company which owns at least 10% of the voting stock of the company paying the dividends;
b) 15% of the gross amount of the dividends in all other cases.
This paragraph shall not affect the taxation of the company in respect of the profits out of which the dividends are paid.

3. The term "dividends" as used in this Article means income from shares or other rights, not being debt-claims, participating in profits, as well as income from other corporate rights which is subjected to the same taxation treatment as income from shares by the laws of the State of which the company making the distribution is a resident.

4. The provisions of paragraph 2 shall not apply if the beneficial owner of the dividends, being a resident of a Contracting State, carries on business in the other Contracting State, of which the company paying the dividends is a resident, through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the dividends are attributable to such permanent establishment or fixed base. In such case the provisions of Article 7 (Business Profits) or Article 14 (Independent Personal Services), as the case may be, shall apply.

5. A Contracting State may not impose any tax on dividends paid by a company which is not a resident of that State, except insofar as
a) the dividends are paid to a resident of that State,
b) the dividends are attributable to a permanent establishment, or a fixed base situated in that State, or
c) the dividends are paid out of profits attributable to one or more permanent establishments of such company in that State, provided that the gross income of the company attributable to such permanent establishment constiuted at least 50% of the company's gross income from all sources.
Where subparagraphs c) applies and subparagraph a) and b) do not apply, the tax shall be subject to the limitations of paragraph 2.

Article 11
Interest

1. Interest derived and beneficially owned by a resident of a Contracting State shall be taxable only in that State.

2. The term "interest" as used in this Convention means income from debt-claims of every kind, whether or not secured by mortgage, and whether or not carrying a right to participate in the debtor's profits, and in particular, income from government securities, and income from bonds or debentures, including premiums or prizes attaching to such securities, bonds, or debentures. Penalty charges for late payment shall not be regarded as interest for the purposes of the Convention.

3. The provisions of paragraph 1 shall not apply if the beneficial owner of the interest, being a resident of a Contracting State, carries on business in the other Contracting State, in which the interest arises, through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the interest is attributable to such permanent establishment or fixed base. In such case the provisions of Article 7 (Business Profits) or Article 14 (Independent Personal Services), as the case may be, shall apply.

4. Interest shall be deemed to arise in a Contracting State when the payer is that State itself or a political subdivision, local authority, or resident of that State. Where, however, the person paying the interest, whether he is a resident of a Contracting State or not, has in a Contracting State a permanent establishment or a fixed base in connection with which the indebtedness on which the interest is paid was incurred, and such interest is borne by such permanent establishment or fixed base, then such interest shall be deemed to arise in the State in which the permanent establishment or fixed base is situated.

5. Where, by reason of a special relationship between the payer and the beneficial owner or between both of them and some other person, the amount of the interest, having regard to the debt-claim for which it is paid, exceeds the amount which would have been agreed upon by the payer and the beneficial owner in the absence of such relationship, the provisions of this Article shall apply only to the last-mentioned amount. In such case the excess part of the payments shall remain taxable according to the laws of each Contracting State, due regard being had to the other provisions of the Convention.

6. A Contracting State may not impose any tax on interest paid by a resident of the other Contracting State, except insofar as
a) the interest is paid to a resident of the first-mentioned State;
b) the interest is attributable to a permanent establishment or a fixed base situated in the first-mentioned State; or
c) the interest arises in the first-mentioned State and is not paid to a resident of the other State.

Article 12
Royalties

1. Royalties derived and beneficially owned by a resident of a Contracting State shall be taxable only in that State.

2. The term "royalties" as used in this Convention means payments of any kind received as a consideration for the use of, or the right to use, any copyright of literary, artistic, or scientific work (but not including cinematographic films or films or tapes used for radio or television broadcasting), any patent, trademark, design or model, plan, secret formula or process, or other like right or property, or for information concerning industrial, commercial, or scientific experience. The term "royalties" also includes gains de-

© 1982 International Bureau of Fiscal Documentation – BULLETIN

rived from the alienation of any such right or propertry which are contingent on the productivity, use, or disposition thereof.

3. The provisions of paragraph 1 shall not apply if the beneficial owner of the royalties, being a resident of a Contracting State, carries on business in the other Contracting State, in which the royalties arise, through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the royalties are attributable to such permanent establishment or fixed base. In such case the provisions of Article 7 (Business Profits) or Article 14 (Independent Personal Services), as the case may be, shall apply.

4. Where, by reason of a special relationship between the payer and the beneficial owner or between both of them and some other person, the amount of the royalties, having regard to the use, right, or information for which they are paid, exceeds the amount which would have been agreed upon by the payer and the beneficial owner in the absence of such relationship, the provisions of this Article shall apply only to the last-mentioned amount. In such case the excess part of the payments shall remain taxable according to the laws of each Contracting State, due regard being had to the other provisions of the Convention.

Article 13
Gains

1. Gains derived by a resident of a Contracting State from the alienation of real property referred to in Article 6 (Income from Real Property (Immovable Property)) and situated in the other Contracting State may be taxed in that other State.

2. Gains from the alienation of
a) shares of the stock of a company (whether or not a resident of a Contracting State) the property of which consists principally of real property situated in a Contracting State; or
b) an interest in a partnership, trust, or estate (whether or not a resident of a Contracting State) to the extent attributable to real property situated in a Contracting State

may be taxed in that State. For the purposes of this paragraph, the term "real property" includes the shares of a company referred to in subparagraph a) or an interest in a partnership, trust, or estate referred to in subparagraph b).

3. Gains from the alienation of personal property which are attributable to a permanent establishment which an enterprise of a Contracting State has in the other Contracting State, or which are attributable to a fixed base available to a resident of a Contracting State in the other Contracting State for the purpose of performing independent personal services, and gains from the alienation of such a permanent establishment (alone or with the whole enterprise) or such a fixed base, may be taxed in that other State.

4. Gains derived by an enterprise of a Contracting State from the alienation of ships, aircraft, or containers operated in international traffic shall be taxable only in that State.

5. Gains described in Article 12 (Royalties) shall be taxable only in accordance with the provisions of Article 12.

6. Gains from the alienation of any property other than property referred to in paragraphs 1 through 5 shall be taxable only in the Contracting State of which the alienator is a resident.

Article 14
Independent personal services

Income derived by an individual who is a resident of a Contracting State from the performance of personal services in an independent capacity shall be taxable only in that State, unless such services are performed in the other Contracting State and the income is attributable to a fixed base regularly available to the individual in that other State for the purpose of performing his activities.

Article 15
Dependent personal services

1. Subject to the provisions of Articles 18 (Pensions, Annuities, Alimony, and Child Support) and 19 (Government Service), salaries, wages, and other similar remuneration derived by a resident of a Contracting State in respect of an employment shall be taxable only in that State unless the employment is exercised in the other Contracting State. If the employment is so exercised, such remuneration as is derived therefrom may be taxed in that other State.

2. Notwithstanding the provisions of paragraph 1, remuneration derived by a resident of a Contracting State in respect of an employment exercised in the other Contracting State shall be taxable only in the first-mentioned State if
a) the recipient is present in the other State for a period or periods not exceeding in the aggregate 183 days in the taxable year concerned;
b) the remuneration is paid by, or on behalf of, an employer who is not a resident of the other State; and
c) the remuneration is not borne by a permanent establishment or a fixed base which the employer has in the other State.

3. Notwithstanding the preceding provisions of this Article, remuneration derived by a resident of a Contracting State in respect of an employment as a member of the regular complement of a ship or aircraft operated in international traffic may be taxed only in that State.

Article 16
Limitation on benefits

1. A person (other than an individual) which is a resident of a Contracting State shall not be entitled under this Convention to relief from taxation in the other Contracting State unless
a) more than 75% of the beneficial interest in such person is owned, directly or indirectly, by one or more individual residents of the first-mentioned Contracting State; and
b) the income of such person is not used in substantial part, directly or indirectly, to meet liabilities (including liabilities for interest or royalties) to persons who are residents of a State other than a Contracting State and who are not citizens of the United States.

For the purposes of subparagraph a), a company that has substantial trading in its stock on a recognized exchange in a Contracting State is presumed to be owned by individual residents of that Contracting State.

2. Paragraph 1 shall not apply if it is determined that the acquisition or maintenance of such person and the conduct of its operations did not have as a principal purpose obtaining benefits under the convention.

3. Any relief from tax provided by a Contracting State to a resident of the other Contracting State under the Convention shall be inapplicable to the extent that, under the law in force in that other State, the income to which the relief relates bears significantly lower tax than similar income arising within that other State derived by residents of that other State.

Article 17
Artistes and athletes

1. Notwithstanding the provisions of Articles 14 (Independent Personal Services) and 15 (Dependent Personal Services), income derived by a resident of a Contracting State as an entertainer, such as a theatre, motion picture, radio, or television artiste, or a musician, or as an athlete, from his personal activities as such exercised in the other Contracting State, may be taxed in that other State, except where the amount of the gross receipts derived by such entertainer or athlete, including expenses reimbursed to him or borne on his behalf, from such activities does not exceed twenty thousand United States dollars ($ 20,000) or its equivalent in . . . . . for the taxable year concerned.

2. Where income in respect of activities exercised by an entertainer or an athlete in his capacity as such accrues not to the entertainer or athlete but to another person, that income of that other person may, notwithstanding the provisions of Articles 7 (Business Profits) and 14 (Independent Personal Services), be taxed in the Contracting State in which the activities of the entertainer or athlete are axercised, unless it is established that neither the entertainer or athlete nor persons related thereto participate directly or indirectly in the profits of that other person in any manner, including the receipt of deferred remuneration, bonuses, fees, dividends, partnership distributions, or other distributions.

Article 18
Pensions, annuities, alimony, and child support

1. Subject to the provisions of Article 19 (Government Service)
a) pensions and other similar remuneration derived and beneficially owned by a resident of a Contracting State in consideration of past employment shall be taxable only in that State; and
b) social security benefits and other public pensions paid by a Contracting State to a resident of the other Contracting State or a citizen of the United States shall be taxable only in the first-mentioned State.

2. Annuities derived and beneficially owned by a resident of a Contracting State

© 1982 International Bureau of Fiscal Documentation – BULLETIN

shall be taxable only in that State. The term "annuities" as used in this paragraph means a stated sum paid periodically at stated times during a specified number of years, under an obligation to make the payments in return for adequate and full consideration (other than services rendered).

3. Alimony paid to a resident of a Contracting State shall be taxable only in that State. The term "alimony" as used in this paragraph means periodic payments made pursuant to a written separation agreement or a decree of divorce, separate maintenance, or compulsory support, which payments are taxable to the recipient under the laws of the State of which he is a resident.

4. Periodic payments for the support of a minor child made pursuant to a written separation agreement or a decree of divorce, separate maintenance, or compulsory support, paid by a resident of a Contracting State to a resident of the other Contracting State, shall be taxable only in the first-mentioned State.

Article 19
Government service

Remuneration, including a pension, paid from the public funds of a Contracting State or a political subdivision or local authority thereof to a citizen of the State in respect of services rendered in the discharge of functions of a governmental nature shall be taxable only in that State. However, the provisions of Article 14 (Independent Personal Services), Article 15 (Dependent Personal Services) or Article 17 (Artistes and Athletes), as the case may be, shall apply, and the preceding sentence shall not apply, to remuneration paid in respect of services rendered in connection with a business carried on by a Contracting State or a political subdivision or local authority thereof.

Article 20
Students and trainees

Payments received for the purpose of maintenance, education, or training by a student, apprentice, or business trainee who is or was immediately before visiting a Contracting State a resident of the other Contracting State and who is present in the first-mentioned State for the purpose of his full-time education or training shall not be taxed in that State, provided that such payments arise outside that State.

Article 21
Other income

1. Items of income of a resident of a Contracting State, wherever arising, not dealt with in the foregoing Articles of this Convention shall be taxable only in that State.

2. The provisions of paragraph 1 shall not apply to income, other than income from real property as defined in paragraph 2 of Article 6 (Income from Real Property (Immovable Property)), if the beneficial owner of the income, being a resident of a Contracting State, carries on business in the other Contracting State through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the income is attributable to such permanent establishment or fixed base. In such case the provisions of Article 7 (Business Profits) or Article 14 (Independent Personal Services), as the case may be, shall apply.

Article 22
Capital

1. Capital represented by real property referred to in Article 6 (Income from Real Property (Immovable Property)), owned by a resident of a Contracting State and situated in the other Contracting State, may be taxed in that other State.

2. Capital represented by personal property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contracting State, or by personal property pertaining to a fixed base available to a resident of a Contracting State for the purpose of performing independent personal services, may be taxed in that other State.

3. Capital represented by ships, aircraft, and containers owned by a resident of a Contracting State and operated in international traffic, and by personal property pertaining to the operation of such ships, aircraft, and containers shall be taxable only in that State.

4. All other elements of capital of a resident of a Contracting State shall be taxable only in that State.

Article 23
Relief from double taxation

1. In accordance with the provisions and subject to the limitations of the law of the United States (as it may be amended from time to time without changing the general principle hereof), the United States shall allow to a resident or citizen of the United States as a credit against the United States tax on income

a) the income tax paid to. . . . . .by or on behalf of such citizen or resident;

and

b) in the case of a United States company owning at least 10% of the voting stock of a company which is a resident of. . . . . .and from which the United States company receives dividends, the income tax paid to. . . . . .by or on behalf of the distributing company with respect to the profits out of which the dividends are paid.

For the purposes of this paragraph, the taxes referred to in paragraphs 1b) and 2 of Article 2 (Taxes Covered) shall be considered income taxes. Credits allowed solely by reason of the preceding sentence, when added to otherwise allowable credits for taxes referred to in paragraphs 1b) and 2 of Article 2, shall not in any taxable year exceed that proportion of the United States tax on income which taxable income arising in. . . . .bears to total taxable income.

2. In accordance with the provisions and subject to the limitations of the law of. . . . . .(as it may be amended from time to time without amending the general principle hereof). . . . . shall allow to a resident or citizen of . . . . . .as a credit against the. . . . . .tax on income . . . . . .

3. For the purposes of allowing relief from double taxation pursuant to this Article, income shall be deemed to arise exclusively as follows

a) income derived by a resident of a Contracting State which may be taxed in the other Contracting State in accordance with this Convention (other than solely by reason of citizenship in accordance with paragraph 2 of Article 1 (General Scope)) shall be deemed to arise in that other State;

b) income derived by a resident of a Contracting State which may not be taxed in the other Contracting State in accordance with the Convention shall be deemed to arise in the first-mentioned State.

The rules of this paragraph shall not apply in determining credits against United States tax for foreign taxes other than the taxes referred to in paragraphs 1b) and 2 of Article 2 (Taxes Covered).

Article 24
Non-discrimination

1. Nationals of a Contracting State shall not be subjected in the other Contracting State to any taxation or any requirement connected therewith which is other or more burdensome than the taxation and connected requirements to which nationals of that other State in the same circumstances are or may be subjected. This provision shall apply to persons who are not residents of one or both of the Contracting States. However, for the purposes of United States tax, a United States national who is not a resident of the United States and a . . . . . national who is not a resident of the United States are not in the same circumstances.

2. For the purposes of this Convention, the term "nationals" means

a) in relation to . . . . . ,
. . . . . .
. . . . . ; and

b) in relation to the United States, United States citizens.

3. The taxation on a permanent establishment which an enterprise of a Contracting State has in the other Contracting State shall not be less favorably levied in that other State than the taxation levied on enterprises of that other State carrying on the same activities. This provision shall not be construed as obliging a Contracting State to grant to residents of the other Contracting State any personal allowances, reliefs, and reductions for taxation purposes on account of civil status or family responsibilities which it grants to its own residents.

4. Except where the provisions of paragraph 1 of Article 9 (Associated Enterprises), paragraph 5 of Article 11 (Interest), or paragraph 4 of Article 12 (Royalties) apply, interest, royalties, and other disbursements paid by a resident of a Contracting State to a resident of the other Contracting State shall, for the purposes of determining the taxable profits of the first-mentioned resident, be deductible under the same conditions as if they had been paid to a resident of the first-mentioned State. Similarly, any debts of a resident of a Contracting State to a resident of the other Contracting State shall, for the purposes of determining the taxable capital of the

© 1982 International Bureau of Fiscal Documentation – BULLETIN

first-mentioned resident, be deductible under the same conditions as if they had been contracted to a resident of the first-mentioned State.

5. Enterprises of a Contracting State, the capital of which is wholly or partly owned or controlled, directly or indirectly, by one or more residents of the other Contracting State, shall not be subjected in the first-mentioned State to any taxation or any requirement connected therewith which is other or more burdensome than the taxation and connected requirements to which other similar enterprises of the first-mentioned State are or may be subjected.

6. The provisions of this Article shall, notwithstanding the provisions of Article 2 (Taxes Covered), apply to taxes of every kind and description imposed by a Contracting State or a political subdivision or local authority thereof.

Article 25
Mutual agreement procedure

1. Where a person considers that the actions of one or both of the Contracting States result or will result for him in taxation not in accordance with the provisions of this Convention, he may, irrespective of the remedies provided by the domestic law of those States, present his case to the competent authority of the Contracting State of which he is a resident or national.

2. The competent authority shall endeavor, if the objection appears to it to be justified and if it is not itself able to arrive at a satisfactory solution, to resolve the case by mutual agreement with the competent authority of the other Contracting State, with a view to the avoidance of taxation which is not in accordance with the Convention: Any agreement reached shall be implemented notwithstanding any time limits or other procedural limitations in the domestic law of the Contracting States.

3. The competent authorities of the Contracting States shall endeavor to resolve by mutual agreement any difficulties or doubts arising as to the interpretation or application of the Convention. In particular the competent authorities of the Contracting States may agree

a) to the same attribution of income, deductions, credits, or allowances of an enterprise of a Contracting State to its permanent establishment situated in the other Contracting State;
b) to the same allocation of income, deductions, credits, or allowances between persons;
c) to the same characterization of particular items of income;
d) to the same application of source rules with respect to particular items of income;
e) to a common meaning of a term;
f) to increase in any specific amounts referred to in the Convention to reflect economic or monetary developments; and
g) to the application of the provisions of domestic law regarding penalties, fines, and interest in a manner consistent with the purposes of the Convention.

They may also consult together for the elimination of double taxation in cases not provided for in the Convention.

4. The competent authorities of the Contracting States may communicate with each other directly for the purpose of reaching an agreement in the sense of the preceding paragraphs.

Article 26
Exchange of information and administrative assistance

1. The competent authorities of the Contracting States shall exchange such information as is necessary for carrying out the provisions of this Convention or of the domestic laws of the Contracting States concerning taxes covered by the Convention insofar as the taxation thereunder is not contrary to the Convention. The exchange of information is not restricted by Article 1 (General Scope). Any information received by a Contracting State shall be treated as secret in the same manner as information obtained under the domestic laws of that State and shall be disclosed only to persons or authorities (including courts and administrative bodies) involved in the assessment, collection, or administration of, the enforcement or prosecution in respect of, or the determination of appeals in relation to, the taxes covered by the Convention. Such persons or authorities shall use the information only for such purposes. They may disclose the information in public court proceedings or in judicial decisions.

2. In no case shall the provisions of paragraph 1 be construed so as to impose on a Contracting State the obligation

a) to carry out administrative measures at variance with the laws and administrative practice of that or of the other Contracting State;
b) to supply information which is not obtainable under the laws or in the normal course of the administration of that or of the other Contracting State;
c) to supply information which would disclose any trade, business, industrial, commercial, or professional secret or trade process, or information the disclosure of which would be contrary to public policy (ordre public).

3. If information is requested by a Contracting State in accordance with this Article, the other Contracting State shall obtain the information to which the request relates in the same manner and to the same extent as if the tax of the first-mentioned State were the tax of that other State and were being imposed by that other State. If specifically requested by the competent authority of a Contracting State, the competent authority of the other Contracting State shall provide information under this Article in the form of depositions of witnesses and authenticated copies of unedited original documents (including books, papers, statements, records, accounts, and writings), to the same extent such depositions and documents can be obtained under the laws and administrative practices of that other State with respect to its own taxes.

4. Each of the Contracting States shall endeavor to collect on behalf of the other Contracting State such amounts as may be necessary to ensure that relief granted by the Convention from taxation imposed by that other State does not enure to the beneit of persons not entitled thereto.

5. Paragraph 4 of this Article shall not impose upon either of the Contracting States the obligation to carry out administrative measures which are of a different nature from those used in the collection of its own taxes, or wich would be contrary to its sovereignty, security, or public policy.

6. For the purposes of this Article, the Convention shall apply, notwithstanding the provisions of Article 2 (Taxes Covered), to taxes of every kind imposed by a Contracting State.

Article 27
Diplomatic agents and consular officers

Nothing in this Convention shall affect the fiscal privileges of diplomatic agents or consular officers under the general rules of international law or under the provisions of special agreements.

Article 28
Entry into force

1. This Convention shall be subject to ratification in accordance with the applicable procedures of each Contracting State and instruments of ratification shall be exchanged at . . . . . as soon as possible.

2. The Convention shall enter into force upon the exchange of instruments of ratification and its provisions shall have effect

a) in respect of taxes withheld at source, for amounts paid or credited on or after the first day of the second month next following the date on which the Convention enters into force;
b) in respect of other taxes, for taxable periods, beginning on or after the first day of January next following the date on which the Convention enters into force.

Article 29
Termination

1. This Convention shall remain in force until terminated by a Contracting State. Either Contracting State may terminate the Convention at any time after 5 years from the date on which the Convention enters into force, provided that at least 6 months prior notice of termination has been given through diplomatic channels. In such event, the Convention shall cease to have effect

a) in respect of taxes withheld at source, for amounts paid or credited on or after the first day of January next following the expiration of the 6 months period;
b) in respect of other taxes, for taxable periods beginning on or after the first day of January next following the expiration of the 6 months period.

GHANA:

The Investment Code, 1981

by Elizabeth de Brauw-Hay *

I. INTRODUCTION

Ghana has a new investment code – Act 437 of 1981 – which received assent on 11 August 1981. It had quickly been discovered that the provisions of existing investment legislation – the Investment Policy Decree of 1975 [1] – were acting as a severe deterrent to foreign investors; hence the introduction of a new investment code within such a relatively short time from the passing of the previous one.

Views of potential investors were sought at a special conference on Ghana's gold reserves held in Accra in January 1981 and were taken into account in the preparation of the new code. The government is particularly keen to encourage overseas investment in mining and gold mining in particular; gold, along with cocoa and timber, account for around 75% of Ghana's total export receipts and in recent years production of this mineral has been falling heavily, mainly due to lack of investment.

These and other reasons behind the new legislation, which repeals the Investment Policy Decree and amending legislation, are clearly set out in the preamble to the Code, viz.:

it is considered vital to attract foreign investments in Ghana and also to encourage investments in Ghana by Ghanaian entrepreneurs to contribute to an increase in fixed capital formation for the exploitation of the resources of Ghana and for an increased production and creation of wealth, employment and improvement in skills and the social conditions of the citizens of Ghana;

having regard to the experience obtained in the operation of previous laws in Ghana relating to investment it has been recognised that one of the most important steps necessary to be taken in order to achieve the foregoing is to operate a policy of liberalization and an open economy and assure to the foreign and Ghanaian investor protection of his investment and a fair return therefrom;

it is the policy of Ghana to operate a mixed economy;

it is considered necessary to redefine the areas of investment in which non-Ghanaians are encouraged to invest, to indicate the areas in which the State and Ghanaians are required to participate in enterprises in which such foreign investments are made and to set out the incentives available to investors in the various fields of investment considered to fall within the priority areas of investment;

it is deemed to be in the best interests of Ghana to promote large-scale investments aimed at the exploration, exploitation, and processing of the mineral resources of Ghana;

it is considered desirable to provide for the registration of technology transfer contracts.

II. ADMINISTRATION OF THE INVESTMENT CODE

The Code provides for certain benefits to investors. In order to qualify for these benefits a potential investor must have his investment approved by a body set up under the Code known as the Ghana Investments Centre. The functions of the Centre, as well as approving investments, include advising on the priority sectors into which investment should be attracted, liaising between investors and ministries and government departments, agencies, etc., ensuring compliance with investment laws in force, approving and registering technology transfer contracts relating to investments in Ghana, recommending legislation to encourage investment, monitoring the results of benefits granted to investors and advising on how the investment climate could be improved. [2]

III. APPLICATIONS FOR APPROVAL

Prospective investors should submit to the Centre an application containing a detailed description of the enterprise intended to be carried on. This application should indicate, inter alia, the product to be produced, a production scheme, the time scale for commencement of production, an investment and financial plan, the locality where it is proposed to carry on the industry, the effects of the investment on the environment, the anticipated volume of imports and exports, an employment training scheme for Ghanaians.

An approval decision will be taken within 3 months from receipt of the application and the applicant will be notified of the Centre's decision. [3]

IV. CRITERIA FOR APPROVAL

Potential investments will be examined in the light of to what extent they contribute to the development of the economy and an efficient use of its resources and economic potential, full and efficient use and expansion of the capacity of existing enterprises, savings on imports, an increase in exports and the strengthening of Ghana's balance of payments situation, a fair country-wide distribution of investments, a high level of employment, importation at reasonable cost and transfer of technology and technical skills to citizens of Ghana. The effect which any investment might have on the environment will also be looked at. [4]

V. RESERVED AREAS OF INVESTMENT

Only Ghanaians may participate in a variety of types of enterprise and in other a certain percentage of the capital of the enterprise must be owned by Ghanaians (see Appendix). In the case of mineral enterprises and enterprises engaged in the production of mineral oil or natural gas, the State will participate in accordance with the terms agreed between the Centre and the foreign investor. [5]

The Code also lays down which areas of investment will be regarded as priority areas. Broadly these are agriculture, mining (including boring for water), manufacturing, export-oriented industries, tourism, the construction and building industries and non-metropolitan industies. [6]

VI. SPECIAL PROVISIONS RELATING TO MINERALS AND OIL [7]

In cases where the State owns part of the capital of a mineral enterprise or an enterprise engaged in the production of mineral oil, an investor wishing to dispose of any part of the capital of such enterprise must first offer it for sale to the State.

Furthermore, all gold, diamonds and uranium produced in Ghana must be sold to the State.

VII. BENEFITS AVAILABLE UNDER THE CODE [8]

Benefits available under the Code fall into 2 categories – general benefits and special benefits.

A. General benefits

General benefits will be available to all enterprises approved under the Code and comprise the following:
- exemption for the first 5 years from payment of customs duties on machinery, equipment and accessories imported exclusively for the establishment of an approved enterprise;
- exemption for the 3 years after the establishment of an approved enterprise from customs duties on spare parts and other imports (other than raw materials) imported specially and exclusively for the enterprise;
- guaranteed manufacturing and establishment licence;
- exemption from selective employment tax [9] for the first 5 years;
- guaranteed personal remittance quota for expatriate personnel and the exemption of such personnel from taxes on the transfer of external currency out of Ghana.

B. Special benefits

Special benefits are also laid down in the Code for the priority areas of investment mentioned above, viz.:

1. Benefits available to agricultural enterprises

(a) Complete exemption from company income tax for the first 5 years; no dividends may be declared or paid, however, until after this benefit has terminated.

(b) Foreign companies investing blocked funds of repatriable status held in Ghana in an approved agricultural enterprise will be entitled:
- to a special import licence for machinery and equipment essential to the enterprise;
- to transfer 35 pesewas for every cedi invested (1 cedi = 100 pesewas) out of blocked funds;
- to transfer out of blocked funds 50 pesewas for every cedi of profit which could have been repatriated but which is reinvested:
- where the gestation period of an investment is more than one year, permission will be given to transfer for each year out of blocked funds 15 pesewas per cedi invested. This also applies to an additional investment made for the expansion of the enterprise. The rate of transfer will be 20 pesewas per cedi in respect of cattle rearing, oil palm, rubber, citrus, and cashew nut plantations.

The term "blocked funds of repatriable status" is defined as meaning accumulated dividends or profits or pre-1972 import credits or proceeds of foreign-owned capital sold to Ghanaians held by the Bank of Ghana awaiting transfer as well as any other certified funds.

The Investments Centre may also grant the following benefits:
- exemption from company income tax and customs duties for up to 10 years for the case of livestock and tree crops with a gestation period over 4 years;
- exemption of management staff from income tax with respect to furnished accommodation on the farm site;
- guaranteed management control for foreign investors in the case of agricultural enterprises in which there is foreign participation for such period as the Centre may determine.

2. Benefits available to the mining industry

(a) All mining enterprises will be entitled to:
- exemption from company income tax for as long as the company has not recovered the whole of its initial development expenditure; the same restriction as to declaring dividends as above operates here;
- guaranteed management control as above for the foreign investor so long as the whole initial development expenditure has not been recovered.

(b) Enterprises engaged in mineral exploitation and exploration may also benefit from the following:
- exemption from turnover tax;
- royalty on gold produced to be based on millhead grade of ore mined on a sliding scale between 2 and 6% of gross value of minerals won;
- company income tax not to exceed 45%;
- exemption of management staff from income tax with respect to furnished accommodation on mine camp.

5. Id., Arts. 12 and 13 and First and Second Schedules.
6. Id., Third Schedule, Part 1.
7. Id., Art. 13.
8. Id., Third Schedule, Part. 2.
9. See *African Tax Systems* (Bureau of International Fiscal Documentation, Amsterdam), Section B, Ghana, I.1.2.5.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

3. Benefits available to manufacturing industries

(a) All manufacturing industries will be entitled to exemption from company income tax for up to 5 years; the restriction as to declaring dividends during this period operates here, too.

(b) In areas outside Accra and Tema the following benefits may be granted on the expiry of the general benefits available:

- reduction of 25% in the company income tax payable;
- remission of 25% for customs duties on machinery, equipment and spare parts imported specificially and exclusively for the enterprise.

4. Benefits available to export-oriented enterprises

Export-oriented enterprises may be granted:

(a) exemption from company income tax for such period as the Centre may determine. The restriction on declaring dividends operates here, too;

(b) a special duty drawback of 25% on raw materials imported and used exclusively for export orders and on which customs duties have been paid;

(c) holding a certain percentage of sales proceeds in a foreign exchange account to meet repayment of initial suppliers.

5. Benefits available to tourist enterprises

Tourist enterprises may be granted:

(a) exemption from company income tax for a period not exceeding 5 years; the restriction on the declaring of dividends operates here, too;

(b) exemption from customs duties on items not immediately available in Ghana required for the establishment, construction and efficient operation of the enterprise;

(c) capital allowances at rates additional to the rates provided under the Income Tax Decree, 1975 as determined by the Centre.

6. Benefits available to construction and building enterprises

Benefits available to approved enterprises operating in the construction and building sector are as follows:

(a) exemption from company income tax for a period not exceeding 5 years. The restriction relating to declaring of dividends also operates here. It should, however, be noted that this benefit does not apply to specific construction and building contracts;

(b) exemption of management staff from income tax on furnished accommodation on the construction site.

7. Benefits available to enterprises operating in non-metropolitan areas

Approved enterprises in this category will be eligible for the following benefits:

(a) exemption from company income tax for a period not exceeding 5 years; the restriction regarding declaring of dividends operates, too;

(b) a reduction of 30% in company income tax payable and a remission of 30% of customs duties on machinery, equipment and spare parts imported specifically and exclusively for enterprises situated within the area of authority of a District Council responsible for any Regional capital. In the case of enterprises situated outside the authority of such District Councils the percentage is 40.

VIII. OTHER TAX-RELATED INCENTIVES AVAILABLE

The Code also provides for capital allowances being granted in respect of buildings, plant, machinery, structures, roads, furniture and fittings and fixtures used for the purposes of an approved enterprise at rates additional to those provided under the Income Tax Decree, 1975. [10]

A deduction for capital expenditure incurred in respect of scientific research for the purpose of the development or advancement of an approved enterprise is also available under the Code. [11] Such expenditure may be deducted from income over a 4-period beginning with the year in which the expenditure is incurred, at the rate of 25% per year.

IX. NON-TAX-RELATED INCENTIVES [12]

Of great importance to foreign investors is the guarantee that there will be no restrictions on the remittance of capital to the country of origin in the event of the sale or liquidation of an enterprise. The transfer of profits to the country of origin of an investment is also guaranteed after payment of taxes and maintenance and replacement of assets. Likewise, there will be no restrictions on the transfer of loan repayments or licence fees.

A guarantee is also given that there will be no restrictions on the entry into Ghana of foreign management and technical personnel required for an approved enterprise.

X. PROTECTION OF INVESTMENTS [13]

Central to the new Code is the guarantee that no approved enterprise may be expropriated by the government. Neither can an investor be compelled to cede his interest in the capital of an approved enterprise to a third party.

A guarantee is also given that benefits granted to an approved enterprise may not subsequently be altered to the disadvantage of the investor.

Fair, adequate and, not least, prompt compensation is, however, provided for in the exceptional cases where an enterprise is taken over or its capital ceded to a third party in the public interest.

XI. SETTLEMENT OF DISPUTES [14]

Where disputes arise between a foreign investor and the Ghanaian government over an approved investment it is provided that the government will *take all necessary steps to ensure amicable settlement of the dispute.*

10. Investment Code, Art. 19.
11. Id., Art. 20.
12. Id., Art. 16.
13. Id., Art. 14.
14. Id., Art. 17.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Should, however, it prove impossible to achieve an amicable settlement, then resort may be had to the conciliation or arbitration procedure laid down in investment protection agreements between Ghana and the country of the investor or in the International Convention for the Settlement of Investment Disputes or in accordance with any other international machinery for the settlement of investment disputes agreed to by the parties involved.

Appendix

ENTERPRISES WHOLLY RESERVED FOR GHANAIANS

Part A – Commercial enterprises

1. Any enterprise concerned with retail or wholesale trade, unless such business is carried on by or within a department store or a supermarket which has an employed capital of not less than ₵ 2,000,000.00.
2. The sale of anything whatsover in any market, petty trading, hawking or selling from a kiosk at any place.
3. Overseas business representation unless the enterprise has an employed capital of not less than ₵ 2,000,000.00.
4. Operation of taxi service and car hire service.
5. The sale under hire-purchase contract of motor vehicles including taxis or vehicles intended to be used in the operation of taxi service or a car hire service.
6. Produce brokerage.
7. Advertising agencies and public relations business.
8. All aspects of pool betting business and lotteries.
9. Estate agency.
10. Travel agency.
11. Lighterage services unless the enterprise has an employed capital of not less than ₵ 2,000,000.00.
12. Commercial transportation of passengers by land.

Part B – Industrial enterprises (including service industries)

1. Bakery;
2. Manufacture of foam materials;
3. Operation of beauty salons and barbers' shops;
4. Manufacture of cement blocks for sale;
5. Ordinary manufacture or tailoring or both of garments such as joromi, shorts, blouses, ladies' dresses, children's wear;
6. Textile screen hand printing (including tie and dye);
7. Tyre retreading;
8. Manufacture of suitcases, briefcases, portfolios, handbags, shopping bags, purses, wallets.

ENTERPRISES PART OF WHOSE CAPITAL IS REQUIRED TO BE OWNED BY GHANAIANS

1. Enterprises not less than 60% of whose capital must be owned by Ghanaians:
enterprises carrying on insurance business.

2. Enterprises not less than 40% of whose capital must be owned by Ghanaians:
enterprises carrying on banking business.

3. Enterprises in which Ghanaians must participate in accordance with terms agreed between the Ghanaian and foreign investor and approved by the Centre:

Commercial enterprises

(i) Department stores and supermarkets being enterprises exempted administratively or by executive instrument from the provisions of section 11 of the Ghanaian Business (Promotion) Act, 1970 (Act 334) or exempted under section 38 of this Code from the minimum requirements of capital prescribed or the minimum Ghanaian ownership of its capital required by this Code;
(ii) Distribution and servicing of motor vehicles and tractors, and spare parts thereof or other similar objects;
(iii) Distribution agencies for machines and technical equipment;
(iv) Operation of industrial laundry and dry cleaning;
(v) Shipping;
(vi) Distribution of petroleum products and lubricants;
(vii) Commercial transportation of goods including the operation of tankers;
(viii) Casinos;
(ix) Clearing and forwarding agencies;
(x) Operation of cold stores and ice making;
(xi) Any enterprise engaged in retail or wholesale trade where the business is carried on within a department store or a supermarket the employed capital of which enterprise is not less than ₵ 2,000,000.00;
(xii) Overseas business representation where the employed capital of the enterprise is not less than ₵ 2,000,000.00;
(xiii) Lighterage services where the employed capital of the enterprise is not less than ₵ 2,000,000.00.

Industrial enterprises (including service industries)

(i) Laundry and dry cleaning;
(ii) Manufacture of charcoal;
(iii) Manufacture of furniture (including knock-down furniture for export);
(iv) Terrazzo work;
(v) Manufacture of confectionery;
(vi) Slaughtering of animals for human consumption and storage, processing and distribution of meat;
(vii) Operation of cinemas;
(viii) Motor workshops;
(ix) Manufacture of pharmaceuticals, cosmetics and perfumery;
(x) Sawmilling;
(xi) Manufacture of insecticides, pesticides and fungicides;
(xii) Assembly of motor vehicles and cycles;
(xiii) Manufacture of plastic, metal and paper containers;
(xiv) Manufacture of paints, varnishes or other similar products;
(xv) Manufacture of packaging materials;
(xvi) Manufacture of wire, nails, washers, bolts, nuts, rivets and other similar articles;
(xvii) Printing of books and stationery (including publishing);
(xviii) Manufacture of mosquito coil;
(xix) Manufacture of metal products;
(xx) Paper conversion;
(xxi) Assembly of household electrical equipment and appliances;
(xxii) Manufacture of jewellery and related articles;
(xxiii) Manufacture of candles;
(xxiv) Fish processing;
(xxv) Manufacture of footwear;
(xxvi) Blending and bottling of alcoholic drinks;
(xxvii) Manufacture of plastic products;
(xxviii) Estate development (including building contracting work);
(xxix) Manufacture of ball-point pens, lead pencils and coloured pencils;
(xxx) Manufacture of glass, mirrors and optical equipment;
(xxxi) Manufacture of gramophone records;
(xxxii) Manufacture of chalk and writing ink;
(xxxiii) Manufacture of biscuits;
(xxxiv) Ceramics;
(xxxv) Any enterprise which is engaged in the production of the following:
  (a) Sugar, salt, soap, detergents;
  (b) Fertilizers, petroleum products, lubricants;
  (c) Matchets, hoes and all agricultural implements;
  (d) Animal feed, milk and baby food;
  (e) Textiles (by all forms of processes other than textiles screen hand printing tie and dye);
  (f) Matches, cement, rubber and products and flour;
(xxxvi) Any enterprise engaged in the brewing of beer;
(xxxvii) Any enterprise engaged in the production or preparation of tobacco or the manufacture of tobacco products;
(xxxviii) Any timber enterprise.

Pakistan's Budget for 1981-1982:

Fiscal Measures for Economic Development*

by Ahmad Khan **

The balanced economic development of a country requires the pursuit of coherent, consistent and coordinated economic policies. The policy planning itself should define the overall strategy and long term goals in unambiguous terms, especially in the historical, economic and social contexts. The policy plan also requires a constant quantitative analysis of the impact of various monetary and fiscal measures to ensure whether the desired goals have been achieved or not, so that, in the light of such analyses, necessary changes in the strategy can be made. Nevertheless, less developed countries like Pakistan, consistently faced with a resource constraint on the one hand and the desire to have an economic breakthrough on the other, find it quite difficult to work out a coordinated economic policy appropriately supplemented by necessary economic inputs. Consequently, despite the need for realization of a balanced economic growth, consistent with the hopes and aspirations of its people, the desired results of the fiscal measures adopted over a period of time may not come true.

Pakistan has historically attempted to formulate appropriate monetary and fiscal measures with a view to achieving balanced economic growth by broadening its industrial base, diverting resources to priority areas in the economy, increasing agricultural production, maximising exports, maintaining price stability, redistributing income, and improving its balance of payments. The fiscal measures employed include both direct and indirect taxes. They were further supplemented by non-tax measures such as providing the necessary infrastructure, skilled manpower, and monetary policies aimed at maintaining stable prices. In order to supplement domestic resources, liberal incentives in the form of tax concessions and investment guarantees were offered to attract foreign capital, goods and technology.

Although the present study does not intend to encompass a quantitative analysis of the impact of various fiscal and non-fiscal measures taken in the past, it might be appropriate to throw some light on the economic scenario of the country. It appears that, in spite of a satisfactory rate of growth in GDP during the past few years, "Pakistan is still in the throes of some acute problems such as low level of investment, widening trade dificit, a sick industrial sector, high rate of inflation and rising debt servicing burden". The only redeeming features in the scenario are "self-sufficiency in food production, improvement in output of other crops, a satisfactory increase in exports both in value and absolute terms, a rise in the level of home remittances, and a change in the outlook of the donor countries affecting the level of foreign economic assistance in the year to come". There is, however, a need to reinforce such gains with sound economic policies and decisive economic gains in all sectors of the economy.

The budgetary measures adopted during the current year reflect the government's desire to push the economic process ahead by providing sufficient incentives to both the industrial and agricultural sectors. The Finance Minister in his budget speech unfolded the economic policy package which the government will pursue in years to come. The fiscal measures adopted through this budget emphasize making the taxation system responsive to growth in the national economy, stricter financial management, controlling inflation, encouraging private sector investment, and improving public sector efficiency. The short term goals include raising of productivity and efficiency in agriculture and industry. The policy to restore private investment and public sector efficiency is backed by a reduction of the Annual Development Program for the industrial sector from 16 to 10 percent, and a clear policy advice to public sector enterprises to generate funds out of their own savings.

Apart from the philosophical consideration cited above, the fiscal measures adopted through the 1981-82 budget especially aim at providing incentives for private individual savings, increasing the surplus in the corporate sector for reinvestment in existing industries, encouraging investment in new industrial units, exploration for natural resources, increasing export of carpets and engineering products, developing agriculture, and construction of residential houses. Necessary changes have also been made in the tax laws to rationalize and streamline the procedures, remove fiscal anomalies and plug the loopholes.

In precise terms, the fiscal measures adopted through the 1981-82 budget are discussed below:

I. ENCOURAGEMENT OF PRIVATE SAVINGS

With a view to meeting the resource gap and encouraging the common man's association with the industrial development in the country, the government has, in the past, come out with various investment schemes like the National Investment Trust, the National Defence Savings Certificates, portfolio investment schemes of the Investment Corporation of Pakistan, postal savings schemes, etc. The investments made in such schemes and the shares and debentures of the public companies registered on the stock exchange have been historically

* This paper is essentially descriptive in nature and discusses the various fiscal measures adopted in the 1982-82 budget. Although reference has been made to the inadequacy of the fiscal measures in achieving the desired economic results, no attempt has been made to quantify the impact and interaction of monetary, fiscal and other non-tax measures to boost the economy.

** Secretary International Taxes, Central Board of Revenue, Islamabad.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

considered for rebate purposes while computing the tax liability of a person. In order to further induce private savings, the existing maximum monetary limit of 40,000 Rs. has been increased to 45,000 Rs. Similarly, the existing tax exemption for dividends and capital gains on disposal of shares of capital stocks of companies has been continued. The scope of investment channels has further been widened to include "Modaraba" certificates and Participation Term Certificates. Exemption from income tax in respect of income from approved debentures has been widened to include income from Participation Term Certificates. Similarly, income from newly introduced "Profit and loss sharing accounts", along with dividend income, if any, has been exempted up to the limit of 15,000 Rs. in the case of an individual.

II. INCENTIVES FOR THE INDUSTRIAL SECTOR

The Fiscal policy incentives for the industrial sector aim at broadening the industrial base, increasing output, channelling the investment to import-substituting industries and dispersing industrial units to the less-developed areas of the country. Whereas the existing tax concessions — e.g. the tax credit for installation of machinery (for balancing, [1] modernization and replacement), the tax credit to companies for investment in shares and debentures (of the Equity Participation Fund), the concessional rate of tax on intercorporate dividends, the tax holiday for industries set up in industrial estates and less-developed areas of the country and the setting off of losses of wholly owned subsidiary companies against the profits of parent companies (if the latter are registered on the stock exchange and have prepared plans for revitalizing sick subsidiaries which are approved by specified financial institutions, etc) — have been continued, the following new measures have been adopted to encourage investment in the industrial sector in general and some priority sectors in particular:

(i) In view of the high investment cost and the large cash flow needs of new enterprises, the rate of initial depreciation has been increased from 25 percent of the cost of plant and machinery.

(ii) On account of the heavy capital outlays involved in the organised exploitation of minerals, and the lack of adequate incentives for the purpose, the rich mineral endowment of the country has remained largely unexploited. Accordingly, Pakistani companies set up between July 1, 1981 and June 30, 1985, engaged in the exploration for and extraction of selected minerals, as to be notified by the government from time to time, have been extended a full tax holiday for a period of 5 years from the date of commencement of commercial production, and a tax concession of 50 percent of the normal rate for 5 years thereafter.

(iii) In order to encourage investment in oil exploration, the existing policy of recouping the entire depreciation allowed on plant and machinery at the stage of export out of Pakistan and charging it to tax at the normal rates has been revised, and it has been decided that such machinery and plant when exported out of Pakistan shall in future be charged to tax only in respect of initial depreciation.

(iv) Under the existing rules, the cost of road transport vehicles for purposes of depreciation is deemed to be no more than 100,000 Rs. This provision was primarily meant to discourage the use of big cars. However, in view of the substantial rise in the price of cars and the fact that in many businesses, vehicles other than cars are also an operational necessity, the provision has been adding undue harship. The limit for the purposes of depreciation has accordingly been relaxed as follows:
(a) for motorcars — 150,000 Rs.;
(b) for other types of transport vehicles — actual cost.

(v) With a view to reducing the tax burden on companies and creating a better climate for investment, the corporate tax rates have also been reviewed. Consequently, the corporate surcharge of 10 percent of the income tax and supertax on companies has been reduced to 5 percent.

(vi) Companies were allowed a rebate on the surcharge on retained profits provided the free reserve did not exceed 15 percent of the paid-up capital. Since banks and financial institutions have of necessity to keep their free reserve higher than this level it was seldom that they availed themselves of the rebate facility. In recognition of this genuine problem, the limit of free reserves in such cases has been raised to 300 percent of paid-up capital.

The direct tax measures have been further supplemented by concessions in the area of indirect taxes. The general rate of sales tax on domestically produced goods has been reduced from 20 to 12.5 percent. Some of the items such as sanitary ware, washing machines, radio sets, TV sets, and other electrical applicances, etc. which were chargeable at higher rates varying between 25 and 30 percent would consequently be taxable at the standard rate of 12.5 percent. Other items such as paper and paper products, artificial leather and rexine, motor vehicle tubes, automobile parts, calcium carbide and asbestos waste which were previously liable to a tax at rates lower than 12.5 percent will continue to be levied at lower rates. On the customs side, in order to provide encouragement ot the leather goods industry, the import duty of 85 percent otherwise chargeable on wet blue goat and sheep leather has been withdrawn. Similarly, the duty on dies and moulds has been reduced from 40 to 20 percent and the sales tax leviable at 10 percent has been withdrawn to encourage the manufacture of machinery and consumer durables. Single filament bulbs for use in miners' safety lamps have also been exempted from customs duties. As a measure of protection to domestic industry, import duties have been enhanced on some goods such as natural yeast, acetic acid, carbon black, sulfur black, white and colored cement, plastic moulding compound and resins, man-made fibres, sanitary ware, kitchen ware, tiles, etc.

1. *Editor's note:* The term "balancing" (of machinery) means installation of additional machines in an industrial unit for the purpose of achieving optimum efficiency of the various interrelated components of that unit.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Similar concessions have been offered in the area of excise duties. These include:

(a) exemption from excise duty and sales tax to locally manufactured tyres and tubes for use in motorcycles, scooters and motor rickshaws;
(b) replacing the present 15 percent ad valorem rate of duty on woolen fabrics, other than carpets, rugs, blankets and shawls, by 13 percent of the retail price.

III. CONCESSIONS TO AGRICULTURE

The agricultural sector is of predominant importance to Pakistan and all possible efforts are being made to increase agricultural production. With this end in view, tax incentives, as well as other measures, are being widely used to achieve the desired objectives. The 1981-82 budget continues the existing exemption to agricultural income, and also income from poultry farming, dairy farming, cattle and sheep breeding, and fish catching. Similarly, the income from domestic manufacture of farm implements and machinery and income from renting of agricultural machinery or from providing pest control services continues up to June 1983. No additional concession on the direct taxes side has been granted through the current budget. However, in the area of indirect taxes, further incentives have been offered to encourage mechanization of agriculture, i.e.:

(a) Imported tractors imported in CKD condition for local assembly which were previously liable to an import duty of 10 percent, subsequently refunded after assembly, have been totally exempted from customs duties.
(b) Spare parts for tractors, previously charged to import duty ranging from 10 to 115 percent, have been made liable to a concessionary duty of 10 percent provided these are imported by authorised assemblers and do not exceed 20 percent of the value of imported tractors.
(c) Bulldozers, angle-dozers and levellers, previously charged to import duty and sales tax at 40 and 10 percent respectively, have been exempted from sales tax and the import duty reduced from 40 to 20 percent.

In addition to the fiscal measures referred to above, certain non-tax measures such as partial withdrawal of subsidy on wheat and increased support price of agriculture products, increased capital investment in the fertilizer industry with a fixed low price for the fertilizer (through Government subsidy) are expected to show positive results in the years to come.

IV. EXPORT PROMOTION MEASURES

Pakistan is essentially a primary goods exporting country. In recent years, the emphasis has, however, shifted towards export of finished goods, technical know-how and services, etc. With a view to encouraging exports, liberal concessions in the form of either a total tax exemption or a reduction of tax rates have been offered in the past. During recent years, it was felt that there was yet the need to further supplement the existing incentive programs to boost the export of certain items and services. Consequently, the following further tax concessions have been given through the current year's budget:

(i) The export of carpets and engineering goods is facing tough competition in the ineternational market. Similarly, the export of leather goods has been effected by the recession and depreciation of the currencies of major European countries which constitute the main export market. To protect the position of these important exchange earners in the export market, in computing the taxable income of domestic companies engaged in the export of carpets and engineering goods, an income tax concession in the form of allowing the deduction of expenditure in connection with advertisement abroad and supply of free samples shall be allowed at $1\frac{1}{3}$ times the amount of actual expenditure Simultaneously, a compensatory rebate of 12.5 percent on the export of carpets and leather goods will also be allowed.
(ii) A tax concession in the form of exemption of income of Pakistan companies rendering technical services abroad to foreign enterprises has been available since 1977 if the money is repatriated to Pakistan. This concession was only partially available to non-company taxpayers. In order to bring the company and non-company taxpayers rendering technical services abroad at par, income derived by non-company taxpayers has also been exempted. This concession is also available to shared income of persons who are partners of registered firms.

V. INCENTIVES TO ATTRACT FOREIGN INVESTMENT

Whereas all possible efforts are being made to utilize domestic resources, including capital and technology, to develop Pakistan's industrial base, the need for import of foreign capital and sophisticated technology is being met through very liberal incentive programs. Tax concessions to industries in priority areas of the economy or geographical areas are equally available to foreign investors. The exemption of income of expatriate technicians engaged in industrial projects for a specified period of time and of interest on foreign loans (whether from foreign governments and their financial institutions or from private lenders) has long been in vogue.

In order to attract sophisticated foreign technology, the percentage of deductible expenditure incurred abroad (while computing the income of a foreign enterprise rendering technical services in Pakistan) has been raised from nil to 10 percent of the gross amount of such fees. The entire expenditure incurred in Pakistan, nevertheless, remains a deductible expense. Appropriate measures are also being taken to streamline the deduction of head office expenses incurred by multinational corporations on behalf of their Pakistan subsidiaries and branches. Draft Income-tax Rules, in this behalf, have been framed and circulated for public opinion.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Realising the necessity of providing a definite set of rules for the computation of income of foreign enterprises engaged in transnational business transactions and to supplement the tax incentives otherwise available under the domestic statutes, Pakistan has endeavoured to broaden its tax treaty net. Whereas conventions for the avoidance of double taxation and prevention of fiscal evasion with respect to taxes on income with most of the developed countries had been concluded by 1970, a number of similar conventions with countries like Canada, Malta, Libya, Romania, the Netherlands, Belgium, Italy, Bangladesh, Thailand, the Philippines, Malaysia, etc. have been concluded during the past few years. These conventions provide for concessional tax rates on dividends, interest, royalties, etc. It is expected that these treaties will serve as a favourable vehicle for the flow of capital, goods and technology from abroad.

An important area for foreign investment has been or is exploration and drilling for oil in Pakistan. Keeping in view the huge capital outlays in this area (and in order to reduce its oil import bill), Pakistan has entered into a number of petroleum concession agreements with foreign enterprises from Western Europe and North America. The existing tax concessions in the form of depletion allowances, reduced rate of tax, deduction of expenditure on drilling of dry holes and its carry forward to the subsequent years (where it can not be adjusted in the relevant year) have been continued.

To sum up, it can be safely stated that the fiscal measures adopted through the Budget for 1981-82 are oriented towards accelerating the place of economic development through the participation of both the public and private sectors, and to reach a stage of self-sufficiency in industrial and agricultural products.

Pakistan:

SUMMARY OF NEW TAX CONCESSIONS IN BUDGET 1981-1982

by Abdul Waheed *

The new tax measures are summarised as follows:

Tax relief has been provided to non-salaried persons falling in low income brackets:

where the total income –

(i) exceeds 12,000 but not 15,000 Rs., the amount of tax payable by an assessee shall be reduced by a sum equal to 20% of the tax payable;
(ii) exceeds 15,000 but not 25,000 Rs., the amount of tax payable shall be reduced by a sum equal to 15% of the tax payable; and
(iii) exceeds 25,000 Rs., the amount of income tax payable shall be reduced by a sum of 315 Rs.

Tax monetary limit of investment for the purposes of tax rebate has been raised from 40,000 to 45,000 Rs.

The rate of surcharge on companies has been reduced from 10 to 5%.

Exemption from tax has been granted to new residential houses constructed between 1 July 1981 and 30 June 1983 and having an annual value op to 18,000 Rs.

The rate of initial depreciation on plant and machinery of a new industrial enterprise has been raised from 25 to 40%.

In case of assets used in the exploration and extraction of petroleum, when exported out of the country, only initial depreciation shall be recaptured and charged to tax.

Pakistani companies engaged in the exploration of selected minerals have been given a tax holiday for 5 years; on the expiry of the 5 years, tax on such income shall be charged at 50% of the normal rate for the next 5 years.

Domestic companies exporting carpets and engineering goods shall be allowed expenditure on account of publicity and free sampling abroad at 1⅓ times the actual expenditure.

Exemption of income derived from rendering of technical services abroad to a foreign enterprise has been extended to non-company taxpayers.

Profits paid or credited to profit and loss sharing accounts shall be allowed as business expense to the banks.

Income tax rebate shall be allowed on investments made in purchase of Modaraba Certificates.

Investment in Participation Term Certificates shall be eligible for purposes of investment allowance, subject to the monetary and holding period limit.

Income derived from Modaraba has been exempted singly or in aggregate with other dividend income up to 15,000 Rs.

Income from PLS accounts along with dividend income, if any, shall be exempt up to 15,000 Rs.

Income from Participation Term Certificates shall be exempted along with debenture income up to 5,000 Rs.

Return on advance tax payments has been raised from 4 to 6%.

Income of a non-professional writer has been exempted up to 25,000 Rs.

A professional sportsman has been allowed exemption in respect of income from one benefit match.

In case of private limited companies with paid-up capital of 3,000,000 Rs. or more, audit by chartered accountants or cost management accountants has been made compulsory.

The Central Board of Revenue, with prior approval of the Federal Government, has been empowered to disclose any particulars of a taxpayer to the public.

The self-assessment scheme has been extended to all taxpayers filing returns for assessment year 1981-1982.

PAKISTAN:

Budget 1981-82

Extract from the Budget Speech pronounced on 26 June 1981 by Mr. Ghulam Ishaq Khan, Finance Minister.

A detailed discussion of Pakistan's tax system appears in the International Bureau of Fiscal Documentation's publication: TAXES AND INVESTMENT IN ASIA AND THE PACIFIC

I. PRELIMINARY REMARKS

86. *Additional tax measures.* – Before coming to the tax proposals, I would like to briefly mention the considerations which have guided them. Although the demands on resources arising from the pressing needs of development, defence, administration, social and other services are enormous, the increase in expenditure of the government has been kept well within the rate of growth of GNP at current prices and, as I have just mentioned, it has been cut further. Even so, as tax receipts do not rise at the rate of GNP, additional resource mobilisation effort including the levy of new taxes becomes inevitable. This is a phenomenon that we have witnessed year after year and stems from the poor elasticity of taxes with respect to the tax base – be it the response of income taxes to incomes, import duties to imports or excise duties to industrial output. Furthermore, numerous exemptions and deductions make for a narrow tax base and a complex tax structure, which by facilitating evasion results in gross horizontal inequities as well as loss of revenue specific taxes lose their real value with inflation.

Poor elasticity of taxes

87. The Government has been concerned with this deficiency and has embarked upon a process of reform with a view to obviating in course of time the need for additional tax levies each year. The most encouraging reponse has been obtained in income tax where a combination of a self-assessment scheme under the new income tax law with tighter, selective enforcement has led to an extraordinary increase in revenue collections and the number of assessees.

88. *Indirect tax structures.* – A similar need exists to reform the indirect tax structures in order to make it more simple, control evasion and reduce areas of discretion and to enable the system to serve the needs of efficient resource allocations. One of the major deficiencies in the system is the heavy taxes, on raw materials which tend to be levied for revenue reasons because taxes on capital goods and consumer goods have a direct and visible impact which is generally resisted. Indeed, if taxes on raw materials are high and prevent development of uses by industries then the whole nation suffers.

89. *Tax reform.* – The flaws in the taxation structure, accumulated over many decades, cannot be removed overnight. But I hope that the measures that I will announce will mark a further significant step in the direction of tax reform. If these measures succeed in achieving the objectives in mind, the base would have been laid for a stable taxation system which will not only serve the needs of revenues but would also generate confidence by eliminating the annual uncertainty about taxation policies.

II. INCOME TAX

90. *Returns under self-assessment scheme.* – This brings me to the tax measures for the coming year. I am glad to say that the self-assessment scheme has now completed two years of its operation. During 1980-81, the campaign to educate the taxpayer about the full implications of the Scheme was stepped up and it has brought about encouraging results. Over 400,000 returns were received from the existing taxpayers as against 370,000 odd received during the preceding year. The number of taxpayers declaring increase in income over the preceding year by 10% or more was 52,718 as against 42,853 during 1979-80. This year 22,128 returns showed an increase in income of more than 20% over that of the last year. About 95% of the returns filed this year were accepted as was the case last year and the rest were subjected to detailed scrutiny.

91. *New taxpayers.* – During 1980-81, the efforts to locate new taxpayers continued unabated and over 200,000 new taxpayers were brought on to the tax register. The total number of taxpayers after deleting dead cases now stands at 844,645 which is more than double the number of taxpayers on income tax record only three years back.

92. *Collection of income-tax.* – The collection of income tax has also more than doubled in two years' time. Collections during 1980-81 are expected to exceed Rs. 670 crores as against Rs. 526 crores during 1979-80 and Rs. 334 crores during 1978-79. As a consequence the contribution of income tax to the federal revenues has increased to 19% in 1980-81 as against 17% in 1979-80 and 14.6% in 1978-79. the significant increase in collections without any increase in the tax rates bears eloquent testimony to the taxpayer's positive response of self-assessment, as well as to the commendable efforts made by the tax collectors to maximize tax revenues.

Success of self-assessment scheme

93. *Simplification of laws, forms and returns.* – Taxpayer's convenience is a matter of paramount concern to the Government. It is our constant endeavour to simplify the relevant laws, and forms and returns. The Income Tax Rules have been revised and published in a draft form for eliciting public opinion. We hope to finalise these rules in the light of the comments and reactions received by August, 1981. A new set of simplified income tax returns has also been prepared for use by different classes of taxpayers from the assessment year 1981-82. For the facility of non-English knowing taxpayers returns will be made available in Urdo also.

94. *Scope of self-assessment scheme.* – Coming to specific budget measures, it has been decided to extend the scope of the self-assessment scheme and to liberalize it further along the following lines:

(i) The scheme presently covers only such taxpayers who fulfil certain prescribed conditions. In view of the positive response from the tax paying public if has been decided to treat all returns for the assessment year 1981-82 showing taxable income as self assessment returns.

(ii) For the assessment year 1980-81, new taxpayers could show in their returns unexplained capital upto Rs. 50,000 provided the income on such capital was declared at not less than 50%. For the assessment year 1981-82, new taxpayers will be allowed to show unexplained capital upto Rs. 100,000 provided they declare an income of 50% on the first Rs. 50,000 and 40% on the balance.

(iii) For the assessment year 1980-81, immunity was given to such persons who declared income higher by 20% or more as compared with the highest assessed income in any of the three preceding years. This concession will continue to be available. However, those assessees who enjoyed immunity for the assessment year 1980-81 by declaring higher income are being given a further incentive. Such assessees will be entitled to immunity if their declared income exceeds the average (instead of the highest) assessed income of the three preceding years by 20% or more.

(iv) Under the present provisions, all self-assessment returns are first processed by accepting the declared income. Subsequently the cases selected for detailed scrutiny are re-opened. As this practice caused inconvenience to the tax payers, it has been decided that only one assessment shall be framed in all cases, whether for accepting them under self assessment or subjecting them to detailed scrutiny.

95. It is hoped that taxpayers will take full advantage of these concessions and declare their true and correct incomes in order to avail of the immunity.

96. *Personal tax rates.* – Personal tax rates have also been reviewed. It is felt that relief on the lines already available to the salaried class is called for in respect of non-salaried assessees falling in lower income brackets. It has, therefore, been decided to provide the following relief to this class of taxpayers:

(i) where the total income is upto Rs. 15,000 the income tax liability before rebate for investment will be reduced by 20%;

(ii) where the total income exceeds Rs. 15,000 but does not exceed Rs. 25,000, the income tax liability before rebate for investment will be reduced by 15%; and

(iii) where the total income exceeds Rs. 25,000 the extent of tax relief will be the same as available to persons having income of Rs. 25,000.

Reduction of rates

97. *Corporate tax rates.* – The corporate tax rates have also been reviewed. Corporate surcharge is presently 10% of the income tax and super tax on Companies. In order to reduce the burden of this tax on companies with a view to creating a better climate for investment, it has been decided to reduce it to 5%.

98. *Rebate of surcharge admissible to companies.* – At present rebate on surcharge is admissible to companies on retained profits provided the free reserves do not exceed 150% of the paid up capital. Since banks and financial institutions have of necessity to keep free reserves higher than this level, it is seldom that they avail of the rebate facility. In recognition of this genuine problem, it has been decided to raise the limit of free reserves in such cases to 300% of paid up capital.

99. *Rebate on investments.* – In order to promote savings, rebate is given on investments made by taxpayers in certain types of securities and savings schemes. The present monetary ceiling for such investments is Rs. 40,000. This limit is being raised to Rs. 45,000. The other conditions will remain unchanged.

100. *Tax treatment of certain financial instruments.* – In pursuance of Government's objective to Islamise the economy, certain financial instruments were introduced and other measures taken during the course of the year. The Income Tax Law is being amended to provide for the tax treatment of these instruments and measures on the following lines:

© 1982 International Bureau of Fiscal Documentation – BULLETIN

(i) Investment made by the first holder of a Modarba certificate issued by a specific value Modarba will not be entitled to Income tax rebate subject to the statutory limit of investment.
(ii) Income tax rebate on investment in open end Modarba will be allowed to the holder of such certificate subject to the monetary and holding period limits already provided in the law.
(iii) Income tax rebate on investment in Participation Terms Certificate (other than such Certificate acquired by purchase or otherwise from previous holder thereof) will be allowed subject to the monetary and holding period limits already provided in the law.

Islamisation of the economy

(iv) Dividend income derived from Modarba will be exempted singly or in aggregate with dividend income from NIT, ICP, PLS Account and listed companies upto Rs. 15,000.
(v) Income from Participation Term Certificates will be exempted singly or in aggregate with income from approved debentures upto Rs. 5,000.
(vi) Profits distributed among profit and loss sharing account holders shall be allowed as business expense while computing profits of banks for tax purposes.
(vii) Income from profit and loss accounts, alongwith dividend income, if any, will be exempted upto the limit of Rs. 15,000 in the case of an individual.

101. *Tax concessions in industrial sector.* – To encourage investment in industrial sector in general and some priority sectors in particular, the following tax concessions are being given:
(i) At present initial depreciation is admissible on new plant and machinery at the rate of 25%. In view of the high initial investment cosdt and the larger cash flow needs of new enterprises, it has been decided to increase the rate of initial depreciation to 40%.

Investment incentives

(ii) Because of the heavy capital outlays involved in the organised exploitation of minerals, and the lack of adequate incentives for the purpose, the rich mineral endowment of the country has remained largely unexploited. It has, therefore, been decided that Pakistani companies set up between 1-7-1981 and 30-6-1985 and engaged in the exploration and extraction of selected minerals as notified by the government from time to time shall enjoy full tax holiday for the first 5 years from the date of commencement of commercial production, and a tax concession of 50% of the normal rate for the 5 years thereafter.
(iii) Oil exploration is one of our priority areas. In order to encourage investment in this sector, it has been decided that the machinery used in oil exploration when exported out of Pakistan shall be charged to tax only in respect of initial depreciation instead of full depreciation as is the case at present.
(iv) Under the existing rules, the cost of road transport vehicles for purposes of depreciation is deemed to be not more than Rs. 100,000. This provision was primarily meant to discourage the use of big cars. However, in view of the substantial rise in the price of cars and the fact that in many a business, vehicles other than cars are also an operational necessity, the provision is acting unduly harshly. It has, accordingly, been decided to relax the limit for purposes of depreciation as under:
  (a) for motor cars the new limit will be Rs. 150,000 and
  (b) for other types of transport vehicles, the actual cost.

102. *Exemption in housing sector.* – At present houses constructed between 1st July, 1974 and 30 June 1983 enjoy tax exemption for a period of five years as under:
(a) where annual value does not exceed Rs. 12,000 – Full exemption.
(b) where annual value exceeds Rs. 12,000 – Exemption limited to Rs. 6,000.

103. In order to further encourage investment in housing sector, it has been decided that income from houses completed between 1st July, 1981 and 30th June, 1983 and having an annual value of not more than Rs. 18,000 (in the case of Islamabad Rs. 24,000) shall be exempted for 5 years. Where annual value exceeds these limits the exemption shall be restricted to Rs. 9,000 only.

104. *Concession on export of goods and technical services.* – At present a number of tax concessions are available on exports of goods and technical services from Pakistan. In the interest of exports, the following further tax concessions are being given:

Export incentives

(i) Export of carpets and engineering goods is facing tough competition from other countries. To create markets for these exports there is need for sale promotion. It has, therefore, been decided that for working out taxable income of domestic companies engaged in export of carpets and engineering goods and such other goods as are notified by the Government from time to time, expenditure in connection with advertisement abroad and on supply of freee samples shall be allowed @ 1⅓ times the amount of actual expenditure;
(ii) At present income of Pakistani Companies rendering technical services abroad to foreign enterprises is exempt from tax, if the money is repatriated to Pakistan. This concession is only partially available to non-company taxpayers. In order to bring the company and non-company taxpayers rendering technical services abroad at par, it has been decided to exempt such income derived by non-company assessees also and on case, such tax payers are firms, the share income will be exempt in the hands of partners as well.

105. *Limit of return paid by Government raised on advance tax deposited by taxpayers.* – Currently, return @ 4% is paid by Government on advance tax deposited by the taxpayers. This rate is low. It has, therefore, been decided to raise it to 6% which will bring it at par with return on treasury bills.

106. *Exemption of income of professional sportsman.* – Presently, income of a professional sportsman from the exercise of his profession including income from a benefit match is taxable. It has been decided that income of a professional sportsman from one benefit match shall be exempted.

107. *Exemption limit raised in respect of artistic and literary work.* – In order to promote literary and artistic work by non-professional writers, poets or artists, it has been decided that the exemption limit on income from this source be raised from Rs. 15,000 to Rs. 25,000.

108. *Date for filing return of income.* – Now I come to some rationalisation measures:
(i) The last date for filing of income tax returns in case of non-company tax payers whose income year ends on any day between 1st January and 30th of June is 1st of November. This date is being brought forward to 1st of October.
(ii) There is no requirement of law at present for the private companies to have their accounts audited by qualified auditors. In order to ensure that accounts of bigger private companies are properly maintained and audited it has been decided that private companies with a paid up capital of Rs. 3,000,000 or more should get their accounts audited by Chartered or Cost and Management Accountants.

Residency

109. *Resident in Pakistan.* – At present a person becomes a resident in Pakistan if his stay in Pakistan during any year exceeds 60 days and during the four preceding years exceeds 365 days. By virtue of acquiring resident status the world income of such person becomes taxable in Pakistan. It has been observed that the condition of 60 days stay in Pakistan creates hardship for Pakistanis working abroad. While, on leave in this country for a period of more than 60 days they have to face taxation on world income basis. To obviate this hardship, the condition of stay of 60 days is being changed to 90 days.

110. *Minimisation of leakage of revenue.* – To minimize the chances for leakage of revenue, the following changes are being made in the area of withholding tax at various stages:
(i) In respect of assessees liable to pay advance tax, the tax rate at import stage is being reduced from 2% to 1.5%. Such taxpayers shall pay tax at this rate on all imports and shall be entitled to adjust the payment at import stage against their advance tax liability.
(ii) Tax @ 3% of the auction price of goods auc tioned by or on behalf of the Government, Local authorities, Public companies, Foreign associations, Contractors or Consultants or Consortium shall be collected by the auctioning authorities.
(iii) At present fees paid to professionals are subjected to withholding tax if total payments in the year exceed Rs. 50,000. This limit is high and is causing leakage of revenue. It is, therefore, being lowered to Rs. 10,000 in any financial year.

111. *Disclosure of particulars of income of taxpayers.* – The law prohibits disclosure of particulars of income of a taxpayer by the tax autorities. It has been observed that this provision gives undue protection to unscrupulous taxpayers whose particulars if made known to public may lead to detection of sources of income not shown to the Department. It has, accordingly, been decided to withdraw this protection and to empower Central Board of Revenue to disclose, with the prior approval of the Government, particulars of any assessee in respect of his income, assets, liabilities etc. to the general public.

112. *Notifications issued in 1980-81 incorporated in formal law.* – During 1980-81, a number of notifications were issued under Section 167 of the Income Tax Ordinance, 1979 in order to tide over difficulties experienced in the course of administering the Law. These notifications are now being incorporated in the formal law.

113. *Prospective enforcement of tax proposals.* – In the last year's budget, the principle of prospective enforcement of tax proposals being convenient to the taxpayers, was adopted. The same pattern has been generally followed this year also. Accordingly amendments relating to tax relief for small income groups, exemption of income from profit and loss sharing accounts, exemption of income from benefit matches and income of non-professional writers will be effective from the assessment year 1981-82. The rest of the amendments relating to relief measures will be effective from the assessment year 1982-83.

114. *Economic activities.* – Before coming to the field of indirect taxation I would like to state as had hinted earlier that we are in the process of restructuring the system in order to make it more responsive to increase in the level of economic activities so that the need for frequent changes in the tax rates is minimised. We intend to pursue this goal more vigorously during 1981-82 and hope to bring about substantial reform during the next couple of years. In this connection a major exercise was undertaken last year to bring the Pakistan Customs Tariff Clas-

© 1982 International Bureau of Fiscal Documentation – BULLETIN

sification in line with the latest International Customs Nomenclature for Classification of goods. While doing so, a uniform classification for the purposes of customs duty and Import Trade Control was developed which, on becoming operative from the next financial year will go a long way in minimising discretion and assessment disputes.

III. CUSTOM DUTIES

115. *Range of duties.* – As was the case with the classification, the rate structure which is another important component of the total system also needed to be simplified. Starting with 11 rates in 1967-68, the number of ad valorem rates has proliferated to 42, which provide numerous opportunities for misdeclaration and malpractices. There are a number of rates involving fractional calculations like 12½%, 47½%, 72½%, 102½% and 197½%. Whatever rationale these rates might have had at the relevant time, it is not valid any more. There are other rates against which either no duty is being collected or which make insignificant contribution to the revenue. Again there are a number of composite rates which do not serve the purpose or the philosophy of their ad valorem or specific levies. It has, therefore, been decided to convert the existing composite rates into specific rates and to reduce the number of ad valorem rates from 42 to 16 only. Staying within the existing range of duties from 10% to 350%, these sixteen new slabs are 10%, 20%, 30%, 40%, 50%, 60%, 70%, 85%, 100%, 120%, 150%, 160%, 175%, 200%, 250% and 350%.

116. *Headings in the Tariff.* – Out of 1100 headings in the Tariff, some 950 headings already carry one or the other of these sixteen rates and they remain unaffected by the change. Adjustment is required to be made only in the remaining 150 headings. It has been decided to adjust the duty on these headings in the next lower or higher slab. The general principle followed in this regard is that the duty on essential items has been adjusted by and large in the lower slab and on less essential and luxury items in the next higher slab.

Improvements of the system

117. *Duty in lower slabs.* – Items on which duty has been adjusted in lower slabs include coke and semi-coke, coaltar, petroleum products like liquid paraffin, white oil, greases and brake fluid, worked mica, glassware for laboratory use, cutting blades for machine, motor parts, motor cycles, cars upto 1,000 cc and optical elements.

118. Among items on which duty has been adjusted in the next higher slab, some items of general interest are woven fabric of silk and plywood where duty will now be chargeable @ 250% instead of 235%, and 200% instead of 195% respectively. Likewise, duties in case of cocoa paste and butter, tooth brushes and tooth pastes, motor cars with an engine capacity of 1000 cc to 1300 cc will now be chargeable @ 120% instead of 115%, 150% instead of 135% and 120% instead of 115% respectively.

119. *Specific rates on betel leaves, unmanufactured tobacco, matches etc.* – Of the composite rates on items of general interest which have been converted into specific rates, betel leaf, is presently chargeable to @ Rs. 50 per kg plus 10% ad valorem. It has now been converted to a single specific rate of 60 per kg. Similarly duty on unmanufactured tobacco has been converted from Rs. 40 per kg + 10% ad valorem to Rs. 50 per kg, unexposed cinematographic films, from 20 paisas per metre + 10% ad valorem to 30 paisas per metre, fish and whale oil, from 70 paisas per kg + 10% ad valorem to Rs. 1.60 per kg, and on safety matches from Rs. 1.92 per 1440 matches + 10% ad valorem to Rs. 288 per 1440 matches.

120. *Improvement in Pakistan customs tariff.* – In addition to rationalization of rate structure, an effort has also been made to improve the Pakistan Customs Tariff from another angle. It has been observed that identical items with minor variation become chargeable to different duties. Such a situation gives birth to assessment disputes and malpractices. A number of such items have been identified and they have been subjected to a uniform rate of duty to minimize discretion and malpractices. These changes are:

(i) Manganese dioxide with slight change in description, is chargeable under three different tariff headings and attract rates of duty and sales tax ranging from 25% duty and nil sales tax to 40% duty plus 10% sales tax. It has, therefore, been decided to charge manganese dioxide to a uniform rate of duty @ 40% plus 10% sales tax.

(ii) Cigarette paper is classifiable under three different tariff headings attracting duty rates ranging from 40% to 50%. It has been decided to charge all kinds of cigarette paper to a uniform rate of duty @ 50%.

(iii) Duty on imported man-made yarns varies from Rs. 35 to Rs. 40 per kg, the bulk of the import being in the Rs. 40 per kg category. The difference in rate of duty provides opportunities for misdeclaration and consequential loss to the Government revenues. It has been decided to subject all such types of yarn to a uniform rate of duty of Rs. 40 per kg.

(iv) Switches and fuses not exceeding 500 volts are chargeable to 85% duty; and other fuses and switches to 40% rate of duty. Importers many times declare switches and fuses of 500 volts as switches of 550 and 560 volts to evade customs duty, although there is no voltage range between 500 to 1000 in the country. In order to remove this technical flaw the description of 500 volts is being substituted by 999 volts.

(v) Clocks of C&F value upto Rs. 100 are chargeable to 100% duty whereas clocks of higher value are chargeable at the rate of 150%. At present there are very few clocks whose value is less than Rs. 100. This distinction provides scope for misdeclaration and under-invoicing. It has been decided to remove the distortion by charging all the clocks regardless of value to a uniform rate of 120%.

121. *Rationalization measures in case of products which are substitute for each other.* – Similar rationalization measures have been taken in case of products which are substitutable for each other but suffer different incidence of duty. Details of these measures are:

(i) Most of the items falling under chapter relating to plastics are chargeable to specific rate of duty. This was done to check under-invoicing in the import of these items. Acrylic sheet is another item of this chapter which is being underinvoiced. To check its under-invoicing and bring it in line with other items of this chapter it has been decided to subject it to specific rate of duty of Rs. 25 per kg instead of 120% ad valorem.

(ii) Toilet paper cut to size or shape is chargeable @ 85% duty plus 10% sales tax. On the other hand, toilet paper in rolls, imported for the manufacture of toilet paper, cut to size or shape is chargeable @ 100%. It has, therefore, been decided to enhance the duty on toilet paper cut to size or shape from 85% to 120%.

(iii) Imported chemicals which are not manufactured in the country are chargeable @ 40%. Hydrogen peroxide, which is an important raw material for textile industry, although presently not being manufactured in the country is chargeable to duty @ 85%. It has been decided to reduce its rate to 40%.

122. *Enhancement of import duties.* – As a measure of protection to domestic industry, import duties have been enhanced on the following eight items:

(i) Natural yeast will now be chargeable to 120% duty instead of 70%;

(ii) & (iii) Acetic acid and carbon black to 85% instead of 70%;

(iv) Sulphur black to 85% plus 10% sales tax, instead of 70%;

(v) Cement coloured and white to 20% and cement grey to 10% from nil rate of duty;

(vi) Plastic moulding compounds and resins to Rs. 13 per kg instead of Rs. 11 per kg;

(vii) Man-made fibres to Rs. 20 per kg instead of Rs. 15 per kg; and

(viii) Sanitary ware, kitchenware and tiles to 150% instead of 120%.

123. *Withdrawal of concession in respect of imported tickets and tags.* – Now that the facilities to print airline tickets and baggage tags have become available in the country it has been decided to withdraw the concession given to imported tickets and tags.

124. *Duty on imported wood veneer.* – Wood veneer is an intermediary product between wood log which is its raw material and plywood, the finished product. Whereas plywood is chargeable to 195% duty both wood veneer and wood log are chargeable to 100% duty. the local units which convert log into wood veneer are, therefore, at a disadvantage because high percentage wastage is involved in converting wood log into wood veneer. It has, therefore, been decided to subject the imported wood veneer to a rate of 150% which is intermediate between the rates on wood log and plywood.

125. *Mechanisation of agriculture.* – To encourage mechanisation of agriculture, the following measures have been taken:

(i) Imported tractors are chargeable to 10% rate of duty. In case of CKD import for local assembly, duty is charged at import stage and is subsequently refunded when tractor is assembled. In order to ensure that the benefit of this concession is made available to farmers immediately, it has been decided to outrightly exempt customs duty on tractors imported in CKD form.

(ii) Spare parts for tractors which are chargeable to various rates of duty ranging from 10% to 115%, will be subject to a uniform rate of 10%, in case these are imported by the authorized assemblers and do not exceed 20% of the value of imported tractors. Tractor parts imported by the commercial importers will, however, be subjected to duty at the rates applicable to general auto-parts which has been reduced from 72½% to 70%.

(iii) Bull-dozers, angle-dozers and levellers are presently chargeable to customs duty and sales tax @ 40% and 10% respectively. In view of their extensive use in agriculture, road-building as well as construction, it has been decided to withdraw sales tax altogether and to reduce the rate of customs duty from 40% to 20%.

126. *Leather goods industry.* – In the field of industry, in order to provide encouragement to leather goods industry, it has been decided to withdraw the import duty of 85% presently chargeable on the wet blue goat and sheep leather.

127. *Duty on dies and moulds.* – Dies and moulds are presently charged to 40% duty and 10% sales tax. To encourage the manufacture of machinery and consumer durables, the duty on dies and moulds is being reduced from 40% to 20%, and sales tax is being entirely withdrawn.

128. *Exemption of single filament bulb.* – Miner's safety lamps and the two-filament bulbs used therein are already exempt from customs duty. Now that single filament bulbs are also being imported for use in the miner's safety lamps, it has been decided to extend the exemption to these bulbs also.

129. *Containers.* – Containers are increasingly being used for the transportation of trade goods. The equipment for handling the containers in the port area such as fork-lift, cranes, tractor tug masters, trawlers etc. is presently chargeable to customs duties ranging from 40% to 85%. These are also chargeable to sales tax at the rates of 10% to 20%. In order to encourage the present trend to-

© 1982 International Bureau of Fiscal Documentation – BULLETIN

wards containerisation it has been decided to reduce the customs duty on the equipment used for handling the containers within port area to 20% whereas sales tax is being withdrawn altogether.

130. *Relief in respect of dental material, etc.* – The following further relief is being provided to the health sector:

(i) Dental materials and preparations which are at present chargeable to duty at rates ranging from 35% to 85% have been exempted from duty.

(ii) Oral diagonostic re-agents are exempt from customs duty but non-oral diagonostic re-agents are chargeable to duty at 40% ad valorem and 10% sales tax. It has been decided to exempt non oral diagonostic re-agents, imported in kit form from both customs duty and sales tax.

(iii) Presently the entire range of X-ray equipment except X-ray film processor is exempt from duty. It has now been decided to exempt the aforementioned processor also.

131. *Duty on watches.* – Considering the high value of watches these days it has been decided to provide relief on this item by reducing the duty from 85% to 60%.

132. *Export rebate on art-silk fabrics and garments.* – Export rebate on art silk fabrics and garments is presently being paid @ 42% of the f.o.b. value and on dyed and printed fabrics it is 45% of the f.o.b. value. A study undertaken revealed that the export values have been more than doubled whereas cost of inputs in terms of C & F price and duty per metre has increased by only 20%. This has obviously distorted the relationship between the f.o.b. export price and the actual duty paid on raw materials. It has, therefore, been decided to correct this distortion by refixing the rates of export rebates. Now the rebate on art silk fabrics and garments will be 32% of the f.o.b. value whereas in the case of dyed and printed fabrics it will be 35%.

133. *Hand knitted woollen carpets and leather goods.* – As stated earlier, export of hand knitted woollen carpets and leather goods has been affected by the recession and depreciation of the currencies of major European countries which constitute their main export markets. These items are important exchange earners for the country and in order to protect their position in the export market it has been decided to allow 12.5% compensatory rebate on their exports.

134. *Mining industry and export of gem stones.* – The Government believes that there is sufficient potential for development of mining industry and export of gem stones. It is accordingly proposed to allow concession of duty free import machinery for balancing and modernisation to marble industry and to the Gem stone Corporation for machinery required for cutting and polishing of gem stones.

135. *Changes in baggage rules.* – The following changes are being made in the Baggage Rules:

(i) Radio-cum-tape recorder is presently chargeable to import duty under the Baggage Rules. It has now been decided to exempt the same from levy of import duty.

(ii) Washing machines and gas appliances are presently allowed to be imported free of duty. Now that these are being manufactured within the country on a large scale, it has been decided to disallow their duty free import. However they would be chargeable to a concessionary rate of 125%.

136. *Warehoused goods in excess of specified period.* – Under the Customs law, imported goods can be warehoused without payment of duty normally for a period of one year. The importers, however, tend to delay the clearance of goods beyond one year. In order tocurb this tendency it has been decided that the rate of penal charge on the warehoused goods for the period in excess of one year be increased from 8% per annum to 2% per month.

IV. CENTRAL EXCISE DUTIES

137. *New measures in respect of central excise.* – In the field of central excise the following new measures have been taken:

(i) Raw materials imported for manufacture of tyres and tubes for use in motor cycles, scooters and motor rickshaws suffer customs duty ranging from 40% to 12%. The tyres and tubes are also chargable to central excise duty @ 10% and sales tax @ 10%. Consequently, the domestically produced tyres and tubes are at a serious dis-advantage vis-a-vis the imported tyres and tubes. It has, therefore, been decided to exempt this category of domestically produced tyres and tubes from both central excise duty and sales tax.

(ii) Knitting yarn is presently exempt from central excise duty. It is usually spun on the same spindles which are used for the manufacture of other yarns chargeable to duty @ Rs. 1 per kg. Cases come to notice where taking advantage of this position dutiable yarn has been cleared as knitting yarn to avoid payment of duty. To plug this loophole, it has been decided to withdraw the exemption on knitting yarn and make it chargeable to duty at the rate applicable to other dutiable yarns.

(iii) Woollen fabrics, other than carpets, rugs, blankets, lohis and shawls are presently chargeable to duty @ 15% ad valorem. Instances of valuation disputes on the basis of over charging of consumers have been reported. In order to protect both the manufacturers as well as consumers, it has been decided to link the rate of duty with the retail price fixed by the manufacturer. However, to prevent any price rise, it has been decided to replace the present 15% ad valorem rate of duty by 13% of the retail price.

(iv) (a) Metal containers which are manufactured in a factory which is not equipped with any plant or machinery capable of being operated with the aid of power, steam or natural gas are presently exempt from duty. It has been noticed that this exemption is being misused and certain large scale manufacturers get the tin sheet printed from regular tin manufacturers and convert the same into tin containers manually. To end this misuse, it has been decided to restrict the said exemption to cottage industries only as was the original intention.

(b) Metal containers manufactured by a manufacturer of vegetable ghee and kerosene oil for packing these products exclusively are exempt from central excise duty. In case, he also manufactures metal containers for packing products other than vegetable ghee and kerosene oil, he becomes dis-entitled to exemption even on metal containers manufactured for vegetable ghee and kerosene oil as well. In order to remove this anomaly, it has been decided to rationalise the exemption so as to ensure that metal containers manufactured for the packing of vegetable ghee and kerosene oil do not become dis-entitled to exemption under any circumstances.

V. SALES TAX

138. *Self clearance procedure in respect of goods manufactured or produced in Pakistan.* – It may be recalled that since 25th April, 1981, sales tax on all goods produced or manufactured within the country is being collected under the excise mode of collection. For the convenience of the manufacturers, however, the self-clearance procedure of the excise mode of collection has been applied. Consequently, no resident staff is posted to the factories and the manufacturers have complete freedom in the conduct of their day-to-day business.

139. *Collection of sales-tax.* – In order to make the excise mode of collection more effective, it has been decided to amend the Sales Tax Act so as to:

(i) redefine the term "sale price" in order to make it applicable to all taxable goods, whether excisable or not;

(ii) merge the two provisos to Section 3 of the Sales Tax Act (which provide for the excise mode of collection for excisable and non-excisable goods separately) into one; and

(iii) apply the provisions of the Central Excises and Salt Act, 1944 to the exclusion of the normal provisions of the Sales Tax Act. It has also been decided to make the provisions of the Customs Act, 1969 similarly applicable to the collection of sales tax on the imported goods. However, the self-clearance procedure of excise mode of collection, to which I have referred earlier, will be applied and no resident staff will be posted at the factories.

140. *Standard rate of sales tax.* – At present, the standard rate of sales tax is 20%. As in the case of customs duty, over a period of time, the rates have multiplied with the result that domestically produced goods have become chargeable to rates ranging from 5% to 30%. The multiplicity of rates has given rise to innumerable difficulties and avoidable disputes. It has, therefore, been decided to reduce the standard rate on all domestically produced goods to 12.5% and to abolish all rates above 12.5%. This will mean that items currently liable to rates of 15%, 20%, 25% and 30% will now be charged to the new standard rate of 12.5%. However, six commodities namely asbestos waste, paper and paperboard, tyres and tubes, calcium carbide, automobile parts and artificial leather and rexine will continue to be charged at the existing rates which are lower than the new standard rate of 12.5%.

141. The reduction in tax rates will bring relief to a majority of manufacturers of taxable goods, like sanitaryware, which was chargeable to 30%, tarpulines which was chargeable to 15%, and bakery products, sweet meats, sodium silicate, tents, plastic products and T.V. sets which were all liable to 20% rate and a number of other products.

142. In addition to general relief in the form of substantial reduction in the standard rate of sales tax applicable to the domestically produced goods, certain other relief and rationalization measures have also been taken:

(a) At present nuts, bolts and screws which are component parts of machinery are exempt from sales tax. Similarly, nuts, bolts and screws produced by cottage industry are also exempt. Besides, the majority of units are quite small which have to compete with cheaper imports. It has, therefore, been decided to exempt locally manufactured nuts, bolts and screws, including wood screws.

(b) The local sodium sulphide manufacturers are also facing disadvantage viz-a-viz imported product. In order to protect the local industry, sodium sulphide manufactured in the country, is being exempted.

(c) Domestically manufactured chip board and particle board of thickness of more than 7 mm, which is the substitute of timber, will be exempt from sales tax whereas other varieties of chip board and particle board will be chargeable at the new standard rate.

(d) Presently asbestos tiles, asbestos cement tiles, vinyl tiles and brick tiles are liable to sales tax @ 20% whereas glazed ceramic tiles and marble tiles are exempt. As all these commodities are close substitutes of each other, it has been decided that tiles of all description will be uniformly charged to tax at the new standard rate of 12.5%.

(e) Leather footwear is presently exempt from sales tax. Rubber footwear in which the value of rubber is at least 75% of the total value of raw material; and non-leather footwear the price of which does not exceed Rs. 25 per pair, are also exempt. Polyurethane footwear is, however, chargeable at 20%. It has been decided that footwear of whatever material

© 1982 International Bureau of Fiscal Documentation – BULLETIN

will be exempt from sales tax if the retail price does not exceed Rs. 125 per pair. All footwear the price of which exceeds Rs. 125 per pair will now be chargeable to the new standard rate of 12.5%. This measure will treat different types of footwear in a like manner and will also shift incidence of tax from low priced to high priced footwear.

143. *Sales tax on paraformaldehyde abolished.* – Sales tax on imported paraformaldehyde, a raw material for manufacturing urea formaldehyde, is being abolished.

144. *Exemption to small manufacturing units.* – Exemption from sales tax was granted to small manufacturing units functioning on cottage industry basis, provided certain prescribed conditions were fulfilled. One of the conditions relates to the amount of capital employed in business.

145. *Capital employed.* – However, "capital employed" was not properly defined. Taking advantage of this loose definition, quite a few large manufacturers split their units to avail of the exemption. To plug this loophole a similar definition of the term "capital employed" is being provided in both, the Sales Tax and the Central Excise Laws. It is proposed to define "capital employed" as to mean every type of capital including borrowed capital. It has also been provided that if a person obtains machinery and fixtures on rent the value of such assets will be included in the amount of capital employed. Investment in business premises will not be considered while computing the amount of capital. In addition to these changes, all other existing conditions relating to cottage industry will remain in force.

VI. WEALTH TAX

146. *Return of Wealth tax.* – A fairly large number of property owners have failed to comply with the statutory requirement of filing their returns under the Wealth Tax Act. We could have easily invoked the penal provisions of law but we have decided not to do so in order to afford another opportunity to the defaulters to comply with the statutory requirements. It has accordingly been decided that the property owners who file the returns for the earlier years by 1st September, 1981 and pay at least 50% of their tax liability simultaneously shall not be subjected to the penal action under the law. the returns for 1981-82 may be filed by 1st October, 1981. The last date for furnishing wealth tax returns has been changed from 15th September to 1st October to synchronise with income tax returns of non-company assessees.

147. *Wealth tax on individual having more than one property, etc.* – In the case of a firm, an association of persons or body of individuals, whether incorporated or not immovable property held for the purpose of the business of construction and sale or letting out is liable to incidence of wealth tax on the portion of its value which exceeds rupees five lakhs. Some persons have started fragmenting their total investment in units of less than rupees five lakhs to avoid payment of wealth tax. In order to check such tendencies, it is being provided that wealth tax will be payable by an individual if he owns more than one such properties and his shares in different properties exceed rupees five lakhs.

VII. GIFT TAX

148. *Rate of gift tax.* – The present gift tax rates are effective since 1963. As prices have risen over the years it has been decided to reduce gift tax rates as under:

On the first Rs.	50,000 of taxable gifts.	From 5% to 2.5%.
On the next Rs.	100,000 of taxable gifts.	From 10% to 5 %.
On the next Rs.	150,000 of taxable gifts.	From 15% to 7.5%.
On the next Rs.	500,000 of taxable gifts.	From 20% to 10 %.
On the next Rs.	1,000,000 of taxable gifts.	From 25% to 20 %.
On the balance of taxable gifts.		From 30% to 25 %.

Malaysia: British company having no permanent establishment not subject to tax on management fees

– Euromedical Industries Ltd. (EIL) *v.* Director-General of Inland Revenue –

In January 1981 the Malaysian High Court decided that EIL, a company resident in the United Kingdom, was not subject to Malaysian income tax on certain management fees because EIL did not possess a permanent establishment in Malaysia. The facts in this case were as follows. In 1973 Euromedical Industries Sdn. Bhd. (EISB) was created in Malaysia for the purpose of manufacturing catheters. EIL and EISB concluded a contract under which EISB paid EIL managerial fees for the provision of three directors and staff supplying managerial, planning, training, technical, operational, marketing and development services. The Malaysian Inland Revenue found that these management fees were subject to income tax.

EIL appealed to the High Court and it was established that:

(1) The management fees were royalties as defined in Section 2 of the Malaysian Income Tax Act, which reads (as far as is relevant):
"royalty" includes –
   (a) any sums paid as consideration for the use of, or the right to use –
      (i) copyright, artistic or scientific works, patents, designs or models, plans, secret processes or formulae, trademarks or tapes for radio or television broadcasting or other like property or rights;
      (ii) know-how or information concerning technical industrial, commercial or scientific knowledge, experience or skill;
   (b) income derived from the alienation of any property, know-how or information mentioned in paragraph (a) of this definition;
   (c) amounts paid in consideration of services rendered by a non-resident person or his employee in connection with the use of property or rights belonging to, or the installation or operation of any plant, machinery or other apparatus purchased from, such non-resident person; and
   (d) any other amounts paid in consideration of technical advice, assistance or services rendered in connection with technical management or administration of any scientific, industrial or commercial undertaking, venture, project or scheme.

(2) The management fees did *not* fall within the royalty definition of Article I(3) of the Malaysia–United Kingdom tax treaty of 30 March 1973 which reads (as far as is relevant):

(3) The term "royalties" as used in this Article means a repayment of any kind received as consideration for the use of, or the right to use, any copyright of literary, artistic or scientific work, any patent, trademark design or model, plan, secret formula or process or for the use of, or the right to use, industrial, commercial or scientific equipment or for information concerning industrial, commercial or scientific experience. The term, however, does not include any royalty or other amount paid in respect of motion picture films or of tapes for radio or television broadcasting, or of the operation of a mine, oil well, quarry or any other place of extraction of natural resources or of timber or forest produce.

(3) However, since the management fees are not covered by the royalty article they must fall under Article VI of the Treaty dealing with business income. This article provides (in part):

1. The income or profits of an enterprise of one of the Contracting States shall be taxable only in that Contracting State, unless the enterprise carries on business in the other Contracting State through a permanent establishment situated therein. If the enterprise carries on business as aforesaid, tax may be imposed in that other Contracting State on the income or profits of the enterprise but only so much thereof as is attributable to that permanent establishment.

. . .

5. Where income or profits include any items or profits which is dealt with separately in another Article of this Agreement, the provisions of that other Article shall not be affected by the provisions of this Article.

The High Court, therefore, held that EIL was not subject to Malaysian income tax with respect to the management fees it received. However, the Inland Revenue has appealed to the Federal Court.

Of course, the principles of this decision are also applicable under other tax treaties concluded by Malaysia, i.e. with Australia, Belgium, Canada, Denmark, France, German Fed. Rep., India, Japan, New Zealand, Norway, Poland, Singapore, Sri Lanka, Sweden and Switzerland. For the texts of the treaties, see *Taxes and Investment in Asia and the Pacific*, Part Treaties, under Malaysia.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

BANGLADESH:

1981 INCOME TAX AMENDMENTS

by K.A. Gofran*

A detailed discussion of the Bangladesh tax system appears in the Bureau's publication TAXES AND INVESTMENT IN ASIA AND THE PACIFIC

Income tax is an annual charge levied by the Parliament at the rate fixed each year by the Finance Act on the taxpayer's total income of the previous year (accounting year immediately preceding the assessment year).

Several amendments have been made in the Income-tax Act, Sales-tax Act, Gift-tax Act, Wealth-tax Act and Urban Immovable Property Tax Act by the Finance Act, 1981.

This article deals briefly with the amendments of the Income-tax Act which are important for international investors in Bangladesh.

INCOME-TAX ACT, 1922

1. *Section 4(3)(via)*

The limit of exemption has been raised to 2,500 Tk. from 2,000 Tk. on account of any receipts of a casual and non-recurring nature other than receipts (i) from winning lotteries, (ii) capital gains, (iii) receipts arising from business, profession, vocation or occupation and (iv) receipts by way of addition to the remuneration of an employee.

2. *Section 4(3)(xvi)*

Previously, interest to the extent of 500 Tk. on any deposit in a savings account with a scheduled bank, co-operative bank or co-operative society was exempt from income tax. This provision has been widened. The exemption of interest is now up to 3,000 Tk. on any kind of deposit but such exemption is available only to an assessee who is an individual.

3. *Section 4(3)(xviii)*

The exemption available on account of interest from a scheduled bank, co-operative bank or co-operative society together with interest on securities and approved debentures will be limited to 5,000 Tk.

4. *Section 7(1)*

An assessee chargeable under the head "Salaries" used to enjoy an exemption of 3,600 Tk. if he owned and maintained at his own expense a car registered in his name and did not receive any conveyance allowance or any other benefit or perquisite in lieu of such allowance from the employer. Similarly, the exemption available was 1,800 Tk. if the conveyance was any other power driven vehicle and 1,500 Tk. if no vehicle was maintained by him. The above exemptions have been respectively raised to 4,200 Tk., 2,400 Tk. and 1,800 Tk. this year.

It may, however, be remembered that the exemption is not available if the assessee, in addition to his income chargeable under the head "Salaries", derives income from business, profession or vocation.

5. *Section 9(1)(i) and 9(1)(ii)*

One sixth of the bona fide annual value of property was until now allowed as a deduction on account of cost of repairs irrespective of whether any expenditure was incurred or not. Henceforth one fifth of such value will be allowed as a deduction from the bona fide annual value.

6. *Section 9A (6)*

Agricultural income up to 3,600 Tk. was exempt from payment of tax under sub-section (6) of section 9A. The provision of such exemption has been withdrawn.

7. *Section 10(4)(d)*

An employer used to be allowed to deduct the lesser of 50,000 Tk. or 50% of the salary, perquisites or other benefits granted to any employee. This limit has been raised to 60,000 Tk. or 50% of the salary, whichever is less.

8. *Section 10(4)(g)*

A new clause (g) has been added to sub-section (4) of section 10. This provision puts a restriction on the admissibility of expenses incurred by an assessee on account of entertainment or services rendered in cases of sales and services liable to excise duty. Such expenses will not be allowed unless supported by an excise stamp or seal.

9. *Section 14A(2BB)*

A new sub-section (2BB) has been inserted providing for a "tax holiday" for expansion of an existing industrial undertaking if such expansion constitutes an identifiable industrial unit or a similar unit for the carrying out of an identifiable industrial process subject to fulfilment of conditions as laid down in section 14A(2B).

The tax holiday will not, however, be available to an industrial undertaking which is formed by the splitting up or the reconstruction or reconstitution of any business already in existence or by the transfer to a new business of any machinery or plant used in a business carried on in Bangladesh.

10. *Section 15(3)*

Previously the limit of exemption, i.e. investment allowance, was 30% of total income or 30,000 Tk., whichever was less. This limit has now been raised to 30% of total income or 35,000 Tk., whichever is less.

11. *Section 15(3A)*

A new sub-section (3A) of section 15 has been inserted. It puts a restriction on calculation of the investment allowance under section 15(3). Subject to limitation as provided in section 15(3), the aggregate sum of exemption, other than the sums exempted for premiums paid for life insurance, deduction for deferred annuity and

* Editor, *Bangladesh Tax Decisions.*

© 1982 International Bureau of Fiscal Documentation – BULLETIN

contribution to a Government or Recognised Provident Fund, shall be up to 5,000 Tk. if the investment does not exceed 5,000 Tk. The amount of allowance available is 5,000 Tk. plus 60% of the amount exceeding 5,000 Tk. The full amount of insurance premium, deferred annuity and contribution to Provident Fund will be taken into account for the purpose of exemption subject to the overall limits.

12. *Section 15AA(1)*

By amending sub-section (i) of section 15, Unit Certificates issued by the Investment Corporation of Bangladesh have also now been made an item for which exemption under section 15AA(1) is available. In other words, purchase of such certificates will also be considered for the purpose of investment allowance.

13. *Section 18(3BB)*

Previously there was provision for deduction of tax at such rate or rates as may be prescribed by a person responsible for making any payment to another on account of supply of goods, execution of a contract or for services rendered, and by the Collector of Customs in the case of an importer or exporter. Now the scope of this provision has been widened by the inclusion of "indenting commission" in section 18(3BB) for the purpose of deduction of tax. It may be mentioned that a rule prescribing rates of deduction has so far been made in the case of supply of goods, execution of a contract or for services rendered. It is gathered that rates are being prescribed for deduction of tax in respect of import and export and indenting commission.

14. *Section 18(1)*

The liability to pay advance tax under section 18A (1) used to be attracted if the total income of an assessee as per the latest completed assessment (either normal or provisional) exceeded 20,000 Tk. This limit has now been raised to 25,000 Tk.

15. *Section 22(1)*

An individual was required to furnish along with the return or certificate, as the case may be, a statement of total assets and liabilities of himself, his wife or wives and his minor children if his/her total income exceeded 20,000 Tk. for any assessment year. This limit has been raised to 25,000 Tk.

16. *Section 23(3A)*

The limit of total income for presumptive assessment under section 23(3A) was 15,000 Tk. The limit has been raised to 20,000 Tk.

17. *Section 24(3)*

A new proviso has been added to sub-section (3) of section 24. Any amount received in cash as subsidy from the Government will henceforth be deducted in computing any loss for the purpose of set off and carry forward of loss under section 24.

18. *Section 28(1)*

An amendment has been made to sub-section (1A) of section 18 empowering the Deputy Commissioner of Taxes to impose a penalty also for understatement of the value of any immovable property in connection with sale or transfer with a view to evading tax.

19. *Section 34(2)(iv)(b)*

Sub-clause (b) of clause (iv) of the proviso to sub-section (2) of section 34 has been amended providing for a time limit to make assessment or re-assessment, as the case may be, in consequence of, or to give effect to any finding or direction in, an order under sections 31, 33, 33A, 34A, 66 or 66A or, in the case of a firm, an assessment to be made on a partner of a firm in consequence of an assessment made on the firm.

The previous legal position in this regard was that an assessment or re-assessment could be made (a) in the case of any such order made before 1 July 1975 within 4 years from that date, and (b) in any other case, within 2 years from the end of the year in which such order was made. An amendment regarding the time limit in respect of other cases has been made this year giving retrospective effect from 1 July 1980 authorising asn assessment or reassessment (a) in the case of any such order made on or after 1 July 1976 and before 1 July 1978 up to 30 June 1982, and (b) in any other case, within 2 years from the end of the year in which such order was made. The amendment does not appear to cover the cases of assessment or reassessment in consequence of such orders made during the financial years 1975-76 and 1978-79.

20. *Section 46(5A)*

A new paragraph has been added to sub-section (5A) of section 46. It provides that if any person to whom a notice under sub-section (5A) is sent fails to make payment in compliance therewith he shall be deemed to be an assessee in default for the amount specified in the notice and further proceedings may be taken against him for the recovery of the amount.

21. *The Third Schedule (Rates of income tax)*

The limit of total income liable to tax has been raised to 15,000 Tk. in the case of every individual, Hindu undivided family, unregistered firm, association of persons and every artificial juridical person (excluding a company and local authority). The number of slabs of taxable income has been reduced to 7 with lower rates of income tax compared to the previous rates. The rates now range from 10 to 60% of taxable income in the case of the above-mentioned kinds of assessees. The rate of 60% is applicable on the amount of taxable income exceeding 150,000 Tk.

A provision has been made this year to charge income tax at a concessional rate in the case of a resident and ordinarily resident assessee other than a company if he brings into Bangladesh through official channels his income accruing and arising outside Bangladesh. The rate of tax is 30% of such income or at the rate applicable to his total income including such income, whichever is more beneficial to him.

The rate of income tax is 50% of total income (excluding dividend income from a Bangladeshi company) in the case of every industrial company and 60% in the case of

© 1982 International Bureau of Fiscal Documentation – BULLETIN

other companies including banks and financial institutions and local authorities. The income from dividends declared and paid by a Bangladeshi company or a body corporate in respect of the share capital issued, subscribed and paid after 14 August 1947 is liable to tax at the rate of 15% of such dividend.

The rate of income tax has been reduced to 30% from the previous rate of 60% in the case of a non-resident assessee.
Every registered firm is liable to income tax at rates ranging from 10% of total income exceeding 15,000 Tk. to 30% of total income exceeding 150,000 Tk.

U.S.A.: Return of tax treaties
(British Virgin Islands and Cyprus)

Mr. Percy, from the Committee on Foreign Relations, submitted the following

REPORT
(To accompany S. Ex. Res. 4)

The Committee on Foreign Relations, having had under consideration an original executive resolution (S. Ex. Res. 4) providing for the return to the President of pending income tax treaties with Cyprus (Ex. I, 96-2) and the British Virgin Islands (Treaty Doc. 97-6), reports favorably thereon and recommends that the Executive Resolution do pass.

Purpose

By this resolution the Senate would return to the President for renegotiation two bilateral income tax treaties, with Cyprus and the British Virgin Islands, which are pending before the Committee on Foreign Relations.

Committee action

On September 15, 1981, the Committee received the following letter concerning these tax treaties from Assistant Secretary of the Treasury for Tax Policy John E. Chapoton:

Department of the Treasury
Washington, D.C., September 15, 1981

Hon. Charles H. Percy,
Chairman, Senate Committee on Foreign Relations,
U.S. Senate, Washington, D.C.

Dear Mr. Chairman: I am writing with reference to the hearings scheduled by the Foreign Relations Committee on September 24, 1981, to consider fourteen pending tax treaties. For reasons which I will explain, I am hereby requesting that the Committee's consideration of the treaties with Denmark, Cyprus and the British Virgin Islands be delayed to give the Treasury Department time to negotiate certain modifications in those treaties.

Because of a recent amendment to Denmark's tax law, modifying the manner in which Danish corporations and their shareholders are taxed, Danish tax officials have requested that we renegotiate one provision of the pending treaty before it enters into force. We would like to accommodate Denmark's request. We intend to negotiate a Protocol to the Danish treaty. That Protocol, when signed, will be transmitted to the Senate for consideration along with the treaty which is now pending.

With respect to Cyprus and the British Virgin Islands, our desire to amend the treaties has come about as a result of our review of these treaties in preparation for hearings. Both of these jurisdictions are tax havens. The pending treaties with both were designed to prevent, or at least limit, the extent to which residents of third countries can use these treaties, in conjunction with favorable internal law provisions in those jurisdictions, to receive U.S. treaty benefits. We have concluded, on the basis of our review of these treaties, that the opportunities which potentially remain for such use are too great for us to tolerate. We intend to raise our concerns with the Governments of both jurisdictions, and seek modifications in these treaties consistent with our present policy. Although we are confident that the proposed British Virgin Islands treaty can be satisfactorily renegotiated, the existing British Virgin Islands treaty has been, and will continue to be as long as it is in force, subject to greater abuse than is likely to occur under the proposed treaty. Thus, in light of our concerns as expressed above, if satisfactory negotiations are not concluded by early 1982, the Administration intends to serve notice of termination of the existing treaty in accordance with its terms. In such event, termination would be effective January 1, 1983.

It should be noted that this procedure is not necessary with respect to Cyprus, since there is no existing treaty in force.

I hope that you will agree to delay consideration of these three treaties.

With best wishes.

Sincerely,

John E. Chapoton
Assistant Secretary (Tax Policy)

Assistant Secretary Chapoton reiterated the position of the Reagan administration with respect to these treaties at a hearing of the Committee on Foreign Relations held on September 24, 1981. On the basis of this request the Committee deferred taking any action on either of these treaties until its regular business meeting on December 8, 1981, when the Committee voted unanimously by voice vote to report out an original executive resolution returning both treaties to the President for renegotiation.

Committee comments

In view of the position of the executive branch on these treaties, as well as the serious reservation expressed by the chairman of both the House Ways and Means and Senate Finance Committee because of their potential for abuse by the residents of third countries, the Committee believes it desirable to return them to the President for renegotiation rather than to maintain them indefinitely on its calendar.

The Committee supports the objective of meaningful anti-treaty shopping provisions and therefore supports the effort to renegotiate the proposed treaties. The Committee may also support termination of the existing treaty with the British Virgin Islands if a more satisfactory agreement cannot be achieved. However, the Committee would expect to have further consultations with the executive branch prior to any decision on the termination of an existing treaty in accordance with the procedures appropriate to such a decision.

PRENTICE~HALL,INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

Prentice Hall Announces:

The most strikingly different new tax guide ever published for taxpayers with income from foreign sources.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Continuously Supplemented. . . . . Always Up - to - Date

This outstanding new Service is created specifically to help save money for:

U.S. INDIVIDUALS
with investments and/or earned income from a foreign source

U.S. CORPORATIONS
with income from foreign sources

FOREIGN CORPORATIONS
with income earned or taxable in the U.S.

NONRESIDENT ALIENS
receiving income from, or taxable in the U.S.

If you fit any of these categories — or if you counsel, advise, or in any way service any of these categories — U.S. TAXATION OF INTERNATIONAL OPERATIONS will be an invaluable new tool for you.

It will deliver management benefits — operations benefits — tax benefits.

In clear, direct language, backed up by practical, tested practices of acknowledged experts in international business operations, the new work spells out how the taxpayer can best take full advantage of every popular, every sophisticated, and every little-known tax-saving device.

Authoritative, specific guidance from one source devoted exclusively to this kind of vital help has been non-existent — until now.
With the first 1972 publication of the innovative U.S. TAXATION OF INTERNATIONAL OPERATIONS this important need is now fulfilled. And bi-weekly "Report Bulletins" will keep the guide as new and up to the minute as the day you receive it.

Personal response to this new publication has been even more enthusiastic than our most optimistic projections. Subscriptions are now being accepted by mail for $ 231 a year.

Address your request to Dept. S-RR-103, Prentice-Hall Inc., Englewood Cliffs, N.J. 07632 and specify U.S. TAXATION OF INTERNATIONAL OPERATIONS, 1-year introductory charter subscription.

Annual payment is not due until 20 days after receipt of the new, ready-for-reference volume.

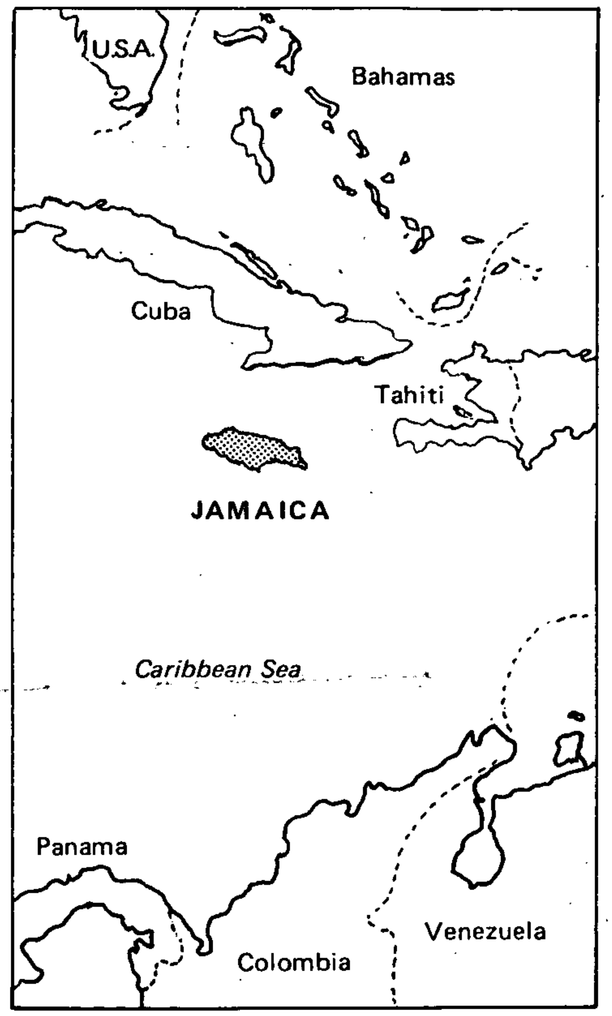
The Fiscal Structure of Jamaica

by H.W.T. Pepper



I. INTRODUCTION

Jamaica is a fairly large Caribbean island, approximately 150 miles long by 50 miles wide, at latitude 18 degrees North situated strategically between Florida and Latin America. The population is about 2,200,000.

The official, and spoken, language is English. A New Government was elected in October 1980, on a platform of encouraging free enterprise and foreign investment, for a 5-year term. The government is bi-cameral, having a House of Representatives and a Senate under the titular headship of a Governor-General.

The Jamaican dollar is linked to the U.S. dollar at a fixed rate of US$1 = J$1.778 and tourists coming to the island are permitted to pay taxi fares and hotel bills in U.S. dollars if they wish.

Of total tax revenue raised in the fiscal year 1979-80, 49% came from indirect taxes, 29% from direct taxes, and 22% from levies on bauxite and alumina of which Jamaica is a major producer. There is a wide spectrum of tax and other incentives to encourage industrial investment, tourist facilities, and exports, including, of course, the protected markets provided under the CARICOM, Lomé II, Commonwealth Preference, and other arrangements.

II. COMMUNICATIONS

Jamaica has good air links with the United States (1 hour to Florida, 3½ hours to New York) and Europe (9 hours to London), and also to other parts of the Caribbean and Central and South America. There are 6 or more flights per day to Miami and daily flights also to New York and Toronto.

There are several good harbours, Kingston – the capital – having one of the best in the world which is equipped for container ships and roll-on, roll-off ships which ply on regular service between Jamaica and the United States, and Jamaica and Europe.

There are excellent telephone, telex, and cable links with the rest of the world and there are direct dialling systems operating between Jamaica and North America.

Internally there is an air network – one can fly from Kingston to Montego Bay in 20 minutes – and also bus and rail services. Most of railway revenue comes from haulage for the bauxite companies, but passengers services are also provided and there are good roads between all the main towns and villages for bus, coach and other vehicular traffic.

III. INTERNATIONAL LINKS

Jamaica is a member of the United Nations, the World Bank, the IMF, CARICOM (The Caribbean Common Market), ACP (the African-Caribbean-Pacific Group of Nations which has important links with the EEC through the Lomé II Agreement), and is a founder-member of the International Bauxite Association which negotiates minimum prices for alumina exports.

Jamaica is a member of the British Commonwealth of Nations, and of the OAS (Organisation of American States). Jamaica is also a beneficiary of GSP (Generalised System of Preferences) accords made by Canada and the United States with Jamaica in 1974 and 1976 respectively, and has a Bilateral Textile Agreement with the United States as well as trade agreements with Mexico and Venezuela which, inter alia, provide favourable terms on which oil may be imported.

Double taxation treaties with the United Kingdom, United States, Canada, Denmark, Federal Germany, Norway, New Zealand, and Sweden facilitate investment by those countries in Jamaica.

Law of the Sea

The decision was taken in August 1981 to site the International Seabed Authority (ISA) in Jamaica. The ISA is one of the many organisations of the United Nations and the fact that Jamaica has been thus honoured should further enhance its status as a suitable place to hold international conferences, as well as having some useful economic and touristic spin-offs.

IV. TRADE

As a member of CARICOM, Jamaica has access to the markets of its fellow members on a duty-free basis, the members being Barbados, Guyana, Jamaica, and Trinidad and the smaller countries Antigua-Barbuda, Belize, Dominica, Grenada, Montserrat, St.Kitts-Nevis, St.Lucia, and St.Vincent and the Grenadines.

Outside CARICOM, the Lomé II Convention gives duty-free access for Jamaica, as one of the 58 ACP countries, into the EEC in respect of over 99% of the items produced in Jamaica (and, of course, in the other ACP countries as well).

Jamaica also benefits from the Commonwealth Preference provisions available to members of the British Commonwealth of Nations of which Jamaica itself is a member, and from GSP (Generalised Schemes of Preferences) agreements with the United States and Canada. The latter, together with the Textile Agreement with the United States, make it possible for a U.S. firm to set up an industry in Jamaica whereby garment cut-outs can be sent to Jamaica for finishing and putting together for re-import into the United States duty-free for sale to customers there.

Jamaica enjoys quotas for traditional exports to the United Kingdom of bananas and sugar, the latter at fixed prices which are usually more favourable than the going world price.

Tourism, which counts as an "invisible export", draws customers from North America during the Northern winter months and from Europe in the summer months although in practice tourists from many countries arrive at all times of the year. Business conferences by U.S. organisations qualify for tax deductions in the United States – if held abroad – only if they take place in approved countries, e.g. Canada, Mexico, Puerto Rico, and the U.S. Virgin Islands. Jamaica's name has now been added to this select list which should help to expand both touristic and trade links between the two countries.

The flow of trade is assisted by the Jamaica Export Credit Insurance Company (JECIC), run by the (Central) Bank of Jamaica, which provides insurance for Jamaican exports. Various countries which export to Jamaica provide parallel cover for exports to Jamaica, e.g. Britain through its Export Credit Guaranteed Department (ECGD), the Netherlands through the Nederlandse Crediet Verzekering Maatschappij (NCM), and the United States through the Overseas Private Investment Corporation (OPIC).

V. INCOME TAX

Taxpayers resident in Jamaica, who are also domiciled there, are taxable on world income, on the basis of the amount arising. Tax is payable on the gross amount of the foreign income, whether it is remitted or not to Jamaica. Individuals who reside in Jamaica, but are domiciled in some other country, or being Commonwealth citizens are not ordinarily resident in Jamaica, are taxable in Jamaica on their Jamaican income; their foreign income, however, is taxed in Jamaica only to the extent that it is remitted to Jamaica.

Assessment

The income tax year runs from 1 January to 31 December, and self-employed individuals, partnerships, and corporate bodies are required to render self-assessment forms each year by 15 March, estimating the income likely to arise in the current year, and computing the relevant tax thereon. Normally the estimate is based on the previous year's income, but the taxpayer may amend his estimate at any time during the year if he finds that his current income is likely to be more or less than estimated. Tax is payable in quarterly instalments, the first on 15 March when the form is rendered, the rest on 15 June, 15 September, and 15 December.

The final accounting for tax for that year comes when the declaration of income for the year is made on 15 March in the following year. At that date a final self-assessment declaration of the actual income and tax liability for the preceding year is required and the balance of the tax is to be paid (or refunded if there was an overestimate).

If the taxpayer does not render his form, the Commissioner may make an estimated assessment – the taxpayer may object to this within 30 days. Under new provisions

© 1982 International Bureau of Fiscal Documentation – BULLETIN

being introduced, the objection will not be valid unless it is accompanied by the necessary statement of income and tax. The Commissioner, in the absence of the statement, may order it to be submitted within 90 days, failing which the assessment may be confirmed. The Commissioner may extend the 90 days in appropriate cases, such extension being subject to a payment of tax on account. The taxpayer may appeal the confirmation of the assessment to the new Board of Revenue.

A. Corporate taxation

All corporate bodies, including associations (but not partnerships) are liable either to Company Profits Tax (CPT) and Additional Company Profits Tax (ACPT) or to Income Tax (IT), at the following rates:

	CPT	ACPT	Total
Agricultural companies	25 %	10 %	45 %
Other companies	35 %	10 %	45 %
	IT		
Life assurance companies	37.5%		37.5%
Estates and trusts	37.5%		37.5%
Building societies	30 %		30 %

Exemption is given from CPT and ACPT (and IT) for approved pension and superannuation funds, and for charities.

Dividends paid by companies are subject to withholding of tax at source at the rate of 37.5%, the tax deducted being accounted for by the company in the manner indicated below.

Where the shareholder receiving the dividend is a company, no further tax is payable by the recipient since the rate of tax payable by the company is 37.5% and relief of the same amount is due in respect of the 37.5% withheld by the distributing company.

Preference dividends paid by a company are deductible from profits in the same manner as debenture interest, but there is no deduction for ordinary dividends.

Dividends paid by a company out of capital are not charged to income tax on the recipient, but are subject to the 5% Transfer Tax.

The Additional Company Profits Tax is available to a company in its accounting for tax withheld from dividends paid out of its profits, as demonstrated in the following examples.

An individual taxpayer receiving dividends is chargeable on the gross amount at his marginal rate of tax, but is credited with the tax withheld at source.

Life assurance companies and *building societies,* besides being taxed at a rate lower than the ordinary corporation tax rate, benefit from the fact that tax relief is given to policy-holders and depositors in respect of premiums and deposits, respectively, which are paid to those institutions. In addition, the interest paid out by building societies on deposits left for a year or more are free of tax to the investor.

Life assurance companies, however, are also subject to a small levy on premium income excluding premiums relating to approved superannuation funds. The levy is 0.5% for Jamaican companies and 2% for others.

Banks are taxable at the ordinary corporate tax rate of 45%, but also benefit from the exemption from tax of interest paid to customers who place money on deposit for a year or more, a relief provided by the 1981-82 Budget.

Example A

Company tax on profit and dividends

	Company profit	CPT	ACPT
	$100	35	10
Total tax	45		
Profits available for distribution	55		
Gross dividend	40		
less tax withheld @ 37.5%	15		
Net cash dividend	25		
Tax to be accounted for by company		= $15	
less ACPT		10	
Net tax due		5	
Plus CPT		35	
ACPT		10	
Total tax payable by company		$50	

Tax payble by shareholder

Assume shareholder's marginal rate	= 50%
Gross dividend $40 @ 50%	= 20 tax
Less tax withheld @ 37.5%	= 15
Net tax payable on dividend by shareholder	$ 5

Example B

	Company profit	CPT	ACPT
	$100	35	10
Total tax	45		
Profits available for distribution	55		
Gross dividend	25		
less tax withheld @ 37.5%	9.37		
Net cash dividend	$15.63		
Tax to be accounted for by company		= $9.37	
Covered by ACPT		10	
Net liability		Nil	
Plus CPT		35	
ACPT		10

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Employment income is subjected to PAYE deductions at source according to the individual's code number, based on his entitlement to reliefs. To obtain a code number the individual must complete an "application for code number" form (P.1). If his domestic circumstances change during the year he may apply for a revised code number. If at the end of the year he finds he had additional tax reliefs to claim he completes a full return form and this is also necessary where he has received income not taxed by PAYE deductions.

The self-employed and those whose income is not, or not fully, subjected to PAYE are required to make by 15 March each year declarations indicating their probable income for the year, and tax thereon, as the basis for making quarterly payments of tax.

Tax reliefs for personal savings, referred to above under "shares subscription", have been extended by the 1981-82 Budget.

B. Personal income tax

Income tax in Jamaica is charged on personal income accruing in the calendar year at the following rates.

First	$ 7,000	30 %
Next	$ 3,000	40 %
Next	$ 2,000	45 %
Next	$ 2,000	50 %
Remainder	(over $14,000)	57.5%

There are no deductions from statutory income – instead reliefs are accorded in terms of tax as follows (tax credits).

Type of relief	*Relief in terms of tax*
Personal allowance	$600
Wife allowance	$140
Alimony or maintenance payments	40% of amount paid, or $160 tax if less
Wife's earned income	40% of earned income up to maximum of $320 tax
Child allowance	$10 per child
Child at university	$120 per child
Dependent relative	$40
Household helper	$4 p.w. max $208
Pensioner's allowance	$400
Special credit	$156 – allowable if income below $12,000

In addition there are various tax credits to encourage saving and investment, viz.:

Life assurance premiums (on life of taxpayer or wife)	60% of premiums paid (max. tax $360) + similar relief for an equity-linked life policy ("capital growth investment") so that maximum relief = $720
Donations	40% of eligible donations (not exceeding 1/20th of statutory income)
Mortgage interest	40% of interest paid – max. $60
Medical expenses	40% of expenses, or $40 tax if less
Shares subscription (regarding payments on 5-year contract to Building Society or Credit Union)	60% of sums paid, max. $360

C. Depreciation

1. *General*

Depreciation allowances on qualifying assets are calculated in the first year on cost and subsequently on the declining balance or written-down value of the asset, except in the case of motor vehicles. Commercial motor vehicles other than motor cars qualify for initial allowances (see below) and all types of qualifying vehicle are depreciated at the rate of 12.5% on a straight-line basis.

2. *Qualifying assets*

Industrial buildings, including factories, mills, warehouses, and buildings housing machinery and plant, but not office buildings (which, however, qualify for a 2.5% straight line depreciation allowance), qualify for straight-line allowances at rates from 2.25% to 5% according to the nature of the building. Plant and machinery generally qualify for an initial allowance of 20% and annual allowances (see below); expenditure on mines, oil wells, etc., patents and scientific research also qualifies.

3. *Investment allowances*

Investment allowances are granted at the rate of 40% of qualifying capital expenditure by sugar cane farmers and sugar manufacturers, and other farmers, on ships and on docks in respect of passenger facilities. For "basic industries" 20% is allowed which includes canning and preserving, textiles, and many other types of manufactures. These allowances are given in the first year, are not deducted in arriving at written-down value, and are not taken into account in computing balancing allowances and charges (see below).

4. *Initial allowances*

Initial allowances are granted at the rate of 20% on the cost of industrial buildings and plant and machinery. The rate for commercial vehicles is 12.5%. The allowances are in addition to the annual allowances and are deducted in arriving at the written-down value.

5. *Annual allowances*

The rates of depreciation allowance on the various types of qualifying assets vary broadly according to the estimated working life of the asset.

6. *"Multi-shift" etc. allowance*

If machinery is used on the basis of 2 or more 8-hour shifts per day, the annual allowance due on the machinery is doubled. Where a qualifying motor vehicle is used to such an extent that it will have a less than normal life, depreciation thereon may be increased.

7. *Balancing allowances and charges*

When qualifying assets are sold, scrapped, or destroyed and the disposal proceeds, including insurance and recoveries, exceed the written-down value, a balancing charge representing the excess (not exceeding the depreciation allowed) is taxed as income of the taxpayer.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Where the proceeds fall short of the written-down value the difference is deductible as a balancing allowance in computing profits.

8. *Depletion*

Depletion allowances are granted regarding the working of minerals (including oil) at the rate of 20% initial, plus an annual allowance proportionate to the rate of exhaustion of the mineral deposits (output of taxable period divided by that output plus remaining reserves), subject to a minimum deduction of 5%.

D. Relief for losses

1. *General*

Losses incurred in business activities, which if profitable would be taxable, may be carried forward for 5 years. A loss for tax purposes may be created where depreciation allowances (see above) exceed taxable profit and the same 5-year carry-forward limit applies. In the case of that part of a loss created by investment allowances, however, the carry-forward period is extended to 11 years.

2. *Hobby-farming*

In the case of hobby-farmers, with effect from 1 January 1982, losses will not be available to offset against other income, but may be carried forward to set against future profits from the farm.

E. Double taxation relief

Foreign income, taxable in Jamaica, which qualifies for double taxation relief is taxable on the gross amount before deduction of foreign tax, the relief for foreign tax being then offset against the Jamaican tax on the foreign income.

Relief is available on income derived from other countries in the British Commonwealth, and also on income from countries which have double taxation treaties with Jamaica (the United Kingdom, United States, Canada, Denmark, West Germany, Norway, and Sweden – negotiations are also in progress for such treaties with certain other countries).

Under double tax treaties relief for doubly-taxed income is given in the country of residence at the rate to which the income has been subjected in the other country, or at the rate applicable in the residence country, whichever is less.

Some types of income, however, may be exempted by one of the countries, allowing the other the sole right to tax. This may apply to the income of shipping and airline companies which are usually taxable only in the country of residence, and some types of pension may be taxed in one country only. Favourable treatment, i.e., exemption in one country or restriction of the amount of tax to be withheld in the paying country, is also generally accorded to interest, dividends, and royalties.

Double tax relief in respect of Commonwealth income is granted at the rate of tax charged in the other Commonwealth country where that rate does not exceed one half the Jamaican rate of tax on the same income. Where the Commonwealth tax rate exceeds one half the Jamaican rate, the relief is given at half the Jamaican rate.

VI. INDIRECT TAXATION

Customs duties in Jamaica are fixed at the level prescribed by CARICOM.

Imported goods may be subjected, in addition to consumption duties, to a 10% stamp duty, and there is also a retail sales tax of 10% levied on certain consumer durables such as refrigerators, television sets, and air-conditioners. Motor vehicles are subjected to much higher rates of sales tax, but substantial abatements have recently been granted in respect of vehicles used for haulage or for agricultural purposes generally.

Locally manufactured goods are subject to excise duties and/or consumption duties as well as to retail sales tax where applicable, but the manufacturers are entitled to duty-free imports of raw materials, etc.

Exports are usually free of all local indirect taxation, and a Free Zone (Export Processing Zone) has been established in Kingston for export-oriented industries which amounts to a "tax haven" since apart from freedom from indirect taxation, income tax holidays for an indefinite period are also granted. A Free Zone is also to be provided at the country's second largest port, Montego Bay.

Although indirect taxation is high there are numerous abatements and exemptions, and certain foodstuffs are actually subsidised.

VII. PROPERTY TAX

Property tax has been charged since 1974-75 on a site (capital) value or unimproved value basis on land only and on the basis of 1973 values. There is no tax on buildings, and the system provides the maximum incentive for site development.

Land being used for agriculture is taxed at 25% of the normal tax rates, and there are provisions for abatement of the tax in case of hardship. Land used for hotels is taxed at 75% of the normal tax rates.

The tax rates are:

Value	*Tax*
not exceeding $2,000	$5 (minimum)
$2,000 to $4,000	$5 + 1% of excess over $2,000
$4,000 to $10,000	$25 + 1.75% of excess over $4,000
$10,000 to $16,000	$130 + 2.5% of excess over $10,000
$16,000 to $25,000	$280 + 3.25% of excess over $16,000
$25,000 to $50,000	$572.50 + 4% of excess over $25,000
Over $50,000	$1572.50 + 4.5% of excess over $50,000

There are approximately 520,000 taxable properties and the annual yield of the tax is around $25,000,000 so that its incidence is by no means oppressive. The tax may be paid in one sum, or in two, or four instalments. In the case of some mortgagors of private property there are schemes whereby the property tax may be paid in monthly instalments along with the mortgage payments.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

VIII. OTHER TAXES

A. Payroll tax

There are two types of payroll taxation, the social security or "National Insurance" levy and the National Housing Trust levy, both of which involve contributions from both employer and employee.

(a) *National insurance contributions*

Contributions are payable by employers in respect of employees at fixed rates up to a maximum of $3.75 per week. The employee also contributes, his maximum payment being $3.65 per week. The funds are used to provide old age pensions and other social security benefits. At the lower end of the contribution scale, a domestic helper contributes 10 cents per week and her employer 20 cents.

(b) *National Housing Trust (NHT)*

3% is charged on payroll, payable by the employer, and 2% of his emoluments is paid by the employee to provide funds for the National Housing Trust which builds low cost housing for sale on mortgage. Mortgages are let out at sub-economic interest rates varying from 4 to 8%. The employee is entitled to a refund of his contributions plus interest after 7 years but he continues to subscribe at the same 2% rate, so that a fund of 7 years' contributions from employees will remain in being. The 7-year refund system does not apply to the employers' contributions.

Contributions by employers to both schemes are tax-deductible. The employee receives a deduction for his NIS contribution but not for the (refundable) NHT contribution.

B. Hotel room tax

A tax ranging from US$4 to $6 per room is charged on occupancy in hotels in the main tourist season (15 December to 30 April). The tax is reduced to a range of US$2 to $4 during the rest of the year. The tax is related to the classification of the hotel which in turn is related to the level of the charges made for rooms.

C. Stamp duties

There are stamp duties on various documents ranging from a few cents on waybills and bills of lading to moderate ad valorem charges on life policies, mortgage deeds, etc. The highest rate is charged on conveyances of property, rising to approximately 2.66% on transfers over $2,000.

D. Transfer tax

On transfers of real property and leases thereof 5% of value is charged after exemption of the first $4,000 of value. Where real estate is disposed of at a price less than, or not much greater than, the acquisition price, the taxpayer may claim that the tax shall not exceed 25% of the excess of disposal price or value over acquisition price or value. If there is no excess, there is no 5% transfer tax payable.

E. "Death duty"

Transfers of property at death are exempted up to $10,000, the rate schedule being:

First	$ 10,000	exempt
Next	$ 10,000	7.5%
Next	$ 40,000	10 %
Next	$ 50,000	12.5%
Over	$110,000	15 %

IX. INCENTIVES

The incentives for manufacturing, agricultural, and tourism enterprises in Jamaica are generous, reaching their peak in the Free Zone referred to below.

Approved manufacturing enterprises may receive tax holidays of 5, 7, or 9 years according to the amount of local added value embodied in their output. Manufacturing goods for export outside the CARICOM area may rank for a 10-year tax holiday, and builders of factories for a tax holiday enterprise may qualify for a 15-year tax holiday. In all these cases there is also broad exemption from customs duties on raw materials for export industries, and from customs and other indirect taxes on imported equipment and machinery.

For new hotel enterprises the tax holiday may extend to 10 or 15 years, and resort cottages may qualify for 7 years of tax holiday. In both cases there is also initial exemption from customs duty on imports of construction materials and equipment.

For approved agricultural enterprises the tax holiday has increased by the 1981-82 Budget from a maximum of 5 to a maximum of 9 years, again in accordance with the amount of local added value embodied in the products. Another 1981-82 innovation is a provision allowing duty-free importation of trucks or lorries used in agricultural enterprises.

Motion picture producers may also obtain tax holidays on a similar basis to the above industries.

Farmers who make losses in their tax holiday period may carry them forward for a further period of 6 years after the end of the holiday. As mentioned under V. Income tax above, farmers also benefit by a lower rate (35%) of tax.

Dividends paid in the tax holiday period out of exempted profits are themselves also exempted from tax for the benefit of the shareholder.

The "Free Trade" or import duty exemption privileges available overseas to exporters of products grown, manufactured, processed, or assembled in Jamaica are quoted above under IV. Trade.

There are other favourable factors for those investing in enterprises in Jamaica, such as the provision of trading estates, factories for rent, and training grants to industries employing Jamaican labour.

There is a Free (Export Processing) Zone in Kingston

© 1982 International Bureau of Fiscal Documentation – BULLETIN

and another is projected for the second largest port, Montego Bay. The main fiscal features are:

(a) indefinite tax holidays;
(b) exemption from indirect taxation on imports, and freedom from import licensing restrictions;
(c) freedom from exchange control; and
(d) no restriction on repatriation of profits.

In addition, factory and warehouse space may be rented in the Free Zone, and there is no restriction on the issue of work permits for expatriate executive and technical personnel.

Products from foreign companies operating in the Kingston Free Zone are granted preferential status in the import markets of the United States, Canada, Japan, the EEC, Switzerland, Denmark, Australia, New Zealand, and COMECON.

Export rebates in the form of a percentage reduction in the rate of corporate profits tax charged are available after the end of the tax holiday period. The rebate varies from 25% where between 10% and 21% of the profits of the enterprise are derived from exports, to 50% where the export profits are 61% or more of total profits.

Offshore companies are charged only 2.5% on their profits if certain conditions are fulfilled under the International Finance Companies (Income Tax Relief) Act 1971. The company must be at least 95% foreign-owned both as regards voting capital and loan stock, and its trading must be wholly off-shore. The company may, however, have a local office and use the services of local professionals.

Property tax is not chargeable on Government properties, so that manufacturers who rent industrial sites or factories from Government have no liability to Property tax.

JAMAICA:

BUDGET 1981-82

On 28 May 1981, the Right Hon. Mr. Edward Seaga, P.C., Prime Minister and Minister of Finance and Planning in Jamaica, introduced his Government's first Budget after its election in 1980. The Government was elected on a platform, inter alia, of encouraging foreign investment, private enterprise, and divesting a number of industries which had been nationalised by the previous Government. Extracts from the Budget Speech concerning tax changes and incentives are reproduced below. See the preceding article by H.W.T. Pepper for a general review of the fiscal system in Jamaica.

I now turn to the question of investment.

. . .

The development of an investment policy must seek to re-establish harmony of local and foreign investment in collaboration, working in the national interest to achieve significant growth and better standards of living. We have in the past defined our national interests and safeguarded them against violation. We did this by carefully selecting only investment interests which would operate in harmony with our national interests to our mutual satisfaction.

No one can point a finger at any of those who are here; if they can, let them do so. Let them do so.

That successful record of the 60s is the same sort of successful record that we propose to carry on in the 1980s.

. . .

Dealing with the taxation measures which we propose to offer in this year's Budget; we first of all face the position that there is a need to stimulate savings. To create a pool of investment to generate growth. As I said earlier, investment does not exist by itself. Savings are what constitute investment, providing the decision is taken to convert savings into investment. And growth is not possible without investment. If we are, therefore, intent upon achieving growth, we must be intent upon achieving investment and likewise we must be intent upon achieving savings.

I would like, therefore, to set out what measures the government proposes to adopt in terms of inducement to personal savings.

The first concerns income tax exemption of interest income from shares in Building Societies. At present, there is a limit of $600 on the exemption which an individual can claim in respect of exemptions from interest income from shares in Building Societies. It is proposed to move that $600 limit and replace it by a limitless amount.

That means you can invest as much as you wish in the shares of a Buiilding Society, the investment income from that will not attract any income tax providing the investor is an individual. This does not apply to corporations. Secondly, there are persons who invest in other areas in certificates of deposits, in banking institutions and in deposits in Credit Unions.

It has been decided to allow complete exemption of all interest earned from certificates of deposits in commercial banks and in credit unions and in any co-operative society which is approved, providing it is by an individual and not by a Corporation and providing the deposit is for a minimum of one year.

There are certain measures in addition to improve tax collection. The present situation is that companies and self-employed individuals are required each year before 15 March to estimate the amount of tax due by self-assessment and to pay this to the Commissioner of Income Tax in quarterly amounts. Where the taxpayer fails to do this, the Commissioner is empowered to make an assessment. The taxpayer can object to the assessment if it is disputed within 30 days.

What follows thereafter is a long, drawn out battle concerning the settlement of the objection, as a result of which millions of dollars are tied up on objections which are not settled.

It is proposed that a Notice of Objection by taxpayers to the assessment by the Commissioner will not be valid if not accompanied by a financial statement of Return Income Tax by the taxpayer within 90 days of the Commissioner requiring the taxpayer to enter such a return.

If the return is not made to the Commissioner within the 90 days, the Commissioner is empowered to confirm the assessment as final. But, we have to be practical. There is a limited number of accountants and auditors, most of them are very badly overworked and, therefore, for good and just reasons it might not be possible to meet the timetable. Hence, the Commissioner is also empowered to grant an extension in the event that the taxpayer says to him he is not able to render the account within 90 days.

He is empowered to grant an extension for a period which he will decide and, if he thinks fit, to make as a condition of the extension the payment of a small amount in the meantime.

Taxpayers may feel that because they are in the hands of a single individual, they may not be getting a proper decision and since this decision is vital to them, we have made a provision that the taxpayer may appeal the decision of the Commissioner in respect of granting the extension or in respect of the amount required as a condition of granting the extension and this appeal would be to the Revenue Board.

Now, the Revenue Board is a new concept, a new administrative unit which is about to be established in the tax structure of the country. It provides for 3 Revenue Board members, one of whom is the Chairman, and they will have under them the various tax departments. They, in turn, will have certain responsibilities whereas the departments will have others and by virtue of having a trio, or, as my friends on that side may say, "troika", it will be a much more acceptable position to taxpayers in so far as they are expecting and appearing to get justice in their complaints and in their objections.

. . .

Another area in terms of saving foreign exchange is to deal with the question of hobby farmers. Presently, some persons engage in hobby farming and set off losses incurred against other income for the purpose of avoiding tax. Provision is to be made that losses arising from agricultural activity may be set off only against future incomes from that source.

Now, for the sake of accuracy and full information,

© 1982 International Bureau of Fiscal Documentation – BULLETIN

I should indicate that the personal savings provision will come into operation on 1 July 1981 and it is for a trial period of one year to test how the flow of funds will materialize.

The measures designed to improve tax collection on the basis of a new assessment arrangement will come into effect on 1 October 1981 and the measures concerning hobby farming will come into effect on 1 January 1982.

. . .

Agricultural incentives as I indicated earlier in my presentation are to be provided and on the basis that these incentives will be now on the same level as industrial incentives.

. . .

But there is another area of incentives which we consider very important for agriculture, and that is the transport section. Right now, people who have trucks can't look forward to ever replacing them. The duties and the taxes that were piled upon vehicles of all sorts, including trucks, by the last government have rendered it impossible for any but the very rich to replace that kind of vehicle and especially when that vehicle is serving the commercial purpose of agriculture.

We have decided, therefore, to exempt from customs duty, retail sales tax and stamp duty, indeed, all tax and all duty, all trucks used for agriculture.

In keeping with our policy to make the rural areas more dynamic, and to bring them more into the mainstream of development, we recognize that there are trucks that ply the routes with passengers, that there are trucks that take goods to deliver to the small shops. One of the reasons why the shops on the top of the hills of the country could not get various items was because there were no trucks to distribute them.

We have decided, therefore, that all other trucks will be relieved of Stamp Duty and Retail Sales Tax. They will still pay Customs Duty.

What does this mean in costs? It means that a truck that costs $45,000 c.i.f., with the present duties and tax would sell for $97,930, and will now cost $54,000, a savings of $43,370.

A lesser truck that cost $36,000 and used to sell for $78,000 will now sell for $43,000.

For the non-agricultural truck that used to be imported at $45,000 to sell for $97,000, with the exemptions granted will now cost $65,000.

. . .

And now I turn to the Budget.

. . .

In so far as the Budget for 1981-82 is concerned, the deficit on recurrent account is $279 million as compared with $357 million in the last Budget and we are committed to progressively reducing this until we show a surplus.

On the basis of that deficit on recurrent account there is an overall gap in the financing of the Budget of $86.7 million. And normally, at this point, I would be saying to you that that gap has to be financed by taxation.

. . .

That $86.7 million will not be financed by taxation; it will be financed by Treasury Bills. There will be no new taxation imposed this year.

But, I lodge a caveat. The revenues are over-stated by $35–$37.5 million. I didn't have to tell the House this. We expect to collect that by improvement in the collection of arrears. And it is entirely possible to do so but I give warning now that if there is any failure to collect it or any part of it, I will be coming back in the middle of the year for the balance.

There will be no printing of money unbacked by the Bank of Jamaica to finance this Budget.

The Budget financing has been designed in this manner to give the taxpayers of the country a rest after years of crippling taxation.

To give the country a chance to pull itself together and to produce growth again. But let us not forget that there are certain ceilings that we have to observe in the financing of the budget by agreement between ourselves and the Fund. The recurrent deficit must not exceed 3.5% of GDP. The overall deficit must not exceed 13.5% of GDP. And the total Budget outlay must not exceed 33% of GDP. This Budget has been financed within all those limits.

. . .

The Budget has been financed without a financial gap. There is no printing of money by the Bank of Jamaica to finance this Budget except in the interim period for cash flow purposes as is the normal course during the year. No new taxation will be levied this year if the $35 million put in for the collection of arrears is collected as we expect it to be.

Agricultural incentives increasing tax holidays on par with industry have been provided; full relief of taxes and duties on agricultural trucks reducing the cost by 80% has been provided; relief on Stamp Duty and Sales Tax for other trucks has also been provided; tax exemption on all interest earned by individuals on shares or deposits in Building Societies, Credit Unions and other approved Co-operatives has been provided.

Tax exemption on all interest earned by individuals on deposits of more than one year in commercial banks and other approved financial institutions under the Protection of Depositors Act has been provided.

Tax collection is to be improved by requiring taxpayers who object to assessment by Commissioner to file accounts within 90 days to substantiate their objection, or the assessment of the Commissioner will be binding. The taxpayer can seek extension of time from the Commissioner and can appeal against the decision of the Commissioner regarding extension.

The investment required to met the growth target for three years is four billion, six hundred million dollars. At this point, the only gap that remains in finding that sum is $820 million or 18%, a creditable amount at this time in terms of unidentifiable projects.

The growth targets are 3.7% for Year One; 4% for Year Two; 5% for Year Three . . . .

HONG KONG:

Tax Aspects of Foreign Currency Gains

by I.W. Harris*

I. INTRODUCTION

In researching for this talk I was surprised to find, or, perhaps I should say, not to find, how little has been published on the topic and how few decided cases exist. However, on reflection, this is perhaps not surprising as it is only comparatively recently that exchange differences have actually emerged as an accounting problem, let alone a tax problem. Although I do not intend to clutter up this talk with a learned discourse on international exchange rates, it may help in order to put the problem in its correct perspective to spend a few minutes on the history of exchange rates.

In the so-called good old days, trade was financed by one of two principal means – by barter or by payment in a precious commodity, generally gold, perhaps silver and, in this part of the world, opium. On the whole, until the outbreak of World War II, the currencies of the world's major trading nations remained on a par with each other, with the U.S. dollar and the pound sterling being exchanged on a 1 to 4 basis and it being true to say, therefore, the old 2/6d coin was really "half a dollar". The first major upset to this pleasant state of equilibrium occurred in the late 1940s when Britain, which at the time was undergoing a severe financial crisis, devalued the pound against the U.S. dollar from \$4 = £1 to \$2.80 = £1. This was followed in 1967 by a further devaluation which brought the rate down to \$2.40. This event seemed to open the floodgates of change and spawned such features of current monetary policy as Special Drawing Rights, the European Monetary System's "Snake" and of course the move of gold away from the fixed parity with the U.S. dollar.

So where has all this left the businessman and his tax adviser? First and foremost it has meant that any transaction entered into by the businessman involving a foreign currency has an exchange risk attached to it – no longer can he assume that if he purchases a machine for, say, US\$10,000 when the rate is HK\$5 = US\$1 that therefore on delivery he will need to shell out, say, HK\$50,000 – it may cost him HK\$55,000 or, if he is lucky, HK\$45,000. He may have sold some goods to a dealer in the United Kingdom for £1,000 which at the exchange rate then prevailing would have yielded HK\$10,000, but when he cashes the draft he only receives HK\$9,500 or again, if he is lucky, perhaps HK\$10,500. The businessman may have invested some of his profits into Australian real estate or German shares or Japanese bonds – what does he do at the end of the year when translating the value of his investment? He finds it is worth less than he paid for it – or, if he has guessed correctly, it is worth more.

Fortunately for me it is no part of this paper to delve into the complexities of currency hedging, swap transactions and the like, nor indeed is it any part of this paper to discuss the various highly technical reasons that cause exchange fluctuations, nor even the theoretical side of the pronouncements of the various accounting bodies on the treatment of this subject, although some brief consideration is necessary in respect of all 3 topics in order to cover this particular subject in the required depth.

II. WHAT IS A CURRENCY GAIN OR LOSS?

I am not going to attempt to define what is an exchange gain or loss as this is a field more appropriate for our accountant or lawyer friends who can expound no doubt at great length on the situations in which a businessman can find himself when involved in foreign currency. However, for the purposes of this paper it is probably sufficient to define a currency gain or loss in 2 parts:

(a) where an obligation has to be met or an item of income is taken into account which produces less or more in the local currency than when the transaction was originally entered into;
(b) where at a particular date the value of a foreign currency denominated asset or liability reveals a surplus or a shortfall when translated into local currency.

III. ACCOUNTING TREATMENT

A. Normal exchange fluctuations distinguished from major changes in currency parities

For Hong Kong companies engaged in substantial overseas trade, or owning substantial overseas trading branches or subsidiaries, the normal fluctuations of exchange rates, whether the rates are pegged or floating, may give rise to differences on exchange whenever one currency has to be converted for accounting purposes into another. Such gains and losses on exchange are a normal feature of overseas operations and do not in themselves usually present any special problems. In general, where there has been no substantial shift in parities, exchange differences on direct trading with foreign customers or suppliers are dealt with in the profit and loss account in arriving at the profit or loss for the period. Where the accounts of overseas branches or subsidiaries have to be converted into Hong Kong dollars for inclusion in the parent's or group accounts, the normal accounting conventions for conversion are straightforward and are used consistently from year to year.

Where, however, exchange rates are subjected to a sudden significant and evidently permanent adjustment outside the run of normal exchange fluctuations, companies may encounter special accounting problems. In these circumstances exceptional exchange gains or losses attributable to the abnormal change in parities may arise as regards both direct trading transactions and the accounts of overseas branches and subsidiaries. It then becomes necessary to determine the amount of exceptional loss or gain involved, and how it should be dealt with in the accounts.

In broad theory, the loss or gain attributable to a change in parities could be most directly arrived at by converting overseas assets and liabilities at the date the rate changes into local currency first at the old rate and then at the new: the difference between the local currency equivalents, after taking account of any forward transaction in overseas currencies, including any forward purchases and sales of goods, is the exceptional gain or loss attributable to the shift in parities. In the case of overseas branches and subsidiaries the exceptional gain or loss is in practice generally computed by means of adjustments applied to their assets less liabilities at the balance sheet date. The gain or loss computed, if material, should be segregated from "normal" exchange gains or losses (which, as noted, are generally dealt with in the profit and loss account in arriving at the profit or loss for the period), and separately disclosed whether (a) as an exceptional item entering into the computation of the profit or loss for the period, or (b) as an exceptional item shown separately after "profit after taxation". When the latter treatment is adopted, account has to be taken of any consequential effect on the tax charge and disclosure made of such adjustments as are necessary. Where a company or group has extensive interests overseas and fluctuations in local currency equivalents or overseas assets and liabilities are a recurrent feature, the treatment in (a) above may be preferable unless the amount involved is exceptionally large; in other instances the treatment in (b) may be more appropriate. An alternative to the treatment in (b) is for the exceptional gain or loss (so far as it may be regarded as being of other than a revenue nature – for instance, as arising on the re-statement of currency fixed assets at the new rates) to be dealt with by a direct transfer to or from reserve, if this would facilitate the presentation of a true and fair view.

The identification and treatment of exceptional gains and losses attributable to major changes in exchange parities are dealt with below in 2 parts: first in the context of overseas transactions or locally based companies not involving overseas branches or subsidiaries; and second, in the context of the conversion into dollars of the accounts of overseas branches and subsidiaries.

B. Overseas transactions of locally based companies not involving branches or subsidiaries

For companies with overseas assets and liabilities other than those attributable to overseas branches and subsidiaries, a major change in currency parities will give rise to a local currency gain or loss on exchange in respect of those of their overseas assets or liabilities affected at the date currency rates change.

In these circumstances the general rule is that overseas assets and liabilities, both current and long term, at the date the parities change should be converted into local currency and the new rate of exchange and the resultant exceptional losses or gains on exchange, if material, presented in the accounts so as to show a fair view of the effects of the alteration in exchange parities.

Exceptional gains or losses on exchange attributable to changes in parities and relating to overseas assets and liabilities of a normal trading nature are normally dealt with in the profit and loss account, and separately disclosed as an exceptional item, if material. Due account is taken of any consequential effect on liability to tax.

There may be exceptions to the general rule to the extent that any part of the gain or loss may properly be taken into account in arriving at the amount at which items to which it relates are to be stated in the balance sheet. For instance, that part of an exceptional loss on exchange attributable to goods unsold on the balance sheet date may be treated as an increment in cost provided net realisable

© 1982 International Bureau of Fiscal Documentation – BULLETIN

value in local currency is estimated to be in excess of cost so computed; this treatment is preferable if local currency prices of the items on hand have been increased to compensate for the change in parities.

Similarly, exceptional losses or gains attributable to liabilities outstanding at the relevant date for purchases of fixed assets from overseas are normally dealt with by adjustment of the cost in local currency of the relevant asset account.

The amount attributed in the balance sheet to work in progress on long term contracts involving overseas customers or suppliers will require review in the light of altered exchange parities so that provision can be made in the normal way for any foreseeable loss arising therefrom.

Exceptional gains or losses which may be regarded as not of a revenue nature, such as those relating to long term loans granted or received, may be shown in the profit and loss account or dealt with by direct transfer to or from reserve according to which method will better present a true and fair view, as suggested above. Where there are both gains and losses of other than a revenue nature, they are set off in the first instance.

C. Locally based companies with overseas branches or subsidiaries

The object of converting the accounts of locally based companies' overseas branches or subsidiaries into local currency is to enable them to be incorporated into the home company's or group accounts at a local currency equivalent which fairly expresses their state of affairs and results. Normally the 2 main methods of converting other currencies for this purpose are the "closing rate" and "historic rate" methods.

Where a major revision of exchange parities has taken place during the financial period it is necessary to determine whether the effect on the local currency equivalent of overseas branches' or subsidiaries' accounts gives rise to an exceptional difference on exchange. In theory, as noted above, the gain or loss attributable to a change in parities could be directly arrived at by converting the accounts of the overseas branches or subsidiaries at the dates the rates changed into local currency at the old and new rates and measuring the difference.

In practice the exceptional gain or loss attributable to the change in parities is normally calculated by adjustment of net assets in the opening or closing balance sheets; for instance, by taking net assets at the last accounting date before the change and adjusting them by reference to the profit earned or loss incurred in the period up to the date of change, the difference between the resultant amount converted at the old and new rates of exchange is the exceptional gain or loss. This achieves the same result as converting net assets at the date the rates changed. Since the "historic rate" method of conversion uses the average rate of exchange for the year to convert profits or losses (before charging depreciation), it automatically takes account of the effect of any change in parities; the "closing rate" method does not, and in that case to determine the exceptional difference on exchange it is normally appropriate to apportion profits or losses to the date the parities changed and to convert results up to that date at the old rate and after that date at the closing rate. In making this calculation, results should be apportioned as nearly as possible on an actual basis so as to take due account of seasonal or other fluctuations in trade. Turnover should be apportioned and converted in the same way so as not to present a misleading view of trading and results.

Under the "closing rate" method, assets and liabilities at the balance sheet date are converted at the rate of exchange then ruling, so that the effect on them of any major change of parities is automatically recognised. Under the "historic rate" method, however, fixed assets and long term loans and liabilities are normally stated at their original local currency equivalents. A major change in parities calls in question these amounts. Bearing in mind that proper provision must be made for depreciation of fixed assets and repayment of long term liabilities, it would be unrealistic not to recognise that a change in parities implies an adjustment in the local currency equivalents of fixed assets and long term loans. In these circumstances it may be desirable either to adjust their local currency amounts by reference to the balance sheet rate of exchange, or to carry out a valuation of fixed assets; if the "historic rate" method of conversion is to be followed, the latter amounts would continue to be used for future conversion purposes in place of original local currency equivalents. Whichever basis of conversion is used, fixed assets appearing "at cost" in terms of overseas currencies may normally continue to be so described after conversion into local currency, since the position will be made sufficiently clear by disclosure of the basis on which foreign currencies have been converted into local currency.

IV. WHEN DO GAINS AND LOSSES OCCUR?

As can be seen from the introduction to this paper, an exchange gain or loss can be said to arise at a number of different points in time. For instance, on a sale of goods contracted at a particular price the gain or loss could arise when the price for the sale of the goods is paid, or when they are actually received or, if deposited in an overseas bank account, when the proceeds are eventually remitted. However, as a general principle it is probably safe to say that the Revenue would normally follow generally accepted accounting principles such as those that I have mentioned earlier. I will revert in more detail later, but it should be noted that although accounting principles would generally apply as to when a gain or loss arises, it does not follow that this follows for a determination as to whether it is of a revenue or capital nature.

V. TAX TREATMENT OF GAINS AND LOSSES

As I have just mentioned, despite the accounting treatment of a gain or loss, the Revenue will apply their own rules to determine whether it is of a revenue or capital nature. What are these rules? The same general principles apply to currency gains and losses as apply to other items of income and expenditure, but because of the very special nature thereof there exist certain peculiarities which are worth examining in some detail.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

A. Capital transactions

If a taxpayer purchases fixed assets from abroad and before he makes payment for them a loss or profit results due to the intervention of a change in exchange rates, such a loss or profit would be on capital account. An incidental result of this would be that the asset could have 3 different cost prices, i.e. the cost at the time of incurring the obligation to pay for it, the cost of acquiring the foreign currency to pay for it and the cost which would be relevant to the computation of capital allowances. For example, a local ship owner contracts to buy a ship from the U.K. for HK$5M. The ship is delivered in the same year but payment is not made until the following year. During the intervening period the Hong Kong dollar is revalued by 10% and therefore in the following year the shipowner will gain HK$500,000 as he will only need to pay HK$4.5M to settle the debt. The ship in his books will continue to show the figure of HK$5M although the real cost to him will only be HK$4.5M. The gain here will be on capital account and this may be taken up in his profit and loss account, but below the line.

For tax purposes the Revenue will adjust the cost to HK$4.5M for the purposes of calculating initial and annual allowances. Of course the converse would apply if an exchange loss had been made on the transaction. It will be seen from this example that for tax purposes the actual outlay of currency by the taxpayer is taken as the cost for the purposes of capital allowances and the corresponding gain or loss is excluded from the profit for tax purposes.

Similarly, the discharge of a foreign loan can result in exchange losses or profits should there be fluctuations in the exchange rates by the time the loan is repaid. It should be noted, however, that loans in this context do not include outstanding balances on trading accounts; exchange gains or losses resulting from this transaction are of a revenue nature.

B. Revenue transactions

Any exchange differences which relate to a taxpayer's income earning operations or form part of his business or are directly or sufficiently related to his business operations will be taxable or deductible as the case may be. For example, if a local importer purchases goods from Japan and prior to the settlement of the purchase price the Japanese yen is devalued he will require fewer Hong Kong dollars to discharge the yen debt. The acquisition of yen to discharge the debt is closely connected with his income earning operations and consequently the gain he makes will be subject to tax.

C. Onshore or offshore

In most jurisdictions it is irrelevant whether the gain or loss was made onshore or offshore as both will come within the tax net. However, in a source jurisdiction such as Hong Kong, the matter is very relevant. The Hong Kong Inland Revenue Department have not, as far as I am aware, issued any guidelines other than a circular issued after the 1967 devaluation of sterling which admitted that the problem was complex and that each case would have to be examined separately. However, as we are only concerned with gains and losses of a revenue nature it is difficult to imagine many circumstances where a normal trading concern in Hong Kong would be able to incur an offshore exchange profit of a revenue nature as it is the underlying transaction, i.e. the sale of goods, which has to be looked at. This matter will, however, be discussed later when we come to minimisation.

VI. TAX CASES

Perhaps there is no clearer way of illustrating the complexities of this subject than by a review of the various judicial decisions that are available.

The only Hong Kong case that has come to the attention of the Courts is that of the Commissioner of Inland Revenue v. Li and Fung Limited which is reported in the 10th Supplement to the Hong Kong Tax Cases. The facts were as follows:

The Company carried on business as exporters and general merchants; its business included exporting Hong Kong manufactured goods to the United States. Such goods were paid for in U.S. currency and the proceeds were deposited in banks in the United States on 7-day call. At various times, when better rates of exchange between the U.S. and the Hong Kong dollar could be obtained, the accumulated funds with interest thereon were remitted back to Hong Kong. When preparing accounts for the year ended 31 December 1972 the Company was aware of the impending devaluation of the U.S. dollar and accordingly revalued the amounts of its cash and bank balances, trade debts and credits expressed in U.S. dollars, resulting in a net loss of HK$333,296.76.

On 12 February 1973 the U.S. dollar was in fact devalued and the Company claimed a deduction for the loss shown in the 1972 accounts against its assessable profits for 1974/75. The Assessor disallowed the amount of HK$327,750 relating to revaluation of the cash and bank balances on the grounds that this was a loss of capital.

On Appeal the majority of the Board of Review found that the U.S. dollar balances, being the proceeds of sale of goods and therefore income from trading, did not lose their identity as trading income by being retained in the U.S.A. and the loss was therefore allowable. The minority view held by one member was that the retention of the money in U.S. dollars placed on deposit altered the nature of the funds from trading income to investment. The Commissioner appealed.

Mr. Justice Garcia held that although the sums in question originated as trading income, their nature was altered to that of capital investment when accumulated and placed on deposit in U.S. banks with the intention of obtaining more favourable exchange rates. The Commissioner's appeal was allowed.

Two Australian cases are of interest and are useful guides. The first is Federal Commissioner of Taxation v. Cadbury-Fry Pascall (Australia) Limited (79ATC4346) which was heard in the Supreme Court of Victoria. The facts were as follows:

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Cadbury-Fry Pascall (Australia) Limited was a subsidiary of an English company which manufactured confectionery for sale in Australia. Two of the materials required for the manufacturing process were cocoa beans and cocoa butter which were purchased from West Africa. Under a long-standing arrangement the English parent placed orders for these items on behalf of the taxpayer with the supplier in West Africa and paid for these goods on the Australian company's behalf. Regular statements of the amounts due to the parent company were sent to the subsidiary and this debt was included in the subsidiary's loan account. Interest was charged by the parent on this account and settlement was made by the subsidiary generally some 6 months after the debt was incurred. It was part of the arrangement between the 2 companies that the debt should be paid in sterling. The loan account also reflected transactions relating to purchases of material made directly by the subsidiary from the parent and also purchases of plant and equipment made through the parent. In addition, service charges made by the parent were passed through this account. As a result of the sterling devaluation in November 1967, the taxpayer was required to pay fewer Australian dollars than had earlier been estimated. The taxpayer claimed that the part of the exchange gain thus made which related to the purchases of raw materials made by the parent on the subsidiary's behalf was not assessable. The taxpayer argued that the arrangement between it and its parent was to provide an advance of funds and that therefore payments in reduction thereof were of a capital nature. The case went to the Board of Review who upheld the taxpayer's claim and thereafter the Commissioner appealed to the Victoria Supreme Court. It was held by the Judge that the arrangement between the subsidiary and its parent was not for the purpose of providing the subsidiary with an advance of funds but that the payment in reduction of the loan account was in substance part of the regular outlay of the taxpayer for raw materials regularly required by it for manufacturing purposes. The mere substitution of the parent for the supplier was an incident of the commercial operation and did not affect the true nature of the transaction. It was held, therefore, that the gains made on that part of the loan account which related to the purchases of raw material and the service charges were subject to tax but the Commissioner agreed that the gain made on purchases of the plant and equipment was not taxable.

A more complex case was that of Lombard Australia Limited v. Federal Commissioner of Taxation (80ATC4151) which was heard in the Supreme Court of New South Wales. The facts in this case were that Lombard Australia Limited, which was a wholly owned subsidiary of the U.K. based National Westminster Bank, borrowed money from several overseas sources, including its parent. These funds were used for the general purposes of its business and were generally for a period of 5 years. At the same time, Lombard Australia Limited also raised funds in the Australian market. After 1975, the company conducted a policy of gradually reducing its foreign currency borrowings and relied more extensively on local fund raising. During the year ended 31 December 1975 Lombard Australia Limited repaid certain overseas loans and sustained exchange losses of $3.2M and claimed this as a deduction in its tax return for that year. Mr. Justice Powell held that the losses were deductible and that they were properly treated as losses or outgoings necessarily incurred in the income earning process. The Judge said that the evidence showed that at all relevant times borrowing overseas was an integral part of the process by which not only the taxpayer but most, if not all, major financiers in Australia funded their lending activities. The evidence also showed that at all relevant times fluctuations in the value of currencies were an established feature of the worldwide monetary scene. This being so, the losses in question represented a kind of casualty, mischance or misfortune which is a natural or recognised incident with the particular trade or business. In his summary the Judge referred to the Cadbury-Fry case referred to above and said that the facts were similar in both cases as the transactions with the overseas parent related to transactions which related to trading stock.

The 2 Australian cases illustrate the rule that it is not the actual transaction that must be looked at to determine whether an exchange gain or loss comes within the tax net, but the underlying transaction to which it relates.

In the U.S., where surprisingly enough there are no detailed regulations covering currency gains and losses, much reliance is placed on decided cases to establish the rules.

One of the leading cases was heard in April 1979, the Hoover Company case (72TC206), where the tax court held that gains and losses from a taxpayer's transactions in foreign exchange contracts were capital gains or losses and not ordinary gains or losses. The Court concluded that the transactions related to taxpayer's ownership or stock in its foreign subsidiaries rather than the taxpayer's everyday operations. This was despite the fact that the Hoover Company entered into a considerable number of foreign exchange contracts, most of which resulted in losses. This was contrasted with the Corn Products case (350US46/1955) where similar transactions were entered into but related to the taxpayer's everyday operations.

A useful case was heard in Malaysia in 1973 (L Sdn Berhad v. Comptroller General of Inland Revenue 1973 1MLJ56). The facts in this particular case were that the company was carrying on the business of buying and selling land and part of the proceeds from these transactions were deposited in the U.K. When sterling was devalued the company incurred a loss of M$595,840. The taxpayer claimed this as an allowable deduction but the claim was dismissed and the Judge said that one of the major questions which arose before the special Commissioners was whether the taxpayer's money in London was fixed capital or circulating capital. He agreed that in the light of decided cases if the money in London was circulating capital then the loss would be an allowable deduction. It would be otherwise if it was fixed capital. It is implicit that the manner in which the capital is employed is a material factor in determining whether it is fixed or circulating capital. The Judge went on to say that it did not seem to be part of the taxpayer's case that the money in London had been employed in any manner for the company's business which of course was buying and selling land in Sabah.

Judge Ali concluded by saying, "The assertion by the

© 1982 International Bureau of Fiscal Documentation – BULLETIN

taxcpayer that the money could be used any time if needed for the company's business is neither here nor there. I venture to think that the taxpayer has not suffered any loss known to law."

Finally, we must have a look at the various U.K. tax cases on this topic. Not unnaturally, the U.K., having certainly in the past one of the world's major trading currencies and relying to a great extent on case law to decide matters of principle, have produced a number of interesting cases over the years. One of the earliest cases was that of Bennett v. Underground Electric Railway Company of London Limited (1923ATC4275) where the taxpayer claimed as management expenses a deduction for the additional costs incurred in purchasing U.S. dollars with which to pay interest in New York. The judgement was that the management of the company did not alter whether or not the interest was paid in dollars and therefore at a greater sterling cost and accordingly gave judgement in favour of the Revenue. The next case was McKinlay v. H T Jenkins and Son Limited (10TC372) where a U.K. company imported marble from Italy and remitted to a bank in Italy sufficient funds to meet advanced payments for the quantity of marble. Before the supplier needed to be paid, the sterling/lira rate moved and as a result a large profit accrued to the U.K. company on sale of the lira. The exchange rate then moved in the opposite direction and the U.K. company was able to acquire the lira cheaper to pay off the Italian exporter. Mr. Justice Rowlatt held that the profit was no more in effect than a bare exchange transaction in the nature of a speculation and that the profit from such transactions could not be a trading profit of the company since it was no part of the company's business to deal in exchange. Another pre-war case was that of Imperial Tobacco Company of Great Britain and Ireland Limited v. Kelly (25TC292) where the company acquired U.S. dollars each year to finance its purchases of tobacco leaf. On the outbreak of war the company had certain funds in U.S. dollars for this purpose which it was required to sell to the U.K. Government. A profit was made and it was held that such a profit was subject to tax because the dollars were acquired for the purposes of a trading transaction. A case a little nearer to this part of the world was Davies v. The Shell Company of China Limited (32TC133) where the company had a large number of agents in China who were required to place deposits with the company. These deposits at the outbreak of the Sino-Japanese war amounted to some 7 million Chinese dollars and were placed on long term deposits with banks. It was agreed that interest was payable to agents on the deposits and at the outbreak of the war the company converted these deposits to sterling and repatriated the funds to the U.K. As each agency became renewable the company terminated the agency and repaid the agent his deposit. On account of the depreciation of the Chinese dollar these payments gave rise to substantial sterling deposits. The U.K. Court of Appeal decided the company's deposits were fixed capital and the profits in question were not trading receipts.

A post-war case which in fact is still going through the U.K. courts is that of Pattison v. Marine Midland Bank Limited, and in May of this year the Chancery Division found in favour of the Crown, but it is understood that the bank are considering appealing against the decision. The facts in this particular case were that Marine Midland Bank Limited is a subsidiary of an American bank who borrowed dollar funds by issuing loan stock to 2 subsidiaries of its parent company resident in the U.S. These funds were lent on to dollar and other foreign currency clients. The loan stock was cancelled by repayment of the loan on 15 June 1976. The company did not speculate in foreign exchange transactions but looked for its profits to the interest differential between amounts lent and amounts received on deposit and for the most part the borrowings were matched by loans. As a result of the fall in the value of sterling an exchange loss was shown on repayment of the loan stock and gains were shown on the assets matching the loan stock translated into sterling on the relevant balance sheet dates. At no time was there any actual conversion into sterling. The taxpayer company was assessed to corporation tax on the basis of exchange loss arising on the payment of the loan stock as a capital loss and the exchange profits shown on the matching assets were revenue gains. The taxpayer company appealed to the City Commissioners contending that the loan stock did not represent capital employed in the trade and any exchange loss was a revenue loss deductible from trading profits. The Commissioners determined that neither the exchange loss nor the exchange profits were to be taken into account in computing the taxpaying company's liability to tax. The Crown appealed to the Chancery Division where it was held that since the loan stock formed part of the capital structure of the company and the liability to pay it was a capital liability, the deduction of the exchange loss sustained on repayment from trading profits was prohibited. The exchange profits shown in the balance sheet in respect of the matching assets however were revenue profits to be taken into account in computing liability to tax.

VII. MINIMISATION TECHNIQUES

The wide variety of cases referred to just now indicates that there are numerous ways in which currency gains and losses can arise and it is clear that careful consideration needs to be given to the tax effects of exchange related transactions. However, it should be borne in mind that the first priority should in all probability be to reduce the risk of the exposure itself of a currency change. This of course is necessary unless the tax planner can ensure that all exchange losses will be deductible in high tax areas and all exchange profits are taken in low tax or nil tax countries, or, alternatively, all losses are of a revenue nature and all profits are of a capital nature.

A. What is currency exposure?

Currency exposure is the net amount of a firm's assets and liabilities in a foreign currency. A net asset position is also called a "long" position, a net liability position a "short" position. The exposure risk is consequently the risk of a monetary loss due to exchange rate fluctuations. It depends both on the size of the exposure and the extent of the expected re- or devaluation of a currency in terms of the base currency.

Currency exposure can be calculated basically in 3 ways:

© 1982 International Bureau of Fiscal Documentation – BULLETIN

1. *Transaction exposure* covers those assets and liabilities which, in the short or medium term, will result in an actual currency conversion. Any change in the value of the respective currency between the date on which an asset or liability is created and the actual conversion date will result in an immediate, actual gain or loss on exchange. This exposure consequently covers all transactions involving foreign currencies such as imports and exports of goods and services, payments of royalties, etc.

2. *Translation exposure* is the exposure calculated on the basis of the balance sheet of the foreign operation. It includes both the amounts of the transaction exposure and all other items which will cause a profit and loss effect on consolidation if the currency in which they are denominated changes in value. It therefore also comprises assets and liabilities which will not give rise to an actual gain or loss on exchange as these items will not be liquidated in the short or medium term. Nevertheless, the translation of these items will result in an accounting (i.e. unrealised) gain or loss, if the currency in which they are expressed changes in value as compared to the base currency.

3. *Economic exposure.* As gains/losses resulting from the economic exposure are not reflected in the financial statement as realised or unrealised exchange gains/losses but a sordinary trading income with no special tax implications, currency exposure, in what follows, will refer only to transaction and translation exposure.

B. How to minimise exposure

The 2 basic methods are:

(a) *Forward exchange contracts/swaps*

By way of forward exchange contracts the firm can shift its exposure to another party, usually to a bank, for a cost which will be based on the interest differential between the local currency and the foreign currency. If an exposure is the result of a temporary loan, the firm can make a swap, i.e. it sells the local currency at the present (spot) exchange rate and, at the same time, re-purchases the local currency at the applicable forward exchange rate.

(b) *Invoicing in the base currency*

This is the hedging method for firms which export directly to third party customers. As the exposure risk is passed on to the customer, it requires a certain bargaining strength and may not be possible in highly competitive markets unless the hedging costs are reflected in the price.

Re-invoicing can be the solution to this dilemma. The exporting company invoices in the local currency to a re-invoicing centre which is to carry and manage the exchange risk. Re-invoicing for a group of companies has the additional advantage that payables/receivables in the different currencies can be netted thus reducing transfer charges and exchange costs.

C. The tax effects of exposure management

As in all business decisions care must be taken to ensure that the tax effect of any transaction is known in advance so that at least the possible liability is known and at best so that the transaction can so be structured to the best possible advantage. Foreign exchange transactions of necessity require that the tax planner is aware of the law and practice relating to such activities not only in his home jurisdiction but also in other countries where the taxpayer operates. This is because of the varying tax rates involved, but more importantly the differing tax treatment accorded to foreign exchange. Thus in the Netherlands the Revenue do not distinguish between capital and revenue, whereas in Germany unrealised gains are not taxable until recognised wherever unrealised losses are deductible when incurred.

VIII. CONCLUSION

In concluding this short talk I hope that I have been able to shed some light on this complex problem. In the days of sailing ships and fixed parities of currencies, currency gains and losses rarely arose, and, if they did, were readily identifiable as to nature and source. However, with the vast sums neeed for international finance these days and with the speed that not only currencies can fluctuate, but also funds can be transferred, it is important for the tax planner to be fully aware of the consequences of international transactions.

Appendix A: China's tax revenue statistics
Appendix B: Foreign Enterprise Income Tax Law

I. INTRODUCTION

Important changes in economic development policy are taking place in the People's Republic of China since the Government's announcement that it intends to achieve the declared goals of the Four Modernizations – in agriculture, industry, defense, and science and technology – by the end of this century. This modernization program is the start of a new venture in China's economic development strategy since the establishment of the People's Republic of China on 1 October 1949 and naturally not without consequences to taxation matters.[1]

The tax system of each country, in order to be an effective part of its economic development policy, must be tailored carefully to the peculiar circumstances and objectives of that country. China has chosen the road to socialism. The crucial point which emanates therefrom is the collectivization of ownership of the important means of production, such as land, capital and labor.[2] Socialization of the means of production connotes the transfer of private ownership of the means of production into public and collective ownership.[3] In China, even private ownership of dwellings has been eliminated by the socialization of the means of production. Only recently have flats been for sale for private ownership.[4] By and large, the means of production (land, capital and labor) are allocated by the State according to the national economic production plan. Consequently, the decisive role of production and consumption under a free market economy or where the price mechanism rules has been replaced by State planning. The price fixing system of commodities in the planned economy in China has caused a deterioration in the balance between prices set by the State and the actual market value. Consequently, it is generally conceived that the economic set-up at present no longer suits the goal of achieving high sustained economic growth after 30 years of socialist economic planning.[5]

China introduced its own tax system in 1950 and adopted "the policy of utilization, restriction and transformation", which translates into plain terms as the transformation from private ownership into public ownership of the means of production during the transition period of the early 1950s. The basic 1950 tax system was followed by tax reforms in which the tax system of State enterprises was more finally attuned to the socialist economic system by turning the advantages of the advances of production to the benefit of the people instead of private entrepreneurs.[6]

In the wake of the Cultural Revolution (1966-1976), the benefits of taxation were not accepted and it was not until recently that the idea of taxation has been revived as a means of providing incentives for greater efficiency and productivity in the use of scarce means of production in State enterprises.

State enterprises are subject to the profit allotment system in which enterprises have to transfer all their profits to the State and, by the same reasoning, all losses are automatically covered by State subsidies. In addition, workers are hired but not fired, promoted but not demoted: a phenomenon known as the "iron rice bowl". This was considered for a long time a sign of "the advantages of socialism". This system of overall State responsibility in production, distribution of goods, social welfare and in other social and economic fields is known as "everybody eats from the same rice bowl". One may compare it with a national social security system for the entire country.

From a functional point of view, however, the profit allotment system replaced the price mechanism to equalize supply and demand of goods in the planned economy. It is obvious that the system of the "iron rice bowl" provides hardly any material incentive for greater efficiency and productivity in the production of capital and consumer goods. The crucial point is that efficient or inefficient functioning of the economy does not depend on who owns the means of production but on the efficient or inefficient operation of the means of production, irrespective of whether it is in a centrally planned economy or in a free market economy.[7]

If the means of production owned by the people are left idle or are badly operated, their economic value is not used. To introduce more vitality in the economic structure, limited competition in a planned economy with State ownership of the means of production and taxation as an instrument to achieve equilibrium between supply and demand may play a role. Higher taxes can be levied on goods whose production needs to be curtailed, and reduction or exemption from taxes can be granted for goods whose production must be encouraged. Besides tax policy, other measures (e.g. price policy, the supply of materials, investment policy, credit and loan policy) may also be applied.[8] The new policy should emphasize the use of "tax instead of profit, independent accounting and self-responsibility for profit and loss."[9]

Since China has nearly 400,000 State enterprises operating in the fields of industry, commerce, communication and transportation, accounting for 64.7% of State revenue in 1960, as against 13.4% in 1950 (see Appendix A), the introduction of taxes to play a role in Government policy to reform the national economic set-up will be implemented gradually during a transitional period of several years, and not overnight by one law as was the case with the introduction of the income tax on joint ventures and the individual income tax effective as of 10 September 1980.[10]

At present, foreigners residing or operating a business in China can be subject to the following taxes:
- the individual income tax;
- the income tax on joint ventures;
- the industrial and commercial income tax;
- the industrial and commercial consolidated tax;
- the urban real estate tax;
- the tax on vehicles and ships;
- foreign enterprise income tax (see Appendix B).[11]

However, the purpose of this article is to explore and focus on the almost imponderable tax aspects of the gradual expansion of self-responsibility of State enterprises for their respective profits and losses. The term State enterprises may include factories, department stores and retail shops run by the State. It should also be noted that the tax experiments undertaken in chosen pilot enterprises are so various in number that attempting to obtain a complete concept of the prospective tax changes can be little more than crystal-gazing.[12]

II. PROBLEMS ARISING FROM THE RESTORATION OF SELF-RESPONSIBILITY OF STATE ENTERPRISES FOR THEIR OWN PROFIT AND LOSS

By and large the profit allotment system will be phased out in 2 stages. The first stage is that enterprises will be allowed to retain a portion of their acquired profits after turning in their planned profits to the State. The State assigns them a basic production schedule to be fulfilled, but each enterprise can increase its own production using its own initiative . The retained profits can be used by the enterprises for expansion of production or for the safety and welfare of the workers. The portion of retained profits differs from location to location in the country and depends on the kind of activity of the enterprise, such as manufacturing, transportation or commerce.[13] For example, in the Municipality of Shanghai, 2 profit retention systems were put into force for trial implementation. In 1978, spinning and weaving enterprises were allowed to retain 9.5% of the profits for allocation to special funds while 90.5% went to the State; they were allowed to retain their total profits for 5 years beginning in 1979. For metallurgical enterprises, the profit retention ratio in 1978 was set at 40% with 60% allotted to the State.

They were allowed to retain their total profit for 5 years beginning 1979.[14]

However, the most important development affecting the taxation of State enterprises in China is the last stage, the experiment with financial self-responsibility for one's own profit and loss. Instead of handing over a portion of their profits to the State, the enterprises pay *taxes* to the State. Any profits remaining after paying taxes are at the disposal of the enterprise. On the other hand, the State will no longer provide subsidies to those enterprises that "produce" losses with independent accounting systems outside the national budget.[15]

Where taxes are not levied upon State enterprises, the introduction of a financial self-responsibility system creates complicated problems which must be solved first. In a planned economy the profit or loss of an enterprise is determined by 2 factors. Those making a higher profit because of subjective or internal factors, such as good economic management, should be rewarded, while those making more profit on account of objective or external factors not influenced by, say, enterprise management, should, in principle, turn over the profits to the State.

Those objective factors are the outcome of the following prevailing circumstances in China's planned economy:
- the price fixing system;
- the nature of the country's natural resources;
- the productivity of fixed assets and of laborers.[16]

1. The price fixing system

As indicated above, the socialization of the means of production in China and the use of economic planning have replaced the price mechanism and the profit motive as instruments to equalize supply and demand on both consumer goods and capital goods. Where a price mechanism does not exist, prices of products have to be fixed by the planning authorities. It is generally accepted that, with respect to the relationship between tax and price in a planned economy, taxes are not price-determining. Consequently, in general, prices of individual items or commodities are independently set by the State to achieve equilibrium in commodity market. The turnover tax, for example, is only one of many factors making up the final price in the price fixing system. Although the tax affects the final price, it plays at most a secondary role in fixing the price of a particular commodity, and in many cases the tax is clearly price-determined. The tax serves as a buffer between cost price and sales price and is an important element in creating equilibrium between the general price level and the cost price for individual commodities.[17]

Price fixing of goods as a substitute for the price mechanism is conducive to making profit and taxes an accounting item set out *ex-ante* in the process of the centrally planned economy.

Because of price fixing, the prices of many products in China are not commensurate with their real economic value, an important factor in determining profit margin. Products urgently needed by the people (raw and processed materials) are too cheap, while those not in urgent need (manufactured goods) are too expensive. The present profit margins of some enterprises are not determined by good economic management but by fixed prices. Without a readjustment of prices, it will be difficult to work out a rational profit retention system.

For example, a watch costs approximately 6 to 12 yuan to make, but sells for 50 yuan, so that watch companies make a big profit. Meanwhile, 1 ton of coal costs about 14.75 yuan to produce, but sells for only 11 yuan, since coal is an essential consumer good and watches are a luxury. To go from a price fixing system to a market price system is a difficult task. There is no way to institute an overall price reform; raising just a few prices will spark inflation.

It is believed that the first step in reducing the gap between various enterprises' income is to use taxes to absorb the windfall profits arising from the irrational price fixing system of goods prevailing in China. If the profit margins on some goods are too wide and yet it is impossible to lower their prices, the extra profits should be turned over to the State in the form of an income regulating tax, so that all industries and trades will attain reasonable post-taxation profits under good management of the enterprise.[18]

Thus, in brief, economic change has been stifled by the Government price fixing system. Some enterprises earn more profits and other less, not because of how well they are managed and how much their workers produce, but merely because of the prices fixed for their product.[19]

2. The nature of China's natural resources

The second objective factor is natural resources. Enterprises in mining industries bring in different profits because of different natural conditions. For example, there are large differences between the resources and consequently between the profits of the Daqing and Yumen oil fields. In such case, different rates of tax (including those on resources) should be introduced to make the profit retention system effective. In fact, some oil wells produce a few tons a day while others produce hundreds or even thousands of tons a day. Since oil is scarce, the maximum production must be achieved at all costs. On the basis of such differences in productivity, the State should either levy different taxes on resources or introduce a system whereby the mining enterprises retain varying portions of the profits they earn over and above the

assigned profit norms.[20] China is in fact contemplating introduction of a national resources tax.[21]

The different productivity of natural resources can be illustrated in the following example:[22]

Assume that there are 3 oil wells, A, B and C, having a different productivity of respectively 50, 100 and 200 metric tons of oil at a cost of 10,000 yuan. To achieve a 20% profit rate the selling price per metric ton will be respectively as follows:

Oil well A:

$\frac{10{,}000 \text{ yuan}}{50 \text{ ton}}$ plus 20% profit rate = 240 yuan

Oil well B:

$\frac{10{,}000 \text{ yuan}}{100 \text{ ton}}$ plus 20% profit rate = 120 yuan

Oil well C:

$\frac{10{,}000 \text{ yuan}}{200 \text{ ton}}$ plus 20% profit rate = 60 yuan

If the country's selling price is fixed at 240 yuan per ton, the gross receipt per well will be 12,000 yuan per year and the total gross receipt of the 3 wells, 36,000 yuan. The difference between the selling price ands the cost price for well B is 120 yuan and is turned in as land (mining) tax to the State. For well C the land (mining) tax is 180 yuan, while well A does not turn in tax due to its poorer oil endowment.

The picture which emerges from the above illustration indicates that marginal oil well A (or even oil wells making losses) can still operate at the expense of profit making enterprises if total production is considered by the authorities as necessary for the centrally planned economic development of the country. Since price fixing of many products deviates from their real economic value, it has become a major reason for the irrational amounts of profits made and amounts of tax turned in to the State.

In the economic planning structure of China, the rates of profits and taxes are fixed *ex-ante* by the planning authorities and used as a means to measure the economic achievements of an enterprise through the economic accounting system.[23] The importance of the economic accounting system in the control of enterprise operations is recognized by Chinese writers, although the effectiveness of such control depends on the availability of accurate and prompt reporting of enterprise activities.[24] In addition, since the price of the product is set by the central government, the profit is predetermined and the manufacturer of the product cannot influence profit margins, but only can estimate production.[25]

3. The productivity of fixed assets and of laborers

The third objective factor is the differences in productivity of fixed assets resulting from the use of different kinds of equipment. Such differences are created by unequal sums of State investment and not by unequal degrees of effort on the part of the workes. To solve this problem, the State may introduce a system whereby the enterprise pays a compensation for the appropriation of fixed assets. The enterprise may pay taxes or interest on those fixed assets at different rates to offset the differences in profit margins arising from the productivity of the fixed assets used. Some Chinese tax authorities consider the fixed assets tax the "selling out" of fixed assets owned by the State to financially independent enterprises. It is asserted that fixed capital assets were redeemed ("bought out") in 1956 from their former private owners during the period of socialization of the ownership of the means of production whereas at present the tax policy would be directed to the opposite, namely, the "selling out" of fixed assets or means of production to independent account units in a planned economy of which the means of production remain in the ownership of the people, i.e. the State.[26]

The fixed assets and working capital of State enterprises have been given at no cost by the financial authorities. The enterprises have to turn over all their profits, if any, to the State and its products are purchased and marketed by the State commercial departments. Given no power or responsibility over either material supply or funds, the enterprise does not concern itself with the question of waste. Mere supervision from the higher authorities cannot be ensured by control through the economic accounting system if the persons running the enterprises are not interested. To change all this, it is necessary to make an enterprise economically responsible for the use of state funds and give it more financial power to handle its profits. It should be provided with a business fund for developing technical innovation. Part of the extra profit earned through improved personal management may be used for the worker's collective welfare or distributed as bonuses among workers who have made greater contributions to earning more profit.[27]

The rate of the fixed assets tax in 5 State-owned enterprises in Sichuan Province, applying the self-sustained profit and loss system in a trial experiment, was differentiated and may vary from either 0.2%, or from 0.3 to 0.5% or from 0.5 to 0.8% of the fixed assets value payable monthly.[28]

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Objections were raised by enterprises to basing the tax on fixed assets on the original value. Certain factories have old and obsolete fixed assets which should have been written off long ago; the authorities concerned do not agree to this and the assets are still listed in the account books at their original value. In many factories most of the fixed assets were acquired in the 1950s. After 20 years or more, practically all the depreciation costs have been written off, yet their value remains intact according to the books. It is obvious that taxation on such a nominal value would be unjustifiable.

The depreciation of fixed assets in China must be changed. Experiments undertaken in Sichuan province in enterprises acquiring greater independence in their economic management suggested a gradual shortening of the depreciation period of fixed assets and a steady increase in the funds for their replacement and for technical improvement. Under the present system the depreciation period ranges from 25 to 40 years. In the next 5 years, it should be shortened to 10 to 15 years and the annual rate of depreciation should gradually be raised from 6.5 to 10%, while 80% of the basic depreciation fund should be placed in the hands of the enterprise.[29] Thus, as some enterprises get more fixed assets, and more modern ones, from the State, they achieve higher productivity and profit. If the tax on fixed assets is not used, the profit retention system cannot be implemented on a fair and equitable basis. To introduce a tax on fixed assets, China has to conduct a nation-wide appraisal of the fixed assets of State-owned enterprises.

This is an enormous job which cannot be accomplished in a short period. Thus a reform in the economic set-up requires the readjustment in a wide field of issues in such areas as production, pricing, supply marketing and taxation. It is necessary to establish a system to transfer surplus fixed assets of one enterprise to another which is in need of such fixed asset. The enterprise having a surplus of fixed assets may transfer those assets to the higher authorities on a lease, or sell those assets to other enterprises and use the proceeds to buy whatever fixed assets it needs. Fixed assets from State investments may be placed at the disposal of banks, which will rent them to the enterprises which need to use the fixed asset. On the other hand, these fixed assets represent an enterprise liability to the State, for which the enterprise should pay an interest or fixed assets tax at regular intervals according to State regulations. At present, the State has allocated fixed assets to enterprises for use without any compensation, as "everybody eats from the same rice bowl".

It is also necessary to make changes in the labor force now operating under the "iron rice bowl" principle. At present, the State allocates manpower to enterprises without much regard for the ability of the person assigned. The State should introduce a system of vocational assessment and promotion in order to transfer to suitable jobs those who cannot fully use their abilities. An enterprise must have the power to fire those employees who prove to be incompetent in the course of employment. The discharged workers may be referred back to the labor departments for new assignments or they may also be allowed to find jobs by themselves.[30]

III. THE TAX EXPERIMENT

The State Council approved on 2 September 1980 the Report of the Economic Commission concerning the gradual expansion of the self-responsibility of State-owned industrial enterprises dated 9 August 1980.[31] As far as taxation is concerned, this Report revealed that beginning with 1981 the principle of retained profit of enterprises must be further developed and extended to provinces and prefectures on a trial basis. The experiment of self-responsibility for profit or loss of State-owned enterprises must be further developed and evolve into a tax system for China. It has been revealed that in Sichuan province 3 kinds of taxes are levied on enterprises to wit, the industrial and commercial tax, the tax on fixed assets and the income tax. In Shanghai, 5 kinds of taxes and 2 kinds of duties are levied on enterprises, viz., the industrial and commercial tax, the income regulating taxes, the tax on houses and land, the boats and vehicle license tax, the income tax and the duty on fixed assets and the duty on the use of circulating funds (working capital). The Head of the General Tax Office of the Ministry of Finance must further replace the profit retention system of enterprises by implementing tax laws concerning the taxation of enterprises in China, such as the value-added tax, the natural resources tax, the differential levies of income regulating taxes, the income tax and the duties on fixed assets and on the use of circulating funds.

The experiment "Take Tax Instead of Profit and Self-Responsibility for One's Own Profit and Loss" was applied in pilot enterprises situated in Beijing municipality, Sichuan province and Shanxi province.[32]

The Report on the Arrangement for the National Economic Plans for 1980 and 1981 revealed that a value-added tax will be introduced for machinery and farm machinery industries to solve the problem of double taxation levied on some industrial products. The income tax on urban collectively-owned enterprises will be revised so as to reduce their tax burden to facilitate the development of the collective economy in China. On an experimental basis more State-owned enterprises will have to pay income tax instead of turning their profits over to the State under the profit retention system.

Beginning in 1981, duties on fixed assets shall be levied on a trial basis on State-owned enterprises so as to promote the rational use of State capital assets allocated by the State. State-owned enterprises that use circulating funds allocated by the State will be subject to the duty on the use of circulating funds.

With respect to the capital construction sector, investment by the State will be replaced by bank loans whever repayment is possible.[33]

1. Tax experiments on State-run industrial enterprises in Shanghai

a. The industrial and commercial tax

The tax regulations of pilot enterprises are promulgated on a case-by-case basis. For example, one of the Shanghai diesel engine factory plants[34] is taxed in conformity with the "five taxes and two duties" approved by the State Council concerning the gradual expansion of the self-responsibility of State-owned industrial enterprises (see above). The Shanghai diesel engine factory plant comprises 32 factories employing about 9,000 laborers.

The industrial and commercial tax experiment envisages the levying of a kind of value-added tax. For China a sophisticated value-added tax system was considered necessary, which implied that for each pilot enterprise the regulation is used on a case-by-case basis. Because of the different circumstances of each enterprise, a uniform value-added tax system is not fair for socialist competition in a period of change in the set-up of the national economy.[35]

In the Shanghai experiment the consumption type of value-added tax was applied. From the total sales proceeds, the enterprise deducts a specific number of materials purchased from other enterprises and processed or used in the manufacture of the product. The difference is the value added by the entrprise by its own activity, which is the tax base for the value-added tax.

With respect to the computation of the value-added tax, the amount payable under the Shanghai consumption type of value-added tax is obtained by the subtraction method rather than the tax credit method.[36]

The deduction of purchases by the enterprise from sales proceeds consists of 7 specified materials obtained from other enterprises and processed in its product. The processed materials comprise raw materials, auxiliary materials, fuels, purchased spare parts, repaired spare parts, low cost materials and package materials. The formula used to calculate the value added tax is the following:

The amount of the industrial and commercial tax is the sales proceeds multiplied by the value-added ratio multiplied by the applicable rate of the industrial and commercial tax.

The formula of the value-added ratio is:

$$\text{Value-added ratio} = 1 - \frac{\text{Production cost} \times \frac{\text{processed purchased materials}}{\text{purchased production expenses}}}{\text{Sales proceeds}}$$

The value-added ratio is calculated for each year per enterprise. The average value-added ratio for the year 1979 which applied to the Shanghai diesel engine factory was 54.2%. For the Shanghai factory the applicable rate of the industrial and commercial tax was 5%. The existing rates of tax were: for agricultural diesel engines, 6%, and for non-agricultural diesel engines, 10%.

The industrial and commercial tax is levied twice a month. Late payment of the tax is penalized by a fine amounting to 0.1% per day levied on the tax not paid.[37]

b. The income regulating tax

The income regulating tax levied in 1979 on the pilot Shanghai diesel engine factory was imposed at the rate of 7.5% on the "determined" profit. The rate of the income regulating tax will not be changed for 5 years if no changes take place in the fixed prices of goods, the tax rates, the costs and utilization of the factory's capacity.

If in those factors a change of 1% occurs in a certain year, the following first half year the income regulating tax rate may be adjusted by 0.4% for each 1% change. The income regulating tax is levied twice a month. Late payments of the tax are penalized by a fine amounting to 0.1% per day levied on the tax not paid. Income regulating tax is paid together with the industrial and commercial tax.

c. The income tax

At present, 270 State-run enterprises pay income tax in Shanghai, Liuzhou (Guangzi province), Sichuan and Hubei provinces.

Hubei province levies progressive income tax at rates divided into 5 income tax brackets ranging from a low of 50% to a high of 75%.

Sichuan province levies progressive income tax rates divided into 6 income tax brackets ranging from a low of 40% to a high of 78%.

Shanghai and Liuzhou both levy a proportional income tax at 50%.[38] The income tax levied on the Shanghai diesel engine factory plant was 50% on the total annual sales proceeds after deduction of the industrial and commercial tax, the income regulating tax and the production cost. The allocation to the workers welfare fund is 11% of the total annual wages paid.

The income tax is levied twice a month. Late payment of the tax is penalized by a fine amounting to 0.5% per day levied on the tax not paid.

d. Special funds

The retained profits shall be divided and transferred to the following special funds of the Shanghai factory plant:
- Production development fund: 41%;
- Staff and workers' welfare fund: 32%;
- Staff and workers' reward fund: 27%.

Under the original profit retention system adopted, the ratios were 38, 36 and 26% respectively.

e. Tax on land and buildings

With respect to the experiment of the Shanghai diesel engine factory plant, the tax on buildings was levied at 1.2% on the annual rental value. The land tax amounts to 0.72 yuan per square metre per year with respect to land located in the city and 0.36 yuan per square metre per year for land located in the suburbs.

The tax on buildings is levied twice a year, on 20 April and 20 October. Late payment of the tax is penalized by a fine amounting to 0.5% per day levied on the tax not paid. The Shanghai diesel engine factory paid an annual tax on buildings amounting to 1,070,000 yuan. The license tax for the use of vehicles and boats paid by the Shanghai diesel engine factory amounted to 22,000 yuan per year.

f. Duties for the use of fixed assets and of circulating capital

In the experiment of the Shanghai diesel engine factory plant, 2 kinds of duties were levied.

The duty for the use of fixed assets at 0.8% per month was levied on the value of fixed assets supplied by the State at the disposal of the factory. The duty for the use of circulating capital (working capital or loan) was levied at the rate of 0.42% per month on the amount of the loan. Both duties must be paid on the 25th of each month. Late payments of duties are penalized by a fine amounting to 0.1% per day levied on the duty not paid. The Shanghai factory paid each month 586,000 yuan with respect to the duty for the use of fixed assets and 136,000 yuan with respect to the duty for the use of circulating capital.

2. Tax experiments on State-run retail trade enterprises in Tianjin

In 1979 experiments were undertaken in Tianjin by State-tun retail trade enterprises with respect to self-responsibility for one's own profit or loss. There were 20 pilot enterprises involved utilizing 3 different measures of economc self-responsibility. Ten enterprises experimented with taxation under self-responsibility for one's own profit or loss and 6 enterprises experimented with the profit retention system, whereas the remaining 4 were "responsible for a task until its completion".[39]

Self-responsibility for one's own profits or loss was subdivided in two kinds of methods, to wit, the "Five Taxes, One Duty" and the "Proportional Income Tax".

Under the "Five Taxes, One duty" method, general trade stores and groceries had to pay the following taxes: the industrial and commercial tax levied at the rate of 3% on the sales proceeds, the tax on buildings levied at the rate of 1.2% on the annual rental value, and the land tax amounting to 0.72 yuan per square metre per year. The income tax was levied at 4% of the profits, increased by a local surcharge of 15%, thus totalling 4.6%.

The duty on the use of working capital was 0.21% per month of the working capital amount. The ratio between retained profit and State share was 30 and 70% respectively. The 4 taxes and one duty are levied on the State share. The balance, if any is available, is taxed by an income regulating tax which is levied at the rate of 0.6% of sales proceeds with respect to groceries, and 2.3% with respect to department stores.

Under the "Proportional Income Tax" method, the district street general trade stores may retain 42% of the profit and transfer 58% of the profit to the State. This ratio is fixed for 3 years. From the retained profit under both methods mentioned above, different amounts were allocated to the special funds, to wit, the development funds, the welfare funds and the reward funds respectively. The ratio to the special funds differs depending on the trade branch.

For trade stores the ratio of the funds were 50, 30 and 20 respectively. For groceries 35, 25 and 40 respectively and for district street trade stores 40, 20 and 40 respectively.[40]

IV. CONCLUSION AND SUMMARY

The tax system of China, in order to be effective as part of its new economic development policy, must be tailored carefully to the path that China has chosen, the road to socialism.

It is generally conceived that the economic set-up at present no longer suits the goal of achieving high sustained economic growth after 30 years of socialist economic planning. In addition, it is strongly asserted that the present economic set-up in China must be adjusted, restructured and consolidated in order to serve better the Four Modernizations and to foster cooperation with foreign investors from countries having an economic system different than that prevailing in China. State enterprises are subject to the profit allotment system in which enterprises have to transfer all their profits to the State and, by the same token, all losses are automatically covered by State subsidies, a phenomenon which is known as "everybody eats from the same rice bowl". This was considered for a long time one of "the advantages of socialism".

The system of overall State responsibility in production and distribution of goods provides little material incentive for greater efficiency and productivity in the production and distribution of goods. To put more vitality therein, China will phase out the profit allotment system and replace it by one of self-responsibility of State enterprises for their respective profits and losses. Instead of handing over their profits to the State, the enterprises pay taxes to the State. Any profits remaining after paying taxes are at the disposal of the enterprises. On the other hand, the State will no longer provide subsidies to those enterprises which have losses.

Where taxes are not levied, their introduction creates complicated problems which must first be solved. This can be accomplished by gradually expanding trial experiments in taxation of enterprises to acquaint people with the "virtues" of financial self-responsibility in doing business and paying taxes to the State instead of by one reform law promulgated overnight designed to break the "iron rice bowl" in a predominantly planned economy.

Appendix A:

CHINA'S TAX REVENUE STATISTICS

The classification of tax revenue in China has been simplified and unified to concur with the unification of the national economy in the form of public ownership of the means of production. This is reflectd in the fact that China did not provide a breakdown in tax revenue figures; consequently there seemed to be no need to follow a classification by types of taxes.

In 1959 China had disclosed some information on its economic performance in the first 10 years of its existence in the publication *Ten Great Years of Financial Accomplishments in the People's Republic of China.* This is up to now the only statistical book published by the People's Republic of China. *Ten Great Years* also contained some national tax revenue statistics. Those tax statistics do not provide a detailed breakdown of the kinds of taxes collected. Only the ratios of taxes, profits from state-owned enterprises and other items of revenue to total national revenue are given.

The purpose of China's tax statistics is to reflect the progress of the accomplishment of the national centrally planned economy. See for the developments of revenue receipts between taxes and revenue from state-owned enterprises: Tables I, II and III. The revenue structure is set out in Table IV.

The statistics on state revenue in Tables I and II are from *Ten Great Years.* The statistics in Tables III and IV on revenue development and revenue structure are from the Chinese-source publication *New China's Research Tax Department,* published in the Japanese article "Chugokuno Sozeiseido" (China's Tax System) in *Kakkokuno Sozeiseido* (Every Country's Tax System) (Tokyo, Zaikei Shohosha, 1976).

Tables III and IV supplement the figures given in Tables I and II. The revenue development statistics reveal that China from 1950 to 1960 relied more on revenue from state-owned enterprises as profit allotments rather than on taxes and much less on loans. Whereas taxes amounted to 75.1% of total revenue receipt in 1950, they amounted to only 34.8% in 1960. On the other hand, revenue from state-owned enterprises increased from 13.4% in 1950 to 64.7% in 1960. Other revenue items dropped from 11.5% in 1950 to 0.5% in 1960.

The relatively heavy reliance on revenue from state-owned enterprises may be explained by the fact that much of the peasants' income in China was in kind and the monetary tax base was, therefore, limited.[1]

In the budget statement by the Minister of Finance submitted to the plenary session of the National People's Congress held in June 1979, some revenue figures were disclosed for the first time since the publication of *Ten Great Years.* The total national revenue for 1979 was estimated at 112,000 million Yuan (112,111 million Yuan for 1978 and 87,450 million Yuan for 1977).[2] The drastically reduced state revenue estimated for 1979 in comparison to 1978 was the result of special measures taken in the new economic programm to raise the living standard in rural areas in comparison to that of urban areas. Among the measures were reduction and exemption from taxes in rural areas.[3]

No detailed breakdown of revenue receipts was given in the 1979 budget statement. The only breakdown for 1978 given was the following: taxes from industrial and commercial enterprises – 45,100 million Yuan (12.6% higher than 1977); and profit from state-owned enterprises – 44,000 million Yuan (an increase of 35%).[4]

Appendix B:

FOREIGN ENTERPRISE INCOME TAX LAW

(Adopted at the fourth session of the 5th National People's Congress on 13 December, promulgated by an order of Ye Jianying, Chairman of the NPC standing committee, the same day, entered into force on 1 January 1982)

The Income Tax Law of the People's Republic of China Concerning Foreign Enterprises

Article 1. Income tax shall be levied in accordance with this law on the income derived from production, business and other sources by any foreign enterprise operating in the People's Republic of China.

"Foreign enterprises" mentioned in this law refer, with the exception of those for whom separate provisions are stipulated in Article 11, to foreign companies, enterprises and other economic organizations which have establishments in the People's Republic of China engaged in independent business operation or cooperative production or joint business operation with Chinese enterprises.

Article 2. The taxable income of a foreign enterprise shall be the net income in a tax year after deduction of costs, expenses and losses in that year.

Article 3. Income tax on foreign enterprises shall be assessed at progressive rates for the parts in excess of a specific amount of taxable income. The tax rates are as follows:

Range of income	*Tax rate (%)*
Annual income below 250,000 yuan	20
That part of annual income from 250,000 to 500,000 yuan	25
That part of annual income from 500,000 to 750,000 yuan	30
That part of annual income from 750,000 to 1,000,000 yuan	35
That part of annual income above 1,000,000 yuan	40

Article 4. In addition to the income tax levied on foreign enterprises in accordance with the provisions of the preceding article, a local income tax of 10% of the same taxable income shall be levied.

Where a foreign enterprise needs reduction in or exemption from local income tax on account of its small-scaled production or business, or low-profit rate, this shall be decided by the people's government of the province, municipality or autonomous region in which that enterprise is located.

Article 5. A foreign enterprise scheduled to operate for a period of 10 years or more in farming, forestry, animal husbandry or other low-profit occupations may, upon approval by the tax authorities of an application filed by the enterprise, be exempted from income tax in the first profit-making year and allowed a 50% reduction in the second and third years.

With the approval of the Ministry of Finance, a 15-30% reduction in income tax may be allowed for a period of 10 years following the expiration of the term for exemptions and reductions mentioned in the preceding paragraph.

Article 6. Losses incurred by a foreign enterprise in a tax year may be carried over to the next year and made up with a matching amount drawn from that year's income. Should the income in the subsequent tax year be insufficient to make up for the said losses, the balance may be made up with further deductions against income year by year over a period not exceeding five years.

Article 7. Income tax on foreign enterprises shall be levied on an annual basis and paid in quarterly instalments. Such provisional payments shall be made within 15 days after the end of each quarter. The final settlement shall be made within 5 months after the end of a tax year. Excess payments shall be refunded by the tax authorities or deficiencies made good by the taxpayer.

Article 8. Foreign enterprises shall file their provisional income tax returns with the local tax authorities within the period prescribed for provisional payments. The taxpayer shall file its final annual income tax return together with its final accounts within 4 months after the end of the tax year.

Article 9. The method of financial management and the system of accounting of foreign enterprises shall be submitted to local tax authorities for reference.

Where the method of financial management and the system of accounting of foreign enterprises is in contradiction

© 1982 International Bureau of Fiscal Documentation – BULLETIN

with the provisions of the tax law, tax payments shall be assessed according to the provisions of the tax law.

Article 10. Foreign enterprises shall present relevant certificates to the local tax authorities for tax registration when they go into operation or close down in accordance with law.

Article 11. A 20% income tax shall be levied on the income obtained from dividends, interest, rentals, royalties and other sources in China by foreign companies, enterprises and other economic organizations which have no establishments in China. Such tax shall be withheld by the paying unit in each of its payments.

For the payment of income tax according to the provisions in the preceding paragraph, the foreign companies, enterprises and other economic organizations which earn the income shall be the taxpayer, and the paying unit shall be the withholding agent. Taxes withheld on each payment by a withholding agent shall, within 5 days, be turned over to the state treasury and the income tax return submitted to the tax authorities.

Income from interest on loans given to the Chinese government or China's state banks by international finance organizations shall be exempted from income tax. Income from interest on loans given at a preferential interest rate by foreign banks to China's state banks shall also be exempted from income tax.

Income derived from interest on deposits of foreign banks in China's state banks and on loans given at a normal interest rate by foreign banks to China's state banks shall be taxed. However, exemption from income tax shall be granted to those foreign banks accordingly in whose countries income from interest on deposits and loans of China's state banks is exempted from income tax.

Article 12. The tax authorities have the right to investigate the financial affairs, account books and tax situation of any foreign enterprise, and have the right to investigate the withholding situation of any withholding agent. Such foreign enterprise and withholding agent must make reports on facts and provide all relevant information and shall not refuse to co-operate or conceal any facts.

Article 13. Income tax levied on foreign enterprises shall be computed in terms of renminbi (RMB). Income in foreign currency shall be assessed according to the exchange rate quoted by the State General Administration of Exchange Control of the People's Republic of China and taxed in renminbi.

Article 14. Foreign enterprises and withholding agents must pay their tax within the prescribed time limit. In case of failure to pay within the prescribed time limit, the appropriate tax authorities, in addition to setting a new time limit for tax payment, shall surcharge overdue payments at one half of 1% of the overdue tax for every day in arrears, starting from the first day of default.

Article 15. The tax authorities may, acting at their discretion, impose a penalty on any foreign enterprise which has violated the provisions of Articles 8, 9, 10 and 12 of this law.

In dealing with those withholding agents who have violated the provisions of Article 11 of this law, the tax authorities may, in addition to setting a new time limit for the payment of the part of tax that should have been withheld and, at their discretion, impose a penalty of not more than the amount that should have been withheld.

In dealing with foreign enterprises which have evaded or refused to pay income tax, the tax authorities may, in addition to pursuing the tax, impose a fine of not more than five times the amount of tax underpaid or not paid, according to how serious the offence is. Cases of gross violation shall be handled by the local people's courts according to law.

Article 16. In case of disputes with tax authorities about tax payment, foreign enterprises must pay tax according to the relevant regulations first before applying to higher tax authorities for reconsideration. If they do not accept the decisions made after such reconsideration, they can bring the matter before the local people's courts.

Article 17. Where agreements on tax payment have been concluded between the government of the People's Republic of China and the government of another country, matters concerning tax payment shall be handled in accordance with the provisions of these agreements.

Article 18. Detailed rules and regulations for the implementation of this law shall be formulated by the Ministry of Finance of the People's Republic of China.

Article 19. This law shall come into force as of 1 January 1982.

IFA NEWS

GREEK BRANCH

The following review written by Mr. Alun G. Davies, honorary president of IFA, has been submitted by the General Secretariat of IFA.

A Greek Economist's Journal,
by Professor Athanase John Sbarounis

Professor Athanase Sbarounis was the President of the XVIth Congress of the International Fiscal Association at Athens in September 1962, and continues to this day to be Chairman of the Greek Branch of IFA, which he has ably led for many years. It was during the Athens Congress that he introduced Dr. Mitchell Carroll, then President of IFA, for the presentation to Dr. Carroll of the Silver medal of the City of Athens. In the course of his address to the participants in the Athens Congress, the mayor of the City of Athens, Dr. Angelos Tsoukalas, recalled that Dr. Carroll's father had been a professor of Greek, and his mother a professor of Greek archaeol-

MALAYSIA:

1982 PROPOSALS

This survey was prepared by *SGV Taxation Services SDN. BHD.*, Kuala Lumpur, Malaysia.

I. INTRODUCTION

The Minister of Finance in his 1982 Budget Speech presented to Parliament on 23 October 1981 made several amendments and additions to the country's tax legislation. The proposals will become law when they receive the Royal Assent or when the relevant Orders/Rules are gazetted. Points 1 to 18 hereinafter are therefore subject to the aforesaid events.

II. 1982 BUDGET – SUMMARY OF DIRECT TAX AMENDMENTS

Income Tax Act, 1967

Banks – Special loan scheme

2% income tax rebate to banks amended with the intention of including over-drafts.

Shipping companies

- New 12-year exemption period introduced.
- Tax-exempt dividend limit increased to 15%.
- Relevant periods of 4 years each concept introduced re tax exemption consequent upon compliance with conditions.
- 50% abatement of chargeable income for the 12 years after the tax holiday period.

Insurance companies

Income tax rate on profits from insurance of offshore risks lowered to 5%.

Late payment of tax

Penalty of 1% per month for 5 months replaced by a 5% penalty upon expiration of 60 days from date of first penalty of 10%.

Interest to non-residents

Interest paid by banks licensed under the Banking Act, 1973 are exempted from withholding tax.

Accelerated depreciation allowanee

Qualifying period extended to 31 December 1985 and to all industries.

Tax-exempt interest income

- Savings account interest:
  - Bank Simpanan Nasional – no limit.
  - Bank Pertanian, Tabung Haji and Malaysia Building Society – interest on deposits up to $10,000 only.
  - Licenced banks and finance companies – interest on deposits up to $1,000 only.
- Time deposits – no limit on amount if deposits are for more than 12 months.

Tax-exempt dividend

Dividends from investment in Amanah Saham Nasional and other approved unit trusts up to $5,000 per annum.

Insurance premiums on imports

Double deduction allowed if insurance is taken out with an insurance company which is incorporated in Malaysia.

Wages of the handicapped

Employer who employs a disabled person is entitled for double deduction of the wages paid.

Real Property Gains Tax Act, 1976

Compulsory acquisition of land

Gains derived from compulsory acquisition will with effect from 23 October 1981 be exempt.

Inter-spouse land transfers

Tax-free transfers permitted between husbands and wives.

Deemed market value transactions

Extended to include those transactions between unconnected persons.

Transfers on reorganisation, reconstruction or in compliance with NEP amalgamation

- Condition on type of consideration removed.
- When assets are distributed by liquidator, no tax arises.

Sale of assets in the seventh years

Gains on assets sold in seventh year of ownership and thereafter, NIL tax rate.

Investment Incentives Act, 1968

Hotel incentives

- Abatement of chargeable income extended to 31 December 1986 for hotels of approved standard built and opened for business in Kuala Lumpur and Penang.
- Pioneer status and hotel accelerated depreciation allowance for hotels of approved standard built and opened for business in Kuala Lumpur and Penang extended to 31 December 1986.
- New incentive for all hotels of approved standard called Hotel Tax Credit (similar to investment tax credit) introduced.

General

Road transportation fees

Revised as follows:

		Rate	
		Current	*Proposed*
1.	the first registration fee for a motor vehicle other than an invalid carriage, a motor bicycle or a motor tricycle	$30	$60
2.	fee on the transfer of a motor vehicle other than an invalid carriage, a motor bicycle or motor tricycle	$20	$40
3.	fee for international driving licence	$30	$60
4.	fee for the issue of a duplicate license	$ 5	$20

Travellers and overseas visitors

New exemptions as follows:

1. Travellers to be exempted from import duty, surtax and sales tax on the following items:
(a) tobacco not exceeding 225 grams (equivalent to 200 cigarettes);
(b) matches not exceeding 100 sticks;
(c) cosmetics, perfumery, soap and dentifrices, in open containers to a total value not exceeding $200;
(d) wearing apparel not exceeding 3 pieces;
(e) footwear not exceeding 1 pair;
(f) electrically and battery operated portable appliances for personal care and hygiene not exceeding 1 unit each;
(g) dutiable foot preparations to a total value not exceeding $75;
(h) souvenirs and gifts to a value not exceeding $200.

For a visitor to enjoy the exemption, he must be in Malaysia for at least 72 hours while for a Malaysian returning from abroad he must be away for the same period. In addition, the articles must be the property of the visitor or the Malaysian and for his personal use.

2. A flat duty of 60% to be imposed on all dutiable items except motor vehicles, liquor and cigarettes brought in by travellers.

Abolition of excise duty and reduction of import duty

Categories of goods:
1. Electric lamps;
2. Electric rice-cookers;
3. Gas stoves;
4. Electric iron;
5. Electric kettle;
6. Oven;
7. Toothpaste;
8. Soap, washing preparations and scouring powder;
9. Cement;
10. Gramophone records;
11. Fans;
12. Mattresses.

III. AMENDMENTS TO THE INCOME TAX ACT, 1967

1. Tax rebate on loans to small business (Section 61B)

With effect from the year of assessment 1981, income tax chargeable on a lender who grants a qualifying loan to a small business is rebated by 2% per annum on the outstanding balance of the loan "calculated on a term loan basis".

It is proposed that the words "calculated on a term loan basis" be deleted from the year of assessment 1982 with the intention that the rebate would also be granted in respect of qualifying overdrafts.

(With effect from year of assessment 1982).

2. Shipping companies – tax exemption (Section 54A)

A 12-year exemption from tax for shipping companies was introduced from the year of assessment 1979.

The Bill proposes to create a replacement tax exemption period in that income tax relief will be given for all Malaysian shipping companies for a period of 24 years commencing from the year of assessment 1982 or date of incorporation, whichever is the later. The companies are required to meet two conditions:

(a) they cannot declare more than 15% dividend which will be tax exempt in the hands of shareholders;
(b) they must use at least 75% of the fleet acquisition reserve for the purchase of ships on the following basis:
  (i) for the first 12 years under this scheme, full exemption will be given if the 75% utilisation condition is fulfilled as at the end of every 4 years of operation, failing which they are then allowed to satisfy the 75% condition at the end of the 12th year.
  (ii) for the next 12 years, companies will be examined every 4 years for compliance of the 75% fleet acquisition reserve condition and the limitation of dividend to 15% tax exempt. If such conditions are fulfilled, the companies will be allowed an abatement of 50% of their chargeable income from tax.

Briefly the above changes mean that whereas a shipping company has previously to incur, by the end of its last basis period for the tax exempt period, capital expenditure to the extent of 75% of

© 1982 International Bureau of Fiscal Documentation – BULLETIN

fleet acquisition reserve account balance on the acquisition of ships or vessels in order to qualify for tax exemption, it is proposed that with effect from the year of assessment 1982 the 12-year tax-exempt period be divided into "relevant periods", each comprising 4 consecutive basis periods. Under the proposal the 75% requirement would be applied at the end of each relevant period. If a company fails to meet the 75% investment requirement at the end of any relevant period, tax exemption would not apply to that period unless at the end of the 12th year the 75% requirement is met with overall.

For the purposes of this incentive, the Bill provides that capital expenditure is deemed to have been incurred:

- when expenditure is made;
- on the signing of a contract for the purchase of a ship or vessel;
- when a similar commitment is undertaken and it is proved to the satisfaction of the Director Gefneral that such commitment is for the actual purchase of a ship or vessel.

(With effect from year of assessment 1982).

3. Shipping companies – abatement of chargeable income (new Section 54B)

It is proposed that from the year of assessment 1982, a Malaysian resident shipping company should have its chargeable income in respect of transporting passengers or cargo by sea abated by 50% for 12 years commencing from the year of assessment immediately following its tax exemption period described above under Section 54A.

Any chargeable income thus abated should be credited to an exempt account. Dividends paid out of the balance on this account would be tax exempt in the hands of shareholders. If a corporate shareholder is involved, dividends paid by that shareholder out of the exempt dividends received would be tax free to the shareholders of said company.

Similar restrictions as to the payment of dividends (15% limit) apply as described above.

As in the case of tax-exempt shipping companies, any excess of the audited net profit less actual tax payable and dividend paid should be credited to a fleet acquisition reserve which may only be reduced by capital expenditure incurred on the acquisition of ships and vessels.

The 75% investment requirement, relevant period concept, withdrawal of the tax exemption for any relevant period and definition of "incur" apply to the abatement provisions as they do to the exemption provisions.

(With effect from year of assessment 1982).

4. Insurance companies (Section 60)

The proposed new Section 60(2) provides that life, inward reinsurance, offshore insurance and general insurance business would all be treated as separate businesses.

Offshore insurance is defined as insurance of a risk under a general policy where the risk is outside Malaysia and the policy of insurance is issued by an insurer resident in Malaysia or a branch in Malaysia of a non-resident insurer. Where any risk is in transit in Malaysia, it shall be deemed to be outside Malaysia.

It is proposed that the adjusted income of the newly created class of separate business, the offshore insurance business, should be computed in the same way as the adjusted income of the general insurance business is computed both for resident as well as non-resident insurers, as the case may be.

(With effect from year of assessment 1982).

5. Offshore insurance – incentives (New Section 60B)

The new proposed Section 60B is a replica of the provisions of Section 60A except that it provides an incentive for the offshore insurance business and not the inward reinsurance business.

The Bill seeks to reduce the income tax rate on the chargeable income from inward reinsurance from 40% to 5% from the year of assessment 1982. As in the case of the inward reinsurance business the chargeable income less tax is available for franking tax-free dividends.

The existing Section 60B should, it is proposed, be renumbered Section 60C.

(With effect from year of assessment 1982).

6. Penalties on late payment of tax (Section 103(5A))

Under existing legislation, a 10% penalty may be imposed if tax is not paid by the due date(s). Further this percentage may be increased to 15% by additions of 1% for each subsequent period of 30 days during which tax charged under a notice of assessment remains outstanding.

The Bill seeks to replace the 1% per month penalty with a 5% penalty chargeable upon the expiration of 60 days from the date of the first penalty of 10%.

The proposed amendment would assist the Inland Revenue in its administrative functions.

(With effect from year of assessment 1982).

7. Tax-exempt interest (Schedule 6 Paragraph 33)

The anticipated revisions to the above paragraph would from the year of assessment 1982 enable licensed banks to pay or credit interest to any non-resident, including the overseas branch of a non-resident bank, without deduction of withholding tax. Such interest would not be subject to Malaysian tax unless it accrues to a place of business of that non-resident in Malaysia.

(With effect from year of assessment 1982).

IV. AMENDMENTS TO THE REAL PROPERTY GAINS TAX ACT, 1976

8. Compulsory acquisition of land under law (New Paragraph 3(f) Schedule 2)

The Bill seeks to provide that gains on disposals on or after 23 October 1981 arising from compulsory acquisitions of land under the Land Acquisition Act, 1960 are not subject to tax under the Act as the disposal price would be deemed to be equal to acquisition price.

(With effect from 23 October 1981).

9. Transfer of chargeable assets between spouses (paragraph 3(b) Schedule 2)

Under the proposed amendment, any transfer of chargeable assets between husbands and wives from 23 October 1981 would be tax free as the disposal price would be deemed to be equal to the acquisition price. (Nevertheless, for the purpose of the private residence exemption, only one life-time exemption will continue to be available to both husbands and wives as any private residence owned by the wife would, for the purposes of this exemption, be deemed to be owned by her husband.)

(With effect from 23 October 1981).

10. Transactions deemed to be at market value (New Paragraph 9(e) Schedule 2)

The Bill seeks to specifically provide that from 23 October 1981, in cases where the anti-tax avoidance provisions of Section 25(2) apply, e.g. where there is evasion or avoidance of tax, the acquisition and disposal of the chargeable assets in question shall be deemed to be at market value.

(With effect from 23 October 1981).

11. Intra-group transfers and transfers upon reorganisations, etc. (Paragraph 17(1)(b) Schedule 2)

Sub-paragraph 17(1)(b), which was subjected to a major alteration in 1977, would, if the proposed amendment is passed, be again changed.

At present, in order that exemption from tax could be claimed, where a chargeable asset is transferred under a scheme of reorganisation, reconstruction or amalgamation, consideration receivable should be in the form of shares or substantially in the form of shares and the balance in cash. The amendment does not place any restrictions on the form of consideration receivable and a wholly cash consideration is now possible.

Further, the amendment provides that where a chargeable asset is distributed in specie by a liquidator under a scheme of reorganisation, reconstruction or amalgamation, no taxable gain or loss arises.

The usual conditions that the transferee company must be a Malaysian resident company and the scheme must be in accordance with the New Economic Policy on capital participation in industry must be met in order to qualify for exemption.

It should be noted that the condition that the consideration should be in the form of shares, or substantially in the form of shares and the balance a money payment, would continue to apply to intra-group transfers for the promotion of greater efficiency in operation under Paragraph 17(1)(a).

(With effect from 23 October 1981).

12. Rate of tax (Schedule 5)

A new tax band has been created under the Bill. Assets sold after the 6th anniversary of the date of acquisition will no longer be subject to tax as the relevant rate of tax would be reduced from 5% to 0% in respect of disposals made on or after 23 October 1981.

Non-citizens and non-permanent residents of Malaysia would however continue to be taxed at 40% on assets acquired after 17 October 1980 irrespective of the period of ownership. However, if the assets were acquired by the non-citizens or non-permanent residents prior to 17 October 1980, then gains on such disposals would be entitled to the graduated rates of tax or the exemption depending on the holding period.

V. OTHER AMENDMENTS BASED ON THE 1982 BUDGET SPEECH

13. Accelerated depreciation allowance (ADA)

Under the existing 1980 Rules, qualifying plant expenditure incurred from 1 January 1978 to 31 December 1982 on the provision of machinery or plant used directly in the manufacture of any product or subjection of goods to any process would qualify for capital allowances of 100% in the year in which the expenditure was incurred.

The Minister of Finance has proposed that ADA should be granted to all industries (apparently in its widest possible sense), including the leasing industry, on qualifying plant expenditure incurred in the period to 31 December 1985.

An Order to this effect should be made in due course and it is expected that companies enjoying pioneer status, etc. would continue to be excluded from claiming ADA.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

14. Tax exemption on interest income

The current exemption available on interest on savings accounts with the Bank Simpanan Nasional is that on a deposit of $30,000 for a calendar year. It is proposed that this limit be removed from the year of assessment 1982 such that all savings account interest from the Bank Simpanan Nasional would be tax exempt.

Interest on savings deposits of up to $10,000 placed by individuals with registered cooperatives, Bank Pertanian, Tabung Haji, or the Malaysia Building Society would remain exempted from tax as at present.

However, in the case of interest from licensed banks and finance companies, interest on savings deposits of up to $1,000 only would be tax exempt from the year of assessment 1982. The current exemption level is interest on $10,000.

It is proposed that the limit placed on interest on fixed deposits exceeding 12 months currently stated at deposits of $10,000 be removed from the year of assessment 1982 such that all interest on deposits exceeding 12 months with approved institutions, e.g. licensed banks and finance companies, would be tax free. Although there are no fixed deposits of 12 months plus one day, it appears possible to claim tax exemption in respect of interest on 15-month fixed deposits prematurely terminated after 12 months.

Whilst for the year of assessment 1981 the exemption applied to individuals as well as companies, it would appear from the Minister's speech that the new exemption Order when issued would restrict the exemption to individuals only from the year of assessment 1982.

15. Double deduction on insurance premiums

With a view to encouraging the insurance of imported goods with locally incorporated companies, it is proposed that any importer who incurs premiums in respect of the insurance of goods imported into this country would from the year of assessment 1982 qualify for a double deduction on the expense if the insurance is taken out with a Malaysian incorporated insurer.

Clients may therefore consider changing the basis of purchasing goods to exclude the CIF basis, where relevant.

16. Double deduction for wages of handicapped employees

As an incentive for the employment of the handicapped, it is proposed that from the year of assessment 1982, the wage expense of employing the disabled should qualify for a double deduction.

17. Incentives to hotels

The abatement of chargeable income provision is an incentive offered to the hotel industry. Under this incentive, chargeable income is abated by between 15% to 30%, depending on the location of the hotel, for 12 years of assessment. In respect of Kuala Lumpur and Penang, this incentive expired on 31 December 1973. In view of an anticipated shortage of hotels in these areas, it is proposed that the incentive be extended to hotels completed or modernised by 31 December 1986.

Further, it is proposed that pioneer status and accelerated hotel depreciation allowance be extended to all hotels of an approved standard in Kuala Lumpur and Penang which are completed/modernised and opened for business from 1 January 1974 to 31 December 1986.

A new incentive hotel tax credit which is similar to investment tax credit is to be introduced for all areas. In respect of Kuala Lumpur and Penang, this incentive will be available up to 31 December 1986. It is expected that under hotel tax credit, companies will be able to claim a minimum credit of 25% calculated by reference to capital expenditure incurred on the hotel building and plant, machinery and apparatus used in the hotel business in the period of 5 years from the beginning of the financial year in which the hotel project was approved for hotel tax credit purposes. The actual credit percentage granted could be much higher than 25%. Relief is claimed through a reduction of the adjusted income of the company by utilising the credit granted. As the credit may be utilised at any time, this incentive would be expecially beneficial if the company does not expect to realise profits within the first few years of operation.

18. Exempt dividends from approved unit trusts

It is proposed that with effect from the year of assessment 1982, the amount of exempt dividends receivable from the Amanah Saham Nasional and other approved unit trusts be increased from $4,000 to $5,000.

VI. CHANGES IN INLAND REVENUE PRACTICES

19. Progressive profits basis of assessing housing developers

The Inland Revenue has previously accepted the completed contract basis of assessing developers. However, since 1981 there has been a move to assess developers on a progressive profits basis. The text of an individual directive by the Inland Revenue is reproduced below:

"As the definition of stock-in-trade in Section 2 of the Income Tax Act, 1967 includes work-in-progress, a company's development projects qualify for a direction under Section 36 of the Act.

Accordingly, the Director-General has directed that under Section 36 of the Act, the gross income and adjusted income from each project for the basis period for each year of assessment in the period within which each project is carried on and completed by the company shall be computed in the following manner:

$$\frac{\text{Total amounts of payment received in the basis period for the year of assessment}}{\text{Full sale consideration}} \times \text{Adjusted income finally ascertained on completion of the project}$$

Pending completion of each project for the purpose of provisional assessment, the company is required to estimate the net profit in respect of the project and the same should be allocated to the basis period for the particular year of assessment in the proportion of the total amount of payments received in that basis period to the full value of the project (consideration). The statutory income can then be arrived at after deducting therefrom the capital allowance due for the year."

"Payment received" includes booking fees and advances. A review of the position would arise following the completion of the project when any tax adjustments necessary would be made restrospectively.

MALAYSIA:

BUDGET 1982

Extracts from the Budget Speech 1982 pronounced on 23 October 1982 by Mr. Mulia Tengku Razaleigh Hamzah, Minister of Finance.

A detailed discussion of the Malaysian tax system appears in the Publication: Taxes and Investment in Asia and the Pacific

Export duty exemption for processed palm oil

It is very encouraging to note the rapid growth which has taken place in the palm oil refining industry in the last few years as a result of the tax incentive provided by the Government in the form of exemption from the export duty on processed palm oil products. While this incentive has been effective in promoting downstream processing of palm oil, it is necessary to make some changes to the duty exemption structure in order to take account of higher costs of refining and to encourage a wider variety of export products. It is therefore proposed that:

(i) the basic level of exemption will be increased from about $75 to $95 to take account of higher cost of refining;

(ii) processed palm oil products will now be classified into 5 categories instead of 4 categories as at present. There will be a new category III to take account of a product which has undergone three stages of processing and which should therefore be given more duty exemption;

(iii) the rates of exemption will be adjusted, so that there is a difference of 5 percentage points between each of the categories. In effect, this will mean that the exemption rates for category II in the present structure will be reduced by 5 percentage points, with no change in the other categories. Thus, the present policy which emphasises the export of a variety of refined palm oil products will be maintained.

To be consistent with this policy, the export duty on stearin which is now at a flat rate of 5% will also be changed. Thus, from now on, fully refined stearin will not be subject to the export duty. The 5% export duty will only apply to crude and semi-refined stearin.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

The new changes will give, on the average, an additional gain of about $20 per ton to the manufacturers of palm oil products.

. . .

Hotel Incentives

To further encourage tourism, the hotel incentives for Kuala Lumpur and Penang island, which expired at the end of 1973, will be further extended up to 31st December, 1986 for hotels of approved standard.

In addition to the existing incentives, namely full tax relief under pioneer status conditions and abatement of chargeable income, the Government will also introduce a new incentive in the form of Hotel Tax Credit to be provided in all areas.

In the case of Kuala Lumpur and Penang island, this incentive is available only up to 31st December, 1986. This tax incentive will be similar to the Investment Tax Credit which is being provided for the manufacturing sector i.e. a minimum tax credit of 25% of the total capiutal expenditure incurred on the project.

. . .

Real Property Gains Tax Act

The Real Property Gains Tax Act will be amended to exclude gains arising from the transfer of a house between a husband and a wife from the tax. A transfer between a husband and a wife is an internal dealing within the same household, and therefore should not attract tax under the Act.

The provision under the Real Property Gains Tax Act to exempt gains arising from restructuring of companies to conform with the New Economic Policy is found to be restrictive. The Act requires that the companies carry out the transactions in shares or substantially in shares and the balance in cash.

This requirement may deter foreign companies to restructure as they may not want to hold shares in the locally incorporated companies and minority shareholders may prefer cash.

Therefore, the Act should be amended to allow exemption even if the transaction consists of money payment rather than in shares provided that the transfer is made under an approved scheme of reconstruction. Distribution of assets by the liquidation of a company will also not be taxed if it is done under an approved scheme of reconstruction.

Another change is to exclude from tax the gains arising from the disposal of an asset which is compulsorily acquired by the Government.

Finally, it is also proposed that from to-day any gain derived from the sale of assets in the 7th year onwards after their acquisition and thereafter will not be subject to tax. At present, tax is imposed at 5% on the gain from the disposal of an asset in the 7th year of acquisition onwards.

. . .

Double deduction

We remember our Ex-Servicemen, especially those who have been incapacitated in the line of duty. It is also important to maximise the utilisation of our manpower resources. Thus, to encourage the employment of the handicapped, and in keeping with the compassionate spirit of the Year of the Handicapped, I propose that double deduction will be provided for wages incurred in employing handicapped persons. All equipment and appliances for the specific use of the handicapped will also be exempted from customs duty. The surtax and sales tax will be abolished for wheelchairs, artificial arms, artificial legs, calippers, hearing aids, buggy invalid chairs and dialysis machines.

Apart from expanding public expenditure, the private sector, will also be encouraged to maintain a high rate of growth in investment and production. At present, Accelerated Depreciation Allowance (ADA) is provided up to basis year 1982.

However, because it has proved beneficial to industries, and has helped to promote industrialisation and modernisation, the period for the ADA will be extended up to basis year 1985. Its scope will now be widened to include not only the manufacturing sector, but to all industries including leasing.

It is expected that this new extension will contribute significantly to greater investment and economic growth as the ADA allows 100% of the capital expenditure to be written off in one year.

The granting of Investment Tax Credit will be geared to provide more tax benefits in order to expedite the development of heavy and ancillary industries.

Thus, while the minimum rate of tax credit granted under this incentive is 25% of total capital expenditure incurred in the project, priority industries will be granted higher rates in order to give them greater relief from tax.

An important incentive available to industries in the manufacturing sector is the exemption from import duties, surtax and sales tax on their imports of raw materials and machinery.

I propose to streamline the administration of duty exemptions so as to make it expeditious and more widely available to the manufacturing sector. Thus:

(a) The surtax on imports of a wide range of raw materials which are not available locally and for which there is only a surtax of 5% will be abolished. Instead, the reduced rate of surtax at 2% or 3% as the case may be, which is payable under the existing exemption system, will be integrated into the import duty. The advantage of this proposal to manufacturers is that they can now obtain the reduced duty of 2% or 3% for importing their raw materials without having to apply for it;

(b) As a further incentive, those industries which import the raw materials bearing the 2% or 3% rate of import duty, can apply for exemption from this duty if such industries comply with the New Economic Policy in terms of equity participation, management and employment structure upon certification by the Foreign Investment Committee;

(c) Furthermore, the surtax and sales tax on imports of machinery and equipment which are not produced locally and which are directly used in manufacturing, will now be totally abolished.

. . .

Shipping

In order to help expand our shipping industry and reduce the foreign exchange paid to foreign shipping, the 1979 tax incentive for the shipping industry will be replaced by a new incentive scheme to make it more attractive for Malaysian ship-owners.

It is proposed now that income tax relief be given to all Malaysian companies for a period of 24 years commencing from the year of assessment 1982 or date of incorporation, whichever is the later. The companies are required to meet two conditions namely:

(a) they cannot declare more than 15% dividend which will be tax exempt in the hands of the shareholders; and

(b) they must use at least 75% of the fleet acquisition reserve for the purchase of ships.

For the first 12 years such companies will be eligible for full tax relief. In the next 12 years, these companies are eligible for a 50% abatement of chargeable income.

. . .

Insurance

Another important area where foreign exchange can be conserved is in insurance. As Malaysia develops, the service sector of the economy and the Balance of Payments must also expand.

Thus the preferential tax treatment provided in the 1980 Budget for inward reinsurance will be extended to insurance companies covering offshore risks as a further encouragement for them to break into the international insurance market.

Therefore, the tax rate applicable to profits earned by Malaysian incorporated companies on the coverage of offshore risks will be reduced from the normal company rate of 40% to 5%.

Malaysian importers will also be further encouraged to insure with Malaysian insurance companies. For this purpose, it is proposed to provide an incentive in the form of double deduction from income tax on the insurance expenses for the cargo.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

SRI LANKA:

BUDGET 1982

Extracts from the Budget Speech for 1982 pronounced on 23 October 1981 by Mr. Ronnie de Mel, the Minister of Finance and Planning.

See for a detailed discussion of Sri Lanka's tax system the Bureau's publication: Taxes and Investment in Asia and the Pacific

A. Direct taxes

1. Surcharge on Income tax and Wealth tax

Mr. Speaker, in the country's present difficult financial situation, at a time when the ordinary man is called upon to bear considerable burdens due to the rise in the cost of living, I feel that the more affluent sections of the population should make a greater contribution to government revenue. We must remember that we cannot continue to balance the budget on the backs of the poor. I therefore, propose to impose a surcharge both on income tax and on wealth tax. The surcharge on income tax will be different from the surcharges which have been levied in the past. The surcharge will be on a progressive rate schedule and only the more affluent taxpayers will be called upon to pay it. The surcharge will not be levied on companies and individuals whose taxable income does not exceed Rs.25,000. The surcharge will be levied on income tax and wealth tax payable for the year of assessment 1981-82 as follows:

(a) Income tax:

(i) Companies, bodies of persons, etc. –
Where the taxable income exceeds Rs.25,000 and does not exceed Rs.50,000 – 5% of the income tax payable;
Where the taxable income exceeds Rs.50,000 – 10% of the income tax payable.

(ii) Individuals –
Where the taxable income exceeds Rs.25,000 and does not exceed Rs.50,000 – 5% of the income tax payable;
Where the taxable income exceeds Rs.50,000 and does not exceed Rs.200,000 – 10% of the income tax payable;
Where the taxable income exceeds Rs.200,000 – 15% of the income tax payable.

(b) Wealth tax:

A surcharge of 10% on the Wealth Tax payable.

These surcharges will bring in additional revenue of Rs.200 million.

2. Tax incentives

Mr. Speaker, there has been a drop in the revenue collected from direct taxes in recent years. One of the main reasons for this drop is the provision of numerous tax holidays as incentives for investment. While there was justification for those incentives in the early stages of our new economic policies, I am of the view that tax holidays should not be a permanent feature of our tax system because of their revenue and equity implications. I, therefore, propose to have a cut-off date for approvals for tax holidays and to fix this date as 31st March 1983. Approvals granted up to this date will hold good only if meaningful steps are taken within one year from the date of approval. Mr. Speaker, this proposal would have the effect of inducing entrepreneurs to take positive steps, within the next year or two, to embark on new ventures. This would further accelerate the development programme of the country. The removal of the tax holiday would not apply to export-oriented enterprises licensed by the GCEC.

3. Exemption of profits arising to foreign contractors

There is provision under Section 22 of the Inland Revenue Act for the exemption from income tax of the profits accruing to foreign contractors, under certain specified circumstances. Mr. Speaker, there is no justification for continuing to exempt such profits. This provision was introduced at a time when Sri Lanka did not provide an attractive climate for investment and when there were only a few Double Tax Relief Agreements.

Exemption under this section is now not granted to a contractor who is a resident of a country with which there is a Double Tax Relief Agreement. The reason is that, where there is such an agreement, Sri Lanka tax paid is allowed as a credit against the tax payable in the contractor's home country. If exemption is granted to the foreign contractor he would not get such a tax credit and would have to pay the full tax in his home country. Sri Lanka would thus unnecessarily forgo revenue for the benefit of a foreign government.

I, therefore, propose to repeal Section 22 of the Inland Revenue Act.

4. Small company relief

Mr. Speaker, in order to encourage the small entrepreneurs to organize their businesses as limited liability companies, concessionary rates of tax have been granted to small companies. The existing provisions define a small company as one whose issued capital does not exceed Rs.500,000.

Resident companies other than quoted public companies pay tax at 50% of their taxable income, while quoted public companies pay tax at 40%.

Instances have come to light of companies earning high incomes which maintain their issued share capital at a figure of less than Rs.500,000 in order to benefit from the concessionary rates of tax. I, therefore, propose to subject small companies to the normal rate of tax of 50% on the excess of their taxable income over Rs.250,000 per annum.

A small company which is a quoted public company would, however, continue to pay tax on the present rate-schedule applicable to small companies even if its taxable income is over Rs.250,000.

5. Foreign entertainers and artistes

At present there is no provision in the Inland Revenue Act to compel an employer or a sponsor to withhold a percentage of the payments made to foreign entertainers, artistes, etc., for tax purposes. In order to prevent any loss of revenue by the non-payment of tax by these persons, I propose to make suitable amendments to the Inland Revenue Act so as to empower an employer or sponsor to withhold 33⅓% of the payments due to these categories of persons against their tax liabilities.

6. Minors' extended deposit schemes

Mr. Speaker, several banks have started deposit schemes whereby the deposits made on behalf of minors are payable with interest to the beneficiary after a period of 20 years or more. Under the present law, tax on interest has to be calculated on an accrual basis for each year of assessment. In view of the long period of maturity of these deposits, it will not be practicable for taxpayers to ascertain the interest each year and to pay tax on such interest. I, therefore, propose that –

(a) the banks should be required to deduct tax at 15% on the interest element from the amount payable on maturity or at the time of withdrawal;
(b) the tax so deducted should be deemed to be a final levy.

This mode of payment of tax would be convenient both to the taxpayer and to the banks.

7. Interest payable under the Land Reforms Act

Mr. Speaker, under the Land Reform (Amendment) Act, No. 39 of 1981, interest at 10% is payable on compensation due to the previous owners of lands taken over by the Land Reform Commission. Interest income is liable to income tax on an accrual basis. It will not be practicable, however, to make assessments from 1972-73 onwards on the additional tax payable by these owners as a result of these interest payments. I, therefore, propose that –

(a) the interest payable at the rate of 10% under the Land Reform Law should be treated as income arising in the year in which the interest is actually paid;
(b) the Land Reform Commission should be required to deduct tax at 10% from the interest payable;
(c) the tax so deducted should be deemed to be a final levy.

This will yield a net interest rate of 9% on the recipients.

8. Non-Resident Foreign Currency Accounts

Mr. Speaker, at present the interest arising on deposits in Non-Resident Foreign Currency Accounts is exempt from income tax only during the period in which the holder of the account is not resident in Sri Lanka. These deposits are, however, exempt from wealth tax both during the period in which he is non-resident and for a further period of three years after he becomes resident.

With a view to making Non-Resident Foreign Currency Accounts more attractive, I propose that, as in the case of wealth tax, the interest on these deposits should be exempt from income tax both during the period in which the holder of the account is non-resident and for a further period of three years after he becomes resident.

9. Exemption of earnings abroad

There is provision under the Inland Revenue Act to exempt the emoluments earned in foreign currency by an individual in respect of services rendered abroad if such emoluments (less reasonable personal expenses) are remitted to Sri Lanka. This provision was enacted to encourage Sri Lankans who are engaged in short-term assignments abroad to bring back their foreign exchange savings to Sri Lanka. In recent years, several resident consultancy firms have also been engaged in rendering services abroad for payment in foreign currency. Mr. Speaker, I am of the view that these resident companies and partnerships too should be granted a tax exemption similar to what is available to individuals, which would act as an incentive for them to bring back their foreign exchange earnings to Sri Lanka. I propose to make the necessary changes to the Inland Revenue Act.

B. Turnover tax and import duty

1. Turnover Tax on Imports on Manufacturing businesses

Mr. Speaker, under the existing law, Business Turnover Tax at rates ranging from 1% to 35% is levied on locally manufactured goods, whilst import duties at rates ranging from 5% to 500% are

© 1982 International Bureau of Fiscal Documentation – BULLETIN

levied on imported goods. In addition, there is a turnover tax on services and a general turnover tax of 2% on non-manufacturing businesses.

The present import duty has two functions. It is partly a revenue measure and partly a protective measure to assist local industries.

It is desirable that the two elements of import duty, namely, the revenue element and the protection element, be separated. This would ensure that the revenue component of import duty at the point of import would be identical to that of the turnover tax on a locally manufactured article when sold. The balance payable at the point of import will represent the level of protection afforded to the locally produced article. The new Turnover Tax Act will enable tax to be levied on this basis.

Under the existing provision, turnover tax in respect of manufacturing businesses is levied at rates ranging from 1% to 35%.

Mr. Speaker, under the new scheme which will take effect immediately, a turnover tax will be imposed on most of the imports. This will be in addition to the present customs duty. However, where an imported item is used in the manufacture of goods or commodities in Sri Lanka, the turnover tax paid on the imported item will be deducted from the turnover tax payable by the manufacturer. Similarly, where a locally manufactured component is used in the manufacture of another item, the turnover tax paid on the component will be deducted from the tax payable by the final manufacturer. In other words, the tax levied on the manufacturer will only be on the value added. The new system will, therefore, be more equitable and will provide a certain degree of relief to the local manufacturer. To provide further relief to the local manufacturer, I propose, with the introduction of the new turnover tax on imports, to reduce the Customs duty on machinery and essential raw materials used in industry from the present level of 12.5% to 5%.

There will be only 3 basic rates of turnover tax, namely, 2%, 5% and 10%. A three-tier rate structure simplifies the administration of the tax.

The 2% rate will apply to:
Agricultural inputs;
Building materials;
Food items (other than infant milk foods which would be free of tax);
Fishing boats and fishing nets;
Handloom and pure cotton textiles;
Petroleum and petroleum products;
Pharmaceuticals (including ayurvedic preparations);
Other manufactured items which are now subject to turnover tax at 1%.

Mr. Speaker, some of these items are items of mass consumption, but I feel that there is no alternative to taxing goods which are articles of mass consumption if additional resources of the magnitude required have to be mobilized. This is the price we have to pay for development and employment.

The increase in the prices of these commodities as a result of the tax will be only marginal. For example, a 2% tax will have no real impact on the price as rice is no longer a controlled commodity. The seasonal fluctuations in the price on the free market will greatly exceed the 2% tax which will amount to only about 10 cents a measure of rice.

The 5% rate will apply to practically all the other items. However, a very few items which are at present taxed at over 5% will fall into the 10% band.

In the case of liquor and beedies, the existing rate of 15% will continue, whilst in the case of tobacco and cigarettes, the existing rate of 35% will continue.

Mr.Speaker, the existing business turnover tax law contains a host of exemptions. There is no justification for these exemptions, and I propose to remove most of them. However, undertakings for the manufacture of desiccated coconut, copra, coconut fibre, coconut oil, crepe rubber, sheet rubber, block rubber, scrap rubber or tea, as well as undertakings for the cultivation of tea, rubber and coconut, will be gazetted as exempted business.

Mr. Speaker, I also proposed to exempt the following items from turnover tax:
(a) Infant milk foods;
(b) Fertilizer;
(c) Crude oil;
(d) Articles manufactured in Sri Lanka and exported by the manufacturer (excluding jewellery and gems);
(e) Goods or materials which are imported and proved to the satisfaction of the Principal Collector of Customs to be goods or materials which would be used in the production in Sri Lanka of goods or commodities for export.

These items will be classified as "excepted articles".

The additional revenue expected from the new scheme of turnover tax is estimated at Rs.1,290 million.

2. Banks, Finance Companies and Pawnbrokers

Mr. Speaker, banks are now liable to a turnover tax of 2% on their income receipts. The banking sector has recorded a high rate of growth of 10% in 1979 and 15% in 1980. This sector has been enjoying substantial profits over the past 2-3 years which are mainly a reflection of the greater economic activity and their increased external transactions. I propose to increase the rate of turnover tax on banks from 2% to 5%.

Finance companies are now liable to BTT at 5% on their total receipts, which include capital sums as well. There is no rationale for adopting a different basis for levying turnover tax on finance companies as compared to banks, particularly as banks also engage in hire purchase business, which was earlier the preserve of finance companies. Also, finance companies, like banks, are now subject to supervision and control by the Central Bank. Accordingly, in the new Turnover Tax Act the definition of turnover as applicable to finance companies has been amended to bring it in line with that applicable to banks. However, I propose to increase the rate applicable to finance companies from 5% to 10%.

Pawnbrokers are also liable to turnover tax on their total receipts which include capital sums. I propose to adopt the same definition of turnover so that pawnbrokers will hereafter be liable to turnover tax, as in the case of banks and finance companies, only on their income receipts. I propose, however, to increase the rate of turnover tax from 2% to 5%.

The additional revenue from this proposal relating to banks, finance companies and pawnbrokers will be about Rs. 50 million.

3. Advertising

Mr. Speaker, during the past few years there has been a significant increase in advertising expenditure, and the newspapers have benefited from this increase. I, therefore, purpose to increase the rate of turnover tax on the advertising receipts of newspapers and periodicals from 5% to 10%.

The additional revenue from this source is estimated to be around Rs. 10 million.

4. Construction

Mr. Speaker, there are a number of businesses in which there has been a phenomenal increase in activity over the last two or three years as a result of the policies adopted by the present Government.

Two sectors have enjoyed particularly large increase both in their total turnover and in their profits. One such sector is the construction industry.

Mr. Speaker, it is my view that the contractors engaged in construction activities, as well as architects and consultants engaged in these activities, can well afford to pay higher rates of turnover tax.

In the case of contractors in the construction industry, the rate of turnover tax is, therefore, being increased from 2% to 3% of the total value of the contract. In the case of architects and consultants, the rate of turnover tax is being increased from the present level of 5% to 10%. The rate for the other professions will remain at 5%.

5. Hotel Sector

Mr. Speaker, the other sector which has enjoyed particularly large increases both in its total turnover and in its profits is the hotel industry. Tourist arrivals have increased rapidly in the last 3 years and hotel owners have increased their room rates sharply because of the increased demand. Room charge increases are far in excess of the amounts warranted by increased costs. The hotel owners have also been given very liberal income tax concessions so that the large profits made by them are not subject to tax periods ranging from five to ten years.

I am confident that hotels can easily pay an increased rate of turnover tax. I, therefore, propose to increase the rate of turnover tax on hotels from the present level of 15% to 20%. The new rate will be made effective from 1st April 1982 in order to give hotels sufficient notice of the change.

Representations have been made that if the higher rate of turnover tax is levied not only on hotel room charges but also on hotel restaurant charges, hotel restaurants would not be able to compete with outside restaurants. I am, therefore, increasing the turnover tax payable by restaurants which are patronized by tourists. Such restaurants are registered with the Ceylon Tourist Board and are given liquor licences on the basis of such registration.

The rate of turnover tax applicable to luxury restaurants will be increased from the present rate of 2% to 10%.

The additional revenue expected from these proposals would be approximately Rs. 25 million.

6. Import duty exemption – Government Departments

Mr. Speaker, I am of the view that the duty exemption which is at present available to government departments and to some corporations on imports made by them should be removed. The removal of the exemption would not, of course, provide the Government with any additional funds, as the duty would appear both on the receipts and expenditure sides of the Budget, but, if government departments and corporations paid normal duties, we would have a more realistic picture of government expenditure and costs of various projects. In addition, potential domestic suppliers of intermediate inputs or of final products would be given a fair chance to compete. At present, contractors for Government who import finished goods for use on contracts can import them duty free, while local suppliers who fabricate products from imported components pay duty. The reduction of duty exemptions will also simplify the administration of customs to a great extent. Finally it will prevent any leakage or avoidance of duty.

Preparations for this change will be made in 1982 and it will be brought into force from 1st January 1983.

C. Excise duties

Mr. Speaker, excise duties on liquor and the tobacco tax have been revised upwards with almost monotonous regularity with every Budget. In spite of the resulting price increases, revenue from liquor and tobacco taxes has continued to grow. After an initial dip in demand immediately following the price increase, demand once again picks up to maintain an upward trend. In view of this, I am proposing the following increases in respect of liquor, cigarettes and beedies.

1. Liquor

The increase in excise duty on liquor with effect from midnight today, will result in the following price increases:

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Molasses arrack	Rs. 3 per bottle
Coconut arrack	Rs. 5 per bottle
Processed arrack	Rs. 10 per bottle
Country-made foreign liquor	Rs. 10 per bottle

In the case of imported liquor, the new turnover tax will increase the price of a bottle of whisky by approximately Rs. 30 and the price of a bottle of brandy by approximately Rs. 35 to Rs. 40.

The additional revenue expected from this proposal is around Rs. 175 million.

2. Cigarettes

Mr. Speaker, I propose to increase the tobacco tax by Rs. 41 per kilogramme, from Rs. 241 per kilogramme to Rs. 282 per kilogramme with effect from midnight today. This increase in tobacco tax will have the effect of putting up the retail prices of all brands of cigarettes by 5 cents per cigarette.

The import duty on raw tobacco will be increased by the same amount so as to equalize the duty incidence.

The additional revenue from this proposal is about Rs. 255 million.

3. Beedies

Mr. Speaker, the price differential between beedies and cigarettes has continued to widen with every Budget, when invariably the price of cigarettes was increased by an increase in the tobacco tax or in the BTT rate, with no corresponding increase in the tax on beedies.

I am, therefore, considering the imposition of an excise duty on beedies, which will bring in additional revenue of around Rs. 70 million. The necessary amendments to the Excise Ordinance to give effect to this proposal will be introduced in Parliament before the end of this year.

4. Beer

Mr. Speaker, the current excise duty on beer amounts to Rs. 12.50 per litre or approximately Rs. 9.40 per bottle of beer. The duty on beer in 1978 was Rs. 4 per litre and was increased to Rs. 6.33 per litre in January 1979 and to Rs. 8.50 per litre in February 1980. Thus, within a space of three years the duty has been pushed up by more than 300%. There is definite evidence that there has been consumer resistance to the high price of beer, which at present is retailed at around Rs. 19 per bottle exforeign liquor shops. The demand for beer, which is not a hard liquor like arrack, has been on the downward trend, mostly due to the sharp increase in prices. I propose therefore, to reduce the duty on beer. The resulting reduction in the price of beer coupled with the proposed increase in the price of arrack would help in weaning people away from the consumption of hard liquor. The excise duty reduction will also encourage the sale of local beer as against imported beer, as no corresponding reduction is being made in the import duty on imported beer.

I propose to reduce the excise duty on beer from its present level of Rs. 12.50 to Rs. 8.50 per litre, which was the level at which it stood before the last increase in November 1980. This should enable the retail price of beer to be reduced by about Rs. 3 per bottle. I expect the increase in consumption to more than offset the effect of the decrease in the rate of duty.

D. Licence tax fees

Mr. Speaker, licence fees and charges for services rendered by various government departments bring in about Rs. 300 million annually to the Government. Most of these fees and charges have not been revised for a long time. I feel that these fees and charges should be revised so as to bring them in line with current costs and prices.

1. Liquor Licence Fees

Mr. Speaker, licence fees on liquor shops and beema salawas are at present collected by the Government Agents and passed on to the local authorities.

I propose that the issue of a licence should, in addition to a licence fee, be subject to a stamp fee as well. The stamp fee will vary, depending on the type of activity for which the licence is issued. Higher stamp fees will be payable in respect of licences within the municipal areas.

The additional revenue from this proposal will be about Rs. 10 million.

2. Stamp duty on cheques

I propose to increase the stamp duty on a cheque from 10 cents to 25 cents. This proposal will yield an additional revenue of Rs. 3 million.

3. Licence fees on Government Vehicles

Mr. Speaker at present there is no licence fee payable on vehicles owned by government departments. I propose that these vehicles should also be liable to licence fees. This would be in keeping with my proposal that government imports be subject to import duties.

4. Fees for Registration of Nursing Homes

Most of the nursing homes in the city as well as in provincial towns are doing well and there is no reason why they should not be called upon to contribute to government revenue. I, therefore, propose that the fee for first registration be increased from Rs. 100 to Rs. 10,000 and that the annual licence fee be increased from Rs. 50 to Rs. 2,000.

5. Other fees and charges

Mr. Speaker, there are a number of services for which fees are charged by the respective government departments under various laws and ordinances which govern the levy of such fees. I propose that the fees charged under the following heads be doubled so as to bring these fees in line with the increased costs of providing these services:

(i) Court fees;
(ii) Audit fees;
(iii) Fees of the Survey Department;
(iv) Fees under the Weights and Measures Ordinance;
(v) Fees under Merchant Shipping Act;
(vi) Fees of the Valuation Department;
(vii) Fees charged for Registration of Companies.

It is expected that the increase in these fees would bring in Rs. 15 million in additional revenue.

6. Revenue licence fees on Motor Vehicles

Mr. Speaker, a new scheme for the licensing, registration and transfer of motor vehicles – to be effective from the licensing year 1982 – will be implemented by the Registrar of Motor Vehicles shortly.

The licence fees as presently levied are based on the age and the tare of the vehicles. There are at present six categories based on the age of the vehicle and ten categories based on the tare. This complicated structure is being simplified by reducing the age categories from 6 to 2 and the tare categories from 10 to 5 for motor cars. In the case of vehicles other than motor cars there will be only 8 categories based on tare and none based on age.

Revenue proposals 1981
Additional revenue

	Rs.Million
Surcharge on income tax and wealth tax	200
Restriction of small company relief	2
Turnover tax on imports and increase in manufacturers' tax	1,290
Increase in turnover tax on banks, finance companies and pawnbrokers	50
Increase in turnover tax on hotels, approved restaurants, contractors, architects and consultants	25
Increase in turnover tax on advertising receipts of newspayers and periodicals	10
Increase in excise duty and turnover tax on liquor	175
Increase in taxes on tobacco	255
Imposition of excise duty on beedies	70
Stamp fees on liquor licences	10
Increase in stamp duty on cheques	3
Revision of fees levied by government departments	15
Increase in licence, registration and transfer fees on motor vehicles	65
	2,170
Less:	
Reduction of import duty on machinery and essential raw materials	200
	1,970

Estimate of expenditure and revenue 1982

		(Rs. Million)	
(i)	Recurrent Expenditure	− 21,114	
	Less: Provision for under-expenditure	+ 450	
			− 20,664
(ii)	Advance Account Receipts		+ 100
			− 20,564
(iii)	Revenue		+ 19,319
(iv)	Current Account Deficit		− 1,245
(v)	Capital Expenditure	− 20,817	
	Less: Provisions for under-expenditure	+ 902	
			− 19,915
	Overall Deficit		− 21,160

© 1982 International Bureau of Fiscal Documentation – BULLETIN

The new scheme has been drawn up with the following objectives in mind:

(a) to increase the total licence fees derived from motor vehicles;
(b) to keep licence fees on very small cars below 15 cwts. in weight low, irrespective of the date of registration, to encourage the use of light cars which are fuel efficient;
(c) to substantially increase the licence fees on cars where the tare exceeds 25 cwts. so as to discourage the use of heavy cars consuming large quantities of fuel;
(d) to reduce the advantage which diesel car owners now enjoy because diesel is sold at a much lower price then petrol.

The new licence, registration and transfer fees will bring in additional revenue of about Rs. 65 million. In anticipation of this additonal revenue, a sum of Rs. 50 million has already been provided in the 1982 Estimate as additional grant to the local bodies for maintenance of roads.

IFA NEWS

continued from page 75

ogy, and that an ancestor of Dr. Carroll, Charles Carroll, had been a signatory of the Declaration of Independence of the U.S.A. (He did not mention the interesting fact that Dr. Mitchell Carroll had been conceived on Greek soil!)

Professor Sbarounis was Director of Direct Taxation at the Greek Ministry of Finance from 1925 to 1935, when he was appointed Director of Studies and Inspection at the Ministry. In 1936 he was appointed Director-General of Taxation (including Customs) when that post was first created. During the German Occupation of Greece he was removed from his post (in 1942) and became Economic Counsellor to the Ministry of Finance. In 1943 he escaped from Occupied Greece and was dismissed from government service by the collaborationist Greek government of Occupied Greece for abandonment of his post. On his arrival in Cairo he was again appointed Director-General of the Ministry of Finance by the Greek Government in exile, led by Tsouderos. After the liberation of Greece in 1944, Professor Sbarounis resumed his post at the Ministry of Finance. In 1944, he was also elected Professor of Public Finance at the Athens School of Economic and Commercial Sciences, which chair he held till 1962, when he was elected Emeritus Professor. During his career after World War II Professor Sbarounis was deputy-governor of the National Bank of Greece, Head of a Greek mission to the U.S.A., a Governor of the World Bank, and represented Greece on many international bodies.

While a considerable part of Professor Sbarounis's career was spent in the stormy years of World War II and the difficult reconstruction period that followed it, he carried out considerable research on taxation in the period between the two world wars. In 1934 he wrote "L'Impôt sur le revenu en Grèce", being an analysis of the three basic laws passed in 1919, on income, on real property, and on successions, as amended thereafter by more than fifty modifications. The period between 1918 and 1934 was not a particularly stable one for Greece. The World War I aftermath included the Asia Minor debacle of the Greek armies and the refugee problems which followed the abandonment of the Greek settlements in Asia Minor. The process of reconstruction in Greece, accompanied by a new law on net wealth and increasing rates of tax, led to considerable discontent amongst taxpayers, baffled by high taxes and retrospective assessments, and by continual tax reforms passed by government after government anxious to change the tax base. Professor Sbarounis analysed this turbulent development, helped by his researches into the various tax systems employed in Western Europe. He concluded that the level of taxation in Greece was excessive, both by reference to the pre-1914 rates and by reference to other tax systems in the Balkans and certain western European systems.

In 1953, before the EEC treaties had come into being, Professor Sbarounis wrote a tract on a "Project for a Turkish-Hellenic customs and economic union". It was a technical study by an economist who saw the dynamic possibilities inherent in an economic union of Greece and Turkey, neither of which had even achieved the benefits of the Industrial Revolution which had invigorated the rest of Europe, and both of which were comparatively undeveloped economies. Writing in 1966 in the "Journal de Genève", Professor Sbarounis wrote despairingly about the failure of Turkey to join with Greece in an association which would enable both countries to harness their converging interests into a profitable union, to bring them both into a prosperous and dynamic future.

One cannot help a final remark: that Professor Sbarounis has been a brave and lonely voice, crying in the wilderness for reason and logic to prevail over turgid emotions and divisive politics.

SWISS BRANCH

On 5 February 1982 a special meeting was held in Basel in which a number of subjects regarding tax harmonization in Switzerland were discussed. These subjects included:

- taxation of families;
- period of assessment;
- capital gains taxation of personal property;
- special problems connected with the taxation of legal entities (including holding and domiciliary companies).

The next regular meeting will be held on 25 June 1982 in Zurich.

NEPAL:

Budget 1981-82

Extracts from the Budget Speech pronounced on 7 July 1981 by Dr. Y.P. Pant, Minister for Finance

4.1 Honourable Chairman, now I would like to submit additional tax proposals to meet the above deficit. I have taken due care to make the present tax system more effective and efficient. Besides, special emphasis has been laid on the process of making the tax assessment procedure simple, just and practical. I have adopted the policy of increasing revenue to meet the development expenditures not so much by increasing tax rates but mainly by strengthening and improving the tax administration.

4.2 While proposing new taxes for the coming fiscal year, I have paid due attention to the principle of social justice by providing maximum relief to the low income group and small farmers. Similarly, a measure of relief has been provided for the middle income group which has faced hardship due to the rising prices. Efforts have been made to raise more taxes from the higher income group on the basis of the principle of ability to pay. The objective of any tax system is not only to collect maximum revenue but also to create a conducive environment for the production of essential commodities in the country and promote import substituting industries. It is also expected that the tax system should not adversely affect the prices of essential commodities and should facilitate expansion and diversification of international trade. On the basis of these considerations, I have designed the tax proposal for the next fiscal year.

4.3 The new Industrial Policy[1] has been promulgated with a view to accelerate industrial development in the country and also to encourage small entrepreneurs. In order to implement the policy successfully, appropriate rules and regulations will be brought out very soon. The fiscal measures, which I have proposed, aim at creating a sound, healthy and stable industrial atmosphere.

4.4 As I have already mentioned, total expenditure for the next year is higher in comparison to last year. This is necessary to meet the targets of the Sixth Plan. I have adopted the policy of generating maximum revenue from existing taxes and meeting shortfalls by the introduction of new taxes. At present, there is a very limited scope for increasing tax rates.

No significant increase of tax rates

4.5 In fact, further increases in tax rates may, at this stage, lead to evasion only. Therefore, I have specifically emphasized raising the revenue by strengthening and streamlining revenue administration as well as by bringing the potential taxpayers within the tax net. An additional amount of Rs 183.2 million is estimated to be collected from such a policy. I have submitted additional tax proposals only to cover the gap not covered by the extra proceeds resulting from the improvement in tax administration.

Indirect taxation

4.6 Now, allow me to submit indirect tax proposals.

4.7 With a view to ensure the flow of essential goods for the consumption of the common people and to check the price rise of these goods, I propose to reduce import duties on coarse cotton textile, kerosene oil and canvas shoes. Keeping in view the general health of the common people, import duty on all kinds of medicine has been reduced to 1%.

4.8 I want to assure the Honourable Members that His Majesty's Government will ever remain vigilant to ensure regular supply of such commodities and to check the rise in their prices. In this context, the price of kerosene oil has been reduced from Rs. 5.15 to Rs. 4.90 per litre by reducing its import duty, and this, I hope, will provide direct benefits to the consumers.

4.9 I have also tried to establish uniformity and consistency and narrowed the gap in the existing rates of customs duty on various commodities imported from the foreign countries.

4.10 As the Honouable Members are well aware, the year 1981 has been observed as the international year of the disabled ones. Various activities are also being organized for their welfare in Nepal. So, I have exempted fully the duties on all aids and equipment to be used by disabled persons with a view to provide necessary support to them.

4.11 Regarding the facilities provided to the newspapers and magazines, there has been duty exemption in newsprint, and 1% duty on press machines, spare parts and printing. The duty on the film used in block making has also been reduced to only 1%.

4.12 From these arrangements, revenue will decrease by Rs. 9.0 million in the next year.

4.13 However, I have proposed to increase the import duty on some luxurious items such as refrigerators, air conditioners, deepfreezes, motorcars, televisions, video-sets, cosmetic goods etc. Similarly, I have also proposed to raise import duty on woolen yarns, leather shoes as well as synthetic materials and soaps in order to protect the domestic industries.

4.14 Keeping in view the deterioration in ecological balance caused by deforestation and to meet the future domestic demand for fuel, I have raised the duty on the export of wood and allied products. Similarly, the export duty on boulder, gravels and sands has been raised with an objective of discouraging exports and precluding soil-erosion, flood and landslides.

4.15 The above mentioned adjustments in custom duties are given in Schedule No. 1, 2, 3 and 4. The revised rates will be effective from today. An additional revenue of Rs. 95.0 million is estimated to accrue from this adjustment. All other custom duties will be retained as before.

4.16 Concerning excise duties, I have proposed to change the existing duty on some of the commodities, while for some other coomodities, I have introduced new excise duty which will be effective from today.

1.	Sawn timber	Rs. 3 per cubic ft.
2.	Bidi manufactured from all types of tobacco	Rs. 6 per thousand sticks
3.	Cutlery manufactured from stainless steel scraps	Rs. 10 per kg
4.	Bricks	
	a. Made by using electric machines	Rs. 5 per thousand
	b. Made without using electric machines	Rs. 4,500 per annum per kiln
	However, the ordinary bricks made by other local methods are exempted from excise duty	
5.	Iron-rod, strips and sheets	Rs. 0.20 per kg
6.	Assembling industries which use imported spare parts	
	a. Radio and transistor sets up to the value of Rs. 600	3%
	b. Radio and transistor sets valued more than Rs. 600	5%
	c. Two or three-in-one which can be used as tape-recorders, transistors, tape-players, cassette-recorders and any set with two or more functions	15%
	d. Simple tape-recorders and cassette-players	10%
	e. Cassette-tape	
	i. playing up to 60 minutes	Rs. 0.50 per unit
	ii. playing for more than 60 minutes and continuing up to 90 minutes	Rs. 0.60 per unit
	f. All types of watches	3%
	g. Electrically operated heaters, hair-dryers, toasters, cookers, calculators run by power	2%
7.	Beer	Rs. 8.50 per litre

4.17 With a view to provide special incentives to the industries established in remote and hilly areas and to remove the existing regional disparities, I have proposed to introduce 10% rebate on prevailing excise duty to industries established in hilly areas. The mills and factories that pay excise duty on the basis of that rebate will be granted rebate of 2% for timely payment of such duty.

4.18 No excise duty will be levied on products of rural and cottage industries except soft drinks, cigarettes, bidi, catecheu, katha, alcoholic drinks, rice, oil, khandsari, sugar, sawn timber, bricks, stainless steel utensils, machine made furniture, assembling of radio transistors, watches, cassette tape recorders and players, calculators, electric heaters, hair-dryers, toasters, cookers, mixtures, juice-extractors, cassette tapes, zippers and diamond cutting.

4.19 Other adjustments made in excise duty are given in Schedule No. 5. The rest of the excise duties remain unchanged. The proposed changes will bring in Rs. 37.2 million.

4.20 As regards sales tax, three categories of sales tax rates introduced during the current fiscal year have not been changed. However, some minor changes have been made for some commodities on the basis of their use and importance. For example, rates of sales tax on cotton thread, cotton-vest, vehicle spare parts, betel-leaf, betel spices, etc. have been reduced whereas sales tax on timber, lubricating oil, motor cycles, scooters and auto-rickshaws has been increased. No sales tax is levied on products of cottage and rural industries except on those mentioned in the Schedule, This, I believe, will help encourage the rural and cottage industries resulting in increased production and employment. Such changes in rates will generate an additional revenue of Rs. 35.8 million.

4.21 The existing rate of contract tax at 2.5% on all contracts exceeding Rs. 10,000 has remained unchanged since 1965. Now, I propose to increase it to 5% of the contract amount. Such increase may be justified by changing economic conditions, growing investment and the margin of profit in contract business. This will generate an additional revenue of Rs. 26.5 million.

1. Editor's note: See for extracts of the Government's Industrial Policy Plan hereafter.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Direct taxation

4.22 Now, allow me to switch over to proposals of direct taxes. I do not have to reiterate here the economic hardship which people are facing due to inflation. Espacially, the low and fixed income groups are finding it difficult to maintain their living standard. Hence, I have proposed to raise the tax exemption limit for the next fiscal year up to Rs. 10,000 for individuals and Rs. 15,000 for couples and families. Income tax rates after the exemption limit will, however, remain intact. This will reduce revenue by Rs. 1.6 million.

4.23 On the theoretical level, it is generally agreed that individuals and commercial firms are required to keep proper accounts of their transactions. But failure on their part to maintain or submit proper accounts had led to practical difficulties in assessing taxes. Lack of proper and reliable accounts makes correct tax assessment difficult. Such a situation may give rise to the complaint among taxpayers that they have been unjustifiably overtaxed. This very situation can also lead to tax evasion. In order to encourage the habit of maintaining proper account of the transactions, from the coming year, a 2% rebate will be given to those taxpayers who get their tax assessed on the basis of accounts of their transactions. This is, however, expected to reduce revenue by Rs. 0.4 million.

4.24 That the value of urban land is increasing rapidly due to population pressure is an undisputed fact. Similarly, nobody can deny that people should at least get minimum shelter in the context of rising prices of construction materials. Keeping this in mind, I have proposed the following changes in house and land taxes from the next fiscal year. This, I believe, will give some relief to the owner cum occupier of the house while those who use their house for other purposes will have to bear additional tax burden.

Value of land & building	*Percentage of tax*
First Rs. 100,000	No tax
Next Rs. 100,000	1.0
Next Rs. 100,000	1.5
Next Rs. 100,000	2.5
Next Any Amount	3.5

4.25 But in the case of land and building occupied by the owner himself the tax on additional Rs. 100,000 will be exempted. This proposed change will generate an additional revenue of Rs. 2.1 million.

4.26 Hon'ble members are aware of the fact that the small farmers have been given a rebate of 75% on the payment of land tax. His Majesty's Government has considered to exempt fully those landowners who own up to 1.5 bighas in Terai, 20 ropanis in hilly areas and landowners who own land in those hilly areas where the cadastral survey has not been completed. Under the existing law, land revenue receipt is recognized as the legal document in case of dispute of ownership. Further, the landowners have the traditional habit of regarding revenue receipt as an evidence of ownership of land. Keeping these facts in mind and also to update land records, we have to continue to collect even a nominal amount of land revenue. From the coming fiscal year, I have, therefore, proposed a minimum rate of land revenue with 99% rebate charging only 1% of current rate, as per Schedule. This exemption limit applies to all landowners of the hilly areas where the cadastral survey has not been completed and also to those landowners who hold 1.5 bighas and 20 ropanis in Terai and hilly areas, respectively. While proposing this special rate of land tax for small farmers, due attention has also been paid to the existing denomination of small coins; and, therefore, the lowest rate of 5 paisa has been proposed for the smallest unit of land holding. This measure will definitely benefit the majority of small farmers. The loss in revenue will amount to Rs. 5.0 million.

4.27 In our country, the rate of land revenue is fixed on the basis of the type of cultivated land. The same rate of revenue is being applied to lands which are used for purposes other than agriculture. There can be no differences of opinion that the land revenue rate of residential and commercial lands should be different from that of agricultural land. In view of this, I have proposed a different rate of land tax which will be applicable in the land under town panchayat areas where the cadastral survey has been completed and the land classified under urban areas according to the provision of the Land (Survey and Measurement) Act as per Schedule from the coming fiscal year.

4.28 As the value of land of various town panchayat areas is assessed differently according to Land Survey Act, I have proposed seperate rates of land tax, as specified in the Schedule, for urban areas of Kathmandu Valley, Terai and Hills. Moreover, in these areas of town panchayats where the classification of land has not been completed, the land tax shall be collected at the lowest rate as proposed for sixth grade of land. The effect of this new proposal will yield an additional revenue of Rs. 5.0 million.

4.29 In order to keep updated land records and to discourage the practices of registering land and property in a different district other than where the land and properties exist, an additional 1% registration fee used to be charged. However, this provision could not achieve the desired objective. Therefore, I have decided to raise the above fee from 1% to 5%. This, I think, will assist greatly in maintaining updated records of land and generate an additional revenue of Rs. 3.0 million. Other rates of land revenue and registration fees will be maintained.

4.30 Hon'ble members are aware that in order to mobilise the additional resources for local development, the whole proceeds from local development tax used to be made available to the same district through Local Development Ministry. As the enthusiasm shown by the people in the current year is encouraging, I have proposed to increase local development tax to 10% of land tax. Likewise, in those districts where the cadastral survey has not been completed, a fee of Rs. 1.00 per landowner will continue to be collected. Provision has been made to deposit such proceeds in a separate account of the land revenue office. The district panchayat will directly receive such proceeds from the land revenue offices for development purposes.

4.31 Keeping in view the importance of the tourist industry as an important source of earning foreign exchange, it is necessary to encourage the tourists to prolong their stay. I propose to reduce visa fee to Rs. 75.00 for every week of the first month and to Rs. 150.00 for every week of the second month.

4.32 Besides this, all other fees and taxes remain unchanged. This proposal would yield an additional revenue of Rs. 197.5 million. Likewise, the strengthening of revenue administration and its reforms is expected to increase revenue by Rs. 183.2 milion. The net deficit would thus be Rs. 825.1 million, out of which Rs. 500,0 million and Rs. 325.1 million will be met from internal loans and cash balance respectively.

4.33 In my view the deficit financing will have no adverse impact on the economy. Because of the favourable monsoon, and our firm commitment to launch development programmes in the form of campaigns, I am fully confident that the agricultural and industrial production will increase substantially. In addition to this, all financial functions from disbursement to internal audit will be decentralized at the district level in order to strengthen financial management. Similarly, I have made special provision of funds for capital and operating capital for smooth implementation of projects. Special attempts have been made to curtail the expenditure for unproductive activities. Particular attention has also been paid to maintain strict financial discipline. Some monetary measures will be undertaken to control unproductive loans advanced by commercial banks.

4.34 While presenting the budget for the current year, I had proposed for some facilities to the Government employees to maintain their living standard and overcome difficulties arising from rising prices. Under a similar note I have made provisions for the following facilities to be provided from the coming year.

4.35 I would like to propose a pay increase of Rs. 100/- to all non-gazetted employees (including peons), Rs. 150/- to gazetted class III and II and Rs. 200/- to all those who are above them in rank. All the government employees, including civil, military and police personnel, will benefit from this provision. This arrangement will increase the basic salary of peons, section officers and the special class officers by 66.6%, 25% and 12.3%, respectively. This will incur an additional expense of Rs. 150.0 million. I would like to inform the House that this increase in pay scale is in consideration of the difficulties faced by the fixed and low income groups.

4.36 In addition, the following facilities are also provided to the employees.

4.37 Pension, which has been paid as a fixed amount so far, will henceforth match with the increase in the level of salary. As a result of this provision, after their retirement, civil servants will derive additional benefit on the basis of the salary which they will have been drawing at the time of their retirement. Gratuity has also been increased.

4.38 The maximum amount of pension has been increased to Rs. 912.50 from the existing level of Rs. 750.00. The minimum amount of pension has also been increased from Rs. 42.00 to Rs. 55.00 per month. On the demise of a pensioner, half of the pension drawn by him will be provided for his wife up to a period of ten years. It is also essential that there should be appropriate change in the rates of travel allowances. Accordingly, the daily allowances have been increased from 36% to 60% for internal travel. Daily allowance in respect of foreign travel has also been increased.

4.39 Medical facilities of the employee have been changed. Gazetted employees will henceforward get medical benefits equivalent to 12 months. Thus, the benefit of 3 extra months' salary will be available to them. Similarly, non-gazetted class I employees will get the equivalent of 18 months' salary instead of 15 months and the rest of the non-gazetted staff will get medical benefits equivalent to 21 months' salary instead of 18 months as at present.

4.40 Taking into consideration the price increase all over the world and difficulties faced by the members of our foreign missions including mission heads, foreign allowance has been increased. The allowance of low level employees of this category has been increased up to 121.73%. Similarly, the salary of the local level employee has also been increased up to 68%. Additional financial liability of about Rs. 20 million has to be incurred becuse of such provisions.

4.41 Taking into consideration the problems and difficulties faced by the government employees, arrangement has been made to constitute a pay commission to study and submit report to His Majesty's Government with respect to pay, allowances, pensions, gratuity and foreign allowances.

NEPAL:

Industrial Policy Plan 1981

Extracts of the most significant parts of the Industrial Policy Plan 1981 presented by the Nepalese Government

OUTLINES OF THE POLICY

Objectives

– To encourage private sector industrial investment as an element in the growth of gross national product.
– To open up gainful employment opportunities in the industrial sector for a labour force excessively dependent on agriculture.
– To attain self-reliance in the production and supply of essential consumer goods and most construction materials.
– To maintain regional economic balance.
– To increase the output of and attain quality improvements in currently manufactured articles.
– To improve the balance-of-payment position through increased exports and more import substitution.
– To enhance entrepreneurial, managerial and technical capabilities as a means of assisting the development of industrial organizations.
– To develop indigenous technologies and to import such appropriate technologies as will contribute to industrial productivity.

Major policies of interest to foreign investors

– All industries, except those which are defence-oriented, will be open for private sector ownership and investment.
– Existing industrial enterprises will be given incentives to improve their operational efficiency, to consolidate their position and to embark upon expansion programmes.
– The private sector will be given the first opportunity of promoting the development of industry through investment. Only if the private sector does not respond to meet the investment programme, will HMG/Nepal and agencies of government intervene by way of public investment. Even under these circumstances, HMG will pursue a policy of disinvestment in favour of the private sector as and when the climate for this appears to be appropriate.
– As a principle, HMG/N will not establish industrial enterprises under its ownership except when large scale investment is involved and private sector investment is inadequate. HMG/N will, however, take the initiative itself by financing cottage, small and medium scale pilot projects in order to stimulate private sector investment.
– Foreign investment will be encouraged in order to promote capital inflow, generate technical expertise and improve productivity. It may take the form of totally foreign owned enterprise or joint Nepalese-foreign investment. HMG/N will establish the priority areas for such foreign investment.
– Relevent technology will be imported taking account of the soci-economic situation of the country and the rate at which new methods and concepts can be absorbed. When appropriate, new techniques and processes will be identified and developed, and will not be limited to improvements on the traditionnal arts and crafts.
– Adminstrative procedures concerned with the establishment of industrial enterprises wil be simplified and made more efficient.
– Tax and other incentives will be clearly defined and specified to avoid any administrative ambiguities.
– Ownership of and investment in cottage and small industries will be reserved for Nepalese nationals only.
– Foreign investors will be permitted to have majority shareholding in medium scale enterprises. In the case of large scale enterprises, only, the foreign investment may amount to one hunderd percent.
– The principle of engaging Nepalese nationals will be followed when employing unskilled, semi-skilled and skilled labour and most other categories of employee. If circumstances demand, foreigners may be employed for a period of seven years, at the most, with the approval of HMG. The Nepalese nationals should be given appropriate training so that they can replace the foreigners within this period. If, however, specialists are not readily available within Nepal, an enterprise may continue to employ the foreigners for an additional period of five years.
– Enterprises will continue to enjoy such incentives and facilities for the period specified as are provided in the current Act without let or hindrance, notwithstanding the amendments incorporated in the present Act.
– While setting up new industrial enterprises and/or expanding, modernising and diversifying the existing ones, effective ways and means will be adopted to preventing or minimising environmental pollution.
– Industrial enterprises will not be nationalised except in special circumstances, in which case the owners will receive compensation based on a just evaluation of the net worth of the enterprises.
– Steps will be taken to establish an Export Promotion Zone with a view to the effective mobilisation of resources needed to develop and promote specified export industries.
– The mechanism relating to official guarantees for foreign loans will be institutionalised and streamlined.
– Import duty and sales tax paid against the importation of raw materials, auxiliary materials and chemicals will be reimbursed to the HMG-recognised export industries. Such reimbursement will be in proportion to the value of imported materials used in the manufacture of such exports.
– HMG will frame and enforce rules and regulations pertaining to patents, trade marks and designs.

FACILITIES AND INCENTIVES

Income tax concessions

(a) Cottage industrial enterprises, except those mentioned in Schedule 1 will be granted 100% tax exemption for a period of six years.

(b) Manufacturing industrial enterprises, smal, medium or large, will be granted income tax exemption as follows:
   1. 100% exemption for 5 years if the value added is between 20% and 50%.
   2. An additional one year's exemption for every 10% increase in the value added above 50%.

Value added: is defined as the ratio of net domestic annual operating costs and expenses (left after deducting all foreign costs such as imported raw materials, expatriates' salary, wages, fees, etc., depreciation of the imported assets) to the total annual operating costs and expenses.

(c) An additional 2 years' income tax exemption will be given to enterprises which produce essential consumer goods.

(d) If an enterprise exports more than 25% of its total annual production, 15% rebate will be granted on the income tax levied for that year. Similarly 25% rebate will be applicable if any enterprise exports more than 50% of its total production in one year.

(e) Energy-based and mining and mineral processing enterprises will be entitled to six years' tax holiday from the date of operation. Such industrial enterprises having more than 25% value added in each year will enjoy an additional six years' tax holiday.

(f) Five to seven years' tax holiday will be granted to new tourism enterprises, depending on the locations designated for the purpose.

(g) Service enterprises will not generally be granted tax exemption, but the following will be entitled to three years' tax holiday:
   - workshops producing spare parts, tools and other end-use articles with the help of automatic or semi-automatic machinery (lathe, shaping and milling machinery);
   - large warehouses;
   - cold storage;
   - hospitals, x-ray clinics equipped to render specialized services;
   - large rental apartments;
   - printing presses;
   - trolley-bus and water transport services.

(h) Industrial enterprises established in the Export Promotion Zone will be granted an initial ten years' tax holiday followed by 50% rebate on income tax for the next five years.

(i) Agro-based special industrial enterprises will be exempted from income tax for a period of 10 years.

(j) Enterprises located in the areas designated as backward by HMG shall be entitled to 3 years' tax holiday in addition to those enjoyed by similar enterprises established elsewhere.

(k) The start-up date of production or providing service will be used for the purpose of computing the period of income tax exemption.

SCHEDULE 1

Industries not entitled to income tax exemption

1. Traditional rice, oil, dal (pulse), and flour mills.
2. Saw-mills
3. Bidi, cigarettes, cigars and other tobacco-based industries.
4. Distilleries and breweries producing alcoholic beverages including chhang.
5. Catechu extraction.
6. Furniture manufacture.
7. Zip fastener manufacture.
8. Enterprises producing stainless steel utensils and other articles.
9. Laundries.
10. Ice and ice cream producers.
11. Photographic services.
12. Other industrial enterprises designated, from time to time, by HMG as not entitled to income tax exemption.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

(l) If an operating enterprise expands its originally licensed capacity by more than 50%, an investment allowance to an extent of 15% of the new investment will be granted and can be claimed within a maximum period of 7 years.

(m) Expenses incurred on training (recognised by the Department of Labour, HMG) with a view to providing employment for and upgrading the skills of Nepalese workers will be regarded as an item of operating expense, and such an expense will rank as a tax credit. The tax credit allowed for this purpose will be subject to a maximum of 1% of the total annual sales revenue.

Customs facilities

(a) Import duty at the rate of 1% only will be levied on (a) machinery used directly in the construction and operation of an enterprise (b) mining and related conveying equipment and (c) spare parts and tools. The entitlement of an enterprise to total exemption or a rate reduced below 1% is not affected by this clause.

(b) Import duty of 1% only will be levied on raw materials, auxiliary raw materials and chemicals to be used in the production, mixing, blending and processing. But if the duty applicable to such materials is below 1% or the enterprise is totally exempted, it will retain the preferential rights.

Notwithstanding anything mentioned in subclause (b) above, the raw materials, auxiliary materials and chemicals will be subject to duties currently in force if the enterprises which import them fall under the schedule designated by HMG.

(c) If these raw materials, auxiliary materials and chemicals of suitable quality are readily available within the country, an enterprise importing supplies of the same materials will pay an additional 15% customs duty.

(d) imports by industrial enterprises for their own use, by HMG, semi-government agencies, cooperatives or by the designated public limited companies will be subject to customs duties as specified in (a), (b) and (c) above. The appropriate agency of HMG will monitor the quanity of such imports and their use.

(e) Assembly enterprises which are established outside the Export Promotion Zone and whose products have more than 20% value added, will pay 25% less than the rate of duty normally applicable on the parts and components imported, provided that the imports are for their own manufacturing operations.

(f) Enterprises established in the Export Promotion Zone will be liable for only 1% import duty (a) on the machinery to be used in construction and operation (b) on spare parts and tools and (c) on raw materials, auxiliary materials, and chemicals to be used in the production, processing, mixing and blending operations. Duty paid on these items in excess of 1% will be refunded.

(g) Products manufactured in Nepal, except those designated by HMG under the relevant provisions of the current law, will not be subject to any export duty. Designated products of the kind referred to above will be promulgated after consultation with the appropriate Ministry of HMG.

(h) If manufacturers who export their products have previously paid more than 1% import duty on raw materials, auxiliary materials and chemicals, such duty paid in excess of 1% on the quantity of these materials used in the manufacture of the goods exported will be refunded.

SCHEDULE 2

Customs duties at rates currently in force, shall be levied on raw materials, auxiliary materials and chemicals imported by industrial enterprises to manufacture the following products:

1. Precious stones and jewels.
2. Stainless steel utensils.
3. Synthetic yarn and synthetic textiles.
4. Zip fasteners.
5. Acrylic yarn.
6. Photographic articles.
7. Other items notified by HMG from time to time.

(i) If the machinery, spare parts, raw materials, auxiliary materials and chemicals are supplied by domestic manufacturing enterprises to those established in the Export Promotion Zone, such supplies will be treated as exports from the viewpoint of duty concessions.

(j) In relation to tourism industry/enterprises, customs duty will be levied at 1% only, on imported items used directly, except those notified from time to time by HMG in its Gazette.

Excise duty concessions

(a) Cottage industrial enterprises will be exempt from excise duty for 5 years from the date of commencement of operations.

(b) Small, medium and large industrial enterprises will be exempt from excise duty for 3 years from the date of commencement of operations. However, no exemption will be granted to those industry categories listed under Schedule 3.

(c) Industrial enterprises established in the backward regions will be entitled to 5 years' exemption in addition to that applicable for similar enterprises located elsewhere.

(d) Manufactured goods supplied to the enterprises established in the Export Promotion Zone or exported abroad will be exempted from excise duty.

SCHEDULE 3

Industrial products not entitled to excise and sales tax exemption

1. Traditional rice mills, oil mills, flour mills, dal (pulses) mills.
2. Stainless steel products
3. Zip fasteners.
4. Precious stones and jewellery.
5. Catechu and tanin.
6. Cigarettes, bidis, cigars, chewing tobacco, snuff and other tobacco products.
7. Alcoholic beverages produced by distilleries except those distilled from fruits in the backward region.
8. Cosmetics.
9. Liquid petroleum gas.
10. Crowns, corks, etc.
11. Saw-mills.
12. Assembly industries (watch, radio, tape-recorder, cassette and calculator).
13. Acrylic yarn.
14. Other industrial products designated from time to time by HMG through notification.

(e) Excise duty will be waived totally on products manufactured in the Export Promotion Zone.

Sales tax concessions

(a) Sales tax will not be levied on the products of cottage industry.

(b) Sales tax will not be levied on imports of (a) machinery used directly in the construction and operation of an enterprise, (b) mining and related conveying equipment, (c) spare parts and tools, and (d) raw materials, auxiliary materials and chemicals.

(c) Where sales tax is already paid on the raw materials, auxiliary materials and semi-processed materials purchased, manufacturers using such materials will be exempt from sales tax on the proportion of the taxed materials used in manufacturing.

(d) Domestic products exported abroad or supplied to the enterprises within the Export Promotion Zone will have sales tax exemption to the extent of such export or supply. Sales tax exemption will not apply, however, to products listed in Schedule 3.

Concessions on electricity charges

(a) Royalties will not be charged on power generated by industrial enterprises for their own use.

(b) Royalties will be imposed on the basis of actual public sale of electric power by generating industrial enterprise.

(c) In distributing electric power from public supply mains, first priority will be given to industrial enterprises.

Concessions on interest rates

Industrial enterprises established in the backward regions shall pay interest at a rate 2% lower than others of similar status located elsewhere.

Concessions on urban property tax

Land and buildings which are essential for the operation of manufacturing and energy-based enterprises and are owned by such enterprises themselves will be exempt from urban property tax for a period of 10 years. Such exemption will be applic-

able to the following types of premises: factory building, labour and staff quarters, godowns, administrative buildings, clinics, recreation halls and canteens.

Convertible foreign exchange facility

Subject to the prior approval of HMG, convertible foreign exchange shall be provided to industrial enterprises on the basis of economic merit, for the following:

(a) The import of machinery, spare parts, tools and implements, other capital goods, raw materials, auxiliary materials and chemicals which are directly used in the industrial enterprise.

(b) Technical consultancy, technical assistance, service charges, management fees, patent fees, investment promotion, market studies, sales promotion, etc.

Protection

HMG may provide protection to industrial enterprises for a definite period, by means of quantitative restrictions on imports or by higher import tariffs if such a policy is justified on economic grounds, financial conditions, or a time requirement to improve quality and price competitiveness.

PROVISIONS RELATING TO FOREIGN INVESTMENT

– Foreign investment in industrial enterprises will be welcomed on the grounds of obtaining access to desirable technology, expansion of export markets, higher management standards and an increase in employment opportunities.
– Foreign investment will be limited to medium and large industrial enterprises. The investor may be a government, firm, individual, company or an international institution.
– An industrial enterprise financed by foreign investment must be incorporated as a limited liability company in Nepal. Foreign investment is allowed up to majority holding in the medium and 100% in the large industrial enterprises.
– If a foreign investor makes an equity investment in a Nepalese industrial enterprise, in convertible foreign currency, 100% of the dividend may be remitted in convertible currency, whether the enterprise is jointly or severally owned.
– If a foreign investor invests in shares in terms of convertible foreign currency, such shares may be sold only after an enterprise has commenced operation. Repatriation of capital will be at the rate of 20% of the sales proceeds of the shares each year up to the limit of the total investment made in convertible currency.
– If a foreign investor has invested in a Nepalese public limited company and has sold shares through the Nepalese Security Marketing Centre, the sales proceeds may be remitted in convertible currency at the maximum annual rate of 25% of the original total investment made in convertible currency.
– Managerial and technical experts who have been engaged, with the prior approval of HMG and who belong to countries where convertible currency is freely exchanged, can remit, in convertible currency, up to 75% of earnings generated by way of salary and allowances.
– Industrial enterprises with foreign equity participation will not be nationalised except in special circumstances, in which case compensation will be paid to investors on the basis of a just valuation of the net worth of the enterprise.
– If an industrial enterprise, having foreign investment, goes into liquidation, a foreign investor can repatriate his share of proceeds of sale of assets in convertible currency under the Nepal Company Act. No taxes will be levied on such amounts.
– HMG or its designated agency will stand guarantee on long-term loans under prescribed terms and conditions.
– Provision will be made through institutionalised procedures to facilitate a simple, smooth and integrated approach to foreign investment, joint ventures and arrangements for the guarantee of long-term loans. The Department of Industry will be the focal point and will be responsible as such for liaison in all these matters.

PRENTICE-HALL, INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

Prentice Hall Announces:

The most strikingly different new tax guide ever published for taxpayers with income from foreign sources.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Continuously Supplemented. . . . . Always Up - to - Date

This outstanding new Service is created specifically to help save money for:

U.S. INDIVIDUALS
with investments and/or earned income from a foreign source

U.S. CORPORATIONS
with income from foreign sources

FOREIGN CORPORATIONS
with income earned or taxable in the U.S.

NONRESIDENT ALIENS
receiving income from, or taxable in the U.S.

If you fit any of these categories — or if you counsel, advise, or in any way service any of these categories — U.S. TAXATION OF INTERNATIONAL OPERATIONS will be an invaluable new tool for you.

It will deliver management benefits — operations benefits — tax benefits.

In clear, direct language, backed up by practical, tested practices of acknowledged experts in international business operations, the new work spells out how the taxpayer can best take full advantage of every popular, every sophisticated, and every little-known tax-saving device.

Authoritative, specific guidance from one source devoted exclusively to this kind of vital help has been non-existent — until now.
With the first 1972 publication of the innovative U.S. TAXATION OF INTERNATIONAL OPERATIONS this important need is now fulfilled. And bi-weekly "Report Bulletins" will keep the guide as new and up to the minute as the day you receive it.

Personal response to this new publication has been even more enthusiastic than our most optimistic projections. Subscriptions are now being accepted by mail for $ 231 a year.

Address your request to Dept. S-RR-103, Prentice-Hall Inc., Englewood Cliffs, N.J. 07632 and specify U.S. TAXATION OF INTERNATIONAL OPERATIONS, 1-year introductory charter subscription.

Annual payment is not due until 20 days after receipt of the new, ready-for-reference volume.

Dharmendra Bhandari:

TAXING FOR DEVELOPMENT: CORPORATE TAXATION IN JAPAN **99**
The author discusses the Japanese corporate income tax system with a special emphasis on the incentives offered to business. He concludes that the Japanese tax system has qualities which could with advantage be adopted by other countries.

D. Hund:

THE DEVELOPMENT OF DOUBLE TAXATION CONVENTIONS WITH PARTICULAR REFERENCE TO TAXATION OF INTERNATIONAL AIR TRANSPORT **111**
(Speech to the IATA Seminar on Tax Management, held in Salzburg on 15 and 16 February 1982)
Air transport has from the very beginning occupied a special place in double taxation treaties. The author examines the historical development and concludes that it is generally accepted that as few tax obstacles as possible should be placed in the way of international air transport. This means that in practice tax should exclusively be levied in the airlines' home countries.

Frank J Schuchat:

U.S.A.: SAFE HARBOR LEASING – A CONTROVERSIAL MEANS FOR DISTRIBUTION OF INVESTMENT INCENTIVES **115**
The author discusses the provision in the Economic Recovery Tax Act under which tax credits and depreciation deductions in excess of an amount of which a corporation can take full advantage can be transferred to another entity for cash.

Eugen Jehle:

TAX INCENTIVES OF INDUSTRIALIZED COUNTRIES FOR PRIVATE UNDERTAKINGS IN DEVELOPING COUNTRIES – A brief introduction **120**
The author discusses various possible tax measures to further investment in developing countries by businesses established in industrialized lands and illustrates his narrative with a large number of examples of incentives which are currently granted or which have been granted in the past. He finds that simplicity and reasonableness of tax provisions are often much more valuable than sophisticated solutions.

SWEDEN: BUDGET 1982-83 ..... **128**
The Swedish Ministry of Economic Affairs and the Ministry of the Budget recently published a booklet dealing with the Swedish Budget 1982-83. The part on taxation is reproduced in this Bulletin.

INHALTSVERZEICHNIS

Dharmendra Bhandari:

Die Besteuerung als ein Element des Fortschritts: Die Körperschaftsteuer in Japan 99
Der Verfasser untersucht das japanische Körperschaftsteuersystem, wobei er das hauptsächliche Augenmerk auf die Anreize richtet, die den Unternehmen zur Verfügung stehen. Er kommt zu dem Schluss, dass das japanische Steuersystem Bestimmungen enthält, die auch in anderen Ländern mit Gewinn zur Anwendung kommen könnten.

D. Hund:

Die Entwicklung der Doppelbesteuerungsabkommen unter besonderer Berücksichtigung der Besteuerung der internationalen Luftfahrtgesellschaften 111
(Ansprache, die am 15. und 16. Februar 1982 in Salzburg anlässlich des IATA – Steuerseminars gehalten wurde)
Die Besteuerung der Gewinne aus dem Betrieb von Luftfahrzeugen hat von Anfang an einen besonderen Platz bei den Doppelbesteuerungsabkommen eingenommen. Der Verfasser zeight die historische Entwicklung auf und kommt zu der Schlussfolgerung, dass die internationale Luftfahrt mit möglichst wenigen steuerlichen Hindernissen konfrontiert werden sollte und dieser Grundsatz auch allgemein anerkannt ist. In der Praxis sollte dies darauf hinauslaufen, dass die Besteuerung ausschliesslich dort stattfindet, wo die Luftfahrtgesellschaften ihren Hauptsitz haben.

Frank J Schuchat:

U.S.A.: "Save Harbor Leasing" – Eine umstrittene Investitionsförderungsmassnahme 115
Der Verfasser beschäftigt sich mit den Bestimmungen des Economic Recovery Tax Act (Steuergesetz zur wirtschaftlichen Erneuerung), nach denen Gesellschaften mit "überschüssigen" Steueranrechnungs- und Abschreibungsbeträgen diese an andere Gesellschaften gegen Entgelt übertragen können.

Eugen Jehle:

Steueranreize von Industriestaaten für Privatinvestitionen in Entwicklungsländern – Eine kurze Einführung 120
Der Verfasser stellt steuerliche Massnahmen vor, durch die Privatinvestitionen in Entwicklungsländern von in Industriestaaten ansässigen Unternehmen gefördert werden können. Er zählt eine Reihe von möglichen Steueranreizen auf, die derzeit zur Anwendung kommen oder in der Vergangenheit gewährt wurden. Er kommt zu dem Schluss, dass einfache steuerliche Regelungen weitaus effizienter sein können als die Anwendung äusserst komplexer Bestimmungen.

Schweden: Der Haushalt 1982-83 128

SOMMAIRE

Dharmendra Bhandari:

Imposer pour le développement: impôt japonais sur les sociétés 99
L'auteur étudie le système japonais d'impôt sur les sociétés en insistant particulièrement sur les encouragements fiscaux offerts aux entreprises. Il conclut que le système fiscal japonais a des qualités qui pourraient être adoptés avec profit par d'autres pays.

D. Hund:

Evolution des conventions fiscales et plus particulièrement de l'imposition des transports aériens internationaux 111
(Discours prononcé à l'occasion du Séminaire de IATA sur la gestion fiscale qui s'est tenu les 15 et 16 février 1982 à Salzbourg)
Les transports aériens ont tenu dès l'origine une place privilégiée dans les conventions de double imposition. L'auteur fait une analyse historique et conclut qu'il a généralement été accepté que le minimum d'obstacles fiscaux devrait exister en matière de transport aérien international. Ceci signifie pratiquement que l'impôt ne devrait être perçu que dans le pays d'origine de la compagnie aérienne.

Frank J Schuchat:

"Safe harbor leasing" – Moyens controversés de distribution d'investissement 115
L'auteur étudie les dispositions contenues dans l'"Economic Recovery Tax Act" permettant aux crédits fiscaux et aux déductions pour investissements supérieurs au montant pour lequel la société pourra en tirer pleinement avantage d'être transférés à un autre assujetti contre remboursement.

Eugen Jehle:

Encouragements aux investissements accordés dans les pays industrialisés aux entreprises privées investissant dans les pays en voie de développement – Une brève introduction 120
L'auteur étudie les différentes dispositions fiscales accordées aux investissements effectués dans des pays en voie de développement par des entreprises établies dans des pays industrialisés; il illustre son article par de nombreux exemples d'encouragements aux investissements qui sont régulièrement accordés ou qui ont été accordés dans le passé. Il semble que simplicité et modération des dispositions fiscales sont souvent plus valables que des solutions sophistiquées.

Suède: Budget 1982-'83 128

TAXING FOR DEVELOPMENT:

Corporate Taxation in Japan

by Dharmendra Bhandari *

I. GENERAL

Japan has few mineral resources, has to import almost all its raw material and food, and still has the second largest economy in the non-Communist world (after the United States). Its economy grew faster than that of any other country in the world during the 1960s and its economic growth has been largely based on manufacturing exports. Economists predict that at the present rate of economic growth, Japan will overtake the United States in the next decade to be the leading economic super power.

Countries	*Real GNP growth rate* 1979	1980	1981
Japan	5.9	5	4
United States	3.2	–0.75	0.75
West Germany	4.5	1.75	–0.25
Great Britain	1.6	–2.25	–2
OECD average	3.3	1	2

Source: (i) Based on OECD Economic Outlook No. 28, December 1980.
(ii) Figures for 1980 are expected performance while those of 1981 are future projections.

Today, Japan accounts for 10% of the world's Gross National Product, even though it has 3% of the world's population and 0.3% of the world's land (of which only 15% is arable). A comparison of the percentage increase over the previous years of the real gross national product with the industrially advanced countries of the West will illustrate Japan's outstanding economic performance.

II. INTRODUCTION

The corporate tax policy of Japan is based upon the principle of reducing the effective rate of tax through various tax deductions and exemptions to encourage economic growth.

One significant measure, which was specifically aimed at encouraging exports prior to its amendment in 1964, was the total exemption of export income from taxable income. This measure had to be terminated when Japan became a full fledged member of the International Monetary Fund by accepting Article VIII of the IMF provisions. Japanese Corporate Tax Law, while terminating the tax exemption for export income, introduced new tax measures aimed at encouraging exports by providing a wide range of relief through depreciation, reserves and incentives. (These are discussed in detail later on.)

Article VIII
General Obligations of Members

Section 1. ***Introduction***

In addition to the obligations assumed under other articles of this Agreement, each member undertakes the obligations set out in this Article.

Section 2. ***Avoidance of restrictions on current payments***

(a) Subject to the provisions of Article VII, Section 3(b) and Article XIV, Section 2, no member shall, without the approval of the Fund, impose restrictions on the making of payments and transfers for current international transactions.

(b) Exchange contracts which involve the currency of any member and which are contrary to the exchange control regulations of that member maintained or imposed consistently with this Agreement shall be unenforceable in the territories of any member. In addition, members may, by mutual accord, cooperate in measures for the purpose of making the exchange control regulations of either member more effective, provided that such measures and regulations are consistent with this Agreement.

Section 3. ***Avoidance of discriminatory currency practices***

No member shall engage in, or permit any of its fiscal agencies referred to in Article V, Section 1 to engage in any discriminatory currency arrangements or multiple currency practices, whether within or outside margins under Article IV or prescribed by or under Schedule C, except as authorized under this Agreement or approved by the Fund. If such arrangements and practices are engaged in at the date when this Agreement enters into force, the member concerned shall consult with the Fund as to their progressive removal unless they are maintained or imposed under Article XIV, Section 2, in which case the provisions of Section 3 of that Article shall apply.

Section 4. ***Convertibility of foreign-held balances***

(a) Each member shall buy balances of its currency held by another member if the latter, in requesting the purchase, represents:

(i) that the balances to be bought have been recently acquired as a result of current transactions; or

(ii) that their conversion is needed for making payments for current transactions.

The buying member shall have the option to pay either in special drawing rights, subject to Article XIX, Section 4, or in the currency of the member making the request.

(b) The obligation in (a) above shall not apply when:

(i) the convertibility of the balances has been restricted consistently with Section 2 of this Article or Article VI, Section 3;

(ii) the balances have accumulated as a result of transactions effected before the removal by a member of restrictions maintained or imposed under Article XIV, Section 2;

(iii) the balances have been acquired contrary to the exchange regulations of the member which is asked to buy them;

(iv) the currency of the member requesting the purchase has been declared scarce under Article VII, Section 3(a); or

(v) the member requested to make the purchase is for any reason not entitled to buy currencies of other members from the Fund for its own currency.

Residential status

All corporate taxpayers are classified as either domestic or foreign corporations. A domestic corporation is a corporation having its head office in Japan. A foreign corporation is a corporation other than the domestic corporation. Thus, a corporation whose head office is registered in a country outside Japan would be a foreign corporation, even if its main place of business is located in Japan. Domestic corporations are taxed on world-wide income while foreign corporations are taxed only on Japanese-source income.

The entities subject to corporate tax are:

(i) ordinary corporations (a joint stock company, limited company, other companies, etc.);

(ii) corporations in public interest, such as incorporated associations, foundations, etc.;

(iii) cooperative associations, such as agricultural cooperative associations, small enterprises cooperative associations, etc.;

(iv) non-juridical organisations with designated representatives or managers.

III. TAXABLE INCOME

Paragraph 1 of Article 22 of the Corporation Tax Law provides that the amount of income for each accounting period of a domestic corporation is the receipts for the accounting period concerned less the expenses for the same accounting period.

Paragraph 2 of Article 22 of the Corporation Tax Law provides that the amounts to be included in the receipts for the accounting period concerned in computing the income of a domestic corporation are, unless otherwise provided, the receipts derived from sales of assets, transfer or furnishing of assets or services, whether for a consideration or not, acquisition of assets by gratuitous transfer and any other transactions other than capital transactions, etc.

Paragraph 3 of Artricle 22 of the Corporation Tax Law provides that the amounts to be included in the amount of expenses for the accounting period concerned in computing the income for each accounting period of a domestic corporation are, unless otherwise provided:

(1) cost of sales, cost of completed work and similar costs corresponding to receipts for the accounting period concerned;

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Section 5. ***Furnishing of information***

(a) The Fund may require members to furnish it with such information as it deems necessary for its activities, including, as the minimum necessary for the effective discharge of the Fund's duties, national data on the following matters:

(i) official holdings at home and abroad of (1) gold, (2) foreign exchange;
(ii) holdings at home and abroad by banking and financial agencies, other than official agencies, of (1) gold, (2) foreign exchange;
(iii) production of gold;
(iv) gold exports and imports according to countries of destination and origin;
(v) total exports and imports of merchandise, in terms of local currency values, according to countries of destination and origin;
(vi) international balance of payments including (1) trade in goods and services, (2) gold transactions, (3) known capital transactions, and (4) other items;
(vii) international investment position, i.e., investments within the territories of the member owned abroad and investments abroad owned by persons in its territories so far as it is possible to furnish this information;
(viii) national income;
(ix) price indices, i.e., indices of commodity prices in wholesale and retail markets and of export and import prices;
(x) buying and selling rates for foreign currencies;
(xi) exchange controls, i.e., a comprehensive statement of exchange controls in effect at the time of assuming membership in the Fund and details of subsequent changes as they occur; and
(xii) where official clearing arrangements exist, details of amounts awaiting clearance in respect of commercial and financial transactions, and of the length of time during which such arrears have been outstanding.

(b) In requesting information the Fund shall take into consideration the varying ability of members to furnish the data requested. Members shall be under no obligation to furnish information in such detail that the affairs of individuals or corporations are disclosed. Members undertake, however, to furnish the desired information in as detailed and accurate a manner as is practicable and, so far as possible, to avoid mere estimates.

(c) The Fund may arrange to obtain further information by agreement with members. It shall act as a centre fore the collection and exchange of information on monetary and financial problems, thus facilitating the preparation of studies designed to assist members in developing policies which further the purposes of the Fund.

Section 6. ***Consultation between members regarding existing international agreements***

Where under this Agreement a number is authorized in the special or temporary circumstances specified in the Agreement to maintain or establish restrictions on exchange transactions, and there are other engagements between members entered into prior to this Agreement which conflict with the application of such restrictions, the parties to such engagements shall consult with one another with a view to making such mutually acceptable adjustments as may be necessary. The provisions of this Article shall be without prejudice to the operation of Article VII, Section 5.

Section 7. ***Obligation to collaborate regarding policies on reserve assets***

Each member undertakes to collaborate with the Fund and with other members in order to ensure that the policies of the member with respect to reserve assets shall be consistent with the objectives of promoting better international surveillance of international liquidity and making the special drawing right the principal reserve asset in the international monetary system.

(2) selling expenses, general and administrative expenses and other expenses (excluding expenses other than depreciation expenses, liability for which is not ascertained before the end of the accounting period concerned);
(3) losses for the accounting period concerned accruing from transactions other than capital transactions, etc.

Paragraph 4 of Article 22 of the Corporation Tax Law provides that the amount of receipts for the accounting period concerned as provided for in paras. 2 and 3 must be computed in conformity with fair accounting standards.

Further, paragraph 5 of the same Article provides that the term "capital transactions, etc." as used in paras. 2 and 3 is defined as transactions increasing or decreasing the amount of stated capital, etc. of a corporation or the distribution of earnings or surplus.

Exempt income

Items excluded from gross revenue in computation of taxable income are:

(1) *Dividends received:* Where a corporation (domestic or branch of a foreign corporation) receives dividends from a domestic corporation, taxable dividends are computed by deducting from the gross dividends the interest paid by the corporation on borrowed funds, in the ratio of the average book value of the shares concerned to the average total assets.

This exemption is not available if the relevant shares were acquired within one month prior to the end of the accounting period of the distributing company and sold within 2 months after the end of the accounting period. Where the dividends received, minus interest, exceed dividends paid out by the corporation, then 25% of the excess is included in taxable income. However, this inclusion does not apply to branches of foreign companies.

If may also be mentioned that dividends received from *foreign* corporations are not exempt. However, credit for taxes is given in double taxation treaties, which Japan has concluded with other countries.

(2) *Appreciation in value:* Appreciation in value is not included in income even if a corporation increases the value of the asset in its books. However, appreciation in value is recognized as income when entered in the books at the times of corporation reorganization and also in

© 1982 International Bureau of Fiscal Documentation – BULLETIN

cases of revaluation of stock held by insurance corporations. Depreciation, however, cannot exceed the actual cost of the asset.

(3) *Tax refund:* Refunds of corporation tax, corporate inhabitant tax, etc. are not deductible as expenses.

(4) *Profit from consolidation or merger:* If a surplus accrues to an existing corporation after amalgamation or merger, the part of the surplus consisting of retained earnings of the amalgamated or merged corporation will not be included in gross income.

Non-deductible expenses

Items not deductible in computation of taxable income are:
(1) Certain taxes such as corporation tax, prefectural inhabitants tax, penalties, fines, etc.
(2) Capital expenditure which lengthens the useful life of fixed assets or increases their value.
(3) Certain amount of contributions or donations except for contributions to national or local government, or public welfare organizations, etc.
(4) Remuneration and retirement allowances of directors in excess of a reasonable amount or bonus paid to directors.
(5) Expenses not supported by vouchers, and also social and entertainment expenses in excess of the specified limit.
(6) A write-down in the value of assets except in the event of damage due to disaster or obsolescence in the case of inventories or fixed assets or substantial decline in the price of listed shares.

Deductible expenses

Normally, all necessary and reasonable expenses and costs may be deducted from gross income in order to arrive at net income.

(1) *Taxes:* Certain taxes such as excise taxes, interest tax on various national and local taxes, foreign taxes to which the foreign tax credit system is not applied for domestic corporations and enterprise taxes are deductible in computing taxable income.

(2) *Salaries, wages and pensions:* Salaries and wages paid to employees of a corporation are deductible. Pensions paid to former employees are also deductible as are retirement allowances paid to employees.

(3) *Bonuses:* Bonuses paid to employees are deductible but not if paid to directors. In the case of a person who is both a director and an employee, only that portion attributable to his status as employee is deductible.

(4) *Social insurance premiums:* Social insurance premiums, payment to employees' pension funds and similar payments by a corporation are deductible.

(5) *Entertainment expenses:* Entertainment expenses are deductible only to the extent considered reasonable by the tax authorities. Such expenses must be for the purpose of the business and supported by vouchers. Further, 90% of the excess of entertainment expenses over the fixed amounts cannot be deducted. The fixed amount is calculated as follows:

Corporations with capital of ¥ 10 million or less	¥ 4 million
Corporations with capital over ¥ 10 million but less than ¥ 50 million	¥ 3 million
Corporations with capital over ¥ 50 million	¥ 2 million

If the expenses for the current period are greater than 105% of that of the preceding period, such excess is disallowed. If it is less than that of the preceding period, however, the full amount, subject to the limit stated above, is deductible.

(6) *Contributions:* Contributions are generally not deductible except when made to
(a) national and local governments: fully deductible;
(b) public interest corporations, etc.: up to double the limit stated in (c) below;
(c) other contributions including contributions to political or religious organizations or societies: deductible up to half the total of 2.5% of profits plus 0.25% of capital.

(7) *Bad debts:* Bad debts may be deducted if:
(a) there is a reconstruction scheme, special settlement agreement or composition admission under legal procedures, etc.; or
(b) it is impossible to recover all the amount of debt because of insolvency; or
(c) business dealings have been suspended for more than a year; or
(d) the cost of collecting the debts will be more than the amount of debts.
For reserve for bad debts, see V. Reserves.

(8) *Deferred expenses:* Such expenses as are properly chargeable to capital account and recoverable by means of amortization over a period of more than one year are known as deferred expenses. Some of the significant manners of treating deferred expenses are explained below:
(a) deferred expense of less than ¥ 100,000 per item is deductible in the year in which it is incurred;
(b) the following specified deferred expenses may be expensed in the accounting period in which they are incurred:
- incorporation expenses;
- interest paid to shareholders under Section 291 of the Commercial Code before the corporation becomes profitable;
- research and development expenditures;
- expenses incurred in opening a business;
- expenses incurred in developing a new market, etc.;
- expenses incurred in issuing shares or debentures;
- discount on bonds.

(c) The amortization of deferred expenses such as lump-sum payments made to obtain know-how, premium paid for renting premises, etc. is computed in the same manner as the depreciation of intangible assets by applying the straight line method.
(d) Expenditure for research and development paid to specified associations mainly engaged in research work, is deductible in full in the year of payment.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

(9) *Royalties:* Royalties are treated as ordinary expenses. A lump-sum payment for an exclusive license is treated as an intangible fixed and depreciable asset.

(10) *Overseas travelling expenses and advertising expenses:* They are deductible to the extent that they are necessary, reasonable and are required for the active conduct of the business.

(11) *Penalties:* Penalties and fines are not deductible, whether imposed on the corporations or on their officers.

(12) *Repairs:* Expenses incurred for repairs and maintenance are deductible in full.

(13) *Bribes:* Deductibility of bribes depends on whether the payment of the bribe is objectively necessary for carrying on the business.

IV. DEPRECIATION

The Corporate Tax Law provides for deduction for depreciation of both tangible and intangible assets (including goodwill). Increased initial depreciation is granted to a corporation filing a blue return[1] on qualifying machinery, equipment and buildings in the accounting period in which the assets are acquired. Accelerated depreciation is granted for certain qualifying assets for certain consecutive accounting periods. Assets which cost less than ¥ 100,000 are deductible when acquired.

The methods of calculating depreciation are the: (i) straight line method; (ii) diminishing balance method; (iii) sum of year's digits method; (iv) production method; (v) replacement method; (vi) any other method specially approved by the District Tax Office.

A corporation may choose one method for each group of its depreciable assets from the depreciation methods mentioned above. The depreciation method must be reported in advance to the tax authorities and a change of depreciation method requires the approval of the tax authorities. Depreciation expenses are deductible for tax purposes to the extent they are entered into the taxpayers' books. The useful lives of fixed assets for computing the charge of depreciation are prescribed by statute. The useful lives in certain cases where wear and tear is faster than usual can be shortened upon approval of the tax authorities. If machinery and plant are used for a longer time than the average, then, upon approval of the tax authorities, extra depreciation is allowed.

The depreciation method for different kinds of depreciable assets, which should in principle be applied, is briefly specified below:

(1) *Tangible fixed assets:* straight line method, declining balance method or other method specially approved by the tax authorities.
(2) *Intangible fixed assets (excluding mining rights and goodwill):* straight line method or other depreciation method approved by the tax authorities.
(3) *Goodwill:* A method in which goodwill is amortized with the amortization limit being the acquisition cost.
(4) *Replacement assets:* straight line method, fixed percentage on reducing balance method or replacement method.

Statutory useful lives. For a better understanding, the statutory useful life of selected assets is shown below:

Description of asset	*Useful life (years)*
(1) Tangible fixed assets other than machinery and equipment	
Reinforced concrete buildings (for office)	65
Wooden buildings (for office)	26
Steel vessels (2000 tons or more)	15

(3) Intangible fixed assets	
Patent rights	8
Utility model rights	5

The statutory useful life of an asset is determined on the assumption that the asset is new and used in the normal manner. This period can be adjusted according to the actual condition of the asset by making application to the Regional Taxation Bureau.

The capital sum recoverable through depreciation is limited to 95%; the remaining 5% is deductible when the assets are written off or disposed. Normally, the accounting of depreciation for tax purposes is the same as for business accounting, but if depreciation for business accounting exceeds the allowable limit for tax purposes, the excess part is disallowed in that year.

Special depreciation. The Corporate Tax Law of Japan provides special depreciation measures to stimulate ac-

1. The blue return system is a tax incentive program designed to secure sound development of the self-assessment system and improvement of taxpayers' accounting practices. Thus, those corporations which maintain such accounts as required under the blue return system and report their income correctly are given certain privileges:
(a) losses may be carried forward for 5 years or backward for 1 year;
(b) special depreciation methods are allowed;
(c) special deduction for overseas transactions of technical services, etc. is allowed;
(d) the amount credited as reserves is allowed as expenses;
(e) in case errors are found in the calculation of taxable income based on the corporation's books and records, the tax authorities can correct the taxable income.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

tivities which the Government considers desirable. It should be noted that these measures make no provision for the cumulative amount of depreciation to be more than the cost of the asset but do provide for increased deduction in excess of normal depreciation, thus providing the benefit of the deferred payment of tax so that the company is left with more surplus which may be profitably utilized in other business activities.

The special depreciation methods can be broadly classified into (a) *increased initial depreciation* and (b) *accelerated depreciation*. Increased initial depreciation allows, in excess of normal depreciation, deduction of a portion of the acquisition cost of an asset for the first accounting period in which the asset is acquired, while accelerated depreciation permits a corporation to deduct a part of the acquisition cost of an allowable asset in excess of normal depreciation for certain consecutive accounting periods.

The special depreciation allowance may be credited to a special depreciation reserve account which is treated as tax-free profit in the balance sheet, and one seventh of such special reserve must be added back to income in the succeeding 7 years. Such a reserve thus provides an interest-free loan from the Government but not a reduction of tax.

The allowances for increased initial depreciation and accelerated depreciation for a few selected assets are mentioned below:

Increased initial depreciation

Description of asset	*Percentage of the cost of acquisition*
(a) Qualified machinery and equipment used for:	
(i) prevention of environmental pollution; (small and medium sized enterprises may opt for increased initial depreciation of 18% for the first 5 years)	
(ii) manufacturing in the free trade zone of Okinawa	27
(b) Qualified machinery and equipment used for manufacturing in severely depressed local industrial areas	20
(c) Qualified machinery and equipment:	
(i) designed not to cause environmental pollution	
(ii) for recycling which may contribute to the efficient use of resources	
(iii) for saving of energy	
(iv) used for manufacturing in developing areas	
(v) used to prevent accidents, fire, gas explosions, etc.	
(vi) special water supply equipment for industrial use	
(vii) railway facilities, distribution of gas in urban areas, nuclear plants for generation of energy	
(viii) buildings in the free trade zone of Okinawa which include production facilities	
(ix) electronic computers, but only large ones	20
(d) Qualified machinery and equipment and areoplanes, if the price is more than ¥ 800,000, acquired by small and medium sized enterprises	14
(e) Qualified buildings used for manufacturing and other equipment attached to it in the free trade zone of Okinawa	16
(f) Qualified steel vessels of not less than 500 tons gross (not less than 2,000 tons gross for an ocean-going vessel) owned by shipping companies	15
(g) Qualified equipment used by a medium sized enterprise:	
– Building used for manufacturing and other equipment attached to it in developing areas, excluding Okinawa free trade zone	14
(h) Qualified newly developed high quality plant or equipment with which the electronic equipment is combined	13
(i) Buildings used for manufacturing in undeveloped areas	10
(j) Qualified retail shops jointly operated by many retail merchants	8

Accelerated depreciation

In addition to ordinary depreciation based on statutory useful life, the following accelerated useful depreciation is allowed, if assets come within the following categories:

(a) 32% of ordinary depreciation for the first 5 years, on machinery used by members of cooperatives, textile industries, etc. for promotion of small and medium sized enterprises, or the structural improvement project of textile industry;
(b) 20% of ordinary depreciation of machinery, equipment and buildings of a corporation where not less than 20% of the employees are handicapped persons;
(c) 50 or 75% of ordinary depreciation for newly contructed houses for rent;
(d) 36% of ordinary depreciation for the first 5 years on facilities for storage of crude petroleum;
(e) 32% of ordinary depreciation for the first 5 years on storage facilities such as fireproof warehouses used for trade purposes and silos for grains.

V. RESERVES

While recognizing accepted accounting principles and the desire to attain specific economic policy aims, the Japanese Corporate Tax Law provides for deduction, as an expense, of the amount credited to specified reserves.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

It should be noted that these reserves provide for tax deferral but not tax exemption. These reserves can be broadly classified into two groups, i.e. *hikiatekin* (a to e), which are justified by generally accepted accounting principles, and *junbikin* (f to i), which are allowed with a view to attaining certain economic policy objectives.

(1) *Reserve for bad debts.* The amount deductible as reserve is subject to the following statutory limits:

Business of the corporation	*Percentage of receivables*
Retail or wholesale	1.6
Retail on installment payments	2.0
Manufacturing	1.2
Banking and insurance	0.5
Others	1.0

The reserve is treated as income in the following accounting period. The amount of reserve is increased to 116% of the ordinary allowance for corporations with capital of not more than ¥ 100 million.

(2) *Reserve for loss on returned goods unsold.* The amount deductible for such reserve is subject to specified statutory limits and is available to publications, pharmaceuticals, agricultural chemicals, cosmetics etc. The amount credited to such reserve is treated as income in the subsequent accounting period.

(3) *Bonus reserve.* Reserve for bonus is calculated by applying the formula specified in the tax law and such reserve is added back in full in the following accounting period.

(4) *Other reserves.* Reserves for retirement allowances, for special repairs and for repairs and guaranteeing certain products are also deductible subject to certain specified maxima, but are added back to the income in the subsequent accounting period.

(5) *Reserve for price fluctuations.* The maximum amount deductible for such reserves is in principle 1.7% of the book value of inventories. It is proposed to abolish this reserve within 5 or 10 years; during the transitional period, reduced deduction rates will be applicable.

(6) *Overseas market development reserve for small and medium sized enterprises.* Such reserve is allowed to a corporation with capital of not more than ¥ 1 billion and which derives income wholly or partly from overseas transactions comprised of export of goods, or processing of goods by the order of an exporter or large scale repairing of ships, the payment of which is made directly or indirectly in foreign currency. The amount that can be credited to such a reserve for meeting expenses to develop an overseas market is subject to the following limits:

(a) for corporations with capital of not more than ¥ 100 million, 3.6% in case of export of merchandise purchased from others and 8.4% for other exports;
(b) for corporations with capital of more than ¥ 100 million but less than ¥ 1 billion, 0.66% in case of exports of merchandise purchased from others and 0.9% for other exports.

One fifth of the amount credited to the reserve in one accounting period should be added back successively to the income in 5 succeeding years.

(7) *Reserve for overseas investment loss.* If a domestic corporation acquires the stocks of the companies mentioned below which are issued for the creation or the increase of capital of such companies, or it extends credit in the form of loans or purchase of debentures, it can credit a certain amount to a reserve account to meet possible losses of the value by the decline in their prices, etc. Such reserve is deductible subject to the following limits:

(a) specified overseas business company which has its head office in a developing country 15%
(b) specified overseas investment company having its head office in Japan if it is formed in order to invest in specified overseas business companies 15%
(c) nuclear fuel company, i.e. a foreign company which is engaged in recycling of nuclear fuel 40%
(d) specified overseas economic cooperation investment company which is engaged in investing in specified overseas economic cooperation company 25%
(e) specified overseas economic cooperation company engaged exclusively in activities making an important contribution to economic cooperation between Japan and the developing country in which the head office is situated 25%
(f) natural resources prospecting company and investment company which is exclusively engaged in investing in and prospecting for natural resources . . 100%
(g) natural resources development investment company which is exclusively engaged in making such investment . . 40%

The amount credited to the reserve may be held for 5 years, but from the sixth year one fifth of such amount should be added back to the income in 5 succeeding years.

(8) *Reserve for investment loss in free trade zones of Okinawa.* If a corporation acquires stock, for the creation or increase of capital, of a manufacturing company whose head office is in the free trade zone of Okinawa, it may credit 15% of the acquisition cost of such stock to such reserve against a fall in the market price of those shares. Such reserve can be held for 5 years but from the sixth year one seventh of such amount should be added back to the income in the succeeding 7 years.

(9) *Other reserves.* Other reserves which are provided by the Japanese Corporate Tax Law for the promotion of its economic policies are mentioned below:

- structural improvement project reserve for small and medium sized enterrises;
- reserve for prevention of mineral pollution of metal mining, etc.;
- depreciation reserve for specific railway construction;

© 1982 International Bureau of Fiscal Documentation – BULLETIN

- depreciation reserve for the construction of atomic power generation;
- depreciation reserve for specific gas construction;
- forestation reserve;
- reserve for pollution control;
- stock transaction loss reserve;
- drought reserve, unusual risks reserve, security transaction responsibility reserve, reserve for losses caused by repurchase of electronic computers, and reserve for computer programs.

It must be noted that all these reserves are deductible as expenses under specified conditions but have to be added back to the income in subsequent years. Thus these provide for tax deferral and not tax exemption.

VI. TAX CONCESSIONS

Though the basic philosophy of the Japanese Corporate Tax Law is to provide relief through tax deferral by a wide range of reserves and depreciation allowances, it also provides a few tax incentives especially for promoting exports and in respect of capital gains.

(1) *Incentives for overseas technical service transactions.* If a corporation has derived income wholly or partly in respect of overseas transactions of technical services, it is allowed a special deduction, as follows:

(a) patents, know-how, etc. resulting from research work in the corporation which is alienated or offered in exchange, directly or indirectly, for foreign currency or its equivalent;
(b) copyrights (except for cinematographic films) sold or offered in exchange, directly or indirectly, for foreign currency or its equivalent;
(c) such technical services as planning, consultation, supervision, etc., related to the construction or production of plant or equipment, or specified technical services for agriculture or fisheries or surveys performed in exchange for foreign currency or its equivalent, on condition that the compensation for such services is ¥ 2 million or more per contract.

The deduction, however, shall not exceed 40% of corporate income.

From the examples in the next column it is clear that if a Japanese company exports patent and know-how even at a loss, it would have to pay less tax than if it does not export and can at the same time increase its cash resources.[2]

2. The incentive for export of patents and know-how, copyright, technical service fees, etc. has been considerably reduced in the last few years. The table below shows the high incentive given in the earlier years:

Year	*Special deduction in percentage*		
	Patent, know-how	*Copyrights*	*Technical service fees*
1964-1975	70	30	20
1976-1978	55	20	20
1979	35	10	20
1980	28	8	16

An explanation of one of the provisions with an attempt to coordinate the economic and legal aspects

Tax incentive for export of patents and know-how in Japan

A few examples are given below which clearly indicate the importance of such an incentive and that, even if the export of patent and know-how is below cost price, it would still be advantageous to Japanese companies, rather than not to export patents and know-how.

This is perhaps one of the reasons which stimulates Japanese companies to enter into a highly competitive and technologically advanced market in the world, as well as enabling them to earn foreign exchange.

Illustration: It is assumed that the rate of tax on a Japanese company is 42%; the cost of providing patent and know-how is ¥ 1,000. Suppose the company exports patent and know-how: (i) at ¥ 1,200; (ii) at ¥ 900; and (iii) if it does not export at all. Assuming the other business income of the company is ¥ 2,000, then

Case I

If patent and know-how are exported at	¥ 1,200	
Income from business		¥ 2,000
Income from export of patent	¥ 1,200	
Less cost	¥ 1,000	¥ 200
Gross taxable income		¥ 2,200
Less tax incentive @ 28% of ¥ 1,200		¥ 336
Taxable income		¥ 1,864
Tax payable @ 42% on ¥ 1,864 : ¥ 783		
Net amount available after taxes ¥ 1,081 + 336 =		¥ 1,417

Case II

If patent and know-how are exported at	¥ 900	
Income from business		¥ 2,000
Income from patent	¥ 900	
Less cost of patent	¥ 1,000	−100
		¥ 1,900
Less tax incentive @ 28% of ¥ 900		¥ 252
Taxable income		¥ 1,648
Tax payable @ 42% on ¥ 1,648 : ¥ 692		
Net amount available after tax ¥ 956 + 252 =		¥ 1,208

Case III

If a company does not export patent	
Income from business, being the gross total income	¥ 2,000
Tax payable @ 42%	¥ 840
Net amount available after payment of tax	¥ 1,160

© 1982 International Bureau of Fiscal Documentation – BULLETIN

(2) *Incentives for prospecting for mineral deposits in Japan and abroad.* A special deduction is allowed in case of a corporation filing a blue return which has created a mineral reserve to meet expenses in prospecting for mineral deposits. Such a reserve is tax free for 3 years and after that it is treated as taxable income. The amount deductible shall not exceed:
   (a) 13% of the proceeds from sales of minerals mined, concentrated or processed by the corporation; or
   (b) 50% of the income derived with respect to the above-mentioned proceeds. However, the deduction shall not exceed 50% of corporate income.

   If a corporation having a prospecting costs reserve disburses new mineral deposits prospecting costs, or when the corporation having the overseas prospecting costs reserve disburses new overseas mineral deposits prospecting costs, the tax deferral provided above may be converted into an exemption from taxable income.

(3) *Special treatment for capital gains from sale of land or buildings.* The Corporate Tax Law also provides for deferred tax treatment and special treatment in respect of such capital gains when the specified conditions are fulfilled. This is discussed below in detail.

(4) *Investment tax credit.* An investment tax credit was introduced by the 1978 tax reform as a temporary measure to encourage investment by certain small and medium sized corporations in lieu of depreciation on plant and machinery used for energy saving or anti-pollution facilities. Such a credit is subject to a maximum ceiling of 20% of tax due.

VII. CAPITAL GAINS

Capital gains are, as a general rule, included in the ordinary income of the corporation and no tax concession is generally granted, However, there are exceptions to this rule as follows:

(1) *Exchange of properties.* Capital gains on exchange of any land, building, machinery and equipment, etc. which have been held by a corporation for more than one year for any similar property which has also been held by the other party for more than one year are not taxed if such transaction fulfills certain other conditions. This concession grants fair treatment to transactions which do not actually result in income for a taxpayer.

(2) *Expropriated property.* The proceeds of the expropriation of an asset are exempt income upto ¥ 30,000,000, if the asset is expropriated in accordance with the law providing for expropriation. Amounts received in excess of ¥ 30,000,000 are treated as taxable income.

(3) *Insurance proceeds.* The insurance proceeds received for damage to or loss of a fixed asset will not be taxed if the same kind of fixed asset is acquired within 2 years.

(4) *Replacement of business assets.* As an incentive to move from populated areas, if a corporation transfers specified assets consisting of land, building or structures in specified populated areas and acquires similar business assets outside these populated areas; it is allowed to reduce its taxable profits by way of reduced book entry.

(5) *Tax-free transfer of property to a controlled corporation.* When a corporation forms a subsidiary corporation owning 95% of all issued shares of the subsidiary, then the transferred property will not be included in the gross income of the transferor corporation. The subsidiary corporation is required to enter in its books the property it has acquired at the book value of the transferor.

   Similar incentive treatment is given to a new corporation in the electronics and machinery industries and such incorporation as is designated by the Small and Medium Sized Enterprise Modernization Facilitation Law without the above stock holding requirement.

(6) *Reduced book entry (Asshuku Kicho).* The concept of "reduced book entry" is peculiar to Japanese tax law.
   (a) When a corporation receives a subsidy or beneficiary contribution from the national or local government in order to acquire certain fixed assets, then the book value of the above fixed assets entered in the account books of the corporation is reduced by the amount of such subsidies or beneficiaries' contributions and these are excluded from the gross income of the corporation.

   Example:

Fixed assets	200
Book value	100
Subsidy (capital gains)	100

   The subsidy (100) is excluded from income.

   (b) Succession to book value of old property
      (i) Acquisition of new fixed assets if purchased with insurance compensation received for a loss of old property.

      Example:

Book value	100
Insurance proceeds received	200
Loss by fire	100
New book value	100

      The profit of 100 (insurance proceeds minus loss by fire) is excluded from the total income.
      (ii) When a corporation sells property and receives capital gains therefor, and acquires specific property, then this capital gain is excluded from the income if the cost of the acquired property equals the sales price of the property sold.

      Example:

Old property:	Book value	100
	Sales price	1000
	Capital gain	900
New property:	Acquisition cost	1000
	New book value	100

© 1982 International Bureau of Fiscal Documentation – BULLETIN

In this case, the capital gain of 900 is excluded from the income.

If the acquisition cost of the new asset is less than the sales price then the proportion of the cost of the new asset to the ratio of the capital gains to the sales price is then excluded from the taxable income.

Example:

Acquisition cost 500
New book value 50

Exclude from total income $500 \times \frac{900}{1000} = 450$

The balance of 450 (900 – 450) is taxable.

VIII. CARRY FORWARD OR BACK OF LOSSES

An interesting feature of Japanese Corporate Tax Law is that it not only allows corporations filing a blue return to carry forward losses for 5 subsequent years, but also allows them to carry back losses for the previous year, thus enabling it to claim a refund of the overpaid tax computed by carrying back of such losses to the income of the accounting year immediately preceding the accounting year in which such loss is incurred.

IX. RATE STRUCTURE

The corporation tax rates are as follows:

(1) Tax rate for ordinary income of a domestic or foreign corporation not distributed as dividends:
  (a) Ordinary corporations
    (i) Corporations with capital of more than ¥ 100,000,000 . . . . . 42%
    (ii) Corporations with capital of less than ¥ 100,000,000
      – for annual income of more than ¥ 8,000,000 . . . . . 42%
      – for annual income of less than ¥ 8,000,000 . . . . . 30%
  (b) Cooperative associations and public interest corporations 25%

(2) Reduced tax rates for ordinary income distributed as dividends:
  (a) Ordinary corporations
    (i) Corporations with capital of more than ¥ 100,000,000 . . . . . 32%
    (ii) Corporations with capital of less than ¥ 100,000,000
      – for annual income of more than ¥ 8,000,000 . . . . . 32%
      – for annual income of less than ¥ 8,000,000 . . . . . 24%
  (b) Cooperative associations 21%

Reduced rates are applicable to the amounts distributed as dividends in excess of dividends, if any, received from domestic corporations.

(3) Tax rates for liquidation income:
  (a) Ordinary corporations 35%
  (b) Cooperative associations 21%

Foreign corporations are not liable to tax on liquidation income.

(4) Reduced rate applicable to special domestic medical corporations 23%

(5) Tax rate for retirement pension funds . . . 1%

(6) Special additional tax rates on family corporations
  – Income below ¥ 30,000,000 . . . . 10%
  – Income between ¥ 30,000,000 and ¥ 100,000,000 . . . . . 15%
  – Income above ¥ 100,000,000 . . . . 20%

A "family corporation" is a domestic company of which 50% or more of the capital stock is owned by not more than 3 shareholders and persons or corporations connected with them.

X. WITHHOLDING OF TAX

Both domestic and foreign corporations are subject to withholding of tax at source.

Domestic corporations. The following income received by a domestic corporation is subject to withholding of tax:
– dividends;
– interest income;
– remuneration for services of public entertainers.

The tax deducted at source must be paid to the Government before the tenth day of the month following that in which the tax is deducted. Further, credit is given to the corporation against its corporation tax for the tax withheld.

XI. AVOIDANCE OF DOUBLE TAXATION

Unilateral relief is granted to domestic corporations under the Japanese Corporate Tax Law for the foreign corporation tax paid on their foreign-source income. The foreign tax credit can be divided into two categories and is briefly discussed below:

(1) *Ordinary foreign tax credit.* Where a domestic corporation pays foreign corporation tax on its foreign-source income, a credit is provided against the Japanese corporate tax subject to the following limitation:

$$\text{Japanese corporation tax} \times \frac{\text{Total income from sources outside Japan}}{\text{Total income subject to Japanese corporate tax}}$$

Such credit cannot, however, exceed the amount of Japanese corporate tax payable on the world-wide income of the domestic corporation. Withholding taxes on interest and royalties are also creditable.

The excess of foreign taxes over the allowable credit may be carried forward for 5 succeeding years or carried back for the 5 preceding years.

(2) *Indirect foreign tax credit.* Where a domestic corporation receives dividends from foreign subsidiaries, a

© 1982 International Bureau of Fiscal Documentation – BULLETIN

credit for the foreign corporate tax attributable to the dividends will be given to the domestic corporation if it holds at least 25% of the total issued capital or voting shares of the foreign subsidiaries for at least 6 months. Further, the foreign subsidiary must be established in the foreign country for purposes of carrying on business and not for tax considerations.

The indirect tax credit is computed as follows:

$$\text{foreign corporation tax on the subsidiary} \times \frac{\text{dividends received}}{\text{net income of the foreign subsidiary after foreign taxes}}$$

This computation has the effect of grossing up the dividends and the foreign corporation tax paid by the subsidiary which is attributable to the dividends.

Tax treaties

Japan has comprehensive double taxation avoidance agreements with Australia, Austria, Belgium, Brazil, Canada, Czechoslovakia, Denmark, Egypt, Finland, France, Germany, Hungary, India, Ireland, Italy, Korea, Malaysia, Netherlands, New Zealand, Norway, Pakistan, Philippines, Poland, Romania, Singapore, Spain, Sri Lanka, Sweden, Switzerland, Thailand, United Kingdom, United States and Zambia. With respect to income for which treatment is provided in the agreement between a treaty country and Japan, then the relevant provisions of the treaty are applicable. Most of these treaties provide relief from double taxation through foreign tax credit.

Power to issue directives

The National Tax Administration has the power to issue directives to its officers for the uniform interpretation and application of laws. These directives are also made public. However, the directives do not bind the courts of justice as a source of law, but are merely an interpretation of the law by the tax authorities. It is important to note that the court of justice seldom decides against the directives. The directives, therefore, play an important role in tax administration.

XII. ANTI-TAX HAVEN MEASURES

On the basis of the findings of the Report on Revisions of the Taxation System for Fiscal Year 1978, submitted by the Tax Council to the Prime Minister in December 1977, the Japanese Diet introduced 2 new sub-sections in the Special Taxation Measures Law dealing with cases of individuals and corporations in Japan which make use of tax haven countries, to reduce their tax liability in Japan.

The new legislation defines "tax havens" as "countries and areas in which the tax burden on all income or on particular types of income of corporations is significantly lower than that on income of corporations in Japan, designated as such by a cabinet order classifying them as countries and areas with low rates of taxation on all forms of income or on particular types of income".

The tax-haven countries have been classified into 3 categories: (1) countries with low rates of taxation on all income; (2) countries with low rates of taxation on income from foreign sources; (3) countries with low rates of taxation on income from specific businesses.

The anti-tax haven measures consist of computing the taxable income of the domestic corporation that is regarded as retained out of "undistributed income" of the special foreign subsidiary of the domestic corporation, multiplied by the proportion of shares held directly or indirectly in the special foreign subsidiary by that domestic corporation.

Taxation of a domestic corporation occurs when the special foreign subsidiaries are corporations located in tax haven countries and in which Japanese domestic corporations or residents hold directly or indirectly more than 50% of the shares issued.

Further, domestic corporations which hold directly or indirectly 10% or more of the shares issued by the special foreign subsidiary, and domestic corporations belonging to a group of stockholders of the same family that hold directly or indirectly 10% or more of the shares as a group, are also taxable on retained income. The condition regarding stock ownership is determined on the basis of the situation existing at the end of the business year of the foreign corporation.

However, the anti-tax haven measures are not applicable if the foreign subsidiary satisfies all the following conditions:

(1) The foreign subsidiary has a fixed facility such as an office, shop or factory which is deemed necessary to conduct its business in the country where its main office exists.

(2) The foreign subsidiary conducts the management and control of its business in the country where its main office exists.

(3) In case the main business of the foreign subsidiary is wholesale, banking, trust, securities business, insurance, shipping or air transport, the foreign subsidiary conducts its business mainly with persons other than related persons.

(4) The foreign subsidiary is not a corporation whose main business is to hold stocks, to offer patents, etc. or copyrights, or to lease vessels or aircraft.

(5) The amount of dividends received by the foreign subsidiary from other foreign corporations which come under these taxation measures does not exceed 5% of its local revenue.

In addition to the above provisions, the new measures also contain provisions to eliminate double taxation with respect to foreign corporation tax imposed on the undistributed income of the foreign subsidiary attributed to the domestic corporation and payment of dividends from already taxed income of the foreign subsidiary.

XIII. CONCLUSION

The success or otherwise of taxation ultimately rests on the reasonableness of the burden which is imposed on the assessees. Excessive taxation may restrict economic incentives and productive efforts, any may cause business activity and national income to decline. If efforts and achievements are recognized, there is no reason why taxes cannot be used creatively to achieve the economic goal of the nation.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

As a fiscal tool, taxation policy has to be directed at productive resources which are necessary for the economic development, but which the private sector is unable to provide for. Such a step towards direction of resources is needed by both the developed and developing countries according to the state of their economy and international economic situation.

The above study on corporate taxation in Japan illustrates the efforts on the part of the Government to use a taxation policy for her economic development which has qualities that could with advantage be adopted by other countries. It would not be an exaggeration to say that if the Japanese economy were to sneeze now, the entire world would catch a cold.

UNITED NATIONS
ECONOMIC COMMISSION FOR AFRICA

AFRICA HALL
ADDIS ABABA

NATIONS UNIES
COMMISSION ECONOMIQUE POUR L'AFRIQUE

Regional Adviser in Public Finance

At the Economic Commission for Africa (ECA) of the United Nations the post of Regional Adviser in Public Finance is vacant.

Category and level:
L.6

Organizational location:
ECA, Budgeting and Financial Management Section – Public Administration, Management and Manpower Division.

Duty station:
Addis Ababa, Ethiopia.

Date required:
As soon as possible

Duties:
Under the overall direction of the Executive Secretary and the immediate supervision of the Director of the Public Administration, Management and Manpower Division and operating through the Budgeting and Financial Management Section, the Adviser will perform the following duties:

(i) Undertake advisory and consultancy services to governments and their agencies on policies, procedures and administrative arrangements for the improvement of public financial management;
(ii) Undertake studies and research in the field of taxation policies, systems and administration with the object of identifying and evaluating problems, proposing solutions, recommending improvements and providing policy guidelines for effective public financial management;
(iii) Plan, organize and direct national, subregional or regional training workshop and seminars for African officials concerned with fiscal policy, tax administration and budgeting as well as prepare appropriate course materials and programmes for these courses and seminars;
(iv) Assist in developing ECA programme of work in budgetary and taxation systems and public financial management;
(v) Undertake any other specific assignment within the scope of the ECA work programme and priorities in the development and management of budgetary and taxation systems as may be directed.

Qualifications:
Advanced University degree in Economics with specialization in public finance or professional qualifications in government tax administration: responsible positions and practical experience in the operations of government Treasury/Ministry of Finance for not less than ten years.

Languages
Fluency in English and French.

Depending on qualifications, L.6 carries net base salary per annum from $US 33,997 (single) and $US 36,939 (with dependants). Appointments are normally at Step – 1 of the level. Post adjustment on initial salary step is now $US 11,903.53 (single) and $US 12,928.12 (with dependants) per annum. The U.N. Secretary-General reserves the right to appoint a candidate at a level below that advertised.

The United Nations provides *educational grants* for each child through first degree at the rate of 75% direct educational expenses or maximum of $US 3,000 per year.

ECA assists in obtaining house lease from the Government. But housing remains staff member's private business.

The U.N. pays a daily subsistence allowance at the U.N. rate applicable to cities visited while on mission.

The work involves heavy intra-African travels to provide consultancy advisory and training services to African governments. Most of the work is field operation.

The Development of Double Taxation Conventions with Particular Reference to Taxation of International Air Transport*

by D. Hund**

1. INTRODUCTION

One of the problems which almost inevitably have to be faced in any international operations is that of double taxation. And if one type of operation is virtually by definition international in character it is air transport. The second report of the OEEC Fiscal Committee of 1959 (in 1961 rebaptized OECD), which preceded the 1963 OECD Draft Double Taxation Convention, notes: "By the nature of their business, shipping, inland waterways transport and air transport enterprises are more exposed than most other industrial and commercial enterprises to the danger of multiple taxation on their income, as they are liable to be taxed simultaneously in their own countries and in the other countries where they receive payment for the carriage of passengers or goods or where their activities are exercised." The International Civil Aviation Organisation (ICAO) Council Resolution of 14 November 1966 expresses itself in similar terms.

Double taxation obviously forms a serious obstacle to running an internationally oriented business like an airline. It goes without saying, therefore, that action to prevent double taxation is of particular importance to airlines.

2. THE PREVENTION OF DOUBLE TAXATION

There are two main ways of setting up schemes to combat double taxation: unilateral schemes at the national level and international measures on a bilateral or multilateral basis. Many countries make it possible to exempt foreign airlines from taxation on a basis of reciprocity. In effect this is a national regulation. Bilateral regulations mean first and foremost comprehensive conventions for the avoidance of double taxation on income and capital. A variation on this theme is formed by conventions which restrict themselves to the avoidance of double taxation on profits from international air transport and/or from merchant shipping. A third possibility is offered by air transport agreements, which mainly relate to landing rights, capacity problems and route sharing. Also here a provision could be inserted relating to the avoidance of double taxation on any profits made by the operations in question. I do not want to express any preferences on these methods here. What I do want to talk about is the use of comprehensive tax conventions to avoid double taxation on profits from international air transport operations.

3. MODEL CONVENTIONS

The history of air transport goes back nearly a hundred years, but the present network of world-wide routes was not conceived until after the first world war. It is interesting to note that the period in which wider international attention began to be paid to the phenomenon of double taxation in general coincides more or less with the earliest days of international air transport, the 1920s, and that the tax position of air transport was treated separately more or less from the start.

In 1921 the League of Nations commissioned a panel of 4 experts to study the economic aspects of international double taxation. Their first report appeared in 1925. It said – and this was repeated in the recommendations attached to the report – that international *shipping* should be taxed according to a regime other than that which applied to ordinary businesses. Air transport was not considered at that time. However, the report led to a conference which was held in Geneva in 1928 and one outcome was a model convention for the prevention of double taxation in the special matter of direct taxes. There were 3 versions of this convention in order to facilitate adjustments to the various tax systems of the states taking part in the conference. Each of the 3 versions makes the levying of taxes on business profits outside the country where the enterprise has its fiscal domicile dependent on the presence of a permanent establishment. Each version adds the following provision, however: "Nevertheless, income from maritime shipping *and air navigation* . . . shall be taxable only in the State in which the real centre of management is situated." The Commentary on the 3 versions notes that the provisions on sea and air transport form an exception to the principle which normally applies in the case of enterprises, but gives no further explanation.

The League of Nations' work in the area of tax conventions was continued and led to 2 new model conventions: the *Mexico* convention of 1943 and the *London* convention of 1946. The Mexico draft devotes a separate article to shipping and air transport for the first time: Article 5. This reads: "Income which an enterprise of one of the contracting States derives from the operation of ships or aircraft registered in such State is taxable only in that State." Assuming that "an enterprise of one of the States" in most cases has its real centre of management there, we thus can establish that the basis of the Geneva document, i.e. that tax should be levied only in the country where the airline is established, is retained although *registration* in that country is also required. The commentary states that this is simply following the principle which had already been laid down in numerous bilateral conventions. I shall return to this point later.

Article 5 of the 1946 London model is also specially devoted to international air and sea transport: "Income

which an enterprise of one of the Contracting States derives from the operation of ships or aircraft engaged in international transport is taxable only in the State in which the enterprise has its fiscal domicile." Although here also precedence is given to domicile, it differs from the Mexico model in two ways. the requirement for registration has been dropped but there has been added the provision that the profit must have been obtained *in international transport.* Nevertheless the commentary states that the new wording is intended to make it still more explicit that "income from international maritime and air transport [is] taxable only in the country where the vessel is registered, provided the owner or operator has its fiscal domicile in that country". The provision is also intended "to facilitate the operation of international transport enterprises".

The demise of the League of Nations also put an end to its work in fiscal matters. Attempts to achieve model conventions continued elsewhere, however. The British Commonwealth produced a Model Commonwealth Taxation Agreement in 1964, for example. It too contains a special provision for international maritime and air transport under which taxation is levied only in the country of domicile.

The Andean Pact States in South America also drew up a model agreement, in 1971. Here the principle for air and maritime transport, laid down in Article 8, is once again taxation in the country of domicile, although the members of this organisation are well known as tenacious defenders of the principle of taxation in the source country. Nevertheless they were obviously not in complete agreement, for the model also contains an alternative Article 8: "The profits earned by a transportation enterprise from its air, land, sea, lake or river operations in any of the Contracting States, shall be taxable only by such Contracting State." In other words: taxation in the source country. The two possibilities are also embodied in Article 19 of a model convention that was published by the successor to the Andean Pact, the Latin American Free Trade Association (LAFTA).

What we have here for the first time is a departure from the principle that taxation takes place exclusively in the country of domicile which, as I said earlier, had been stipulated in the case of maritime and air transport from the earliest model conventions onward. I shall return to this point at a later stage.

Far more important is the work on model conventions undertaken by what was originally the Organisation for European Economic Cooperation (OEEC), later the Organisation for Economic Development and Cooperation (OECD). The organisation's model/draft conventions for the avoidance of double taxation on income and capital of 1963 and 1977 have had a tremendous influence on the bilateral double taxation conventions concluded over the past 20 years. Here again international sea and air transport is treated separately from other enterprises: Article 8, paragraph 1, which is identical in the two models, states: "Profits from the operation of ships or aircraft in international traffic shall be taxable only in the Contracting State in which the place of effective management of the enterprise is situated." The commentary to the OECD models, however, does not give the reasons which led to this treatment, which differs from the normal regime for profits. Presumably it was supposed that this treatment was at that time so widely accepted internationally that no explanation was necessary.

The most recent in the series of model conventions is the United Nations model double taxation convention between developed and developing countries, which dates from 1980. A group of experts from both developed and developing countries had been working on this model since 1968 and it differs from the OECD model conventions on a number of generally predictable points. As was evident in the Andean draft, developing countries are naturally more inclined towards greater powers of taxation for source countries than are the developed countries. Thus the UN model contains a wider interpretation of the term "permanent establishment" and higher rates of taxation at source on income from movable capital than are usually agreed between developed countries. In so far as shipping and air transport is concerned, the experts were unable to agree upon a common solution and as a result the model contains two alternatives. Article 8A, paragraph 1, is word for word the same as Article 8, paragraph 1 of the OECD models. Article 8B, on the other hand, provides for the right of the source country to levy taxes in the case of *shipping* but the principle of taxation solely in the country of domicile is maintained for *air transport.* The commentary on Article 8A, paragraph 1, states: "The exemption from tax in the source country of foreign enterprises engaged in international shipping traffic is predicated largely on the premise that the income of these enterprises is earned on the high seas, that exposure to the tax laws of numerous countries is likely to result in double taxation or at best in difficult allocation problems, and that exemption in places other than the home country ensures that the enterprise will not be taxed in foreign countries if their over-all operations turn out to be unprofitable. Considerations relating to international air traffic are similar."

Finally, mention should also be made of the United States Treasury Department Model Income Tax Treaty, which was first published in 1976 and partly revised in 1977; a new draft has recently been issued. In effect it is a standard draft that the United States tends to use as basis in its negotiations rather than a model treaty. All 3 published versions likewise lay down the principle that taxes on air and maritime transport are levied exclusively in the country in which the enterprise is established.

The conclusion from all this is that the position of international air transport in model conventions has remained essentially unchanged in over 50 years, i.e. taxation is levied exclusively in the country of domicile or of effective management.

Before discussing how much of this principle has remained intact in bilateral tax conventions, I should like to say a few words about some *multilateral* conventions.

4. MULTILATERAL TAX CONVENTIONS

The problems that arise in bilateral relationships pale beside those of multilateral ones. For this reason there have only been a few multilateral double taxation conventions

© 1982 International Bureau of Fiscal Documentation – BULLETIN

in the past, none of which has had any great significance. I shall just briefly mention 4 examples:

(1) the 1963 convention between francophone African states;
(2) the multilateral Andean Pact convention of 1971;
(3) the Arab convention of 1973;
(4) the Comecon convention of 1979.

The francophone African convention contains a major departure from the domicile principle in applying the main rule for companies, i.e. taxation in the source state, but dependent on the presence there of a permanent establishment, to air and maritime transport. The Andean Pact convention, on the other hand, does provide for taxation exclusively by the state of domicile, which is also the case with the Arab convention and the Comecon convention (or multilateral Convention between the members of the Council of mutual economic aid (CMEA), as the Eastern European economic community is called).

Here too, then, there is an almost universal acceptance of the domicile principle.

5. BILATERAL TAX CONVENTIONS

The earliest comprehensive conventions for the avoidance of double taxation date from the beginning of this century. Since then over 500 of them have been concluded. You will forgive me for not having gone through all of them to check the provisions relating to air transport. However, I have gone some way towards doing this by looking at the provisions in the tax conventions concluded since 1965 and published by the United Nations. There are over 300 of them, and only a very small number, about 4%, provide for taxation in the source country (see Annex). This is hardly surprising in view of what I have just said about the model conventions and their enormous influence on treaty practice.

I have tried to see whether certain groups of treaties show any particular fixed pattern. First of all there is the group of developed countries, essentially the 24 member states of the OECD. There are some 200 treaties between these states, that is about 75% of the possible permutations and combinations between them. Almost without exception the provisions on air transport in these conventions follow Article 8 of the OECD models, that is taxation in the state of domicile. This is not surprising as the OECD formula provides for the possibility of a country making a reservation on any provision of the model convention with which it disagrees. None of the member states has made such a reservation with regard to air transport.

There are hardly any general tax conventions between OECD countries and Arab states. Given the attitudes on both sides – I refer to the Arab Convention I just mentioned – it is not likely that air transport would prove a stumbling block in negotiations. This may be the case, however, in relationships between developed and developing countries, in spite of the UN model convention, which puts air transport in a favourable position. Nevertheless, 119 of the 136 conventions in this category still follow the domicile principle. The proponents of taxation in the source country are only a small group: Singapore, Malaysia, Sri Lanka and the Philippines. With this in mind, it is worth noting the tax convention between the United States and the Philippines, whose ratification has been dogged for years by problems, partly due to the provision relating to air transport. It is remarkable that only one of the 10 conventions between developing countries that I have looked at provides for taxation in the source country. The last group I would like to mention is that of conventions with Eastern European countries which date from the last 10 years or so. Without exception, they uphold the principle of taxation in the country of domicile.

And last, but not least, my own country, the Netherlands: at present there are 32 conventions in force and 3 signed but not yet ratified. We are strongly in favour of placing as few fiscal obstacles in the way of international air transport as possible and we heartily support the OECD principle which, I take it, is also held by IATA: taxation exclusively in the state of effective management of the enterprise. We have been able to ensure that this principle has been respected in all the conventions we have concluded, with only one exception the convention with Singapore.

CONCLUSION

It may be seen that international air transport has occupied a special place in double taxation conventions from the very beginning. This in itself is a remarkable situation, for an airline is an enterprise and as such there is no reason to arrange the taxation of its profits in a way which departs from the internationally accepted practice for other enterprises, that is taxation outside the country of residence being made dependent on the presence of a permanent establishment. As we have seen, however, airlines have been treated differently for over 50 years.

There are two main reasons for this, one theoretical and one practical. The theoretical backgrounmd for exemption in the source country is that the profits of an airline are not primarily obtained where passengers and freight are loaded. No, the activity that produces the profits in the first place is flying and that is done mainly in international air space. The practical argument against treating airlines according to the same rules as other enterprises is the fact that it is almost impossible to arrive at an acceptable method of dividing profits between the various permanent establishments and the headquarters.

I realise that I have only been able to deal with certain aspects of the taxation of international air transport. I have not discussed the interpretation of the term "international traffic". Nor have I considered what exactly should be understood by "profits from air transport". Nevertheless I hope that I have been able to give you some idea of the historical development of international air transport from an international fiscal point of view. It is fair to say that it is accepted on a more or less worldwide scale that as few fiscal obstacles as possible should be put in the way of international air transport. In practice this means that taxation is levied only in the airline's home country. I have also pointed out that the Netherlands shares this principle and that it has been able to maintain it in some 35 general double taxation conven-

© 1982 International Bureau of Fiscal Documentation – BULLETIN

tions, but also in a number of more restricted conventions, air transport agreements and a number of declarations on the basis of reciprocity.

It is therefore possible to state that the ICAO Council Resolution of 14 November 1966, which recommended the member states to take all possible steps to grant international air transport profits exemption from taxation on a basis of reciprocity, and which recommendation has since been repeated a few times, has been followed to a large extent by treaty concluding countries.

We should also note, however, that a number of developments around the world may make continuation of existing practices more difficult. First of all there is the increasing tendency of certain host countries, mainly developing countries, to make foreign airlines liable to taxation, even in spite of the UN model convention and in most cases despite the absence of a permanent establishment. But what is even worse: taxation is often not levied on a net basis but on a notional amount of profit which is not subject to revision in the light of actual profits. In this connection I should like to refer to the report which your organisation published in 1975, entitled "Taxation of international air transport, net income basis, an alternative to reciprocal exemption".

A second unfavourable development is the fact that one is increasingly confronted in practice with countries which, in spite of repeated urging, are not prepared even to discuss the problems of international air and maritime transport as they relate to double taxation. This means that the question of how to devise a suitable scheme cannot even be raised. A variation on this theme is the increasing unwillingness to deal with air and sea transport in anything other than a comprehensive double taxation convention. This makes any scheme partly dependent on the solution of problems which often have nothing to do with international transport.

A third development which, in my opinion, has to be rejected is the fact that some countries are only prepared to do business if exemption is granted for all taxes and levies which have some, sometimes distant, relation to air transport. Of course it is an honourable starting point. By no means, however, should the ultimate goal – taxation of profits from air transport only in the country of residence – be endangered by making a reciprocal exemption on such profits dependent on the willingness to grant exemption as well for all kinds of indirect taxes, sometimes even together with the demand to grant the airline's staff a kind of diplomatic status. Part of those matters is dealt with in air bilaterals. For others, a solution seems complicated. Anyhow, they should be dealt with separately.

The last unfavourable development I should like to point out – and one which has so far been mainly restricted to merchant shipping – is the increasing tendency of certain countries to give preferential treatment to their own companies. It is true that foreign lines are usually exempted from taxation but their opportunities for loading or unloading freight or for enabling passengers to embark or disembark are often drastically restricted, thus reducing the opportunities to realise profit and frustrating the effect of the exemption.

In my opinion these developments should be most emphatically rejected in the interests of the unimpeded exploitation of international airline services.

U.S.A.:
SAFE HARBOR LEASING – A Controversial Means for Distribution of Investment Incentives

by Frank J Schuchat *

Of all the provisions in the Economic Recovery Tax Act (ERTA) enacted by the United States Congress in 1981, perhaps the one generating the most public discussion is Section 201, which, by adding Section 168(f)(8) to the Internal Revenue Code, makes it easier for an entity with tax credits or depreciation deductions in excess of an amount it can take full advantage of, due to a lack of taxable income, to transfer those tax benefits to another, profitable entity, in return for cash.

The so-called safe harbor leasing provision of the ERTA is designed to allow all corporations to take advantage of the new Accelerated Cost Recovery System (ACRS),[1] which permits recovery of capital investments in certain productive assets over a shorter period of time than was previously allowed, as well as the 10% Investment Tax Credit (ITC).[2] Both ACRS and the ITC are measures to encourage capital investment, which is seen as the key to economic recovery. Without safe harbor leasing, it is argued, there would be distortions in the economy, due to uneven distribution of tax incentives, with older, profitable corporations receiving a competitive advantage over new enterprises and those suffering losses during the years the tax incentives are available to them. In addition, the accumulation of unused tax benefits is said to make some corporations attractive targets for takeovers, which would also reduce competition.

The "tax sales" which have so far taken place under Section 168(f)(8) have created a furor in the press, among citizens' groups and in the Congress, based on objections to the high cost in lost revenue (which according to Treasury estimates could exceed $27 billion by 1986), at a time when most Federal programs are on austerity budgets, the deficit is expected to reach record levels, and the administration is exhorting the public on the benefits of living with less government assistance. This article will discuss the mechanics of safe harbor leasing as well as some of the arguments put forward by those who would keep it in the Code and those who favor its elimination.

BACKGROUND

The general form for the transfer of tax benefits under the new provision is illustrated by the following two examples taken from the Temporary Regulations issued by the Internal Revenue Service.[3]

In the simple leasing transaction, X Corp. would like to acquire a $1 million piece of equipment, which is "qualified leased property" as defined by the statute, and which has a 10-year economic life and under ACRS can be depreciated over an accelerated period of 5 years. Y Corp. meets the requirements of Section 168(f)(8)(B) for a lessor, which will be discussed below, and has profits it wishes to shelter from tax. Y will purchase the equipment selected by X from the manufacturer for $1 million, paying $200,000 in cash and borrowing the remaining $800,000 from a bank, with a repayment schedule calling for 9 equal annual installments of principal and interest of $168,000. Y then leases the equipment to X under an agreement calling for 9 annual rental payments of $168,000. Both corporations elect to have the transaction characterized as a lease and to have the special rules of Section 168(f)(8) apply. Y will be treated as the owner of the property for federal income tax purposes and is therfore entitled to the investment tax credit and the ACRS deductions with respect to the property. Y will have a basis of $1 million in the property and must report the rental payments as ordinary income. Y will, however, be able to deduct from gross income the interest paid to the bank on the $800,000 loan. X will be permitted to deduct as a business expense the aggregate payments of rent.

In the sale and leaseback transaction the facts are the same except that X has already purchased the machinery for $1 million and enters into an arrangement with Y to transfer to it ownership of the property for federal tax purposes. In order to accomplish this, X will agree to sell the machinery to Y for an initial payment of $200,000 in cash, plus a note for $800,000, calling for repayment of principal and interest over a 9-year period in annual installments of $168,000. X, which has now transferred title to the property (but has retained possession), will agree to lease the property for 9 years with rental pay-

* J.D., Member of the Staff of the International Bureau of Fiscal Documentation.

1. IRC Section 168.
2. IRC Sections 38; 46. U.S. law permits a credit against tax for amounts invested in certain depreciable property. The credit is generally available in the year the property is first placed in service, and is currently 10% (prior to 1975 the credit was 7%). The adjusted basis of the property is not reduced by the amount of the credit. In effect the provision reduces the cost of capital expenditures, with the intent of encouraging productive investment.
3. Temp. Reg. Section 5c. 168(f)(8)(-1)(e). Treasury Decision 7791.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

ments totalling $168,000 per year. Again, the two corporations will elect treatment under Section 168(f)(8) and are therefore assured the transaction will be treated as a lease for federal income tax purposes.

The rental payments which X is required to make to Y are exactly equal in timing and amount to the debt service payments that Y must make on the note. Therefore, the two sets of payments cancel out each other and the only cash that need change hands between X and Y is the original $200,000, which is the cost to Y of securing the tax benefits that accompany ownership of the equipment, i.e. the investment tax credit and the ACRS deductions. Y's basis will be $1 million and it must report as income the rent it receives from X; however, that income is offset by the deduction for the interest paid to X on the note and the annual depreciation. X need not recognize a gain on the sale since the sale price of $1 million equals its basis in the property. X must report interest on the note as income but may deduct rental payments.

In either example, the user of the property, X, may have an option to purchase the property at the end of the lease period for a nominal price or a determinable price, and this will not affect the characterization of the transaction as a lease, nor will it be taken into consideration in determining the amount the lessor has "at risk" with respect to the property.

PRE-ERTA LEASING

Prior to enactment of Section 168(f)(8), it was possible to transfer tax credits or deductions through a leveraged lease; however, there was no "safe harbor", and the transaction had to meet specific guidelines in order to qualify for an IRS letter ruling characterizing it as a lease rather than a conditional sales contract.[4] The lessor had to have a minimum unconditional "at risk" investment in the property at all times of 20% of the *cost* of the property. Such minimum investment had to be an equity investment which, in this context, included only consideration paid and personal liability incurred by the lessor to purchase the property. The net worth of the lessor had to be sufficient to satisfy such personal liability and the lessor had to demonstrate that an amount equal to at least 20% of the original cost of the property was a reasonable estimate of the fair market value of the property at the end of the lease term. The property also had to have a remaining useful life at the end of the lease term of the longer of one year or 20% of the originally estimated useful life of the property.

The lessee was not permitted to have a contractual right to purchase the property from the lessor at a price less than the fair market value at the time the right was exercised and the lessor could not have a contractual right to cause any party to purchase the property, at the time the property was first placed in service or use by the lessee. The lessee could not furnish any part of the cost of the property, nor could he lend to the lessor funds required to purchase the property, nor guarantee any indebtedness created in connection with the acquisition of the property by the lessor. Finally, the lessor had to be able to demonstrate an expectation of profit from the transaction, apart from the value of or benefits obtained from the tax deductions, credits, allowances and other tax attributes arising from the transaction.

THE NEW RULES – A SAFE HARBOR

What the new law does is to deliberately ease the former requirements in order to encourage tax leasing. To qualify for the safe harbor, i.e. a guarantee of treatment of the transaction as a lease for federal tax purposes, the parties involved must first of all elect to treat the transaction as a lease rather than a financing arrangement. However, not all taxpayers may participate in tax leasing. To qualify as a lessor in one of these arrangements one must be a corporation other than a subchapter S corporation or a personal holding company, a partnership all of the partners of which are eligible corporations, or a grantor trust with respect to which the grantor and all beneficiaries are corporations or a partnership composed of corporations.[5]

The nominal lessor is also required to have, at all times during the lease term, a minimum investment "at-risk" in the property of at least 10% of the adjusted basis of the property. Although this "at-risk" requirement is a continuation of the old policy of insisting the nominal lessor have a stake in the cost of the leased property, it is less of a stake than under the previous guidelines, since it need only be 10% rather than 20%, and, more importantly, it is determined with respect to the adjusted basis of the property rather than the original basis.

The fact there may be an agreement between the lessor and the lessee requiring either or both parties to purchase or sell the property at some price (whether or not fixed in the agreement) at the end of the lease term will not affect the amount the nominal lessor is considered to have "at risk" with respect to the property. The fact the lessee is considered the owner for state or local law purposes will also not be taken into account in characterizing the transaction as a lease. It will not matter either that after the lease term no other person besides the lessee will be able to make use of the property.

---

4. See Revenue Procedure 75-21, 1975-1 Cumulative Bulletin 715; Revenue Procedure 75-28, 1975-1 Cumulative Bulletin 752; Revenue Procedure 76-30, 1976-2 Cumulative Bulletin 647.

5. A Subchapter S Corporation is a true corporation which is treated as a partnership for Federal income tax purposes, i.e. corporate income is exempt from federal income tax with regard to the corporation itself, but is taxable for the individual shareholders, whether distributed or not. The shareholders must be fewer than 25, they must elect Subchapter S treatment, and must have only one class of stock (IRC Section 1371).
A personal holding company is a corporation subject to the personal holding company tax, which is imposed annually on all corporations which fit certain definitional requirements, regardless of whether their purpose was to avoid tax. Essentially, a personal holding company is an investment company, in which the majority of stock is held by 5 or fewer persons, and the bulk of its income is from dividends and interest (see IRC Section 541).
A grantor trust is a trust of which the grantor will be treated as the owner of the trust's assets for tax purposes, in general because certain attributes of control have been retained (see IRC Section 671).

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Another change from the old IRS guidelines is that the lessee, or a related party, may now provide financing, or guarantee financing for the transaction. That does not, however, allow the lessee to finance or guarantee the 10% minimum "at-risk" investment required of the lessor.

The lease term (including extensions) may not exceed the greater of 90% of the useful life of the property for purposes of Section 167 depreciation, or 150% of the present class life of the property.[6]

In order to be "qualified lease property" the property must meet one of 3 requirements, the first of which is that it is new Section 38[7] property of the lessor which is leased within 3 months after the property was placed in service, and which, if it had been acquired by the lessee, would have been new Section 38 property of the lessee. (The lessor may use the property within the 3-month period prior to the start of the lease.)

In case of a sale-leaseback transaction, "qualified property" includes property that was new Section 38 property when acquired by the lessee. The sale and leaseback must occur within 3 months of the date the property was placed in service by the lessee, and the adjusted basis of the lessor must not exceed the adjusted basis in the hands of the lessee at the time of the lease. A special rule applies for eligible property placed in service after 31 December 1980, and before the date on which the ERTA was enacted (13 August 1981). Such property will be deemed to have met the 3-month requirement if leased by 13 November 1981.[8] The third category of "qualified property" is mass commuting vehicles (as defined in IRC Section 103(b)(9))[9] which are financed in whole or in part by obligations the interest on which is excludable from income tax under Section 103(a). This special category, under which a lessee will receive the depreciation deduction even though the property is used by a tax-exempt organization or government unit in an exempt function, does not, however, qualify for the investment tax, credit, but only for the ACRS deductions.

The act states that, if the specified requirements are met, no other factors will be taken into account in determining whether the transaction will be effective to transfer federal tax attributes to the nominal lessee. The Treasury Department is authorized by the Act to promulgate regulations as may be necessary to carry out the purposes of the section, including regulations to insure that the aggregate amount of (and timing of) deductions and credits in respect of qualified leased property is limited to the aggregate amount (and timing) which would have been allowable without regard to the leasing provisions.

In case the lessee acquires the property at the expiration of the lease term, and subsequently disposes of it, the lessee will be subject to the normal rules for recapture of depreciation deductions under IRC Sections 47 and 1245,[10] just as if the lessee had been considered the owner of the property for the entire term of the lease. However, any amount recaptured already from the lessor when it transferred the property will not be recaptured again from the lessee.

REVISION OF REGULATIONS

In October 1981,[11] the Treasury announced regulations for safe harbor leasing which provided guidelines as to what subsequent events might disqualify a leasing transaction from safe harbor protection. Among the specified events was a transfer in bankruptcy or similar court-supervised proceeding. This set off a storm of criticism since, in the words of one concerned corporate executive, the effect of the regulations was "nearly to destroy the ability of poor companies with dubious credit to take advantage of the new law".[12] Since it was "poor" companies, or at least companies with a negative taxable income, which were the intended beneficiaries of the safe harbor leasing provision, the temporary regulations were subsequently amended.[13]

As it now stands, a transfer in bankruptcy or similar proceeding is not automatically a disqualifying event if (1) all lenders with secured interests in the property prior to the time the lease is consummated consent to release the federal income tax ownership of the property from their interest, (2) the lessor gives written notice of its tax ownership to the court, the trustee in bankruptcy, and the purchaser of the property, and (3) the lessor files a statement with its income tax return identifying the transferees and the property. All that having been done, the lessor will continue to be owner of the property for tax purposes, and the transferee will step into the shoes of the original lessee. The rule is mandatory for agreements executed after 31 May 1982, and elective for those before that date.

If, on the other hand, the lessee voluntarily sells or assigns its interest in the lease or in the property, the arrangement *does* lose its characterization as a lease under

---

6. IRC Section 167(m)(1). Under the Class Life Asset Depreciation Range (ADR) system taxpayers were permitted to base depreciation deductions on a hypothetical useful life selected from within a range specified for designated classes of assets.
7. Section 38 property is property that may be depreciated annually and for which an investment tax credit is available. The category generally includes tangible personal property (except air conditioning and heating units); certain other tangible property (except buildings) tied to production or certain services; some research and storage facilities; qualified expenditures for rehabilitating business buildings; certain agricultural and horticultural structures and certain reforestation expenses.
8. This deadline caused a flurry of activity in September and October of 1981 as corporations rushed to qualify for leasing property already purchased and placed into service.
9. This provision exempts from tax interest paid on municipal bonds used to finance purchases of buses, subway and rail cars to be used by mass transit systems owned by government units. The theory is that by exempting interest from tax local governments can offer holders of their obligations an attractive yield at a lower cost to the local government. By permitting tax leasing of mass commuting vehicles, capital costs are further subsidized.
10. If property for which accelerated depreciation deductions or a credit have been taken is disposed of prior to the end of its useful life or the ACRS recovery period, part of the tax benefits are "recaptured", i.e. paid back to the Treasury.
11. Temporary Regs. Section 5c. 168(f)(8). Treasury Decision 7791.
12. Letter of 27 October 1981 from Chrysler Corporation President Lee A. Iacocca to Treasury Secretary Donald T. Regan, reprinted in *Tax Notes*, 16 November 1981, p. 1215.
13. Treasury Decision 7795.

the safe harbor provision, unless within 60 days of the transfer the lessee's transferee gives written consent to take subject to the leasing of the tax attributes of the property to the nominal lessor.

Under the new regulations it is intended that corporations will have the flexibility needed to make maximum use of Section 168(f)(8) so that, as Congress intended, the lessee will obtain the benefit of capital investment incentives in an amount as near as possible to the tax incentives it would have received had it been able to take advantage of the ACRS deduction and the Investment Tax Credit without having to resort to a lease.

A QUESTION OF POLICY

The old guidelines, which made leverage leasing complicated and resulted in high transaction costs, were designed to insure that only genuine arrangements were recognized for federal tax purposes. In contrast, the new regime will be easier to work with because it represents more than simply a change in mechanical requirements or an easing of reporting obligations. As stated in the *General explanation of the Economic Recovery Tax Act of 1981,* prepared by the staff of the Joint Committee on Taxation, the new provision is

> . . . a significant change overriding several fundamental principles of tax law. Traditionally, the substance of a transaction rather than its form controls the tax consequences of a transaction. In addition, a transaction generally will not be given effect for tax purposes unless it serves some business purpose aside from reducing taxes. Because the leasing provision was intended to be only a transferability provision, many of the transactions that will be characterized as a lease under the safe harbor will have no business purpose (other than to transfer tax benefits). When the substance of the transaction is examined, the transaction may not bear any resemblance to a lease.[14]

However, to admit that a safe harbor for leverage leasing serves no business purpose save for reducing taxes does not mean that transferability of tax benefits does not serve any legitimate public objective. The investment tax credit and accelerated depreciation are intended to lower the cost of capital to firms in order to encourage capital investment, which is considered the key to economic growth. When some firms cannot take advantage of these incentives not only are their capital costs not decreased, they are in fact increased relative to other firms. This distortion should be addressed in some way. Therefore, we have the Congress encouraging leverage leasing by creating a safe harbor.

The basic principle is summed up in the following passage from an address by the Assistant Treasury Secretary for Tax Policy, John E. Chapoton:

> What tax leasing guarantees is that the investment stimulus of ACRS will be available equally to all firms which make new investments, whether or not the particular firm has significant current income. The choice of investments made in the economy will be determined by the economic profitability of the investments, not by special tax benefits available only to certain firms with particular tax characteristics. Far from being a special interest benefit for distressed industries or cash rich companies, leasing is a tool for spreading the investment stimulus of the new tax law more equally throughout the economy . . . . safe harbor leasing, which allows more efficient leasing transactions than under prior law, is an essential ingredient of the new ACRS rules.[15]

Since passage of the ERTA, corporations have been quick to arrange leasing transactions to take advantage of the new safe harbor provision. This has created considerable publicity, mostly adverse, which has in turn prompted several members of Congress to propose legislation to repeal Section 168(f)(8).[16] Whether or not such efforts will be successful remains to be seen.

Under temporary regulations issued by the Treasury, safe harbor leases are to be reported within 30 days after the transaction is executed,[17] so that when the Congress does reconsider Section 168(f)(8) it will be able to draw upon useful current data in considering how effective the provision has been. Nevertheless, the result of its reconsideration will hinge as much on politics as tax policy.

Although opposition to Section 168(f)(8) is based for the most part on its cost to the Treasury, and not on its effectiveness in dealing with the problem of distributing tax incentives made available in other parts of the Internal Revenue Code, the section can also be faulted in that respect.

According to one estimate, companies that "sell" their tax benefits appear to be getting about 60% of the value of those benefits.[18] That means that although the benefit results in a loss to the Treasury of the full amount which the lessee would have been entitled to had it been able to use the benefits itself, the intended beneficiary of the investment incentive, the lessee, gets much less assistance than the government has paid for. This is plainly not efficient. In addition, the fact that profitable corporations are able to take substantial deductions and credits by becoming tax lessors can undermine public confidence in the revenue system. On the other hand, if only profitable enterprises are able to take advantage of tax credits and deductions that are intended to apply across the board, there is also a risk that some corporate taxpayers will perceive the sytem as inequitable.

Accordingly, if the government is to continue to provide incentives to capital investment through the tax system, it may be necessary to consider alternatives to leverage leasing as a means for allowing all corporate taxpayers to take advantage of the incentives. The most obvious alternative is a refundable tax credit, i.e. a system where corporations without tax liability to offset would be given a payment in the same amount they would otherwise receive as a tax credit. Such a scheme might be complicated to administer. Neverthless, it has been considered be-

fore, and is used in some countries, notably in Western Europe, as a means for distributing tax incentives for investment (see box). The major advantage of a refundable credit is that the incentive is more precisely targeted; in other words, the company which is supposed to receive the subsidy receives the whole subsidy, without having to share it with a lessor as under Section 168(f)(8).[19] The difficulty with a refundable tax credit is that it is likely to be politically impossible, particularly at a time of unprecedented deficits, for the Federal government to make cash payments to distressed corporations or profitable corporations, which for one reason or another have no U.S. income tax liability.

Another means of allowing corporations in a loss position to have the benefit of incentives would be to allow them to take advantage of those incentives over an indefinite period of time. This would, however, not be effective in many cases and in any event does not completely address the problem. Net operating losses and certain credits can already be carried over for a period of 15 years,[20] and any incentive that is only available several years down the road is really no incentive at all. The present value of the tax credit or deduction will always be much greater than the value of that same benefit taken several years in the future. That is why tax leasing has proved to be so popular among the lessees. Even after paying a premium to the lessor they still benefit because they receive an infusion of cash immediately. For many companies the promise of a tax benefit in the future means little; they may have disappeared before they are able to use it.

The problem addressed by tax leasing is by no means simple. If Section 168(f)(8) is abolished and nothing is put in its place, the tax incentives offered for capital investment will continue to cause distortions in the economy. However, some distortion is inevitable where the revenue system is too heavily depended upon as a vehicle for carrying out economic programs. Perhaps the real solution is for the Federal government to eliminate tax incentives for investment, which will increase its revenues and decrease its need to borrow money, thereby freeing a substantial amount of capital which would then be available at a lower cost to the private sector.

SELECTED INVESTMENT SCHEMES IN EUROPEAN COUNTRIES AVAILABLE WITHOUT REGARD TO TAXABLE INCOME

NETHERLANDS: The Law on Investment Incentives (WIR), effective 24 May 1978, provides for a tax-free basic investment premium and a number of tax-free investment bonuses. (The law replaces two prior special tax incentives for investment: accelerated depreciation and an investment allowance.) The WIR premium and the total investment bonuses are credited against the taxpayer's income tax liability. The depreciable base of the assets concerned is not affected. Corporations operating at a loss may apply to the Tax Administration (Inspecteur der Vennootschapsbelasting) for payment of any excess over tax due. Non-residents may also benefit from these subsidies; however, where it affects their income tax liability, it may also affect the possibility of crediting Dutch income tax against income tax in their home country, e.g. the United States. Therefore, the net result will be no actual benefit from the cash subsidy.

FRANCE: A cash grant (Regional Development Grant) of up to 25% of amounts invested may be obtained by businesses which create or expand activities in designated areas where industrial problems exist.

GERMANY: The Investment Premium Law (Investitionszulagengesetz) provides for a tax-free investment aid of 8.75% of the amount invested in depreciable fixed assets for new businesses and expansion of business in certain development areas. Premiums varying between 7.5% and 20% of the cost of investment in new depreciable fixed assets are available where the assets are used in research and development, production and distribution of energy, and for any purpose where the assets were ordered or production commenced within stated time periods.

The government is presently considering offering a 10% investment grant for investment made during 1982 in new plant and buildings, provided the firm making the investment spends more than its average investment in the past 3 years.

SWEDEN: Investments made during certain stated time periods, in general ending 31 December 1979, were eligible for an investment allowance in the form of a 10% or 25% deduction (prior investment periods have been granted deductions of 20% and 30%) which could only be taken in the year of the investment. However, if the profit was insufficient to offset the entire allowance, the taxpayer could opt to receive cash in the amount of 4% or 10% of the investment.

IV. FINAL REMARKS

I. INTRODUCTION

A. Background

In recent years, world-wide interest in the relationship between industrialized and developing countries has increased significantly. This is last but not least documented in the creation of specific international bodies and organizations that are preoccupied with all possible issues involved, directed to bring about an improvement in the economic and social situations of developing countries.

There is little controversy around the question that tax incentives for private undertakings, on the side of industrialized countries and/or developing countries, are only one device out of a vast variety of possibilities that could make a contribution to a more equitable distribution of wealth amongst nations. Furthermore, the degree of usefulness of such incentives will depend upon a great number of factors, such as the economic system of a developing country and the degree of development that has already been achieved.

B. Scope of this article

As indicated above, the appropriate means of support for developing countries are often difficult to identify. This article will present a short survey of possible tax incentive measures open to industrialized countries. It is quite clear that this catalogue of measures is only one component of a broader picture that, to be somewhat comprehensive, should also include *tax incentives provided by developing countries* and *the reconciliation of tax incentive measures as provided by industrialized and developing countries.*

Nevertheless, this article is confined to tax incentives for private undertakings in developing countries provided by industrialized countries. Indeed, it can be observed that there is renewed interest for this especially on the side of the industrialized countries these days for which one can assume the following reasons:

(1) the gloomy state of the economy of many industrialized countries themselves, documented by huge budget deficits, great balance of payment problems, etc., makes it very difficult for the respective governments to maintain or even increase the transfer of public funds to developing countries;

(2) the discovery of possible potential for economic growth through private undertakings in developing countries that may be beneficial to the developing country as well as to the economy of the industrialized country; i.e. where it is possible to support undertakings in developing countries that further economic development and employment opportunities there without representing a threat to the economic situation in the industrialized country, for example with respect to the unemployment question. This scheme will be of particular interest where financial facilities can be made available from third countries. As opposed to the direct transfer of financial facilities, tax incentives often do not cause an immediate outflow of public funds.

* Senior Research Associate, International Bureau of Fiscal Documentation, Amsterdam.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

There are certainly many more reasons but, at present, these two appear to be the most significant.

This short presentation of the most common tax incentive measures will basically refer to private undertakings such as participation in a corporation, investment by way of a permanent establishment, the granting of loans, and the transfer of technology. It mainly applies to taxes on income. Another important issue, namely, tax incentives for expatriates, will only be briefly mentioned.

C. General problems

The types of tax incentives that can be employed will often be a function of the tax systems that are applied in the countries involved. For instance, where an industrialized country applies the territoriality system, the consequences will be quite different vis-à-vis another industrialized country that applies a world-wide system of income taxation.

Another crucial point is the fact that it is, in theory, a generally accepted idea that the investor should benefit from a tax incentive granted by a developing country and not the tax authority of the industrialized country of which he is a resident; however, some systems may well eliminate any such efforts taken by developing countries.

A further problem area constitues the existence of different accounting systems for tax purposes in the countries involved.

In some cases, the measures to be discussed below can provide a solution, but others remain outside the scope of this article.

II. THE DIFFERENT TYPES OF TAX INCENTIVES*

A. Classification

The tax incentives that may be made available to industrial countries can be classified in different ways, for instance as capital-related or income-related incentives, as incentives classified according to the stage of a private undertaking at which they are available, and many more. Of course, the type of incentive will also depend on the type of the activity that is undertaken.

Furthermore, the granting of tax incentives and the availability of measures for the avoidance of double taxation are often closely interrelated. Indeed, those measures can themselves represent incentives and therefore they are here given the same attention as are "ordinary" tax incentives although there are, of course, arguments to take a different viewpoint.

This short survey follows mainly the "stage classification".

B. Pre-activity/Initial tax incentives

Under this category those tax incentives are listed that can be made available either in the planning period (see (1)) or at the time the undertakings are initiated (see (2) to (5)).

1. Future investment reserves

Future investment reserves are amounts that are deductible from taxable income before any undertaking in a developing country has been started.

The maximum amount deductible may be determined as a certain percentage of the taxable profit of a given year, as a specific fixed amount, or may be based upon any other assessment base (equity capital, etc.). The future investment reserve as created must result in an undertaking in a developing country within a specified period of time; otherwise the amounts deducted from taxable income must be added back and are subject to taxation at the normal rate. The amount of the reserve may either be "kept" within the enterprise or it may be required to be transmitted to an institution such as a national development company or development bank. The latter way could also provide access to additional funds, expertise, etc. at the time an undertaking is planned and started.

The future investment reserve provides a possibility to enterprises, particularly small and medium sized enterprises, to "prepare" themselves financially for ventures in developing countries which are already at the planning stage. It appears that the possibility to build up such a reserve would open the way to private undertakings in developing countries for enterprises that may otherwise be prevented from doing so.

With respect to domestic investment, the future investment reserve scheme has been applied in a number of countries, including Denmark,[1] Finland[2] and Sweden[3] for some time. A scheme with a similar effect, namely, pre-investment depreciation, is, for instance, employed in Norway.[4]

2. Valuation rebate

Upon investing a certain amount of capital in an undertaking, a "lump sum depreciation" of a certain percentage may be granted without the requirement that there actually be a drop in the value of the underlying item. By way of such a valuation rebate, a hidden reserve is created which need not be dissolved until the undertaking is disposed of. The effect of this measure is a tax saving in the initial year of the undertaking with no tax consequences in the following years. The advantage of this measure is the easy handling, i.e. there is no substantial bureaucracy involved.

---

* Specific country references to various kinds of incentives and other measures have been established with the kind cooperation of the Staff of the International Bureau of Fiscal Documentation.
It must be noted that the references to specific countries are to serve as examples only and naturally cannot represent any kind of complete survey.

1. Law on Investment Reserve, of 18 November 1975, as amended.
2. Law on Investment Reserve and Allowance, of 28 December 1978, as amended.
3. General Investment Reserve Act, of 31 May 1979, as amended. For a detailed discussion of the Swedish scheme, see:

© 1982 International Bureau of Fiscal Documentation – BULLETIN

The valuation rebate was, for instance, granted in West Germany under the Development Aid Tax Law, but was abandoned on the occasion of a later amendment of that law. The tax law of Austria contains a similar provision for investment abroad provided that certain requirements are met.[5].

3. General reserve

A "general reserve" is described in this article as a profit-deductible amount based upon the value of a private undertaking initiated in a developing country. The deduction of the reserve will usually take place in the year in which the underlying undertakings are being started. As to the amount of the reserve, there are numerous possibilities ranging from a rate of 1% to a rate exceeding 100%.

Another determinant of this type of incentive is the time period for which it is granted. The possibilities range, of course, from a dissolution at the time the undertaking is being disposed of to a dissolution within a relatively short period after its creation. In between there are many ways, for instance a dissolution in annual installments after a grace period of several years. The effect of this measure is basically a tax respite, the extent of which depends on the period during which the reserve may be maintained.

Provisions for a general reserve for undertakings in developing countries are contained in the tax laws of France,[6] Japan[7] and West Germany.[8]

4. Tax-free transfer of hidden reserves

The tax systems of most industrialized countries provide for the taxation of hidden reserves upon dissolution, either by way of capital gains taxation or by way of automatic inclusion of such amounts into profits due to the application of the accrual method. A dissolution of hidden reserves is usually assumed when an asset is sold or otherwise leaves the sphere of an enterprise (or country).

"Bearers" of hidden reserves may be all kinds of movable fixed assets but also intangible assets such as patents, trademarks, etc. In the latter case, the amount of hidden reserves may be particularly great when the underlying items represent the result of own research and development efforts and the tax law of the country in question does not require/allow the capitalization of the underlying costs. Indeed, the obligation to dissolve hidden reserves can frustrate the otherwise desirable transfer of assets to undertakings in developing countries. This effect can be avoided in allowing enterprises to maintain the book value of such items (in case it remains in the sphere of the enterprise). Where self-developed, non-capitalized intangible assets are being transferred, a solution may also be found in capitalizing the item with one unit of account (as pro memoria item). At any rate, where an industrialized country does not want to waive the right to tax the hidden reserves of items upon the transfer to a developing country, it could allow a combination of dissolving the hidden reserves with the creation of profit-deductible reserves.

In the first case, a tax-free transfer of hidden reserves would be the result whereas in the latter case (profit-deductible reserve) the consequence will depend upon the requirements with respect to the dissolution of those reserves. If the reserve may be maintained indefinitely, a generous tax respite will be the consequence whereby this transaction even may become a tax-free transfer (e.g. where a patent eventually expires).

5. Investment premiums (Investment tax credit/Cash grant)

A special form to promote private undertakings in developing countries is the investment premium to be granted by the authorities of the industrialized country.

There are arguments that this type of incentive need not necessarily be regarded as a tax incentive. In this article, however, it is being dealt with as a tax incentive; the only difference vis-à-vis other incentive measures is to be seen in the fact that the implications do not appear at the level of income but rather at the level of amount of tax due. The basic idea is that a private undertaking in a developing country will benefit from a premium (investment tax credit or cash grant) calculated as a certain percentage of, for instance, capital invested.

The advantages of investment premiums include the quick availability of liquidity for the enterprise. Furthermore, if the investment premium does not influence the acquisition cost to be used for possible depreciation and is also otherwise kept outside the accounting system for tax purposes, it is truly a one-time affair that does not encourage the blossoming of red tape.

At any rate, this type of incentive has become a popular incentive measure for domestic investment in a number of countries, including Canada,[9] the Netherlands,[10] Spain,[11] West Germany[12] and the United States of America.[13]

C. Tax incentives during operation

The pre-activity/initial tax incentives are mostly concerned with tax matters that arise at the first stage of an undertaking in a developing country, whereas the tax incentives during operation are mostly concerned with the outcome of those undertakings in subsequent years, i.e. the treatment of income – positive or negative – is the major issue.

Again it must be emphasized that precise answers to related questions will depend on the tax system of a specific industrial country; if the territoriality principle of taxa-

tion is employed, the answers are different as compared with countries that adhere to the taxation of world-wide income.

In this context, there is, of course, another important issue, namely, the question as to how a developing country taxes private undertakings carried on by foreigners. Indeed, this is not the subject of this article but the underlying implications cannot be totally ignored. Thus, it will be necessary to mention briefly relevant measures.

One could argue that measures for the avoidance of double taxation, both unilateral and bilateral, are not by their very nature tax incentive measures of industrialized countries for private undertakings in developing countries, since, to a great extent, they are also employed in relationships between industrialized countries. However, whatever viewpoint one may employ, these measures are too important to be neglected and their implications may have a greater significance for a foreign investor than the aggregate of all other tax incentives. Furthermore, there are indeed measures that are uniquely designed for the relationship between an industrialized country and a developing country.

1. "Specific" tax incentives

In this article, those measures are defined as "specific" tax incentives (during operation) which usually do not fall under the category of measures for the avoidance of double taxation.

a. *Special depreciation*

A great number of industrialized countries provide a rather generous tax regime by way of allowing a fast depreciation of fixed assets. Although that regime is usually designed for domestic purposes it may nevertheless be applicable with respect to undertakings in developing countries, namely where such an undertaking is carried on as a permanent establishment and the system of taxation of world-wide income is applied.

The most common schemes are the following:

- *Full depreciation* for fixed assets in the year of acquisition. This regime is, for instance, applied in the Republic of Ireland[14] and in the United Kingdom;[15] other countries are also reported to be considering the introduction of this scheme into their tax system.
- *Accelerated depreciation,* i.e. a fast writing off of fixed assets by way of allowing high depreciation rates in initial years or an additional depreciation on top of the usual depreciation that is based on the useful life of an asset. At any rate, the depreciation base usually does not exceed 100%. This scheme is common practice in many countries, including Austria,[16] Belgium,[17] Japan[18] and Sweden[19] whereby there are often restrictions with respect to the specific type of fixed assets that are required.
- *Depreciation allowance,* i.e. the depreciation base exceeds the acquisition costs of a fixed asset. This scheme is, for instance, found in Belgium[20] and Finland[21] whereby it is also often restricted to specified types of assets or certain areas.

b. *Reserves for losses*

Where an undertaking in a developing country is maintained in the form of a subsidiary company or where a tax treaty provides for the exemption from taxation of income of a permanent establishment in the industrial country, no consideration of losses of such undertakings will usually be provided.

As an incentive measure, an industrialized country may include a provision in its national tax law that allows the creation of a profit-deductible reserve for such losses. Usually, such a reserve is dissolved as soon as the subsidiary company/permanent establishment operates at a profit.[22]

Generally speaking, the consideration of such losses is, for instance, possible in the international relationship in France,[23] West Germany[24] and the Netherlands[25] provided that certain preconditions are met.

c. *Depreciation to fictitious going concern value*

The tax laws of some industrialized countries provide the possibility of depreciation in those cases where the taxpayer can establish that the actual value of an asset is lower than its book value. This scheme may be opened for application for undertakings in developing countries on a fictitious basis. A systematic depreciation of a certain annual percentage of the initial investment spread over a number of years down to a certain fictitious going concern value without requiring economic justification represents an attractive possibility to provide a tax incentive for private undertakings in developing countries in that it allows the tax-free creation of hidden reserves. This scheme offers a "compensation" for the general risk that is always involved where there are undertakings in remote countries.

d. *Tax reliefs for expatriates*

Although it will usually be the developing country that taxes expatriates from industrialized countries employed in undertakings there, there are nevertheless certain situations where an industrialized country can provide reliefs for such persons. This is particularly true where an industrialized country bases its tax system upon citizenship; in this case, a substantial basic exempt amount can bring about the necessary incentive to work in a developing country.

Relief measures in this context may also be extended to the social security system of the industrialized country; for example, where it appears to be desirable for an expatriate to remain in the social security system of his home country, this should be facilitated in the underlying legislation.

2. Tax incentives provided by measures for the avoidance of double taxation

Measures for the avoidance of double taxation can be based on (a) unilateral provisions of the national law, (b) bilateral treaties between two states, or (c) multilateral treaties between a number of states.

For the purpose of this article, i.e. the application of such measures as tax incentives in the relationship between developing and industrialized countries, only the unilateral and the bilateral approaches are significant.[26]

This article does not deal with those two legal approaches as such but with the methods that, in principle, may be offered by both.

The following is a presentation of different methods for the avoidance of double taxation with respect to taxes on income whereby the situation is, of course, regarded from the angle that a person (investor) in an industrialized country receives income from an undertaking in a developing country. (To some extent, these principles are also applicable to taxes on capital.)

Again, the discussion of the various methods basically refers to private undertakings in the form of subsidiary companies, permanent establishments, the granting of loans, and the provision of technology (royalties), as the case may be (see also above).

a. *Tax exemption method*

The exemption method actually "ignores" the income that arises abroad (source country), in this case a developing country. In other words: the source country will tax the underlying income according to its tax laws whereas the investor's home state (industrialized country) does not levy any taxes on the same income item. Thus, such income is tax free in the investor's home country.

This method makes sure that tax incentives granted by developing countries fully benefit the investor. As a general rule, tax incentives are granted by a developing country as a compensation for, for instance, an insufficient infrastructure. Thus, the tax exemtpion method enables an investor to operate under more difficult circumstances, usually under the same conditions as similar undertakings in a developing country. In this context, the exemption method is most relevant with respect to taxation of the profit of a permanent establishment; the tax exempt-status may either be based on a unilateral waiver of the investor's home country or on a tax treaty provision that allocates the exclusive right to tax to the state where the permanent establishment is located.

This method can thus be regarded as a simple but powerful incentive to carry on undertakings in a developing country (provided, of course, that the "tax climate" there is "pleasant").

A certain "sophistication" of the tax exemption method can be seen in the application of the so-called progression clause. This is to say that a country may well accept the right of another state to tax a certain item but nevertheless employ that tax rate for the (domestic) income that is applicable to the total income (i.e. including the tax exempt income). This measure is of course only relevant where the tax is levied at progressive rates.

Generally speaking, the tax exemption method is unilaterally applied, in different variations (e.g. depending on the type of income) in countries including Australia,[27] France[28] and the Netherlands.[29] Many countries refer to the tax exemption method in their respective tax treaties.

b. *International affiliation privilege*

The international affiliation privilege is a special form of tax exemption method for intercompany dividends. Where a corporation that is a resident of an industrialized country holds a certain percentage of the equity capital of a corporation in a developing country, the dividends paid by the latter to the former are tax exempt in the industrialized country.

As to the percentage necessary to qualify for this favorable tax treatment, there is no uniform picture. Some countries require a stake of at least 25% in the capital of the subsidiary company, others are satisfied with 20, 10, 5 or an even lower percentage rate. At any rate, the decisive criterion is often whether the parent company can exercise some influence on the subsidiary company by virtue of the shareholding.

An extension of this favorable treatment can also be considered in those cases where the shareholder is not a corporation but, for instance, a partnership. In many cases if may be desirable or even vital to carry on undertakings in a developing country in the form of a corporation whereas, it may be favorable to carry on business in the home country in a legal form other than a corporation.

This incentive measure is, for instance, unilaterally applied in Australia,[30] Belgium,[31] France,[32] the Netherlands[33] and Switzerland,[34] other countries referring to it in underlying tax treaties.

c. *Fictitious tax credit (Tax sparing credit/Matching credit)*

The currently fashionable method for the avoidance of double taxation with regard to the relationship between industrialized and developing countries is the fictitious tax credit.

Basically, the idea is that an industrialized country grants

a tax credit of a certain percentage for underlying income from a developing country without regard to how high or low (e.g. due to special tax incentives) the actual tax burden of that income has been in the developing country. Therefore, this mechanism is named the "fictitious tax credit", also referred to as tax sparing credit and matching credit. The income items for which it is usually employed are dividends, interest and royalties.

This method may be further refined. The most important approaches can be summarized as follows:

(i) the credit in the industrialized country equals precisely the tax ordinarily provided for in the developing country. Thus, any incentives that lower the ordinary tax burden are "spared" and benefit the investor;

(ii) the credit in the industrialized country intentionally exceeds the tax levied in the developing country.

Indeed, an almost unlimited number of variations can be designed. Many factors must be taken into consideration; the relevance of this is reflected by the fact that the fictitious tax credit is usually arranged for in bilateral treaties for the avoidance of double taxation where a reconciliation of the diverging factors – due to different tax systems, etc. in the industrialized and developing country involved – will be striven for. It is due to these difficulties that the fictitious tax credit has been employed as a unilateral measure for the avoidance of double taxation only in exceptional cases.

Indeed, many industrialized countries accept the inclusion of the fictitious tax credit (tax sparing credit) into tax treaties with developing countries. The unilateral granting of the fictitious tax credit is not very common; West Germany for instance is prepared to grant it in specific circumstances.[35]

d. *Lump sum settlement*

The application of an accounting and tax system in a specific developing country that differs totally from that in a specific industrialized country may be one out of many possible reasons that it does not appear to be advisable to employ one of the usual measures for the avoidance of double taxation but rather rely on taxation on a lump sum basis.

Again, a great variety of possibilities is available. For instance, one of the most efficient (and least bureaucratic) manners will be a situation where, in the case of a foreign permanent establishment, an industrialized country totally neglects the (foreign) calculations of income and taxes and applies a certain, usually low, tax rate on a possibly estimated (gross) income.

Another popular candidate for taxation on a lump sum basis can be income from personal services in the case of expatriates where the industrial country retains the right to tax but where a fair fixing of deductible expenses encounters great difficulties.

At any rate, the lump sum settlement will represent an attractive "tax incentive" where there is a striking disproportion between the actual amount of income and taxes and the effort in calculating income and taxes according to "well established principles".

e. *Direct tax credit*

The direct tax credit is a logical consequence of the strict application of the principle of taxation of world-wide income (or capital) in that it provides for the deduction of foreign taxes from the domestic tax liability that has been established on the basis of world-wide income (or capital).

Indeed, this measure for the avoidance of double taxation can only be regarded as a tax incentive if one regards the absence of other measures (or less favorable measures) as the only alternative.

Generally speaking, in applying the direct tax credit, the tax burden on income that thas been derived in a developing country will be equal to the tax burden on income that has been earned in the industrialized country of which a potential investor is a resident. Any tax incentive (low tax rate, etc.) provided by the developing country is cashed in by the tax authority of the industrialized country.

Thus a developing country may actually be forced to levy taxes at a high rate although the "economic environment" (poor infrastructure, etc.) makes it highly advisable to promote economic development with taxes that offer a low burden. This can have a particularly adverse impact where the interest of foreign investors is confined to a few specific fields (e.g. oil exploration) and less attractive (foreign) investment in other fields of vital importance is thus frustrated.

Within the method of the direct tax credit, there are also certain possible variations.

For instance, if the so-called per country limitation is applied, income and creditable taxes are established separately for each country. Thus, if there is income from two foreign countries whereby the tax burden of the first is lower than that of the industrialized country but the second is higher, the difference will be cashed in by the tax authority in the first case but in the second case the excess (tax burden developing country – tax burden industrialized country) may not be creditable but must be borne by the investor.

Where, however, the overall limitation is applied, income and creditable taxes are established as an aggregate and there is an inter-country compensation whereby a non-creditable residual tax burden appears only in those cases where the average tax burden of foreign-source income exceeds the tax burden of the industrialized country in question.

Another possible procedure is the limitation of the tax credit to specific types of income, i.e. the strict application of a schedular system of taxation in an international relationship.

The provision of a "carry-forward of foreign taxes" can offer some relief in those cases where the taxpayer in the industrialized country has no tax or an insufficient amount of tax to be credited against the foreign tax.

35. Körperschaftsteuergesetz, Sec. 26(3).

© 1982 International Bureau of Fiscal Documentation – BULLETIN

The direct tax credit is, for instance, the method that is generally applied in Denmark,[36] Finland,[37] Japan,[38] West Germany,[39] Sweden,[40] United Kingdom,[41] and the United States of America.[42]

It is observed that some countries which usually do not grant the direct tax credit – either because they employ the territoriality system or their tax system does not provide for measures for the avoidance of double taxation – are prepared to grant it in the case of income received from developing countries. For instance, the Netherlands allow the direct tax credit for withholding taxes paid on dividends, interest and royalties provided they stem from developing countries.[43]

f. *Indirect tax credit*

The term "indirect tax credit" is usually referred to in cases where foreign taxes (e.g. paid in a developing country) may be credited against taxes in an industrialized country whereby the taxpayer of the foreign taxes is, from a legal point of view, not identical with the taxpayer that claims a credit for the foreign taxes paid.

The practical relevance of this incentive measure is generally confined to dividends. Where a parent company in an industrialized country receives dividends from a subsidiary company in a developing country, the availability of the indirect tax credit will allow a credit of the income tax paid by the subsidiary company against the tax liability of the parent company, on a proportional basis of course.

Thus, there is generally no difference in the tax burden between capital invested in a developing country and at home in an industrialized country (see above, direct tax credit).

The indirect tax credit is, for instance, available in Japan,[44] West Germany,[45] United Kingdom[46] and the United States of America.[47]

g. *Deduction of foreign taxes from the taxable base*

Generally speaking, this type of tax measure usually can be regarded as an incentive for undertakings in developing countries only in cases where there is otherwise no relief measure at all.

Nevertheless, depending on a number of other factors, this method can be favorable. For instance, where an investor suffers losses in the industrialized country and there is no carry-forward of foreign tax credits, this method may at least safeguard a carry-forward of losses whereby the foreign taxes are included in the relevant amount.

Furthermore, the possible application of this method in cases where other measures cannot be used may bring about some relief, e.g. where foreign taxes are not regarded as being equivalent to domestic taxes and a tax credit is therefore refused.

West Germany[48] and Japan,[49] for instance, offer their taxpayers an option between deduction of the foreign tax from income and a tax credit.

D. Tax incentives upon termination of activities

1. Tax-free re-transfer of hidden reserves

Where a private undertaking in a developing country is successfully terminated (e.g. the expiration of a joint venture carried on as a corporation, the disposal of a permanent establishment, the repayment of a loan, etc.), hidden reserves may have been generated.

To the extent that a possible taxation of those hidden reserves falls under the jurisdiction of an industrialized country, this country may consider the possibility to transfer hidden reserves as contained in such items into a new private undertaking in a developing country.

2. Tax reliefs for returning expatriates

Although this subject does not actually fall within the scope of this article, it should nevertheless be mentioned that there is a number of possibilities to make temporary work in developing countries attractive for executives, technicians, etc., last but not least by way of specific tax incentives and/or by generous treatment generally provided by in the tax system for such cases.

E. Summary

Many factors will influence the decision as to which type of incentive is to be granted for what type of undertaking. Indeed, each industrialized country has to design its own "package" of incentive measures that takes into consideration all relevant factors of taxation and groups them in a consistent manner. The table below provides a simplified survey as to which measures for the avoidance of double taxation may be offered by the tax system of an industrialized country.

III. CONTROL MECHANISMS

The possibilities for the tax authorities of an industrialized country to exercise control over private undertakings abroad are naturally limited. Indeed, they will generally be confined to the assistance of the tax authority of a developing country, as it may be arranged by virtue of a tax treaty under the "exchange of information clause".

Where the availability of a specific tax incentive of an in-

dustrialized country will depend upon the fulfillment of certain requirements (e.g. the maintenance of "active" undertakings in industry, commerce or agriculture), a confirmation certificate of a chartered accountant firm or a Chamber of Commerce (possibly one in which the country is a partner) may be a possible means to exercise a certain control especially concerning tax incentives that are granted at the initial stage of an undertaking.

IV. FINAL REMARKS

Tax incentives provided by industrialized countries for private undertakings in developing countries can only support the efforts of the latter's governments to accelerate the pace of the improvement in the economic development of their countries. However, it is and should remain a passive role; the active part in this relationship must be played by the developing countries themselves. As far as taxation is concerned, it is the task of the repective governments to create a tax climate and design an investment policy that make it attractive for foreigners to take the risk that is always involved in starting entrepreneurial undertakings, particularly in geographically remote areas.

At any rate, it has been observed that a great number of industrialized countries offer an attractive package of tax incentives for undertakings within their boundaries. The extension of such provisions to undertakings in developing countries is certainly one of the available possibilities; this is particularly true were an industrialized country employs the system of taxation of world-wide income but confines certain incentive measures (e.g. investment premiums) to domestic investments.

Anyhow, it is difficult to evaluate the positive impact that tax incentives may have, those of developing countries and of industrialized countries; the general feeling is that one must not overestimate their significance. However, it is even more difficult (or extremely easy?) to evaluate the negative impact that excessive tax claims and the possible absence of reasonable reconciliation measures do have, i.e. how many private undertakings that would be economically viable and that could contribute a great deal to the development of available resources never leave the stage of a feasibility study for tax reasons?

Quite a number of efforts are being undertaken to bring about an improvement in this respect. But there are good reasons for the assumption that the simplicity and reasonableness of tax provisions have much greater positive consequences in the development process of an economy than supposedly "sophisticated" solutions.

Finally, it must again be stated that private undertakings are just one element in the great complex that is identified as the relationship between industrialized and developing countries, and tax incentives are only a small portion of that element. Indeed, there is no pat solution for the improvement of this relationship. Rather, it is necessary to elaborate individual solutions for the specific cases of individual countries.

SWEDEN:

Budget 1982–83

Swedish tax has been dealt with in the Bureau's publications: Supplementary Service to European Taxation, *Sections A and B;* Guides to European Taxation, *Vol. II:* The taxation of companies in Europe; *and Vol. IV:* Value added taxation in Europe.

The Swedish Ministry of Economic Affairs and the Ministry of the Budget recently published a 168 page booklet entitled: *The Swedish Budget 1982/83.*

We reproduce below the pages dealing with taxation.

One of the main foundations for the estimation of Budget revenue is a forecast by the National Audit Bureau. In fiscal 1982/83 revenue is calculated to about 169 billion kronor.

The main revenue items are presented below. The estimates are based on the assumptions which have been adopted in the Economic Policy Statement.

Budget revenues. Billion kronor; estimated

	1981/82	*1982/83*	*Change*
Taxes on income, caital gains and profits	31.8	34.7	+2.9
Statutory social security fees	31.0	31.0	–
Property taxes	2.7	3.4	+0.7
Value-added tax	38.2	40.5	+2.3
Other taxes on goods and services	29.2	30.5	+1.3
Revenue from central government activities	17.5	18.2	+0.7
Other revenue	9.0	10.7	+1.7
Total revenue	159.4	169.0	+9.6

The revenue from taxes on **income, capital gains and profits** comes very largely from the state tax on personal income.

The present system

For individuals, state income tax is levied on a progressive scale. For the 1982 income year the rate ranges from 2% in the lowest taxable bracket (6,900–27,600 kronor) to 58% in the highest (above 207,000 kronor). The scale is indexed against inflation in that the brackets are adjusted annually to allow for price developments. As of 1982 allowance for prices is made excluding indirect taxes (incl. VAT), customs duty and charges, while an addition is made for subsidies. Changes in energy prices are disregarded, too.

There is also a local tax on income. This is levied at a proportional rate, which is decided by each country council and municipality. For 1982 the average rate is calculated to be 29.74%. A marginal tax ceiling operates to prevent the combined rate of state and local income tax from exceeding 85% in the highest income bracket and 80% below this.

For tax purposes an important concept is the *source of income.* Certain costs are deductible from each source's taxable receipts and the net result is entered as income or a deficit under one of the six sources or types of activity (employment, capital, real property excl. agriculture, business, agricultural property, and incidental). For assessment purpose the taxable receipts and deductible costs are computed separately for each source. The sum of the sources which show a surplus then constitutes *total income.* From this are deducted any deficits on other sources, other general deductions and any deduction for losses. What remains is *assessed income.* Tax is however calculated on *taxable income,* which in most cases equals assessed income (for local tax there is a further general deduction). Certain persons, chiefly those with a basic pension, are entitled to an extra deduction from assessed income. Final tax is then calculated with allowance for any tax reductions. For 1982 tax reductions are available for married persons whose spouse has little or no income, for single persons with a child living at home, and for certain forms of saving and share devidends.

For 1982 state tax is smaller than local tax on incomes up to around 171,700 kronor.

Total revenue from state tax on personal income is estimated at 27.1 billion kronor in fiscal 1982/83.

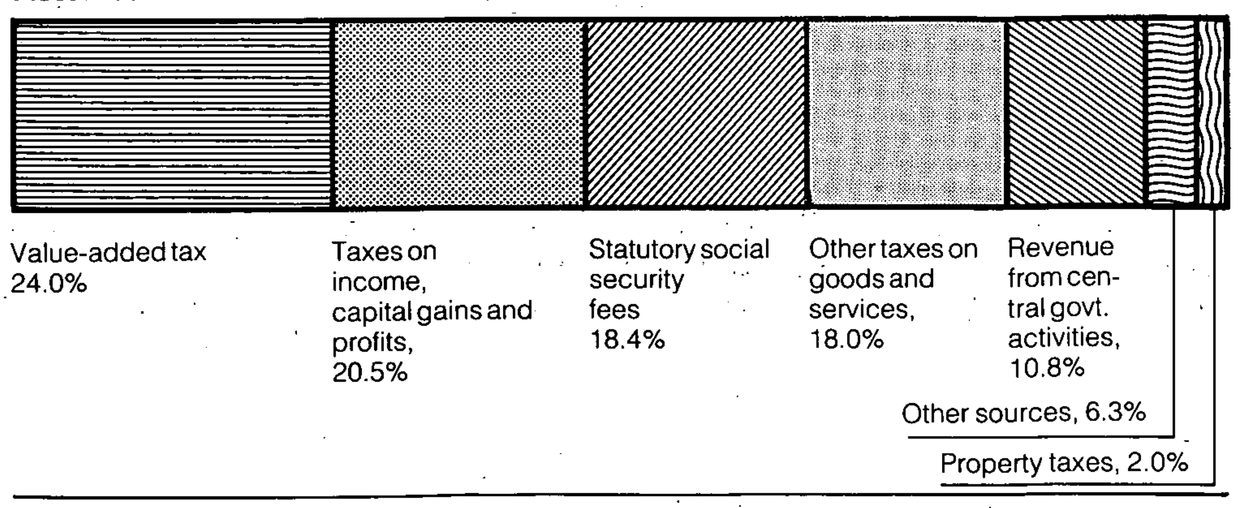
Companies pay state income tax at 40% of taxable income. The rate for economic associations is 32%. State tax revenue from these legal entities in fiscal 1982/83 is estimated at 5.8 billion kronor.

Besides the tax paid by individuals and legal entities on income, capital gains and business, this main revenue item includes several minor headings. Total revenue under this item is accordingly estimated at 34.7 billion kronor.

Proposed change to income tax

In the spring of 1981 the Centre, Liberal and Social Democrat parties agreed on a reform of income tax and the intention is to present a Bill to Parliament this spring. The proposed reform involves a marked reduction of marginal tax rates and restrictions on the tax value of deficit deductions. The reform is to be implemented over three years, starting with the 1983 income year. When it is fully operational, the marginal tax rate for most full-time employees will not exceed around 50%. At the same time, the tax value of deficit deductions will be limited to about 50% of the amount deducted, even for persons whose income incurs a marginal tax rate of more than 50%.

The reform is confined to state tax, i.e. it does not concern local income tax. Moreover, the new regulations apply only to individuals and others for whom state income tax is progressive.



The tax agreement states that the reform should be financed in full by raising payroll charges or by means of a wider tax on factors of production.

In the present Draft Budget tax revenue has been forecast on the basis of unchanged tax regulations. The proposed reform's effects on the Budget are to be elucidated in this spring's Supplementary Budget Bill.

The item **statutory social security fees** comprises all charges that are calculated as a percentage of the wagebill and paid by employers and the self-employed. For 1982 there are 11 charges of this type. The revenue from them is accounted for in several ways; some are included in full in the Budget, others only partly or not at all. Those included in full – the charges for basic pensions, child care and adult education – are calculated to yield 31.5 billion kronor in fiscal 1982/83. Due to the construction of certain funds, the yield from the other charges is estimated to reduce Budgetary revenue by 0.5 billion kronor.

Total revenue from statutory security fees in fiscal 1982/83 is estimated at 31.0 billion kronor.

Sources of revenue
Fiscal 1982/83

© 1982 International Bureau of Fiscal Documentation – BULLETIN

The main **property taxes** are those on capital, inheritances and gifts, and stamp duty.

For individuals, capital tax is progressive and starts at 1% on wealth between 400,000 and 600,000 kronor, rising to 2.5% on wealth above 1.8 million kronor. In fiscal 1982/83 capital tax is estimated to yield 0.9 billion kronor.

Total revenue from property taxes in fiscal 1982/83 is calculated to be 3.4 billion kronor.

Value-added tax (VAT) is levied as of 16 November 1981 at 17.7% of the taxable value (21.51% of the pre-tax price). Certain goods and services are partially or wholly exempt from VAT. Revenue from VAT is the largest individual item on the revenue side of the Budget. In 1982/83 it is estimated at 40.5 billion kronor.

Other taxes on goods and services are e.g. those on road traffic, petrol, spirits, wine, tobacco and energy. Revenue from this group in 1982/83 is estimated to total 30.5 billion kronor.

Road traffic taxes and petrol tax are calculated to yield about 9.4 billion kronor in 1982/83.

Petrol tax is levied on petrol and other motor fuels containing at least 70% petrol by weight, as well as on certain alcohols and alcohol extracts that are intended as motor fuel. The tax on petrol is to be increased to 1.20 kronor per litre as of April 1982.

Road traffic taxes are levied on vehicles and kilometreage. The vehicle tax is based on the vehicle's weight. The kilometre tax is charged if the vehicle is fitted to run on fuels other than petrol and liquefied petroleum gas, i.e. chiefly diesel oil. This tax varies with the vehicle's type and weight; it is levied on the number of kilometres driven (rounded down to the nearest ten).

Taxes on wines and spirits consist of a basic duty plus a percentage rate. The basic duty on spirits is a variable amount per litre, depending on the alcohol content, while for wine it is a constant amount per litre; the percentage rate is related to the price. Revenue from these taxes in fiscal 1982/83 is estimated to total 5.5 billion kronor.

Tobacco tax is levied by weight. In fiscal 1982/83 it is calculated to yield 2.9 billion kronor.

Energy taxes are levied at the following rates:

Petrol	0.34 kronor/litre
Liquefied petroleum gas	0.53 kronor/litre
Electricity	0.04 kronor/kilowatt-hour (0.03 for certain consumers)
Coal	12 kronor/tonne
Coke, incl. brickettes	14 kronor/tonne
Lignite brickettes, duff, etc.	6 kronor/tonne
Heating and fuel oil	253 kronor/m³

The total yield from energy taxes in fiscal 1982/83 is estimated at 7.9 billion kronor.

Customs duties are levied as a rule as a percentage of the article's dutiable value. A free trade agreement between Sweden and the EEC has been in force since the beginning of 1973. Duty-free trade had been introduced for most of the goods in question by mid-1977. In fiscal 1982/83 customs duties are estimated to yield 1.6 billion kronor.

Revenues from other central government activities comprise e.g. operating surpluses from the public enterprises, interest income and other central government charges. In fiscal 1982/83 these sources are estimated to yield 18.2 billion kronor.

JAPAN:

Budget 1982–83

See for a detailed discussion of the Japanese tax system the Bureau's publication:
Taxes and Investment in Asia and the Pacific.

The Japanese Ministry of Finance announced the following tax measures which the Government wishes to introduce in the financial year 1982-83.

I. Corporate income tax

(1) *Reserve for bad debts*

The reserve for bad debts will be reduced as follows:

Business of the corporation	*Percentage of receivables* Present	1982	1983
Retail or wholesale	1.6	1.4	1.3
Retail on installment payments	2.0	1.8	1.6
Manufacturing	1.2	1.1	1.0
Other kinds of business	1.0	0.9	0.8

(2) *Special depreciation*

The rate of the initial depreciation deduction will be reduced by 2 percentage points. For instance, the initial depreciation deduction for the prevention of environmental pollution will be reduced from 27 to 25%.

(3) *Entertainment expenses*

The deduction of entertainment expenses will be restricted. Under current law, corporations may deduct entertainment expenses in the following manner:

Corporations	*Deductible amounts*
– Corporations with capital of ¥ 10,000,000 or less	¥ 4,000,000 + 90% of the excess
– Corporations with capital over ¥ 10,000,000 but not exceeding ¥ 50,000,000	¥ 3,000,000 + 90% of the excess
– Corporations with capital over ¥ 50,000,000	¥ 2,000,000

Under the new provisions deduction will be limited to the fixed amounts and no deduction at all will be permitted for excess amounts. Corporations with capital in excess of ¥ 50,000,000 will no longer be allowed to deduct entertainment expenses.

(4) *Special tax treatment of capital gains derived from the transfer of real property*

A special additional capital gains tax is imposed on the sale or transfer of land, etc. acquired after 31 December 1969. The rate of this tax is 20%. This tax will henceforth apply to transfers of real property within 10 years after acquisition.

II. Individual income tax

Capital gains derived from real property acquired before 1 January 1969 (long term capital gains) are subject to a special income tax which is imposed at varying rates. This tax will henceforth apply to property transferred within 10 years from acquisition.

ZAMBIA:

Budget 1982

Extracts from the Budget Speech pronounced on 29 January 1982 by Mr. Kebby S.K. Musokotwane, Minister of Finance

See for a detailed discussion of the Sri Lanka tax system the Bureau's publication: Taxes and Investment in Asia and the Pacific

FISCAL MEASURES

91. Mr. Speaker, Sir, it is evident from my earlier remarks that the economic and financial situation continued to deteriorate in the year just ended. I have also tried to convey the message that prospects for any meaningful improvement in this situation remain, at best, modest in the course of this year. In the light of this grim scenario and bleak outlook, the immediate and vital lesson for the Nation is, I believe, clear. The Nation must brace itself for more sacrifices and hard work.

92. Indeed, it is opportune for me to remind the House and the entire Nation that resources allocated to various national needs by the Government come from the people themselves through the payment of taxes and other levies. The responsibility of the Government is to collect such resources for equitable redistribution to important areas and for the purpose of achieving equitable distribution of incomes in the form of transfer payments.

93. Sir, I have in my address emphasised continued need to restructure the economy. The major component of this structural adjustment policy is the reallocation of our scarce resources away from consumption towards productive uses. This is one of the cardinal themes of this year's Budget. Consequently, the majority of budgetary and economic policy prescriptions included in this address are geared towards the attainment of this goal. Of critical significance are the following:

- the need for further reductions of subsidies;
- the need to move determinedly and progressively in the implementation of economic pricing;
- the need to enhance the operational effectiveness and financial viability of parastatal enterprises; and
- the necessity of restraining the growth and, preferably, achieving reductions of non-essential recurrent expenditures.

94. I have also made it clear that financial discipline and control are absolutely essential for all sectors particularly in the Government and parastatal sectors. With this in mind, Government expenditure has been set at levels which I believe to be realistic and necessary for the efficient operation of Ministeries and Departments. Therefore, Controlling Officers and others responsible for financial control and management should not view their responsibilities simply within the narrow limits of their respective agencies but within the broader national perspective.

95. Mr. Speaker, Sir, in arriving at the total expenditure, I have been guided by the level of recurrent revenue likely to be available this year. Of the total revenue of K1,038.3 million, I anticipate raising K135.7 million through new revenue measures which I shall announce shortly. In the case of Zambia, excessive reliance on taxes on international trade entails considerable risk, particularly during periods of depressed copper prices and economic conditions in general. This fact has been vividly demonstrated by the continued lack of mineral tax revenue as well as the unpredictable and fluctuating levels of revenue from import duties. As a consequence, I am compelled to rely on excise duties. The new measures will, admittedly, have the unpleasant but necessary effect of raising, for the Government, the required additional revenue. I have been compelled to resort to these measures in view of the inexorable increase in public expenditure. Therefore, society has, regrettably, to bear the burden of financing this increase in expenditure. It is my conviction that the ever-increasing demands made on the Government have to be matched by the readiness to make additional contribution through taxation.

96. Accordingly, I have had to broaden the scope of indirect taxation to raise the required revenue. The bulk of the additional revenue will therefore come from excise duties.

(a) Excise duty

97. Mr. Speaker, Sir, I propose to raise duty on the following items:

(i) Clear beer: by 5 ngwee per 375 millilitre bottle;
(ii) Opaque beer: by 1.2 ngwee per litre;
(iii) Cigarettes: by 10 ngwee on the most expensive brands of 20 cigarettes;
  - 5 ngwee on the middle brands of 20 cigarettes;
  - 3 ngwee on the cheapest brands of cigaresttes;

(iv) Pipe tobacco: from K3.00 to K4.00 per kilogram;
(v) Potable spirits: from K7.00 to K8.00 per proof litre;
(vi) Mineral water: by 4 ngwee per bottle;
No increases are proposed in respect of other non-alcoholic beverages such as orange squash, raspberry and strawberry juices which are predominantly consumed by our rural communities.
(vii) Sugar: by 4 ngwee per kilogram.

Sir, I expect to raise K12.5 million from clear beer, K2.0 million from opaque beer, K5.0 million from cigarettes, K4,000 from pipe tobacco, K250,000 from potable spirits, K6.7 milion from mineral waters and K2.4 million from sugar, as additional revenue.

Petroleum products

98. Mr. Speaker, Sir, Honourable Members are aware of the increasing portion of foreign exchange earnings consumed by imports of petroleum, oils and motor spirits. In 1980, the oil bill reached K130.0 million and rose sharply to over K205.0 million last year. This upward trend is expected to continue this year. In view of the soaring oil prices which are entirely beyond Zambia's control it is therefore imperative that the Nation should evolve a comprehensive energy policy. Such a policy shuld reflect the essential elements of fuel conservation, the development of alternative energy sources and measures to move towards a balance between demand and supply for energy. The current imbalance should be progressively restored by adequate price adjustments.

99. Mr. Speaker, Sir, pending the formulation and implementation of a comprehensive energy policy, I wish to urge the entire Nation to exercise the utmost economy in the use of this resource. In this respect the Government will continue to encourage and reward efficient energy use through the provision of appropriate incentives particularly for industry. The business community may wish to know that the Government, under the relevant customs and excise provision, may grant rebates in respect of imported equipment and machinery for the purpose of conversion to alternative and cheaper sources of energy, such as electricity.

100. Mr. Speaker, Sir, in view of the foregoing I propose to increase duty on premium and regular petrol by a flat rate of 3 ngwee per litre; an increase of 5 ngwee per kg on liquefied gas; and an increase of 9 ngwee per litre on diesel. The proposed increase on diesel should not have adverse implications for our farming community in respect of which significant incentives, including producer prices, have been awarded. As is well known, the cost of diesel is fully reflected in the determination of crop producer prices. Sir, on kerosene, I propose to introduce a modest increase in duty of 5 ngwee per litre. Honourable Members are aware that this product has for a long time enjoyed a zero-rate of duty. These measures are expected to yield K32.6 million.

101. These measures take effect from midnight tonight. However, I must caution and remind the business community that their current stocks for which they have paid the existing rates of duty are not affected by these measures. Consequently, the prices must remain unchanged. Adjustments may only be effected on sale of goods supplied by manufacturers after midnight tonight.

(b) Customs duty

(i) Bicycles

102. Mr. Speaker, Sir, I propose to remove the suspension of duty on all bicycles imported into the country. Sir, this measure is intended to afford protection to our budding

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Chipata Bicycle Plant which is expected to become operational this year. I consider this increase to be modest and should not therefore lead to disruption in the supply of imported bicycles as our plant establishes itself. The protection is merely designed to ease the plant's teething problemes in its infancy.

(ii) Boats, ships and launches

103. Under the provisions of the same subsidiary legislation, I have introduced a suspension of duty on all imported boats, ships and launches designed for use in fisheries and inland waterways, including vessels used in scientific research. I hope Mr. Speaker, Sir, that this will alleviate the hardship experienced by persons and organisations engaged in the activities I have just mentioned.

(iii) Customs tariff

104. Mr. Speaker, Sir, I propose to make adjustments to the existing customs tariff affecting various imported items. These adjustments have been necessitated by the need to take into account the rising prices of imports. These changed circumstances have made it appropriate to charge duty by value rather than by weight or quantity. I expect to raise K15.0 million from this change in the method of levying duty.

(c) Sales tax

105. Mr. Speaker, Sir, under the Sales Tax Act, I have not proposed any major revenue measures except that I have made structural changes in the tariff applicable to electricity, school uniforms and toothpaste. The significant aspect of these changes in respect of the last two items is that sales tax has been removed on school uniforms and the rate on toothpaste has been reduced from 50% to only 20%.

(d) Import licence levy

106. I propose to increase the levy on import licences from 2 to 5%. This increase is in conformity with the continued need for the rationalisation of the country's foreign exchange use and also to discourage frivolous applications for foreign exchange. This measure should discourage such behaviour without unduly deterring genuine and serious importers. I expect to raise K13.5 million from this measure which becomes effective from midnight tonight.

(e) Air passenger tax

107. Mr. Speaker, Sir, I propose to raise this tax from K8.00 to K10.00 on international flights and from K2.00 to K4.00 on domestic flights as from midnight tonight.

108. I expect to raise an additional K430,000 from this measure. In this measure I am fully cognisant of the need to promote tourism as well as domestic air transport. Notwithstanding both these objectives, it is clear that in the prevailing economic conditions these categories of passenger traffic should make additional contribution towards the maintenance costs of airport services and facilities. Furthermore, the Nation will readily acknowledge that Zambians have remained free to make frequent trips abroad despite the fact that such trips entail costly use of the nation's scarce foreign exchange resources. The Government does not intend to restrict this privilege. However, it is strongly felt that a modest increase should be imposed on those of our nationals who continue to enjoy this privilege.

109. In this connection it is worth noting that the Government intends to limit the number of trips abroad undertaken by public officials including civil servants and executives in the parastatal sector. This should create substantial savings for the Government and the Nation as a whole since it affects balance of payments through outflows of foreign exchange.

(f) Foreign currency purchase (education and travel) levy

Mr. Speaker, Sir, in my address, I made repeated reference to the foreign exchange constraint. In this connection, it has become imperative to rationalise our use of this scarce resource. Accordingly, I propose to impose a levy of 10% on the kwacha equivalent of foreign currencies applied for and purchased from any commercial bank within the Republic in respect or travel and education outside Zambia. For this purpose, I am proposing to exempt from the purview of this measure, travel undertaken on Party and Government business, approved medical grounds as well as Government sponsored scholarships. I expect to raise K2.5 million from this source.

(g) Commodity loans

111. Mr. Speaker, Sir, I propose that commodities procured by Government under certain commodity arrangements with donor countries should be sold on the open market. I believe that this measure is necessary in order to rationalise the procurement and utilisation of such commodities and equipment similarly obtained. It would further encourage a co-ordinated and disciplined approach to the procurement and utilisation of external assistance on the part of Government agencies. It is therefore essential that the Government should resort to the arrangement I have proposed in order to finance the local cost component of externally funded projects. I expect this measure to yield K58.1 million. This proposal is with immediate effect.

(h) Income tax

112. Mr. Speaker, Sir, I now wish to propose a number of measures affecting direct taxes. Sir, before I do so, I would like to state that a number of representations have been made by our citizens, individually and severally, regarding the high incidence of our tax. I have received and considered such representations with sympathy. In line with the democratic nature of the Party and its Government, I have, in the recent past, made a few concessions which have lessened, to a certain degree, the incidence of direct taxes. At the same time, I should stress that the major constraint to significant reductions in the effective tax burden continues to be the inadequate levels of revenues available to the Government relative to the increasing levels of expenditure. I should point out that it is extremely difficult to effect meaningful reductions in Government expenditures, especially recurrent, without impairing the operational effectiveness of Government agencies. In spite of the foregoing, I wish to propose the following tax measures:

(i) Personal allowances

113. Mr. Speaker, Sir, I propose to raise:
- Married allowance from K1,500 to K1,700;
- Single allowance from K600 to K650;
- Child allowance from K225 to K275;

Sir, it is my considered opinion that the increased allowances I have just proposed, modest as they may appear, will effectively reduce the tax burden on the Zambian people, I estimate that these measures will result in a loss of K8.0 million to Government.

(ii) Married women

114. Mr. Speaker, Sir, several representations have been made to me by our working married women to reduce the tax burden currently borne by them. Indeed, the UNIP National Council, at its 16th Session, considered and adopted a resolution in this matter.

115. Sir, under the present system, the taxable incomes accruing to a wife and husband are taxed separately at parallel rates. The underlying cardinal characteristic of the present system is the recognition of the family as a single taxable unit. The effective tax burden on the family is lower under this system as opposed to the system which prevailed prior to 1st April, 1970. Until then, the income accruing to the wife was added to that of her husband for the purpose of determining the tax payable. Consequently, the husband's income was subject to tax at a higher rate. As an illustration, under the present system, both the husband and wife, after taking into account personal allowances to the husband, are taxed separately but at the same rate of 5% each on their respective first taxable K1,000. In short, they pay an amount of tax of K50 each. This is in contrast to the old system whereby this same family would have paid K150 in taxes.

116. Sir, in view of the foregoing, and given the desirability of continuing to consider the family as one taxable unit, I am proposing that the working wife and husband should be allowed to elect for separate assessment so that the married allowance can be apportioned between them.

117. Mr. Speaker, Sir, for this purpose, the husband and wife will be required to make an irrevocable election six months prior to the commencement of the effective charge year regarding the apportionment of married allowance.

118. I believe, Sir, that this is a reasonable and equitable way of implementing the directive of the Party on this issue. In this way, the demands of those wives who insist that their husbands are not fulfilling their role as head of the household, will be met.

(iii) Savings

119. Mr. Speaker, Sir, it is now a matter of public interest and concern that the rate of savings remains unsatisfactory. It is therefore

© 1982 International Bureau of Fiscal Documentation – BULLETIN

the wish of the Party and its Government to encourage savings. I need not over-emphasise the importance of savings for investment, employment generation and accelerated development in general.

120. In order to provide an inducement to greater savings, I propose to increase the tax relief on interest earned by individuals on savings accounts from K200.00 to K400.00 held in commercial banks. In particular recognition of the need for the Zambia National Building Society to attract more resources for lending, I propose to increase tax relief on interest earned on savings accounts from K200 to K500. In the case of the Zambia National Credit and Savings Bank, I propose to raise the tax relief to K600. I trust that these measures will motivate Zambians to save more.

(iv) Pension contributions and annuities

121. Mr. Speaker, Sir, under section 37 of the Income Tax Act, relief in respect of pension contributions is limited to K1,200 or 10% of the contributor's basic emoluments liable to tax for each charge year. I propose that the figure of K1,200 be raised to K2,400. Under the same section, relief on an annuity is limited to K2,400 of the individual's assessible income. I propose that the figure of K2,400 be raised to K3,000.

(v) Co-operatives

122. Mr. Speaker, Sir, the Party and its Government attach great importance to the role of the co-operative movement in the development of this Nation, in particular rural development. It provides an effective and efficient means of increasing production, leading to a better distribution of incomes. This would further result in the reduction of the existing rural/urban income disparity. In line with this objective, I propose to increase the income of a member allowed for tax purposes from K600 to K800 per annum.

(vi) Donations to UNIP

123. Sir, I propose to grant income tax relief in respect of donations to the party from the public and institutions alike. I trust that this measure will attract the necessary funds to facilitate the implementation of vital Party projects and programmes.

124. Mr. Speaker, Sir, the measures I have proposed will take effect from 1st April, 1982.

(vii) Company tax

125. Mr. Speaker, Sir, the Party and its Government are determined to strengthen the role and contribution of our commercial enterprises to the development of this Nation. To that end the Government recently granted a wide range of incentives and concessions. However, the contribution of our enterprises has been constrained by the methodology used in determining and collecting taxes levied on them.

126. Under the present system, tax liability is assessed on the basis of profits earned by companies and self-employed individuals in the year preceding the charge year. This is in contrast to the present method of collecting taxes on current basis applicable to the wages and salaries of employees under the Pay As Your Earn (PAYE) Scheme. In other words, the earners of wages and salaries are taxed on the basis of current income. Sir, this difference in the basis of assessing tax is, to say the least, discriminatory. It discriminates in favour of companies and businesses and against the employees. It affords the concerned tax-payers the opportunity of an interest-free loan at the expense of Government. It further provides those tax-payers with an opportunity to take advantage of depressed economic or inflationary conditions.

127. Lastly, it makes the implementation of public programmes difficult in that the flow of tax revenue is rendered uneven and unpredictable.

128. In view of the foregoing. Mr. Speaker, Sir, I propose that the tax liability on profits of companies and self-employed individuals should be assessed on current income basis. The tax wil be payable on a quarterly basis. This proposal will make income tax reflect the current state of our economy and responsive to the changes in the economy. In order to facilitate and reduce the burden on the affected tax-payers, I further propose the following transitional arrangements:

(a) For the charge year (1981/82) ending 31st March, 1982 the tax will be payable on 14th August and 14th December, 1982.
(b) For the charge year (1982/83) ending 31st March, 1983, profits and other accrued income will be estimated by the affected tax-payers and the tax liability will be assessed at current rates applicable as from 1st April, 1982. The tax so assessed will be payable to the Commissioner of Taxes in the following quarterly instalments:
30th June, 1982
30th September, 1982
30th December, 1982
30th March, 1983
(c) For the charge year (1983/84) and subsequent charge years ending 31st March each year, tax will be due and payable in the four quarterly instalments except that payment must be made not later than the 14th of the following month after the due date.

129. Mr. Speaker, Sir, it will be evident that the proposed current basis of tax assessment introduces, in effect, some degree of self-assessment on the part of the affected tax-payers. On receipt of the actual income tax returns and accounts for 31st March of each year, the Commissioner of Taxes will determine the correct tax liability and give credit, wherever applicable, for the provisional tax paid. Any shortfall will be paid within thirty days, as at present.

130. The degree of self-assessment arising from my proposal will entail the freedom on the part of the affected tax-payers to revise their estimate in respect of any subsequent instalment payment. This, however, will be subject to the condition that any under-estimation of the tax liability (at the end of the accounting period) by a third, will attract a 10% penalty on the amount so under-estimated. Such penalty must be paid within thirty days. The existing 5% penalty imposed monthly on the outstanding tax will remain in force.

131. Notwithstanding the proposed system, the Commissioner of Taxes will still retain the power to issue a demand notice for assessment to any tax-payer in respect of any charge year, as already provided for under the Income Tax Act.

132. Mr. Speaker, Sir, it is evident from what I have just elaborated that the tax burden will be quite heavy during the transitional period. It means that tax due for two years will be paid in one year. However, it should be appreciated that this will occur but once in the 1982/83 charge year.

133. Mr. Speaker, Sir, in recognition of the hardship that might be experienced by some tax-payers during the transitional period, I am proposing a reduction of the company tax rate from 50% to 45% from 1st April, 1981. I am confident that with this reduction business activity will not be adversely affected as we move to the proposed rational system in tax administration.

(viii) General

Undistributed profits

134. Mr. Speaker, Sir, I now wish to discuss the undistributed profits tax (UPT) which has been a subject of numerous representations by affected tax-payers. Indeed a specific resolution was adopted on this issue by one of the Economic Symposia organised recently under the auspices of the Rt Honourable Prime Minister.

135. In recognition of the several representations made to me as the imperative need to stimulate business activity and reactivate our economy, I have decided to introduce a more effective and workable system "of deeming" in place of the undistributed profits tax.

136. Sir, the new provision will essentially remove the indiscrimate penalty for non-distribution and identify only those companies which never plough back their profits into the business. This will be evidenced by, for example, accumulations of cash or investments in non-trading assets. Furthermore, the tax on undistributed profits will be levied on the shareholders to whom the income properly belongs. The details of this provision will be given in the relevant legislation which this House will consider soon.

Tax clearance certificate for small-scale business and self-employed individuals

137. Mr. Speaker, Sir, tax evasion is committed in various forms such as failure to report income to the Tax Department, under-stating income and by the maintenance of poor or no business records. Unwittingly or not, this amounts to concealing their correct income for tax purposes.

138. In order to ensure that they are compelled to observe the law and report their income to the Department of Taxes, I am proposing that they be required mandatorily to obtain tax clearance certificates to show that they have satisfied their tax liability before their trade licences can be issued or renewed. Sir, it is only fair that the tax burden should be borne equitably by all eligible persons. Unless this is achieved, all attempts to make meaningful reductions in the effective tax rate will be futile.

(i) Parastatals–Revenue contribution

139. Mr. Speaker, Sir, last year I raised the matter of parastatal organisations and their

© 1982 International Bureau of Fiscal Documentation – BULLETIN

contributions to Government revenue. At the time my proposal was to make them liable to tax as any other commercial enterprise, I regret to report that I am unlikely to raise any significant revenue by this method due to the seemingly poor performance of the majority of the parastatal organisations.

140. Sir, total Government investment in the parastatal sector is in excess of K1.5 billion of which about K750 million is in the form of equity. I propose to impose a levy of 1.5 per cent on this equity in the parastatal sector. This levy will help us to expose inefficient parastatal organisations and identify the underlying contributing factors, such as poor management, structural or other organisational defects.

141. By this measure, I do not intend to penalise the efficient and profitable organisations. Such organisations shall not be required to pay both company tax and the proposed levy. They shall only pay the greater of the two. In essence, the levy shall apply to those parastatal enterprises which continue to be inefficient in spite of the progressive implementation of economic pricing for their products. I expect to raise K11.25 million from this measure.

(j) Fines, licences and fees

142. Mr. Speaker, Sir, in the prevailing conditions, I have noted that some of the fines, licences and other taxes are far too low and have not been revised for a long time now. I propose to effect changes to the relevant pieces of legislation in order to raise additional revenue for Government. This proposal will become effective from 1st April, 1982. I expect to raise K2.0 million from this measure.

(k) Revenue administration

143. Mr. Speaker, Sir, in order that Government does not lose revenue due to it, I intend to strengthen its principal revenue collection agencies that is, the Departments of Income Tax and of Customs and Excise. In this connection, I have deliberately increased the allocation of funds to these Departments to make their operations more effective. In addition, I propose to establish a Revenue Unit in my Ministry which will, among other functions, liaise closely with all revenue collection agencies within the Republic. It is my sincere hope that by strengtening our revenue collection, the Government should be able to tap resources which have so far remained uncollected.

PART VI

INCENTIVES

(a) Agricultural sector

(i) Farming income tax rate

144. Mr. Speaker, Sir, last year I announced additional measures to boost the implementation of the Operation Food Production Programme. The measures included accelerated depreciation of farming machinery, equipment and implements at 50% of the cost of the assets on a straight-line basis. I restricted the maximum tax rate to 25% on farming income, and introduced a development allowance for growers of tea, coffee and citrus fruits. This year, I propose a further reduction of the tax rate to 15% on income arising from agricultural operations.

(ii) Selective employment tax

145. Mr. Speaker, Sir, I propose to remove the payment of Selective Employment Tax on the incomes of expatriate personnel engaged in the agricultural sector. The measures I have announced should go a long way towards increased agricultural production, food sufficiency and improved nutritional standards throughout the Republic.

(b) Industrial sector

(i) Foreign exchange credit

146. Mr. Speaker, Sir, Hon. Members will have noted that one of the main themes of my address has been on foreign exchange or the lack of it. Indeed in his address to the 16th National Council of the United National Independence Party on the 14th December, 1981, His Excellency the President stated among others and I quote:

> "This lack of alertness to the export opportunity is understandable considering the transportation and other problems that we have had in the past. But this indiffence must end now if we are to survive. From now on it's 'EXPORT or PERISH'."

147. Sir, in response to this timely warning my Ministry has taken time to study the problem and evolve methods to make export trade enterprising and lucrative to those engaged in it. In this connection, I propose to introduce, in consultation with my colleague in the Ministry of Commerce and Industry, measures which will entail the following:

- the establishment of an Export Guarantee Agency to protect the interest of Zambian exporters;
- the introduction of foreign credit system by which any exporter who earns foreign exchange will be given credit of up to 50% of the net foreign exchange earned; and
- preferential tax rate on income earned from exports.

(ii) Wear and tear allowance

148. Sir, as Honourable Members are aware manufacturers of soft drinks have been unable to satisfy the market, particularly to rural areas. In order to facilitate wider distribution of these products, I propose to grant them relief on any new plant and machinery they acquire provided they establish such plant and machinery in rural areas. In this case depreciation will be over a five-year period and based on the sum-of-years-digits method.

(c) Training of Zambians in professional fields

149. Mr. Speaker, Sir, last year, I increased the rate of selective employment tax to 20% and disallowed the tax as a deduction for tax purposes. I have since given sympathetic consideration to the effect of this tax and have decided to grant some relief for expenses incurred in the training of Zambian employees towards professional qualifications in such specialised and professional fields as accountancy, architecture.

MALTA:

Budget 1982

Extracts from the Budget Speech pronounced on 2 August 1981 by
Dr. J. Cassar, Minister of Finance,
Customs and People's Financial Investments.

REVENUE 1982

Revenue during 1982 is estimated to amount to a total of £M218.8 million. This is made up of ordinary revenue of £M203.2 million, grants amounting to £M8.6 million and foreign loans of £M7 million.

Revenue from customs is estimated to amount to £M44.1 million, that is, about 3 million more than in 1981.

Although we shall raise the rate of customs duties on 2 items as I shall explain later on, the increase in the total revenue from customs is mainly due to higher prices for imported merchandise which, as the House is aware, is taxed ad valorem, that is according to value.

We are proposing to increase slightly customs duty on imported wines and lead crystal. As regards the increase in customs duties on imported wines, of 9 cents on a bottle of wine, 10 cents on a bottle of vermouth, and 12 cents on a bottle of champagne, this increase is intended to protect further local wines, whilst the increase in the rate of duty on lead crystal, which will now be as high as that on ornamental glass, as it was some time ago, is intended to eliminate the difficulty which often arises in distinguishing one from the other. These measures are estimated to increase Revenue by about £M100,000 a year.

Entertainment tax exemptions

In order to further encourage sports and cultural activities in our country, Government intends to exempt cultural live shows by local talent and football from entertainment tax.

The reduction in revenue from this source is expected to be about £M130,000.

INCOME TAX

Now I come to the measures which the Socialist Government will propose on income tax. But before I go into detail I would like to say something about this tax and the many rumours circulating about it.

Income tax was introduced in Malta by the Labour Party when this came to power for the first time in 1947. From the very beginning opponents of the Labour Party came all out against it, there were some who even tried to get religion into it. Time proved us right because many came to believe that as the main direct tax, income tax is the most just tax on earth and this results in the fairest and most just distribution of wealth.

But, over the years, people who should know better continued to make political capital out of income tax. During the 1960s there was one party that advocated an end to income tax. The Nationalist Party, which was then in power, was against this, ridiculed the idea and declared it as impossible. But later, one the eve of the 1971 elections, the Nationalist Party also promised that if re-elected it would abolish income tax. The people voted otherwise. The same thing happened in 1976 although once again the Nationalist Party reiterated the promise of abolishing income tax.

Today the Opposition Party has suddenly abandoned the promise of an end to income tax. But at the same time they seize every opportunity to incite the people against this tax. Such tactics should come to an end. All honest people should know and understand that Government expenditure, which is to the benefit of the whole population, must come from somewhere and when it comes to taxes, income tax is the most just tax of all.

Against this background I will now come to the measures which we are proposing.

First of all, in order that income tax will not erode the greater part of the wage increase I announced earlier, we are proposing that as from basis year 1982 personal allowances will rise by £M130 for a married couple and £M75 for a single person. This means that the personal allowance for a married couple will rise from £M1070 to £M1200 and for a single person from £M635 to£M710.

This means also that since the Maltese Socialist Party came to power, personal allowances have risen by £M660 for a married couple and by £M410 for a single person, that is these allowances more than doubled under the Socialist Administration. It is worth mentioning here that in the period 1962–1971 these personal allowances rose by only £M120 and £M60 respectively, a rise of approximately only 25%.

Moreover, we are proposing another measure in connection with income tax. In fact the tax rates and the bands regulating this tax which will come into effect as from basis year 1982 will be adjusted as shown in Table No. VI which I will read.

These measures are really very important because of their effect on the taxpayer whether employed or self-employed.

TABLE VI
Changes in income tax rates

Present rates		
Personal deductions:	Single	£M 635
	Married	£M 1,070
Rates:		
On the first taxable	£M 100	5c in the £M
On the next	£M 100	10c in the £M
On the next	£M 500	15c in the £M
On the next	£M 500	20c in the £M
On the next	£M 600	25c in the £M
On the next	£M 1,200	30c in the £M
On the next	£M 600	40c in the £M
On the next	£M 600	50c in the £M
On the next	£M 800	60c in the £M
On the rest		65c in the £M
New rates		
Personal deductions:	Single	£M 710
	Married	£M 1,200
Rates:		
On the first taxable	£M 200	2c in the £M
On the next	£M 100	5c in the £M
On the next	£M 100	7c in the £M

To bring out this point more clearly Tables VII and VII detail the effect of these income tax measures as well as the reduction in tax in the various income brackets.

While once again I call upon the House to take these tables as read, I feel it is appropriate at this stage to give some general examples.

As a result of the changes we are proposing, a person who this year pays £M15 in tax, in 1982 will pay only £M4 – a saving of 73% in tax. A person now paying £M30 per annum will pay £M9 in 1982 – thus saving 70%. Those now paying between £M75 and £M130 in tax will next year pay between £M34 and £M79 – thus saving between 55% and 38% and this always in spite of the fact that their income will rise through pay increases and higher social benefits.

The above examples cover the great majority of Maltese workers, including those in factories, at the Drydocks and in the Civil Services.

As a result of these measures and the increases in pay, bonus and children's allowance, a married worker with 3 children earning the minimum wage next year will have about £M224 more left in his pocket after paying his income tax and insurance contributions. If the same worker, married with 3 children, is in Government employment in Group C or a clerk he will have £M230 in his pocket.

A Drydock's worker is also at this level. Even those who are single or married without children will also be having next year about £M90 more in their pockets than they have this year. This means that every worker supporting a family of 5 persons, no matter who he is and where he works, will not only have all the increase of £M3 a week left, together with the increase in bonus, but because of the new income tax measures he will have left at least another pound per week.

Although everybody is going to pay less tax, those earning the minimum will still be paying a small amount. The Socialist Government believes that everyone is in duty bound to help carry a bit of the social burden; everyone must think of others and contribute for the good of others according to his means, if we really want to have a Christian and humane society, a socialist society.

Those who are in the high income bracket, including the self-employed, will also be benefiting from the measures we are proposing because they too will be having more money left at their disposal.

This is being done because it is right that the relativity between those who earn most and those who earn less must not continue to be closed up: this is being done so that the incentive to work will also remain for those in the higher income bracket.

On the basis of 1982, at the present rates, the Government was expecting to collect £M22 million in tax from the employees and the self-employed.

With the £M3 a week increase in wages and the £M16 increase in bonus together with the increase in children's allowance, Government next year would have collected, at present rates, £M26 million. Taking the new rates and the increase in the ceiling which we are proposing for next year, it is calculated that from the employees and the self-employed we will be collecting about £M18 million.

This means that through these measures on income tax, tax collection on the basis of assessment for the basic year 1982 will be about £M8 million less than what the income would have been had not these measures been taken.

The government could do this because it enlarged and strengthened the public sector which is now yielding enough tax so that Government is in a strong position to make this concession.

The Socialist Government, in the name of honest and serious people, hopes that in this way motivation for work will increase as will reliability in paying income tax.

At the same time it must be appreciated that, as I have already explained, these increases will cost the Government a great deal of money and it is therefore essential that everyone cooperates, particularly the self-employed who do not pay through the PAYE system as employees do. Every effort must be made so that tax due is collected efficiently during the same year the income or profit is earned. For this goal to be attained, as has been done in the case of employees with the introduction of the PAYE system, another reform must be put through whereby payment of provisional tax is effected more frequently so that during the year of assessment (the year following the one during which income or profit is earned) it will only be necessary to make some minor adjustments as in the case of PAYE.

It is hoped that the self-employed will reciprocate the good will Government is showing by effecting these decreases in taxation. At

TABLE VII
How the net income* of several categories of employees is going to increase

5,000	1,720	1,436	284	16.5
7,000	3,020	2,636	384	12.7

the same time, the Government will be taking administrative measures through the Department of Inland Revenue so that every employee paying PAYE will benefit immediately during 1982 itself from the reductions being proposed in income tax. In fact action towards this end has already been taken when, after this year's Budget, employers were requested to reduce PAYE rates in accordance with the new rates approved last November.

Mr. Speaker,
At the beginning of my speech I briefly showed how the Maltese Socialist Government succeeded, during the past decade, in building a strong economy and increasing the national wealth and how, during this time, it has distributed this wealth on the principles of social justice by helping those who were mostly in need. I also explained that the aim of this Budget is that we follow the principles as propagated in the 5-year Development Plan – 1981/85 in order to consolidate all that we have achieved in the economic and social fields.

Since this Budget is being presented a few months before the general elections, some had predicted that we would use this Budget to create some false sense of well-being. In fact, these same people have also said that when last November we budgeted for a surplus of £M22 million we purposely did this, so that we would have enough money to distribute during election time.

However, it seems that these people have forgotten, or would have wished others to forget, that the Socialist Government has never waited for election time to distribute national wealth to those who deserve it. This Budget is just one of the 11 Budgets which this Government has presented during these past 10 years. It is similar to all the previous Budgets, the purpose of which was to establish a sound economy and increase the national wealth. All these Budgets have contributed towards the progress attained in the social field, to such an extent that even foreigners are mystified how, despite our limitations, we were able to achieve such a high level of progress. This progress is evident in today's standard of living of the workers, in the beautiful and comfortable houses they are occupying in the high protein food which the workers' families are consuming, in the large number of television sets that have been purchased and are still being purchased, in the ever increasing number of telephones installed in workers' houses, in the number of vehicles on the road and how the shops are always thronged with customers. All this apart from the fact that the workers today, as never before, are well insured against any mishap that may occur to them or their families and this thanks to the excellent free social services which the Socialist Government is providing. This is real and true progress which no one can deny, whichever argument one puts forward, be it the water situation or income tax assessments.

The Maltese people are enjoying this wealth because during the past 10 years they had a courageous and hard working government which has always frowned upon indolence. This wealth did not come from nothing.

Consequently this Budget, by improving the benefits to all classes of the population, especially the workers, is following this Government's previous Budgets, it is following the right way, in a responsible and serious manner, that has always led us to victory.

Most of the changes proposed were enacted in Act No. XL of 1981.

Individual persons who have been granted a residence permit under the Immigration Act, 1970 or on or after 14 November 1972 are subject to income tax at favourable rates. These persons are often indicated as "new residents" and they may generally not engage in business, profession or employment or take part in politics.

The rates are:

For every pound of the first £200	2c
For every pound of the next £100	5c
For every pound of the next £100	7c
For every pound of the next £200	10c
For every pound of the next £300	15c
For every pound of the next £500	20c
For every pound of the next £700	25c
For every pound of the remainder	30c

Provided that the minimum liability of any such individual in respect of any year of assessment shall be one thousand pounds.

THE EUROPEAN UNION

On 24 and 25 February 1982 the recently installed Institutional Committee of the European Parliament met with a view to organising its work which will eventually result in a draft for a Treaty to establish a European Union replacing the present forms of European cooperation such as the European Communities, political cooperation and the EMS. It is intended that the European Parliament will adopt a proposal for a European Union which will then be submitted for ratification to the national authorities.

Mr. A. Spinelli submitted a working document to serve as a basis for a preliminary discussion and which, among other things, will enable the "coordinating rapporteur" to prepare a draft resolution on guidelines for subsequent work.

The working document lists a number of tasks which the European Union should fulfill, including: the pursuance and development of the aims set out in the Treaties of Rome and Paris, the development of economic and monetary union, combatting inflation and unemployment, contributing to the harmonious social and economic development of the world as a whole, and maintaining the greatest possible degree of openness and stability in the world economy with regard to trade and monetary matters.

The European Union will, of course, need financial means and the working document states with respect to taxation:

> In accordance with appropriate agreed procedures, the Union and the Member States shall from time to time effect a redistribution inter se of their respective powers of taxation on the basis of the general plan for the Union's development as accepted in principle by the Member States.
> — Within the limits of the distribution of powers thus agreed the Union and States shall determine their taxes and budgets independently.
> — While it is in general desirable that the same tax collecting body shoud collect both national taxes and Union taxes, the respective accounting systems must be kept strictly separate so as to put an end to the present practice under which certain items of Community revenue are made to pass through national budgets.
> — Within the limits of the distribution of powers thus agreed, the Union's taxation and budget shall be proposed by the Government, adopted by Parliament, submitted to the Council – which may propose amendments supported by reasons or reject them by a simple majority of votes – and adopted at a second and final reading by Parliament.

Taxes and Humor

The Municipality of São Paulo enacted Law No. 9,322 of 25 September 1981 exempting from the tax on services (Imposto sobre Serviços de Qualquer Natureza) the individual performances of Brazilian humorists.

The measure met the "serious" objection of being discriminatory because it favors only a particular kind of theatrical spectacle, and is thus detrimental to similar activities which are facing difficulties in providing a bit of "culture".

Besides (the comment goes on) rather than look for a cheaper laugh for the people, an exemption should be provided to lower the cost of the health services.

Some questions arise: is laughter important?, how important is it?, can it be encouraged with tax incentives?

Pedro Massone:

Die Steuerreform 1981 in Peru *148*
Im Jahre 1981 führte die Regierung von Peru eine umfassende Steuerreform durch, mit der das Einkommen- und Umsatzsteuergesetz völlig umgestaltet wurde; ferner wurden erhebliche Veränderungen bei der Vermögensteuer und bei einer Reihe anderer Steuergesetze vorgenommen.
Der Verfasser untersucht die wichtigsten Aspekte dieser Steuerreform, z.B. die Besteuerung der Unternehmens- und Investitionseinkommen, die Besteuerung des von Nichtansässigen erzielten Einkommens sowie die neue Umsatzsteuer.

SOMMAIRE

Pedro Massone:

La réforme fiscale péruvienne de 1981 ..... *148*
Le gouvernement péruvien a introduit en 1981 une importante réforme fiscale avec entre autres une législation entièrement nouvelle sur l'impôt sur le revenu et sur la taxe sur le chiffre d'affaires. Il a également modifié l'impôt sur la fortune et un certain nombre d'autres impôts.
L'auteur étudie les points les plus importants de la réforme, à savoir l'imposition des revenus professionels et d' investissements, des revenus des non-résidents et la nouvelle taxe sur le chiffre d'affaires.

From Prentice Hall

An indispensable aid for American businessmen, investors and corporations engaged in or planning foreign operations and for those in foreign countries planning or doing business in the United States —

TAX TREATIES

This definitive guide is indispensable for any businessman or corporation that sells, buys, manufactures, or invests in the United States — as well as for any American businessman or corporation that does business in foreign countries. It tells you:

- How and where to handle your investments while eliminating the chance of double taxation.
- How much of your investment income will be protected by tax treaty exemptions.
- How much business Americans can carry on in a foreign country and vice versa without becoming taxable as a "permanent establishment."
- How to protect your employees who are temporarily at work abroad from a double tax burden.

In Tax Treaties, you'll also find:

1. The full official text of every existing treaty, supplementary treaty, or protocol relating to income taxes and estate and gift taxes between the United States and each of its tax-treaty countries, including model treaties showing the latest trends.
2. Annotated editorial text arranged in a Uniform Paragraph Plan . . . makes for easy direct comparison of provisions of one tax treaty country with another . . . permits a single unified index which works hand in hand with this unique setup. You'll make sure, speedy decisions at the flip of a wrist.
3. Official reports on each treaty giving you the background behind the provisions; why particular treaty articles were included; and what each provision means to you.
4. A Special Finding List at the beginning of the editorial summary for each country . . . speeds you quickly to explanatory and official material that affects you.
5. Monthly REPORT BULLETINS, analyzing the latest treaties, decisions and rulings, keep you right on top of today's fast breaking tax treaty developments . . . (plus Current Matter containing the most recent U.S. court decisions and IRS rulings giving you the latest judicial and official word on tax treaties.)

In today's constantly expanding international commerce, expert tax-managing or tax-counseling of business activities between the United States and each of its treaty countries is a must — so keep up to date with Prentice-Hall's TAX TREATIES.

To order a one-year introductory subscription to this unique publication at the low rate of only $156, address Department S-TT-103.

Developments in Latin America

THE PERUVIAN TAX REFORM (1981)

by Pedro Massone*

I. INTRODUCTION

During 1980, the Peruvian government appointed a National Commission for Tax Reform composed of Drs. Roberto Dañino Zapata, General Secretary of the Ministry of Economy, Benedicto Cigueñas Guevara, Under Minister of Finance, and Armando Zolezzi Moller, General Director of Taxes.

In addition, Law No. 23,230, enacted on 15 December 1980 under Article 188 of the Political Constitution of Peru, vested the Executive Branche with the authority to issue Legislative Decrees referring to taxes and other subjects.

On the basis of the work developed by the National Commission for Tax Reform and using its delegated authority, the Peruvian Government enacted several legislative decrees introducing new legislation regarding income tax, sales taxes, mining and other subjects.

The new legislation includes the following acts:

(1) Legislative Decree No. 200 of 12 June 1981 introducing an entirely new income tax law (Ley General de Impuesto a la Renta), which contains changes concerning tax jurisdiction, allowable deductions, tax rates, reorganization of companies, etc.;

(2) Legislative Decree No. 190 of 12 June 1981 introducing an entirely new sales tax law, which contains changes concerning the coverage of the sales tax, tax rates, tax credits, excise taxes and a special tax on goods which Peru traditionally exports ("traditional goods");

(3) Legislative Decree No. 213 of 12 March 1981 introducing amendments to the net worth tax that include provision for the avoidance of economic double taxation and the measurement of brackets in tax units (see II.E. below);

(4) Legislative Decree No. 184 of 12 June 1981 introducing rules on a betterment contribution;

(5) Legislative Decree No. 187 of 12 June 1981 introducing amendments to the Tax Code of 1966 as regards the Fiscal Court and other subjects;

(6) Legislative Decree No. 109 of 12 June 1981 introducing an entirely new General Mining Law, which contains rules on mining taxation and tax incentives; and

(7) other rules on tax evasion, tax amnesty, and various other subjects.

From this brief survey, it is easy to realize that the reform deals with many subjects and refers to a number of laws which cannot be covered in detail within the limits of an article. It is, therefore, convenient to restrict the scope of this work to the most relevant aspects of the reform, that is to say, the principal features of the taxation of business income, taxation of particular types of income (e.g. income from mining, other income specially taxed, investment income and income derived by non-domiciliaries) and sales taxes.

Such topics as income taxation of individuals, net worth tax, betterment contribution and tax code will not be considered.

II. TAXATION OF BUSINESS INCOME

A. General description

Originally, the Peruvian income tax system was principally schedular. Later on, Supreme Decree No. 287-68-HC of 13 August 1968 introduced a change-over from the schedular to a global system and consequently its regulations provided for assessment on the aggregate income of the taxpayer whether he was a natural or a juridical person. This approach was confirmed by the new income tax law enacted with Legislative Decree No. 200 of 12 June 1981.

In fact, except for rates and a few special standards (e.g. personal allowances), the income tax is levied under rules which are the same for individuals and legal entities.

The new income tax law enters into force as from taxable year 1982 (assessment year 1983) and is applicable to taxable periods starting on or after 1 January 1982.

The old income tax law included in Supreme Decree No. 287-68-HC, its complementary legislation, regulations thereto and any provision referring to income taxation or which is in conflict with the new law is revoked. However, exemptions, allowances, other tax benefits, tax credits referred to in Decree-Law No. 22,401,[1] amendments thereto, laws pertaining to certain sectors of activity and laws stimulating the economy are not revoked and remain in force.

B. Taxable persons

The income tax law is levied, on individuals, married couples, undivided inheritances and legal entities.[2]

For income tax purposes, legal entities include only:
- corporations organized in Peru;
- partnerships organized in Peru and limited by shares, in that proportional part corresponding to stock shares;
- cooperatives;
- enterprises belonging to the social property (i.e. unions and similar organizations);
- state-owned enterprises;
- mining and oil enterprises irrespective of their legal organization;
- charities, societies, industrial, fishing and mining communities as regards the taxable income;
- sole proprietorships, companies and entities of any kind organized outside Peru, which derive Peruvian-source income;
- branches or agencies in Peru of sole proprietorships, companies and entities of any kind organized outside Peru; and
- agricultural companies of social interest, and cooperatives for agricultural production.

Income derived by sole proprietorships, commercial limited liability companies and other companies not considered to be legal entities under the rules discussed above, inclusive of the income belonging to the general partners of a partnership limited by shares, is attributed to the owners or shareholders, irrespective of actual distribution. Likewise, income derived by de facto companies, joint ventures and property held in common is attributed to members thereof, irrespective of actual distribution.

C. The concept of income

1. General income concepts

The tax under consideration is levied on the income derived from capital, work, or the joint application of both factors, and also on earnings statutorily considered to be taxable income. Income from the following sources is specifically considered to be taxable:
- the assignment of property to a member upon his

1. Decree-Law 22,401 of 22 December 1978 provides a system of tax credits which replaces investment allowances as from the taxable year 1979.
2. The following persons and entities are exempt from the income tax:
- the government and agencies thereof (sector público), except for state-owned enterprises which are taxable;
- universities, educational and cultural centers;
- charities (fundaciones) duly organized under the law and provided they pursue statutorily any of the following aims: education, culture, advanced research, charity, social and health assistance and social benefits for the personnel of enterprises;
- mutual assistance entities; and
- peasant and indigenous entities (communidades campesinas y nativas).

© 1982 International Bureau of Fiscal Documentation – BULLETIN

withdrawal from a business association or upon total or partial dissolution thereof. The income arising from the assignment is taxed with the association;[3]
- the transfer of goods carried out within 2 years as of the termination of activities performed by a business enterprise.

Taxable income also includes the following items:
(1) any compensation paid to an enterprise under insurance contracts covering its personnel and any compensation not covering real damage;
(2) any difference between premiums or contributions paid by insured persons and sums paid by insurance companies upon maturity of life insurance policies providing a dowry or other benefits paid on life insurance policies;
(3) royalties;
(4) capital gains arising from the transfer of specified property;[4] and
(5) results from the habitual sale, exchange or transfer of goods.

For computation purposes, income is classified into the following categories:
- *first category*, including income from real property;
- *second category*, including other capital income (dividends,interest, royalties, etc.);
- *third category*, including income from commerce, industry, business and similar sources;
- *fourth category*, including income from professional services (fees and remuneration of board members); and
- *fifth category*, including income from employment (wages, salaries and participation in profits).

Income derived by legal entities and enterprises domiciled in Peru is included in the third category irrespective of its nature. Moreover, income not specifically included in another category is deemed to be third category income.

2. Tax jurisdiction

The income tax is levied on Peruvian-source income only, irrespective of the nationality of individuals and the country where legal entities are organized.[5]

The following items of income are considered to be from Peruvian sources:
- income from real estate located in Peru;
- income from capital, assets or rights located or used for economic activities in Peru;
- income received with respect to personal services performed in Peru;
- profits derived from civil, commercial and other activities carried out in Peru; and
- income from the transfer of shares or participations in the capital of enterprises or companies organized in Peru.

The following items are also considered to be Peruvian-source income:
- interest, commissions, premiums and any sum paid for loans, financing or, in general, for any capital placed in Peru;
- interest on debts, when the debtor-company has been organized in Peru;
- wages and any remuneration paid or credited by enterprises domiciled in Peru to members of administrative boards performing activities abroad;
- royalties; [6] and
- fees or remuneration paid by the Peruvian government and agencies thereof (Sector Público Nacional) to persons performing representative or official duties abroad.

As regards expenses incurred abroad it is presumed, unless it can be proved to the contrary, that such expenses have been incurred for the production of foreign-source income.

3. Taxable period and allocation rules

For income tax purposes, the taxable period runs from 1 January to 31 December. The same rule applies to the commercial period but the tax administration may, upon request, authorize a different closing date for activities and businesses having special characteristics.

Items of income are allocated to taxable periods under the following rules:
(1) third category income (i.e. business income) is deemed to be produced in the commercial period during which it arises. The income belonging to legal entities shall then be included in the taxable period during which the corresponding commercial period is closed. Likewise the income originating from sole proprietorships or from partnerships not considered to be legal entities for income tax purposes shall be allocated by the owner or partner to the taxable period during which the commercial period is closed;
(2) first category income (i.e. income from real property) shall be allocated to the taxable period during which it arises; and
(3) other income (i.e. non-specified income) shall be allocated to the taxable period during which it is collected.

The above rules shall be similarly applied to the allocation of expenses.

In the computation of third category it is possible to cosider expenses paid in the period but incurred in preceding periods. However, if the amount was known when incurred and no provision was made for payment, the late deduction shall be limited to 80% of the expense. If the amount of the expense was not known or anticipated when incurred, however, a full deduction may later be allowed by the tax administration.

Income from the transfer of goods in installments to be paid during periods exceeding one year as from the date of the transfer may be allocated to commercial periods during which installments are due for collection.

For income tax purposes, income which is at the beneficiary's disposal is deemed to be collected.

---

3. For income tax purposes the value of the assignment cannot be less than the following minimums provided by the law:
   - for inventories, the price of transactions made with third parties;
   - for securities, their quotation in the stock market; and
   - for fixed assets, the market value or, if transactions thereon are not frequent, the assessed value.
4. For the taxation of capital gains see Section III. D.1. below.
5. In the old income tax law, persons resident or domiciled in Peru were traxed on world-wide income.
6. The Peruvian law does not provide further specification.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

4. Reorganization of companies

The income tax law includes some provisions that regulate and facilitate the reorganization of companies and enterprises. For these purposes a reorganization includes only mergers and split offs.

The provisions of the law are:
- the taxation of income arising from the appreciation of goods transferred as a result of the reorganization is deferred until distribution thereof;
- the value of the goods, transferred as a result of the reorganization are carried over to the acquirer. Likewise, the values on which depreciation is calculated and the useful life taken for these purposes shall not be changed as a result of the reorganization;
- losses incurred by the transferor can be offset against income derived by the acquirer, under the same terms existing prior to the reorganization; and
- organization and pre-operative expenses incurred by the transferor can be amortized by the acquirer under the same terms existing before the reorganization. The same rule applies to the amortization of the price paid for intangible assets.

D. The computation of taxable income

1. General description

The computation of taxable income is made through the following stages:
(1) gross receipts;
(2) net receipts;
(3) gross income;
(4) net income; and
(5) taxable income.

Net receipts from the transfer of goods are established by deducting, from gross receipts, refunds, bonuses, discounts and similar items, provided they are in accordance with market practices.

Gross income is defined as the aggregate of taxable proceeds arising in the taxable period. As regards proceeds from the transfer of goods, gross income is represented by net receipts minus deductible costs.

The cost of transferred goods is the acquisition or production cost or, as the case may be, the acquisition or inventory value established under the law. For property subject to depreciation, the cost is reduced by depreciation allowances.

For immovable property, the cost is calculated under the following rules:
- if the property has been acquired for a consideration, the cost is the acquisition value as adjusted for inflation under indexes established in regulations to the law;[7] and
- if the property has been acquired gratuitously, the cost is the cadastral value as adjusted for inflation under indexes established in regulations to the law.[8]

For shares and participations, the cost is calculated under the following rules:
- if the shares and participations were acquired for a consideration, the cost is the acquisition value; and
- if the shares and participations were acquired gratuitously, the cost is the market value or, if there is no market value, the cost is established under regulations to the law.[9]

In order to establish the *net income*, the expenses necessary to produce the income and to conserve its source may be deducted from gross income unless the deduction is specifically excluded. In the absence of proof to the contrary, it is presumed that expenses incurred abroad are related to foreign income and are consequently disallowed as a deduction.

The *taxable income* of legal entities is equal to their net income. The taxable income of individuals domiciled in Peru is equal to net income less specified personal deductions and allowances.

2. Specific deductions

It has been said that, in order to establish net income, the expenses necessary to produce the income or conserve its source may be deducted unless specifically excluded.

The law also provides that, under certain limits and conditions, the deduction of some items is specifically allowed in the computation of third category income (business profits), i.e. amortization, bad debts, collection expenses, depreciation, entertainment, fees, gifts, interest, leasing payments, losses, organization and pre-operative expenses, premiums, reserves, royalties, retirement pensions, salaries and other remuneration, social benefits, taxes and travel expenses.[10]

The following discussion shall cover only those specific deductions which have the most relevant interest within the group.

---

7. Not received at the time this article was completed.
8. Not received at the time this article was completed.
9. Not received at the time this article was completed.
10. The law also specifies that the following items are not deductible in calculating taxable income:
(1) personal expenses of the taxpayer and his family;
(2) the income tax;
(3) fines, surcharges, interest for late payments and other penalties applied by the government and its agencies (sector público nacional);
(4) gifts other than those allowed as a deduction by the law;
(5) sums invested in the acquisition of assets or in permanent improvements;
(6) allocations to reserve funds which are not allowed as a deduction by the income tax law;
(7) amortization of intangible assets. However, the price paid for intangible assets can be fully deducted as an expense when incurred or amortized in up to 10 years;
(8) exchange losses sustained as regards that part of foreign financing which exceeds an amount equal to 3 times the net worth of the debtor. The limit can be changed by the government where not appropriate to the requirements of specific activities;
(9) interest paid to entities abroad that are economically connected with the debtor, in that part which is above the limit established in regulations to the law and interest on that part of financing which is above 3 times the net worth of the debtor. The rules do not apply where the limit has been amended by the government;
(10) trade commissions originating abroad for the purchase or sale of goods, in that part exceeding usual payments in the country where commissions originate;
(11) losses incurred in the sale of securities for the acquisition of which a tax incentive has been received; and
(12) taxes assumed by the payor of income which are due by the recipient thereof, except for the 10% tax levied on interest paid abroad under rules discussed in Section III. E.4. below.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

a. *Depreciation*

Amounts representing depreciation allowances corresponding to fixed assets are deductible. Allowances are calculated annually and, if not taken in due time, may be deducted in subsequent periods.

The depreciation rate for buildings and structures is 3% per year. For other fixed assets used for the production of taxable income, depreciation rates are calculated at percentages established in accordance with their useful life. The percentages are then applied to the acquisition or production value of goods or to values resulting from revaluations made under the law. The value of permanent improvements must also be considered. Regulations can authorize that depreciation allowances be taken under other rules.

If personal property becomes obsolete or is no longer used, the taxpayer can go on taking depreciation allowances or take a full deduction of the balance in one single period.

b. *Entertainment*

Entertainment expenses belonging to the business are deductible for that part which, in the aggregate, does not exceed both 1% of gross receipts and the number of tax units specified in regulations to the law.[11]

c. *Fees*

Remuneration paid to members of a corporation's board of directors for the discharge of their duties is deductible up to a sum which, in the aggregate, does not exceed 6% of pre-tax business profits.

d. *Interest*

Interest and financing expenses are deductible provided they are incurred in order to acquire goods or services for the production of income in Peru or to protect its source. Taxpayers deriving interest and other income from financing which is free from income tax may deduct only interest and financing expenses that exceed tax-free income. This limit does not apply to interest derived from securities acquired to discharge an obligation established in the law or in the Central Bank rules, or from securities yielding an interest not above 50% of the rate established by the Central Bank for rediscount granted to commercial banks.

e. *Losses*

Taxpayers domiciled in Peru may set off the aggregate net loss incurred in a taxable period against net income arising during 4 successive years computed as of the first year showing profits. Any balance not so compensated cannot be carried forward.

In the computation of losses, exempt income and dividends must be taken into account (i.e. to reduce the loss or to eliminate it). By contrast, personal allowances of individuals (e.g. family allowances for spouse, children and dependents) are not taken into account to increase losses.

Taxpayers performing economic activities requiring large investments and long periods to consolidate production may enjoy longer periods to carry forward losses, under rules to be established in regulations.[12]

Extraordinary losses of assets devoted to the production of taxable income, as a result of acts of God, force majeure or crimes, are deductible provided the loss is not covered by compensation or insurance. The normal decrease in inventories is also deductible.

f. *Royalties*

Royalties are deductible under the rules established in regulations to the law.[13]

E. Tax rates

1. General rates

Resident legal entities are taxed at progressive rates ranging from 30 to 55% applied to brackets expressed in tax units,[14] as shown in the following chart:

Taxable income (tax units)	*Percentage levied on excess over lower limit*
0 - 150	30
150 - 1500	40
1500 - 3000	50
more than 3000	55

2. Surcharges

a. *Capitalization tax*

Profits capitalized by means of issuing stock dividends within 6 months from the closing date of the taxable year are subject to a 15% "capitalization" tax which must be paid within the first 15 days of the month following the month during which the capitalization is decided. This is a final tax excluding taxation on the relevant stock dividends and can be paid by the corporation out of undistributed profits or free reserves without further tax liability for the shareholder.

The relief attached to the capitalization tax[15] is not available during the 5 years following a capital reduction or if the tax is not paid in due time. Likewise, if the capitalization is carried out within 6 months and the capitalization tax is paid within the time limits as stated above but the corresponding company liquidates or distributes its capital within 5 years as from the date of the public deed containing the capitalization, then the difference between the 15% tax and the normal income tax on dividends will be due.[16]

Legal entities are not allowed to establish freely disposable reserve funds in excess of 100% of their paid-in capi-

11. Not received at the time this article was concluded.
12. Not received at the time this article was concluded.
13. Not received at the time this article was concluded.
14. The tax unit was introduced by Legislative Decree No. 7 of 30 December 1980 and is to be adjusted every year in accordance with changes in prices. For taxable year 1981 it is 350,000 Soles.
15. Recourse to the capitalization tax and the benefits attached thereto involve a tax relief in the sense that in the absence thereof the 25% withholding tax on dividends would be due.
16. The normal tax on dividends is currently 25%.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

tal. Any sum above the limit which is also above 2 tax units must be compulsorily capitalized or distributed within 12 months as from the date of the balance sheet in which the excess appears.

If the capitalization is carried out within 6 months as from the closing date, the capitalization tax and the benefits attached thereto apply.

If the capitalization and/or distribution are carried out after 6 months but within 12 months as from the closing date of the taxable year, the 25% tax on dividends is due upon distribution. However if the capitalization or distribution is not carried out within 12 months as from the closing date, the sum exceeding 100% of paid-in capital shall be subject to the 25% withholding tax on dividends, surcharges and interest as if distributed to shareholders, irrespective of actual distribution.[17]

b. *Additional rate (tasa adicional)*

There are certain specific instances where non-compliance with the tax law is penalized with an additional rate of tax (tasa adicional). In fact, the following items shall be subject to an additional rate of 40%:

- any sum registered as an expense which later on is discovered to be really taxable income;
- any sum charged to profits or to freely disposable reserves, provided it represents an indirect disposal of income which has escaped tax control; and
- any sum which upon a tax control is assessed as income and which has not been reported in tax returns.

The additional rate is not applicable to income derived by branches or agencies (see Section III. E. 2. below).

F. Income tax administration

1. Annual returns and payments

Individuals, married couples, undividend inheritances and legal entities deriving income subject to tax must file an income tax return not later than 30 April of every year, including additional information on net worth, as may be requested.

Branches and agencies in Peru of individuals or legal entities domiciled abroad must also file returns showing the income available for the non-domiciliary.

Sole proprietorships, individual enterprises with limited liability and partnerships not treated as legal entities for income tax purposes shall file, after the closing of the commercial period and under terms and requirements established in regulations,[18] a return showing the net income or loss of the commercial period; this income or loss shall be attributed to the owners or partners proportionally to their participation in the enterprise's capital.

The tax due in accordance with the income tax return must be paid at official or private banks before the filing thereof. The tax corresponding to income in foreign currency shall be paid in Peruvian currency. For this purpose, the income in foreign currency must be converted into Peruvian currency in accordance with the exchange rate at the date on which income arises or is collected, as the case may be.[19]

2. Tax prepayments

In addition to annual returns and payments, taxpayers are required to make monthly prepayments which are creditable against the final liability to income tax.

For calculating the monthly prepayments, legal entities can choose one of the following methods:

(1) pay for each of the first 2 months of the period 10% of the income tax paid in the second preceding taxable year and pay for the remaining months of the period a portion of the tax paid in the preceding year to be established under rules enacted every year by the Finance Ministry;
(2) calculate the monthly prepayment on the basis of a balance sheet showing the income of the corresponding month; or
(3) pay 2% of third category gross receipts arising in the month.

If the legal entity fails to choose one of the methods, the tax administration shall calculate and charge the prepayment under methods (1) or (3), as it may prefer.

Likewise, the income tax law offers individuals several alternatives for the computation of the amount of prepayments (not covered in this article).

3. Tax audits

If an annual income tax return is not filed, the tax administration shall require the taxpayer to prepare it and to pay any tax due, inclusive of surcharges and interest, within 30 days. If after that term the taxpayer does not satisfy the requirement, the tax administration may, without further delay, charge and compulsorily collect a sum equal to the rax of the last period for which a return or assessment exists, multiplied by the number of delinquent periods, plus surcharges and interest. In these cases, the taxpayer's rights are limited to refund claims for excessive collection.

Besides the steps mentioned above, the tax administration may estimate the taxpayer's income and, for that purpose, use any of the following techniques:

- calculate the income by means of coefficients based on capital, the amount of transactions and income of other periods, the amount of purchases and sales, inventories of merchandise and products, bank deposits, normal business results of similar enterprises, salaries, rent and other overhead;
- calculate the income on the basis of external signs of wealth such as rent paid for dwellings, value of dwellings, value of estates used for entertainment, vehi-

17. Before the tax reform, industrial companies with receipts above 590 "annual minimum wages" for the Lima Province had to either pay a tax of 2% on after tax profits for scientific research or use a similar amount for scientific or research programs approved by the appropriate government agency (Instituto de Investigación Tecnológica Industrial y de Normas Técnicas). This levy is still in force after the tax reform because it originates from a special law which was not specifically amended by the reform.
Moreover, a surtax of 2% on behalf of the "Fondo te Compensación Nutricional" was levied on the full taxable profits of legal entities the profits of which were above 60 tax units (unidades impositivas tributarias). It might be understood that this last levy was revoked by the new income tax law. However, Law No. 23,337 of 15 December 1981 specifically extended its application to 1982.
18. Not received at the time this article was concluded.
19. For allocation rules, see Section II. C.3. above.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

cles, boats, luxury horses, servants, travel abroad, social clubs, education, works of art, etc.;
- calculate the income on the basis of changes or increases in the taxpayer's capital and any other data available to the tax administration;
- use general averages and percentages for a certain product or branch. No proof shall be admitted to rebut said averages or percentages when the taxpayer has not filed his income tax return; or
- calculate the income on the basis of differences in stocks, averages of estimated receipts, market values and technical indexes provided in regulations to the law.[20]

For assessment purposes, it is presumed, with right of rebuttal, that any difference between expenses of an individual and reported income is unreported net income. Likewise it is presumed, without right of rebuttal, that any capital increase the origin of which cannot be justified by the taxpayer is unreported net income.

The income tax law includes a rule under which any audit performed by the tax administration must begin with the return corresponding to the last taxable period, provided one has been filed. If there is no objection to the return, the tax administration may not charge taxes due for previous periods. This standard does not apply if the last taxable period cannot be audited due to the taxpayer's fault.

When the income tax return of the last taxable period has been considered correct by the tax administration, but later on it appears not to be so, then the tax control can be extended to the periods which originally could not be covered because of the scheme.

III. TAXATION OF PARTICULAR TYPES OF INCOME

A. The concept of domiciliary

The new Peruvian income tax law contains some rules dealing specifically with the taxation of income belonging to non-domiciliaries, referred to below, especially in Section III. E. Domiciliaries and non-domiciliaries are defined in the following manner.

For income tax purposes, the following are considered to be domiciled in Peru:
- Peruvian individuals who under the general law are domiciliaries of Peru;
- foreign individuals who have lived or been present in Peru for 2 successive years or more. Temporary absences not above 90 days in each taxable period are not taken into account;
- persons discharging abroad representative duties or official positions for the government or its agencies (sector público nacional);
- legal entities organized in Peru;
- branches, agencies and other permanent establishments in Peru belonging to individuals or legal entities not domiciled therein. In this case, the branch, agency or permanent establishment is considered to be domiciled in Peru only as regards its Peruvian-source income; and
- inheritances of persons who were at their death domiciliaries of Peru, under the income tax law.

Non-domiciliaries who have been present in Peru for 6 months and have been registered as taxpayers can elect to be treated as domiciliaries for income tax purposes.

On the other hand, individuals shall cease to be regarded as domiciliaries for income tax purposes, if they leave Peru and become residents of another country. Where it cannot be proved that an individual has become a resident of another country, he shall be regarded as a domiciliary unless he is absent from Peru for 2 successive years or more. Temporary visits to Peru not lasting more than 90 days in each taxable period are not taken into account.

B. Taxation of income from mining

1. Taxation rules

The General Mining Law introduced by Legislative Decree No. 109 of 12 June 1981 regulates the exploitation of all mineral resources existing in Peruvian soil, subsoil or sea, except for petroleum, other hydrocarbons, guano deposits and medicinal mineral waters.[21]

In Peru, mineral resources are inalienable State property. Mining activities may be carried out by State-owned enterprises or, under government concessions, by private individuals and legal entities, either Peruvian or foreign. Concessions are irreversible as long as the concessionnaire complies with requirements established in the General Mining Law. The mining industry is considered to be of public interest.

The government may retain for the State exclusive mining rights on certain minerals or in certain areas (áreas de reserva nacional). The government can also establish special rights in favor of the State (derechos especiales del estado) and grant them to state-owned enterprises. The nature of the special rights is similar to that of concessions.

The law authorizes the establishment of "special mining enterprises" (empresas mineras especiales), that is to say, corporations with minimum state participation of 25%, organized under the General Mining Law with the purpose of carrying out mining activities protected by special rights in favor of the state or, as the case may be, by concessions granted to private persons. Individuals and legal entities, either Peruvian or foreign, can participate in the special mining enterprises.

Concessionnaires are subject to the payment of surface and registration duties. They are also required to make investments, carry out activities and reach production levels established in the law. Mining activities are subject to income tax but are exempt from other taxes.

The income tax is levied, as regards mining activities,

20. Not received at the time this article was concluded.
21. Under Decree-Law No. 17,440 of 19 February 1969, petroleum and other hydrocarbon deposits are State property, and petroleum and petrochemical industries are public services. Law No. 23,231 of 26 December 1980 permits the state-owned company Petroperu to grant secondary and tertiary petroleum recovery operations to foreign firms. Previously this practice was disallowed.
Decree-Law No. 22,775 of 6 December 1979, as amended by Decree-Law 22, 862 of 5 January 1980, established a new regime for oil contracts and introduced tax rules applicable to oil contractors and to Petroperu.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

under ordinary rules of the Income Tax Law, with the following deviations:

- Income derived and losses incurred by partnerships limited by shares (for that part belonging to general partners), commercial limited liability companies, general partnerships, limited partnerships, mining limited liability companies, special mining enterprises and any form of enterprises receiving tax incentives granted in contracts entered into with the government under Article 157 of the General Mining Law[22] are allocated to partners proportionally to their participation in the entity's capital.

  Under this scheme, the taxpayer is the partner. The income tax paid by the company is considered to be a prepayment to be credited against the partners' liability up to the limit of that liability and proportionally to the partners' shares in the company's capital. Moreover, the liability to the income tax arising for individuals from mining activities is limited to the tax resulting from the application of ordinary rates to mining income only (i.e. as separate from other income).

- The acquisition value of mining rights and that of special rights of the state shall be amortized as from the period during which the production minimum becomes compulsory.
  For amortization purposes, the acquisition value includes the acquisition price or the registration cost, as the case may be, and prospecting and exploration expenses incurred up to the date on which a production minimum becomes compulsory.[23] The amortization is to be spread over a period determined by the taxpayer considering the deposit's life as calculated in accordance with the mineral reserves and the production minimum already referred to.[24]
- Exploration expenses incurred as from the date the production minimum established in the law becomes compulsory can be fully deducted or amortized using an annual percentage which is determined considering the deposit's life as calculated in accordance with mineral reserves and the production minimum. Development and preparation expenses permitting the deposit exploitation for more than one period can be fully deducted in the period during which they are incurred or amortized in up to 3 periods including that one during which they are incurred.[25]
- Branches or foreign enterprises not domiciled in Peru receiving tax incentives granted in contracts entered into with the government under Article 157 of the General Mining Law[26] may remit abroad an amount equal te depreciation allowances taken on fixed assets, capitalized expenses and profits, provided the balance sheet of the period shows a profit, or a loss which does not exceed depreciation allowances registered in the period. If losses exceed depreciation allowances of the period, remittances related thereto shall be reduced in an amount equal to the difference. Special mining enterprises and companies receiving tax incentives granted in contracts entered into with the government under Article 157 of the General Mining Law[27] that have among their partners one or more branches of foreign enterprises not domiciled in Peru shall, for remittance purposes, allocate depreciation allowances and amortizations among their partners proportionally to their share in the capital's.
- Any person performing mining activities shall contribute 1% of his after tax profits to the Geological and Metallurgical Institute (Instituto Geológico Minero Metalúrgico).

2. Tax incentives

The General Law on Mining grants several tax benefits for the promotion of mining activities. The incentives refer to depreciation and revaluation, investment and reinvestment, permanency of taxation rules, contracts with the government, and special rules.

a. *Depreciation and revaluation*[28]

Depreciation allowances for investments made by mining enterprises in machinery, equipment, installations, housing, social welfare, vehicles and earthworks, up to 300 tax units in the year, can be taken at a 100% rate.

Depreciation allowances of the same investments exceeding 300 but not 900 tax units in a year can be taken at a 20% rate except where the normal depreciation rate is higher. Depreciation allowances on that part of investments exceeding 900 tax units in the year are taken under ordinary rates for mining.

If the exchange rate of Peruvian currency against the American dollar changes by more than 5%, fixed assets can be revalued free from income and other taxes. Capitalization of the net balance of the revaluation (revaluation of assets less adjustment of debts incurred in foreign currency to buy the assets) is also free from taxation.

b. *Investment and reinvestment*

Mining enterprises are entitled to a tax credit if they reinvest in their own operations - or invest in other mining enterprises - in an amount not exceding 40% of their net income.

Persons not engaged in mining activities can also take advantage of the above credit, provided they make investments in mining enterprises. If the credit is not actually used by these persons, it can be taken by the enterprise receiving the investment. The above tax credit is calcu-

---

22. This kind of contract is discussed in Section III. B.2.d. below.
23. The taxpayer can elect to deduct prospecting and /or exploration expenses in the period during which they are incurred.
24. If the mining rights are abandoned or revoked before the production minimum becomes compulsory, the acquisition value shall be fully deducted. If the mining rights are abandoned or revoked, or the mining deposit is depleted after the production minimum becomes compulsory but before the acquisition value has been fully amortized, the taxpayer can choose to deduct immediately the balance or go on with the amortization.
25. If the mining reserves are depleted or mining rights are revoked, the taxpayer can choose to deduct immediately the balance of expenses or go on with the amortization.
26. This kind of contract is discussed in Section III. B.2.d. below.
27. This kind of contract is discussed in Section III. B.2.d. below.
28. The provisions on depreciation allowances and revaluation discussed herein are not applicable where a contract has been entered with the government, under Article 157 of the General Mining Law.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

lated by applying the average or effective income tax rate to the investment or reinvestment.[29]

In order to receive the benefits, it is necessary to prepare investment and/or reinvestment programs and obtain approval therefor from the government (Dirección de Fiscalización Minera).[30]

The investment program can be carried on directly by each separate enterprise or by means of joint ventures or legal entities organized for that purpose. Assets acquired under investment programs cannot be transferred before depreciation allowances representing 90% of their value have been taken without considering accelerated depreciation. It is, however, possible to transfer the asset to another mining enterprise which will not enjoy a credit for the sum invested in the acquisition.

The credit from investments belonging to mining enterprises shall be used to pay the income tax due for the period during which the investment is carried out. Any balance of credit shall be used to pay the income tax due for up to the 3 following periods.[31] The amount of the credit or balance thereof not used to pay the income tax of the period during which the investment is carried out is adjusted at the end of each period during which the value of the Peruvian currency against the American dollar changes by more than 5%.

The capitalization of the investments and reinvestments made by mining enterprises under rules discussed above is exempt from income and other taxes.[32]

c. *Permanency of taxation rules*

Mining enterprises commencing operations exceeding 350 but not 5,000 metric tons per day are given the guaranty that the taxation rules will not change for a period of 10 years as from the commencement of operations.

Mining enterprises already producing more than 350 but not more than 5,000 metric tons per day which increase their production capacity by 100% without exceeding 5,000 metric tons per day, are also assured the above privileged treatment for a period of 10 years as of the date on which the increase of production has been effected. If the growth is between 50 and 100%, the period of permanency is proportionally reduced.

Operations are deemed to be commenced or the increase effected once actual operations represent at least 80% of projected production, during 90 successive days.

The guaranty that the taxation rules will not change means that the taxpayer is subject to the tax regime in force on the date on which the program is approved and that no tax subsequently established shall be applied. This privileged tax treatment also covers assessment and payment rules but, in this case, the taxpayer can elect to be taxed under any new rules. Should any tax be replaced by a new one, the taxpayer shall pay the new tax up to the sum which would be due in the year under repealed rules. Anticipation of payments and compulsory loans in favor of the state are prevented by the scheme.

d. *Contracts with the government*

In order to promote investment and facilitate the financing of mining projects involving an initial production of at least 5,000 metric tons per day or increases of current production aimed at reaching the above level,[33] the Executive Branch is authorized to conclude, with the approval of the Council of Ministers, contracts with mining enterprises by means of which one or more of the following benefits may be granted:[34]

(1) the guaranty that the taxation rules in force on the date on which the contract was signed will remain applicable during 10 years;
(2) the authorization to use higher rates of depreciation allowances as regards machinery, equipment and other fixed assets, within the aggregate limit of 20% per year;
(3) the authorization to revalue the book of machinery and installations when the value of the Peruvian currency against that in which the investment was made undergoes a change which exceeds 5%.[35] The revaluation and subsequent capitalization of the appreciation are free from income and other taxes or duties;
(4) the reduction of the ordinary corporate income tax as calculated at rates in force on the date on which the contract is entered into, during the period which is necessary to recover the investment plus 3 additional years. The reduction that can be granted is limited to one third of the ordinary progressive rates.[36] This means that at least two thirds of the rates in force on the date on which the contract is concluded remain applicable;
(5) the authorization to keep accounting records in American dollars or in the currency in which the investment is made, provided the contract establishes that 80% of the production, or the additional production resulting from the contract, shall be exported. The system must be used for periods not shorter than 5 years and during such period the taxpayer is not allowed to revalue assets;
(6) the guaranty that the legal rules will remain applicable regarding the disposal of foreign currency de-

---

29. Under Decree-Law No. 22,401 the tax credit is normally calculated by applying the medium rate of income tax of the investment or reinvestment and by subsequently adjusting (in certain cases) the balance of that computation according to an "index of selectivity". This index varies for different activities and according to the priority level of the enterprise receiving the investment. As regards mining, however, the index is 1 and can therefore be disregarded.
30. Reinvestment programs must be submitted for approval during the taxable period or at least 60 days before the final income tax becomes due. The mining agency (Dirección de Fiscalización Minera) shall take the decision on the program within 45 days. If the decision is not taken or notice of the decision is not served within the 45-day term, the program is automatically approved. In order to enjoy the credit, enterprises must also file, within 60 days of the end of the corresponding period, a sworn return directed to a mining agency (Dirección de Fiscalización Minera) showing investments made in the period. In order to receive investments from third parties, it is necessary for an enterprise to have its programs approved by the government and use the funds received in discharge of the program within 3 years of the date of receipt.
31. Enterprises dealing with less than 5,000 metric tons per day can choose to take the credit under the aforesaid rules or under special rules.
32. Ordinary income taxation on capitalization is discussed in Sec. II. E.2.
33. Some other specified enlargements are also eligible for the scheme.
34. Incentives listed herein do not exclude the possibility for an enterprise to obtain the priviliged treatment as explained in Section III. B.2.c. above, provided the requirements discussed therein are met.
35. This possibility is not available for enterprises keeping their financial records in foreign currency.
36. For ordinary rates see Section II. E.1. above.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

rived from the sale of products, as in force on the date in which the contract with the government is signed; and

(7) no discrimination as regards foreign exchange.

The above contract concluded between the government and mining enterprises shall be in force for the period which is necessary to recover the investment by using the gross income concept, less the income tax, the contribution to the Geological and Metallurgical Institute (Instituto Geológico Minero Metalúrgico) and profit shares payable to workers (participaciones liquidas y patrimoniales). For this purpose:

- "gross income" means the selling price minus costs. Depreciation allowances, amortization of invested capital, and investments or reinvestments for which tax incentives have been received are, in this case, not deductible as costs; and
- "investment" includes assets representing the acquisition of mining rights, the prospecting, exploration and development thereof, the purchase of machinery and equipment, winning plants, systems for power production, installations, earthworks, support facilities, housing and social welfare. Investments and reinvestments for which tax incentives have been received shall not be taken into account for the computation of investments to be recovered.

The contract may be revoked if the beneficiary does not provide assurances that the financing will be obtained within 18 months as of the date of its signature or if the work has not been commenced and finished within the time limit established in the contract, unless the delay is due to acts of God or force majeure.

e. *Special rules*

The general mining law includes special taxation rules for less developed areas, engineering ventures with foreign participation and small miners.[37]

Mining enterprises commencing their activities in the Jungle Region or in other areas of Peru which, due to geographic difficulties, have not benefitted from mining development receive the following additional incentives:

- for each ton of mineral ore or product that is sold, a tax credit certificate equal to 10% of the f.o.b. or ex factory value thereof with a minimum of 0.5% of a tax unit and a maximum of 1.5% of a tax unit. The certificate can be used for the payment of income and other taxes or transferred to other taxpayers for the same purpose; and
- concessionnaires for exploration can obtain an extension of their concessions for 5 additional years provided they meet certain requirements related to investments.

Engineering companies and professionals not domiciled in Peru rendering assistance services or preparing projects for mining, are wholly or partly exempt from income tax if they create, with Peruvian engineering companies or professionals, any kind of company or joint venture and contribute technology not available in the country. The activities of these enterprises must be performed in Peru unless it is necessary to carry them out abroad for sound reasons. The exemption is 100% if the Peruvian participation reaches at least 51% and is proportionally reduced if the Peruvian participation is less than 51%. The exemption applies to the income tax on dividends and profits belonging to the foreign company or professionals.

C. Other income specially taxed

The Peruvian income tax law provides special rules for the taxation of the following income-producing activities: communication, film distribution, imports and exports, insurance, news, oil-related services and transportation. Considering that these rules relate to international activities, a short description is given.

a. *Communication*

Income arising from communication services between Peru and foreign countries is considered to be Peruvian-source.

Where such income is derived by domiciliaries of Peru, it is presumed without right of rebuttal that its entire amount is Peruvian-source. This rule does not apply to branches or permanent establishments in Peru of foreign enterprises. Persons not domiciled in Peru and branches or agencies of foreign enterprises providing communication services in Peru are presumed, without right of rebuttal, to derive net Peruvian-source income equal to 5% of gross income from radiograms, telephone calls and similar communications made from Peru to another country.

b. *Film distribution*

Income arising from the leasing and other kind of exploitation of films, tapes, matrixes and other elements used for the projection or reproduction of images and sounds is considered to be Peruvian-source.

Where such income is derived by domiciliaries of Peru, it is presumed, without right of rebuttal, that its entire amount is Peruvian-source. This rule does not apply to branches or permanent establishments in Peru belonging to foreign enterprises.

Persons not domiciled in Peru and branches or agencies of foreign enterprises distributing cinematographic and similar films to be used by domiciliaries of Peru are presumed, without right of rebuttal, to derive net Peruvian-source income equal to 20% of gross receipts for the use of films for cinema or television, videotapes, soap operas, records, comics or any other similar means for projection, reproduction or broadcasting of images and sounds.

c. *Imports and exports*

Income arising from the export of goods produced, manufactured or purchased in Peru is considered to be Peruvian-source. For these purposes exports include remittances abroad made by subsidiaries, branches, representatives, purchasing agents and intermediaries acting for individuals and legal entities operating abroad.

For income tax purposes, the value of imports cannot ex-

37. Rules for small miners do not seem to offer special interest and are thus not discussed in this article.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

ceed the ex factory value in the place from where they originate, plus expenses to the Peruvian port. Any excess amount shall be treated as taxable income of the importer, unless proof to the contrary is provided.

Likewise, for the same purposes, the value of exports cannot be less than the "real value", that is to say, its value in the consumer's market minus expenses. Any deficient sum shall be treated as taxable income of the exporter, unless proof to the contrary is provided.

d. *Insurance*

Income arising from insurance, reinsurance and back cessions is considered to be Peruvian-source.

Where such income is derived by domiciliaries of Peru, it is presumed, without right of rebuttal that its entire amount is Peruvian-source. This rule does not apply to branches or permanent establishments in Peru belonging to foreign enterprises.

Non-domiciliaries insuring risks in Peru are presumed, without right of rebuttal, to derive Peruvian-source income equal to 7% of:
- net premiums (exclusive of commissions paid in Peru) remitted by enterprises organized and domiciled in Peru; and
- income (net of commissions) received for reinsurance covering risks located in Peru, or referring to residents thereof or to property located therein.

e. *News*

Income arising from the supply of news by international agencies is considered to be Peruvian-source.

Where such income is derived by domiciliaries of Peru, it is presumed, without right of rebuttal, that its entire amount is Peruvian-source. This rule does not apply to branches or permanent establishments in Peru belonging to foreign enterprises.

International news agencies are presumed, without right of rebuttal, to derive net Peruvian-source income equal to 10% of gross remuneration received for the provision of news and, in general, information and material for printing to persons or entities that are domiciled in Peru or use the material therein.

f. *Oil-related services*

Contractors and subcontractors not domiciled in Peru, rendering specific services related to the exploration, drilling, development and transportation of oil, are presumed, without right of rebuttal, to derive net Peruvian-source income equal to 25% of gross receipts.

Contractors and subcontractors domiciled in Peru, rendering the same services, are presumed to derive a minimum taxable income equal to 15% of gross receipts.

g. *Transportation*

Income arising from transportation between Peru and foreign countries is considered to be Peruvian-source.

Where such income is derived by domiciliaries of Peru, it is presumed, without right of rebuttal that its entire amount is Peruvian-source. This rule does not apply to branches or permanent establishments in Peru belonging to foreign enterprises.

Persons not domiciled in Peru and branches or agencies of foreign enterprises rendering transportation services in Peru are presumed, without right of rebuttal, to derive net Peruvian-source income equal to 1% of gross income from transportation by air and 2% of gross income from transportation by sea.

Persons not domiciled in Peru leasing airplanes are presumed, without right of rebuttal, to derive net Peruvian-source income equal to 60% of gross receipts arising from such leasing.

Income from the leasing of boats and airplanes is taxed at a 10% rate.

D. Taxation of investment income

1. Taxation of capital gains

Capital gains from the transfer of property are taxed only when derived from *habitual* transactions[38] or if they arise from the transfer of the following items:
- immovalbe property, provided the transferor has made in the taxable period or in the 2 preceding periods at least 2 purchases and 2 sales of immovable property;
- shares, provided the transferor has made in the same period at least 10 purchases and 10 sales;
- immovable property previously acquired with the purpose of being subsequently transferred or which is sold within a development or subdivision scheme;
- property received as a payment for habitual transactions;
- personal property which may be depreciated;
- goodwill, trademarks and similar items;
- property belonging to legal entities or enterprises organized abroad and performing in Peru activities that produce third category income;
- business or enterprises; or
- rights or concessions.

2. Taxation of dividends paid to domiciliaries

Dividends paid to legal entities are not computed in calculating the aggregate income of the recipient. However, dividends paid to legal entities are subject to a 25% withholding tax which is creditable against the same tax due on subsequent distributions.[39] Dividends paid by legal entities domiciled in Peru out of exempt dividends or interest received from other companies are not taxable, provided the redistribution is carried out within the 2 periods following the one during which they were received.[40]

---

38. It is presumed that transactions are not habitual if they refer to:
- immovable property acquired gratuitously by inheritance;
- immovable property which has been used by the vendor for dwelling purposes for at least 1 year;
- immovable property owned for at least 2 years;
- shares and participations acquired gratuitously by inheritance; and
- shares and participations owned for at least 2 years.

39. The tax, however, cannot be refunded.

40. For allocation purposes, distributions are deemed to be first paid out of exempt dividends or interest and subsequently out of other income.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

In order to benefit from the credit or exemption referred to, it is necessary that the following conditions be met:
- if the redistribution is made in shares, it must be made in the same shares as previously received. However, the company making the redistribution may capitalize the shares received from another company and make the redistribution in its own shares;
- if the redistribution is made in cash it must be paid out of cash dividends; and
- if the redistribution is made in kind it must be made with the same items received from another company.

Dividends paid to resident individuals are subject to a 25% withholding tax representing a prepayment which is creditable against the final liability to the income tax. Dividends paid on shares distributed to workers under the scheme of workers' participation in profits[41] are subject to income tax under the same rules applicable to salaries, as long as the employment condition exists. After retirement, however, they are taxed as ordinary dividends.

Stock dividends can be subject to the same regime of dividends unless the capitalization tax or other rules discussed in Section II. E. 2. apply.

The concept of dividend includes:
- income distributed to shareholders by corporations and partnerships limited by shares whether in cash, kind or shares of the distribution company;
- distributions of shares representing a revaluation of fixed assets which is in excess of the amount authorized by the law;
- sums received upon the liquidation of a company which are in excess of the normal value of shares and certain specified premiums;
- shares in profits;
- any loan or delivery of goods to shareholders not exceeding profits and free reserves which is not refunded within 12 months; this standard is not applicable to banks and financial institutions; and
- any sum which, upon a tax audit is assessed as third category income, provided the payment thereof represents an indirect disposal of income which has escaped taxation. In this case the tax discussed in Section II.E.2.b. is due.

On the other hand, the term "dividend" does not include:
- certain specified premiums;
- shares of the distributing company representing the capitalization of revaluations authorized by law. If the shares are distributed to legal entities, the shares must be registered by the recipient in a special reserve account to be used for offsetting losses and distributed only upon the sale of the shares for which they were received.

3. Taxation of interest paid to domiciliaries

Interest paid to domiciliaries is taxed as ordinary income of resident individuals and corporations. However, a final 40% withholding tax is levied on interest paid on bearer bonds and securities.

For the purposes of income taxation, it is presumed, without right of rebuttal, that any loan produces at least the interest charged by the Central Bank on rediscount to commercial banks. This assumption is not applicable in specified instances including loans granted by non-domiciliaries from abroad. Moreover any sum refunded by the debtor which exceeds amounts received is presumed to be interest.

The law provides for the following exemptions:
- interest on loans granted by the Peruvian government or agencies thereof (sector público nacional); and
- interest on savings deposits and contributions.[42]

4. Taxation of royalties paid to domiciliaries

Royalties paid to a Peruvian individual or corporation are considered to be business profits and treated as ordinary income.

The term "royalty" is deemed to include any consideration in cash or in kind paid for the use of or the right to use any patent, trademark, design or model, plan, secret formula or process, and copyrights of literary, artistic, or scientific work, as well as for information concerning industrial, commercial or scientific experience.

Recipients of royalties may deduct 10% of such income during the period necessary to recover expenses incurred in Peru for the acquisition, production and registration of the assets for which the royalties are paid.

E. Taxation of income derived by non-domiciliaries

1. General rules for the taxation of non-domiciliaries

Income of any kind paid or credited to beneficiaries not domiciled in Peru is subject to final withholding tax at the following rates:
- dividends: 30%;
- interest: 40%, 10% or exempt;[43]
- royalties: 25%;
- income from the leasing of boats or airplanes: 10%;
- after tax profits of branches or agencies belonging to nonresidents: 30%;
- pensions or remuneration for personal services rendered in Peru: progressive rates used for resident individuals which range from 2 to 65%; and
- non-specified income: 40%.

The withholding tax is calculated on the following amounts which, for this purpose, are deemed, without right of rebuttal, to be net income:
(1) for first category income (i.e. income from real property), the tax is levied on the net or taxable income established under special rules provided by the law;

---

41. The scheme for workers' participation in profits is discussed in the Introduction to the Peruvian chapter in Section C of *Corporate taxation in Latin America* (International Bureau of Fiscal Documentation, Amsterdam).
42. There are also some items which are exempt in accordance with legislation existing prior to the enactment of the current income tax law and which has not been revoked by the new legislation, i.e.:
- interest on bank certificates in foreign currency and deposits in foreign currency with financial enterprises (Decree-Laws No. 22,038 and 22,891);
- interest on securities issued by the government agency for development "Cofide" (Decree-Laws No. 21,020 and 22,891); and
- interest on bonds issued by financial enterprises and fixed term deposits (Decree-Laws No. 18,957, 20,114 and 22,891).

43. For further discussion, see Section III. E.4. below.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

(2) for royalties, the tax is levied on gross receipts minus deductions (discussed in Section III. E.5. below);
(3) for life pensions, the tax is levied on gross receipts minus a deduction equal to 50% thereof, made to recover the investment and limited, in the aggregate, thereto;
(4) for other non-specified second category income (e.g. dividends and interest), the tax is levied on the total of the income paid or credited to the non-domiciliary;
(5) for income specially taxed (i.e. derived from communication, film distribution, imports and exports, insurance, news, oil-related services and transportation), the tax is levied on the corresponding amount established under the rules discussed in Section III. C. above;
(6) for other non-specified third category income (i.e. business income),[44] the tax is levied on the amount paid or credited to the non-domiciliary;
(7) for fourth category income (i.e. income from professional services), the tax is levied on 90% of sums paid or credited to the non-domiciliary.
(8) for fifth category income (i.e. income from employment), the tax is levied on 100% of sums paid or credited to the non-domiciliary; and
(9) for income not listed above, originating from the transfer of goods or rights or from the exploitation of goods subject to wear and tear, the tax is levied on receipts minus invested sums (costs).

For withholding tax purposes, income derived from business associations not considered to be legal entities for income tax purposes shall be deemed to be paid or credited to the beneficiary abroad as from the date on which the annual income tax returns are due.

2. Taxation of income derived through branches

Profits derived by branches or agencies established in Peru are taxed in accordance with ordinary rates (see Section II. E.1.), and, in addition, the after tax profits that are available to the principal abroad are subject to a 30% withholding tax.

Expenses incurred by a branch, which represent taxable income for other branches or agencies, are deductible, provided the payment can be duly controlled and does not constitute indirect distribution of profits.

3. Taxation of dividends paid to non-domiciliaries

Dividends paid to beneficiaries not domiciled in Peru are subject to a 30% withholding tax which is final.

For the concept of dividend see Section III. D.2. above.

4. Taxation of interest paid to non-domiciliaries

Interest paid to non-domiciliaries can be subject to 3 different tax regimes:
- the interest is subject to a 40% final withholding tax if no other specific rule is provided for;
- the interest is subject to a 10% final withholding tax, if it is paid to legal entities on loans or financing specified by the law and discussed below; or
- the interest is exempt from income taxation in instances discussed below.

The instances where interest paid to legal entities is subject to 10% tax are the following:
- interest on foreign financing, provided:
  - the proceeds of the financing are sold in the Single Exchange Market (this requirement applies to cash loans only);
  - the annual interest (inclusive of commissions, premiums and any other charges) does not exceed by more than 3 points the prime rate of the financial market from which the monies come; and
- interest paid abroad by banks and financial enterprises established in Peru for the use of their credit lines abroad.

The following interest is exempt from income tax:[45]
- interest on development loans granted by international organizations or by institutions belonging to foreign governments;
- interest on loans granted by foreign institutions for the construction, acquisition, installation or operational start of new fixed assets, or for working capital which is necessary for the establishment or development of the enterprise, provided some additional requirements are met; and
- interest on saving deposits and contributions.

5. Taxation of royalties paid to non-domiciliaries

Royalties paid to beneficiaries not domiciled in Peru are subject to a 25% withholding tax, which is final.[46]

Any recipient of royalties may deduct 10% of such income during the period necessary to recoup expenses incurred in Peru for the acquisition, production and registration of the assets for which the royalties are paid.

Non-domiciliary recipients of royalty payment habitually performing research and experimentation in order to find the kind of assets for which the royalties are paid can deduct the corresponding expenses, up to 5% of gross royalties. The government may, for specific cases, change the limit.

In case of technical services requiring activities which are partially performed in Peru and partially performed abroad, net income is presumed to be 40% of gross receipts.

Royalties paid for technical, economic, financial or any other assistance rendered from abroad by governmental agencies or international organizations are exempt from income taxation.

IV. SALES TAXATION

A. The general tax on sales

1. General description

The Peruvian legislation in force before the 1981 reform included a sales tax (Impuesto a los Bienes y Servicios) which covered goods and services. For goods it was a value-added tax levied at the producer and wholesale

44. Not referred to in (5) above or in (9) below.
45. For more exemptions, see footnote 42.
46. For the concept of royalty, see Section III. D.4. above.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

levels. However, no credit was granted for the acquisition of fixed assets and services.

Legislative Decree No. 190 included in the reform package introduced a new general tax on sales (Impuesto general a las ventas) which extends the coverage of sales taxation to the retail level, taxes some services previously exempt and grants credits for fixed assets and services. The change entered into force on 1 November 1981.

2. Taxable persons

The general tax on sales is levied on individuals and legal entities that:
- perform sales of taxable goods, irrespective of the stage of the production and distribution process at which their activity is carried out;
- import goods; or
- render specified services listed in Appendix II to the law.

3. Taxable transactions

The general tax on sales is levied on the following transactions:
- the sale of movable goods carried out in Peru;
- the rendering of specified services listed in Appendix II to the law; and
- the importation of goods. Exports of goods are not subject to the tax.[47]

For the purpose of the tax, a "sale" is any transaction by means of which goods are transferred for a consideration. Taxable sales also include:
- any disposal of goods made by an enterprise, its owner or partner, for purposes other than business activities; and
- any disposal of goods not allowed as an expense for income tax purposes.

A "sale", however, does not include the transfer of inventory under a merger transaction or at the alienation of an enterprise.

For purposes of the tax, "movable goods" are those goods that can be moved from one place to another, rights thereon, boats and airplanes.

The services subject to the tax are listed in Appendix II to the law and include the following items:
- lodging services, sale of food and drink carried out in lodging establishments, tourism facilities, restaurants, bars, night clubs, clubs and any similar establishment;
- services rendered by general warehouses (almacenes generales de depósito);
- data processing, tabulation and electronic computation;
- advertising, publicity and similar services;
- cleaning of buildings, chimneys, windows and similar services;
- radio and television broadcasting (inclusive of closed circuit television services);
- repair, maintenance, reconstruction and alternation of movable property;
- laundry and dyeing services;
- services of hair dressers, beauty parlors, saunas, masseurs and the like;
- furniture decoration;
- photographic services;
- photocopies, copies, reductions and similar services; and
- leasing and subleasing of movable property.

Financial leasing is also taxed. However, the leasing and subleasing of agricultural machinery are exempt.

Exempt items are listed in Appendix I to the law which is in force up to 31 December 1990. The list includes: living animals, meat, fish, milk, butter, eggs, honey, plants, flowers, vegetables, fruit, coffee, cereals, flour, seeds, edible oil, sugar, cacao, pasta, bread, food for animals, unprocessed tobacco, salt, sulfur, graphite, sand, plaster, medicines, fertilizers, pesticides, India rubber, rubber, hides, wood, cork, copybooks, books, newspapers, periodicals, wool, cotton, hemp, machinery for agriculture, etc.

Exemptions cover the sale of used property carried out by individuals or legal entities not performing business activities. Future exemptions not listed in Appendix I to the law must be granted specifically and be included therein. General exemptions[48] already granted or to be granted in the future shall not be deemed to include the general tax on sales. However, imports previously exempt from the old tax on goods and services are automatically exempt from the new general tax on sales.

4. Taxable amount

The tax is calculated by applying the rate, as the case may be, to:
- the value of sales;
- the full amount of receipts from services; or
- the c.i.f. customs value of imports, as increased by duties and taxes on imports but exclusive of the general tax on sales.

The "value of sales" or the "receipts from services" include the full amount to be paid by the acquirer of goods or user of services. This amount comprises the full value of invoiced goods or services, inclusive of sums charged separately even if originating from complementary services, interest, financing expenses or any expense incurred on account of the purchaser or user of services.

Also included in the value of sales or the receipts from services are the excise tax (Impuesto Selectivo al Consumo) and any other taxes on production, sales or services. However, as regards the sale of gasoline and fuels

---

47. The liability to the tax arises:
- as regards the sale of goods, either on the date on which the invoice is issued or on the date on which the good is delivered, whichever is first;
- as regards the sale of boats and airplanes, on the date on which the contract is signed;
- as regards the disposal of goods for purposes other than business activities, on the date of the disposal;
- as regards the rendering of services, either on the date on which the invoice or receipt of payment is issued or on the date on which the consideration is received (whichever is first); and
- as regards the importation of goods, on the date on which customs clearance is applied for.

48. I.e. exemptions which do not specifically mention the general tax on sales.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

derived from petroleum, the tax on vehicles (Impuesto de Rodaje) is not included in the value of sales for the computation of the general tax on sales. Likewise discounts and bonuses shown in invoices are not included in the taxable amount, provided they are in accordance with normal trade practices.

The price of assembly or installation "in situ" of pre-fabricated parts, performed by the vendor of such parts,is to be included in the value of sales. This provision covers pre-fabricated parts of bridges, watertanks, depots and stores, railways, highways, lifts, mechanical ladders, plumbing, sprays for fire prevention, central heating, ventilation, air conditioning, lighting, electric circuits, similar facilities in buildings and any structures.

5. Computation of the tax

The general tax on sales is essentially a value-added tax. This means that the tax rate provided by the law is applied to taxable amounts and the tax liability resulting from that calculation is reduced, where appropriate, by crediting against this liability the tax on goods or services supplied to the taxpayer.

The Peruvian sales tax law provides for a single 16% rate. Nevertheless, industrial enterprises established in less developed areas receive tax reductions. In addition, enterprises established in the Jungle Region benefit from even more substantial reductions and exemptions. These special regimes shall be further discussed in Section IV. A.6. below.

The tax credit is granted for purposes of the general tax on sales if it is registered separately in invoices substantiating the acquisition of goods and services and also for this tax paid on imports.

In order to enjoy a credit on the acquisition of goods and services:
- the acquisition price must be deductible as an expense or cost under the income tax legislation;
- the goods and services must be used to perform transactions subject to the general tax on sales or on "non-traditional exports";
- the tax must be registered separately in the invoice substantiating the acquisition of a taxable good or service or in the import documents;
- the invoice must be issued in the way established in regulations to the law; and
- the invoice or importation document must be registered in the taxpayer's record of purchases.

The credit originating from the acquisition of goods subject to depreciation (fixed assets) must be divided in 4 annual installments and taken as from the calendar year during which the use of such goods commences. If an asset is sold before the 4-year term has elapsed, any unused balance of the credit can be offset only against the tax arising from the sale of the asset itself. However, if the enterprise has not commenced operations, the credit arising from the acquisition of fixed assets may be refunded, provided the asset has not been put into use.

Where a taxpayer simultaneously performs taxable and non-taxable transactions, certain provisions established in regulations to the law must be taken into account for the computation of the credit.[49]

When an enterprise is reorganized or transferred, the existing tax credits thereof can be transferred to the new or acquiring enterprise. However, if an enterprise is liquidated, the credit is not refunded.

6. Special rules

a. *Less developed areas*

Industrial enterprises of the first, second and third priority[50] established or to be established in less developed areas[51] pay the general tax on sales under more favorable rules.

The "less developed areas" entitled to the tax reduction include any area of Peru other than the provinces of Lima, Cañete, Chancay and Huaral of the Department of Lima, and Callao.

The special rules provide for a tax reduction which is calculated under the following provisions:
- the tax debit of the month (i.e. the tax liability arising from goods and services sold in the month) is reduced by 15% of its amount;
  for enterprises that are established in less developed areas on or after 1 January 1980, the reduction for the first 5 years as from commencement of operations is 40%;
  for enterprises that were already established in less developed areas before 1 January 1980, the reduction for that part of the 5-year period (computed as from commencement of operations) which was still available when Legislative Decree No. 190 entered into force (i.e. on 1 November 1981) is 30%; and
- the tax credit is calculated on purchases and services received under ordinary rules and is not limited or affected by the reduction of the debit.

Thus, by reducing the debit and maintaining the credit untouched, a reduction is produced in the final tax.

b. *Jungle Region*

Taxpayers domiciled in the Jungle Region enjoy a more favorable regime as regards the general tax on sales, even if compared with less developed areas in general.

The Jungle Region encompasses the departments of Loreto, Ucayali, San Martin, Amazonas, and Madre de Dios.

To be eligible for the benefits a person must:
(1) be domiciled in the Jungle Region; and
(2) perform 75% of his transactions in the Jungle Region.

Legal entities must in addition:
(3) be organized and registered in the Jungle Region; and
(4) have their management in the Jungle Region.

---

49. Article 31 of Supreme Decree 245-81-EFC of 4 November 1981.
50. Under the General Industrial Law (Decree-Law No. 18,350 of 27 July 1970, as amended) industrial activities are classified in 4 priority groups. For further discussion, see Industrial Incentives in Section 6.02 of the Peruvian chapter in Section C of *Corporate Taxation in Latin America*.
51. For incentive purposes it is necessary to separate ordinary "less developed areas" from some less developed areas which enjoy an even more privileged regime, e.g. the Jungle Region which is discussed in Section IV. A.6.b.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Commercial enterprises belonging to the government or to its agencies only need comply with requirements (3) and (4).

The benefits available for the Jungle Region are the following:

(1) the importation of goods specified in an Appendix to Decree-Law No. 21,503, to be consumed in the Jungle Region, and imports of raw materials for the production of such goods are exempt from the general tax on sales. This exemption does not apply to goods similar to those already produced in the region in an amount sufficient to cover the needs thereof;
(2) the sale of the goods specified in an Appendix to Decree-Law No. 21,503 to be consumed in the Jungle Region and the sale of raw materials for the production of such goods are exempt from the general tax on sales;
(3) sales and services subject to the general tax on sales (i.e. sales and services which are not exempt under the rules discussed in (1) and (2) above) may receive the tax reductions granted to the enterprises established in less developed areas;
(4) merchants established in the Jungle Region that purchase, from taxpayers established outside the region, the goods specified in an Appendix to Decree-Law No. 21,503, to be consumed in the Jungle Region, may receive a refund of the general tax on sales invoiced for the purchase. If the purchase is made from a producer receiving the benefits granted to enterprises established in less developed areas, the refund is limited to 60% of taxes invoiced. This refund does not cover the purchase of goods similar to those already produced in the region in an amount sufficient to cover the needs thereof; and
(5) manufacturers established in the Jungle Region producing the goods specified in an Appendix to Decree-Law No. 21,503, to be consumed in the Jungle Region, may receive a refund of the general tax on sales invoiced for the purchase from other areas of Peru of raw materials to be used in such production. If the purchase is made from a producer receiving the benefits granted to enterprises established in less developed areas, the refund is limited to 60% of invoiced taxes.

7. Tax administration

a. *Tax returns, payments and refunds*

The tax arising from sales and services must be calculated monthly and paid in to authorized banks within the first 15 days of the month following that during which transactions are carried out. The tax arising from imports is calculated by the customs service and must be paid together with custom duties.

If no liability to the tax arises in a particular month, the taxpayer must notify the tax administration. Where credits arising in a month exceed liabilities, the balance is carried forward to subsequent months.[52]

A refund may be obtained as regards:

- credits belonging to enterprises that have not commenced operations, provided the credits arise from the acquisition of fixed assets that have not yet been used; and
- credits corresponding to exports[53] to which persons are entitled who do not perform transactions subject to tax (or who perform them to an extent which is not sufficient to absorb the credits within 3 months). Under the same circumstances credits to which exporters are entitled can be used to satisfy some specified taxes (e.g. income tax prepayments).

Taxpayers subject to the general tax on sales must additionally file annual returns showing their acquisitions of the year, whether taxable or exempt.

b. *Tax audits and control*

The tax administration is vested with the power to estimate the value of goods and services, if the value is not specified or if the value indicated by the parties does not seem to be reliable.

If the tax on monthly sales has not been paid and if no notice on the absence of liability to the tax been given,[54] the tax administration may require that the taxpayer comply with his duty within 10 days.

If after the 10 days' term the taxpayer has not complied the tax administration may charge and compulsorily collect, without further delay, a sum established on the basis of the tax paid in previous periods, increased by surcharges and interest. If the tax administration makes use of this authority, the taxpayer's rights will be limited to refund claims based on excessive collection. The steps taken by the tax administration do not preclude its power to assess any tax actually due on the basis of other elements.

Where the taxpayer omits to prepare and deliver invoices or the registration thereof or where the tax administration has sound reasons to believe that the taxpayer's notices, self-assessments and returns are not correct, the tax administration may assess the tax on the basis of differences in inventories, averages of estimated sales, market values, and other data specified in regulations to the law.

The tax administration may assume, unless proof to the contrary is provided, that differences in inventories between those registered in the taxpayer's books and those accounted by the tax administration correspond to unreported sales of the last preceding year. The amount of unreported sales is then calculated by applying to the difference in inventory established by the tax administration the same rate that taxable sales of the last preceding year bear to the closing inventory of the same year.

The unreported sales computed as aforesaid are allocated to the different months of the year proportionally to reported sales of each month and the tax is then calculated without considering the credits that may exist. At the same time, unreported sales are deemed, without right of rebuttal, to be net income and subject to the income tax.

---

52. For credits arising from the acquisition of fixed assets, see Section IV. A.5. above.
53. Note that credits corresponding to exports are available only as regards non traditional exports.
54. See Section IV. A.7.a. above.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

The tax administration may also assume, unless proof to the contrary is provided, that sales in a particular month are equal to a daily average of sales which is multiplied by the working days of the month.

The daily average is established on the basis of sales made by the taxpayer under the control of the tax administration during 5 consecutive or alternative days in the month. If the 5 days' control is carried out in at least 4 alternate months of the same calendar year, the average of monthly sales and services established as aforesaid can be used to calculate the sales of the non-controlled months of the year. The difference in sales between those reported by the taxpayer and those estimated under the preceding rules is also treated as net income and subject to the income tax.

Furthermore, the same percentage that unreported sales of the last year, as established under the preceding rules, bear to reported sales of the same year can be used to assess unreported sales of the preceding year, provided the tax administration can prove that accounting records do not correspond to actual transactions.

c. *Small taxpayers*

Small taxpayers, i.e. taxpayers with annual sales not above 200 tax units, can choose to be taxed under a simplified system. Under this system the liability to the General Tax on Sales (tax debit) equals a certain percentage (which cannot exceed 16%) of an amount of sales equalling 200 tax units.

Under the scheme, the taxpayer is permitted to credit against his liability the tax paid on acquisitions of the period, but, if credits exceed debits, no refund is granted.

Individuals whose annual sales are not above 35 tax units are not subject to the general tax on sales. This exemption does not cover importers.

B. The excise tax

1. General description

The Peruvian legislation existing to the 1981 tax reform included several separate excise taxes.

Legislative Decree No. 190 introduced a new excise which is in force as from 1 November 1981 and replaces the separate taxes previously levied on tobacco, manufactures thereof, non-alcoholic beverages, beauty products, coca, petroleum derivatives, alcohol, alcoholic beverages, cars and tourism services.

The new excise tax is levied at production level on specified goods and services at rates up to 116% (for Virgina-type cigarettes).

2. Taxable persons

The excise tax is levied on:
- producers and economically connected enterprises, as regards sales carried out in Peru;
- importers of goods subject to the excise tax; and
- persons rendering services subject to the excise tax.

For the purposes of the excise tax, "producer" means any person taking part in the last stage of the process by means of which goods receive the condition of a product subject to the tax, even if the activity is performed by using the services of a third party.

For the same taxation purposes, enterprises are deemed to be economically connected if:
- one of the enterprises owns more than 30% of the capital of another enterprise, either directly or through a third enterprise;
- more than 30% of the capital of 2 or more enterprises belongs to the same person, either directly or indirectly;
- more than 30% of the capital of 2 or more enterprises belongs to a married couple, or to persons who are close relatives, as specified in the law.

If an item is sold by the producer to an economically connected enterprise, both this sale and the sale made subsequently by the connected enterprise are subject to the excise tax, unless the following conditions are met:
- proof is submitted that the price of the first sale is not below the price charged for the same items by the producer to unconnected enterprises; and
- sales to unconnected enterprises are not below 50% of the sales made by the producer in the period.

When the subsequent sale by the connected enterprise is subject to the excise tax, then the tax paid upon the purchase from the producer is creditable against the liability for the subsequent sale.

3. Taxable transactions

The excise tax is levied on:
- sales of specified products carried out in Peru at producer level;
- importation of the same specified products; and
- the rendering of specified services.

For the purposes of the excise tax, the term "sales" has the same meaning it has for the purposes of the general tax on sales. Likewise, the liability to the excise tax arises under the same rules as provided for the general tax on sales.

The specified items on which the tax is levied are listed in Appendices III and IV to the law.[55]

4. Taxable amount

The excise tax is calculated by applying the corresponding rate, as the case may be, to:
- the value of taxable sales;
- the full amount of receipts from taxable services; or
- the c.i.f. customs value of imports as increased with customs duties.

The rules used to determine the taxable amount for the purposes of the general tax on sales are also applicable to the excise tax. The general tax on sales and the excise tax, however, are excluded from the taxable amount. For gasoline and fuels derived from petroleum, the taxable amount is the ex factory price exclusive of the general tax on sales and the circulation tax. (Impuesto de Rodaje).

For imported cigarettes, the c.i.f. customs value cannot be less than 0.03% of a tax unit per pack or 20 units.

---

55. See footnote 56 below.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

5. Tax rates

The rates of the excise tax are specified in Appendices III, IV and V to the law. The principal rates for sales are: 10, 20, 25, 30 and 40%. The rate for services is 10%.[56]

C. Special tax

The exports of traditional products are subject to a "special tax" payable by exporters and by state-owned commercial enterprises that export on account of third parties.

The tax is calculated on the f.o.b. value of exports at a 3% rate. For products listed in Appendix VI to the law the rate is 2%. Some of the products included in the list are: common salt, natural graphite, natural sands, quartz, clay, chalk, calcium phosphate, pumice-stones, emery, marble, hip slate and other construction stone, magnesia, plaster, asbesto and borates.

V. FINAL REMARKS

Although this article was not intended to and does not cover the new legislation in its entirety, it easily conveys an idea of the broad coverage thereof. The recent Peruvian tax reform includes, in fact, new statutes for all the principal taxes.

An attempt was made in this report to show what seemed to be the principal aspects of the new legislation. It may now be useful to summarize those features that are most relevant and interesting:

(1) the change-over from the principle of world-wide taxation of income derived by residents or domiciliaries of Peru to the limited taxation of the Peruvian-source income. With this change Peru follows the views held on the subject by the prevailing Latin American doctrine;
(2) the design of the progressive income tax tables for individuals and corporations with brackets expressed in tax units, which amounts to an automatic adjustment of those brackets for inflation;
(3) the reorganization of sales taxation, including:
   - the reinforcement of the value-added nature of the general sales tax by covering the retail stage and a number of services previously exempt and by granting credits for fixed assets and services; and
   - the consolidation of most excise taxes (which are now included in a single law) following the views of LAFTA experts and the example of other Latin American countries (e.g. Brazil, Chile and Mexico);
(4) the provision for rules on the reorganization of companies, covering both the income tax and sales taxes, in an area where, with very few exceptions, this kind of rule is lacking;
(5) the rules on less developed areas which together with other tax benefits previously in force represent an incentive scheme the growth and importance of which reminds one of the Brazilian scheme;
(6) the new mining legislation reflecting the importance of this activity for the Peruvian economy and including important tax incentives;

---

56. A 10% rate applies to: color television sets, specified cars and cameras. The Executive Branch can include new items in the list of products subject to the 10% rate, provided there is an increase in the customs duties on these products.
A 20% rate applies to: firework articles, carpets, rugs, wigs, porcelain and ceramic figures, decorative crystal objects, imitations of fine pearls, and imitations of precious and semi-precious stones, domestic freezers, domestic washing machines for dishes, domestic dryers, grinders, mixers and fans, musical boxes, appliances for the recording and reproduction of sounds, appliances for the recording and reproduction of images and sounds for television, musical boxes and similar items, tapes, videotapes, lighters, pipes, cigar-holders, and toilet sprays.
A 25% rate applies to: mineral and effervescent water, beer, wine, vermouths, cider, cognac, brandy, grappa, pisco, perfumes, beauty products and furs.
A 30% rate applies to: caviar, rum, liquor, similar beverages, fine pearls, diamonds, precious stones, semi-precious stones, artificial stones, articles made of gold, fine pearls, precious stones, semi-precious stones or artificial stones, glasses made of precious metals or covered therewith, watches made of precious metals or covered therewith, worked ivory, mechanical, electrical and electronic toys, pens, pencils and lighters made of precious metals or covered therewith.
A 40% rate applies to: specified cars, yachts, and pleasure boats.
Different rates apply to the following products:
- black tobacco cigarettes 56%
- Virginia-type cigarettes 116%
- gasoline for motors
  - coast and highlands 60%
  - jungle 14%
- kerosene for domestic use
  - coast and highlands 13%
  - jungle 14%
- kerosene for industrial use
  - coast and highlands 34%
  - large mining enterprises 39%
  - jungle 22%
- gasoil (diesel 1)
  - coast, highlands and great mining 43%
- gasoil (diesel 2)
  - coast, highlands and great mining 46%
  - jungle 22%
- fuel oil (petroleum residual 5)
  - coast, highlands and great mining 46%
- fuel oil (petroleum residual 6)
  - coast, highlands and greatmining 56%
  - jungle 22%
- liquified petroleum gas 13%

Different rates apply to the follwing services:
- commissions and interest received by banks, financial and credit institutions. 17%
(exemption is granted to the Agrarian Bank of Peru, interbank transactions, commissions and interest derived from direct cash loans);
- insurance premiums, interest and commissions received by insurance companies 10%
(for reinsurance the tax is levied on the receipts belonging to each company. Exemption is granted to insurance covering transportation of products marketed by the Government, insurance covering export financing, premiums and commissions for reinsurance received or transferred in the Peruvian market);
- international tickets for passenger transportation 14%
(exemption is granted to diplomatic and consular personnel and members of international organizations discharging their duties in Peru);
- cable, telex and long distance telephone services; 15%
- local telephone services; 10%
- leasing and distribution of films; 10%
- leasing and subleasing of immovable property 5%
(exemption is granted for the leasing and subleasing of dwelling houses the rent of which is limited under Decree-Law No. 21,938).

(7) the control powers vested in the tax administration, especially as regards the broad possibilities to presume or estimate the amount of taxable income and sales. These powers can represent an important tool for the enforcement of the tax law in countries where control is difficult due to the number of taxpayers, the poor development of business organization and low compliance; they must, however, be wisely managed because the risk of unfair use seems to be inherent in the nature thereof; and
(8) the restriction imposed on the audit and assessment powers of the tax administration for the case in which the taxpayer's last return is not objected to. This permanent provision is a Latin American novelty and represents a very special encouragement to compliance.

In accordance with information received after this article had been prepared, Law No. 23,337 of 14 December 1981 introduced amendments to some of the subjects discussed here. For further information on such amendments the reader is referred to a note to be published in forthcoming issues of the *Bulletin* and *Tax News Service*.

CHINA – U.S.A.

Agreement with respect to the mutual exemption from taxation of income derived by air and shipping transport enterprises signed

On 5 March 1982, the Chinese Minister of Finance, Mr. Wang Bingqian, and the Ambassador of the U.S.A. to China, Mr. Arthur W. Hummel, signed an agreement that exempts air and shipping transport enterprises of one state from taxation of income in the other state.

Although this is not the first agreement of this nature to which China is a party, the Editors of the *Bulletin* nevertheless find that this very agreement is of particular interest to the world of taxation since it was concluded after implementation of major tax reforms in the People's Republic of China.

It should be noted that China has not yet concluded any comprehensive treaty for the avoidance of double taxation but it is understood that negotiations in this field are going on with a number of countries.

Note: The Bureau has published a comprehensive description of the Chinese tax system in its loose-leaf work *Taxes and Investment in Asia and the Pacific* (also available as an offprint: *Investment and Taxation in the People's Republic of China,* 3rd edition; the 4th edition will be available in the near future).

The government of the United States of America and the government of the People's Republic of China have agreed as follows, with respect to mutual exemption from taxation of transportation income of shipping and air transport enterprises:

Article I

Income and profits of an enterprise of a contracting state from the operation of ships or aircraft in international traffic shall be taxable only in that contracting state.

Article II

1. The term income and profits from the operation of ships and aircraft includes:
(A) Income and profits from the operation of passenger, cargo, or mail transportation service by the owner or charterer of a ship or aircraft, and the sale of tickets related to such transporation;
(B) Income and profits from the rental of ships or aircraft which are operated in international traffic by the lessee;
(C) Income and profits from the rental of ships or aircraft if such rental is incidental to the operation of ships or aircraft in international traffic; and
(D) Income and profits from the rental or use of containers (and related equipment for the transport of containers) used in international traffic.
The income and profits referred to in (A) through (D) above are, in such case, derived by an enterprise of a contracting state.
2. The term international traffic means any transport by a ship or aircraft, except when such transport is soley between places in the other contracting state.

Article III

Gains derived by an enterprise of a contracting state from the alienation of ships, aircraft, or containers operated in international traffic shall be taxable only in that state.

Article IV

1. The term enterprise means:
(A) A state-owned or collectively-owned enterprise of, and an enterpriser carried on by a resident of, the People's Republic of China; and
(B) An enterprise carried on by a company incorporated in the United States of America and an enterprise carried on by a resident of the United States of America.
2. The term enterprise also includes a participation in a partnership or joint business by an enterprise referred to in Paragraph 1.

Article V

Salaries and other remuneration derived by a resident of a contracting state employed as a member of the crew of a ship or aircraft operated in international traffic shall be exempt from tax in the other contracting state.

Article VI

The competent authorities of the contracting state shall seek to resolve by mutual agreement any difficulties or doubts arising as to the interpretation or application of this agreement.

Article VII

Nothing in this agreement prevents a contracting state from taxing its residents and citizens.

Article VIII

Each of the contracting states shall notify the other contracting state in writing, through diplomatic channels, upon the completion of their respective legal procedures to bring this agreement into force. The agreement shall enter into force on the date of the later of such notifications and the provisions shall take effect on January 1, 1982.

Article IX

This agreement shall remain in force indefinitely. However, either contracting state may terminate the agreement by giving six months prior notice to the other contracting state, through diplomatic channels, in which case the agreement shall cease to have effect as of January 1 following the expiration of the six months period.

India: Finance Bill, 1982

Summary of Proposals relating to Direct Taxation

by Kailash C. Khanna

CORPORATE TAXATION

Tax relief has been proposed for Indian exporters whose export turnover during the accounting year exceeds the export turnover of the immediately preceding year by more than 10%. The goods in relation to which the tax concession will be provided and the rate at which the relief will be calculated will be notified by the Central Government after taking into account the cost of manufacture of such goods, the prices of similar goods in the foreign market, the need to develop foreign markets for such goods, the need to earn foreign exchange, the destination of export and any other relevant factors. The maximum amount of deduction to which the taxpayer will be entitled will not exceed 10% of the amount of income tax otherwise payable by the taxpayer on the profits and gains from the export of such goods.

With a view to encouraging construction, engineering and similar projects overseas, there is a proposal that where a resident Indian taxpayer derives any profit from the business of execution of a project under a contract with a foreign enterprise, he will be entitled to a deduction from taxable income of 25% of such profits, subject to certain conditions. First, 25% of the profits from the project should be credited to a special reserve account, which shall not be available for distribution by way of dividends or profits for 5 immediately succeeding assessment years. Secondly, the consideration for the project should be payable in foreign currency and the taxpayer will be required to remit into India in foreign exchange an amount equal to 25% of such profits within a period of 6 months from the end of the relevant accounting year. If the amount credited to the reserve account or the amount actually remitted into India is less than 25% of the profits of the project, the deduction will be restricted to the amount so credited or remitted, whichever is less.

It is proposed to extend, up to 31 March 1987, the grant of investment allowance now admissible at the higher rate of 35% to specified plant and machinery.

Another suggestion seeks to exempt from tax intercorporate dividends in the case of 3 more industries, namely, synthetic rubber, rubber chemicals and basis drugs.

PERSONAL TAXATION

No changes in the slab rates of tax have been proposed except in the following cases:

(1) on income between 60,001 and 70,000 Rs. – from 50 to 52.5%;
(2) on income between 70,001 and 85,000 Rs. – from 52.5 to 55%;
(3) on income between 85,001 and 100,000 Rs. – from 55 to 57.5%.

Under the existing law, deduction in respect of LIC premium, employee's contribution to Provident/Superannuation Fund, deposit of 10/15 Year Post Office Cumulative Time Deposit, etc. is allowed at the following rates:

- on 5,000 Rs. – 100%
- on next 5,000 Rs. – 50%
- on balance – 40%

It is now proposed to increase the rate of deduction as under:

- on 6,000 Rs. – 100%
- on next 6,000 Rs. – 50%
- on balance – 40%

It is also proposed to raise the maximum amount qualifying for deduction from 30,000 to 40,000 Rs.

At present, standard deduction is allowed to salaried employees at the rate of 20% of their salary subject to a maximum of 5,000 Rs. It is proposed to increase the rate to 25% without any change in the ceiling of 5,000 Rs.

Under the existing law, income up to 3,000 Rs. received by an individual by way of interest on Government securities, interest on certain debentures, dividends on shares in Indian companies, interest on bank deposits, etc. is exempt up to 3,000 Rs. It is proposed to raise the exemption limit from 3,000 to 4,000 Rs.

Encashment of unutilised earned leave received by employees of Central/State Governments at the time of their retirement will be exempt from tax without any limit; others will qualify for relief up to 6 months' salary or 25,000 Rs., whichever is less.

It is also proposed that the exemption limit of interest received from the Unit Trust of India should be raised from 2,000 to 3,000 Rs.

At present, investment in certain specified new equity shares by individuals qualifies for deduction at 50% of the cost of acquisition. This deduction is available only in the year of acquisition and up to a shareholding of 10,000 Rs. It is proposed to increase the amount of 10,000 Rs. to 20,000 Rs.

It is proposed to modify the provisions relating to exemption from capital gains on transfer of house property. The condition of self-occupation of the property by the taxpayer is intended to be deleted and the period for construction of a new property is proposed to be increased from 2 to 3 years. Likewise, capital gains arising from the transfer of certain long term capital assets will be entitled to tax exemption provided the net consideration is utilised by the taxpayer for the purchase or construction of a house property within the specified period. It is also proposed to relate the deduction in respect of long term capital gains to the period for which the capital asset has been held; higher deduction will be allowed if the capital asset is held for a longer period.

With a view to encouraging savings, it is proposed to issue a new series of capital investment bonds with a maturity period of 10 years carrying simple interest at

© 1982 International Bureau of Fiscal Documentation – BULLETIN

7% per annum payable annually. The interest on this bond will be exempt from income tax without any ceiling limit.
It has also bee proposed that the value of these bonds will be exempt from wealth tax without any ceiling limit.
Gifts of these bonds by the first holder up to 1,000,000 Rs. in one or more previous years will also be exempt from gift tax.

In order to encourage private savings, a Social Security certificate will be introduced. Under this scheme an individual between the age of 18 and 45 can invest up to 5,000 Rs. and the amount will triple in 10 years. The main feature of this scheme is that in the case of death of the investor during the 10-year period, his nominee or legal heir will immediately become entitled to the full maturity value of the certificate. The details of the scheme will be notified later.

WEALTH TAX

Under the existing law, exemption from wealth tax is available up to 150,000 Rs. representing shares in Indian companies, bank balance, Post Office Savings, etc. This limit is proposed to be raised to 165,000 Rs.

The value of conveyance(s) owned by an individual is now exempt from wealth tax up to 30,000 Rs. It is proposed to increase this limit to 75,000 Rs.

With a view to providing an incentive to increased savings, it is proposed to introduce a new capital investment bond. Investment in this bond will be exempt from wealth tax without any limit.

It is also proposed to raise the wealth tax exemption limit in respect of investment in a Unit Trust from 25,000 to 35,000 Rs.

Highlights of the Tax Proposals of the Indian Budget for 1982-83

by Dharmendra Bhandari*

With the Prime Minister, Shrimati Indira Gandhi, entrusting the Finance portfolio to Mr. Pranab Mukherjee, the youngest Finance Minister in India, just a few weeks before the presentation of the budget, it was expected that Mr. Mukherjee's budget would give a boost to the sagging Indian economy. However, the general feeling is that Mr. Mukherjee's maiden budget neither offers any solution to the problems which the Indian economy faces nor does it seek to give a fillip to the industrial growth of the country.

DIRECT TAXES

In framing his direct tax proposals, the Finance Minister has spelt out his motto thus: Save-invest-produce and get concession to export. In order to mobilise private savings for public use, the Government has decided to issue two new savings investments. Firstly, under the Social Security Certificates, an individual between the ages of 18 and 45 can invest up to 5,000 Rs. which will triple in 10 years. The second instrument is the Capital Investment Bond. These bonds will have a maturity of 10 years and carry an interest rate of 7%, exempt of income tax, wealth tax and, in the case of gift tax, up to 10 lakhs Rs.[1] in the case of the first holder.

It is proposed to increase the monetary ceiling of deduction in respect of Life Insurance, Provident Fund, etc., from 30,000 to 40,000 Rs. The Minister has also proposed to raise the ceilings for exemption of income from investment in specified financial assets such as bank interest, dividends, government securities, etc. from 3,000 to 4,000 Rs. and in case of units from 2,000 to 3,000 Rs. He has also proposed to double the amount of deduction of equity investment in new industrial companies and housing finance companies from 10,000 to 20,000 Rs. Further, with a view to providing an incentive to taxpayers who do not own a residential house, it is proposed to exempt from tax long term capital gains arising from the transfer of assets where the net consideration received is invested by the taxpayer in a residential house.

The Finance Minister has also proposed to boost investment in India by the large number of non-resident Indians working abroad. Firstly, any investment without repatriation rights made by non-residents of Indian origin, so long as it is not for transaction in commercial land, will be treated on the same footing as investments of resident Indian nationals. They will be allowed to invest, with repatriation rights, in any new or existing company up to 40% of the capital issued by such company. Secondly, the interest rates on new deposits of maturities of one year and above held in non-resident external accounts will carry interest of 2% above the rate permissible on local deposits held by persons resident in India. The test of "residence" as laid down for taxation purposes has also been liberalised to avoid hardship to Indian citizens earning income in foreign countries who come to India for short spells.

With a view to earning more foreign exchange, the Finance Minister has proposed a reduction in income tax on export profits for exporters whose turnover in 1982-83 is in excess of 10% of their turnover in the current year. In view of the large construction contractors working

* Chartered accountant. Senior research fellow, Department of Accountancy, University of Rajasthan.

1. 1 lakh = 100,000.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

outside India, 25% of their profits will be exempt from income tax subject to certain conditions.

INDIRECT TAXES

While giving concession in direct taxes, the Finance Minister has relied heavily on customs duties to raise revenues. His main proposal is to raise the auxiliary duty on all categories of imports by 5% except for petroleum products. Basic customs duties on several items such as polyester chips, electric goods and certain items of iron and steel have also been increased. There is a heavy increase in excise duty on cement which has been raised from 71.50 to 135 Rs. a tonne.

In order to boost production in certain industries like fertilizers, steel products, paper, etc., it is proposed to give excise duty concession for 38 industries on output in excess of 110% of their 1981-82 output.

There are several other tax proposals of little importance that it is difficult to focus attention on all of them. The numerous minor concessions, relaxations and incentives reflect a certain predilection to please diverse sections of the society – understandable in a year of likely mini general elections – but do not add up to a strategy of a growth-oriented budget.

INDIA:

Budget 1982-83 Aimed at Increase of Production and Saving

Extracts from the Budget Speech pronounced on 28 February 1982 by Mr. Pranab Kumar Mukherjee, Union Finance Minister.

See for a detailed discussion of the Indian tax system the Bureau's publication TAXES AND INVESTMENT IN ASIA AND THE PACIFIC

Sir, before I present my tax proposal, I would like to indicate the broad objectives I have kept in view. While we take comfort in our success in reducing inflation, it is of the utmost importance that the budget itself should not give rise to further inflationary expectations. Any large uncovered deficit beyond prudent limits is inherently inflationary. It also gives rise to adverse expectations with regard to the behaviour of prices. It is therefore my major concern to keep the budgetary deficit as low as feasible.

Another important objective is to avoid measures which would place undue burdens on the low-income and middle-income groups. These groups are the worst sufferers in time of inflation.

As I have already indicated, providing adequate incentives for increasing production and savings in the economy is a prime objective of this budget. Larger savings and increases in productivity can significantly help moderate inflationary pressures and also generate resources for development. The buoyancy in revenue and the decline in the rate of inflation in the environment of strong agricultural and industrial growth in 1981-82 confirm this.

Salaried taxpayers

Sir, coming now to direct taxes, my first proposal concerns salaried taxpayers. There have been many representations that the income-tax exemption limit should be raised, taking account of increases in the cost of living. I cannot accept, as a principle, that income limits for exemption from tax should be fixed with reference to cost of living. Nevertheless, I believe some relief to salaried taxpayers within the lowest taxable slab would be appropriate. At present, salaried taxpayers are entitled to a standard deduction equal to 20% of the salary, subject to a ceiling of Rs. 5,000. I propose to raise the rate of deduction from 20% to 25%, without disturbing the ceiling of Rs. 5,000. This will give a significant measure of relief to those with salaries up to Rs. 20,000. The loss of revenue would be Rs. 21.58 crores in 1982-83.

Another measure of relief seems deserved for those at the end of their working lives. I propose to exempt from income-tax, subject to certain conditions, the encashment benefit in lieu of unavailed earned leave given to employees when they retire.

Taxpayers who are not in receipt of house rent allowance are entitled to a deduction up to Rs. 300 per month in respect of the house rent paid by them. However, persons receiving house rent allowance are entitled to an exemption up to Rs. 400 per month in respect of the house rent allowance received by them. I propose to raise the monetary ceiling from Rs. 300 to Rs. 400 per month also for those who are not receiving house rent allowance.

The owner of a self-occupied house is entitled to a deduction, from the annual letting value of the house, of an amount equal to one-half of the annual letting value or Rs. 1,800 whichever is less. I propose to raise the monetary ceiling of Rs. 1,800 to Rs. 3,600.

The annual letting value of a newly-constructed house let out on rent has been reduced by an amount up to Rs. 2,400 in respect of each residential unit for a period of five years. With a view to providing a stimulus for construction of houses, particularly for persons with relatively lower incomes, I propose to raise the monetary limit of Rs. 2,400 to Rs. 3,600.

Long term saving

I propose to liberalise the scheme of deduction in respect of long-term savings such as life insurance, provident fund contributions, etc. A deduction of 100% will be allowed in respect of the first Rs. 6,000 of the qualifying savings, plus 50% of the next Rs. 6,000 of such savings plus 40% of the balance. The monetary ceiling in respect of the savings qualifying for deduction is also being raised from Rs. 30,000 to Rs. 40,000. The higher monetary ceiling in respect of the qualifying savings in the case of authors, playwrights, artists, musicians, actors, sportsmen and athletes, is also being raised from Rs. 50,000 to Rs. 60,000. These incentives for larger savings will result in a revenue loss of Rs. 26.17 crores in a full year and Rs. 19.76 crores[1] in 1982-83. It may be desirable in due course to provide a wider choice of eligible modes of savings to taxpayers. I therefore propose to extend the existing tax concession in relation to investment in notified Central government securities.

I find that out of the new life insurance policies issued by the Life Insurance Corporation of India, nearly 15% policies lapse before the end of the following year. Such a high volume of lapses shortly after the issue of the policies is a matter of concern. It also implies that the very purpose for which the tax concession is allowed in respect of premia on such policies, which is to promote long-term savings through life insurance, is frustrated. I propose, therefore, to provide that were a taxpayer discontinues a life insurance policy before premia for two years have been paid, no deduction will be allowed in respect of the premia if any paid under the policy and, if such deduction has been allowed, the same shall be withdrawn.

Under the existing incentives for stimulating savings and investment, income up to Rs. 3,000 from investment in specified financial

1. 1 crore = 10,000,000.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

assets, such as government securities, units in the Unit Trust of India, bank deposits and shares in Indian companies, is exempt from Income-Tax. In addition income up to Rs. 2,000 from units in the Unit Trust of India is exempt from tax. I propose to raise the ceiling of Rs. 3,000 to Rs. 4,000 and the separate ceiling in respect of income from units, from Rs. 2,000 to Rs. 3,000. This measure will result in a revenue loss of Rs. 12.12 crores in a full year and Rs. 9.09 crores in 1982-83.

As a parallel measure, I propose to raise the ceiling of the value of investments in specified financial assets exempt from wealth-tax from Rs. 150,000 to Rs. 165,000. In addition, the separate exemption of Rs. 25,000 provided in respect of units in the Unit Trust of India is proposed to be raised to Rs. 35,000. The revenue loss will be Rs. 1.54 crores in a full year, but there will be no loss in 1982-83.

At present, taxpayers are allowed a deduction, in the computation of taxable income, of 50% of amounts invested in equity shares of new industrial companies and companies engaged in providing long-term finance for construction or purchase of houses for residential purposes. The maximum investment in a year qualifying for this deduction is limited to Rs. 10,000 with a view to encouraging larger investments in such companies. I propose to raise the monetary ceiling for investment to Rs. 20,000.

High incomes

While I have given some relief to those in the lowest taxable income range, I consider that there is scope for more progression in the tax rates for high incomes. I, accordingly, propose to modify the rates of personal taxation, so as to raise the rate of income-tax on the slab of Rs. 60,001 to Rs. 70,000, from 50% to 52.5%, and on the slab of Rs. 85,001 to Rs. 100,000 from 55% to 57%. This would yield Rs. 3.24 crores in a full year and Rs. 2.43 crores in 1982-83.

Withholding tax

Deduction of tax at source from dividends, interest on securities and other interest causes considerable inconvenience, and even hardship, to a large number of small investors whose taxable income is below the exemption limit. For the convenience of such persons, I propose to provide that income-tax shall not be deducted at source if the recipient furnishes a declaration to the payer of such income to the effect that his estimated total income of the relevant year will be below the exemption limit.

I also propose to provide that tax will not be deducted at source from interest paid on such securities of the central government or a state government as may be notified by the central government in this behalf.

Residence

The tests of "Residence" in India laid down for taxation purposes result in hardship to Indian citizens earning income in foreign countries who come to India for short spells. An individual is regarded as resident in India in a year if he stays here in that year for 30 days only, and also maintains a dwelling house here for 182 days or more. As this test causes hardship to persons working outside India, who come home even on relatively short visits, I propose to delete this test of residence.

Under another test, persons who have been in India for 365 days or more in the four years preceding the relevant year, become resident in that year by being in India for 60 days or more in that year. In the case of Indian citizens who are employed abroad and who come to India on leave or reaction, the period is 90 days. I propose to extend this benefit also to the self-employed and those in other occupations, irrespective of their avocation abroad or the nature of their visit to India.

Indian citizens who go abroad for purposes of employment are now chargeable to tax in India on their foreign income, if they have stayed in India for more than 60 days that year. I propose to liberalise the provision so that an Indian citizen who leaves India in any year for purposes of employment shall not be treated as resident unless he has been in India for 182 days or more in that year.

Foreign exchange earners

I will now come to some proposals regarding foreign exchange earnings. I propose to provide some tax relief to exporters whose export turnover for any year exceeds that of the immediately preceding year by more than ten percent. The tax relief, to be calculated at a specified percentage of such excess turnover, would be limited to ten percent of the income-tax otherwise payable on export profits. The rate at which the tax relief will be calculated and the goods qualifying for the purpose of this concession will be notified by the Central government.

With a view to strengthen the competitiveness of our construction contractors who have undertaken projects outside India, I propose to exempt 25% of the profits derived by them from such foreign contracts, subject to certain conditions.

With a view to augmenting the capital base of Indian banks engaged in banking operations in foreign countries, I propose to provide that those banks which are approved in this behalf by the Central government would be entitled to a deduction up to 40% of their income carried to a special reserve account.

Interest-tax levied under the Interest-Tax Act forms an integral part of our credit policy. However, taking note of the escalation in costs of industrial projects, I propose to exempt scheduled banks from payment of interest-tax on the interest received by them on loans sanctioned in foreign currency for import of capital plant and machinery. With a view to improving the competitiveness of export of capital plant and machinery, I propose to exempt interest paid on credit sanctioned by scheduled banks for export of capital plant and machinery on deferred payment terms outside India.

Incentives

Investment allowance at the higher rate of 35% is granted in respect of machinery and plant installed for the manufacture of articles made with know-how developed in government laboratories, public sector companies, recognised institutions and universities. This concession is available in relation to machinery and plant installed up to 31st March, 1982. I propose to extend this tax concession for a further period of five years.

Dividends received by a domestic company from an Indian company engaged exclusively or almost exclusively in the manufacture of specified articles are completely exempt from income-tax, having regard to the importance of basic drugs, synthetic rubber and rubber chemicals (including carbon black). I propose to extend the benefit of this tax concession to dividends received from companies engaged in the manufacture of these articles as well.

At present, scheduled commercial banks are allowed a deduction in respect of provisions made by them for bad and doubtful debts relating to advances made by their rural branches. The deduction is limited to 1.5% of the aggregate average advances made by the rural branches. In order to promote rural banking and to assist non-scheduled commercial banks operating in the rural sector, I propose to extend the benefit of this tax concession to them also.

Energy saving and protection of the environment are high priority areas. I, therefore, propose to allow depreciation at 30% on devices and systems for energy saving, or for minimising environmental pollution or for conservation of natural resources. The list of the qualifying items will be notified in due course.
