Views expressed in signed articles are those of the Authors, and not necessarily those of the editors.

Conditions of subscription to the Bulletin:

1978 Subscription with Supplements Dfl. 120

For European Taxation subscribers and for I.F.A. Members:

1978 Subscription Dfl. 96

* *For subscribers resident in the Netherlands there will be a 4% TVA surcharge.*

For an index of Articles, Reports and Documents, and Bibliography of the Bulletin, published in 1977, and a list of authors, see page 574 et seq.

Members of the International Bureau of Fiscal Documentation may receive the Bulletin and Tax News Service in return for their membership fee. In addition, the following services and discounts are offered:

- free access to the library
- free information on tax literature
- reports and information at request, up to a value which varies for each membership category
- discounts to a maximum of 20% on certain occasional publications of the Bureau

Full details of membership will be sent on request.

S.I. Roberts, Senior Partner of Roberts and Holland, New York.
Prof. L. Hart Wright, Professor of Law, University of Michigan, Ann Arbor, Michigan.

PURPOSE

The International Bureau of Fiscal Documentation was founded in 1938. For reasons of organizing character this Bureau is established as a separate foundation according to Netherlands law. The Bureau is a scientific, independent, non-profit making, non-political foundation of which the purpose is defined in the articles as follows:

(art. 2) The Object of the International Bureau of Fiscal Documentation is the foundation and maintenance of an international documentation bureau, in order to supply information in fiscal legislation and the application of fiscal law, and to stimulate the study of fiscal science.

(art. 3) The International Bureau of Fiscal Documentation shall endeavour to realise this object by:

a. founding a library on fiscal legislation, books, periodicals and other publications;

L'OBJET DU BUREAU

Le Bureau International de Documentation Fiscale fut fondé en 1938. Pour des raisons d'organisation, ce Bureau est établi comme une fondation séparée conformément au droit civil néerlandais. Le Bureau est une institution scientifique, indépendante, sans but lucratif et sans objet politique, dont le but est défini dans les statuts comme suit:

(art. 2) Le but du Bureau International de Documentation Fiscale est d'établir et de maintenir un bureau international de documentation tendant à fournir des informations concernant la législation fiscale et l'application du droit fiscal, ainsi qu'à stimuler l'étude de la science fiscale.

(art. 3) C'est par les moyens suivants que le Bureau se propose d'atteindre ce but:

a. en établissant une bibliothèque fiscale d'ouvrages, revues et autres publications;

b. supplying information;
c. giving any one the opportunity to study all material available in its library;
d. issuing a periodical;
e. any other appropriate measures.

In close cooperation with the I.F.A., and with the aid of expert correspondents throughout the world, the Bureau acquires as much information as possible in the field of international and comparative tax law. The Bureau is thus able to supply data (but not advice) on specific tax problems. A fee, necessary for the maintenance and extension of the Bureau, is charged on a time/cost basis. The Bureau has published several series of monographs including "Selected Monographs on Taxation" (a joint venture with Harvard Law School, International Tax Program).

The Bureau also publishes *European Taxation*, now a monthly journal on the tax systems of Europe. *Tax News Service*, published twice per month, provides rapid information on worldwide tax developments. *Supplementary Service to European Taxation* is a loose-leaf reference work.

The loose-leaf series, *Guides to European Taxation* comprises "The Taxation of Patent Royalties, Dividends, Interest, in Europe", "The Taxation of Companies in Europe", "The Taxation of Private Investment Income" and "Value Added Taxation in Europe".

The loose-leaf series, *Tax Treaty Guides* comprises "Handbook on the U.S.—German Tax Convention" and "Handbook on the Dutch—German Tax Convention" (in German). The Bureau has also published three loose-leaf reference works, *Corporate Taxation in Latin America*, *African Tax Systems* and *Taxes and Investment in the Middle East.*

b. en fournissant des informations;
c. en procurant à tous ceux qui s'y intéressent l'occasion de consulter ces ouvrages;
d. en publiant un périodique;
e. en recourant à tout autre moyen adéquat.

Par une coopération étroite avec l'IFA et avec l'aide de correspondants à travers le monde, le Bureau rassemble toutes les données possibles en matière de droit fiscal international et comparé. De cette façon, le Bureau est à même de fournir des renseignements, mais non des avis, concernant des problèmes fiscaux spéciaux. Des honoraires, nécessaires au maintien et à l'expansion du Bureau, sont demandés en fonction du temps nécessaire et du coût. Le Bureau a publié un certain nombre de monographies dont des monographies sur la fiscalité (études réalisées en association avec Harvard Law School, International Tax Program).

Le Bureau publie aussi *European Taxation*, qui est devenu une revue mensuelle sur les systèmes fiscaux européens. *Tax News Service*, publié deux fois par mois, donne une information rapide, à l'échelle mondiale, de tout ce qui touche à la fiscalité. *Supplementary Service to European Taxation* est un ouvrage de référence présentée sous feuilles mobiles.
Guides to European Taxation, également une publication sous feuilles mobiles, comprend "L'imposition de Redevances, Dividendes et Intérêts en Europe", "L'imposition des Sociétés de capitaux en Europe", "L'imposition de revenu des investissements privés" et "La Taxe sur la Valeur Ajoutée en Europe". *Tax Treaty Guides*, une autre publication sous feuilles mobiles, comprend le "Manuel relatif à la Convention fiscale Allemagne — Etats Unis" et le "Manuel relatif à la Convention fiscale Pays-Bas — Allemagne" (en langue allemande). Le Bureau a également publié, *Corporate Taxation in Latin America*, *African Tax Systems* et *Taxes and Investment in the Middle East*, ouvrages d'information sous feuilles mobiles.

I.F.A. — INTERNATIONAL FISCAL ASSOCIATION

General Secretariat: c/o Erasmus University, P.O.B. 1738 (50, Burg. Oudlaan), Rotterdam

Executive Committee

President: Alun G. Davies (United Kingdom)

Secretary General: Prof. Dr. J.H. Christiaanse (Netherlands)

General Treasurer: Mr. D. Coutinho (Netherlands)

Vice-Presidents:
Max Laxan (France)
Dr. Helmut Fabricius (German Federal Republic)
Richard M. Hammer (U.S.A.)

Honorary Presidents:
Dr. Mitchell B. Carroll (U.S.A.)
Prof. Baron J. van Houtte (Belgium)
Dr. Paul Gmuer (Switzerland)

Members:
Dr. R. Bechinie (Austria)
R. Caraza Escobedo (Mexico)
G.L. Herring (Australia)
Jose Luis Perez De Ayala (Spain)
Prof. Paul Sibille (Belgium)
Aa. Spang-Hanssen (Denmark)
Ph. F. Vineberg (Canada)

The I.F.A. was founded on the 12th of February 1938 by tax experts of a number of countries. Purpose and working-method are defined as follows in the Articles:

Aim — Article 2

The aim of the Association is the study and advancement of international and comparative law in regard to public finance and especially international and comparative fiscal law and the financial and economic aspects of taxation.

Plan of Action — Article 3

The Association shall endeavour by all legal means to realise this aim: a) by scientific research; b) by holding congresses and conferences; c) by publications; d) by cooperation with all data collecting organisations, especially the International Bureau of Fiscal Documentation in Amsterdam; e) by all other appropriate methods.

I.F.A. has branches in 27 countries. Residents in any of these countries (I.F.A. members or candidates for membership) can approach the secretary of the local Branch.

Members who live in countries where IFA has no Branch are registered as direct members of the Association. They can get in touch with the General Secretariat of I.F.A. (this also applies to candidates for membership).
Conditions of direct membership of I.F.A. for 1978 are: individuals US$ 32.— p.a. - corporations US$ 70.— p.a.

To meet the future information needs of the international businessman and his financial and legal advisers, the International Bureau of Fiscal Documentation announces the MAJOR e-x-p-a-n-s-i-o-n of its key loose-leaf management information service —

The Taxation of Companies in Europe

(Vol. 2 of Guides to European Taxation)

Loose-Leaf

Each chapter follows a common outline

Four Binders

Updated quarterly by air

THE TAXATION OF COMPANIES IN EUROPE:

— provides you with reliable up-to-date background data at a fraction of the normal cost of gathering the information yourself

— although the continued importance of seeking local professional advice before making major corporate decisions is emphasized, it enables you to reduce the cost of those "first steps", AND HELPS YOU TO ASK THE RIGHT QUESTIONS!

Dfl. 850

including up-to-date basic volume in four binders PLUS AN AIRMAIL SUBSCRIPTION TO THE QUARTERLY UPDATING SUPPLEMENTS THROUGH THE END OF 1977.

For residents of the Netherlands: prices are exclusive of BTW (value added tax)

A RELIABLE GUIDE to the practical aspects of all taxes encountered at the different stages in the life of a company. Specially designed for the businessman with serious international interests, and his professional advisers.

Already covering the NINE Member States of the EEC NOW e-x-p-a-n-d-e-d to cover also MAJOR Non-EEC Countries:

Austria
Greece
Norway
Sweden
Switzerland

This radical new concept in management information services now becomes one of the most authoritative sources of reference in its field, in the English language.

What's New?

In the latest updating supplements... tax changes in Denmark (depreciation); new French professional tax, also headquarters tax, deductibility of director's remuneration, and inflation levy; new German Fiscal Code (effective January 1, 1977), expected reform of corporate income tax system, also new co-determination law and loss carry back; new Irish corporate income tax system, and Budget speech; changes in investment allowance provisions in Luxembourg and the Netherlands; United Kingdom Finance Bill 1976. Changes in Netherlands company law.

Introduction

After thirty years.

From the very beginning in 1938, the International Bureau of Fiscal Documentation contemplated the publication of a magazine in which tax developments from all over the world would be reported and the readers would be informed of new tax literature and significant court decisions and administrative rulings. Page proofs of the first issue of what was to be the **Bulletin for International Fiscal Documentation/Bulletin de Documentation Fiscale Internationale** were lying ready when World War II involved the Netherlands. It was not before the second half of 1946 that the project could be taken up again. The **Bulletin's** first volume appeared during the years 1946/1947. With the December 1976 issue, its thirtieth year was completed.

As its long name indicates, the **Bulletin** was never meant as a forum for doctrine. Its founder, Prof. Dr. P.J.A. Adriani (who was the Bureau's first managing director until 1954), in full agreement with the then leading members of the International Fiscal Association (I.F.A.), wanted to provide a regular source of information on the tax aspects of what was going on in all countries of the world. It was to be left to I.F.A. at its annual congresses to examine and analyse the developments from a more academic point of view.

When in 1957 six European countries established the European Economic Community, special focus was required for the approximation and harmonisation of taxes in the Common Market. This was of particular interest to the business community in Europe and overseas. The Bureau considered it as one of its basic objectives, as formulated in its statutes, to follow the new developments closely. In 1961 it published the first issue of **European Taxation**. At that time, hardly fifteen years ago, no publisher saw any purpose in a European tax magazine designed to report on and to analyse important new taxation issues and so, the Bureau had itself to publish the results of its own research activities. Shortly afterwards, some doctrinal works were published, followed by a loose-leaf reference service brought out under the title **Supplementary Service to European Taxation** and by four loose-leaf **Guides to European Taxation** in which great efforts were made to treat the various subject matters in such an analytical manner that despite often considerable differences in tax structures, comparisons could easily be made. These Europe-oriented publications gave the opportunity to change slightly the scope of the **Bulletin**. Business and financial relationships with developing countries were becoming increasingly important and it was just about the right moment for the **Bulletin** to give more attention to the tax situations in those countries. This was done — and could not have been done otherwise — with the true international cooperation of a network of local correspondents, all experts in their field, who over the years have become real friends of the Bureau.

The new orientation resulted in praise as well as criticism. Often, the latter is more useful to improve one's work and to increase one's efforts. Now, it is felt, the time has come to give a new momentum to the **Bulletin**. Rather than mere descriptions of tax systems in more or less countries, more active information seems to be of current interest. The background of new measures is often more important than the measures themselves. New international tax problems arise which are being discussed by all sorts of international or regional committees. The world is becoming smaller and smaller, also as regards tax matters. What happens in one country, or in a particular region, may affect other countries or may assist other regional groups to formulate policies or define desiderata.

In its unique library, the Bureau has so much available that only those who visit it for their own research, can find and really appreciate. It is felt that more of this material should be made available to the international tax community. The **Bulletin** would seem to be the best vehicle for this. In its former format, however, it would not have had emough space to report all there is to report. Therefore, it was decided to enlarge it by approximately 40 percent.

Although a combination of increased efficiency and improved technical processes help to keep the cost increase within certain limits, the new formula can only be successful if the number of subscribers increase as well, say also by 40 percent. It is for this reason that not only the many old and faithful subscribers receive this first issue in the new format and presentation, but all members of I.F.A. as well (the **Bulletin** is I.F.A.'s official organ, incidentally) and many other people with whom the Bureau maintains a long and pleasant relationship.

The international tax picture.

The term "International Tax Law" is wrong. I have reached this conclusion after many years of teaching, when I had to give my students a definition of the subject assigned to me. This is not because, as for instance **Maxime Chrétien** writes in his famous "A la recherche du droit international fiscal commun", there is no true and common body of law on international matters; one might say the same about international private law. Neither do I have any problem of the kind indicated by **Manlio Udina** who devotes many pages of his "Il diritto internazionale tributario" to a distinction (which cannot be made in English) between "diritto internazionale tributario" and "diritto tributario internazionale", the former term referring to a true international body of law (which, as everyone will agree, does not exist), the latter meaning those provisions which are found in domestic laws on international tax situations and as such are not international law at all.

No, the difficulty is that many problems of international tax "law" arise which are more in the nature of international politics, or economic policy, or of economics in general. It would, therefore, probably be much better if a more neutral term were used, such as "International Taxation". That this would be more appropriate may appear from a number of problems that nowadays attracts and keeps the attention of the international tax community.

The traditional question of **avoidance of international double taxation** — still a very important one, of course — can no longer be considered without the equally crucial question of **international tax avoidance and tax evasion.** This latter subject is of particular interest in the relationship with **developing countries** whose main concern often is how to find out what the overall tax situation is of foreign investors, mostly **transnational companies,** operating within their territory. As a result, there is an increasing tendency towards **regional co-operation** in tax and related matters. Nowadays, it is hardly possible anymore to deal with one of these subjects without looking at the whole spectre of problems.

International Double Taxation

An impressive network of bilateral tax treaties link all or nearly all developed countries with each other. There can be no doubt that the O.E.C.D. Committee on Fiscal Affairs has largely contributed to this significant situation. The Draft O.E.C.D. Treaty of 1963 and the proposed amendments thereto of 1974 did actually serve as a model for most treaties concluded since. In addition, many treaties came into being between developed and less developed countries. It is worth noting that in many respects these follow the O.E.C.D. Draft as well. Developing countries are more and more concluding tax treaties among themselves and sometimes these take the form of a multilateral treaty, such as the one between the countries of the Andean Pact and another one between several Arab countries. (Both texts have been published by the Bureau.) Finally, mention should be made here of the many treaties recently concluded between Western countries and most countries of Eastern Europe. (The English texts of these treaties are reproduced in Section C of SUPPLEMENTARY SERVICE TO EUROPEAN TAXATION.)

The number of countries providing for **unilateral** relief from double taxation is ever increasing. This is an interesting and important development and it shows that these countries accept the consequences of becoming increasingly involved in international trade and investment.

Tax Avoidance & Tax Evasion

Prohibitive taxation is bound to result in devices to reduce the tax bill. A distinction is made between those which are illegal (tax fraud or evasion) and those which are not (tax avoidance). Both phenomena have led to domestic and international counter measures. Several countries endeavour to tighten the rope — to tax evaders by strengthening their tax administrations and by increasing the means of punishment. International tax treaties usually contain special provisions for the exchange of information aiming at reducing the possibilities of both evasion and avoidance. The struggle against tax avoidance is reflected in such legislation as the recent German measures and the earlier provisions concerning controlled foreign corporations in the U.S. Internal Revenue Code. The United Nations Group of Experts on Tax Treaties between Developed and less Developed Countries made the exchange of information a special issue in its reports. The recently held ESCAP Seminar on Foreign Investment and Tax Administration also emphasized the importance of this subject. A brief note on this Seminar is given elsewhere in this issue.

Prohibitive taxation may result from high rates or an unrealistic computation of the tax base. Several Asian countries have found that a lowering of effective tax burdens increases tax compliance and constitutes an efficient instrument in the struggle against tax evasion. This is shown by Mr. Qureshi in the opening article in this issue. Prohibitive taxation may also result from unrelieved international double taxation. This may easily lead to the use of

Tax Havens

Why does a country become a tax haven and what can it offer? What are the reasons for individual and corporate taxpayers to make use of a tax haven? What counter measures may be expected from countries suffering from such use? These and other questions are dealt with by Mr. Pepper in a lengthy article the first part of which appears in this issue.

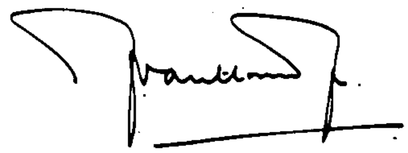
Transnational Companies

Several international organizations are dealing with the tax and other aspects of multinationals or, as they are now being referred to, transnationals. It is intended to report regularly in the Bulletin what is going on in this respect.

Foreign Investment and Oil

Discussions on the pricing of oil and other sources of energy are likely to go on. A large number of (mainly less developed) countries will have to pay the higher bill on oil imports unless they are willing or able to reduce such imports. Others try to receive some degree of compensation by investing in the oil producing countries. Recently, the Bureau organized a well attended international conference in Amsterdam on the investment opportunities (and the tax aspects thereof) in a large number of Middle East countries. A brief note on this conference is included in this issue.

Taxation and Inflation



Many countries are faced with the problem of economic recession and inflation. Various counter measures are devised, with varying results. Belgium and Israel introduced or proposed special legislation in this respect, see pages 17 and 29.

Regional Cooperation

Several, if not all, of the problems briefly mentioned above result in an increased effort of countries belonging to a region, to cooperate more closely in tax and general economic matters. It is worth noting that while the E.E.C. seems to be at a stand still, outside Europe, regional cooperation, in Latin America, in Africa, and in the Middle East as well as in South East Asia, appears to indicate a strong political will to get together more closely. In matters of taxation the results may not yet seem spectacular but there is no reason to underestimate the significance of this tendency.

International Taxation

The international pattern of trade, industry and investment, the flow of capital, goods and also persons, the tremendous need of technology in many areas of this world — they are all economic features in a changing world. They are affected by and, in turn, affect taxation. These developments can no longer be viewed within a domestic or international legal framework. We, in the Bureau, feel that research in tax matters should more and more disentangle itself from the rather narrow traditional concept of international tax law. We are well aware of this and engage more generally in the study of all aspects of international taxation. I hope and trust that this will be reflected in the BULLETIN in its expanded format, which is not only a matter of form but especially of substance. I also hope that our many correspondents and subscribers will assist us in achieving our objectives.

J. van Hoorn Jr.

The following table is not meant to be a comprehensive list of all the tax havens in the world, but does include the most important of them. Some countries have expressed their intention of becoming tax havens, but not all have enacted the necessary laws and attracted customers. No attempt has been made in the text of this article to give a comprehensive account of all the services provided by each haven, and in any event the picture is constantly changing, as anti-avoidance laws in industrial countries limit the scope for avoidance, and havens adapt their services to meet the new demands upon them. For detailed commentary the reader is directed to the most up-to-date literature he can find — at the time of writing the publications in the bibliography probably give as up-to-date a picture as can be obtained by the general and professional reader.

Key to Code Letters

The functions of the havens can only be given in outline in a table, and the cryptic references need to be expanded by larger, specialised reference works to obtain detailed information as to the exact functions and potential of a particular haven.

Language
D = Dutch, E = English, F = French, G = German, S = Spanish.

Note In each country there is usually the possibility of obtaining English translations and explanations of the laws etc.

Functions
B = Banking; C = Companies ("offshore"); CIC = Captive Insurance Companies; HC = Holding Companies; IBC = International Business Companies; R = Residential; T = Trusts

IFA INTERNATIONAL FISCAL ASSOCIATION NEWS

During the week of 13-17 September 1976 the International Fiscal Association held its 30th Congress in Jerusalem (Israel). The two subjects discussed were (i) "Tax incentives as an instrument for achievement of governmental goals" and (ii) "The definition of capital gains in various countries". The following summaries of proceedings were released.

SUBJECT I.

TAX INCENTIVES AS AN INSTRUMENT FOR ACHIEVEMENT OF GOVERNMENT GOALS

The XXXth Congress of IFA studied "Tax incentives as an instrument for achievement of governmental goals — their role in income taxation and a comparison with alternative instruments regarding both economic and social goals".

There was general agreement as to the usefulness of defining and evaluating tax incentives. Such evaluation should include the effects achieved, the revenue losses involved, and any equity consequences. Some difficulty was seen, however, in formulating unambiguously and uncontroversially a revenue concept against which all incentives could be identified and the connected revenue costs measured. Another difficulty was seen in determining the initial cost to be attributed to a tax incentive in cases where e.g. foreign capital or foreign technicians would not be attracted in the absence of such incentive.

Another factor to be considered in evaluating tax incentives is their relationship to the juridical requirements of the various countries and to the necessity of conforming to constitutional and other legal standards of delegation of authority to administrative agencies.

The Congress also considered the factors involved in the choice between tax incentives and direct expenditures. The need was felt for further research to explore the factors and ascertain the criteria governing decisions in this respect.

On two points the Congress was in general agreement, one that tax incentive programs should be scrutinized as carefully as other matters of budgetary and economic policy, the other, that further research into the effect of tax incentive measures would be useful, in particular, in order to measure their cost/benefit ratio.

SUBJECT II.

THE DEFINITION OF CAPITAL GAINS IN VARIOUS COUNTRIES

The XXXth Congress of the International Fiscal Association noted that the problem of the definition of capital gains could not be examined independently of a particular tax system. Looking at the diversity of tax systems, the Congress came to the conclusion that no general definition of capital gains was possible.

The National Reports show, and the discussion confirmed, that most countries recognize a concept of capital gains. But no country was able to produce a clear and concise definition applicable to that country. Some of the participants felt that it was impossible to define capital gains without studying the goals desired in making the distinction between capital gains and ordinary income; others considered that in substance the definition should be independent of tax policy considerations.

The reports and discussions show that in some countries the distinction between business assets and private assets determines the tax treatment of the capital gains; in other countries, this distinction is not relevant.

The Congress, on the basis of the General Report, the National Reports and the discussions has ascertained that both objective and subjective criteria exist to distinguish between capital gains and ordinary income. It was common ground that objective criteria were normally to be preferred.

Pakistan, India, Sri Lanka and Bangladesh*

NEW ORIENTATIONS IN TAX POLICIES

By N.M. Qureshi, **Chairman**

Central Board of Revenue, Pakistan

Pakistan, India, Sri Lanka and Bangladesh have had a long common experience of British rule, and this common colonial heritage has produced many similarities in their socio-economic and administrative systems, including the taxation of income. In recent years, there has been quite a significant parallelism in the evolution of their systems of taxation of income in many important respects.

For nearly a quarter of a century since independence, the maximum marginal rates of taxes on personal incomes in these four countries had stayed quite high. They were a result as much of the popular social urge of redistributing income and wealth through progressive taxation as of pragmatic need of mobilising resources for use by government where private savings were inadequate or limited. For promoting private savings and investment in the face of high maximum marginal rates, an intricate system of tax incentives, in which the prime position was occupied by tax holidays, was evolved.

The concern with increased skewness in the size distribution of income and wealth was by no means unjustified. The gains of development accrued, in the early stages, to a small class of businessmen and manufacturers. Single minded pursuit of economic growth was associated with growing inequalities of income and wealth and increasing denial of social justice. Experience had, however, shown that highly progressive system of income taxation had done little to correct social inequalities. It was realised that a more fruitful approach to the problem will be the development of the counter-vailing powers of trade unions and state intervention. The emphasis in this field was, therefore, shifted to a re-alignment of productive resources and production relations and of the content of production in such wise as to combine development with reduction in economic and social inequality.

All the four South Asian countries have seen a considerable strengthening of the trade union movement under the impetus of ameliorative state legislation. The role of the public sector has also greatly increased, particularly in areas where market dominating positions emerged as a consequence of narrowness of the domestic market and rigidities, immobilities and imperfections of the market. This aspect of the situation will be adequately brought out by Pakistan's experience in the matter.

Increasing role of the public sector in Pakistan's industrial field will be clear from the establishment under the Economic Reforms Order, 1972, of the Board of Industrial Management which controls and manages as many as 53 basic industrial enterprises which account for over 20 per cent of large-scale industrial investment in the country. Public sector industry also now includes 26 hydrogenated oil mills. Certain service industries of petroleum products and shipping were taken over in January, 1974. The management and control of 32 life insurance companies was taken over by the Government in March, 1972, and major Pakistani commercial banks were nationalised in January, 1974. More recently, over 2000 small-scale establishments processing cotton, rice and wheat flour, came under public ownership and control.

The Government of Pakistan also moved in to regulate the private sector in fields that were found to be riddled with all types of oligarchic corporate controls that begot multifarious business malpractices, including the generation of black money. This resulted in the abolition of the managing agency system, introduction of cumulative voting system and proportionate representation in public companies. A similar purpose was served by activising the Securities and Exchange Authority of Pakistan and establishing the Monopoly Control Authority.

There have been parallel developments in India, Sri Lanka and Bangladesh of nationalising banks, imposition of ceilings on urban lands and property and increased regulation of private corporations. Land reforms with the lower ceilings of land holdings have also been the common experience of all the three countries as well as Pakistan. In all the four countries, there has thus been a common realisation of positive results in the direction of a more equitable distribution of incomes and wealth flowing through broader socio-economic policies rather than progressive taxation.

DECLINING MAXIMUM MARGINAL RATES

In recent years, some of the basic ideas of public finance have been called in question as to their general applicability to all countries in all conditions. One such proposition that has held ground for long as an axiom is the desirability of having a steeply progressive tax system emanating from the concept of the diminishing marginal utility of income. This proposition has been questioned through the 'fifties' and 'sixties' on the ground that requirements of capital formation and economic incentives for accelerating the growth of an economy are negated by too progressive a system of taxation which has serious disincentive effects on productive effort.

The progressive rates on personal incomes did not help much in the mobilisation of resources for use by Governments. In **Pakistan**, the share of income tax in total federal tax receipts amounted to 16.3 per cent in 1975-76. Although this was a considerable improvement over the low watermark of 13.0 per cent in 1974-75 and almost equally low figure of 13.5 per cent for 1973-74, it was lower than 17.9 per cent of 1972-73, 23.7 per cent of 1971-72, 18.3 per cent of 1970-71, 20.0 per cent of 1969-70, 20.7 per cent of 1964-65 and 25.4 per cent of 1959-60. This low relative share of income tax was, however, partly a result of inflationary expansion of receipts from ad valorem rates of customs, central excise and sales tax and partly of large fortuitous collections from export duties imposed in the wake of the drastic devaluation of the Pakistan Rupee in May 1972.

* The charts and tables illustrating this article have been prepared by Mr. M.P. Dominic, LL.B, B.Ph, L.Ph, associate of the International Bureau of Fiscal Documentation. The responsibility for them rests, therefore, not with Mr. Qureshi but entirely with the Bureau.

1. 1 lakh = 100,000.

Income tax provided 12 per cent of tax revenue in **Bangladesh** last year. In Sri Lanka in 1975 direct taxes contributed only 20 per cent to total tax revenues and the share of income tax was no more than 18 per cent. The position was no different in **India**, where a bold experiment in bringing down the rates of personal taxation was accordingly made with a view to remove one of the prime inducements for tax evasion, namely, the attraction of high return which tax evasion gave in the context of high tax rates. The rise in tax revenues recorded after the initial reduction of the maximum marginal rate in India from 97.75 per cent to 77 per cent for the fiscal year 1975-76 encouraged a feeling that a further reduction would induce greater voluntary compliance with tax laws without adversely affecting revenues. Accordingly, the maximum marginal rates of personal taxation were further reduced to 66 percent for the fiscal year 1976-77.

The evolution of the tax system in **Sri Lanka** over a period of time had also for the most part been in an ad hoc manner, with a heavy emphasis on mobilisation of resources and re-distribution of incomes. On the whole, direct taxes were practically left untouched in Sri Lanka during the past ten years except for changes in the tax rates relating to income tax which till 1976 generally tended in the direction of a steeper progressivity, but produced little effect on revenue. The growth of numerous tax concessions with the passage of years made the tax system increasingly more complicated and at times even inconsistent. The current phase in Sri Lanka which began with the budget of 1976 had as its aim the liberalisation of the climate for voluntary savings and investments by reducing the maximum marginal rate of income tax from 75 per cent to 50 per cent and doing away with schemes for compulsory savings and ceiling on income.

In **Bangladesh** too, the maximum marginal rate of tax on personal incomes has been brought down to 65 per cent. Furthermore, Bangladesh has abolished, from the assessment year 1976-77, the surcharge levied on the income of the assessees, not being a company, on income exceeding Taka 36,000.

In **Pakistan**, the highest marginal rate of tax on personal incomes was brought down from 70 per cent to 60 per cent in the budget for 1976-77. To protect revenue interests, this reduction was preceded by a rationalisation of tax incentives and improvement of tax-collecting machinery, a process that still continues. The reduction was followed by amnesty for tax evaders aimed at flushing out black money and securing a revenue windfall of nearly over 450 million rupees for public sector investment. Similar adjustments of tax policies have also taken place almost simultaneously in **Sri Lanka** and **India**.

The results will be available next year and are most likely to prove beneficial in the larger interest of revenue.

TAX HOLIDAY

In trying to create a fiscal climate for investment, both local as well as foreign, tax holidays had increasingly been used by most developing countries, including Pakistan, Sri Lanka, India and Bangladesh as a device to attract such investment.

In **Pakistan**, the tax holiday scheme was abolished with effect from the assessment year 1971-72 on the ground that it never achieved its purpose of industrial dispersal but contributed to concentration of economic power and wealth and encouraged the establishment of uneconomic units.

The tax holiday scheme introduced in 1959 in Pakistan granted new industries set up between 1959 and 1965 tax holiday for 8, 6 and 4 years depending on their location, longer periods being meant for less developed areas. These industries enjoyed, in addition, liberal depreciation allowances on the original cost, on the expiry of the tax holiday. Later on, for industries set up between 1965 and 1970, the period of tax holiday was reduced to 6, 4 and 2 years. Also, the depreciation became admissible after the expiry of the tax

holiday period, on the written down value of assets rather than on their original cost.

There is no conclusive evidence that the pace of industrial development was quickened by the tax holiday. There is, however, conclusive evidence to show that tax holiday failed to attract industries to the less developed regions, for industries could not be attracted to remote locations if infra-structural facilities such as railways, roads, water, power, banks, post and telegraph communications did not exist. The scheme resulted in considerable direct revenue loss to the exchequer, besides the loss of revenue due to evasion of tax by the non-exempt units attributing their profits to tax-exempt expansion units.

Attempts were made by previous Governments to obtain some revenue from tax holiday companies in the form of surcharge or treatment of tax as interest-free loan but no bold and clear-cut decision was taken. The tax already realised for the assessment year 1971-72 was, therefore, treated as tax duly chargeable and not an interest-free loan. The Government was, however, still resolved to encourage setting up of industries in less developed areas and had already given full exemption from import duty in case of capital equipment to be installed in such areas. Equity Participation Fund was also revived for giving support to private entrepreneurs who set up industries in less developed areas. The Government also ensured that all possible facilities were provided for furtherance of its policy for the rapid industrial growth of backward areas. The abolition of tax holiday brought in an additional revenue of Rs. 60 million in 1972-73.

To compensate the incentive effect of tax holiday in a more rational way, the Government introduced a new tax credit scheme in the budget for 1974-75 at a revenue cost of Rs. 10 million per annum, to encourage the investment of corporate savings. Investment to equities of approved industrial undertakings set up between 1st July, 1974 and 30th June, 1980, qualified for a tax credit equal to fifteen per cent of the amount invested provided the undertakings were not located in the comparatively developed areas and for undertakings located in the comparatively under-developed areas to thirty per cent. Five years were prescribed as the minimum period of investment. In Pakistan's budget for 1975-76, this concession was made admissible not only for investment in new industrial units but also in the case of identifiable expansion of existing industrial units.

The budget for 1975-76 also provided that profits before taxation of an industrial undertaking which commenced commercial production between 1st July, 1975, and 30th June, 1980, would be reduced to the extent of 10 per cent of the capital employed if the undertaking was set up in the less developed areas and 5 per cent of the capital in the remaining areas other than certain specified areas.

The existing concession of special depreciation allowance of 15 per cent for new machinery was extended to industrial undertakings set up between July 1, 1975, and June 30, 1980. Furthermore, 5 per cent of rebate in super tax was allowed to smaller industrial undertakings set up between July 1, 1975 and June 30, 1980 provided the cost of fixed assets exclusive of the cost of land did not exceed Rs. 30 lakhs [1]. In the budget for 1976-77, provision was also made at a revenue cost of Rs. 2 million for tax credit at the rate of 10 per cent of the cost of new machinery to a company engaged in an industrial undertaking where such machinery was acquired for purposes of replacement, balancing and modernisation.

In **Sri Lanka** also a certain amount of disquiet over the usefulness of the tax-holiday device had tended to surface in the recent past. A serious disadvantage of tax holiday is seen to arise from the inequality of treatment between tax holiday areas of investment and other areas. Sri Lanka has also had the experience of everyone demanding tax holiday and holding it as a threat for non-investment. In any event, the low rate of income tax amounts to a partial tax-holiday for everyone without discrimination between the different areas of investment. Another interesting question that is being increasingly raised in Sri Lanka is that given the fact that the tax system of a country should reflect the socio-economic aims of the Government, whether tax holidays by providing narrow based havens for investors could result in social discon-

Rs 250,000	Rs 174,500	69.8%			

tent and more validly lead to tax evasion on the part of non-beneficiaries of the benefits.

The other important reasons suggested for withdrawal of tax holidays in Sri Lanka are as follows:

(A) Areas of investment which qualify for relief under section 16CC of the Inland Revenue Act have been widened now and there is a shift of emphasis from the blanket tax holiday type of incentives for production, employment, promotion and conservation of foreign exchange earnings and receipts.

(B) The continuation of capital allowances in the form of lump sum Depreciation (LSD) and Development Rebate.

In the matter of tax holiday, there has been a contrary experience in **Bangladesh** flowing mainly from the fact that the stage of its economic development is quite different from that of the three other South Asian countries under consideration. Section 14A(i) of Bangladesh's Income Tax Act provides that the income, profits and gains of an industrial undertaking set up in Bangladesh between the 1st day of July, 1973, and the 30th day of June, 1974 (both days inclusive), shall be exempted from the income tax and super tax payable under the Income Tax Act for a period of five years, subject to the conditions that the industry is owned by a company and that its registered office is in Bangladesh, that the paid up capital of the company will not exceed taka 35 lakhs and that the subscribers of the capital should not be other than the Bangladesh citizens.

However, the scope of tax holiday for a company was widened by a further liberal provision in section 14 (2A). In the new provisions, the participation of a foreign national has been allowed in the contribution of the capital of the company. The period of tax holiday has also been extended to 7 years for an industrial undertaking which will be set up in less developed area and the period of setting up of the industrial undertaking has been extended to 1980. In places like Chittagong and Dacca, which are comparatively developed areas, the period of exemption from payment of tax by the company has been restricted to five years. The limit of capital has been raised to 100 million taka. There is no limit of capital for an industrial undertaking sponsored by the Government or corporations. One important provision for tax holiday company is that 60 per cent of the profit of the company is to be ploughed back for the extension of the said industrial undertaking or is to be invested in the purchase of the Government bond.

The other three countries having tried tax-holiday as a tool of development and abandoned it, it remains to be seen how far Bangladesh succeeds along with the lowering of the rate of tax.

BETTER TAX COMPLIANCE

During the past three or four years, increasing importance has been attached in Pakistan, Sri Lanka and India to better tax compliance through improvement of administrative arrangements. In **Pakistan**, the budget for 1973-74 brought about several amendments in taxation laws to make them more stringent and to enhance the penalties for tax evasion. Taxation Officers were given enhanced powers for obtaining information from taxpayers and for inspection of accounts and documents. Penalties for defaults by tax-payers in submitting returns and delaying payment of admitted tax were also increased. It was made mandatory for all income-tax assessees with annual incomes exceeding Rs. 50,000 to file wealth statements. In cases of tax evasion or wilfully furnishing of wrong information, taxation officers were authorised to initiate criminal proceedings. The tax assessments were expedited and the maximum period for finalisation of income tax assessments was reduced from 4 years to 2 years. Special Judges were to be appointed for trying the cases of tax evasion. Provision was also made for appointment of valuation experts for assessing the value of properties to facilitate assessment of direct taxes. The cooperation of the people was sought for detection

Rs 250,000	Rs 169,755	67.9			

of tax evasion and a liberal system of rewards was introduced under which a portion of the amount of tax sought to be evaded was to be paid to the informer whose information led to the detection of tax evasion. The Central Board of Revenue was authorised to disclose the incomes declared by the important assessees and the income tax assessed in such cases.

In January this year, fresh administrative measures were envisaged in Pakistan in a meeting held by the Federal Finance Minister with a wide range of relevant tax officials. In the meeting, the Finance Minister underlined the importance the Government attached to administrative measures for tightening the ring round black money in the country. A comprehensive and integrated campaign was launched immediately after this meeting. The administrative measures included a country-wide survey which brought to light about 70,000 potential tax-payers. A dead-line, with a warning of severe consequences for defaulters, was fixed for voluntary filing of tax returns by persons who were liable to pay tax but had side-tracked their tax liability. This resulted in the emergence of over 4000 new income assessees. Some of the other measures adopted included strengthening of the newly set up Vigilance Wing to bring about improvements in realisations and to reduce major leakages of revenue to a minimum.

The Vigilance Wing in Pakistan is charged with the following important functions:

a) unearthing cases of under-valuation and misdeclaration of goods, suppression of correct income tax and sales tax and other taxes and duty.
b) probing into specific cases of frauds, collusion and other malpractices in the revenue administration so as to ensure timely and complete realisation of revenue.
c) paying surprise visits to concerned places, investigating cases of evasion of taxes and duties and granting suitable rewards to informers leading to detection of such cases in accordance with the rules already prescribed.

These measures resulted in a record income tax collection in Pakistan in 1975-76 of Rs. 2149 million, which was 69 per cent ahead of the budget estimates for the year. For all the principal heads of federal taxes, the revenue receipts of Rs. 13169 million for 1975-76 exceeded the preceding year's receipts by 20 per cent. These revenue receipts also exceeded the revised estimates of Rs. 12691 million by Rs. 480 million. The uncovered budgetary gap of Rs. 1700 million for 1976-77 was thus reduced to Rs. 1220 million.

For federal taxes, the tax-gross domestic product ratio of 11.2 per cent for 1975-76 was one of the highest recorded in Pakistan. This ratio had been ranging from 7.00 in 1959-60 to 10.0 in 1964-65, 10.8 in 1969-70, 11.1 in 1970-71, 10.8 in 1971-72, 11.1 in 1972-73, 11.7 in 1973-74 and 10.8 in 1974-75. The ratio for 1975-76 was exceeded only by 11.7 per cent of 1973-74, when federal receipts were swelled by large fortuitous collections from export duties.

In Pakistan, there has also been a welcome decline in the average cost of collections made by the Income Tax Department. Besides taxes on income, this department collects wealth tax, gift tax, estate duty and sales tax from inland transactions other than those in excisable commodities. All these collections varied from Rs. 1384.8 million in 1973-74 to Rs. 1634.8 million in 1974-75, Rs. 2505.3 million in 1975-76 and Rs. 2612.0 million (including presumptive collections from declarations of concealed income) in the budget estimates for 1976-77. The corresponding absolute figures of cost of collection incurred by the department are Rs. 20.8 million for 1973-74, Rs. 26.6 million for 1974-75, Rs. 28.6 million for 1975-76 and Rs. 31.0 million for 1976-77. The percentage cost of collection has thus declined sharply from 1.50 per cent and 1.62 per cent in 1973-74 and 1974-75 respectively to 1.14 per cent and 1.18 per cent in 1975-76 and 1976-77 respectively. These figures are quite indicative of administrative improvements in the recent past.

The reorganisation of tax administration in **Sri Lanka** through scheme of self-assessment and Pay-As-You-Earn has been quite similar to that undertaken in Pakistan. It resulted in a considerable reduction in the non-productive work-load on the assessing staff, which was consequently deployed for more productive work of enforcement, particularly the correction of tax liabilities declared by tax-payers. In Sri Lanka, tax fraud division is a specialised activity of the audit programme, which plays an important part in securing better tax compliance. The objective of this division is not so much to enforce the criminal statutes of the law or to prosecute tax-payers committing tax fraud as to create a spectre of jail and disgrace for those who constantly evade their just and legal share of the tax burden. For maximum deterrent, there is a careful representation of industries, geographic areas and economic groups in the selection of tax fraud cases. The punishments are supposed to deter tax offences by making them painful, financially and otherwise, by means of fines, penalties and prison sentences.

In **India**, the massive Taxation Laws (Amendment) Act, 1975, has come into force. This amended law is based on the recommendations of an expert committee known as the Direct Taxes Inquiry Committee, 1971, which was appointed by the government to recommend, among other things, concrete and effective measures to unearth black money and prevent its proliferation through further evasion. The powers of tax authorities to get at the hidden assets of tax evaders and to secure proof of tax evasion have now been enlarged. Penal provisions have been made more rational, more effective procedures for tax recovery have been streamlined and powers of the Recovery Wing enhanced. Most important of all, stiffer punishments have been provided for different types of tax offences, going in some cases upto seven years of hard labour, with stipulation for certain prescribed minimum sentences for some of the more serious offences.

In **Bangladesh**, the Director of Inspection or the Commissioner of Taxes may authorise search or seizure of books of accounts, or documents from any premises, if in consequence of an information he has reason to believe that a person has failed to comply with or there is a possibility that a person may not comply with notice under section 22(4) or 37, when it might be issued.

Further, if the Director of Inspection or the Commissioner has reason to believe that a person has any money or bullion, jewellery or other valuable articles or things and such money, bullion, jewellery, or other valuable articles or things represented either wholly or partly income or property which has not been disclosed for the purpose of Income-tax, he may authorise any Joint Director of Inspection, Joint Commissioner of Taxes, Deputy Director of Inspection or Deputy Commissioner of Taxes: (1) to enter and search any

building or place where such books, documents, money, bullion, jewellery or other valuable articles or things are kept, (2) to break open the door or locker, safe, almirach, and other receptacle where the keys are not available; (3) to seize books of accounts, documents, money, bullion, jewellery or other valuable articles or things.

TAX EVASION

Many developing countries have learnt it to their cost that there is a very close relationship between tax evasion and steeply progressive rates of direct taxes on income levied with a view to achieving distributive justice. Rates being steeply progressive, a good part of the assessable income goes into a hide-out to remain black.

Black money is a problem common to virtually all the market-economy countries where maximising profits and personal incomes are the overriding consideration. The scourge is not confined to the developing countries alone; the latter are, however, particularly susceptible to it for a variety of reasons, important amongst which are: (a) limited traditions of personal and business accounts; (b) limited traditions of using banking facilities and handling the inflated amounts of money incomes made possible by planned economic development; (c) absence of any automatic reporting system for property income and property transactions, analogous to the existing pattern for incomes from employment; (d) availability of facilities for registration of property in bogus names and (e) regulation of economic activity and imposition of fiscal discipline.

The need for rapid and planned economic development necessitates fiscal and monetary mechanisms. The mechanisms give rise to clandestine transactions and violation of regulations which, in turn, breed "unaccounted incomes" and tax evasion. For understanding the problem of black money, a clear distinction needs to be made between the primary and the secondary sources of its generation. In addition to the evasion of income tax, its primary generation in the fiscal field takes place through evasion of other direct taxes, sales tax, central excise duties, customs and other indirect taxes. It also takes place through under-invoicing and over-invoicing of foreign trade; circumvention of price, distribution and all other types of official controls, and kick-backs and other malpractices in official, corporate and private purchases, sales and contracts. When generated, its fall-out fans out to permeate virtually all the vital segments of the economy.

The amount of black money generated through these primary sources cannot be brought on the books that are amenable to examination in the Income Tax Department at the time of assessment, nor can it be used openly for legitimate investment. In the event, there are only two courses open to this black money. One of them is that it should keep off the ordinary investment stream and find its way into ineluctable channels which are economically unproductive and socially undesirable. The black money spills over into consumption, mostly ostentatious living and conspicuous consumption. Its impact on society is debilitating in nature. While it results in the erosion of social values, on the one hand, it tends to exert a demoralising effect on the rest of the society on the other. The bulk of the black money, left over after a part has been devoted to ostentatious living, may get petrified in the shape of gold, bullion or jewellery or real estate or be at rest in fake bank accounts.

The other course open to it is illegitimate investments of various types. Speculative trade in a developing country is by far one of the most lucrative and calls for no such managerial skill as attends upon investment in commercial concerns and industrial undertakings. Smuggling provides another equally lucrative field in which to illegally invest, with prospects of disproportionate returns. The black money may take to itself wings and fly across the national border also. Investments in real estate (particularly luxury construction), transport sector, industry generally and film industry in particular also hold out attraction, as in these fields under-statement of income is comparatively easy and assessment of income tax relatively difficult.

These illegitimate investments net in profits, often as good as a windfall, and as these profits cannot be diverted for legitimate investment in any sector of the economy, they continue to spill out on the periphery of

Changes in the Income Tax Rates Applicable to Resident Individuals

BANGLADESH

1974-75	Rate	Effective Rate	1976-77	Rate	Effective Rate

the hoards of the black money, extending its volume every so often. A vicious circle is thus created and distortions in the economy as a whole set in.

The distortions in the economy are more pronounced and the circumference of the vicious circle is widened during a period of rapidly rising prices, a phenomenon which pervaded virtually all the market-economy countries in 1973-74 and 1974-75. Speculative hoarding of commodities, investment in real estate and smuggling are in full play to accelerate the secondary generation of black money.

To recapitulate, black money tends to inhibit the canalisation of domestic resources into planned investment in the public as well as the private sectors. It distorts social values and promotes inequalities of income distribution. It also fuels inflationary fire through speculative hoarding of commodities.

There is a very close relationship between black money and progressive rates of direct taxes on income levied with a view to achieving distributive justice. When the rates are too progressive in a developing country, very ingenious methods are employed by assessees in evading taxes, notable amongst which are suppression of sales and inflation of purchases, maintenance of duplicate sets of accounts, under-valuation of stocks and assets, concealment of branch profits, conducting business with fictitious partners, over-statement of salaries of employees and of expenses of establishment, wrong and inflated claims of depreciation and transactions under bogus names. Thus, black money may be generated by a variety of sources, but, to remain black, it must consistently escape the income-tax net. Tax is evaded mainly by the higher income groups who are liable to the highest marginal rates of personal income tax. And, tax thus evaded is added to the hoards in the hide-out.

In a developing country, it is not uncommon to find that high income earners in manufacturing, construction and professions evade income tax extensively even in respect of their legitimate incomes. What motivates evasion is not difficult of understanding. The more progressive the rates of income tax, the greater are the rewards of tax evasion and the consequential maintenance and inflation of the hoards of black money. In developing countries, income taxes are virtually always somewhat highly progressive. Critics of progressive taxation warn that it will absorb private savings and dull initiative and enterprise. They suggest that the developing and underdeveloped countries should wait until they have passed through at least the first stages of industrialisation before attempting highly progressive income taxation. Their contention has an empirical basis in the fact that the industrialised countries built up their capital stock at a time when the income tax was either low or non-existent.

In this age, however, it is hardly possible in a developing country to abandon the equity consideration of progressive taxation of income. Highly progressive taxation of income cuts down at once the standard of consumption of the higher income groups and the accumulation of wealth. Inequities of income, in the absence of government intervention, make possible wide disparities in the standards of current consumption and, in course of time, accentuate the unequal distribution of wealth, which breeds two undesirable consequences. The concentration of wealth in the hands of a few carries with it the concentration of economic power. Secondly, as large wealth-holdings are transmitted through inheritances, a class of rentiers is created, who earn large incomes and consume them extravagantly without any social rationale to sustain their claims on social product. Thus, a developing country wedded to egalitarian ideals is not likely to break the undesirable consequences of inequities. Highly progressive taxation is resorted to for purposes of preventing lavish consumption and unproductive investment on the part of higher income groups. Developing market-economy countries are thus faced with the twin problems of digging out black money and developing a mechanism which would ensure against its generation.

AMNESTY IN INDIA

In order to combat tax evasion and reduce severity of its adverse impact on the economy of India, a scheme for voluntary disclosure of undisclosed income and wealth and for payment of tax thereon, without any penalty or prosecution, was provided by a Presidential Ordinance promulgated on October 8, 1975. The objects of the scheme which was operative upto December 31, 1975, were
i) to offer an opportunity to persons who had evaded tax in the past to declare their undisclosed incomes and wealth and return to the path of rectitude; and ii) to secure canalisation of black money so disclosed into productive fields in the overall interest of the economy.

The Indian amnesty was based on certain "reasonable" standard rates on the disclosed amount. The tax was related to the amount disclosed, irrespective of the number of years over which it was earned. And immunity was granted from penalty, interest and prosecution. These standard rates were as follows:

a) In the case of a declarant other than a company	**Rate of Income-tax**
Slab of income declared up to Rs. 25,000	25%
Rs. 25,001 to Rs. 50,000	Rs. 6,250 plus 40% of the excess over Rs. 25,000
Over Rs. 50,000	Rs. 16,250 plus 60% of the excess over Rs. 50,000
b) In the case of a declarant being a company	60%

In addition to the tax payable, declarants were also required to invest 5 per cent of the disclosed income in notified Government securities within a stipulated time. The proceeds of these bonds were earmarked by Government for projects of high social priority.

Declarants were required to indicate the forms (e.g. cash, bullion, shares, commodities etc.) in which the income disclosed was being held. In respect of assets represented by the disclosed income, immunity from Wealth-tax was given for the then current year (1975-76) and earlier years.

Further, the declarants were required to credit the amount of income disclosed in their books of accounts or any other record and indicate this in the declaration. This was meant to provide a safeguard against money flowing back into illegal channels.

Declarants were ordinarily required to pay the tax due before making the declaration. Commissioners were, however, empowered to extend the time of payment, or grant instalments for payment, for good and sufficient reasons. Interest was chargeable on deferred payments.

The declarants were assured of full secrecy by a provision in the law itself that all particulars contained in the declaration shall be treated as confidential.

Declarations received under the scheme disclosed income and wealth of about Rs. 16,000 million, nearly half of which was income disclosed. The tax payable on the disclosed income and wealth and the amount required to be invested in Government securities together amounted to nearly Rs. 3,000 million.

MEASURES IN PAKISTAN

In order to smoke out the black money in Pakistan, the Federal Budget for 1976-77 held out the olive branch to the black money-generating and black-money using higher income groups by bringing down the highest marginal rate of income tax on individuals from 70 per cent to 60 per cent. However, fiscal measures alone could not ferret out black money unless these were supplemented by a judicious mix of economic policy and administrative steps. Specific measures adopted to smoke out black money was additon of the Fifth Schedule and Section 3C to the Income Tax Act, 1922. These legal provisions announced with the federal budget for 1976-77 were much simpler than in India and provided for declarations of undisclosed incomes at the uniform concessional rate of 30 per cent. The declarants were entitled to incorporate in their books of account such undisclosed income as was in tangible form and were not to be liable to either sales tax or wealth tax or Central Excise duties in respect of the income declared.

The Government gave the black money holders an opportunity to make their hidden earnings level by paying only 30 per cent as tax. In addition, the Government came forward with new concessions. If a limited company paid 30 per cent on its hidden income, the directors and shareholders were not asked to pay taxes on the dividend they had already received. The same concession was offered to the directors of private firms if the firms paid up the 30 per cent tax. The Government also came forward with a deferred payment scheme to help those who were not able to pay tax on their concealed income forthwith, but the deferred payment was subject to a rate of interest of 2 percent per month which was much higher than in India. Income Tax Officers were authorised to give deferred payment facilities up to June, 1977, and Income Tax Commissioners for periods beyond that. The government held out assurance that those availing themselves of the opportunity would not be put to any harassment or coercion and that the government would keep its pledge of treating the declarants fairly and justly. It was also promised that the declarations would enjoy complete secrecy.

A good deal of hidden income came up and the Government's efforts in this regard were a resounding success. Hidden income to the extent of Rs. 1,460 million was declared, besides the sealed envelopes including which the total might exceed Rs. 150 million. The Government of Pakistan received Rs. 270 million as tax, and the total tax inclusive of the deferred payments, was Rs. 450 million. The Government did the best it could to attract the hidden wealth painlessly. The low 30 per cent tax and a series of concessions offered to the tax dodgers were much too attractive for any realistic person with hidden income.

BANGLADESH

According to a Reuter report published in Pakistan Time of November 11, 1976, with a Dacca dateline, the Bangladesh Government has also set up a Commission to ferret out undeclared taxable income known there as black money. According to a Government press release, adds the report, the commission will be headed by the Governor of Bangladesh Central Bank.

To sum up, the tax policies in Pakistan, India, Sri Lanka and Bangladesh have had two important features in common. One of them is the tightening of administrative arrangements for the collection of taxes on income. The other is the reduction of the maximum marginal rates of steeply progressive taxes on income. At 50 per cent this maxima is the lowest in Sri Lanka and at 65 per cent and 66 per cent, it is the highest in Bangladesh and India respectively. Pakistan's rate of 60 per cent falls in between, but it has been supplemented by a wide-ranging rationalisation of tax incentives.

Major Central Taxes in Pakistan, India, Sri Lanka and Bangladesh

PAKISTAN	INDIA	SRI LANKA	BANGLADESH

Major Tax Incentives in Pakistan, India, Sri Lanka and Bangladesh

	PAKISTAN	INDIA	SRI LANKA	BANGLADESH
Tax Holiday	—5 or 10 year tax holiday for new industrial undertakings set up in specified areas.	—5 year tax holiday for new industrial undertakings, hotels and ships. —40% of income of an Indian company or resident non-corporate taxpayers from royalties received from a person carrying on business in India. —Dividends and royalties received by an Indian Co. from export of technical know how.	—8 year tax holiday for export profits of approved new companies from traditional exports. —5 year tax holiday for existing approved companies for profits from increase in exports. —5 year tax holiday for approved hotel undertakings or for constructing buildings for hotels.	—5 or 7 year tax holiday for new industrial undertakings.
Tax Credit and Tax Rebates	—Investment in equities of approved public companies engaged in industrial undertakings. —Investment in balancing or modernization or replacement of machinery — 10%. —Tax rebates for exports. —Tax rebates for other activities.		—Investments by companies according to approved investment plans — 10%. —Foreign exchange brought in by a person carrying on an undertaking for purposes of the undertaking — 20% or amount equivalent to foreign exchange whichever is less. —Investment in housing and land development projects — 20%. —Increase in employment in 1976 — $20\% \times \frac{\text{Increase of employees}}{\text{Total no. of employees on Dec. 31, 1975.}}$ —New undertakings in 1976 employing at least 50 employees — 20% tax. —Increase in the quantity of exports of traditional export products — $20\% \times \frac{\text{Increase in exports}}{\text{Total quantity of exports in the year preceding the year of assessment.}}$	—Rebates for exports (30-50%).
Special Deductions	—Revenue expenditure on scientific research and technical training incurred by an industrial undertaking. —Capital expenditure on scientific research related to business to be apportioned between 5 consecutive years.	—Revenue and capital expenditure on scientific research in the first year. —1½ times the expenditure incurred by domestic companies and other resident taxpayers on export promotion.	—Capital expenditure incurred in the opening up of land for cultivation etc. —Export promotion expenses of approved export companies enjoying tax holiday.	—Revenue expenditure on technical training and scientific research. —Capital expenditure on scientific research related to business to be apportioned between 5 consecutive years.
Accelerated Depreciation	—Special depreciation allowance of 15% in respect of machinery. —Initial depreciation (10-30%) in respect of buildings, plant, machinery and ships.		—Lump sum depreciation ($33\frac{1}{3}$-80%) for specified assets. —Full depreciation in the first year for approved hotel undertakings in respect of plant, machinery, fixtures.	—Initial depreciation (10-30%) in respect of buildings, plant, machinery and ships.
Investment Allowance in respect of plant, machinery etc.		—25% of the cost of new ships, aircraft, new plant or machinery or distribution of power and electricity or construction, manufacture or production of specified articles.	—Development rebate (20 or 40%) for new plant, machinery, fixtures and industrial buildings.	
Foreign Technicians	—3 year exemption of salary under certain conditions. —5 year exemption of tax on tax.	—2 year exemption of remuneration up to Rs. 4,000 per month under certain conditions and exemption from tax on tax on the excess. —2 year exemption of tax on tax.	—Exemption of income from employment. Period depends on whether they are employed by the government or by a tax holiday undertaking.	—3 year exemption of salary under certain conditions. —5 year exemption of tax on tax.

Withholding Taxes on Dividends, Interest and Royalties paid to Non-Resident Companies

	PAKISTAN	INDIA	SRI LANKA	BANGLADESH
Dividends	—Received by a public Company and paid by a Pakistani Co. former after 14 Aug. 1947 — 15%. in other cases 20%.	25%	33 1/3% + 6% of the gross amount of the dividends.	—Received by a public Company and paid by a Bangladesh Company formed after 14 Aug. 1947 — 15%. Other cases 20%.
Interest	—Interest on Securities — 30%. In other cases — 60% (Income Tax 30% + Super Tax 30%)	—Interest on tax free Securities — 44%. In other cases — 70% + 3.5% surcharge	71.71%	—Interest on Securities — 30%. In other cases — 60% (Income Tax 30% + Super Tax 30%)
Royalties	—60% (Income Tax 30% + Super Tax 30%)	a) Royalties from approved agreements: i) made between 31.3.1961 - 1.4.1976 — 50% + 2.5% surcharge ii) made after 31.3.1976: —lump sum consideration for supply of industrial know-how — 20%. —balance — 40%. b) Technical Assistance fees from Agreements: i) made between 29.2.1964 - 1.4.1976 — 50% + 2.5% surcharge. ii) made after 31.3.1976 — 40%.	71.71%	—60% (Income Tax 30% + Super Tax 30%)
Treaties	*Dividend* The rate must be reduced by 6.25% of the super tax (i.e. about 14.06%) under the treaties with Denmark, Sweden, U.S.A., Japan, Sri Lanka (6%). Under treaties with West Germany, Ireland, Switzerland, United Kingdom, France, Poland and Canada, the maximum tax rates are 10%, 15% or 20%. *Interest* Under treaties with Japan, West Germany, France, Switzerland, the rate is reduced to 30%. Under the treaty with Canada, the rate is reduced to 25%. Certain types of interest are also exempt under different treaties. *Royalties* Exempt under treaties with Denmark, Sweden, U.S.A., Japan, West Germany, Ireland, Switzerland, U.K. and France. Under Ceylon treaty 50% reduction. Under Austrian treaty 20% tax. Under Canadian and Polish treaties — Industrial and cinematograph royalties — 20%. Technical know-how and information royalties — 15%. * The treaties with Canada, Poland and Malta are not yet in force. The treaty with India has expired.	No modifications are made under the tax treaties. Comprehensive tax treaties exist with Austria, Belgium, Denmark, Egypt, Finland, France, West Germany, Greece, Japan, Malaysia (not yet in force), Norway, Sri Lanka and Sweden. The Income Tax Double Taxation Relief (Dominions) Rules, 1956 apply to Sierra Leone.	*Dividend* No reduction of rates in the treaties. But, under the Japanese treaty, a special concession of refund of tax deducted at source for a period of 5 years after the expiry of the tax holiday period is given if the company holds at least 10% of the shares. *Interest* No reduction of rates in the treaties. *Royalties* Copyright and cinematograph royalties exempt under treaties with Sweden, Denmark, Norway, West Germany, Japan and Pakistan (only copyright). Industrial royalties — reduction of tax by 50% under treaties with Denmark, Norway, West Germany, Japan, Pakistan and Malaysia. * There is also a treaty with India.	No tax treaties

REORIENTATION OF BELGIAN TAX POLICY: THE 1976 PROGRAM LAW

As was also the case in 1974 and in 1975 the Belgian Parliament enacted for 1976 a "Program Law", i.e. a law which on the one hand aims at keeping Government expenditure within the limits as determined in the Budget Law and on the other hand attempts to redistribute national income on behalf of that part of the Belgian population which is hardest hit by the economic recession and inflation. For this purpose three sets of measures were introduced, i.e. tax measures, a change of the legal provisions regarding the financing of municipalities, provinces and universities and a number of social measures.
The tax measures are again subdivided into three different categories:

- an amendment of individual income tax in order to adjust current tax provisions to price inflation (based on an estimate of 12.9 percent per annum) and the reform of the taxation of so-called "replacement income" (generally social security benefits);

- the second set of measures aims at reducing the tax burden on married couples where both husband and wife are receiving earned income (as opposed to investment income);

- the third set of measures pertains to the introduction of a special excise duty on wines, the limitation of VAT credit with respect to investment goods and the extension of the statute of limitations in cases of tax fraud.

The various provisions of the Program Law were discussed in detail in the English language in the August 1976 issue of EUROPEAN TAXATION. The present article in French, written by Mr. André Spruyt, discusses a special aspect of the Program Law, i.e. the changes introduced in Belgian individual income tax law which in particular affect those taxpayers who receive "earned income" (revenus professionnels). These changes concern, inter alia:

- "Replacement income", i.e. income which is received as a result of the temporary or permanent loss of the source from which the taxpayer's income flows. Such "replacement income" includes social security benefits which under previous legislation were tax exempt provided their aggregate amount did not exceed 80 percent of the income they replaced. Since it has appeared too difficult to properly control this condition it was decided to discontinue the exemption in a two-step operation.

- Income received by active members of so-called "sociétés de personnes" (like the general partnership, limited liability companies etc.) was, under previous legislation, treated as business income and is now considered to be a "remuneration" and put on an equal footing with the remuneration of the members of the Board of Directors in a company limited by shares (société anonyme). Such income will, thus, be considered to be received in the year in which it was attributed (and no longer at the time of the closure of the financial year).

- Separate assessment of the incomes of husband and wife in a number of cases.

In order to realize the above objectives the Program Law redefines the concept of taxable earned income thus introducing a number of important changes which will, inter alia, considerably affect non-resident members and directors of Belgian companies. For instance, under previous legislation remuneration — including pensions — of employees and members of the Board of Directors was not subject to Belgian income tax if it was paid by a Belgian resident, company or association resident in Belgium for activities performed abroad. Under the Program Law pensions are no longer included in this exemption. However, remuneration paid to an active member of a "société de personnes" may now benefit from the exemption. A new restriction imposed is that the exemption is only available for that part of income which can be allocated to a foreign establishment.

Further provisions of the Program Law deny the lump sum expense deduction to, inter alia, pensions and — somewhat surprisingly — the earned income deduction is reduced in particular to the detriment of lower income groups.

Belgique: Modifications apportées par la loi du 5 janvier 1976 au régime d'imposition des revenus professionnels.

André J. J. Spruyt *

I. INTRODUCTION

1. La loi du 5 janvier 1976 relative aux propositions budgétaires 1975-1976 [1], couramment intitulée "loi programme", comporte un important volet de modifications aux lois fiscales. Les articles 1 à 57 modifient le Code des Impôts sur le Revenu, l'article 58 modifie le Code de la Taxe sur la Valeur Ajoutée, tandis que les articles 59 à 70 apportent des modifications aux droits d'accises.

La revision du Code des Impôts sur le Revenu que constitue la loi du 5 janvier 1976, vise principalement l'Impôt des Personnes Physiques [2]. D'autre part, elle prévoit l'extension des délais extraordinaires pour le recouvrement des différents impôts sur le revenu. La loi du 5 janvier 1976 aménage l'I.P.P. afin d'effacer les effets de l'inflation quant aux petits et moyens revenus, introduit des mesures en faveur des familles et modifie le régime fiscal des "revenus de remplacement", ce qui implique une adaptation du régime d'imposition des revenus professionnels.

Rappelons que l'I.P.P. frappe le montant global des revenus immobiliers, mobiliers, professionnels et divers des personnes physiques résidant en Belgique.

* Assistant à la Faculté de Droit de la "Vrije Universiteit Brussel". L'auteur a travaillé comme "Associé de Recherche" auprès du Bureau International de Documentation Fiscale pendant la période 1971-1972.
1. Moniteur Belge, 6 janvier 1976, p. 81-130.
2. En abr. I.P.P.

Les montants nets de ces quatre catégories de revenus sont globalisés et, après déduction de certaines dépenses, le montant ainsi calculé forme le montant net imposable qui est soumis à des taux progressifs. Notons que les revenus des époux sont cumulés. L'impôt ainsi calculé peut être réduit notamment en raison de charges de famille, de l'origine étrangère des revenus etc.

La revision de l'I.P.P. que constitue la loi du 5 janvier 1976 apparaît comme assez compliquée en raison de l'introduction de nombre de modifications en deux temps: modifications applicables soit à partir de l'exercice d'imposition 1976 [3], soit à partir de l'exercice 1977 et modifications dont la portée est limitée à l'exercice 1976.
Ce présent exposé sera limité à l'étude des modifications apportées au régime d'imposition des revenus professionnels: revenus professionnels imposables, revenus immunisés, charges professionnelles, abattements sur le total des revenus professionnels et l'imposition distincte des revenus professionnels des époux.

II. MOTIFS DE LA REFORME EN MATIERE DE REVENUS PROFESSIONNELS

A. L'aménagement du régime fiscal des "revenus de remplacement"

2. Les "revenus de remplacement" sont les revenus qui constituent la réparation totale ou partielle d'une perte temporaire ou permanente de revenus professionnels. Il faut distinguer entre d'une part les allocations sociales se substituant à des revenus professionnels perdus et d'autre part les indemnités payées par le responsable du fait occasionnant la perte ou par son assureur.

a. Les allocations sociales constituant un "revenu de remplacement"

3. Il s'agit des allocations de chômage, de maladie, d'invalidité, d'accident de travail ou de maladie professionnelle, dont les travailleurs et employés peuvent jouir en vertu de la législation sociale. Selon le régime fiscal antérieur à la loi du 5 janvier 1976 ces allocations sociales étaient immunisées quand leur montant n'atteignait pas 80% de la rémunération brute perdue.

Cette immunisation avait été instaurée à une époque où ces allocations avaient en fait le caractère de secours. Dans l'état actuel des lois ces allocations ne sont pas seulement liées au montant des rémunérations auxquelles elles se substituent mais aussi à l'évolution du bien-être général. En outre le système antérieur donnait lieu à des difficultés d'ordre pratique en ce sens que parfois il était très difficile, pour ne pas dire impossible, de déterminer avec certitude si ces "revenus de remplacement" atteignaient ou non 80% de la perte effective de rémunération. La raison en était la complexité, la superposition et l'évolution constante des régimes légaux, conventionnels ou contractuels dont découlent ces allocations, sans compter que, dans de très nombreux cas des arrangements plus ou moins subtils étaient pris pour que l'indemnisation globale frise la limite de 80% sans l'atteindre tout à fait [4].

Un autre reproche qui était fait à la législation antérieure en la matière, est qu'elle engendrait des distorsions parfois considérables sur le plan de la charge fiscale subie par différents contribuables à ressources annuelles égales, suivant que ces ressources provenaient exclusivement d'une activité professionnelle, ou bien en tout ou en partie de "revenus de remplacement" [5].

4. Les exemples repris dans les travaux préparatoires de la loi du 5 janvier 1976 sont à cet égard éloquents [6]. Envisageons la situation d'un contribuable célibataire qui disposait pour l'année civile 1974 (exercice 1975) de 300.000 F.B. de ressources:

— **Première hypothèse:**	
— Salaire net	300.000 F.B.
— Montant net imposable (après déduction de l'abattement sur le montant total des revenus professionnels)	284.000 F.B.
— I.P.P. dû (avant application des centimes additionnels)	63.650 F.B.
— **Seconde hypothèse:**	
— Salaire net	200.000 F.B.
— Allocation de chômage	100.000 F.B.
— Montant net imposable (constitué par le salaire net dont l'abattement est déduit; l'allocation de chômage étant immunisée)	174.000 F.B.
— I.P.P. dû (avant majoration des centimes additionnels)	31.350 F.B.

Pour le même montant de ressources, la charge fiscale variait donc sensiblement.

5. Afin de remédier à cette situation, la loi du 5 janvier 1976 introduit un aménagement de loi fiscale qui intervient en deux étapes. Pour l'exercice 1976 ces allocations sociales restent immunisées dans la mesure où elles l'étaient sous le régime antérieur mais elles sont prises en considération pour déterminer le taux de l'I.P.P. applicable aux autres revenus.

Dès l'exercice 1977 les immunités antérieurement prévues sont supprimées [7]. Cette suppression est toutefois assortie de mesures assurant l'exonération de fait de certains "revenus de remplacement" lorsqu'il constituent les seuls revenus imposables des bénéficiaires [8].

b. Les indemnités payées par le responsable du fait occasionnant la perte ou par son assureur

6. Le régime fiscal de ces indemnités avait donné lieu à contestation:
(i) en ce qui concerne les indemnités constituant la réparation d'une perte *permanente* de bénéfices [9] ou de profits [10]. En effet, la jurisprudence [11] considérait que ces indemnités n'étaient pas imposables à défaut de disposition légale [12].

3. Ayant en règle générale pour base les revenus de l'année civile 1975.
4. Doc. Parl., Chambre, S. 1975-1976, n° 680-1, Exposé des Motifs, p. 12.
5. Doc. Parl., Chambre, S. 1975-1976, n° 680-10, Rapport, p. 6.
6. Doc. Parl., Chambre, S. 1975-1976, n° 680-1, Exposé des Motifs, p. 13-14.
7. A une exception près en matière d'assurance maladie ou invalidité cfr. infra n° 31.
8. Cfr. infra n° 35.
9. La notion de "bénéfices" indiquait les revenus retirés de l'activité professionnelle, de commerçant, d'industriel, d'agriculteur et d'associé actif de société de personnes soumise à l'Impôt des Sociétés (en abr. I.S.): cfr. infra n°s 7 et 8.
10. Par "profits" il faut entendre les revenus professionnels obtenus par les titulaires de professions libérales.
11. Cfr. Cass. 9 décembre 1971, J.P.D.F., 1971, p. 324 (avec note).
12. De telles indemnités perçues par des salariés et mandataires de sociétés par actions, étaient par contre imposables en vertu de l'ancien article 26, 2° C.I.R.

(ii) en ce qui concerne les indemnités constituant la réparation d'une perte *temporaire* de rémunérations [13]: La jurisprudence [14] considérait que ces indemnités n'étaient pas imposables à défaut de disposition légale [15].

Ces anomalies devaient tôt ou tard être corrigées par le législateur [16]. Bien que les Travaux Préparatoires de la loi du 5 janvier 1976 ne sont pas explicites [17] à cet égard, nous croyons que le nouveau régime fiscal des "revenus de remplacement" comporte aussi l'imposition de ces indemnités [18].

B. Aménagement du régime fiscal des revenus professionnels des associés actifs de sociétés de personnes soumises à l'Impôt des Sociétés

7. Dans le régime antérieur les sommes attribuées à de tels associés actifs en raison de leur travail personnel étaient soumises à l'I.P.P. dans le chef de l'associé en tant que "bénéfices" [19]. Dans le chef de la société, ces montants étaient déductibles en tant que charges professionnelles [20].
Notons que le revenus professionnels des mandataires de sociétés par actions étaient considérés comme "rémunérations".

8. Les conséquences de la qualification de ces revenus comme "bénéfices" dans le chef du bénéficiaire étaient que:

a. la société débitrice ne devait pas retenir le précompte professionnel [21]. Le Roi avait le pouvoir d'y soumettre ces revenus [22], sans cependant en avoir usé. Les associés actifs étaient par contre tenus d'effectuer des versements anticipés, sous peine de majoration de l'impôt dû sur ces revenus [23].
b. ces revenus étaient considérés comme étant recueillis par les associés actifs à la date de clôture de l'exercice comptable de la société [24]. En d'autres termes tous les revenus professionnels obtenus en tant qu'associé actif et se rapportant à un exercice comptable déterminé d'une société de personnes, appartenaient à la période imposable en matière d'I.P.P. pendant laquelle l'exercice comptable était clôturé et étaient imposés pour l'exercice d'imposition auquel la période imposable se rattache. Ainsi les revenus recueillis en tant qu'associé actif et se rattachant à l'exercice comptable 1973-1974 de la société, appartenaient à la période imposable 1974 de l'associé et étaient imposé dans son chef pour l'exercice d'imposition 1975 en matière d'I.P.P.
c. les associés actifs pouvaient attribuer une quote-part de leurs revenus professionnels à l'épouse qui les aidait effectivement sans disposer de revenus d'une activité professionnelle distincte. Cette attribution de bénéfices au conjoint aidant ne pouvait avoir pour effet de ramener la quote-part de l'autre conjoint au-dessous de 72.000 F.B. [25].

9. Lors de la discussion du projet qui est devenu la loi du 25 juin 1973 devant la Commission Sénatoriale des Finances, le Gouvernement avait pris l'engagement de soumettre les revenus professionnels des associés actifs de sociétés de personnes au même régime que ceux des mandataires de sociétés par actions. [26]. La loi du 5 janvier 1976 en prévoyant l'imposition des revenus professionnels des associés actifs comme "rémunérations", tend à réaliser cet engagement.

C. Allégement de la charge fiscale grevant les revenus professionnels des époux

10. Depuis la réforme fiscale de 1962, tous les revenus des époux étaient cumulés et l'impôt était établi sur l'ensemble de ces revenus avec application, toutefois d'un abattement spécial sur les revenus professionnels de l'épouse.

Pour des motifs d'ordre social, la loi du 5 janvier 1976 introduit l'imposition séparée des revenus professionnels des époux qui en raison de la modicité de leurs revenus, sont contraints à travailler tous deux [27].

III. REALISATION DE CES OBJECTIFS

11. L'introduction de ces innovations nécessitait la restructuration et la modification d'un grand nombre de dispositions du C.I.R. concernant les revenus professionnels imposables, les revenus professionnels immunisés, les dépenses professionnelles, les différents abattements et le cumul des revenus des époux.

A. Revenus professionnels imposables

a. Classification générale

12. L'article 20 C.I.R. distingue plusieurs catégories de revenus professionnels imposables, auxquelles s'appliquent des règles différentes.

Aux termes de l'ancien texte, il y avait quatre catégories de revenus professionnels:

(i) les bénéfices des exploitations industrielles, commerciales ou agricoles quelconques, y compris les bénéfices résultant du travail personnel des associés actifs dans les sociétés de personnes soumises à l'impôt des sociétés;
(ii) les rémunérations diverses:
  (a) de toutes personnes rétribuées par un tiers, sans être liées par un contrat d'entreprise, y compris les bénéficiaires de pensions ou de rentes viagères;
  (b) des mandataires [28] de sociétés par actions;
(iii) les profits des professions libérales et de toutes occupations lucratives;
(iv) les bénéfices ou profits qui se rattachent à une activité professionnelle indépendante antérieurement exercée.

Les règles qui s'appliquent à ces différentes catégories de revenus professionnels font l'objet des art. 21 à 25 C.I.R., en ce qui concerne les bénéfices, 26 à 29 C.I.R. pour les rémunérations, 30 C.I.R. pour les profits et 31 à 32 C.I.R. en ce qui concerne les bénéfices et profits se rattachant à une activité professionnelle indépendante antérieurement exercée.

---

13. La notion de "rémunérations" indiquait les revenus retirés de l'activité professionnelle de salarié et de mandataire de sociétés par actions; cfr. infra nos 14 et ss.
14. Cfr. Cass. 22 juillet 1969, J.P.D.F., 1969, p. 246 et Gand, 25 février 1970, Bull. Ass., 1972, p. 157 (avec note).
15. De telles indemnités perçues par des industriels, des commerçants, des agriculteurs, des associés actifs de sociétés de personnes soumises à l'I.S. et par des titulaires de professions libérales étaient imposables en vertu des articles 22, 6° et 30, 2° C.I.R.
16. Cfr. note sous Cass., 9 décembre 1971, J.P.D.F., 1971, p. 326.
17. Incidemment une allusion à ces contestations est faite dans Doc. Parl., Chambre, S. 1975-1976, n° 680-10, Rapport, p. 24.
18. Cfr. infra, nos 16 et 24.
19. Cfr. l'ancien article 20, 1° C.I.R.
20. Cfr. l'article 108, 1° C.I.R. tel qu'il a été modifié par l'article 29 de la loi du 25 juin 1973, Mon. B. du 6 juillet 1973, pp. 8063 à 8081.
21. Les rémunérations attribuées aux mandataires de sociétés par actions étaient soumis à ce précompte en vertu de l'ancien article 180, 1° C.I.R.
22. L'ancien art. 181 C.I.R.
23. Cfr. l'ancien article 89, § 1 C.I.R.
24. Cfr. l'ancien article 169, § 1, b) de l'Arrêté Royal d'exécution du Code des Impôts sur le revenu (en abr. A.R. d'exécution du C.I.R.).
25. Cfr. l'ancien article 64, § 1 C.I.R.
26. Doc. Parl., Sénat, S. 1972-1973, n° 278, Rapport, p. 41.
27. Doc. Parl., Chambre, S. 1975-1976, n° 680-10, Rapport, p. 9.
28. Administrateurs, commissaires, liquidateurs, etc.

13. Le nouvel article 20 C.I.R. [29] applicable à partir de l'exercice d'imposition 1976 [30] distingue dorénavant cinq catégories de revenus professionnels:

(i) les bénéfices des exploitations industrielles, commerciales et agricoles quelconques;
(ii) les rémunérations diverses:
  (a) des employés, travailleurs et fonctionnaires;
  (b) des mandataires de société par actions;
  (c) d'associés actifs de société de personnes assujettie à l'impôt des sociétés;
(iii) les profits de professions libérales et de toute occupation lucrative;
(iv) les bénéfices et profits se rattachant à une activité professionnelle indépendante antérieurement exercée;
(v) les pensions, rentes et autres allocations en tenant lieu.

A la différence du régime antérieur, les sommes attribuées aux associés actifs d'une société de personnes en raison de leur travail personnel ne sont plus considérées comme "bénéfices" dans le chef de l'associé mais comme "rémunérations" [31].

D'autre part les pensions et allocations analogues ne figurent plus parmi les "rémunérations" mais forment dorénavant une cinquième catégorie de revenus professionnels imposables [32].

b. Définition des "rémunérations"

14. Comme indiqué ci-dessus le régime antérieur ne prévoyait que deux catégories de "rémunérations"; celles des appointés et salariés, y compris les pensions, et celles des mandataires de sociétés par actions. La loi du 5 janvier 1976 y ajoute une nouvelle catégorie — celle des rémunérations des associés actifs d'une société de personnes — et en exclut les pensions.

(i) des appointés et salariés:

15. Le nouvel article 26 C.I.R. [33], applicable à partir de l'exercice 1976 [34] les définit comme toutes celles, quels qu'on soient le débiteur, la qualification et les modalités de détermination et d'octroi, qui constituent pour le travailleur le produit du travail au service d'un employeur.

16. Elles comprennent notamment:

(a) Les traitements, salaires, commissions, gratifications, primes, indemnités et toutes autres rétributions analogues tels que pourboires et autres allocations même accidentelles, obtenues en raison ou à l'occasion de l'exercice de l'activité professionnelle.
(b) Les avantages en nature, ainsi que les avantages qui résultent de la prise en charge par l'employeur de dépenses professionnelles ou privées propres au travailleur, tels que les indemnités accordées aux travailleurs par leur employeur en remboursement de leurs frais de déplacement de leur domicile au lieu du travail [35]. Les indemnités obtenues en remboursement de dépenses effectives propres à l'employeur ne sont toutefois pas comprises parmi les rémunérations.
(c) Les indemnités obtenues en raison ou à l'occasion de la cessation de travail ou de la rupture d'un contrat de louage de travail, ou en réparation totale ou partielle d'une perte temporaire de rémunérations. De cette dernière disposition il ressort clairement que les "revenus de replacement" qui constituent la réparation totale ou partielle d'une perte temporaire de revenus professionnels sont dorénavant imposables. Cette disposition s'applique non seulement aux allocations sociales constituant la réparation totale ou partielle d'une perte temporaire de rémunérations mais aussi aux indemnités payées par le responsable du fait occasionnant la perte ou par son assureur. Le texte antérieur avait donné lieu à contestation en cette dernière matière [36].
(d) Les rémunérations proméritées par des appointés ou salariés mais payées ou attribuées à leur ayants cause.

(ii) des mandataires de sociétés par actions:

17. Le nouvel article 27, § 1 C.I.R. [37] les définit comme toutes celles qui constituent pour le bénéficiaire, le produit d'un mandat d'administrateur, de commissaire ou de liquidateur, ou d'un mandat ou de fonctions analogues, dans des sociétés par actions ou dans des personnes morales y assimilées ou assimilables, belges ou étrangères.

Notons qu'en cette matière la loi du 5 janvier 1976 a introduit une modification concernant l'Impôt des Non-Résidents. En effet dans le régime antérieur, les rémunérations obtenues par des non-habitants du Royaume, en raison d'un mandat d'administrateur, commissaire etc. d'une société par actions soumise à l'Impôt des Sociétés belge, n'étaient pas considérées comme revenus produits ou recueillis en Belgique lorsqu'elles étaient payées en raison d'une activité exercée à l'étranger par les bénéficiaires [38]. Il s'en suivait que ces revenus n'étaient pas soumis à l'Impôt des Non-Résidents. Le nouvel article 141, 2° C.I.R. [39] introduit une condition supplémentaire à la non application de l'Impôt des Non-Résidents. Dans le nouveau régime, cet impôt n'est pas applicable dans la mesure où ces rémunérations sont imputées sur les résultats d'établissements situés à l'étranger, en raison de l'activité exercée par les bénéficiaires au profit de ces établissements.

18. Elles comprennent notamment:

(a) les tantièmes et autres rémunérations fixes ou variables allouées à un titre quelconque, sauf en remboursement de dépenses effectives, propres à la société.
(b) les avantages en nature, les avantages résultant de la prise en charge par la société de dépenses propres au mandataire, les indemnités obtenus en réparation totale ou partielle d'une perte temporaire de rémunérations et les rémunérations proméritées par le mandataire mais payées à ses ayants cause.
(c) le crédit d'impôt au cas où les rémunérations allouées au mandataire n'ont pu être déduites des bénéfices imposables de la société. Rappelons que les rémunérations qu'une société par actions attribue à ses mandataires ne sont déductibles des bénéfices de cette société que lorsque les mandataires exercent des fonctions réelles et permanentes [40]. Cette déductibilité est cependant limitée à deux sociétés.

29. Tel qu'il a été modifié par l'article 15 de la loi du 5 janvier 1976.
30. Art. 71, § 1, 2° de la loi du 5 janvier 1976.
31. Cfr. supra nos 7 à 9 et infra nos 19 à 23.
32. Cfr. infra nos 24 et 25.
33. Tel qu'il a été modifié par l'article 17 de la loi du 5 janvier 1976.
34. Art. 71, § 1, 2° de la loi du 5 janvier 1976.
35. Cfr. toutefois infra n° 29.
36. Cfr. supra n° 6.
37. Tel qu'il a été modifié par l'article 17 de la loi du 5 janvier 1976.
38. Cfr. l'ancien article 141, 2° C.I.R.
39. Tel qu'il a été modifié à partir de l'exercice 1976 par l'art. 31 de la loi du 5 janvier 1976.
40. Art. 99 C.I.R.

Lorsque les rémunérations attribuées aux mandataires ne sont pas déductibles des bénéfices de la société, un crédit d'impôt fixé à 46% du montant brut des rémunérations est accordé aux mandataires qui peuvent l'imputer sur l'I.P.P. dû [41].

Ce crédit d'impôt constitue toutefois un revenu imposable pour le bénéficiaire [42].

(iii) des associés actifs dans des sociétés de personnes:

19. Le nouvel article 27, § 2 C.I.R. [43] les définit comme toutes celles quels qu'en soient le débiteur, la qualification et les modalités de détermination et d'octroi qui constituent pour le bénéficiaire le produit de l'activité professionnelle exercée en qualité d'associé dans les sociétés commerciales belges, autres que les sociétés par actions lorsque leurs bénéfices sont imposés à l'Impôt des Sociétés [44] et dans les sociétés étrangères assimilables à ces sociétés belges.

Les rémunérations attribuées aux associés actifs peuvent être déduites des bénéfices imposables de la société en tant que charges professionnelles [45]. Les sommes allouées aux associés qui ne constituent pas la contrepartie de leur activité professionnelle d'associé, sont imposées dans le chef de l'associé en tant que revenus mobiliers.

20. Les rémunérations des associés actifs comprennent notamment:

(a) les sommes allouées ou attribuées aux associés actifs à l'exception de celles qui constituent des revenus mobiliers [46] dans le chef des associés ou qui sont payées en cas de partage total ou partiel de l'avoir social ou en remboursement de dépenses effectives propres à la société.
(b) les avantages en nature, les avantages résultant de la prise en charge par la société de dépenses propres aux associés actifs, les indemnités obtenues en réparation totale ou partielle d'une perte temporaire de rémunérations et les rémunérations proméritées par l'associé mais payées à ses ayants cause.

21. Bien que le nouveau régime considère les sommes attribuées aux associés actifs comme "rémunérations", elles ne sont pas — ou pas encore — soumises au Précompte Professionnel. En effet, comme dans le régime antérieur [47], le Roi dispose du pouvoir de soumettre ces revenus à ce précompte [48]. Il ne semble cependant pas encore vouloir user de ce pouvoir puisque l'art. 3 de l'Arrêté Royal du 25 février 1976 [49] modifiant l'art. 113 de l'A.R. d'exécution du C.I.R. qui soumettait toutes les "rémunérations" au Précompte Professionnel, tend en effet à en exclure les "rémunérations" payées aux associés actifs. Comme dans le régime antérieur, les associés actifs sont tenus à effectuer des versements anticipés s'ils veulent éviter des majorations d'impôt [50].

22. Le régime antérieur des "bénéfices" donnait l'occasion aux associés actifs d'attribuer une quote-part de leurs revenus professionnels à l'épouse aidante [51]. L'imposition de ces revenus comme "rémunérations" à partir de l'exercice 1976 fait obstacle à cette possibilité. Il importe toutefois de remarquer que lors de la discussion dans la Chambre des Représentants d'un nouveau projet de loi modifiant le C.I.R. un amendement introduit par M. Desmarets [52] et portant sur le rétablissement de cette possibilité à partir de l'exercice 1977, fût adopté [53, 54].

23. Le nouveau régime des montants alloués aux associés actifs de sociétés de personnes en vertu de leur activité professionnelle est applicable à partir de l'exercice 1976 [55]. Ces revenus étant considérés à partir de cet exercice comme "rémunérations", c'est la date à laquelle ces sommes sont payées ou attribuées qui détermine la période imposable à laquelle elles appartiennent [56]. Ainsi les rémunérations payées à un associé actif pendant l'année 1975, appartiennent à la période imposable 1975 et sont imposées dans son chef pour l'exercice d'imposition 1976 en matière d'I.P.P.

Rappelons que suivant le régime antérieur des "bénéfices", ces revenus étaient considérés comme étant recueillis par les associés actifs à la date de la clôture de l'exercice comptable de la société [57]. Cependant un régime de transition a dû être instauré pour le cas où l'exercice comptable d'une société de personnes clôturé en 1975 porte également sur l'année 1974.
Dans le chef des associés actifs de sociétés de personnes dont l'exercice comptable clôturé en 1975, porte également sur une partie de l'année 1974, les revenus recueillis en tant qu'associé actif et se rapportant à cet exercice comptable restent pour l'exercice d'imposition 1976, des "bénéfices" dans le chef de l'associé [58]. Toutefois, les revenus que ces associés obtiennent pendant l'année 1975, après la clôture de l'exercice comptable sont des "rémunérations", ce qui entraîne une imposition anticipée par rapport au système antérieur.

En effet suivant le système antérieur ces revenus auraient été considérés comme appartenant à la période imposable 1976, c.à.d. la période imposable pendant laquelle l'exercice comptable 1975-1976 est clôturé, et imposés pour l'exercice d'imposition 1977. Le nouveau régime a pour conséquence que les revenus payés ou attribués aux associés actifs pendant l'année 1975 mais se rapportant à l'exercice comptable 1975-1976, appartiennent eux aussi à la période imposable 1975 et sont imposés pour l'exercice d'imposition 1976. Cependant l'ensemble des revenus professionnels de ces associés actifs est ramené fictivement à l'année, compte tenu de la période de l'année 1974 couverte par l'exercice comptable de la société, pour déterminer le taux de l'impôt applicable aux revenus imposables pour l'exercice d'imposition 1976. Cette mesure de transition tend à éviter que les associés actifs dans une société de personnes dont l'exercice comptable ne correspond pas avec l'année

41. Art. 135, § 1, 2° C.I.R., tel qu'il a été modifié par l'art. 20 de la loi du 20 décembre 1974, Mon. B. du 31 décembre 1974.

civile seraient imposés à des taux élevés pour l'exercice d'imposition 1976 en matière d'I.P.P.
En plus aucune majoration pour cause d'insuffisance de versements anticipés, n'est appliquée sur la partie de l'impôt afférente à de tels revenus qui en vertu de la loi du 5 janvier sont imposés pour l'exercice d'imposition 1976, au lieu de l'exercice d'imposition 1977 [59].

c. Définition des pensions, des rentes et des allocations en tenant lieu

24. Dans le régime antérieur, les pensions étaient assimilées aux rémunérations. Le nouvel article 32bis C.I.R. [60] stipule que sont visées quels qu'en soient le débiteur, le bénéficiaire, la qualification et les modalités de détermination et d'octroi, les pensions et les rentes viagères ou temporaires, ainsi que les allocations en tenant lieu qui se rattachent directement ou indirectement à une activité professionnelle dont les revenus sont imposables en tant que bénéfices, rémunérations ou profits. Les "revenus de remplacement" qui constituent la réparation totale ou partielle d'une perte permanente de bénéfices, de rémunérations ou de profits, sont aussi visés. Le régime antérieur avait donné lieu à contestation. La jurisprudence considérait que les revenus de remplacement constituant la réparation d'une perte permanente de bénéfices ou de profits n'étaient pas imposables à défaut de disposition légale [61]. Le nouveau texte met fin à cette contestation.

25. La cinquième catégorie de revenus professionnels imposables comprend, notamment les pensions, rentes, capitaux ou valeurs de rachat de contrats d'assurance-vie constitués en tout ou en partie au moyen soit de cotisations patronales, soit de cotisations personnelles d'assurance complémentaire contre la vieillesse et le décès prematuré. En vertu de l'article 54, 2°, 3° et 5° C.I.R. ces cotisations personnelles peuvent être déduites du montant global des revenus professionnels. Ces pensions, rentes, capitaux ou valeurs de rachat sont cependant immunisés lorsque les cotisations n'ont pas été déduites par l'assuré.

B. Les revenus professionnels immunisés

26. A cet égard des modifications ont été apportées quant aux immunisations à caractère social ou culturel.

Dans le régime antérieur l'article 41 C.I.R. immunisait pour des raisons sociales ou culturelles plusieurs revenus ayant le caractère de "revenus de remplacement". Comme le projet qui est devenu la loi du 5 janvier 1976 tendait à imposer les "revenus de remplacement", la portée de l'ancien article 41 C.I.R. a dû être limitée. Le nouveau texte s'applique à partir de l'exercice 1976.

Le nouvel article 41 C.I.R. [62] ne garde l'immunisation que pour les indemnités, allocations ou rentes qui ont le caractère:
— soit d'un revenu de complément, telles les allocations familiales:
— soit d'interventions dans certaines dépenses d'ordre privé, telles les allocations pour soins de santé, pour frais funéraires, pour aide d'une tierce personne, etc.;
— soit de témoignages de la solidarité nationale, tels le revenu minimum garanti, les allocations aux handicapés non travailleurs, les pensions des victimes de guerre, etc.

59. Cfr. art. 49, § 2 de la loi du 5 janvier 1976.
60. Introduit par l'art. 19 de la loi du 5 janvier 1976.
61. Cfr. supra n° 6.
62. Tel qu'il a été modifié par l'article 20 de la loi du 5 janvier 1976.

THE ADJUSTMENT OF BELGIAN INCOME TAX TO INFLATION.

The Belgian Program Law offers a full indexation for inflation for income tax on incomes up to 200,000 Bfrs., a decreasing partial indexation for income tax rates for incomes from 200,000 to 500,000 Bfrs., whereas incomes in excess of 500,000 Bfrs. do not receive any compensation for inflation. The latter incomes are subject to a 10 percent surcharge on that part of the income tax which can be attributed to the income in excess of 500,000 Bfrs. and — with respect to 1975 income — again to an additional 10 percent surcharge on income tax on income in excess of 1,500,000 Bfrs. This results in an effective increase of income tax in the higher income brackets.

Individual Income Tax

Income (Bfrs.)	1975 rate	1974 rate	Difference
50,000	nil	5.70%	— 5.70
100,000	6.92%	12.70%	— 5.78
150,000	11.80%	16.67%	— 4.87
200,000	15.43%	19.35%	— 3.92
250,000	19.28%	21.38%	— 2.10
300,000	21.86%	22.82%	— 0.96
350,000	23.86%	24.34%	— 0.48
400,000	25.56%	25.68%	— 0.12
450,000	26.89%	26.91%	— 0.02
500,000	28.00%	27.97%	+ 0.03
600,000	30.67%	30.64%	+ 0.03
700,000	32.57%	32.55%	+ 0.02
800,000	34.17%	34.15%	+ 0.02
900,000	35.57%	35.55%	+ 0.02
1,000,000	36.69%	36.67%	+ 0.02
2,000,000	45.66%	44.46%	+ 1.20
3,000,000	51.44%	48.89%	+ 2.55
4,000,000	55.83%	52.48%	+ 3.35
5,000,000	58.55%	54.72%	+ 3.83

27. Notons qu'en matière d'indemnités ou d'allocations familiales, le régime antérieur les immunisait à concurrence d'une somme égale aux allocations analogues que l'Etat accorde à son personnel. Les allocations familiales légales dont bénéficient les administrateurs de sociétés de capitaux et les associés actifs de sociétés de personnes étant inférieures à celles dont jouit le personnel de l'Etat, il était de pratique courante que ces sociétés attribuaient à ces personnes des allocations familiales complémentaires qui étaient immunisées dans le chef du bénéficiaire.

Le nouveau texte de l'article 41, § 1, 1° C.I.R. par contre, ne prévoit l'immunisation que pour les allocations familiales légales.

28. Le nouveau texte de l'article 41 C.I.R. [63] prévoit de plus expressément l'immunisation des sommes obtenues en exécution d'un contrat d'assurance individuelle contre les accidents corporels. Sous le régime antérieur elles étaient aussi immunisées tandis que les primes d'assurance constituaient des dépenses professionnelles à concurrence de la partie de la prime qui était censée couvrir des risques d'ordre professionnel [64].

Dans le nouveau régime qui prévoit l'imposition des "revenus de remplacement", la déduction de ces primes d'assurance en tant que dépense professionnelle a été supprimée [65] tandis que les allocations perçues en vertu de tels contrats continuent à être immunisées.

29. Continuent à être immunisées comme dans le régime antérieur:
- les indemnités accordées aux travailleurs par leur employeur en remboursement de leurs frais de déplacement de leur domicile au lieu du travail dans la mesure où elles ne dépassent pas 5.000F.B. l'an:
- les rentes octroyées aux invalides du temps de paix ou à leurs ayants droit, dans la mesure où elles dépassent ce qui correspond à la pension de retraite ou de survie à laquelle les intéressés auraient pu normalement prétendre;
- les prix, les subsides, les rentes et les pensions attribués par les pouvoirs publics ou par des organismes officiels à des savants, des écrivains ou des artistes dans la mesure où ils ne sont pas versés à titre de rémunération de services rendus [66].

30. Bien que tous les "revenus de remplacement" [67] soient en principe imposables à partir de l'exercice d'imposition 1976, certaines allocations sociales continuent à être immunisées pour l'exercice 1976 seulement. Il s'agit des indemnités, rentes, pensions et capitaux en tenant lieu octroyés en exécution de la législation concernant l'assurance en cas de maladie et d'invalidité, l'assurance contre le chômage, la réparation des dommages résultant d'accidents de travail ou sur le chemin du travail ou causés par les maladies professionnelles, ainsi que les allocations complémentaires de même nature octroyées en exécution de conventions collectives du travail rendues obligatoires par arrêté royal [68]. L'immunisation est soumise à la condition que le montant total des allocations légales, éventuellement majoré des allocations extra-légales, n'atteigne pas 80% de la perte de rémunération brute. Cette condition d'immunisation existait déjà dans le régime antérieur [69]. Toutefois, dans le régime en vigueur pour l'exercice 1976 ces revenus bien qu'immunisés, sont pris en considération pour la détermination du taux de l'impôt applicable aux autres revenus [70]. A partir de l'exercice 1977, l'immunisation conditionnelle des allocations sociales constituant des revenus de remplacement est supprimée. L'application d'abattements spéciaux [71] assure toutefois leur exonération de fait ou tempère leur imposition.

31. A partir de l'exercice d'imposition 1977, une seule immunisation est encore prévue en matière de "revenus de remplacement". En effet, à partir de cet exercice seules les indemnités octroyées en exécution de la législation concernant l'assurance en cas de maladie ou d'invalidité sont immunisées à concurrence de 10% de leur montant [72], en raison des dépenses médicales dont ces revenus sont grevés.

C. Les dépenses professionnelles

32. En plus de la suppression de la déduction en tant que dépense professionnelle des primes d'assurance individuelle contre les accidents corporels [73], la loi du 5 janvier 1976 prévoit la modification du régime des dépenses professionnelles forfaitaires, c.à.d. des montants que le contribuable peut déduire en tant que dépenses professionnelles sans qu'il ait à en faire la preuve. La réforme de ce système est introduite en deux temps.

a. Pour l'exercice d'imposition 1976 cette déduction s'opère, tout comme sous le régime antérieur, sur les rémunérations, y compris les revenus recueillis en tant qu'associé actif de société de personnes, les profits et les pensions, les rentes et les allocations en tenant lieu. Le barème est toutefois considérablement simplifié [74].
En ce qui concerne les rémunérations des travailleurs salariés et les profits des titulaires de professions libérales, les montants déductibles en tant que dépenses professionnelles forfaitaires pour l'exercice 1976 sont:
- 20% de la première tranche de 150.000 F.B. de ces revenus;
- 10%de la tranche de 150.000 F.B. à 300.000 F.B.;
- 5% de la tranche excédant 300.000 F.B.

Pour les rémunérations de mandataires de sociétés par actions et d'associés actifs de sociétés de personnes les dépenses professionnelles forfaitaires sont fixées à 5% de ces revenus.

Le forfait ne peut en aucun cas dépasser 60.000 F.B.

b. A partir de l'exercice d'imposition 1977 les revenus sur lesquels une déduction forfaitaire pour dépenses professionnelles peut être opérée sont modifiés. En effet cette déduction ne s'applique plus qu'aux rémunérations, autres que les allocations constituant la réparation partielle d'une perte temporaire de rémunérations, et aux profits [75]. La déduction ne s'applique plus aux allocations constituant la réparation partielle d'une perte temporaire de rémunérations ni aux pensions, rentes et allocations en tenant lieu. En effet, à partir de l'exercice d'imposition 1977 des abattements spéciaux sont accordés en ce qui concerne ces revenus [76]. Les taux de déduction forfaitaire sont maintenus pour l'exercice d'imposition 1977. Cependant le montant maximum du forfait est fixé à 75.000 F.B. [77].

D. Les abattements déductibles du total des revenus professionnels

33. Sous le régime antérieur l'allégement de la charge fiscale afin de remédier aux ou de tempérer les effets de l'inflation, était obtenu en modulant les abattements spéciaux sur le montant global des revenus professionnels. Pour l'exercice d'imposition 1976 une méthode d'indexation directe des barèmes d'I.P.P. est appliquée qui tient compte d'un taux d'inflation de 12,9% [78].

L'indexation directe ainsi réalisée est complète pour les petits revenus, c.à.d., ceux dont le montant net imposable n'excède pas 201.000 F.B., tandis qu'elle est partielle et dégressive pour les revenus moyens. En effet à partir d'un revenu net imposable de 465.000 F.B. l'effet de l'indexation est totalement supprimé pour les contribuables n'ayant aucune personne à charge.

L'application d'une technique directe d'allégement des effets de l'inflation permet la simplification des abattements sur les revenus professionnels imposables.

a. Pour l'exercice d'imposition 1976

34. L'abattement sur le montant global des revenus professionels est en principe fixé à 10.000 F.B. [79].

Lorsque les revenus professionnels d'un contribuable sont constitués exclusivement de pensions, rentes et allocations en tenant lieu, un abattement plus élevé est prévu afin d'assurer l'exonération de fait des pensions dites "sociales".

D'une part cet abattement spécial est fixé à 76.000 F.B. moins la déduction forfaitaire pour dépenses professionnelles [80], lorsque le bénéficiaire de la pension est:
— soit un contribuable marié dont le conjoint n'exerce pas ou n'a pas exercé une activité professionnelle distincte, c.à.d. lorsque le conjoint du bénéficiaire de la pension ne dispose pas de revenus professionnels;
— soit un contribuable célibataire, veuf ou divorcé.

D'autre part l'abattement spécial pour pensionnés est fixé à 53.000 F.B. moins la déduction forfaitaire pour dépenses professionnelles, lorsqu'un des époux ne jouit que de pensions, rentes et allocations en tenant lieu, tandis que son conjoint exerce une activité professionnelle distincte, ou lorsque les deux conjoints bénéficient chacun, séparément d'une pension.

L'abattement spécial pour pensionnés ne peut être inférieur à 10.000 F.B.

En ce qui concerne les ménages l'abattement de 53.000 F.B. moins les dépenses professionnelles forfaitaires, et celui de 10.000 F.B. peuvent être soit cumulés, soit appliqués deux fois lorsque les époux disposent chacun de revenus professionnels.

b. A partir de l'exercice d'imposition 1977

35. Le régime des abattements sur le montant global des revenus professionnels est à nouveau modifié [81]. Ce nouveau régime des abattements a dû être introduit afin d'assurer l'exonération de fait ou de tempérer l'imposition des allocations sociales constituant des "revenus de remplacement".

Rappelons qu'à partir de l'exercice 1977 les "revenus de remplacement" sont effectivement imposables tandis que la déduction forfaitaire pour dépenses professionnelles ne s'applique plus aux allocations constituant la réparation partielle d'une perte temporaire de rémunérations, ni aux pensions, rentes et allocations en tenant lieu [82].

Le nouveau régime des abattements du montant global des revenus professionnels prévoit:
(i) un abattement ordinaire de 10.000 F.B. pour le cas où les revenus professionnels comprennent uniquement:
— des bénéfices, rémunérations ou profits autres que des indemnités constituant la réparation partielle d'une perte temporaire de ces revenus;
— des pensions, rentes ou allocations en tenant lieu qui constituent la réparation totale d'une perte permanente de bénéfices, rémunérations ou profits.

(ii) Un abattement spécial égal à la différence entre d'une part le montant maximum annuel de l'allocation de chômage et, d'autre part, le minimum imposable pour les contribuables n'ayant aucune personne à charge.

Lorsque cet abattement aurait déjà été applicable pour l'exercice 1976, il aurait atteint en gros 118.000 F.B. [83]. Cet abattement spécial est appliqué lorsque les revenus professionnels comprennent exclusivement:
— des indemnités constituant la réparation partielle d'une perte temporaire de bénéfices, rémunérations et profits;
— des pensions, rentes et allocations en tenant lieu qui constituent la réparation partielle d'une perte permanente de bénéfices, rémunérations et profits.

(iii) Un abattement spécial égal à la différence entre d'une part le montant maximum annuel de l'indemnisation globale à laquelle les travailleurs âgés jouissant de la prépension, peuvent prétendre, et, d'autre part le minimum imposable pour les contribuables n'ayant aucune personne à charge. Cet abattement spécial s'applique lorsque la prépension constitue le seul revenu professionnel du contribuable. Notons que cet abattement ne s'applique qu'à la prépension instauré par la convention collective du travail du 19 décembre 1974 et que cette prépension n'est accordée que lorsque le travailleur est licencié par son employeur. La loi du 30 mars 1976 relative aux mesures de redressement économique [84] a introduit elle aussi un régime de "prépension" accordé à la demande du travailleur. Le système de "prépension" prévu par la loi du 30 mars 1976 n'est applicable qu'au 31 décembre 1976 avec possibilité de prorogation toutefois [85]. Bienque l'art. 62bis C.I.R. n'accorde l'abattement spécial sur les prépensions, qu'à celles qui sont prévues par la convention collective du 19 décembre 1974, il est cependant possible que cet abattement soit aussi appliqué aux prépensions accordées en vertu de la loi de redressement économique.

36. Le nouveau régime des abattements sur le montant global des revenus professionnels introduit à partir de l'exercice 1977 l'application d'une double règle de proportionnalité.

---

78. Cfr. l'Annexe I à l'A.R. du 25 février 1976 (Mon. B. du 10 mars 1976, p. 2614 et ss) pris en exécution des art. 77 C.I.R. (tel qu'il a été modifié par l'art. 7 de la loi du 5 janvier 1976) et 48 de l'A.R. d'exécution du C.I.R.
79. Cfr. l'art. 54, 4°, a C.I.R. tel qu'il a été modifié uniquement pour l'exercice 1976 par l'art. 3 de la loi du 5 janvier 1976.
80. Cfr. supra n° 32, a.
81. A partir de cet exercice ces abattements sont régis par le nouvel art. 62 bis C.I.R., introduit par l'art. 45 de la loi du 5 janvier 1976.
82. Cfr. supra, n° 32, b.
83. Chambre des Représentants, session 1975-1976, n° 680-10, Rapport, p. 14.
84. Mon. B. du 1 avril 1976, p. 3923 et ss.
85. Cfr. l'art. 30 de la loi du 30 mars 1976.

En effet, chacun de ces abattements ne sera accordé qu'en fonction de la quote-part des revenus auxquels ils s'applique, dans l'ensemble des revenus professionnels. D'autre part dans les ménages ou les deux conjoints bénéficient chacun de revenus professionnels, ces abattements ne sont accordés qu'une fois et répartis proportionnellement pour déterminer le montant net des revenus professionnels de chacun des époux.

Ainsi lorsque les revenus professionnels [86] d'une contribuable célibataire comprennent pour moitié des salaires et pour l'autre moitié des allocations de chômage, les deux abattements correspondants sont aussi accordés pour moitié.

Lorsque le mari et la femme disposent chacun d'un salaire égal, l'abattement ordinaire de 10.000 F.B. est attribué pour une moitié au mari et pour l'autre à son épouse.

Même lorsque les revenus professionnels des conjoints sont imposés séparément [87], les abattements ne sont accordés qu'une fois par ménage.

E. L'abattement spécial sur les revenus professionnels de l'épouse

37. Dans le régime antérieur un abattement de 40%, avec un minimum de 19.000 F.B. et un maximum de 27.000 F.B., était appliqué aux revenus professionnels de l'épouse. Cet abattement s'appliquait cumulativement avec l'abattement sur le montant global des revenus professionnels. Il était déduit des revenus professionnels de la femme ayant une activité professionnelle distincte de celle de son mari ou de la quote-part des bénéfices ou profits pouvant être considérée comme attribuée au conjoint aidant effectivement le contribuable sans disposer de revenus d'une activité professionnelle distincte. L'attribution de bénéfices ou profits au conjoint aidant ne pouvait avoir pour effet de ramener la quote-part de l'autre conjoint au-dessous de 72.000 F.B.

38. Pour l'exercice d'imposition 1976, cet abattement est porté à 46.000 F.B. [88]. La limité en dessous de laquelle les bénéfices ou profits d'un conjoint ne peuvent descendre par l'attribution d'une quote-part à l'autre, est fixée à 120.000 F.B. Rappelons qu'avant la loi du 5 janvier 1976, les revenus professionnels obtenus en tant qu'associé actif d'une société de personnes, étaient imposés comme bénéfices. Ceci donnait à ces associés actifs la possibilité d'attribuer une quote-part de ces revenus à l'épouse aidante [89]. A partir de l'exercice d'imposition 1976, ces revenus sont imposés en tant que rémunérations ce qui empêche ces associés actifs d'attribuer une quote-part de leurs revenus à leur conjoint aidant [90].

39. A partir de l'exercice d'imposition 1977 l'abattement spécial sur les revenus professionnels de l'épouse est porté à 56.000 F.B. [91]. Cette augmentation s'explique par le fait qu'à partir de cet exercice l'abattement sur le montant global des revenus professionnels [92] n'est accordé qu'une fois par ménage. Notons que lorsque les revenus professionnels des conjoints sont imposés séparément [93] l'abattement spécial de 56.000 F.B. sur les revenus professionnels de l'épouse n'est pas accordé.

La limite en dessous de laquelle les bénéfices ou profits d'un conjoint ne peuvent descendre par l'attribution d'une quote-part à l'autre est portée, à partir dudit exercice, à 150.000 F.B. [94]

F. L'imposition séparée des revenus professionnels des époux

40. Avant la loi du 5 janvier 1976, le C.I.R. prévoyait le cumul de tous les revenus des époux [95]. A partir de l'exercice d'imposition 1977, l'imposition séparée des revenus professionnels des époux est introduite pour autant qu'il s'agisse de revenus professionnels modestes.

L'application de l'imposition séparée est soumise à la condition que les époux disposent chacun de revenus professionnels, que ceux-ci proviennent d'une activité professionnelle distincte, ou de l'attribution de bénéfices ou de profits au conjoint aidant. Les revenus professionnels nets cumulés des époux ne peuvent toutefois excéder 350.000 F.B. Par revenus professionnels nets il faut entendre les revenus professionnels bruts dont ont été déduits les dépenses professionnelles, les dépenses déductibles autres que professionnelles, et les abattements déductibles du montant global des revenus professionnels de chaque époux. Dans le chef de l'épouse, l'abattement spécial sur ses revenus professionnels [96] n'est cependant pas appliqué.

Lorsque les revenus professionnels nets cumulés des époux n'excèdent pas la limite de 350.000 F.B., les revenus professionnels de l'épouse sont imposés séparément sans qu'elle puisse bénéficier de l'abattement spécial de 56.000 F.B. Ses autres revenus, tels les revenus immobiliers, mobiliers et divers, continuent cependant à être cumulés avec tous les revenus du chef de famille. Au cas d'imposition séparée des revenus professionnels des époux, l'épouse n'est plus considérée comme personne à charge de son conjoint [97] bien qu'il y ait imposition cumulée pour ce qui concerne les autres revenus. Les autres personnes pour lesquels une réduction d'impôt pour charges de famille peut être obtenue sont considérées comme étant à charge de celui des conjoints ayant les revenus imposables les plus élevés.

Lorsque le régime du cumul serait toutefois plus favorable au ménage, c'est ce régime qui doit être appliqué. Cela peut arriver en raison des charges de famille importantes du ménage ou de la répartition des revenus professionnels du ménage entre le mari et la femme.

41. Lorsque les revenus professionnels nets cumulés des conjoints excèdent 350.000 F.B. une règle de palier est prévue afin de ne pas trop léser les ménages dont les revenus professionnels nets dépassent légèrement ce montant.

En effet en ce cas l'impôt calculé sur les revenus cumulés des conjoints ne peut dépasser celui dû par le ménage en imposant séparément les revenus professionnels, majoré de la moitié de la différence entre les revenus professionnels nets cumulés et 350.000 F.B.

86. Après déduction des dépenses professionnelles mais avant la déduction des autres dépenses déductibles. Cfr. l'art. 62bis, § 2, al. 2 C.I.R.

TAXATION IN THE MIDDLE EAST.

Except to the relatively few insiders, little is known about tax and related questions in those Middle East countries on which, for one reason or another, the interest of businessmen and investors is more and more being focused. An international conference recently held in Amsterdam highlighted some of the most crucial problems with respect to eleven countries which offer interesting opportunities for all kinds of business activities. This note gives a necessarily brief summary of the main points discussed during the conference.

The countries of the Middle East can be categorized as developing countries. Unlike other developing countries, however, they generally have huge funds available from which they can readily pay for whatever they need in the context of their development programmes. In many countries there is a lack of managerial skill and technological know-how. In some of them there is even a shortage of labour, whereas others are faced with a crucial unemployment problem.
It is not surprising that the overall attitude towards foreign investment and business is positive. Even where legislation seems to be very strict, most countries have built in legislative or administrative outlets enabling them to grant special favourable treatment. While it is perhaps an exaggeration to say some laws only exist on paper but are not applied in practice -- although one sometimes cannot avoid getting this impression -- foreign activities deemed to be of interest for local development are positively looked upon and treated accordingly. It is, as always in the case of operations abroad, important to understand traditions and mentalities. This applies in particular to dealings with the authorities. Whereas in some countries there is a legislative and administrative machinery, in others it is the Ruler who determines what is to happen and his decree is the Law. In several cases, special investment laws or codes provide for rules which deviate fundamentally from the normal legal provisions and are, therefore, sometimes very attractive. Usually, special committees which have the authority to examine and to approve applications made in connection with new projects, operate quickly and efficiently.
During the Amsterdam conference some points of special interest dealt with in the Conference Manual were highlighted as a result of discussions with the 200 participants. A few of these points are summarized in this brief article. *The research staff of the Bureau, in cooperation with the speakers and other experts, is currently examining the possibility of preparing a detailed loose-leaf work scheduled for publication in the autumn of 1977.* **Meanwhile, a small number of copies of the Conference Manual are still available.**

An important point is the criterion of "being engaged in trade or business" within a country. This point has two main aspects. On the one hand, the question arises as to whether a foreign firm is *allowed to do business* **in a country. On the other hand, one wants to know when tax liability arises.**

Foreigners restricted in doing local business

The basic attitude towards foreigners wishing to engage in trade *within* Middle East countries is restrictive. In nearly all countries foreign individuals are prohibited to carry on a local business. Saudi Arabia and Kuwait, for instance, grant the right to engage in business as a commercial agent exclusively to the nationals. Other countries follow this same pattern by requiring every merchant to be registered but then provide that such registration is only possible for nationals.
Doing business in the form of a company is generally more suitable for foreigners. Companies are allowed to engage in business within the countries but a normal requirement is local participation in the share capital as well as in the management. As regards Saudi Arabia, commercial law does not provide for restrictions as to foreign ownership, but under the provisions of the Foreign Capital Investment Code permission is required for the investment of foreign capital.

Alleviation of restrictions in special cases

For special projects the restrictions are generally waived and in many cases even incentives are offered. The exceptions to the normal rules apply mostly if for the project concerned foreign know-how is a prerequisite for the realisation of the project. In most situations a special Committee has to consider whether the project is in the public interest. If this is found to be the case, the investors are entitled to the benefits of the various investment laws or codes.

Tenders

Usually, the international business community is invited to offer a tender for public projects. Often, this tender system is restricted in that not every foreign company is allowed to subscribe. Some countries accept tenders only from "qualified firms" appearing in a special list. As regards private projects foreign companies may themselves sometimes take the initiative. For them to benefit from the favourable legislation they must prove that the project is one of public interest and inform the authorities in detail about feasibility, marketing aspects, local participation and the like.

Company law

The company law of several countries is based on the civil law system. The types of companies are generally those known in Western European, particularly French law. Usually they are legal entities with the exception of joint ventures which are considered as an undisclosed agreement of association between two or more parties. This is especially the situation in **Saudi Arabia.** In the **United Arab Emirates** the formation of companies is effected through a charter system, i.e. by Decree of the Ruler.

When does trading attract tax?

Foreign firms have to be very careful if they do not wish to become liable to income tax. Taxation of business profits is based upon the principle of territoriality which is rather sharply defined. Trading *with* a country — i.e. the selling of goods *to* a Middle East country — does not usually attract tax, but only to the extent that the goods are delivered at a port. As soon as they are delivered directly to the ultimate customer, the foreign firm will be deemed to carry on business *within* the country and become taxable. In other words, even in the absence of any sales office or business agent, Middle East tax liability may arise because of the simple fact that delivery takes place within the country.
This is an important feature in connection with construction operations, especially those concerning the construction and installation of industrial or similar plants. Where a foreign company applies machinery and other equipment manufactured in its own country for installation in a Middle East country, it is often worth its while for it to conclude two separate contracts: one to deliver the machinery and equipment at a port and the other to assemble or construct. Thus, only profit resulting from the latter will be taxable in the host country.

Head office expenses

Most Middle East tax laws are not very detailed on the subject of the computation of taxable profit. Generally accepted methods of commercial accounting play an important role. As a consequence of the principle of territoriality, business expenses are only deductible if connected with taxable activities within the countries concerned. Head office expenses may constitute a problem in this respect. Charges for direct services related to operations in the Middle East are generally deductible if such services contribute to the profitability of the operations. Overhead cost of the head office would not as such be allowed. Often, the solution seems to be to take such cost into account in computing the fee charged for direct services.

Interest and royalties

Another problem arising from the principle of territoriality is the somewhat ambiguous position of interest and royalties payable by the Middle East activities. While such payments are deductible expenses in computing the profits from such activities they are at the same time income from local sources. The problem then is what part of the interest and royalties constitutes taxable profit. In such cases the general rule is applied that the profit is estimated if no proper accounts are kept. **Saudi Arabia** for instance assumes that at least 15 percent of such payments constitute taxable profit, which then is taxed at normal rates.

Depreciation, capital gains, losses

Depreciation of assets is deductible. Where depreciable assets are sold at a gain, such capital gains are included in ordinary profit and taxable as such.
As regards losses different rules apply in the various countries. Within two extremes, losses incurred in previous accounting periods are carried forward. In **Kuwait** this is allowed for an unlimited number of years. On the other end, **Qatar** and **Saudi Arabia** do not allow any loss carry-over.

Special rules and incentives

Most countries apply special taxes or rules to oil companies.
In all cases, approved or qualifying foreign investments may benefit from the incentives provided for in special investment laws.

(reproduced by kind permission of Business International S.A., Geneva)

Rate structure

Where companies are taxed, two different rate structures apply. There are graduated rates on a per bracket basis, where for each bracket a percentage is imposed irrespective of the total profit. In some countries the rates are graduated as well but each percentage applies then to *total* profit not exceeding a certain bracket. In the following table, these two methods are indicated as "graduated rates" and "flat graduated rates" respectively.

General evaluation

Although at first sight the attitude towards foreign investors seems to be restrictive, foreign companies in many cases are not only allowed but even welcomed to operate in most Middle East countries. The only problem that may arise for a particular company is to come into the picture. Even though this is not always required, it is to be recommended to get in touch with a local partner or sponsor who can facilitate the contacts with the various authorities and who takes care of compliance with the provisions of the various laws, decrees and regulations. This is particularly desirable in connection with the drawing up of contracts and other legal documents which must always be submitted in the Arabic language.

THE FACTS:

The conference was held in Amsterdam, 27-29 October, 1976

Subject:
Tax and Legal Aspects of Trade and Investment in Oil Countries and Financial Centres of the Middle East.

The eleven countries covered:

Bahrain - Egypt - Iran - Iraq - Jordan - Kuwait - Oman - Qatar - Saudi Arabia - Syria - United Arab Emirates

The ten speakers:

Issa El-Ayouty
Partner of Issa El-Ayouty & Co., Accountants & Auditors, Jeddah
D. Bennetts
Partner of Peat, Marwick, Mitchell & Co., Dubai
George Ghali
Partner of Saba & Co., Jeddah
Sayed Habib
First Under Secretary of Ministry of Finance, Cairo
D. Fletcher
Partner of Whinney, Murray & Co. in the Middle East, Deira — Dubai
P. Nabavi
Partner of Coopers & Lybrand, Tehran
Khalid Issa Taha
Lawyer, Baghdad
Kamen Troller
Lawyer, President of the Arab-Swiss Chamber of Commerce and Industry, Geneva
Usama Tuqan
Partner of Saba & Co., Bahrain
D. Wainman
Partner of Whinney, Murray & Co., London

The Conference Manual

prepared by Mr. J. Mittendorff with the assistance of the speakers contains 11 country chapters, each dealing with the following subjects:
— Selling goods
— Trade agencies
— Construction or assembly activities
— Branches
— Subsidiaries
For each subject, the legal, financial, tax and customs aspects are summarized.

Moreover:

the texts (in English) of:
— the multilateral Arab double tax treaty
— the treaty on Arab Economic Unity
— the existing bilateral treaties between
Egypt — Austria
Egypt — Finland
Egypt — Germany
Egypt — Italy
Egypt — Norway
Egypt — Sweden
Egypt — U.S.A.
Iran — France
Iran — Germany

A limited number of the Conference Manual is still available at the price of 200 Dfl. (by registered airmail: 220 Dfl.). Please use the enclosed order form and enclose your cheque.

	I Local participation	II Corporate income taxes (max.)	More favourable treatment as regards I and II under special law or arrangement	Exchange control limitation
Bahrain	51%	nil, except oil companies	yes	no
Arab Republic of Egypt	51%	undistributed 39.7% distributed 40.55%	yes	yes
Iran	At least majority. 25% foreign holding permitted	foreign company graduated rates up to 60% at Rs 50 M Special construction withholding tax 5.5%	yes	approval, no
Iraq	51%	graduated rates up to 60% at I.D. 15,000	yes	yes
Jordan	51%	38.5%	yes	yes
Kuwait	51%	flat graduated rates up to 50% at KD 375,000	yes	no
Oman	35% up to 66 2/3%	flat graduated rates up to 50% at RO 500,000	yes	no
Qatar	51%	flat graduated rates up to 50% at QD 5 M	yes	approval, no
Saudi Arabia	not, 25% to qualify for incentives	graduated rates up to 45% at S.R. 1 M	yes	no
Syria	No, however authorisation needed	graduates rates up to 66% at £S 700,000	yes	yes
United Arab Emirates	Charter system Abu Dhabi 51%, or 25% Others local sponsor or bank guarantee	graduated rates up to 50% at Rupee Riyal 1 M respectively Dirham 5 M	yes	no

Inflation and Taxation.

At present, almost every country, whether developed or less developed, suffers from inflation. There may be a variety of causes of inflation but the common feature is that crucial problems arise in the area of taxation of business income. In most countries, income tax is based upon the nominalistic principle.

Over the years, several attempts have been made to adjust income tax provisions so as to reflect economic realities. As regards business income a *revaluation of assets* for the purpose of determining depreciation allowances has been admitted or is still being granted. With respect to progressive individual income taxes, rates, allowances as well as brackets have been, or are being, adjusted. These and other measures have not always led to practical results.

Learned societies have put up study committees or devoted special meetings to the problem of inflation and taxation. During its London Congress held in September, 1975, the International Fiscal Association invited a panel of experts to discuss it. At this year's Congress in Vienna (October, 1977) one of the two main subjects is "Inflation and Taxation", on which a large number of national reports is expected, with Prof. Dr. Hans Georg Ruppe from Austria as general reporter. The London based Institute for Fiscal Studies made it a topic for research in depth.

Inflation presents a special problem for developing countries seeking to attract foreign investments. A country facing and suffering particular difficulties in this respect is Israel. The Israeli Government has taken active steps to resolve the matter in a new manner after previous legislation having been rather unsuccessful. Dr. Ernst W. Klimowsky, president of the Israeli branch of the International Fiscal Association and a lawyer in Tel Aviv briefly reports on the measures recommended and now officially proposed in his country.

TAX MEASURES AGAINST INFLATION.

Dr. E. W. Klimowsky

A. The economic and tax problems

With an economy with an annual inflation rate of between 30-35% and nevertheless badly needing foreign investments in order to steep up the growth of its national output above 2%, Israel is looking for a remedy also in the fiscal field.

Attempts for the same reasons and purposes had already been made elsewhere, for instance in France, to allow balance sheet reserves; similar attempts were contemplated in U.K.

The problem had been discussed by a panel of experts at the 29th Congress of the International Fiscal Association 1975 in London. One of these experts had been Shalom Ronel, past president of the Israeli Institute of Public Certified Accountants. He was on November 12th, 1975, appointed by the Ministers of the Treasury, Commerce and Industry to act as chairman of a committee which should examine the effects of devaluation of the Israeli pound (IL) on foreign investments and to propose measures to maintain and encourage such investments in Israel. In its Report of February 2nd, 1976 the committee surveyed the unsatisfactory experience made after previous one-time devaluations of the IL with regard to the maintenance of the value of equity capital in terms of foreign currency; the laws of 1958, 1964 and 1969 granting additional depreciation allowances had proved to be completely inadequate countermeasures. Therefore a permanent and built-in remedy had to be found, especially for enterprises with a high working capital whilst with regard to the investment in fixed assets the problem was not so significant.

The situation of the foreign investor had been deteriorating in two ways: on the one hand he suffered a genuine loss of foreign currency in both real and nominal terms. It is true that the same investor made a profit on loans received in IL. On the other hand, in case of sale of an asset acquired in foreign currency and sold in foreign currency, the Israeli law courts related the purchase and sale's price to IL and held that such an investor had made a profit in IL for which he was liable to income tax or capital profits tax. All these difficulties aggravated by the introduction into Israeli economy of the "creeping devaluation" whereby with an attempt to delay any rise in price level, the rate of the IL to the US dollar was constantly lowered in short intervals, each time at about 2%. The investor was, therefore, interested to postpone the conversion of foreign currency into IL. This withholding tactics caused considerable tension with the Israeli enterprise which had to take costly loans in IL from Israeli banks. Moreover, that enterprise cannot normally take short-term loans in foreign currency, this being against Israeli fiscal policy.

The committee rejected the insurance of the rate of exchange as an alternative remedy which would cost 10.4% annually with a devaluation rate of 30%. In any such case the value of the undivided profits would have to be insured as well in terms of foreign currency, thereby demanding a larger premium than the insurance of share capital because it involves a short period of time and a probably quick withdrawal. The issue of bonus shares will require a complicated adjustment of premiums. Other alternative remedies, such as additional loans with or without convertibility grants, tax credit certificates and the introduction of a special allowance to maintain only the working capital into foreign currency were examined and rejected by the committee.

B. The recommendations by the committee

The committee found that by way of legislation two fundamental positions had to be altered in order to pave the way for the attraction of foreign currency investments:

(a) Relinquishing the nominalistic treatment with regard to those investments, and —

(b) Income tax exemption of any profits arising from the devaluation of the IL.

"No tax will be imposed on profits, where the amount of the provision is negative."

This should be confined to foreign currency earning industrial enterprises.

The particulars of these recommendations are:
1. Companies wholly or partly approved or recognised under the Israeli Law for the Encouragement of Capital Investments (L.E.C.I.) and the Law for the Encouragement of Industries (L.E.I.) and owned by foreign residents or in which foreign residents have more than 25% of the control, may out of their profits make an *Equity Maintenance provision* in IL in order to maintain the approximate value of equity capital, including accumulated profits as measured in terms of foreign currency. This Provision is income tax deductible even in closely-held companies (under the control of not more than five persons) and will be calculated according to the adjustment of depreciation and the amount required for the working capital. Also companies jointly owned by foreign *and* local investors may set up that Provision. The exchange rate differentials due to investors are a deductible expense.

Because the earlier anti-inflationary (not that for excessive wear and tear) depreciation allowance has become superseded, it will now be disallowed.

2. The Equity Maintenance Provision is meant to insure the foreign currency value of the share capital and also, if so desired, the accumulated surplus to be distributed as dividend. For the latter purpose that surplus is to be adjusted to the exchange rate and, after a withholding tax of 25% or in case of Double Taxation Conventions of 15% in terms of foreign currency be transferred to a Dividend Equalization Reserve. Adjustment of depreciation is to be computed once a year only, viz. according to the coefficients to be published once a year by the Income Tax Commissioner. Example: For an asset of IL 100.— the exchange rate was by the end of the first year IL 4.20 and the next rate IL 7.24, the adjusted depreciation of that asset will be IL 172.—.

C. The Equity Maintenance Provision Bill

Now, the Minister of Finance has on November 17th, 1976 issued the first draft of a Bill which is intended to shield foreign investments against inflationary corrosion.

The introduction of the "creeping devaluation" aggravated that corrosion to a perilous degree, inasmuch as these did not take the form of value-preserving fixed assets. The calamity was especially felt by scientifically orientated enterprises where the percentage of working capital is rather high. One of the results was the speedy distribution of dividends for foreign investors. In order to solve these problems the recommendations of the Ronel Committee were adopted and will be presented to the Knesset as a Bill of which the salient features will be as follows:

(a) An industrial company having more than 25% direct or indirect participation by non-residents, shall be entitled to set up a tax-exempt *reserve* as Equity Maintenance Provision (E.M.P.). That investment may give to the non-residents the right to dividends or to voting power or to appoint members of the board of directors. The investment itself may be composed of equity and of shareholders loans. This new proposition is meant for genuine non-residents only and, therefore, a company registered outside Israel but controlled by an Israeli resident is excluded.

(b) The E.M.P. is income-tax deductible and is being adjusted once every year from the year of start of operating to the end of that and every following year. The adjustment is composed of the following particulars: long-term loans and current obligations and payments made to foreign shareholders, even to those who have a controlling interest in the company.

(c) The provisions made are to be registered in a special account to be kept separate in the annual balance sheet as "Capital Maintenance Reserve" and shall serve to maintain the payment of dividend in foreign currency and to cover payments of the "negative provision" (when the amount required exceeds the adjustments of the depreciation and other debts). This negative provision is considered as an income item and shall not exceed the amount of provisions made in the two foregoing years. Has this been, however, the case, then the surplus shall be transferred to the two subsequent years and shall be deducted from the positive provision.

(d) From the E.M.P. the amount necessary for the adjustment of the distributable dividend is to be transferred into a "Dividend Equalisation Reserve" (D.E.F.) which is to be registered in a special account and to be singled out in the annual balance sheet. If the company has overdrawn the E.M.P. it has to pay back the amount of the tax-exempt overdraft with interest.

(e) Because of the grant of the perpetuating anti-inflationary remedy the earlier special depreciation allowances are cancelled.

The new measures are to remain in force for ten years, and from 1980 onward no new such privileges are to be given. The right to those privileges is to be computed on a monthly base beginning from the actual month in which the grant is being given.

It is noteworthy that the currency and tax privilege will be granted to the company as such and not to the foreign investor and that they apply also to such otherwise qualifying companies which are controlled by not more than five persons.

LOOSE-LEAF SERVICES REVIEW

For many years, we have been listing not only loose-leaf publications received for review, but also the updating supplements subsequently received for these publications. This information will continue to be listed in the section: Loose-leaf Services.

As an additional service, however, we are now starting a country-by-country survey, listing bibliographical notations and further information on the contents of these books. The first of these surveys appears in this issue on page 38 and deals with loose-leaf publications covering Australia and Belgium.

From tax haven to fiscal paradise.

H.W.T. Pepper

PART ONE

I. INTRODUCTION *

1. Opinions about tax havens tend to vary from regarding them as the unacceptable face of capitalism to hailing them as sanctuaries from over-oppressive tax levies, depending on whether one is trying to collect taxes or avoid paying them.

2. Since World War II, when many countries' taxes were raised to unprecedented heights, not every country has reverted to more "bearable" tax levels and there has been a brisk business in setting up tax havens and in using their services.

3. Economists may deplore the channelling of highly-skilled private sector man-power into the non-productive tax avoidance industry, with a corresponding diversion of governmental resources into countering avoidance. High tax levels encourage avoidance techniques which tend to reduce the tax base, leading to the need for still higher taxes, which in turn increases the exasperation factor and leads to even more avoidance. Economic waste is also implicit in the diversion of skills and resources from higher-taxed to lower-taxed countries purely on tax considerations intead of on the basis of real economic needs.

Fiscal Losses and Gains

4. The "fiscal wastage" or leakage (or "saving", depending on one's viewpoint) caused by the use of tax havens cannot be estimated accurately but probably runs into thousands of millions of dollars, only a tiny part of which accrues as revenue to the havens.

5. The losers tend to be the highly-industrialized countries, which are usually also highly-taxed, but these are not the sole sufferers, since some developing countries also have high tax rates and are thus at even greater risk (because of limited resources to cope with them) to tax avoidance schemes.

6. The havens themselves are a varied collection of colonies, principalities, and independent states, which by no means, as a body, represent the most needy countries of the world. Some havens achieve comparative affluence for their populations, and sometimes this affluence is, in effect, at the expense of much poorer developing countries whose tax revenue is also eroded by haven activities. Nevertheless, as will be seen later, certain specific requirements govern the question of which countries could be developed as tax havens and these factors have little to do with a country's needs or deserts!

* *For a detailed table of the various tax havens, see page 5.*

TABLE OF CONTENTS

PART ONE

Para. Subject

1- 16 Introduction
4- 6 Fiscal Losses and Gains
7- 12 Influence of Fiscal Policy on Propensity to Avoidance
13- 16 Definition
17- 29 "Respectable" Uses of Tax Havens
21- 29 "Defensive" Uses
30- 35 Attributes and Tax Structure of a Tax Haven
36- 42 Typical Uses of a Tax Haven
43- 44 Where Use of a Tax Haven Inappropriate
45- 46 Regional Considerations
47 "Image"
48- 50 Tax Havens and Tourism
51- 58 Individual Taxpayers: Residential Havens
57A- 58 Artistic Havens
59- 60 No Tax and Low Tax Havens
61- 65 Exchange Control
66- 67 Geographical "Zoning" of Havens
68- 72 Tax-Avoidance & Counter-Tax-Avoidance: Restrictions on Havens
73- 78 Competition Between Havens:
73- 75 Fees
76 Services
77 Work Permits
78 Laws
79 Pre-Requisites for a Tax Haven

PART TWO *(in next issue)*

80- 85 Permissible & Desirable On-Shore Activities: Benefits to Haven
86- 87 Other Economic Activities
88- 95 Captive Insurance Companies
96- 97 International Business Companies
98-100 Off-Shore Companies:
98- 99 Directors' Meetings: Local Directors
100 Revenue to Haven Government
101-103 Off-Shore Trusts and Funds: Family Trusts
102-103 Investment Trusts and Funds
104-107 Banks
108-110 "Secret" or "Numbered" Bank Accounts
111-117 Shipping Havens: "Flag of Convenience": General
115-117 Factors other than Taxation
118-121 Shipping Havens and Centres
122-125 "Free Ports" and "Duty-Free Zones": Entrepot Trade and Processing Industries
124 Income Tax on Export Industries
125-126 Tax Sparing of Exempted Profits
127-130 Death, Succession, Inheritance, and Gift Taxes
131-135 "Vetting of Developers, Promoters, Bankers, and Others

[To be concluded in the next issue]

Influence of Fiscal Policy on Propensity to Avoidance

7. When personal tax levels are not regarded as unduly high or oppressive in the light of a country's economic circumstances, tax avoidance by the sharper or shadier characters in a community may be regarded as less than "respectable" and unworthy of emulation. When taxes are generally regarded as unreasonable or oppressive, and particularly when the political party in office appears to use its power to levy taxes at a much higher rate than the opposition party did when it was in office, there may be an erosion of that part of patriotism which has to do with prompt declaration and payment of taxes, and tax avoidance may become a much more general and respectable pursuit.

8. To an extent, therefore, matters are in the hands of a government itself — which if it does not exercise reasonable moderation in taxation may reach the point of diminishing returns.

9. That the feeling against taxation which is regarded as onerous can be very strong is indicated by various historical examples, starting with the Athenian Empire, which fell partly through defection of associated states which were supposed to contribute to the Athenian navy, the fall of the Roman Empire, partly speeded by the exactions of the central government from the provinces to provide bread and circuses for the Roman plebeians.

10. In more recent centuries the revolt in England against a naval tax ("ship money") imposed by a would-be absolute ruler became a civil war in which the King lost his head and England her monarchy; and the tea and stamp taxes imposed by Britain upon the American colonies resulted in the first "colonial war" of the modern era and independence for the erstwhile colonies.

11. Nowadays the strife is carried on in accountants' and lawyers' offices and on the Government side in the chambers of Attorneys General, usually without bloodshed, though the cell-door may occasionally clang shut on the legal avoider who has gone too far and used fraudulent evasion to gain his ends.

12. Like the quest for El Dorado, the avoider's dream is the perfect haven, where he may inherit the family fortune untaxed, enjoy his life-time income untaxed, preferably amid modern conveniences, a blissful climate and cultural environment, and leave his capital untaxed to his heirs when he in turn departs from his earthly haven to a fiscal paradise.

Definition

13. Before going further it is desirable to define a "tax haven" for the purpose of these notes, as being a place offering relief or exemption from taxes, particularly direct taxes on income and wealth, and from exchange control, not merely a place to keep money (whether "black" or "white", "hot" or "cold"). Several countries accept foreign money on bank deposit without attempting to tax the interest or seek disclosure of the foreign depositor's name (examples include Britain and the U.S.A.) but such countries are not necessarily orthodox tax havens, and some plainly are not.

14. Some countries, however, have some "haven" elements in that particular types of income or capital are not taxed and a full-scale haven may then be a place where such exempted income may be imported and held or put to work. (See also "**No tax and Low Tax Havens**" below).

15. Other countries may provide an effective haven for certain classes of individuals although in no sense being tax havens in the ordinary sense. (See "**Individual Taxpayers: Residential Havens**" below.)

16. Some havens specialise in shipping (see "**Shipping Havens**" below) and some of the more "respectable" havens now eschew the use of the phrase "tax haven" preferring to be styled "financial centre".

"RESPECTABLE" USES OF TAX HAVENS

17. A case can no doubt be made out for the use of tax havens as a refuge from "tax tyranny" or oppression, as England, Holland, and in turn the New World were (and are) for long sanctuaries from religious and political persecution. Perhaps the very existence of such havens exercises some check on the rapacity of tax departments and Ministries of Finance.

18. Not all tax-avoidance schemes entail the use of a tax haven, and in fact most "avoidance", or the ordering of one's affairs so as at least not to attract the maximum tax, is done within the taxing country, and havens are most relevant when there is some international element in transactions or investments.

19. Often the effect of using an avoidance scheme based on a foreign tax haven is to **defer** taxation rather than avoid it completely. There may be good commercial reasons for deferment, even though such reasons may not be accepted by the taxing state.

20. One of the more "respectable" devices is the "captive insurance company" referred to below, and some respectability has also attached to the use, in certain circumstances, of flags of convenience. (See "**Shipping Havens. .**" below.)

"Defensive" Uses

21. Where the tax laws of a country contain anomalies which can only be avoided by a person taking himself or his income or capital outside the taxing country, there may be some case to be made in justification, provided no laws are broken.

22. For example, countries with death duty laws usually have abatement provisions to reduce the successive exactions when the same estate passes from one person to another, and then to another because of a succession of deaths, but rarely is the relief adequate to prevent extremely confiscatory levels of taxation.

23. Where capital gains tax exists, some countries have no relief where the proceeds of realisation of assets are promptly re-invested. Then what is supposed to be a tax on realisation at a profit of assets with a view to personal consumption of the gain, becomes an arbitrary levy which e.g., does not usually apply to realisation and reinvestment where this occurs through one company taking over another by a share exchange, or, of course to the investment which increases in value without needing to be switched at all.

24. Several countries have no adjustment for currency depreciation in their gains taxation so that where there is no profit (or even a loss) in real terms on realisation of an asset, the owner may incur substantial tax upon the cash "profit" on realisation.

25. Where an individual owns assets through a company which he controls and is unwise enough to realise his assets by first selling the company's assets and then winding up the company to distribute its assets to himself, he will, under some capital gains tax regimes incur a swingeing "double dose" of capital gains tax on what is really a single capital gain.

26. Where a boxer, baseball or football player, rises to the top of his profession and remains there for a short time only he may incur very heavy "graduated" taxes on his income for that period. The same may apply to a writer, an actor, singer, dancer, etc. Some countries' laws provide for the "spreading" of the exceptional earnings over a longer period for tax purposes, but the period of spread is rarely long enough to equate the "star's" position with that of a man who earns a similar total income over the whole of his working life, which will often be a period of at least 40 years.

27. In such cases it had become almost routine to take "avoiding" action. Possibly it was the prevalence of such avoidance which helped to lead to a major change in the USA's Federal Taxation of earned income. The top rate of Federal income tax fell over a relatively short period of years from more than 91 percent to the present "cut-off" rate of 50 percent of the earnings. The action taken by the USA has incidentally led to a major reduction in the numbers of those entering into tax avoidance schemes concerning exceptional short-term earnings.

28. In many cases an individual may register a haven company, or even a trust, abroad with the idea of eventually retiring to live abroad, or as a precautionary or preparatory measure, but may never actually use the company so that it becomes a sort of "toy", of which he tires in due course, so that it becomes struck off the register.

29. In contrast, of course, some taxpayers, or their advisers on their behalf, concoct schemes of the greatest artificiality in order to avoid tax that is not unduly oppressive, and some taxpayers are of such an extreme nature that they would go out of their way to avoid tax even if it was charged only at 1 percent!!

ATTRIBUTES AND TAX STRUCTURE OF A TAX HAVEN

30. What have been called the "classic" attributes of a tax haven may be summarised as—

(a) Absence of direct taxation (i.e., no income tax, estate, inheritance, or succession taxes, capital gains tax);
(b) Absence of Exchange Control;
(c) Political stability, good law and order, work permits readily available for foreign professionals to operate haven services;
(d) Good air, telex, and telephone communications with developed countries; and
(e) Suitable tax, commercial, corporate, and trust laws to attract overseas business.

31. The "ideal" political situation has been suggested to be that of a long-term "colony" which apparently has no ambition to become independent (the **Caymans, Gibraltar, Bermuda** and **New Hebrides** have been put forward as more or less within that category, while **Switzerland**, a country with a stable currency, a neutral stance in wars, and an absence of political problems is regarded as another type of "natural" haven). [1]

32. Some of these conditions may, of course, be shaded — for example, some havens function not with an absence of direct taxes but having those taxes at low levels. For instance, **Jersey, Guernsey,** and the **Isle of Man,** all off the coasts of Britain have personal income taxes with maximum rates around 20% and so does **Montserrat** in the West Indies, while the **British Virgin Islands** have a 12% maximum income tax on individuals and companies.

33. A country may have exchange control for its resident nationals but accord freedom from control to others in respect of all money originating from outside the country.

34. It is useful for a country to have up-to-date company and trust laws, and to make digests of these laws (as well as full copies) available to those who require them. Company laws should preferably contain model Memorandum and Articles of Association which may be used by persons who wish to register a company quickly and there is also something to be said for establishing model trust instruments which may be adopted in cases where a trust is required for some usual and straightforward purpose. Such models are of great assistance to the "customer" since he knows, without having to incur substantial professional fees to find out, what kind of documents will comply with, and "work" under the law of what, to him, is a foreign country. Where such laws do not exist and it may take a long time to formulate them, an interim solution may be found by allowing the laws of some other country to apply to particular types of transactions relevant to "offshore" customers.

35. Of course a tax haven must raise some taxes to pay for the cost of governing the country, and does not usually wish to raise import duties to exceptional levels because that would hit the poorer people in the country. Revenue is in fact usually derived from initial and annual company registration fees, and similar fees for offshore banks, shipping registration, etc. where these items are within the haven's scope. Where the haven makes it a condition that an offshore company should have an on-shore director or other local representation (which may or may not be a good idea) the effect is to put business in the way of local professionals, who will benefit handsomely if there is no income tax. It may, therefore, be reasonable to make a small percentage levy on professional fees in repect of offshore business as an additional means of raising national revenue.

TYPICAL USES OF TAX HAVENS

36. By far the largest part of tax haven business in pure numbers of transactions is the registration of companies. Usually there are flat initial and annual registration fees and no supervision of the activities of the company if

1. There are, of course, several long-established havens, e.g. **Panama, Andorra, Liberia, Liechtenstein,** which are politically independent, in recent years the **Bahamas** has become independent, and **Singapore** and **Malta** have been added to the ranks of shipping centres.

these are all overseas. Although registration takes place in the haven the actual "residence" of the company, e.g., for tax purposes, may be there or in some other country where the company is actually managed.

37. Local professionals will be involved in helping to set up and register companies, which may include drafting Memoranda and Articles of Association where these are not made on a standard model. Some countries insist on a local director or official being appointed to a company in order to increase local earnings from offshore companies. This measure would probably not be adopted by a newer haven which was seeking to obtain a footing in the haven field, and in any event there might be initial shortages of professionals in law and accountancy available to take on the extra work, given that a swift and efficient service is a sine qua non of a tax haven.

38. Registration of trusts in tax havens is a matter that will certainly involve resident professionals, and in the first instance the employment of outside experts in trust and tax law to provide the necessary services. The Government's task will be to provide suitable trust laws, to relax its labour laws at least to the extent that there is no difficulty in employing foreign lawyers and tax experts for some years until local personnel can be trained. There will in any case be appreciable employment created by the existence of tax haven facilities and customers. Foreign employers can normally be expected not to be slow in employing locals as soon as they are qualified, since the cost in salaries and fringe benefits is normally much less where a man and his family do not have to be brought into the country at high cost in fares and benefits. Benefit may include housing accommodation when a foreign employee is in post as well as education allowances and fares for his children if they have to be educated overseas.

39. Shipping registration and flag-of-convenience facilities tend to be a specialised service provided only by a few havens. If the haven has a "genuine" connection with maritime matters in the shape of good harbours and port installations and a history of handling and chandling ships, there will probably be local skills which can be utilised in respect of registration and "flag" services.

40. By far the largest shipping haven is **Liberia**, which employs agents overseas, notably in New York, to which lawyers and agents acting for North American clients can refer, and in other countries as well. (See below "**Shipping Havens. .**".)

41. Banking services, specialising in handling off-shore funds, including trusts, are likely to involve importing experts even though ordinary banking services already exist in a country. A good example in this respect is the **Caymans** where there are now about 220 banks, of which 25 have registered since the end of 1975, company registrations running at about 1200 per annum, a good deal of trust business, and about 40 solicitors and 40 accountants supplying the expertise to cope with the banking, trust and other work. In the **Caymans** many of the banks are physically present in substantial buildings, although the funds they handle are mostly of overseas origin.

42. Haven countries such as **Caymans, Bermuda, Jersey, Guernsey,** tend to be rather cautious in their registration of banks, since financial institutions, if not properly run, may lose not only their own money but also the savings of others, thus spoiling the image of the country which has allowed them to register. Accordingly it is common to require security checks and references in such cases and to provide laws which also give some measure of security to the depositor.

WHERE USE OF HAVEN INAPPROPRIATE

43. It has been truly said that there is nothing more useless than to have made trading losses in a tax haven. If, therefore, there is any danger of the results of an enterprise going "into the red", even if in the initial stages only, and even if the "loss" is somewhat "artificial" — perhaps being created by generous relief for depreciation etc., possibly in excess of normal commercial provisions — it may still not be desirable to use a tax haven.

44. The point is that if the enterprise is part of a larger concern (or "conglomerate") it will usually be possible to arrange for the losses on one part of the concern to be offset against profits of other sections, thus reducing the total profits of the group. Such an offset will not be permissible if the loss-making activity is based in a tax haven. Accordingly, even in the case (or perhaps particularly in the case) of a shipping concern which is part of a group, where there is a risk of trading losses, or an entitlement to exceptional depreciation allowances, it may be best for the shipping activities to be subjected to orthodox taxation.

REGIONAL CONSIDERATIONS

45. Another limitation on the operation of tax havens is the attitude of their regional neighbours. Britain takes an interest in the activities of its offshore havens (**Jersey, Guernsey, Isle of Man,** etc.) which probably helps to ensure that they do not permit the perpetration of too audacious schemes to avoid British tax, and correspondingly the EEC keeps an eye on the European tax havens. General de Gaulle, when President of France, treated **Monaco** very firmly when there was some question of their extending haven activities so that French nationals would have had more scope to avoid French tax and erode the French revenue. Similarly, Australia is understood to have severed telex connections with one or two would-be havens in the Pacific region in order not in any way to encourage their efforts to provide havens for Australian tax avoiders. Britain ended the double taxation agreement with the **British Virgin Islands** (which was in any case due for revision) and renegotiation has not yet been completed as far as is known, although the double tax treaty with the USA still stands.

46. Although practitioners are always on the look-out for a haven which is geographically convenient to the countries whose taxes may be avoided, in the interests of good neighbourly relations, havens often pay regard to the susceptibilities of their neighbours, perhaps because of the realisation that excessive avoidance zeal might stir up a hornets' nest, whereas a moderate amount of avoidance might be tolerated!

"IMAGE"

47. It is important for a haven, or would-be haven, to achieve and maintain a good "image" if it wants to attract optimum business. On the positive side it is important that there should be no delays in answering queries connected with the services provided, whether by telex, cable, or post, and that "literature" including forms and copies of the laws, digests thereof, and explanatory notes about the laws and other services should be immediately available on reasonable payment. So much is plain common sense. A haven will try to keep out of the news, or at least out of the bad news, such as having its ships behave badly, its banks going bankrupt, or its institutions involving subscribers or depositors in losses. This means good "vetting" (see below) and constant vigilance, all of which is worth while, since if a haven attracts bad press notices and thus focusses attention upon itself, it is also more likely than others to provoke counter-action by the countries whose revenues suffer from avoidance depredations.

TAX HAVENS AND TOURISM

48. There is no necessary link between tax havens and tourism, but it is noteworthy that in some cases places were recognised tourist resorts before they became important tax havens — this is true of Britain's offshore islands all of which are pleasant places, still "unspoilt" as far as scenic beauty is concerned. It is also true of the Caribbean resorts such as the **Bahamas, Montserrat,** the **British Virgin Island,** and **St. Vincent,** and of **Bermuda** further north, while in Europe, **Andorra, Gibraltar, Malta, Cyprus, Monaco,** and **Switzerland** have their attractions.

49. The **Cayman Islands** are a haven where tourists followed the tax avoiders, good communications with neighbouring territories have grown up to meet both "trades". It has been noted that there is a tendency, when an individual has set up an offshore company or perhaps a family trust in a haven, even if there is no actual need for him to visit the place, that he will at some time or other go there in person. He may not become wildly excited at the sight of the brass plate of his own company but may perhaps generate a sentimental attachment which will result in his remaining an occasional tourist long after all tax havens have been wiped off the face of the earth by international "sanctions"!!

50. At any rate, it does seem that wherever a haven is reasonably accessible, and has something to offer the tourist there may be useful inter-action whereby one activity encourages the other.

Individual Taxpayers: Residential Havens

51. In the ancient world, exile was sometimes used as a punishment, sometimes resorted to as an escape from the consequences of crime or political disfavour. In modern times dictatorships of the right and the left have both resorted to the reverse policy of not allowing the disaffected to leave the country. Fortunately, in democracies, an individual is still free to travel and emigrate outside his own country, and a new category, the "tax exile" has arisen, who sometimes "votes with his feet" when he finds the tax regime at home altogether too onerous.

52. Exile is not to be too lightly resorted to since the conditions of life in the chosen haven, while no doubt pleasant, are unlikely to be so stimulating, or the amenities quite so comprehensive as in the industrialised country from which he comes, and he may miss the social contacts with friends and relatives to which he has become accustomed.

53. Sometimes exile is resorted to more for health reasons than tax considerations, sometimes there are elements of both factors in the decision to retire overseas, perhaps to a warmer or drier climate. Where there is a choice of possible havens, tax considerations may swing the decision one way or the other.

54. Although it would sometimes make sense to do so, few countries indeed offer a special tax "deal" for potential settlers (an exception is Malta — see below) but some do not need to because their tax climate is in any event favourable. For example, **Bermuda, Bahamas,** and **Caymans** have no income tax or death duties, **Monaco** has no income tax, some **Swiss cantons** no death duties, the **British Virgin Islands** have a top tax rate of individual income tax of 12%, and a top rate of around 20% prevails in **Montserrat, Jersey, Guernsey,** and **Isle of Man.** In **Malta** the normal top rate of income tax is 65%, but new residents may be accorded a maximum rate of 32½% if they satisfy certain minimum income and capital requirements and pay not less than M£1,000 per year in income tax. The minimum tax payment requirement in **Jersey** is incidentally now £17,000 although the maximum rate is 20%, so that new arrivals, other than those who set up businesses, have to be more or less in the millionaire class. Further afield the **Seychelles** have a top rate of 35% and the **Solomon Islands** a cut-off top rate of 25% on personal incomes— all of these islands have attractions for residence in retirement. An important factor to consider is whether income tax extends to the whole of a person's world income or merely to the part that is brought into the country for living expenses. The rules vary and cannot be briefly summarised.

55. It is, however, important to clear this point before deciding to go to settle in an island paradise, i.e., one must first make sure that even if it is not a fiscal paradise, the tax charge will be a reasonable one. Some tax regimes, though appearing rather harsh on the surface, may prove to be more favourable if foreign income is not taxed, and if double taxation treaties or unilateral relief for foreign tax provide abatement where the income brought into the country has already been taxed overseas.

56. It is nowadays usual for a would-be settler to be asked to give evidence of adequate means before being permitted to settle in a country. This is reasonable enough because many pleasant parts of the world have populations with low income levels and the countries often have economic problems such that they have no wish for an influx of impoverished beachcombers.

"Artistic" Havens

57A. An interesting idea for encouraging settlement in a kind of "artistic" haven, or modern Athens, has been developed in **Eire** (Republic of Ireland). An individual who is an established novelist, playwright, composer, artist, sculptor, etc., may set up residence in Eire and be completely free of income tax on his artistic earnings including any royalties, etc., from his past artistic work. The only stipulation is that he should be an established and successful member of his profession and not a mere dilettante.

57B. Apart from raising the cultural image of the country, the concession is not likely to be costly since artists, writers, etc. are often somewhat nomadic, being able to exercise their professions almost anywhere in the world which they may visit to seek "local colour". They are also able, on occasion, to arrange their affairs so that they minimise their tax liability even without the benefit of specific exemption. The welcoming State, however, is likely to receive economic benefits from the advent of a class of reasonably affluent persons, whose demand for housing and other requirements should give a minor stimulus to the economy.

58. Tax "exile" is probably the most respectable form of tax avoidance, and if the individual has skills which he does not want to atrophy in retirement, he may be able to help his adopted country (especially if he keeps out of local politics) by placing his skills at the government's disposal; the exile, moreover, makes a real sacrifice by severance of old friendships and amenities.

NO TAX AND LOW TAX HAVENS

59. Although a complete absence of direct taxation has obvious attractions, sometimes a moderate tax regime in the country of adoption for corporate or individual residence may prove in the event to be equally attractive. The effect of a network of double taxation agreements between a country selected as suitable for residence, and some of the industrialised countries whence the new resident may come is often to provide exemptions for certain types of income, such as pensions and annuities, in the source country if these are remitted to and taxed in the residence country. Where other income is doubly-taxed the effect of the treaty may be that there is no net addition to the tax jointly imposed by the two countries, because of the relief granted by one or the other.

60. Some countries exempt foreign income from tax provided it has borne tax in the foreign country and in some cases the rather token tax applied to **International Business Companies** (see later) has been sufficient to qualify.

EXCHANGE CONTROL

61. It goes almost without saying that a tax haven must not even contemplate applying exchange control to its customers, and should allow them to maintain bank accounts in any currency that the banks operating in the haven are prepared to allow. It is legitimate to desire to keep one's monetary assets in whichever currency or currencies one thinks will prove strongest over a period and reasonable for a haven to allow this facility for anyone who wants to use it.

62. Absence of exchange control is not of course confined to tax havens but is the rule in many countries where there is no pressure on the balance of payments. Exchange control should in any event be a temporary expedient, whever adopted, since it is arguable that it may have the opposite effect from that desired if persons in a position to bring money into the country, hesitate to do so for fear of difficulty in taking it out again.

63. Hence, in countries which have had exchange control for long periods, such as Britain, although control is strict on residents, non-residents may freely transfer money in and out. They are encouraged to send money to Britain by high interest rates, which, however, make it expensive to attract such funds.

64. Where exchange control exists, it must be admitted that it may help the Tax Department to cope with cases where income is fraudulently understated and the money sent out of the country to avoid detection, but on the whole an economy is healthier if such control can be given up and foreign investment attracted by the economic climate in general rather than by "artificially high interest."

65. As far as by-products, such as the making of greater difficulties for tax evaders are concerned, it is better to deal with such evasion by other methods. Moreover, since exchange control itself will usually generate a new quota of control-evaders, this may in turn lead to new types of tax evasion, since there may then be a "need" to evade tax in order not to provide evidence which on a cross-check could help the exchange control authorities to establish a prima facie case for evasion of their controls through evidence of income declared and taxed, but not accounted for by bank balances within the control country!!

GEOGRAPHICAL "ZONING" OF TAX HAVENS

66. There is a clear tendency for taxpayers to use the services of tax havens which are physically near to, or at least well-connected by air, sea or land travel, and by telephone, telex, or cable. Geographical distance may be overcome by the haven establishing agencies in the countries it serves (see also "**Shipping Havens. .**") but there are obvious advantages to the **Bahamas** and **Caymans** in having the excellent air connections they enjoy with North America, and to the British "off-shore islands" and the various European havens (e.g., **Andorra, Monaco, Liechtenstein, Switzerland, Malta,** and **Gibraltar**) in being so well connected to European industrial centres. The inter-action of financial services and tourism (see **"Tax Havens and Tourism"** above) is also obviously greatest when there are good travel links between customer and haven.

67. On the other hand, the physical nearness of a haven to the countries it seeks to "serve" (the Finance Ministries of those countries might choose another verb!) may make it easier for the latter to put pressure upon a haven and limit its activities (see below **"Tax-Avoidance and Counter-Tax-Avoidance"** and **"Shipping Havens.."**).

TAX-AVOIDANCE AND COUNTER-TAX-AVOIDANCE: RESTRICTIONS ON HAVENS

68. It is a misfortune for mankind that so much good brainpower is devoted on the one side to extra turns for the tax screw and on the other to new twists in avoidance spirals!

69. The more experienced havens seem to exercise self-discipline by refraining from bringing wrath upon them by allowing too outrageous schemes to be set up which would seriously erode tax revenue in another country. Others, by stringent vetting of would-be operators and their schemes, endeavour to avoid financial scandals and

other abuses which would damage their "image". For example, **Bermuda** does not accept offshore banks at all, and **Jersey, Guernsey**, and the **Isle of Man** all exercise restraint in the interests of neighbouring Britain, the **Caymans** accept banks with offshore activities but take great care to check the bona fides of the promoters.

70. By now it must be clear to havens, even if it is not always clear to the more enthusiastic of tax advisers, that any scheme which is too esoteric, convoluted, or "artificial", particularly if it offers a serious threat to the operation of an important tax law in an industrial country, is going to provoke reaction. The reaction may not only set aside the scheme, involving the perpetrator perhaps in additional expense instead of a tax saving, but may go much further in a wing-clipping exercise.

71. For example, the Australian Government, reacting from avoidance schemes which in particular used **Norfolk Island, Nauru,** and the **New Hebrides,** enacted at the end of 1974 a revision of the Banking Act, which imposed a requirement that an Australian had to obtain a tax clearance certificate and exchange control permission before undertaking transactions with a number of tax havens (in addition to the **New Hebrides,** for which the requirement already existed). The prescribed list of 19 countries makes interesting reading, viz.:

Bahamas		
Bermuda	*Grenada*	*Nauru*
Solomon Islands	*Hong Kong*	*Netherlands Antilles*
British Channel Islands	*Isle of Man*	*New Hebrides*
British Virgin Islands	*Liberia*	*Panama*
Cayman Islands	*Liechtenstein*	*Switzerland*
Gibraltar	*Luxembourg*	*Tonga*

72. The U.K., in introducing Capital Transfer Tax in succession to Estate Duty included a provision which ruled that a Briton who "emigrated" to Jersey, Guernsey, or the Isle of Man, offshore islands one of whose attractions had hitherto been the absence of death taxes, would remain liable to British Capital Transfer Tax for the first 3 years after emigration. Similar provisions exist elsewhere, e.g. Austria subjects its non-resident citizens to death duty as if they were resident during a period of two years after they have left the country, Germany does so for a period of five years (10 years under certain circumstances), while the Netherlands only recognize the acquisition of a foreign domicile by its citizens after 10 years have elapsed. The United States is currently looking into the whole matter of tax avoidance, and if anything, efforts are likely to be stepped up on the forthcoming change of President. The U.S. is already noteworthy for the interest it takes in taxing its passport-holders when the latter are working or resident outside the country, and seems likely to take an increasing interest in the activities of offshore banks in so far as U.S. nationals do business with them. Belgium, Canada, and West Germany are other countries to take anti-avoidance action in recent years.

COMPETITION BETWEEN HAVENS

73. **Fees.** In general it seems that there is comparatively little competition between havens, solely on the grounds of fees, say, for ordinary company registration. For one thing fees tend to be broadly in line, since new havens have adopted practices from the older havens whose success they have emulated! Another point is that there is usually no guarantee that the fees of one haven, which are currently below average, will not be increased next year to an above-average level!

74. Accordingly, provided the fees are not inordinately high, customers are more likely to look into matters such as accessibility, efficiency of services, availability of professional advice and so on. A new haven, attempting to jump on the bandwaggon would, therefore, be better advised to look to its services than to try to gain an entry by undercutting prices!

75. Legal, financial and tax practitioners in other countries who already have to keep au fait with the laws and practices of a fairly large number of havens, are unlikely to be too enthusiastic about the arrival of a new haven, except to the extent that the extra competition with the old havens will keep them "on their toes" and perhaps also discourage them from attempting to increase their fees.

76. **Services.** The types of service commonly provided by financial and tax havens have already been alluded to. In general it is efficiency and promptness which most impress customers and potential customers, and these factors cover the availability of all relevant laws, and digests and translations of them, the explaining of all that is actually required to set up companies, trusts, etc. and, of course swift replies to enquiries by letter, preferably in the customer's own language.

77. **Work Permits.** The importance of granting labour permits to expatriates without undue delay can hardly be overstressed. In fact the countries in the developing world which give most attention to this simple point are usually the ones that attract the most technical aid and private investment, and incidentally achieve the greatest increase in employment opportunities for their own citizens in all fields of human endeavour.

78. **Laws.** As already mentioned, it is useful to have up-to-date company and trust laws, but until they are adopted it is possible to make do with the laws of other countries by making them applicable to the instances which are appropriate. The main requisite is that it should be absolutely clear what law applies, and that copies should be readily available.

PRE-REQUISITES FOR A TAX HAVEN

79. These have already been summarised in the Introduction to these notes. It might be mentioned, however, that where a new haven is to be set up, which has the requisite history of political stability and civil order, it is also useful, where the ruling government is likely to change from time to time with the varying outcome of elections, that there should be reasonable assurance that the party out of power does not intend to reverse the policy of the party in power when its turn to govern comes, i.e., there should be bilateral consensus of views on the matter.

COUNTRY BY COUNTRY SURVEY OF LOOSE-LEAF PUBLICATIONS...

AUSTRALIA

AUSTRALIAN INCOME TAX; LAW AND PRACTICE

11th edition; by E.P. Mannix and D.W. Harris.
— Replacement pages
— Bulletin
— Cases.
Sydney, Butterworths, 1975.
Supplemented: fortnightly.

Loose-leaf publication consisting of 7 volumes. The full text of the Income Assessment Act is set out section by section, and each section is followed by annotations prepared by the editors.
The annotations consist of an analysis of the section, notes on all the decided cases which have a bearing on the section, worked examples and relevant departmental announcements. The Income Tax Regulations and related legislation including double taxation treaties are appended.
The material in this work is updated by a special loose-leaf service: Replacement pages.
In addition, the publishers supply supplementary services for information on tax developments and on case law in Bulletin and Cases, respectively, to be filed in loose-leaf binders entitled Australian Income Tax-Law and Practice — Bulletin, and Australian Income Tax-Law and Practice — Cases.

SALES TAX; EXEMPTIONS AND CLASSIFICATIONS

Canberra, Commonwealth Taxation Office, 1971.
Supplemented: periodically.

Publication gives details of current official rulings on the classification of goods under items in the Schedule to the Sales Tax (Exemptions and Classifications) Act.
The material will be kept up to date by the issue of replacement pages.
A comprehensive index is appended.

BELGIUM

BTW-HANDLEIDING

Ministère des Finances, Masuiplein 13, 1000 Brussels.
Supplemented: annually.

Loose-leaf publication prepared by the Ministry of Finance designed as a guide for quick information on tax on value added. The publication provides a well organised comment on the tax on value added per subject matter with reference to findings in the law and to administrative circulars.
The material is kept up to date by the issue of supplementary pages.

CODE DES IMPOTS SUR LES REVENUS/WETBOEK VAN DE INKOMSTENBELASTINGEN

Commentaire du Code des impôts sur les revenus / Commentaar op het Wetboek van de inkomstenbelasting.
Ministère des Finances, rue d'Arlon 80, Brussels; 8 volumes.
Supplemented: regularly.

Loose-leaf publication containing the official text of, and comment to the Belgian Income Tax Code, available in the French and Dutch languages. The full text of the Code is published. In addition, an annotated text of the Royal Decree implementing the Code is appended. The comment to the Code covers the individual income tax, the corporate income tax, the income tax on legal entities and the tax on non-residents. Tax collection, distribution of income to provinces and municipalities, cadastral income from real estate, temporary provisions, prepayment on business income, the enforcement of the law and penalties for non-compliance are dealt with.
The material is kept up to date by the issue of replacement pages and supplementary pages.

GUIDE PRATIQUE DE FISCALITE

CED/Samsom, 7 rue Philippe de Champagne, 1000 Brussels. 6 volumes.
Supplemented: regularly.

Loose-leaf publication divided into 8 chapters.
Chapter I consists of two parts. Part I contains the official text of the Belgian Income Tax Code in the French and English languages. It covers the individual income tax, the corporate tax, the tax on legal entities and the tax on non-residents. The Royal Decrees implementing the income tax are appended.
Part II contains the official text of the other parts of the Belgian Fiscal Code. It deals with the tax on value added, registration duties, death and gift duties, stamp duties and duties connected therewith.
Chapters II to VIII contain a commentary on the different tax items mentioned under Part I and Part II of Chapter I.

TRAITE DES IMPOTS SUR LES REVENUS/HANDLEIDING DER INKOMSTENBELASTINGEN

CED/Samsom, 7 rue Philippe de Champagne, 1000 Brussels.
Supplemented: monthly.

Loose-leaf publication containing the official text of, and commentary on, the Belgian Income Tax Code, available in the French and Dutch languages. The full text of the Code and the implementing Royal Decrees, ministerial decrees and circulars are printed. The comment of the Code covers the individual income tax, the corporate income tax, the income tax on legal entities and the tax on non-residents.
Tax collection, system of prepayments, worked examples, enforcement of the law and penalties for non-compliance, tax appeal procedures and double taxation treaty provisions are dealt with.

WETBOEK VAN DE BELASTING OVER DE TOEGEVOEGDE WAARDE

Ministère des Finances, Masuiplein 13, 1000 Brussels.
Supplemented: two times a year.
Loose-leaf publication containing the text of the Belgian tax on value added act of 3 July, 1969. The Royal Decrees and ministerial orders, implementing the law, are included. Supplements have been issued in the months February and July during the last years.

FISCALE DOCUMENTATIE VANDEWINCKELE

CED/Samsom, Philippe de Champagnestraat 7, 1000 Brussels; 15 volumes.
Supplemented: twice or three times per year.

Loose-leaf publication containing official text of, and commentary on, the Belgian taxes in the Dutch language. The series consists of 15 volumes. Each volume can be bought separately. The contents of this work, briefly summarised, are the full text of the tax law, the royal and ministerial decrees implementing the law, case law and official regulations, comment, tax tables and worked examples. Designed as a quick reference guide it covers taxes such as the personal income tax, the corporate income tax, the income tax on legal entities, the tax on non-residents, tax on value added, stamp duties, death duties. System of prepayments, tax collection, the enforcement of the law and penalties for non-compliance are dealt with. The material is kept up to date by the issue of supplementary pages.

GUIDE FISCAL PERMANENT

Editions Service, Boulevard Emile Bockstael 252, 1020 Brussels.
Supplemented: monthly.

Loose-leaf publication containing the official text of, and comment to the Belgian Income Tax Code in the French language. The full text of the Code and connected decrees implementing the Code is followed by comment to the taxes in the Code, i.e. the individual income tax, the corporate income tax, the income tax on legal entities and the tax on non-residents. The comment consists of an analysis of the above taxes in connection with tax collection, cadastral income from immovable property, system of prepayments, the enforcement of the law and penalties for non-compliance, temporary provisions, distribution of income to provinces and municipalities, worked examples and references to statute and case law.
The material is kept up to date by the issue of supplementary pages.

VAKCURSUSSEN

Inkomstenbelastingen en ermede gelijkgestelde belastingen, BTW. Ministère des Finances, rue d'Arlon 801, Brussels. 3 volumes.
Supplemented: regularly.

Loose-leaf publication in three volumes explaining the income tax and related taxes. The work is primarily designed as study material for purposes of young officials in the administration of direct taxes. No references therefore are made in the explanations to sections of the law, decrees, circular dates, case law. Taxes cover the personal income tax, the corporate income tax, the income tax on legal entities, the tax on non-residents, the tax on motor vehicles and the taxes on lucky winnings. The major principle of the tax on value added is only dealt with in connection with the direct taxes explained. Tax collection, system of prepayments, enforcement of the law and penalties for non-compliance and tax appeal procedure are dealt with. Explanation on double taxation treaties is forthcoming.

TAXATION AND THE BRITISH RECOVERY PROGRAMME

The Chancellor of the Exchequer, Mr. Denis Healey, cannot possibly have read Mr. Qureshi's article at page 7 of this issue when he gave his New Year Message on Britain's economic situation and the strategy planned by the British Government. After having stated that "the necessary measures have now been taken," Mr. Healey said:

> "The Government also hopes to provide better financial incentives for the necessary improvement in our industrial performance. I have already decided to improve the tax treatment of those working abroad at the sharp end of exporting.
> I am also concerned to create the conditions in which it will be possible to reduce income tax in the next Budget, particularly at both ends of the earnings scale. But I can give no commitment in this field before I know what agreement can be reached on the next round of pay policy — I hope in good time for the Spring Budget.
> The recent economic measures should be seen as one element in a three-year recovery programme to which the developing industrial strategy and new policies on pay and taxation will make equally important contributions. But the key to its sucess will lie, as always, with management and work-force at the level of the individual firm."

See for Mr. Healey's view on tax policy his article Taxation Policy in Britain: The Government's Objectives, *in: European Taxation, Vol. 15, No. 11, November 1975, pages 363-367.*

FOREIGN INVESTMENT AND TAX ADMINISTRATION

Under this title the United Nations Economic and Social Commission for Asia and the Pacific (ESCAP) held a second Seminar in Tokyo (September/October, 1976), the first having been held in Manila at the end of 1974. Both Seminars were sponsored by the Government of the Netherlands and both were chaired by the Bureau's managing director. The Governments of, respectively, the Philippines and Japan hosted the Seminars. A report on the Manila Seminar, with a synopsis of country reports, is available from ESCAP, Division of Industry, Housing and Technology, United Nations Building, Rajdamnern Avenue, Bangkok 2, Thailand.

The Tokyo Seminar was attended by top level officials from fifteen countries. In addition to the chairman, the following discussion leaders were in charge:

S. Ambalavaner, B. Sc., LL.B.
Member of Sri Lanka, United Kingdom and India Bar,
Colombo

Joseph P. Bourdrez
International Development Consultant
New York

Prof. R. Hirono
Chief, Development Planning Division,
ESCAP, Bangkok

Dr. Suresh Kumar Sahgal IAS
Principal Administrator,
Int.l Crops Research Institute for Semi-Arid Tropics (ICRISAT)
Hyderabad

Subject Areas Discussed

Foreign investment and tax policies
Tax systems in Asia and the Pacific
Foreign investment incentives
Foreign investment- and tax administration
Problems of foreign investment negotiations
Approach to international co-operation
- transnational enterprises
- tax and non-tax policies
- strengthening of regional co-operation and complementation

Incentives specific to domestic and international re-location of industries

These subjects were prepared by four working groups and further discussed in plenary sessions.

Conclusions reached

I. The working group on *Foreign Investment Policy* identified several problem areas and suggested remedies therefore:

Widening gap between the rich and the poor

Remedies:
- Progressive increase in local content
- Preferential treatment to employment-oriented projects
- Encouragement to foreign as well as domestic small and medium size investors
- Encouragement of competition, also with domestic enterprises
- Promotion of regional development and dispersion
- Creation of widely held investment companies mobilizing small savings
- Involvement by public sector enterprises in joint ventures

Overdependence upon foreign countries

Remedies:
- Diversification of foreign capital sources
- Ceiling on foreign equity investment in individual projects
- Legislation on restrictive trade practices
- Development of domestic managerial and technical skills

Harmful competition among countries with respect to foreign investment

Remedies:
- Greater exchange of information among developing countries
- Co-ordination of project planning at sub-regional level
- Mutual consultation among countries of the region for rationalization and, where necessary, limitation and reduction in tax and other incentives
- Voluntary code of conduct on the part of foreign investors

Adverse effects on domestic enterprise and technological development

Remedies:
- Encouragement of domestic participation in joint enterprises
- Majority equity participation by nationals of host countries
- Restrictive entry into sectors which are adequately serviced by or reserved for domestic enterprises
- Planned phase-out programmes
- Entrusting nationals with progressively increasing management responsibilities
- Progressive transfer of technology and establishment of research and development facilities

Adverse impact on balance of payments

Remedies:
- Preferential treatment for export-oriented and import-substituting projects
- Regulation of outflow of foreign exchange for services performed by foreign investors
- Regulations against the misuse of transfer pricing mechanisms
- Relaxation of capital outflow of developed countries

● *Several general measures for policy improvement*

Having reviewed these major problems associated with foreign investment and having considered certain possible remedial measures, the Working Group emphasized that *foreign investment in its wider connotation encompassing technology transfer should be recognized as a significant contributing element in the development efforts of developing countries.* Policies need to be oriented so as to enhance foreign investment and direct it into desired areas. Among the major policy options to that end, the Working Group considered the following:

- A well-defined, stable and coordinated foreign investment policy
- Clear identification and publication of investment opportunities for foreign investors
- Dissemination of information on laws and regulations relevant to foreign investment, such as taxes and incentives, labour and immigration, foreign exchange control, etc.
- Adequate provision of infrastructure facilities
- Establishment of an integrated machinery for foreign investment promotion, evaluation, approvals and monitoring procedures
- Evolution of procedures conducive to speedy decision making
- Provision of selective tax and non-tax incentives for attracting foreign investment
- Facilities for repatriation of capital and remittances of profits and dividends
- Special arrangements, such as production sharing and work contracts, for oil and other extractive industries
- Greater flow of capital and technology among the developing countries of the region
- Bilateral agreements on investment guarantees and multilateral procedures on investment dispute settlements

II. The working group on *Foreign Investment Administration* very much worked along the lines of the last-mentioned proposals. The main points emphasized by it were:

● The institution of a high level government body as a centralized machinery for all aspects of investment administration with authority to issue the necessary permits and approvals.

● Active promotion activities, such as
- clearly written and attractive publications on investment opportunities, as well as advertising and broadcasting abroad
- the use of embassies and consulates abroad with clear instructions and an adequate promotional training
- sending investment missions abroad
- establishing promotional offices in foreign countries.

● Prompt handling and evaluation of enquiries. The supply of information should be prompt, accurate and complete. Industrial projects as well as matters of technology should be thoroughly examined, evaluated and cross-checked against prevailing laws and regulations with discretionary decision-making kept within narrow limits if at all necessary.

● Administrative expertise was felt to be mandatory, requiring extensive training of responsible officials.

III. Two working groups dealt with *Tax Policy* and *Tax Administration*. Their conclusions can be summarized as follows:

● **Tax policy** should aim at influencing the pattern of consumption, savings, investment, capital formation, production, proper development of natural resources, international trade, prices, employment, as well as income and wealth distribution.

● **Tax climate**. Domestic and foreign investment require a good tax climate. The following requirements should be satisfied:
- stability in the tax system
- comparable tax rates and bases in the region
- reduction of tax rates, since high taxes are to be considered as a disincentive to investment, as leading to tax evasion and, consequently, as having counter-productive effects
- simplification of the complex tax laws
- avoidance of retroactive legislation or administrative interpretation.

● **Assessment procedures** should be improved. A scheme of withholding taxes on wages and salaries, as well as on dividends, interest and royalties, and a self-assessment system should be considered. The latter would require appropriate education of taxpayers.

● **Tax holidays** were deemed to play only a marginal role in attracting foreign investments, also because in several capital exporting countries their effect would be nullified.

The following alternatives were unanimously recommended:
- Capital allowances in the form of accelerated depreciation for the purpose of enabling industry to recoup its capital investment in a short span of time
- Realistic depreciation allowances or other similar capital allowances in respect of initial as well as additional investments
- Other provisions in the law taking into account the economic conditions under which investments are made.

Whereas depreciation not exceeding 100 percent of the cost is not by itself a tax advantage, there was general agreement that accelerated depreciation eases the liquidity position and is, therefore, useful as an incentive to foreign and local investment.

● **Loss carry-over and depreciation allowances.** Depreciation allowances (normal as well as accelerated) and other economically oriented devices should be accompanied by a mechanism for the carry-over not only of ordinary business losses but also of losses resulting from such allowances and other devices. *Depreciation losses at least should be carried forward without any time limitation. The same should apply to operating losses incurred during the first few years after the operations start.*

● **Other tax recommendations**
- Royalties, technical service fees or fees for the provision of know how are to be allowed as deductible current expenditure.
- Where corporate profits are exempt under a tax incentive scheme, dividends whether paid to local or foreign investors, should not *ipso facto* be exempt as well, unless the law so specifically provides.
- Capital gains taxation is acceptable. The capital of foreign investors to be repatriated should include such gains.
- The role of direct taxes in a development economy should be strengthened.
- Indirect taxes should serve as a tool to achieve tax policy goals. Wherever possible, their burden should be shifted so as not to become too heavy for people in the lowest income brackets. Consequently, the prime necessities of life should be exempted.
- The countries of the region should conclude double taxation treaties.

Reference was made in this connection to the work of the United Nations Expert Group on tax treaties between developed and less developed countries.

— Tax avoidance and evasion ought to be combated by a regular exchange of information.

These and other recommendations made by the second ESCAP Seminar will be formulated in more detail in a report shortly to be published by ESCAP. It is noteworthy that they are not just the result of wishful thinking of a group of academics. The people who attended the seminar are high ranking officials who, in their respective countries, are involved in the formulation of development and tax policies.

Moreover, in several respects certain delegates could report on actual positive experiences with measures already introduced in their countries. In this connection, particular attention is drawn to the article by Mr. N.M. Qureshi elsewhere in this issue. As the Chairman of the Central Board of Revenue of Pakistan, Mr. Qureshi is to be considered as an expert in matters of tax policy and administrative implementation of tax laws.

CONFERENCE DIARY

FEBRUARY 1977

British Branch of I.F.A.: Fringe benefits — United Kingdom and the other E.E.C. countries. London (United Kingdom) February 16 (English).

MARCH 1977

British Branch of I.F.A.: Development Land Tax. London (United Kingdom) March 9 (English).

Bibliography

Books.

Any inquiries concerning books on this list should include the reference numbers listed.

ASIA

REPORT OF THE PROCEEDINGS OF THE FIFTH MEETING OF THE STUDY GROUP ON ASIAN TAX ADMINISTRATION AND RESEARCH

Bangkok, Revenue Department, Ministry of Finance, 1975. 526 pp.
The report consists of a summary of the proceedings of the meeting and the text of working papers submitted by the participating countries Australia, Indonesia, Japan, Malaysia, New Zealand, the Philippines, Singapore and Thailand. The subjects of the meeting included Estate and Inheritance Taxes, Fiscal Measures to Encourage Export, Development of Personnel, The Organizational Structure of an Income Tax Office. (B. 50.573)

A.S.E.A.N.

SURVEY OF JAPANESE DIRECT OVERSEAS INVESTMENT CENTERING AROUND ASEAN (Association of Southeast Asian Nations)

To review future private economic cooperation problems for ASEAN. (Tabulated results of questionnaire). July 1976. Tokyo, Committee on International Economic Policies, 1976. 20 pp.
Reference material for the Third Southeast Asian and Japanese Businessmen's Meetings — July 19-21, 1976. Tokyo. (B. 50.532)

AUSTRALIA

AUSTRALASIAN TAX REPORTS

Volume 5. Edited by E.F. Mannix and D.W. Harris. Melbourne, Butterworth, Ltd., 1976. 805 pp.
Bound volume containing text of tax cases of Australia and New Zealand. (B. 9909)

AUSTRIA

DIE BUNDESABGABENORDNUNG MIT EINGEHENDEN ERLÄUTERNDEN ANMERKUNGEN, VERWEISUNGEN AUF ZUSAMMENHÄNGENDE BESTIMMUNGEN UND HINWEISEN AUF HÖCHSTRICHTERLICHE ENTSCHEIDUNGEN

5. Überarbeitete und neuerlich erweiterte Auflage. By F. Reeger and G. Stoll. Vienna, Wirtschaftsverlag Dr. Anton Orac, 1975. 562 pp.
Fifth revised and extended edition of the textbook providing comments on the Federal Fiscal Code, with reference to Austria (and, as far as applicable, German) case law. (B. 9862)

EINKOMMENSTEUERHANDBUCH; EINKOMMENSTEUERGESETZ 1972

By A. Schubert, W. Pokorny and W. Schuch. Vienna, Wirtschaftsverlag Dr. Anton Orac, 1973. 1376 pp.
Textbook providing comment on the Individual Income Tax Law 1972, effective as of January 1, 1973, with reference to case law and literature updated as of the middle of 1973. (B. 9863)

FAMILIENVERTRÄGE UND INDIVIDUALBESTEUERUNG

Zivilrechtliche, steuerrechtliche und sozialversicherungsrechtliche Probleme bei Vereinbarungen zwischen Angehörigen. By H.G. Ruppe.
Schriften zum österreichischen Abgabenrecht, Band 12. Vienna, Wirtschaftsverlag Dr. Anton Orac, 1976. 428 pp., ÖS 594.—.
Monograph dealing with a number of problems in the case of agreements between members of a family. Civil law, tax law and social security law consequences are discussed. (B. 9882)

DIE GESELLSCHAFT BÜRGERLICHEN RECHTS

Zivilrecht, Steuerrecht, Unternehmensrechtsform, Gestaltungsmöglichkeiten, Vertragsmuster. By K. Böhler. Vienna, Industrieverlag Peter Linde, 1976. 260 pp., ÖS 210.—.
Monograph dealing with civil law and tax law aspects of the so-called legal form of the "civil law company" in Austria. The author extensively explains in which cases this legal form must be preferred above others. (B. 9883).

BELGIUM

OEDIPE-FISCAL: AU BONHEUR DES MULTINATIONALES — LE MODELE SIMPLIFIE DE DECLARATION A L'IMPOT SUR LE REVENU DES PERSONNES PHYSIQUES — LE DOUBLEMENT DES REVENUS CADASTRAUX

Prepared by R. Defraiteur. Mons, Université de l'Etat à Mons, Centre de Recherche pour l'Organisation, l'Etude, le Développement et l'Innovation dans le Secteur Public et l'Entreprise, 1976. 47 pp.
Cahier No. 6 of Centre O.E.D.I.P.E. containing: discussion on the privileged tax treatment of foreign managers, the legal provision applicable to transfer pricing and the headquarters in Belgium; comments on the recently introduced simplified tax return; discussion of the temporary measures on the taxation of income from real property. (B. 9814)

DEVELOPING COUNTRIES

NATIONAL ACCOUNTS OF LESS DEVELOPED COUNTRIES

Comptes nationaux des pays moins développés 1959-1968. Paris, Organisation for Economic Co-operation and Development, 1970. 270 pp., Ffrs. 25.—. (B. 9917)

EUROPE

THE EUROPEAN ECONOMY IN 1975

Economic survey of Europe in 1975. Prepared by the Secretariat of the Economic Commission for Europe, Geneva. New York, United Nations, 1976. 152 pp.
An assessment on the 1975 economy in West and East Europe surveyed on the responsibility of the Secretariat. (B. 9970)

GERMANY (FEDERAL REPUBLIC)

ENTWURF WOHL-EINGERICHTETER STEUERN AUS DEM JAHRE 1719

By T.L. Lau. Cologne, Peter Deubner Verlag, 1976. 32 pp., DM 12.80.
Reprint of a chapter of a historical book on taxes published in the 18th century. The chapter reprinted is entitled: "The improvement of taxes", and gives a plea for a righteous tax system. An explanatory introduction by A. Pausch has been added. (B. 9881)

KÖRPERSCHAFTSTEUERGESETZ 1977 (KStG 1977)

Düsseldorf, IdW Verlag, 1976. 252 pp., DM 26.—.
Consolidated text of the new Corporate Income Tax Reform and the Introductory Law to the Corporate Income Tax Reform. Government's explanatory note on each provision is appended. (B. 9947)

VERLUSTVORTRAG — VERLUSTRÜCKTRAG

Cologne, Peter Deubner Verlag, 1976. 48 pp., DM 19.80.
Brochure discussing the tax treatment of losses incurred. The Income Tax Amendment Law 1976 which introduces the 1-year carry-back for losses is also covered. Theory is clarified by 37 practical examples. (B. 9935)

DAS VERSTÄNDIGUNGSVERFAHREN IM DEUTSCHEN INTERNATIONALEN STEUERRECHT

By D. Mülhausen. Schriften zum Steuerrecht, Band 14. Berlin, Duncker & Humblot, 1976. 243 pp., DM 66.60.
Indepth study analyzing the concept of mutual agreement procedure in German international tax law. The cause of this study was the 1971 double taxation treaty between Germany and Switzerland on the issue of mutual agreement solutions. (B. 9685)

INDONESIA

TAX ADMINISTRATION IN INDONESIA

Paper presented by the Indonesian Delegation to the ESCAP Seminar on Foreign Investment and Tax Administration, Tokyo, 27 Sept. - 7 Oct., 1976. 34 pp. (B. 50.567)

INTERNATIONAL

DISTRIBUTION REQUIREMENTS FOR FOUNDATIONS

By E. Steuerle. OTA Paper 12, May 1976. Washington, Office of Tax Analysis, 1976. 25 pp.
Published text of preliminary findings of tax research conducted by staff member of the Office of Tax Analysis. The purpose of this paper is to examine the minimum distribution requirements for foundations. (B. 9823)

INTERNATIONAL ASPECTS OF THE TAXATION OF CORPORATIONS AND SHAREHOLDERS

By M. Sato and R.M. Bird. Reprinted from Vol. XXII, No. 2 (July 1975), International Monetary Fund, Staff Papers, pages 384-455. (B. 9951)

INTERNATIONAL MONETARY FUND

Twenty-seventh annual report on exchange restrictions 1976. Washington, International Monetary Fund, 1976. 520 pp.
Report on exchange restrictions in various countries during the period 1975 and early 1976, as well as measures and intergovernmental arrangements that may have direct balance of payments implications. (B. 9938)

INVESTIR DANS LE TIERS MONDE

Mesures d'incitation en faveur des investissements privés vers les pays en développement. Troisième édition, juin 1975. Paris, Organisation for Economic Co-operation and Development, 1975. 130 pp., Ffrs. 20.—.
Third revised edition of comparative study on measures taken by developed countries of the OECD to promote private investment in developing countries by way of concluding protection agreements and government guarantee for such investments. The countries reviewed are: German Federal Republic, Australia, Austria, Belgium, Canada, Denmark, U.S.A., France, Italy, Japan, Norway, New Zealand, the Netherlands, United Kingdom, Sweden and Switzerland. (B. 9840)

THE POLICY USES OF A COMPUTATIONAL GENERAL EQUILIBRIUM ALGORITHM

By J.B. Shoven. OTA Paper 9, February 1976. Washington, Office of Tax Analysis, 1976. 19 pp.
Published text of preliminary findings of tax research conducted by staff member of the Office of Tax Analysis. (B. 9827)

PROGRAM FOR SEMINAR ON PROTECTION OF ASSETS OF TAX HAVEN ENTITIES

Conducted by the USA branch of the International Fiscal Association in Dupont Plaza Hotel, Miami, June 18, 1976. New York, International Fiscal Association, 1976. ± 120 pp.
Text of contributions to the seminar by various speakers such as Statement of the Problem by M.J. Langer; Protection of Assets by H.P. Dale; Protection of Assets of Corporations by J.J. Karp; The Movable Trust by L.A. Freeman; The Canadian solution for the Protection of Trust Assets by J. Reynolds. (B. 9905)

PUBLIC FINANCE IN THEORY AND PRACTICE

By A.R. Prest. London, Weidenfeld and Nicolson, 1975. 448 pp., £ 6.50.
Fifth revised edition of study on public finance in developed nations divided into three parts: analysis, description and policy. (B. 9865)

TAX HAVENS OF THE WORLD

By W.H. Diamond and D.B. Diamond. Volumes 1 and 2. New York, Matthew Bender, 1976.
Loose-leaf publication in two binders containing information on the tax havens of the world. It reviews various areas such as government, labour, taxation, banking, transfer of funds, transportation, etc., to be reckoned with in choosing a tax haven either for business purposes or for a retirement haven for individuals. The following "countries" are included: Andorra, Bahamas, Bermuda, British Virgin Islands, Campione, Cayman Islands, Channel Islands (Jersey, Guernsey and Sark), Costa Rica, Cyprus, Gibraltar, Greece, Hong Kong, Ireland, Isle of Man, Lebanon, Liberia, Liechtenstein, Luxembourg, Malaysia, Monaco, Montserrat, Nauru, Netherlands, Netherlands Antilles, New Hebrides, Panama, Philippines, San Marino, Switzerland, Turks and Caicos Islands, United Kingdom, Venezuela. An introductory chapter and a glossary of Tax Haven Terms is appended. The material will be updated by supplements to replace existing pages or supplement them. (B.8615)

SIZE DISTRIBUTION

A compilation of data. By Shail Jain. Washington, International Bank for Reconstruction and Development, 1975. 137 pp.
Compilation of data on income distribution from 81 countries that allows comparisons. (B. 9928)

ITALY

I RAPPORTI DI INTERMEDIAZIONE NELL'I.V.A.

By G. Acampora. Rome, Nuova Rivista Tributaria Editrice, 1974. 16 pp.
Value added tax liability of intermediaries, such as commission agents. (B. 9853)

JAPAN

ASIA'S NEW GIANT

How the Japanese economy works. Edited by Hugh Patrick and Henry Rosovsky. Washington, The Brookings Institution, 1976. 942 pp.
Study consisting of essays by various contributors explaining how the Japanese have managed their economy during the past twenty years, together with an assessment of Japan's present and future economic prospects. The book is a substantial addition to the literature on the Japanese economy accessible to Western readers. Among the essays are the following: Hugh Patrick and Henry Rosovsky: Japan's Economic Performance; An Overview. E.F. Denison and W.K. Chung: Economic Growth and its Sources. E.C. Wallich and M.I. Wallich: Banking and Finance. J.A. Pechman and Keimei Kaizuka: Taxation. R.E. Caves and Masu Uekusa: Industrial Organization. H. Patrick and H. Rosovsky: Prospects for the Future and Some Other Implications. (B. 50.570)

EHS LAW BULLETIN SERIES: JAPAN

Volume IV. Tokyo, Eibun-Horei-Sha, Inc., (Codes Translation Institute, Inc.), 1975.
This volume contains the English version of the following laws: law concerning adjustment of procedures of tax delinquency measures and compulsory execution (revised edition 1960); The Income Tax Law of Japan (1975 edition); The Inheritance Tax Law of Japan (1975 edition); the Corporation tax Law of Japan (1975 edition); The Assets Revaluation Law of Japan (1962 edition); double taxation treaties between Japan and the U.S.A., U.K. resp. with respect to taxes on income and the treaty between Japan and the U.S.A. for the avoidance of double taxation with respect to taxes on estates, inheritances and gifts. (B. 50.560)

LAWS, ORDINANCES AND OTHER REGULATIONS CONCERNING FOREIGN EXCHANGE AND FOREIGN TRADE (1976)

Tokyo, Chuo Shuppan Kikaku Co., 1976. ± 550 pp.
English version of statutes concerning the regulations of foreign exchange and foreign trade by Japan. (B. 50.559)

AN OUTLINE OF JAPANESE TAXES 1976

Tokyo, Tax Bureau, Ministry of Finance, 1976. 292 pp.
This 1976 edition updates the general guide providing a survey of taxes levied in Japan including the 1976 tax changes, double taxation treaties and organization of national tax administration. (B. 50.516)

VALUE ADDED TAX (VAT)

Easy commentary by Haruo Taniyama (Makoto Miura). Published by Oriental Economist Co., Ltd., Tokyo, September 24, 1976. 256 pp., appendix 22 pp.
Introduction to the value added tax system written under his pen name by Makoto Miura, director of Zeisei Keiei Kenkyujo (The Institute of Tax and Management), Tokyo. Written in the Japanese language, two-thirds of this book explain the value added tax in the European Economic Community and one-third is dedicated to the problem of introducing the VAT in Japan. (B. 50.513)

KOREA (SOUTH)

DOING BUSINESS IN KOREA

Prepared by Ahn, Kwon & Co., January 1976. Seoul, The SGV Group, 1976. 51 pp.
General information on business opportunities in South Korea. Taxation is considered. (B. 50.507)

GUIDE TO INVESTMENT IN KOREA 1976

Seoul, Economic Planning Board, 1976. 129 pp.
Revised and updated guide providing information including taxation for foreign investors in Korea. Relevant text of investment statutes is included. (B. 50.563)

INVESTMENT IN KOREA

Application and authorization. Seoul, Bureau of Foreign Investment Promotion, Economic Planning Board, 1976. 8 pp. (B. 50.548)

INVESTMENT IN KOREA

Guarantees and incentives. Bureau of Foreign Investment Promotion, Economic Planning Board, 1976. 7 pp. (B. 50.550)

INVESTMENT IN KOREA

Policy and climate. Seoul, Bureau of Foreign Investment Promotion, Economic Planning Board, 1976. 9 pp. (B. 50.549)

KOREAN TAXATION 1976

Tax System Bureau, Ministry of Finance. Seoul, Government Printer, 1976. 190 pp.
Revised and updated publication explaining briefly the Korean tax structure and administration to foreigners engaged in business activities in Korea and to provide information on the Korean tax system to foreign countries, in particular those negotiating tax conventions with Korea. (B. 50.572)

LATIN AMERICA

DOCUMENTOS E INFORMES DE LA NOVENA ASAMBLEA GENERAL

Ottawa, Canada, 8-14 Junio, 1975. Panama, Centro Interamericano de Administradores Tributarios, 1975. 345 pp.
Papers and reports of the 9th General Assembly held in Ottawa from June 8 to 14, 1975, covering the following main topics: I — Main taxpayer archive; II — Value added tax administration; III — Multinational enterprise fiscalization; IV — Tax administration science. (B. 15.587)

THE LATIN AMERICAN INTEGRATION PROCESS IN 1975

Le processus d'intégration en Amérique Latine en 1975. Buenos Aires, Banco Interamericano de Desarrollo, 1976. 61 + 59 pp.
Extract from the Annual Report "The Latin American Integration Process in 1975", Section I. (B. 15.578/ B. 15.579)

EL PROCESO DE INTEGRACION EN AMERICA LATINA EN 1974

Buenos Aires, Instituto para la Integración de América Latina, Banco Interamericano de Desarrollo, 1975. 300 pp.
A general survey on the integration process in Latin America, during the year 1974. The book contains a general survey and a per group study: AFTA, ANCOM, etc. (B. 15.593)

EL PROCESO DE INTEGRACION EN AMERICA LATINA EN 1975

Buenos Aires, Instituto para la Integración de América Latina, Banco Interamericano de Desarrollo, 1976. 321 pp.
A report on the integration process in Latin America either within an international context and considering each group of countries such as LAFTA (ALALC) and the Andean Group, Central American Common Market and CARICOM (Caribbean Common Market). Original text in Spanish and separated extracts in English and French. (B. 15.577)

PROGRESO ECONOMICO Y SOCIAL EN AMERICA LATINA

Informe Anual 1975. Washington, Banco Interamericano de Desarrollo, 1975. 470 pp.
A report on the economic and social development in Latin America since 1970 and especially for the years 1974 and 1975, containing a general or regional analysis and a particular analysis for each country. (B. 15.580)

THE NETHERLANDS

FISCAAL MEMO

Deventer, Kluwer, 1976. 62 pp., Dfl. 12.50.
Revised edition of Fiscal Memo providing practical information in a nutshell concerning tax provisions and related subjects such as social security contributions effective as of July 1976. (B. 9884)

INDIVIDUELE BELASTINGHEFFING VAN GEHUWDEN

By F.C. Wijle. Brochure 10, August 1976. Rotterdam, Erasmus University, 1976. 132 pp.
Proposal for separate taxation of married women under the Dutch individual income tax, wage tax and net wealth tax. (B. 9868)

DE PROPORTIONELE TARIEVEN IN DE INKOMSTENBELASTING (2)

Bespreking van het rapport van de Commissie ter bestudering van de grondslagen en onderlinge verhoudingen van de tarieven van de inkomstenbelasting. Geschriften van de Vereniging voor Belastingwetenschap, No. 142. Deventer, Kluwer, 1976. 23 pp.
Entitled "The proportional individual income tax rates" this booklet is number 2 on the same subject containing text of the discussion on the Report prepared by the Commission to study the principles and interrelations of the individual income tax rates. (B. 9968)

SCHEMATISCH OVERZICHT VAN DE SOCIALE VERZEKERINGSWETTEN

31st ed., July 1976. By G.F. Fortanier and J.J.M. Veraart. Deventer, Kluwer, 1976. 12 pp.
Revised and updated 31st edition of comparative survey concerning national insurance laws effective as of July 31, 1976. (B. 9953)

SAUDI ARABIA

WINNING BUSINESS IN SAUDI ARABIA

By N. Fallon. London, Graham & Trotman, Ltd., 1976. 61 pp., £ 29.50.
Information guide for those who are interested in doing business in Saudi Arabia. Company law and foreign capital investment procedures are described, as well as taxes. The economic environment is set out with emphasis on the Second Five Year Plan. (B. 50.483)

SWITZERLAND

CONSTITUTION ET IMPOSITION DES SOCIETES ANONYMES EN SUISSE

U.S. Tax Reform Act of 1976 - Congress chases the foreign dollar.

J. H. Dobson* & V. M. Tarris**

On October 4, 1976, President Ford signed into effect the Tax Reform Act of 1976. This Act makes sweeping changes in many facets of U.S. tax law including a number of changes in the treatment of various types of foreign income and foreign entities. It is the purpose of this article to provide a discussion of the provisions of the Tax Reform Act which have international significance.

Because of the breadth of the changes and the complexity of U.S. tax law it is not possible to provide a detailed explanation of the treatment of international transactions under the Act in a single article. Instead, the authors have attempted to give a general view of the types of transactions affected by the Act and the manner in which they have been affected. This is done by explaining how each of the transactions was treated prior to the Tax Reform Act, with a brief explanation of the practical consequences, followed by an explanation of the changes enacted by the Act. This will not provide the reader with a complete description of the laws and regulations restricting these transactions, but it is hoped that it will enable him to recognize situations where U.S. tax laws should be considered.

This article will be presented in two segments, in consecutive issues of the Bulletin for International Fiscal Documentation. In this segment, four areas will be discussed: the taxation of individuals living abroad, the taxation of foreign trusts, the taxation of controlled foreign corporations, and the credit for foreign taxes. In the following segment the discussion will focus on money and property moving out of the United States, special categories of taxpayers, bribes and boycotts and the domestic international sales corporation.

I. FOREIGN TAX PROVISIONS AFFECTING INDIVIDUALS ABROAD

1. Foreign income of U.S. citizens resident outside the United States

A. Prior law

In the United States, international double taxation can arise in the following situations:

(a) a resident U.S. citizen receives foreign-source income;
(b) a resident alien receives foreign-source income;
(c) a non-resident alien receives U.S.-source income; or
(d) a non-resident U.S. citizen receives foreign-source income.

The present section deals with the last-mentioned situation.

Unlike almost every other country in the world, the United States taxes its non-resident citizens on their world-wide income in a manner which is basically the same as in the case of resident citizens. Since the country where a U.S. citizen is resident generally taxes its residents on world-wide income as well, a special case of international double taxation may easily arise.

* J.D., University of Michigan, Editor of EUROPEAN TAXATION, International Bureau of Fiscal Documentation, Amsterdam.
** J.D., Georgetown University, Editor of Guides II and IV to European Taxation, International Bureau of Fiscal Documentation, Amsterdam.

In this issue:

I. FOREIGN TAX PROVISIONS AFFECTING INDIVIDUALS ABROAD
- 1. Foreign income of U.S. citizens
  - A. Prior law
  - B. The Tax Reform Act
- 2. Non-resident aliens
  - A. Prior law
  - B. The Tax Reform Act

II. TAXATION OF FOREIGN TRUSTS
- A. General description
- B. The Tax Reform Act
  - 1. Foreign trust with U.S. grantor
  - 2. Capital gains of a foreign trust
  - 3. Tax-free accumulations
  - 4. Transfers of appreciated property abroad
- C. Summary

III. CONTROLLED FOREIGN CORPORATIONS
- A. Prior law
- B. The Tax Reform Act
  - 1. Investments in U.S. property
  - 2. Gains from the disposition of shares in foreign corporations
    - a. Less developed country corporations
    - b. Gains on shares distributed, sold or exchanged by a U.S. corporate shareholder
  - 3. Income from foreign insurance companies
  - 4. Income from foreign base shipping companies

IV. THE FOREIGN TAX CREDIT
- A. Prior law
- B. The Tax Reform Act
  - 1. Elimination of "per country" limitation
  - 2. Recapture of foreign losses
  - 3. Controlled foreign corporation credit
  - 4. Oil and gas extraction income credit
  - 5. Foreign capital gains
  - 6. Underwriting income
  - 7. Dividends from less developed country corporations

Subject to special provisions which may be contained in a double taxation treaty it may have concluded with the United States, a foreign country where a U.S. citizen is resident can hardly be expected to provide any relief from double taxation in the case referred to above. It is the United States, therefore, that should provide such relief.

As will be seen from the brief survey that follows, the United States actually grants double taxation relief to its non-resident citizens. This relief is rather limited in scope. Nevertheless, it may result in a few special advantages. Under the former legislation, two forms of relief were available, namely:

1) a tax credit; and
2) an exemption.

A special disadvantage resulted from the disallowance of the use of certain deductions.

The *tax credit* is the general form in which the United States, unilaterally and in treaties, grants double taxation relief to its residents, both citizens and aliens, and to its non-resident citizens. The credit is for foreign taxes paid in respect of foreign-source income. In the case of U.S. citizens residing abroad, the foreign tax credit does *not* apply to foreign tax on U.S.-source income of the U.S. citizens resident in the foreign country. Thus, this relief method does not solve the double taxation problem to the extent that the taxpayer receives U.S.-source income.

The United States granted an *exemption* from U.S. tax for a limited amount of foreign-source income derived by a non-resident U.S. citizen. A U.S. citizen is permitted to exclude from U.S. taxation a limited amount of the income earned abroad. Any U.S. citizen who was a *bona fide* resident of a foreign country for an uninterrupted period including an entire taxable year, or any U.S. citizen who was present in a foreign country for 17 out of 18 months, was allowed to exclude $20,000 from his taxable income in the United States. A citizen who was a *bona fide* resident of a foreign country for at least 3 consecutive years was allowed to exclude $25,000 of his foreign-source income from his taxable income in the United States. The exemption was a definite one, in the sense that any income in excess of the excluded sums was taxable in the United States as if it was the only income. Thus, this form of relief was an exemption *without* progression.

One would expect that taxes on these sums which were already fully exempt from U.S. tax would not be available for the tax credit. This was not the case. Any foreign tax imposed on foreign-source income *including* the exempt amount would be credited against the U.S. tax on the non-exempt income, within the usual limitations. See Part IV below.

One disadvantage did result from the use of the tax credit. Normally a U.S. taxpayer may determine his taxable income in one of two ways. He could include income from all sources and deduct all actual expenses in the manner prescribed by law. Or he could determine his income by deducting a lump-sum amount fixed by law (the so-called "*standard deduction*"), even if this sum exceeded the actual expenses incurred. A non-resident U.S. citizen who chose to obtain relief from double taxation by the use of the tax credit was not permitted to use the standard deduction to determine his taxable income.

Finally, mention should be made of the fact that certain countries impose their taxes only on income actually received in the country. U.S. citizens residing in such countries could avoid paying foreign taxes altogether by having their income paid to an account in another country, generally a country which would not impose tax on such income. Although this income was not, therefore, taxed abroad at all, it nevertheless qualified for the exclusion from U.S. tax to the maximum amount mentioned above.

The situation existing until the enactment of the Tax Reform Act of 1976 can thus be summarized as follows:

a. Exclusions

(i) A U.S. citizen residing abroad was exempt from U.S. tax with respect to certain amounts determined by law.

(ii) This exemption applied irrespective of whether or not the income was subject to foreign tax.

b. Tax credit

(iii) Any foreign tax paid on the exempt income could be credited against U.S. tax on the non-exempt portion of the income.

(iv) No credit was available for foreign taxes paid on U.S.-source income.

c. Deductions

(v) The taxpayer could only deduct sums actually expensed by him; he could not use the standard deduction available to other, resident, U.S. taxpayers.

(vi) An expense paid on excluded income was completely unavailable as a deduction to the taxpayer.

d. Tax rate

(vii) U.S. tax on the non-exempted income was determined at the rate applicable if the taxpayer had no other income.

B. The Tax Reform Act

Section 1011 of the Tax Reform Act was passed in an attempt to eliminate some of the advantages and minimize the disadvantage described above.

a. *Exclusions*

(i) Effective December 31, 1975, the maximum exemption available for foreign-source earned income is $15,000. [1]

(ii) Income earned abroad which is received outside the country in which it is earned is ineligible for the exclusion if one of the purposes (not necessarily the principal purpose) of receiving the income outside that country is to avoid paying tax in the country in which it was earned. The fact that the country in which the income was earned did not tax it will probably be sufficient to show the existence of a tax avoidance motive.

1. In limited circumstances, i.e. if an individual performs qualified charitable work during the taxable year, this exemption increases to $20,000. If an individual works for both a charity and a non-charitable organization, a special rule applies

b. *Tax credit*

(iii) The taxpayer is no longer allowed a deduction or a credit for the foreign income taxes paid on the amount excluded from gross income under the earned income exclusion.

(iv) The credit is still not available for foreign taxes paid on U.S.-source income.

c. *Deductions*

(v) The tax law was amended to permit taxpayers who avail themselves of the foreign tax credit to also take the lump sum deduction rather than being limited to deducting only actual expenses.

(vi) Expenses related to the excluded income are still not deductible from taxable income. They are considered, however, when computing the tax rate on taxable income under the exemption with progression system.

d. *Tax rate*

(vii) Any additional income in excess of the exclusion is taxed at the higher tax rate that would apply if there were no foreign earned income exclusion (exemption *with* progression).

An individual who would be eligible for this exclusion may elect to have it not apply. Such an election might be made if the country in which the income was earned imposes a high tax rate. In this case, the taxpayer would want to use all the foreign tax credit available to him. Once this election is made, however, it cannot be revoked except with the consent of the Secretary of the Treasury.

2. Non-resident aliens

A. Prior law

Under U.S. tax law, a husband and wife are allowed to file a joint tax return. This may have a great advantage because the total income, irrespective of which of the two spouses received it, is split into two equal parts and each part is taxed according to the tax rate schedule established by law. In other words, the effect of the progressive rate structure is considerably reduced. However, the use of the joint return was not available to a husband and wife if one spouse was a non-resident alien. Not filing a joint return had both advantages and disadvantages for taxpayers.

a. *Disadvantages*

1) Tax rates

U.S. tax law has 4 tax rates: one for single taxpayers, one for heads of households, one for married individuals filing joint tax returns, and one for married individuals filing separate tax returns. The highest tax rate for a specific amount of income exists for those married individuals filing separate tax returns.

2) Maximum tax rate

The section of the tax law imposing a maximum rate of 50 percent on earned income was available to married individuals only if they filed a joint return. The maximum rate which could be imposed otherwise is 70 percent.

b. *Advantages*

1) Foreign-source income of non-resident alien spouse

The foreign-source income of a non-resident alien spouse was not subject to any U.S. tax.

2) Community property laws

In countries recognizing community property income, one half of the income of one spouse is attributable to the other spouse. Thus, the non-resident alien's half of the income, although earned by a U.S. citizen, was not taxable in the United States.

In addition, although a non-resident alien filing a tax return was not required to do so until June 15 of the year following the tax year, he was required to file a declaration of estimated income tax by April 15. The estimated return determined the quarterly payments of tax which must be paid to the government in advance of the actual filing of the tax return the following year.

B. The Tax Reform Act

Section 1012 of the Act permits a citizen and his or her non-resident alien spouse to file joint tax returns by permitting the non-resident alien to be treated as a resident of the United States for tax purposes. This is accomplished by an election for such treatment. Both the husband and wife must make such an election. It is effective until terminated.

Once an election is terminated, it may not be made again by either spouse at any subsequent time. Thus, a non-resident wife who divorces her U.S. citizen husband and later remarries another U.S. citizen cannot elect to be treated as a U.S. resident for tax purposes with this second husband.

The Tax Reform Act attempts to minimize both the disadvantages and the advantages of not being able to file a joint return with a non-resident alien spouse.

a. *Disadvantages*

1) Tax rates

By filing a joint return the U.S. citizen and his or her non-resident alien spouse may use the more favorable tax rates available for married individuals filing a joint return.

2) Maximum tax rate

The maximum tax rate which can now be imposed on the earned income of the U.S. citizen and his or her non-resident alien spouse is 50 percent.

b. *Advantages*

1) Foreign-source income of non-resident alien spouse

By electing to have the non-resident alien spouse treated as a U.S. resident for tax purposes, the spouse and his or her husband are liable for tax on their world-wide income.

2) Community property

The former section of the tax law dealing with community property of a resident or citizen married to a non-resident alien individual has been repealed. A new section has been added. It attempts to properly allocate income for U.S. tax purposes to the person who in fact earned or received it and thus to deny to the non-resident alien spouse the right to a tax-free one half of the spouse's income otherwise taxable in the United States.

Section 1012 of the Act also amended the date for the filing of the estimated tax return by a non-resident alien to coincide with the date on which the tax return is due.

The joint return election is effective for taxable years ending on or after December 31, 1975. The community property rules and the estimated tax return date will apply to taxable years beginning after December 31, 1976.

II. TAXATION OF FOREIGN TRUSTS [2]

A. General description

Because U.S. tax law accepts that a trust has legal personality, it recognizes that a foreign trust may be taxed as a non-resident legal entity that is not a citizen of the United States. As such, it would not be subject to U.S. tax on its income and capital gains. Such gains would be taxable only when received by a U.S. beneficiary. Therefore the two principal questions concerning the taxation of foreign trust income and other gains are: when is the trust to be treated as a separate personality and what taxation should apply to payments to beneficiaries. The new Tax Reform Act deals with both of these questions and in each case the law is expanded to give the U.S. tax administration greater powers.

To understand the motivation for and the effects of the new Act, one must first consider the purposes for which a trust may be employed. Simply stated, there are two basic types of tax advantages that a person (grantor) may be seeking when he contributes property to a trust. The first, "income splitting", is based entirely on internal tax law. Since a trust is recognized as a separate taxpayer, and since there is progressive taxation on individual income, a taxpayer in a high tax bracket might want to put some of his income-producing property in a trust. The trust is taxed on the income according to the rates applying to an individual. Thus, the grantor's income is divided between two taxpayers, himself and the trust, each of whom is taxed at a lower rate than if the income had been aggregated. This is the income splitting effect offered by trusts: by increasing the number of taxpayers through which income is received, the grantor can avoid much of the burden of a progressive rate structure.

The Congress recognized that the income splitting aspect of a trust could potentially circumvent the aims of the Congress in establishing a system of progressive taxation. The response was to put conditions on the separate taxation of trusts so that transfers which were no more than tax maneuvers would not give rise to separate taxation. Under the law certain circumstances, which indicate that the grantor has forfeited control [3] over the property and most future benefits from the property [4], must exist before the trust income is taxed to the trust or the trust beneficiary rather than to the grantor. Of course, these provisions only restrict, and do not prevent, the avoidance of the progressive tax rates. For instance, a grantor can split his income while retaining the right to have the property returned from the trust to him at a later time [5]. What these provisions do determine is how much of the rights of ownership of the property the grantor must be willing to give up to gain the benefits of income splitting. The placement of that balance is the central question in this first area of trust-related tax benefits.

The second major potential advantage of trusts arises from the perception by the U.S. tax administration of a foreign trust as a legal person having a non-resident alien status. If one gives one's property to a foreign trust, and if the transfer-of-effective-control conditions are satisfied, then the property is now owned by a foreign person. Income produced by the property is received by a foreign person and is not automatically subject to U.S. tax [6]. Thus, one can see the potential of using a foreign trust as a receptacle for accumulating income free of tax. Similarly, the foreign trust could sell the property without being subject to U.S. taxation. Since the United States taxes capital gains, a grantor might wish to use a foreign trust as a vehicle for selling property which had appreciated in value without the grantor being taxed on the gain. In other words, the foreign trust, if unrestricted, would give the U.S. grantor a base for accumulating income and realizing appreciation gains without current U.S. taxation. This deferral of tax liability until distribution is the second type of benefit one can perceive in the U.S. trust concept.

B. The Tax Reform Act

1. *Foreign trust with a U.S. grantor*

The Tax Reform Act of 1976 eliminates both income splitting and tax deferral for most transfers to foreign trusts. This is done through three provisions in the Act. The first of these, Act Section 1013, has several effects. It prohibits a U.S. grantor from gaining the advantage of income splitting from transfers during his lifetime to a foreign trust which has a U.S. beneficiary. That is, if a foreign trust has any U.S. beneficiary the U.S. grantor will be taxed on *all* income earned by the trust from the ownership of his property. The law defines a U.S. beneficiary as any U.S. person (U.S. citizen or resident or domestic legal entity) to whom or for whose benefit any income or corpus of the trust may be paid or accumulated, either by normal operation of the trust or by its termination during the tax year. A trust is also considered to have a U.S. beneficiary if benefit flows from the trust to a foreign corporation which for more than 50 percent is owned by U.S. shareholders, to a foreign partnership with a U.S. partner or to a foreign trust with a U.S. beneficiary. The burden of reporting a trust with a U.S. beneficiary falls on the U.S. grantor. Failure to report such a trust subjects him to criminal sanctions and a penalty of 5 percent of the corpus [7] of the trust.

---

2. Since many countries do not recognize the legal existence of a trust, some readers may have little experience with this type of legal entity. To provide background information which should help clarify this Subchapter for those readers a short explanation of the trust concept is provided in an appendix at the end of this article.
3. Effective control will not have been transferred, and hence separate taxation will be denied, if the grantor retains the right to choose how the income or property will be disposed of, if he retains administrative control over the trust, or if he has the power to revoke the trust.
4. Sufficient benefits will not have been surrendered if the grantor will receive income or property from the trust within 10 years of its creation or if income from the trust is used for the benefit of the grantor or his spouse.
5. Provided that the property is in trust for at least 10 years.
6. Like any other foreign person, a foreign trust will be subject to tax on income derived from the United States unless exempted by treaty.
7. The term "corpus" refers to the principal sum of the trust.

The law applies for tax years ending after December 31, 1975, but only in the case of foreign trusts created after May 21, 1974, and transfers to foreign trusts after May 21, 1974. These provisions will not apply, however, where the transfer is made by the U.S. grantor upon his death or where the transfer to the trust is in a taxable exchange for money or property equal in value to the transferred property. The trust is recognized as owner of the property for tax purposes in these situations.

2. *Capital gains of a foreign trust*

Besides reducing the availability of income splitting where a foreign trust is involved, Act Section 1013 prohibits U.S. beneficiaries of any foreign trust from enjoying a tax measure which benefits U.S. beneficiaries of U.S. trusts. That measure is the special tax rate applied to capital gains. Normally a trust is allowed to deduct half of its net capital gains in computing taxable income, which in effect produces taxation of capital gains at half the normal rate. Previous legislation had denied this benefit to foreign trusts established by a U.S. grantor. Under the Act income received by U.S. beneficiaries attributable to capital gains earned by a foreign trust not established by a U.S. grantor in the first tax year beginning on or after January 1, 1976, will no longer be allowed the 50 percent deduction.

Obviously, this measure and the measure discussed immediately previously are not intended to harmonize the treatment of domestic and foreign trusts. The purpose seems, rather, to penalize the transfer of property to foreign trusts where the purpose of the transfer may be tax avoidance. The use of a foreign trust where both the grantor and beneficiary are U.S. persons suggests a motive of tax-free accumulation. Capital gains earned by a foreign trust and distributed to U.S. beneficiaries suggest a transfer of appreciated property to a trust to allow tax-free accumulation of the gain.

3. *Tax-free accumulations*

The second Section of the new Act dealing with foreign trusts is directly concerned with tax-free accumulations. A new Section is added to the Internal Revenue Code providing for an interest charge where a foreign trust is distributing income which has been accumulated free of U.S. tax (e.g. income retained by a trust having either no U.S. grantor or no U.S. beneficiary). The interest charge is imposed by increasing the tax on the distribution by 6 percent for each year that the tax has been deferred. The general provision providing for the deduction of interest expenses does not apply to this charge. This interest charge will not apply where the trust income was taxed to the grantor under Act Sec. 1013 discussed above, since in that case there will not have been a tax-free accumulation of the income. Where a trust beneficiary is subject to the charge upon distribution, the impact of this Section is reduced by a provision which provides that the tax on income accumulated before or during 1976 will only be subject to the interest charge from the first tax year beginning after 1976. Thus the new Act will not retroactively reduce the tax deferral benefits provided by a foreign trust through this interest charge.

4. *Transfers of appreciated property abroad*

The third Section of the Act concerning foreign trusts, Section 1015, deals with transfers of appreciated property abroad to avoid U.S. tax on the gain. This section is not restricted in its application to transfers to foreign trusts, but includes transfers to any foreign person. An excise tax is imposed on such transfers. The purpose of such an excise tax is to counterbalance the tax avoidance potential of such a transfer with an equivalent tax liability. Prior to the Tax Reform Act an excise tax provision already existed, imposing a tax of 27½ percent on the amount of untaxed appreciation in value of the transferred shares and securities. The tax applied except where the recipient was an organization exempt from income tax, where the taxpayer had established that tax avoidance was not one of the principal purposes for the transfer, or where the transfer was one to which Section 367 applied [8].

This excise tax is made stronger in two ways by the Act. First, the tax is no longer limited to the transfer of shares and securities. Under the new provision all property transferred after October 2, 1976 which has appreciated in value is subject to the tax. All transfers intended to allow tax-free realization of capital gains will fail under the new law. Second, the rate of the excise tax is raised to 35 percent for all transfers occurring after October 2, 1976. This rate corresponds to the maximum rate of U.S. tax on capital gains received by an individual (i.e. one half of the maximum marginal rate of 70 percent) meaning that the advantage of a tax-free sale is nullified for even the wealthiest taxpayers. For taxpayers whose income is not taxed at the maximum rate, the excise tax on the transfer of property will be greater than the tax that would be due upon its sale. A new provision allows these taxpayers to escape this extra taxation. A taxpayer may elect to have a transfer treated as a sale, with the excess of the property's value over the taxpayer's basis in the property treated as capital gains. If such an election is made the taxpayer is not subject to the excise tax. The result of this provision and the two changes mentioned above is that while a taxpayer can no longer gain a tax advantage by having appreciated property transferred abroad before its sale, he can make such a transfer without paying more tax than would result from a sale, provided he elects taxation as a sale.

C. Summary

Briefly summarized, the new Act has had four major effects in the area of foreign trusts, one of which also applies to other foreign persons. The measure which has the broader applicability taxes transfers of appreciated property to any foreign person. It eliminates any tax advantage from the U.S. standpoint for sales of appreciated property through a foreign intermediary rather than by the U.S. owner. A second measure counters the tax deferral advantages of realization of capital gains by a foreign trust before distribution to a U.S. beneficiary by denying the beneficiary a 50 percent deduction for the gains that he would be allowed for a similar distribution from a U.S. trust. The third measure denies tax

8. For an explanation of the application of Section 367 see Part V.B. below.

deferral for a U.S. grantor who transfers property to a foreign trust with a U.S. beneficiary by refusing to recognize the legal personality of the trust and by taxing the income from the property to the grantor. The fourth measure limits the tax deferral possibilities for income on property received by a foreign trust nor from a U.S. grantor but with a U.S. beneficiary. Six percent interest will be charged on the tax on such income for each year that distribution is deferred. The end result of these measures is that foreign trusts no longer offer more tax advantages than U.S. trusts, and in many cases they are less advantageous.

III. CONTROLLED FOREIGN CORPORATIONS [9]

A. Prior law

As was mentioned in the discussion of trusts, a U.S. taxpayer might wish to defer U.S. taxation on his income by having the income accumulated by a foreign entity not subject to U.S. tax. Recognition of the tax avoidance potential of such an action led Congress to establish special provisions for the taxation of "controlled foreign corporations" (CFCs). In theory these provisions simply prevent a U.S. taxpayer from deferring tax on income received by a foreign business which the taxpayer effectively controls In practice the rules provided by these provisions are far from simple.

The rules fall into two groups: those defining a controlled foreign corporation, and those determining the additional amount to be included in the taxable income of the U.S. shareholder of a CFC. According to the first group of rules a controlled foreign corporation is a corporation more than 50 percent of whose voting power is owned, directly or indirectly [10], by certain persons misleadingly referred to as "U.S. shareholders". A "U.S. shareholder" for the purposes of this law is a U.S. citizen, resident, partnership, corporation, estate or trust which owns at least 10 percent of the voting power of the foreign corporation. (This means that the existence of U.S. portfolio shareholders in a foreign corporation will not result in a CFC status.) Thus a controlled foreign corporation is a corporation a controlling portion of whose voting rights is held by a group of U.S. persons, each of whom individually holds a substantial amount of control.

If a company is determined to be a controlled foreign corporation, special taxing provisions apply which are intended to eliminate the tax deferral arising from the use of a foreign company by a U.S. person. These provisions require that a "U.S. shareholder" of a CFC must include in his taxable income his pro rata share of certain types of income earned by the corporation during the tax year. The types of income that were to be currently taxed to the shareholder under the existing law were:

(a) the corporation's increase in earnings invested in U.S. property;
(b) the reduction in the corporation's qualified investments in less developed countries, to the extent that income has been excluded from tax in previous years because of an increase in qualified investments;
(c) the reduction in the corporation's investments in foreign base shipping companies, to the extent that income has been excluded from tax in previous years because of reinvestment;
(d) income from the insurance of U.S. risks;
(e) foreign personal holding company income, i.e. income flowing to the person who owns certain property (rents, royalties, interest, dividends, etc.);
(f) income from the sale of personal property previously purchased from a related person [11], or from the purchase of personal property for sale to a related person;
(g) income from the providing of services to a third party for or on behalf of a related person [12];
(h) income from a foreign base shipping company to the extent that such income is not reinvested.

The term "subpart F income" was used to refer to income items (d) — (h) of a CFC.

Income item (a) is included with the intention of limiting the transfer without a taxable dividend of the benefits of the company's earnings to the shareholder. That is, a controlling shareholder might wish to use dividends from a CFC to purchase property, e.g. securities, but not wishing to be taxed on the dividend, he might have the CFC purchase the property with the money that would have been paid as a dividend. Income item (a) means that for purchases by a CFC of certain property the value of the property will be treated as income to the shareholder. Under the prior law "U.S. property" included tangible property located in the United States, stock of any domestic corporation, an obligation of a U.S. person (except when arising out of a banking transaction or a normal business transaction) and rights such as patents, copyrights and secret processes.

Income items (b) and (c) are included to insure that income which is excluded from tax because of reinvestment in certain qualified investments will be taxed when subsequently regained by the corporation.

Income items (d) — (h) are included with an eye toward the prevention of the use of the corporation by the shareholder as an alter ego existing solely to receive and hold the shareholder's income. Transfers of income-producing property to the corporation by the shareholder with the intention of tax-free accumulation of the income is prevented by item (e). Items (f) and (g) prevent the use of

---

9. For a more complete discussion of this area of U.S. taxation see ALAN R. RADO, UNITED STATES TAXATION OF FOREIGN INCOME, A NEW APPROACH (Publications of the International Bureau of Fiscal Documentation, Vol. 18, 1963).
10. So-called "attribution rules" treat a taxpayer as owning some or all of the stock that is owned by certain relatives, partnerships in which he is a partner, estates in which he is an heir, trusts of which he is a beneficiary, and corporations in which he has a controlling shareholding.
11. For purposes of this provision a related person is any individual, partnership, trust, or estate which controls the CFC, a corporation which controls or is controlled by the CFC, or a corporation which is controlled by the same persons which control the CFC.
12. For this income item and for income item (f) no amounts are included which are income earned through the conduct of a trade or business in the United States the U.S. tax on which is not reduced nor eliminated by a treaty.

a CFC by a person "related" to that corporation as an income-accumulating intermediary in the transactions of the related person. That is, income shifting to the CFC through transfer pricing is prevented. Income items (d) and (h) serve to prevent tax-free earnings from "situs-free" activities, that is, activities which do not take place in a particular location. For tax purposes such activities are normally considered to occur in the jurisdiction in which the entity engaged in the activity is located. However, the inclusion of income items (d) and (h) attributes a U.S. situs to such activities performed by a CFC.

These eight income items do not, of course, include all types of income that could be received by the foreign corporation. They do, however, seek to cause current taxation of all of the corporation's income which has sufficient connection with the United States or with a U.S. shareholder to justify treatment as U.S. income. Income earned by the corporation from genuinely foreign sources will not be currently taxed in the United States, and the corporation can accumulate such income free from U.S. tax. This is reasonable, since the accumulation is income earned by a foreign entity from foreign sources. However, this situation offered possibilities of tax reduction that were unacceptable to the Congress. The possibilities focus on the use of a CFC as an intermediary for a U.S. person's business activities abroad. Income from the business activities would be accumulated by the corporation. This would increase the value of the corporation, a gain that could be passed on to the shareholder in three ways. The first, the dividend, would be taxed to the shareholder at normal tax rates, but the other two, gain on the sale of the shareholder's shares or gain upon the liquidation of the company, would normally be taxed as capital gains at one half the normal rate [13]. Thus, a U.S. person might substantially reduce his tax on foreign source income by the use of a CFC. To prevent such a tax dodge a provision was included in the Code which required that gains from the sale of shares and from certain liquidations of a CFC generally would be treated as dividend income. An exception existed in the case where the foreign corporation qualified as a less-developed country corporation (LDCC). If shares in an LDCC had been held for at least ten years, the shareholder would be allowed capital gain treatment for gains on the sale of his shares. If the shareholder was a corporation that had been a CFC at any time during the 10 year period, capital gain treatment would be allowed only if 50 percent of the voting power of the shareholder corporation's stock was owned by the same U.S. persons during the entire 10 year period.

There are three categories of foreign corporations which qualify as LDCCs. Each category is based on the corporation's income and assets. The first category requires that the corporation engage in a trade or business and derive at least 80 percent of its gross income from sources within less developed countries (LDCs). At least 80 percent of the corporation's assets must be property used in a trade or business located in an LDC, an investment required by an LDC, and assets which are not "U.S. property" as defined above. The second category consists of corporations which own at least 10 percent of the voting power of a category 1 LDCC and which meet the category 1 income and asset tests. The third category consists of corporations who derive at least 80 percent of their income from the use in foreign commerce of aircraft or vessels registered in an LDC or from the performance of services directly related to such use, from the sale or exchange of such assets, from dividends and interest of LDCCs at least 10 percent owned by the corporation, and from the sale of LDCC stock obligations. At least 80 percent of the corporation's assets must be aircraft and vessels and assets not "U.S. property".

A second exception existed where the CFC was involved in certain reorganizations. U.S. tax law permits certain corporate reorganizations between domestic corporations with no current taxation of the shareholders of the corporations involved for gains received because of the reorganization. Normally, when one of the corporations involved was a foreign corporation, Section 367 would apply, requiring a favorable ruling by the tax administration before the shareholders' gains would be excluded from current income. (This section is discussed in detail in Part V.B. below.) The administration could deny such a ruling where the foreign corporation involved was a CFC being used for tax avoidance purposes. For certain transactions, however, Section 367 did not apply and it was possible to transfer CFC gains to U.S. persons without any taxation to the U.S. shareholder of the CFC. Three of these situations existed, each one concerning a U.S. shareholder which was a domestic corporation. The first was the situation in which the U.S. shareholder distributed its CFC stock to its own shareholders as a dividend. The whole value of the stock was taxed to the shareholder-recipients at normal rates, but the distributing corporation was not taxed on the amount that the CFC stock has appreciated in value while being held by the corporation. The second situation was where the U.S. shareholder-corporation distributed the CFC stock to its own shareholders in the course of a liquidation of the shareholder-corporation. In the third situation the shareholder-corporation would sell the CFC stock in the course of its own liquidation and would distribute the money to its shareholders. In both of these cases the shareholder-recipients were taxed at capital gains rates, if at all, for the value of the shares or money received, and the corporation was not taxed at all. Thus, these latter two situations in particular allowed U.S. persons to use a CFC as a receptacle for foreign income which they then later receive as capital gains.

B. The Tax Reform Act

The Tax Reform Act of 1976 does not change the essential nature of the tax treatment of controlled foreign corporations. It does, however, provide new rules which modify the treatment of income earned by a CFC in specific instances.

These rules make adjustments in the tax treatment of:

(a) Certain investments in U.S. property;

13. For corporations the capital gains tax is at the fixed rate of 30 percent.

(b) Gains from the disposition of shares in foreign corporations;
(c) Income from foreign insurance companies;
(d) Income from foreign base shipping companies;
(e) Foreign taxes paid by certain subsidiaries of domestic corporations controlling foreign corporations (for a discussion of this change, see Part IV below on the foreign tax credit);
(f) Bribes and boycott income effected through a CFC (see Part VII below).

1. *Investments in U.S. property*

The new Act has added two exceptions to the types of investments which will be treated as investments in U.S. property. A controlled foreign corporation may now invest in certain domestic companies and in certain property for mineral exploration without an effect on the amount of income to be currently taxed to the U.S. shareholders. The first measure should make it easier for a domestic corporation to find financing and new capital. It is quite broad in scope, as the CFC can purchase shares or obligations of domestic corporations without detriment except in two instances. The first is where the shares or obligations are issued by a U.S. shareholder of the CFC. The second is where 25 percent of the voting stock of the issuing corporation is owned, directly or indirectly [14], by the U.S. shareholders of the CFC. Thse two exceptions are clearly aimed at attempts to return a CFC's earnings to the U.S. shareholders without declaring a dividend under the guise of a loan or capital investment.

The second measure is designed to encourage the exploration for and the exploitation of oil, gas and minerals found in and under the Continental Shelf waters of the United States. The law excludes from U.S. property all movable property except for vessels and aircraft used for "exploring for, developing, removing, or transporting resources" from the Continental Shelf and its waters.

These measures apply to CFCs for tax years beginning after December 31, 1975, and to U.S. shareholders for their tax years which end with or after the first qualifying tax year of the CFC.

2. *Gains from the disposition of shares in foreign corporations*

The Act also changes the treatment given to the gain from the disposition of certain shares in foreign corporations. Act Section 1022 changed the treatment of shares in so-called "less developed country corporations". Act Section 1042(b),(c) and (d) added certain transactions to the list of transactions on which gain on CFC shares must be recognized.

a. Less developed country corporations

Under the new law a shareholder in a LDCC loses some of the advantage of having the corporation accumulate income. If the shareholder sells his stock and the corporation has undistributed profits earned in a tax year beginning after December 31, 1975, he will be treated as having received a dividend if he makes a gain on the sale. Any gain he realizes will be treated as a dividend, taxed at normal rates instead of the preferable capital gains rate, to the extent of his share of post-1975 undistributed profits. If the gain is attributable to pre-1976 undistributed dividends, however, it will still qualify for capital gains treatment. This capital gains treatment is available, under the new law, to all LDCC shareholders without regard to the length of time the stock has been held.

This law takes effect for the first tax year beginning after December 31, 1975.

b. Gains on shares distributed, sold or exchanged by a U.S. corporate shareholder

To prevent the possibility of permanent tax avoidance, Act Section 1042 (b) amends Section 1248 to require that corporations meeting the stock ownership requirements for CFCs which distribute, sell, or exchange stock of that CFC in one of the transactions discussed above recognize as a dividend (thus subject to taxation as ordinary income) the gain realized on such distributions or exchanges to the extent of the earnings and profits of the corporation in the same manner as for other sales or exchanges discussed in Section 1248. This new provision is to apply notwithstanding any other provision of the tax law (i.e. the exceptions which the law was designed to eliminate).

There is an exception to this recognition requirement for certain distributions to shareholders who are domestic corporations, if the distribution is to a domestic corporation which will have the same holding period for the stock as the distributing corporation and the domestic corporation has held more than 10 percent of the stock of the foreign corporation for 5 years. No gain need be recognized, since the future application of this section is still possible. A later distribution of the stock where gain was recognized would "recapture" all the deferred gain.

In addition, CFC stock which is part of a partnership interest which is sold or exchanged must now be included in the transaction items receiving ordinary income treatment on such sale or exchange. There was previously no provision for the treatment of CFC stock in such a transaction.

The above amendments apply to all sales, exchanges, and distributions taking place after October 9, 1975.

3. *Income from foreign insurance companies*

As mentioned above in Part IIIA, Subpart F income includes foreign personal holding company income. Such income is passive investment income, such as dividends, interest, royalties and rents. However, certain income derived from the active conduct of a trade or business is excluded from foreign personal holding company income. This income includes rents and royalties from the active conduct of a trade or business which are received from a non-related person (defined in footnote 11) (with limitations), and dividends, interest, or gains derived from the conduct of a banking, financing or similar business or derived from the investments made by an insurance company of its unearned premiums or reserves ordinary and necessary for the proper

14. The attribution rules here are similar to those described in footnote 10 but with attribution from foreign persons which are not included in the CFC attribution rules.

conduct of its insurance business if they are received from a non-related person. The insurance company is thus not liable to Subpart F taxation on dividends, interest, and capital gains on reserves held to meet the laws of the country where the insurance company is incorporated or the jurisdiction where the property or person is insured. Income on its other premium reserves, however, is treated as Subpart F income.

Some foreign jurisdictions require that foreign insurance companies participating in a reinsurance pool composed principally of companies doing business in the United States maintain a fairly substantial ratio of surplus to earned premiums. The assets held to meet this ratio are of necessity in the form of investments which generate passive income, such as dividends and interest. Under the prior law, such surpluses maintained by foreign insurance companies generated Subpart F income. The same type of surpluses in the United States, maintained in a 1 to 3 ratio, are considered ordinary and necessary to the proper conduct of casualty insurance businesses even though they are not required by law.

To coordinate the treatment of U.S. and foreign insurance companies, Act Section 1034 adds a new exception to the Subpart F definition of foreign personal holding company income. Effective December 31, 1975, foreign personal holding company income will not include dividends, interest, and gains from the sale or exchange of stock or securities derived from investments of up to one third of the premiums earned on insurance contracts (other than life insurance or annuity contracts). To be excludable, the income must be received from a person other than a related person. The premiums on which such income is earned cannot be attributable, directly or indirectly, to the insurance or reinsurance of related persons.

Thus this exclusion eliminates any penalizing treatment which was imposed on a shareholder for income from "necessary and proper" investments and amends the section to tax only that passive investment which is intentionally invested abroad with a view to accumulating tax-free passive income.

4. *Income from foreign base shipping companies*

Prior to the enactment of the Tax Reform Act of 1976 all profits from a foreign base shipping company received by a controlled foreign corporation which were not reinvested in the shipping company were currently taxed to the U.S. shareholders of the CFC. Under the new law an exception is created to this rule. Income will not be currently taxed to the U.S. shareholders if the income was derived from the use or hiring or leasing for use of an aircraft or vessel between two points within the country in which the CFC is created or organized and in which the aircraft or vessel is registered. This exception is a case where the shipping activity is not situs-free. The country in which the activity takes place is also the country which has the right to tax the CFC which receives the income. This means that the CFC is not gaining any advantage over other shipping companies operating in its home country, so there is no reason to treat this as a tax avoidance scheme. By exempting this income from current taxation to the U.S. shareholders the Tax Reform Act refines the scope of "Subpart F income" to make it more closely coincide with income from the use of a foreign corporation for tax avoidance. This provision applies to CFCs for tax years beginning after 1975 and to U.S. shareholders for their tax years which end with or after the first qualifying tax year of the CFC.

IV. THE FOREIGN TAX CREDIT

A. Prior law

Under the U.S. tax system the principal means of unilateral relief from double taxation of income earned abroad is through the providing of a tax credit for foreign income, war profits and excess profits taxes paid or accrued during the tax year. The amount of credit allowed is limited to the lesser of the amount of foreign tax paid or accrued and the amount of U.S. tax attributed to the foreign income. The second amount is calculated according to the following formula:

$$\text{limit} = \frac{A}{B} \times C$$

where A represents foreign source income,
B represents world-wide income
C represents U.S. tax on world-wide income

Prior to the enactment of the Tax Reform Act a taxpayer could usually choose between two methods of applying the above formula. He could always choose to combine all foreign income (except certain interest income, DISC dividends, and oil and

THE TRUST CONCEPT

The trust concept in the United States is based on the principle that ownership of property may be divided into two parts: legal ownership and beneficial ownership. Legal ownership grants the owner title to the property, the right to control the property and the right to sell the property. However, all benefits that are produced by the ownership of the property belong to the person who has the beneficial ownership of the property. Normally, the legal owner of property is also the beneficial owner. In a trust, however, the ownership is divided. Property is transferred to one person, the trustee, for the benefit of other persons, the beneficiaries. (The transferor is known as the grantor or settlor.) The trustee controls and manages the property and is required to exercise reasonable business judgment in conserving and enlarging the assets which have been given to him. Any gains produced by the property belong to the beneficiaries. They may be distributed to the beneficiaries in the year in which they arise or they may be accumulated by the trust and distributed in a later year. It should be emphasized here that while the legal title to the property has been given to the trustee, a separate legal entity has been formed, a trust. The income is received by this entity, not by the trustee, and the property forms the trust's net worth, and does not become part of the trustee's net worth. The trust terminates according to the provisions set down by the grantor at the time of the transfer. Both legal and beneficial ownership of the trust property then is transferred to the beneficiary designated by the grantor or designated by some other person specified by the grantor.

gas income, see below) and losses and apply the formula, using the resulting limit as a limit of all foreign taxes paid and accrued during the tax year which could be credited against U.S. tax. This was called the "overall" limitation. In the alternative the taxpayer could choose to apply the formula to the income from each foreign country separately [15]. Each resulting limit served as a restriction of the amount of taxes paid to the country in which the income was earned which could be credited against U.S. taxes. This was called the "per country" limitation.

The overall method of computation offered a greater amount of credit in certain circumstances where the U.S. taxpayer had some of his foreign income taxed at a higher rate than would be applicable in the United States and some of his income taxed at a lower rate. For example, assume that the taxpayer is a corporation subject to U.S. tax at the rate of 48 percent. It received income of 100 from country A taxed in A at 60 percent and income of 100 from country B taxed in B at 30 percent. Under the overall method the taxpayer has foreign income of 200 and foreign taxes of 90, or a foreign tax rate of 45 percent. Since this is lower than the U.S. tax rate the taxpayer may credit all of his foreign tax against his U.S. tax liability. This allows him to credit taxes paid in A that exceed the U.S. taxes due on the income earned in A. Thus, the overall method could create a sort of foreign tax credit "bonus".

The per country method could also create a sort of bonus under certain circumstances. The bonus arose from the fact that all foreign losses reduced only U.S. income, allowing a disproportionate amount of foreign tax credit. For example, suppose that a U.S. corporation had income of 100 in each of four countries, A, B, C and the United States, all of which countries tax income at 48 percent. The taxpayer had losses of 100 in country D. His world-wide income is 300 and his U.S. tax liability is 144. However, according to the limit formula given above, each of A, B and C have contributed one third of the world-wide income. Foreign tax credit of one third of the U.S. tax liability is allowed to each. Thus, foreign taxes satisfy entirely the U.S. tax liability. Even though the taxpayer earned one third of his world-wide income in the United States, he pays no taxes to the United States Treasury. The per country limitation offered a method for a corporation with both profitable and unprofitable activities abroad to minimize its U.S. tax liability.

The reduction of U.S. income because of foreign losses was particularly advantageous to the taxpayer because of the treatment of future profits from the "loss countries". Full foreign tax credit was allowed for taxes on those profits. Suppose that in the above example the taxpayer had received income of 100 from D and from the United States in the following year, each country imposing a tax of 48 percent. The tax paid to D would be creditable and would satisfy the U.S. tax liability on the D source income. Thus, a loss in D would reduce U.S. taxes in year 1 but an equivalent gain in D in year 2 would not increase U.S. taxes. This situation did not allow a taxpayer to pay less than the U.S. rate on his world-wide income, but it did permit him to pay a smaller percentage of the tax to the United States Treasury than the pro rata share of U.S. income of the world-wide income. As indicated in the example, this might mean a reduction of the taxpayer's total tax liability by increasing the available foreign tax credit. A similar advantage would occur under the overall method where a year of net loss from foreign sources was followed by a year of net gain. Under the existing law this advantage was available for all foreign losses except on oil and gas extraction income.

Note:
Similar to the "bonus" from averaging incomes from low tax and high tax countries, an advantage might be gained from averaging income taxed at a lower rate with income taxed at a higher rate. For example, many countries tax interest payments to non-residents at a much lower rate than they tax business income. Averaging interest income taxed at, say, 10 percent with business income taxed at 60 percent would mean an increase in the amount of the tax on business income that was allowable as a foreign tax credit without an increase in total taxable income. To restrict this advantage, separate foreign tax credits are computed for each of four categories of foreign income. The categories are (i) interest income earned abroad other than through business-related activities, (ii) income received from a DISC or former DISC, (iii) foreign oil and gas related income, and (iv) general foreign income (all foreign income except that in categories (i) — (iii)). Under the existing law a second restriction was added on oil and gas extraction income. Taxes paid on such income in excess of 50 percent of the income were not eligible for the foreign tax credit [16].

The availability of the tax credit was entirely restricted to the entity which paid the foreign tax. If a U.S. corporation received a dividend on which income a foreign tax had been paid by a foreign "first tier subsidiary" [17], "second tier subsidiary" [18], or "third tier subsidiary" [19], the U.S. corporation could take a credit for its pro rata share of the foreign tax paid or accrued on the profits from which the dividend was paid. (This indirect tax credit was treated as income received by the parent.) This permitted a U.S. corporation to do business abroad either through a branch or through a subsidiary structure with equal availability of credit for foreign taxes paid on the activities abroad. Slightly different rules applied in this area to amounts of income deemed received by a U.S. corporation because of its status as a U.S. shareholder of a CFC [20] and to dividends received from a LDCC. In the first situation,

15. In the case of oil and gas income the formula could only be applied overall and not to each separate country.
16. The excess taxes could, however, be deducted from taxable income.
17. A foreign corporation, 10 percent or more of whose voting stock is owned by the U.S. corporation.
18. A foreign corporation, 10 percent or more of whose voting stock is owned by a first tier subsidiary of the U.S. corporation.
19. A foreign corporation, 10 percent or more of whose voting stock is owned by a second tier subsidiary of the U.S. corporation.
20. For definitions of CFC and U.S. shareholder see footnote 10 and accompanying text.

credit was allowed the U.S. corporation only for foreign taxes paid by the CFC or by a foreign corporation 50 percent owned by the CFC (rather than a 10-percent-owned second tier subsidiary). No credit was allowed for taxes paid by a third tier subsidiary.

In the situation of a dividend from an LDCC, the recipient included only the amount of the dividend in his income. The indirect credit was not treated as income. His foreign tax was reduced, however, by the ratio of the foreign taxes paid by the LDCC to its pretax profits.

The following example illustrates the results:

Foreign country A: 30 percent corporate tax rate; Corporation B earnings: $1000.

	LDCC		*Non-LDCC*	
Earnings	$1000		$1000	
A tax	300		300	
Paid as dividend	700		700	
U.S. corporation				
Dividend income	700		1000	
48% tax	336		480	
Foreign tax credit	210	$(300 - (300 \times \frac{300}{1000}))$	300	$(300 \times \frac{700}{700})$
U.S. taxes paid	126		180	
Total taxes	426		480	

Thus the domestic corporate shareholder of an LDCC was in effect given both a deduction and a foreign tax credit for the foreign taxes paid. If, however, the foreign tax rate exceeded the U.S. rate of 48 percent, the foreign tax credit carry-over available for future years was reduced, since the corporation was not allowed credit for all the taxes paid to the foreign country on the dividend income.

B. The Tax Reform Act

The new law substantially alters the application of the foreign tax credit in 8 areas:

(a) Elimination of the "per country" limitation of the credit;
(b) Recapture of foreign losses;
(c) Controlled foreign corporation credit;
(d) Further limitation of oil and gas extraction income credit;
(e) Special treatment of foreign capital gains;
(f) Underwriting income;
(g) Dividends from less developed country corporations;
(h) Reduction of credit because of participation in certain boycotts (for a discussion of the provision see Part VII).

1. *Elimination of the "per country" limitation of the credit*

Perhaps the greatest change enacted by the new law is the elimination of the "per country" method of calculating the allowable tax credit. For tax years beginning after 1975 only the "overall" method of computing the limitation will be permitted. This means that losses from operations in a foreign country no longer may be used to reduce U.S. income while the taxpayer takes a credit for taxes paid in other foreign countries.

2. *Recapture of foreign losses*

The new law contains a set of provisions which insure that foreign gains achieved after a year in which net foreign losses have reduced U.S. taxes will increase U.S. taxes in the year or years of gain. These provisions apply for foreign losses sustained in tax years beginning after 1975. In years of gain after such a loss year 50 percent of the foreign source income will be treated as U.S. source income until U.S. source income has been increased by an amount equal to the previous loss deduction. Foreign source income will, of course, be reduced by the amount of the increase of U.S. source income. For purposes of this rule losses due to foreign expropriation losses and casualty losses (losses arising from unexpected and unusual events) will not be treated as losses subject to recapture.

Where there has been a foreign loss in a previous year, U.S. income will also be increased by the deemed income from the disposition of property used predominantly outside the United States in trade or business. The "deemed income" is the excess of the fair market value of the property over the property's tax basis, irrespective of what amount is actually received by the taxpayer. This income will be added to U.S. income without the 50 percent limitation that applies to other foreign income until total recapture of the prior foreign loss has taken place.

An important element of these new rules is that the foreign taxes paid on the foreign income which is treated as U.S. income will not qualify for the foreign tax credit. The logic is that they are not taxes paid on foreign source income. The necessity of such a rule is that otherwise these taxes could be attributed to other foreign income under the overall method of computation. The United States Treasury would lose tax revenues on that income and the taxpayer would still have available the advantage of foreign loss years. Thus foreign taxes paid on income deemed to come from U.S. sources are not eligible for the foreign tax credit in the year of payment and may not be carried back or carried over to be credited in a different tax year.

3. *Controlled foreign corporation credit*

The Tax Reform Act has greatly enlarged the availability of the foreign tax credit for a U.S. corporation which is taxed on income received by a controlled foreign corporation of which it is a U.S. shareholder. The U.S. corporation can take a tax credit, for tax years beginning after 1976, for its pro rata share of the taxes which have been paid on that income by a first tier subsidiary (i.e. the CFC), a second tier subsidiary and a third tier subsidiary. As is the case of the deemed foreign tax credit

for a U.S. corporation actually receiving a foreign dividend [21], 10 percent ownership of the voting stock of a corporation normally creates the subsidiary relationship. However, there is an added rule in the CFC situation that the domestic corporation must own, directly or indirectly, at least 5 percent of the voting stock of a second or third tier corporation to take a credit for its foreign taxes. Thus, the new law puts the treatment of CFC income on a much similar footing with dividends actually received for purposes of the foreign tax credit, but it does not completely eliminate the distinction.

4. *Oil and gas extraction income credit*

The new law has further limited the allowable credit for foreign taxes paid on oil and gas extraction income. The 50 percent of income limit on the amount of tax that may be credited or deducted in a tax year has been changed. For corporations this limit is now 48 percent of the oil and gas extraction income for tax years ending after 1976. For individuals the limit is their average U.S. effective rate of tax on oil and gas extraction income. This limit applies for tax years ending after 1974.

5. *Foreign capital gains*

Prior to the passage of the Tax Reform Act of 1976 no special provisions applied to capital gains received abroad. Such gains were simply treated as general foreign source income for purposes of calculating the foreign tax credit. However, for purposes of computing U.S. tax liability, foreign capital gains were combined with domestic capital gains and losses and the net amount of gain, if any, was taxed at a special rate [22]. Also, foreign capital gains in some countries were not subject to tax. Thus, the U.S. taxpayer might gain three advantages from foreign capital gains. First, foreign capital gains would increase the amount of foreign tax that could be credited even if no foreign tax had been paid on the gain. This is the type of "bonus" that was intended to be prevented by separate credit limits for interest income, etc. discussed above. Second, a foreign gain which increased the foreign tax credit might be offset by domestic capital losses and hence produce no U.S. tax liability. Third, even if the foreign capital gains were fully taxed in the United States, they would be taxed at 30 percent or less [23]. However, in computing the amount of U.S. tax attributable to foreign sources the gains would be given equal weight with U.S. income taxed at 48 percent for corporations or at progressive rates up to 70 percent for individuals.

The new law reduces or eliminates all three advantages. In applying the tax credit formula, foreign source capital gains for tax years beginning after 1975 will only be considered foreign taxable income to the extent that the gains exceed domestic capital losses. For corporate tax payers if foreign capital gains are to be considered foreign taxable income the "foreign taxable income" in the tax credit formula will be increased by only five-eights of the amount of the gains (reflecting the ratio of capital gains taxation to taxation of other income, 30:48). Thus, the amount of foreign capital gains included in the foreign tax credit formula now more nearly reflects the amount of U.S. tax attributable to those gains.

The "bonus" from averaging untaxed or lightly taxed income with highly taxed income is limited by treating certain capital gains as U.S. source income. Gains from the sale of stock abroad by a corporation after 1975 will only be foreign income if the gain is subject to foreign income tax at a rate of at least 10 percent or if the sale is made in the country in which the corporation issuing the stock earned more than 50 percent of its gross income for the three tax years prior to the year of the sale. Gains from sale of stock by an individual after 1975 will be foreign gain only if the sale occurs in the taxpayer's country of residence. Gains from the sale of personal property other than shares by any taxpayer after November 12, 1975 will only be foreign source income if the gain is subject to foreign income tax at a rate of at least 10 percent, if the property is sold in he country in which it was used in a trade or business of the taxpayer, or if the property is sold in a country in which the taxpayer derived more than 50 percent of his income for the three years preceding the tax year of the sale. Thus, while foreign capital gains may still increase the amount of taxes paid on other income which is eligible for the foreign tax credit, a taxpayer may not increase his foreign tax credit by having a sale producing capital gains take place in a foreign country unrelated to the property sold unless the gain is subject to at least a 10 percent tax.

6. *Underwriting income*

A foreign tax credit is available only for taxes paid to foreign countries on taxable income from sources without the United States. The tax law specifies to a large extent the types of income which are considered income from sources within and without the United States. Underwriting income (the premiums earned on insurance contracts during the taxable year less losses and expenses incurred) was not included under either definition. Under prior law the source of such income was determined on the basis of where the incidents of the transaction producing the income occur (e.g. where the contract was signed). Thus the taxability of such risks could be easily manipulated by insurers and the insured by changing the location where the contract was signed. It could also result in double taxation if, for example, a contract was executed in the United States and covered overseas operations. If issued in the foreign country in which the risk is located, it might be subject to foreign tax in addition to the U.S. tax imposed because the contract was signed in the United States. Since it was income from U.S. sources, taxes paid on such income to a foreign country would not be available for the foreign tax credit.

For this reason, new subsections were added to the sections of the tax law which define income from

21. See footnotes 16, 17 and 18 and accompanying text.
22. For an individual capital gains are normally taxed at one half the rate of his other income, but the taxpayer may choose instead to have the first $50,000 of capital gains taxed at the flat rate of 25 percent. For corporations capital gains are taxed at the flat rate of 30 percent.
23. See footnote 21.

sources within and without the United States. Act Section 1036 designates underwriting income derived from the insurance of U.S. risks as income from sources within the United States. "U.S. risks" are defined elsewhere as risks in connection with property in, or liabilities arising out of activities in, or in connection with the lives or health of residents of the United States, or where another company receives premiums for substantially the same type of risks. All other underwriting income is income derived from sources without the United States.

This section is applicable to taxable years beginning after December 31, 1976. Thus the new law clarifies the tax treatment of income from offshore insurance companies. It both eliminates the adverse foreign tax credit consequences of certain insurance transactions and prevents the manipulation of the availability of the foreign tax credit.

7. *Dividends from LDCCs*

Act Section 1033 amends the tax law dealing with the credit for taxes paid and eliminates the special treatment given to LDCCs. All dividends received from foreign subsidiaries, whether LDCCs or not, must be grossed up by the underlying taxes, if an indirect tax credit is taken.

Section 1033 also amends other sections of the tax law to eliminate the distinctions which were made between LDCCs and non-LDCCs.

Act Section 1033 is generally effective for any distribution received by a domestic corporation after December 31, 1977 and for distributions made out of current income in taxable years beginning after December 31, 1975. Corporations making distributions in taxable years beginning after December 31, 1975 and received before January 1, 1978 are effected only to the extent that the distribution is made out of the accumulated profits of a foreign corporation for a taxable year of the foreign corporation beginning after December 31, 1975.

U.S. Tax Forecast: More Reform

President Carter spoke during his campaign of the need for a comprehensive tax reform. Now he is in a position to propose such a reform. It is expected that he will present a complete tax reform package to the Congress in 1978. However, although President Carter's tax package is in its infancy, it is not too early to anticipate some of its contents. Based on statements by the President, one can expect measures concerning

- the double taxation of corporate profits. President Carter has said that this income should be taxed only once, indicating that he favors some form of imputation system of taxation.
- taxation of capital gains. President Carter has indicated that he favors full taxation of capital gains rather than the present system of excluding from three eights to one half of the gain from tax.
- the Domestic International Sales Corporation. President Carter favors the abolition of the DISC.
- individual taxpayers. The President favors a reduction in the deductions and exclusions available to individuals. He also supports a change from a deduction to a tax credit for dependents, a change which would benefit the poor taxpayers more than the well-to-do.

Though the exact form that these measures will take is uncertain, and though President Carter's proposals will have no effect unless passed by Congress, it can be concluded that the prevailing current in the Carter Administration is toward tax change and reform.

Interrelationship of corporation tax and income tax of shareholders.

National and International Tax Aspects

by Martin J. van Rooijen

The International Bureau of Fiscal Documentation is pleased to present the following — slightly adapted and updated version — of a paper submitted by Mr. Martin J. van Rooijen, Dutch Vice-Minister of Finance, on October 15, 1976 before a meeting of the U.S.A. Branch Northeastern Regional Committee of the International Fiscal Association.
The subject of his paper is the proposed E.E.C. Directive on a common system of corporation and shareholder taxation which advocates the introduction of the "imputation system" which has already been adopted by a number of E.E.C. member countries. Mr. Van Rooijen shows that the imputation system as proposed by the E.E.C. Commission contains a number of built-in deficiencies which should not be underestimated, in particular in the the relationship between E.E.C. member countries and non-member countries.

I very much appreciate your invitation to exchange ideas with you today about part of the tax harmonisation in the European Communities, namely the imputation system as proposed by the European Commission for the structure of company taxation for the whole Community.

Tax matters have always aroused great interest and in the present year in which the United States of America is celebrating its bicentennial it should not pass unnoticed here that it was a fiscal matter, the well-known Boston Teaparty, which sparked off the American War of Independence. Other examples may be found to prove that taxes are far from being mere marginal phenomena in society. One tax which has often been, and still is the centre of interest, particularly in the European Community, is corporation tax.

A particular question which has caused profound controversy is whether there is room for a tax on the profits made by legal entities in addition to a tax on the income of natural persons. The protagonists of an independent corporation tax maintain that a joint-stock company is a social entity in which management, capital and labour cooperate productively, and that it would not be realistic to identify the company with those who provide the capital. The company is an independent body and as such it should be taxed independently of the shareholders. The taxation system based on this opinion in which corporation tax is levied completely independently of the income tax on the shareholders is known as the classical system and it is applied in the U.S.A., Italy and the Netherlands as well as elsewhere.

The opposite view holds that the joint-stock company is no more than a form of cooperation of natural persons which is subject to certain norms. Seen in this light there is no reason to levy a separate corporation tax and if the profit of the company is taxed at all then such tax can only constitute an advance payment of the income tax owed by the persons entitled to the profits, namely the shareholders. The tax systems of most Western countries do not carry this view to its extreme but on the other hand a number of countries such as Belgium, Denmark, England, France, Germany and Ireland have opted for a partial integration of corporation and income tax in their fiscal legislation with regard to distributed profits. In this context we refer to the avoidance of what is known as economic double taxation. Economic double taxation means that the total profits of a joint-stock company are subject to corporation tax first and that subsequently the part of those profits which is distributed in the form of dividends is taxed again when received by the shareholders.

Economic double taxation may be wholly or partially avoided by taking measures with regard to either corporation tax or income tax. The differentiated rate system and the deduction of dividend are measures for the relief of corporation tax.

The *differentiated rate*, which was applied in Germany up to January 1, 1977, means that the profits made by a legal entity are not taxed according to a uniform rate but that a lower rate is applied to distributed profits. The lower rate in Germany was 15% while non-distributed profits were taxed at a rate of 51%.

The deduction of dividend allows the company to deduct the whole or part of the distributed profits from the taxable gains.

A variation of this system, namely the deduction of primary dividend, has been repeatedly discussed. The deduction of primary dividend means that that part of the dividend which may be deemed to be a primary remuneration for the capital provided by the shareholders, may be deducted from the taxable profit. Such a system has existed in Denmark and though limited to certain forms of providing new capital, was in force temporarily in Belgium some time ago. [1]

It is also possible to provide relief for double taxation on distributed profits by taking measures with regard to income tax. This possibility is applied in what is called the imputation system which is what I want to talk to you about today.

The imputation system allows the tax which the distributing corporation paid on the distributed profits to be wholly or partially deducted from the tax owed by the shareholder on the dividend received.

Currently in Belgium, Denmark, France, Ireland and Great Britain a partial imputation system is in force. On 1 January 1977 Germany introduced a system of total imputation with regard to distributed profits. The system introduced in Germany is a mixed form of the imputation system and the differentiated rate system. Corporation tax which may be wholly set off against the tax owed by the shareholder on dividends received, will be levied on distributed profits at a reduced rate. The Commission of the European Community is also in favour of an imputation system and has submitted a proposal for such a system to be adopted in all the Member States. According to the Commission's proposal the profits of corporations will be subject to a corporation tax at a rate which may not be lower than 45% or higher than 55% in any Member State. A shareholder may set off part of the corporation tax levied on the dividends received by him against the tax which he himself owes on the dividend.

For that purpose the deductible part of the tax levied on the distributing corporation, that is, the tax credit, is added to the taxable income or the taxable profit of the shareholder and subsequently deducted from the tax owed by the shareholder on the total amount of income and tax credit. The Member States may not grant a tax credit of less than 45% or more than 55% of the corporation tax levied on the dividends.

Where the shareholder is not liable to pay tax on the dividends received there is no reason to grant him a tax credit. This is particularly the case when the shareholder is a legal entity. In the Netherlands, for example, there is a substantial holding privilege according to which a company which holds more than 5% of the shares of another company is exempted from paying tax on the dividend received from that other company. In such cases there is no economic double taxation so that there is no reason to grant the shareholding company a tax credit. In other words parent companies are not entitled to tax credits on the dividends received from their subsidiaries.

The United States has another system for inter-corporporate dividends, which is known as the "credit system", about which I hope to say more when dealing with the relationship between the European Community and third party countries.

Where a parent corporation passes on the dividend received to its own shareholders there are two possibilities: either the shareholder is liable to pay tax on the dividends received or he is not taxed. In the first case, economic double taxation occurs and consequently the shareholder is entitled to a tax credit. In the second case, if, for example, the parent corporation passes on the dividends to its own parent corporation economic double taxation does not occur and its own parent corporation would not be entitled to claim a tax credit.

At the purely national level the proposed imputation system is still feasible but applying the system in an international setting is altogether different. It should be pointed out that in the Commission's proposal the intra-community dividends, i.e. the dividends flowing from one Member State to another, are treated differently from those distributed to shareholders outside the European Community.

The Commission proposes a very complicated system for dealing with intra-community dividends. For example if a Belgian subsidiary pays dividends to a Dutch parent corporation which in turn passes them on to its own shareholders, the Belgin tax credit must be transferred to the Netherlands so that it may be taken into account in assessing the Dutch income tax owed by the shareholder. Because of the substantial holding privilege the Dutch parent corporation itself is not entitled to the tax credit. For technical reasons the transfer of the Belgian tax credit to the Dutch shareholder has been organised as follows: when the Dutch parent corporation passes on the Belgian dividend to its shareholders a compensatory levy (précompte) which is sufficient to cover the costs of granting the tax credit to the shareholder is imposed on the corporation. The Belgian tax credit may be deducted from the "précompte" or compensatory levy. If no further measures were taken the setting off of the Belgian tax credit would be a charge on the Netherlands treasury. Howevēr the intention is that the burden of the imputation should be borne by the country of the subsidiary corporation. Consequently there is the need for a settlement between the Dutch and Belgian treasuries.

That is the position regarding intra-community dividends. What happers, however, when dividends leave the European Community. The answer to this question will have to be provided by the Conventions for the avoidance of double taxation between the European

1. In order to stimulate its economy France recently adopted the deductibility of dividends for companies created in 1977-1979 on increasing their capital during those years. The deduction is accorded for a period of 5 years and the maximum annual deductible amount is 7.5 percent of the capital contributed.

Community and third party states. That this is far from easy may best be demonstrated by means of an example. A corporation resident in one of the Member States of the European Community pays a dividend to a shareholder resident in the United States. The shareholder is a natural person and so there is economic double taxation and the shareholder is in principle entitled to a tax credit. The question arises how the shareholder's right should be exercised. The American tax authorities will not be prepared simply to set off part of the corporation tax levied in the European Community from the American income tax and so it seems likely that the tax credit will result in direct payment to the American shareholder by the Member State. Nevertheless I would like to query this solution. Is it right that the costs of the tax credit should be entirely chargeable to the state in which the distributing corporation is resident? In our example economic double taxation is caused just as much by American income tax as by the corporation tax levied in the E.E.C. State and it would be equally correct to say that the American Treasury should bear the burden of the tax credit. The direct payment of the tax credit to the shareholder I have just mentioned will require certain international measures to be taken. It stands to reason that the Member State of the European Community will only be prepared to pay if it is quite certain that the American shareholder is liable to pay tax on the dividend received. If the shareholder is exempt from tax on his dividends or if he does not declare the dividend to the American tax authorities then economic double taxation will not occur and no tax credit need be paid. Thus the shareholder will have to present evidence of his tax liability in respect of dividends received in the United States when claiming the payment of a tax credit.

The situation is even more complicated when a corporation resident in one of the Member States pays dividends to an American parent corporation. The American parent corporation may set off corporation tax paid on the profit distributed in the E.E.C. State against the American corporation tax for which it is liable. The consequence of setting off one tax against the other is that as long as the profit derived from the E.E.C. country remains in the corporation it should not be subject to a higher tax than that which results from the highest rate of corporation tax applicable in the U.S.A. and in the E.E.C. country. In this way the accumulation of tax liabilities within the corporation is avoided and there is no reason to grant a tax credit to the parent corporation. However, when the shareholders of the parent corporation finally receive the dividend and are taxed on it, the need to grant a tax credit arises again, but the manner in which it is to be effected is far from clear. After all, the shareholder cannot claim directly from the tax authorities of the E.E.C. Member State, as can the direct shareholder, because his dividend is not an E.E.C. dividend but is the dividend of an American corporation. Moreover, a procedure by which the parent corporation claims the tax credit and passes it on to its shareholders is not feasible either since the parent corporation cannot prove that the shareholders are liable to pay tax or not.

In the new Convention between England and America a lump sum solution to the problem has been found. According to Article 10 of the Convention an American parent corporation receiving dividends from a British subsidiary is entitled to half the tax credit which would have been granted to a shareholder who is not a legal entity. This provision has been made on the assumption that the parent corporation will redistribute about half of the dividends received to shareholders who are liable to pay tax.

If all the difficulties attached to the proposed imputation system are considered, and particularly those arising at international level, the classical system seems to be perfectly simple. The way this system operates is clear; it does not discriminate against foreign shareholders and does not impede international cooperation by companies. The imputation system on the other hand is to a large extent obscure and particularly where it touches on international shareholding relationships the granting of tax credits causes many problems which can lead to discrimination against foreign shareholders. In order to implement the system properly at international level the existing conventions for the avoidance of double taxation need to be extended by a number of extremely difficult provisions regarding the granting of the credit which can be understood only by very experienced tax experts. Looking at the conventions signed by France and the United Kingdom it becomes clear that France is not prepared to grant inter-corporate tax credits while England has only a partial solution for these. What Germany will do once it has introduced the imputation system cannot be predicted.

It is very doubtful whether the advantages of the imputation system outweigh the complications at international level which have just been referred to. In its Explanatory Memorandum to the proposal to introduce an imputation system in the E.E.C. the Commission puts forward the following advantages:

a) In comparison to the classical system the imputation system is more neutral with regard to various forms of company financing. The classical system favours self-financing and discourages the distribution of profit to the shareholders, while the imputation system is said to encourage equity financing and the distribution of dividend.

b) The imputation system favours fairness of taxation, while the classical system favours the ploughing back of profits which benefits the major shareholders but not the small shareholders who are interested only in obtaining a reasonable dividend.

c) The imputation system is said to make tax evasion and tax avoidance less attractive. Under this system it would be less appropriate to transform unincorporated enterprises into joint-stock companies; large shareholders would be less inclined to have dividends paid into a company set up for the purpose. These arguments are based on the assumption that the introduction of the imputation system will go hand in hand with an increase of the corporation tax rate which would bring it closer to the marginal rate of income tax.

The Commission's arguments are not always convincing. They are based on the premise that the imputation system will promote the inclination to distribute profits and considerably lessen the gap between the marginal income tax rate and the corporation tax rate. It is questionable whether these two consequences of the imputation system will bear out the arguments of the Commission.

Moreover, I am struck by the fact that the Commission stresses arguments based on the national tax policy of the Member States while it devotes scarcely any attention to various international aspects. This is all the more strange since the "Van den Tempel Report" which was commissioned by the European Community in 1969, drew its strongest arguments against the imputation system from precisely those international aspects. In its Double Taxation Memorandum of 1970 the Netherlands Government arrived at a similar conclusion.

Furthermore, it remains to be seen whether, particularly from the financing point of view, the transition from the classical system to the imputation system is really so attractive economically to corporations which distribute little or no dividend since, assuming that the aggregate yield of corporation tax and income tax remains unchanged, such corporations will after all be faced with a higher rate of corporation tax without having the benefits of the relief of economic double taxation. The imputation system favours especially those companies which usually distribute very satisfactory dividends. While it is true that the Commission's proposal is of a structural nature so that arguments pertaining to cyclical financing problems should not be advanced against it, such aspects should certainly be considered where the financial position of certain corporations is weak for a prolonged period.

It may be expected that the examination of these and other questions will be very time-consuming so that it will be a good while before a harmonised company taxation system is introduced.

The proposal of the European Commission contains a suggestion to harmonise the withholding tax on dividends at a rate of 25%. It may be questioned whether there is any place in the imputation system for a withholding tax since the tax credit already has a similar function. Neither France nor England make use of a withholding tax in domestic taxation. On the other hand the new Anglo-American Tax Convention does provide for a withholding tax to be levied in the United Kingdom on dividends flowing to the United States.

In this respect it should not be forgotten that in 1973 the Commission still intended to submit to the Council within a short time guidelines for a withholding tax on interest. According to the Commission a harmonised withholding tax could be an important instrument in the struggle against tax fraud and in this I fully concur. From the very start, however, the Commission has rightly pointed out that, simultaneously with the harmonised levy on interest, measures to control the movement of capital would have to be introduced; otherwise the withholding tax on interest might provoke a flight

of capital to third party countries. Moreover, the control measures were to contain provisions guaranteeing a large measure of freedom for the movement of capital within the Community. The Commission has not yet proposed a measure of this kind and it is therefore not surprising that in July 1975 it declared that no proposal for a harmonised withholding tax would be submitted to the Council for the time being.

In conclusion I should like to say a few words about the framework in which tax harmonisation in the European Community is to be seen, that is, the Common Market. The Common Market implies that in many areas and matters the Member States are growing closer to each other. In different areas such as the customs union and agricultural policy much progress has been made, but in other areas it has been slower.

The harmonisation of taxes is but a part of the considerable work which still has to be done before the aims of the Common Market have been fully realised. Tax harmonisation therefore cannot be seen in isolation from work proceeding in other Community matters such as common transport policy, common energy policy and common industrial policy. There is no point in allowing tax harmonisation to run on ahead of developments in other areas; only a coordinated approach can lead to satisfactory results.

Furthermore, as the process of tax harmonisation progresses, more attention should be given to a rational division of fiscal authority between the Community and the Member States. Irrespective of its structure, every State has to deal with the problem of dividing fiscal authority between the central government and other authorities. There are two aspects to the problem. The first of these is that of deciding which taxes should be levied by the government and which can be left to the local authorities. The second is that of deciding the share of the national taxes to be assigned to the other authorities. The key to this problem will usually be found in the division of responsibilities between the various public bodies and the extent to which some of these bodies are unable to finance expenditure from their own tax revenue.

The Europe of the Nine faces the same problem. Although the sovereign right of the individual Member States to levy taxes has scarcely been affected, as more development takes place more taxes will be levied by the Community, which in turn will distribute funds to the Member States according to need (for example in the form of subsidies).

This is why tax harmonisation lies in the force field between two poles, one of which is the responsibility of the Member States which will still retain a good deal of autonomy and will therefore need considerable financial leeway, while the other pole consists of the requirements of a well-organised Community and the extent to which economic and social policies become a Community responsibility.

Whatever happens, a uniform tax structure under the central authority of the European Community cannot be achieved without the cooperation of the national parliaments, and the corresponding formulation and implementation of a common tax policy will have to go hand in hand with a strengthening of the position of the European Parliament. After all as long ago as the eighteenth century the slogan "no taxation without representation" made the citizens of the American colonies rebel and furthered the cause of democracy.

I hope that now, during the last quarter of the 20th century, this same slogan will provide much food for thought to the Eurocrats of the New Europe.

TURNOVER TAX IN THE U.S.S.R.

by E.H. de Jong *

Turnover tax is one of the most important sources of income for the Soviet State budget. Although its proceeds have proportionally declined (as compared with the total income of the Soviet budget) since 1965, the year of the economic reforms, more than 30 percent of the total income of the Soviet budget was derived from this source during the last few years.

The following are subject to U.S.S.R. turnover tax:
- State enterprises;
- cooperative enterprises;
- so-called "enterprises of social organizations" (i.e. all kinds of associations, such as trade unions, sporting clubs, etc.).

* Documentation Office for East European Law, University of Leiden, the Netherlands.

It must be common knowledge that private enterprises have not existed in the Soviet-Union since the 1930's. All enterprises are owned either by the State or by a cooperative or by social organizations. The vast majority is owned by the State. In addition to the turnover tax, the enterprises pay several levies and taxes on profits, social security premiums and other levies and taxes (e.g. customs duties). More than 90% of the total income of the Soviet budget consists of the sum of the turnover tax and the other levies and taxes due by enterprises. The other revenues come from the wage and income tax.

Since the tax reforms of 1930, taxation of enterprises in the U.S.S.R. is effected through two main channels:
1. turnover tax;
2. profits taxes.

Different laws exist for the taxes on profits due by State enterprises, cooperative enterprises or enterprises of social organizations respectively. As regards the turnover tax, however, there exists one uniform law which is effective for all categories of enterprises.

Since the vast majority of enterprises is owned by the State, taxes on profits of State enterprises also constitute an important source of income for the Soviet budget, in addition to the turnover tax. Just like turnover tax, their share of total income of the Soviet budget has exceeded 30 percent during the last few years.

The following charts may illustrate this:

A. In 1000 Million of Rubles [1]

Legal Sources

The turnover tax has been reformed in 1975 by the Decree on the Turnover Tax as approved by the Council of Ministers of the U.S.S.R. [2]

As a part of this Decree, the Ministry of Finance of the U.S.S.R. issued a "General Instruction on the Turnover Tax" which contains a large number of regulatory provisions [3]. The old "Ordinance to the Turnover Tax on Enterprises in the Socialized Sector", dating from 1930 [4] and a large number of additional regulations and instructions were substituted by the Decree and the General Instruction.

Taxpayers

As explained above, the taxpayers for the turnover tax are State enterprises, cooperative enterprises and enterprises of social organizations. However, enterprises owned by agricultural or fishing cooperatives (kolchozes) are excluded from tax liability.
Both production and commercial enterprises can be liable to the turnover tax. The only thing which is subject to turnover tax is sale or other disposition of goods manufactured or purchased by the enterprise. Services are not taxed. Goods which are taxed are mainly consumer goods, i.e. goods which are sold to individuals. Goods used in the course of production (e.g. machinery and equipment) are, in general, not taxed with turnover tax, except for, inter alia, petroleum products, natural gas, energy, motorcars.

System of Soviet Turnover Tax

The 1930 Soviet turnover tax was based on the principle of one-time imposition of turnover tax for each product, however, with the restriction that the product itself does not undergo a change which makes another product of it. If the finished product was processed to one or more other products, turnover tax could be levied on the newly manufactured products, even if the processed product was taxed with turnover tax in an earlier stage. In that case, it had to be a question of the manufacturing of completely new products (e.g. the manufacturing of confectioner's products from products which were subject to turnover tax in an earlier stage, such as flour, sugar, fats, etc.) Processes which have the purpose to protect certain products against deterioration or damage or to facilitate the sale of the products (e.g. packing) were not considered to turn them into new products.

This principle which was laid down in article 1 of the legislation of 1930 is no longer provided for by the new Ordinance on the Turnover Tax of 1975.

Although the principle of a single stage turnover tax cannot explicitly be found in the new Ordinance on the Turnover Tax, it plays a role in the background, i.e. for the way of determination of the tax rates. The former principle, that turnover tax will only become due if the goods are sold by the enterprise to customers outside the enterprise, also disappeared in the new Ordinance on the Turnover Tax. Transfers within the enterprise (e.g. from one department to another) against retail trade or industrial wholesale prices are now subject to turnover tax.

Tax Base

In determining the rates of the turnover tax, one must consider that almost all prices of goods are determined by the State. In the Soviet Union the following three different price concepts exist:
— enterprise's wholesale price;
— industrial wholesale price;
— retail trade price.

The enterprise's wholesale price of a certain product consists of the production costs increased by the margin of profits of the enterprise.
The industrial wholesale price for a certain product consists of the enterprise's wholesale price increased by the turnover tax.
The retail trade price for a certain product, finally, is composed of the enterprise's wholesale price increased by the turnover tax and the margin of profit of the retail trade. See the chart at the bottom of this page.

4. Ordinance on the Turnover Tax of enterprises in the socialized sector, approved by the Decree of the Central Executive Committee and the Council of People's Commissars of the U.S.S.R., September 2, 1930; *Sobranie zakonov i rasporiazheniĭ Rabochekrest'ianskogo Pravitel'stva SSSR* (Collection of laws and decrees of the Workers' and Peasants' Government of the U.S.S.R.) 1930, No. 46 item 477.

production costs	+	margin of profits of the enterprise					=	enterprise's wholesale price
production costs	+	margin of profits of the enterprise	+	turnover tax			=	industrial wholesale price
production costs	+	margin of profits of the enterprise	+	turnover tax	+	margin of profits of retail trade	=	retail trade price

The product can be taxed either on the level of the productive enterprise or on the level of the trading enterprise (one-time imposition). The rates of the turnover tax are determined either on the basis of the difference between retail trade price less the margin of profit of retail trade and the enterprise's wholesale price or on the basis of the difference between the industrial wholesale price and the enterprise's wholesale price. In the first case the trading-enterprise pays the turnover tax due; in the second case the productive enterprise.

The rates can also be determined on the basis of percentages of turnover or in fixed amounts per product-unit. During the last years more than 80% of the revenue of the turnover tax has been computed as the difference between retail trade price (less the margin of profit of retail trade) and the enterprise's wholesale price or as the difference between the industrial wholesale price and the enterprise's wholesale price. Approximately 6% of the revenues of turnover has been computed in percentages of turnover and approximately 14% in fixed amounts per product-unit.

The Government determines not only the prices of the products, but also the production and the turnover of the products, which are fixed in a plan (annual plan, divided in quarterly plans, if any, monthly plans, etc.). The revenue of the turnover tax can be easily computed from these plans because of the existing fixed prices. Therefore, revenue of turnover is also planned. The revenue of the turnover tax depends on the realization of the production plan and the plan concerning sale of the products. Thus, an important additional effect of the collection of the turnover tax is the possibility to control the realization of the plans of the enterprise concerning the production and the sale of the products via the Ministry of Finance. If an enterprise's plan concerning production or sale of products is not realized, this will immediately result in a reduced turnover tax revenue. Since the turnover tax revenue is also laid down in a plan, the non-realization of a plan concerning production or sale of product, if any, makes the enterprise fail to meet the standards set by the authorities. The attention of the Ministry of Finance (i.e. the Ministry of Finance of the U.S.S.R., the ministries of finance of the separate Union Republics and the financial departments of the lower territorial governments (provinces, regions, cities etc.)), therefore, is immediately drawn to circumstances upsetting the production or the sale of products.

The Government can influence the earning capacity (i.e. percentage of profits as compared with full costs of production) of a certain product by determining the turnover tax rate for that product. In determining the turnover tax rate for new products an earning capacity with a minimum of 15% and a maximum of 30% must be guaranteed for the enterprise according to the Ordinance on the Turnover Tax. The determination of the turnover tax rates for other products must result in an earning capacity of 15 to 17% for the enterprise, or in the case of groups of similar products up to 20%, if any. Anyhow, a minimum earning capacity of 15% for a certain product must always be guaranteed for the enterprise in determining the turnover tax rates. Thus, the production of new products is stimulated within the limits of the Government plans by guaranteeing a high earning capacity on these goods. If, in the case of the effective turnover tax rate, the production of certain goods results in a loss or a failure to make a profit, temporary reductions of the turnover tax rates are granted with respect to these goods (in most cases for one year). On the other hand, however, the enterprises which produce hardly profitable goods or goods which involve a loss can be obliged to pay higher turnover tax on other goods produced by them which have a relatively high earning capacity, as a compensation for reductions of turnover tax. The rates are always determined by the Ministry of Finance of the U.S.S.R., the ministries of finance of the Union Republics, or the financial departments of the lower territorial governments (provinces, regions, cities, etc.).

Dates of Payment

The duty to pay the turnover tax exists for the enterprise directly after the receipt of the money from the sale of its products. The terms within which the turnover tax due must be paid range from a payment directly after each transaction, a daily payment, a payment per five days, a payment per ten days, a monthly payment to a quarterly payment. However, a payment once per ten days is the most usual term. For enterprises which pay the turnover tax due once per 10 days, the turnover tax due amounts to more than 3,000 Rubles per month [5]. If the average turnover tax due amounts to less than 3,000 Rubles per month, the tax is paid monthly or quarterly. These quick, continuing payments of turnover tax provide the State budget with a constantly flowing source of income.

Computation and Returns

The enterprises which are subject to tax must compute the turnover tax due themselves. They also must render an account of this with the Ministry of Finance within the required terms and in accordance with the forms which are issued by this ministry. The director and the chief accountant of the enterprise are responsible in

this respect. Enterprises which are subject to the Ministry of the Interior of the U.S.S.R. and the Committee for State Security with the Council of Ministers of the U.S.S.R. (better known as K.G.B.) are excepted from this duty. Enterprises which fail to render an account of the turnover tax to be paid by them are obliged to pay 110% of the turnover tax paid over the preceding period of time, until an account is rendered. Enterprises which do not pay the turnover tax due within the required terms, must pay a fine at an amount of 0.05% per day of the outstanding tax due. On the other hand, however, the taxpayers also have right of appeal against wrong decisions of officials at the Ministry of Finance.

Exemptions

The Ordinance on the Turnover Tax lists a number of groups of enterprises which are completely or partially exempt from the payment of turnover tax.

First, it concerns newly founded or reorganized enterprises which produce consumer goods from locally available raw materials or by-products (with the exception of vodka, other drinks and cosmetics containing alcohol, as well as tobacco), however, under the condition that the consumer goods are at least 75% made from locally available raw materials or by-products. The same exemption is granted to newly founded or reorganized enterprises which produce articles of popular art. These enterprises are exempt from the payment of the turnover tax during the first two years after the foundation or the reorganization.

The second group consists of enterprises and institutions which employ disabled workers. Here, it concerns products which are manufactured by workplaces of educational institutions, educational and workcentres for minors, medical-therapeutical workplaces of psychiatrical and other institutions, workplaces for handicapped and blind persons, etc. All products manufactured by such institutions are partially exempt from turnover tax. The conditions for the granting of this exemption is that the number of partly disabled persons amounts to 75 percent or more of the total number of employees (except in the case of blind persons, where the percentage of 75 is reduced and instead a percentage of 50 is applied).

The third group of enterprises and institutions which are exempt from the payment of turnover tax, consists of various branches and enterprises which produce all sorts of goods, e.g. medicines and vitamins, bread and flour products, potatoes, vegetables and fruit, milk and milk products, meat and meat products, books, newspapers and periodicals, coal, peat and firewood, clothes, toys, etc. It was the legislature's intention to exempt from turnover tax the necessities of life as much as possible.

In addition to the exemptions granted by the Ordinance on the Turnover Tax and the annexed Instruction, partial or complete exemptions from tax can also be granted by the Ministry of Finance.

COUNTRY BY COUNTRY SURVEY OF LOOSE-LEAF PUBLICATIONS . . .

CANADA

CANADIAN INCOME TAX REVISED incorporating CANADIAN CURRENT TAX

Butterworths, 2265 Midland Avenue, Scarborough, Ontario M1P 451, Canada.
Supplemented: regularly, weekly respectively.

Loose-leaf publication service in nine binders for Canadian income tax and one binder for weekly CANADIAN CURRENT TAX. The main part of the work covers the text and comment on the Canadian Income Tax Act (Volumes one to four). The service issues the material in booklet form rather than in supplementary pages. In volumes 1 to 4 the Canadian tax law is arranged by pertinent topics rather than by section of the Act. The discussion includes worked accounting examples. Volume 5 includes a consolidated index and case table. Volume 6: text of the Income Tax Act, rules and regulations thereto. Volume 7: interpretation bulletins and advance rulings. Volume 8: information circulars, forms, tax treaties in existence to date between Canada and other countries and the O.E.C.D. draft double taxation treaty. Volume 9 deals with tax planning and management.
One Binder contains CANADIAN CURRENT TAX which is a weekly report of all developments in federal income tax law and cases in Canada.

CANADA TAX SERVICE

Editor-in-Chief H. Heward Stikeman. Richard De Boo Ltd., 151 Wellington Street, Toronto 1, Ontario, Canada.
Supplemented: regularly.

Loose-leaf publication service in five binders. The main part of the works covers the complete text of the law and comment on the Canadian Income Tax Act which is set out in section order. Gift tax, estate tax, sales and excise taxes are set out in Binder 5. Forms and text of double taxation treaties are appended. The service keeps the material constantly up-to-date by frequent releases of new and revised material and relevant supplementary booklets of current tax interest. CANADA TAX SERVICE includes a *digest service* on current tax charges published in TAX TIMES which provides information relating to the latest in tax developments with cross-references to CANADA TAX SERVICE and a *study service* on current tax charges published in CANADA TAX LETTER which provides a continuing series of critical and analytical studies on tax reform and other tax questions of current interest prepared by recognised authorities on the subject concerned.

PROVINCIAL TAXATION SERVICE

Richard De Boo Ltd., 151 Wellington Street, Toronto 1, Ontario, Canada.
Supplemented: regularly

Loose-leaf publication service providing continuously updated information on the increasingly important and fast changing areas of provincial taxes of Alberta, Saskatchewan, Manitoba, New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland. This service presents the texts of all provincial income, corporation, property, commodity and other tax acts and regulations, orders-in-council, bulletins — indexes and introductory notes. Tables of principal licence and registration fees of the Provinces are also included. The material is kept up-to-date by the issuance of supplementary and replacement pages.
Complementary to Provincial Taxation Service are in separate volumes:
1. British Columbia Taxation Service.
2. Ontario Taxation Service.
3. Quebec Taxation Service.
The provincial taxes of which are not dealt with in Provincial Taxation Service itself.

PROVINCIAL SUCCESSION DUTY AND GIFT TAX SERVICE
(formerly Canada Estate Tax Service)

Editor-in-Chief H. Heward Stikeman. Richard De Boo Ltd., 151 Wellington Street, Toronto, Ontario, Canada.
Supplemented: regularly.

Loose-leaf publication service to provide in one Binder the texts of and comment on the provincial succession duty and gift tax legislation. Special chapters on situs and valuation are appended. The material is kept up-to-date by the issuance of supplementary and replacement pages.

CANADA INCOME TAX GUIDE

CCH Canadian Ltd., 6 Garamond Court, Don Mills, Ontario 1974 (second edition started 1974), Canada.
Supplemented: 18 supplements per year.

Loose-leaf publication service to reflect the Canadian Income Tax Act as revised under the federal income tax reform effective January 1, 1972. Volume 1 contains an explanation of federal income tax law based on the Income Tax Act, Income Tax Regulations, decisions of the Tax Review Board and the courts, and administrative rulings with reference to the Law and illustrated by worked examples. Volumes 2 and 3 (optional) contain the full texts of the Income Tax Act and Regulations, Information Circulars, Interpretation Bulletins and Advance Rulings.

CANADIAN TAX REPORTER
(second edition started 1973)

CCH Canadian Ltd., 6 Garamond Court, Don Mills, Ontario, Canada.
Supplemented: weekly.

Loose-leaf publication service in six binders. The full text of the Federal Income Tax Act is set out section-by-section, and each section is followed by editorial comment, text of income tax regulations, tax review cases, interpretation bulletins, information circulars, memoranda, advance rulings and other tax-related regulations. In addition the compilations contain reproduction of text of double taxation treaties and forms. The material is thoroughtly indexed and is kept up-to-date by the issue of supplementary pages.

CANADIAN SALES TAX REPORTER

CCH Canadian Ltd., 6 Garamond Court, Don Mills, Ontario, Canada.
Supplemented: monthly.

Loose-leaf publication service dealing with the taxes imposed by the Federal Excise Tax Act, i.e., the sales tax, the excise tax and the tax on certain insurance premiums. It explains the provision of the Excise Tax Act and Memoranda. The text of the statute and where appropriate departmental circulars or memoranda are reproduced in full. The material is kept up-to-date by the issue of supplementary pages at least once a month. New court decisions and other current developments are reported in the New Matters division of this work. A comprehensive index is appended.

DOMINION TAX CASES

CCH Canadian Ltd., 6 Garamond Court, Don Mills, Ontario, Canada.
Supplemented: 3 reports per month.

Loose-leaf publication service which reports in full the text of all federal tax cases heard by the Tax Review Board, The Supreme and Federal Courts of Canada and the higher courts of the provinces. New cases will be reported as and when they are released by the Board or the courts. A regular service will report on new developments. All decisions are cumulatively indexed by subject in the Topical Index, by section number of the Acts in the Citator, and by case name in the Case Table.

FOREIGN INVESTMENT IN CANADA
A guide to the law by Peter R. Hayden, Jeffrey H. Burns and Irwin Schwartz.

Prentice-Hall of Canada, Ltd., 1870 Birchmount Rd, Scarborough, Ontario M.P. 237, Canada. 1975.
Supplemented: monthly.

Loose-leaf publication service on foreign investment law in Canada. The service covers a full comment on the Foreign Investment Review Act and the complete text of the Foreign Investment Review Act, the Regulations and Guidelines thereto. Provincial, as well as federal, legislation that restricts foreign investment in Canada is dealt with. The service brings the material up-to-date by monthly releases which are of three types entitled: Current Matter; New Ideas and Report Bulletins. A comprehensive index is appended.

FRANCE

DICTIONNAIRE PERMANENT — DROIT DES AFFAIRES

Editions Législatives et Administratives, 3 Rue Jean-Ferrandi, Paris.
Supplemented: regularly (at least four times a year).

Loose-leaf publication service providing explanation of the French business entities. Each kind of major business entity is dealt with in extenso. Minor business entities are also considered. At present the work contains three binders. The material is kept up-to-date by the issue of replacement pages and supplementary pages.

DICTONNAIRE PERMANENT — FISCAL

Editions Législatives et Administratives, 3 Rue Jean-Ferrandi, Paris.
Supplemented: regularly (at least four times a year).

Loose-leaf publication service providing explanation of the French tax system. Each kind of tax is dealt with. References are made to the basic statute, case law, administrative notifications and circulars. Double taxation treaties are considered. At present the work contains two binders. The material is kept up-to-date by the issue of replacement pages and supplementary pages.

FEUILLETS DE DOCUMENTATION PRATIQUE FRANCIS LEFEBVRE

Editions Francis Lefebvre, 44 Rue de Villiers, Levallois-Perret.
Supplemented: every three months.

Encyclopedia in loose-leaf form dealing with taxation, social and labour law in France divided into six basic collections contained in various binders. The six basic collections are classified under the following subject headings: DIRECT TAXES, REGISTRATION AND STAMP DUTIES, INDIRECT TAXES, TAXES ON IMMOVABLES, SOCIAL SECURITY AND LABOUR LAW. Each collection covers the text of statutes pertaining to the subject concerned and includes the relevant text of the law, circulars, case law and administrative instructions. Double taxation treaties are considered. The material in each collection is kept up-to-date by the issue of monthly BULLETINS and LOOSE-LEAF SUPPLEMENTS, every three months. In addition, the issue of RAPID DOCUMENTATION PAGES (FEUILLETS DE DOCUMENTATION RAPIDE) published at least once a week reports on new developments in the field of taxation, social and labour law.

JURIS CLASSEUR: DROIT FISCAL CODE FISCAL — COMMENTAIRES

Editions Techniques, 123 Rue d'Alésia, Paris.
Supplemented: 2-3 times a year.

Loose-leaf service on taxation in France in various binders. The work covers the consolidated text of the tax laws and comments thereon. It deals with all taxes such as individual income tax, corporate income tax, business tax, tax on value added, taxes on immovable property, and other miscellaneous taxes on income, capital, payroll and local taxes. Avoidance of double taxation both by unilateral measures and by double taxation treaties, is considered. The material is kept up-to-date by the issue of replacement pages and supplementary pages.

LA TAXE PROFESSIONNELLE

Express — Documents
61 Rue de Malte, Paris.
Supplemented: regularly.

Loose-leaf publication containing full text of the business tax (taxe professionnelle) and explanation thereof. The material is kept up-to-date by the issue of replacement pages and supplementary pages.

FROM TAX HAVEN TO FISCAL PARADISE.

H.W.T. Pepper

PART TWO *

PERMISSIBLE AND DESIRABLE ON-SHORE ACTIVITIES: BENEFITS TO HAVEN

80. Some types of tax haven have relatively high direct taxes but give exemption therefrom to companies registered there under special legislation which have their business transacted overseas. In such cases it is essential that the exempted companies should have no operations in the country as otherwise they could compete with other local companies which are subjected to normal taxation.

81. Nevertheless, it is sometimes required that one of the directors of such offshore companies should be a local resident, or that a local should act in some other capacity in the company, obviously in order to generate some more local employment. Even if the duties are purely nominal, if a substantial number of companies register, the total quantity of "work" to be done may be appreciable, and where some legal or accounting knowledge is required, the result may be to create openings for local persons to acquire professional qualifications and raise their status and earning capacity.

82. Often an offshore company will arrange to have its directors' meetings outside the country of registration, the residence of the company then being in the country where the meetings take place. That place may be a "no tax" haven so that no income tax arises in either country.

83. Another variation is to allow the offshore company to have an office in the country of registration, in fact to encourage this, provided that its actual functions are concerned solely with persons not resident in the country.

84. In the case of a "no tax" haven, there is usually no economic objection to an offshore company carrying on its work in the haven so long as its functions are entirely outside those of the existing trades and businesses carried on by locals in the haven. The functions of the offshore company will usually be of a legal and financial character connected with the overseas owners of the company.

85. In either type of haven there should be a clear gain in employment opportunities for nationals of the haven, which will range from professional (legal, accounting, and banking) services, clerical work, and of course there will be demands on the construction industry, and on utilities, including telephone, telex, and postal services.

* Part One has been published in January 1977 issue of the Bulletin.

TABLE OF CONTENTS

PART TWO

Para.	Subject
80- 85	Permissible & Desirable On-Shore Activities: Benefits to Haven
86- 87	Other Economic Activities
88- 95	Captive Insurance Companies
96- 97	International Business Companies
98-100	Off-Shore Companies:
98- 99	Directors' Meetings: Local Directors
100	Revenue to Haven Government
101-103	Off-Shore Trusts and Funds: Family Trusts
102-103	Investment Trusts and Funds
104-107	Banks
108-110	"Secret" or "Numbered" Bank Accounts
111-117	Shipping Havens: "Flag of Convenience": General
115-117	Factors other than Taxation
118-121	Shipping Havens and Centres
122-125	"Free Ports" and "Duty-Free Zones": Entrepot Trade and Processing Industries
124	Income Tax on Export Industries
125-126	Tax Sparing of Exempted Profits
127-130	Death, Succession, Inheritance, and Gift Taxes
131-135	"Vetting" of Developers, Promotors, Bankers, and Others

OTHER ECONOMIC ACTIVITIES

86. Goods, such as consumer durables, are not uncommonly manufactured in one country and sold to consumers in another which may be at the other end of the world. Some large corporations interpose a subsidiary in a third country actually or ostensibly to process selling orders and production demands so as to ensure an even flow of the goods from factory to market. Where the distribution country is in a tax haven the profits from that level of activity will no doubt be tax-free or lightly taxed, at least in the first instance. Sometimes no doubt the ostensible distribution company may be little more than a brass plate, but with the growing pressure on tax havens there must be more reasons than ever to have a "real" operation in the haven.

87. Nowadays, when data can be taped and flown rapidly from place to place, processed by computer and transmitted by telex, it could well make sense to set up intermediary corporate activities in tax havens (for that matter in other developing countries that offer fiscal inducements) involving the use of data-processing equipment for which local staff could be trained. There would of course also be scope for setting up much simpler operations. Such a course would not only commend itself to the host haven but make the whole operation less vulnerable to counter-tax-avoidance legislation.

CAPTIVE INSURANCE COMPANIES

88. The kind of risks which a corporation might wish to insure against range from the cataclysmic (such as the entire destruction of buildings, plant and stocks by earthquake, tidal wave, or fire), to the fairly frequently recurring, run-of-the-mill losses. In between there are risks which may involve substantial losses which are less than cataclysmic and less predictable than the small losses.

89. A large corporation may insure the first category of risks, and perhaps not insure the second category, but bear the risks itself. As regards the intermediate type of risks, it may decide to set up a subsidiary or affiliated company (therefore a "captive" company) to handle the insurance.

90. If the main company had merely put some of its profits aside as reserves to cover the contingency of the intermediate type of risks, no tax deduction would be due for the sums reserved. In contrast, premiums to an insurance company against recognised risks would be deductible — hence the need to set up a separate company in a haven so that untaxed reserves may accumulate to meet future losses.

91. Sometimes the intermediate risks may include some peculiar to the industry which are not commercially insurable, or not readily insurable except at unreasonably high premiums.

92. Once it has a captive insurance operation, the main company may also transfer other types of insurance to the new company, using re-insurance to hedge against cataclysmic risks.

93. Establishing a captive insurance company may have other advantages besides a tax saving. Where risks are insured with a commercial company there may be complacency as regards accident prevention because of the very fact that the risk is covered by a third party who will meet all costs of restitution in the event of loss. When the insurer is within the "group", the loss will come back home and there will be an incentive to take all possible preventive measures to limit losses, making for a more healthy corporate performance in general.

94. Although as will be obvious from the above, a good case can be made out for the creation of captive insurance companies, it is also true that there can be abuses in their use, e.g., as a vehicle for sending excessive sums of money overseas in the form of "premiums". In the U.S.A. the Internal Revenue Department has banned the deduction of premiums to captive insurance companies because of abuses, though it seems that a better, though less simple approach would be to allow deductions subject to close checks on the operation including the level of premiums charged.

95. The tax haven "specialising" in captive insurance management is Bermuda, estimated to have about 400 such companies registered, but some business in this field is also done in the Bahamas, Caymans, the Irish Republic (Shannon Free Port area), New Hebrides, and Panama.

INTERNATIONAL BUSINESS COMPANIES

96. Laws to permit the registration of "International Business Companies", normally having all their business operations abroad have been enacted in Antigua, Barbados, and Jamaica, in each of which the rate of tax applicable to world profits of such companies is 2½%, and in St. Vincent, where the rate of tax is 2%. All 4 countries have relatively high rates of direct taxation, except for the special IBC rate, and for the long-term exemption of tax on the profits of new enterprises operating inside the territories.

97. The originator of the "IBC" idea perhaps thought that the industrialised countries would accept tax rates at 2 or 2½% as qualifying for relief in double tax treaties, where one country gives up its right to tax income if the income is taxed in the other country. At any rate, only St. Vincent seems to have attracted a reasonable number of such registrations, and this country is now considering the extension of its financial and haven services. The IBC legislation in St. Vincent, however, is to be repealed and replaced by a similar law, the exercise being done to weed out undesirable companies which were registered under the old laws. It may be assumed that this will put an end to the notorious off-the-peg off-shore banks. The two new laws to be introduced (designed by a firm of Swiss lawyers) are the more usual income tax-free companies which pay registration fees only, and trust law which will enable income tax-free trusts to be set up.

OFF-SHORE COMPANIES

Directors' Meetings: Local Directors

98. Reference has already been made to the general lines of requirements of laws and facilities for the registrations of companies. In the early stages of a haven's existence it probably should not insist, e.g., on meetings being held in the country, on a local person (such as a lawyer) being appointed to the Board. If the welcome the haven gives to its customers is a friendly and helpful one it may well be that the company may decide to make greater use of local facilities without being pressed to do so. Moreover it is not unknown for a company's officials to make excuses to come to the country of registration of their own freewill in order to enjoy a peaceful interlude from the rat-race back home!

99. Sometimes it suits the company's purpose better to arrange directors' meetings in another country, and if ruled about such matters are too stringent in one haven the customer may choose another. Where operations are carried on within the tax haven, of source, it may well be reasonable to seek more of an actual "presence" of the company in the haven, but these matters can be worked out in the light of experience of customers' needs and the responsibility of the haven to preserve a good image.

Revenue to Haven Government

100. A haven will usually charge somewhere in the region of the going rate for offshore companies, which ranges upwards from about £200 sterling for initial and also for annual registration. For a new haven substantial revenue should not be looked for in the early stages, it

will be more important to establish a name for efficiency and service and let the future take care of itself. There is a great deal of competition and loopholes are being closed all the time in tax legislation, sometimes faster than the experts can find new ones. It has to be borne in mind that some of the advantages of haven business may be measured in employment opportunities rather than in tax revenue. (See also "**Attributes and Tax Structure of a Tax Haven**" above.)

OFF-SHORE TRUSTS AND FUNDS

Family Trusts

101. One type of "offshore" trust is that created by a taxpayer, usually for the benefit of his heirs, whereby he divests himself of certain assets, which can then earn or accumulate income tax-free in the haven he has chosen so as to increase the benefit to the beneficiaries, in addition to reducing the tax liability of the originator of the trust. The greatest flexibility in setting up trusts occurs under a common law regime such as that prevailing in the Bahamas, Bermuda, Caymans, Hong Kong, the Isle of Man, and New Hebrides. There is provision for civil law trusts in several havens, including Liechtenstein, Switzerland, Panama, and the Netherlands Antilles.

Investment Trusts and Funds

102. Offshore investment funds, which may either be in the form of a trust or company are clearly matters which require careful consideration by the haven authorities, particularly in view of scandals that have arisen over the last few years through bad or even fraudulent management of customers' investments. The general idea is that an offshore investment operation has advantages in that there is less tax applying to the income arising from the "group" investments than if the operation were not in a tax haven. Where the individual investor resides in a country which taxes foreign income there may only be a marginal advantage in obtaining a slightly larger gross distribution, or in some element of tax-deferral.

103. Apart from making security checks on the persons who are to operate the funds, the haven may decide to enact security laws governing the rights of investment managers to invest, as is common in the Trustee Laws of many countries. Although there was great interest in haven-based funds during the 1960-1970 decade, there has been a considerable slackening of interest in recent years.

Banks

104. Interest on deposits of cash in Banks in No-Tax Havens does not, of course, attract income tax, but the same is also true of deposit interest accruing on deposits from overseas invested in banks in non-tax-free financial centres such as Guernsey, Isle of Man, Jersey, Liechtenstein, Luxembourg, Netherlands, Netherlands Antilles, Singapore, the U.K. and the U.S.A. Offshore banks are, however, more often situated in the No-Tax Havens, especially Bahamas with nearly 400, and the Caymans with about 220. Guernsey and Jersey are also offshore banking centres although these havens have more or less reached saturation point as regards banks.

105. Some offshore banks have been set up by large international banks to perform various functions which are more easily accomplished in conditions of freedom from exchange control, and fewer banking formalities. Such banks are able to pay interest without deduction of tax and take part in international underwriting syndicates, and of course assist customers in forming foreign companies and trusts.

106. In some cases "captive" banks have been set up by large international trading concerns which may be of service, not only to their parent companies, but also to customers of those concerns. The offshore bank may operate as a merchant bank and provide financial facilities additional to those obtainable in commercial banks at home. The offshore bank is often able to handle foreign exchange business more smoothly than the local banks.

107. The fees charged by havens for offshore banks which wish to register and operate under the havens' laws are very substantially higher than those for ordinary companies, and there is usually a licensing procedure, besides the ordinary registration process, which prescribes what a bank can do under the law. During the processing period the haven will normally check the credentials of the promoters in a very thorough manner (see "**Vetting of Developers, Promotors, etc.**" below).

"SECRET" OR "NUMBERED" BANK ACCOUNTS

108. All bank accounts are "secret" as between the account-holder and the bank to the exclusion of all other persons. Some countries, however, have enacted rules demanding the disclosure by the bank to Government (Inland Revenue, Exchange Control, Police) in certain circumstances of details of a customer's affairs.

109. Where secrecy is more or less untrammelled by any disclosure laws, it is probably almost as effective whether the customer's name, or an anonymous number identifies the account, especially if the account is kept in a distant tax haven.

110. Nevertheless, there is some demand for numbered accounts, partly no doubt because of the mystery or aura of glamour which seems to surround such accounts. In some cases, in these days of industrial espionage when large corporations try to obtain the industrial secrets of their competitors, there may well be a reasonable commercial case for using an anonymous account to do certain dealings where secrecy from competitors is essential. It seems that not even numbered accounts are completely proof against penetration by Government agents working for the Treasury or perhaps the Fraud or Bunco Squad, but these notes are concerned with legal transactions only, where there should be nothing to hide from one's Government!

SHIPPING HAVENS "FLAGS OF CONVENIENCE"

General

111. The popular view of "flag of convenience" tends to range at one extreme from the notion of a rusting hulk limping into harbour with a drunken crew and officers having only correspondence course qualifications. Some-

times the picture is of a ship going the wrong way in a busy traffic lane, or running ashore and spilling its oil cargo on to neighbouring beaches. At the other extreme, and to an increasing extent, haven registrations include some of the newest and most modern of ships whose owners maintain a high standard of maintenance of the vessels, and of facilities for the crew.

112. Both images are factual, but the former may be on the way out as haven countries themselves raise standards of compliance. Recent initiatives by the International Labour Organisation Maritime Conference (13-29 October 1976) will further improve matters when countries ratify and act upon the latest proposals for checking the condition of ships that call at the harbours of signatory countries, and at the same time examining the conditions of service of the crew for compliance with I.L.O. standards.

113. Although it has been estimated that less than one-third of ships' crews belong to trade unions, there is probably higher union membership among dock-workers, and there have been examples of dock-workers or longshoremen "blacking" (i.e., refusing to handle) ships which too flagrantly ill-treat their crews. Accordingly there are limits beyond which owners cannot go in attempts to make undue profits by underpaying crews and undermaintaining ships.

114. Since havens commonly offer income tax exemption on shipping profits (but impose registration and tonnage fees), many shipowners are attracted by that factor alone. In high-wage countries, however, where there are strong maritime trade unions, shipping companies have sometimes found it impossible to make any profit at all except by registering under a foreign flag (usually also registering a shipping company in the flag country) so as to bring themselves outside the too-onerous labour requirements in the home country. Such action has been lent a measure of "respectability" by some governments, notably the U.S.A., condoning the use of a foreign flag, so that its nationals will have some shipping interests in case of war or other emergency, when the home government might otherwise have to depend entirely on foreigners for shipping services.

Factors other than Taxation

115. To what extent maritime countries lose revenue from income tax on shipping profits by the activities of havens must be somewhat conjectural. Shipping tends to suffer more than average economic vicissitudes, ranging from under-capacity when the Suez Canal is closed, to over-capacity when the canal re-opens. Passenger ships have lost most of their business to the airlines, and private sector shipping has suffered from subsidised competition by State or para-statal shipping lines, and sometimes from attempts of importing or exporting countries to insist that their cargoes be carried by their own ships.

116. Moreover, shipping is often given preferential fiscal treatment. Britain has at different times granted depreciation on sums larger than the actual cost of a ship to its owners and given substantial grants towards the cost of new ships. The U.S.A. has given favourable treatment to American shipowners even though they have registered their ships under flags of convenience. Greece, whose nationals own a large proportion of the world's shipping, has recently tried, with some success to "bring the ships back home" by matching the treatment afforded to Greek owners by the tax havens where the ships were formerly registered.

117. It is in fact generally recognised that matters such as over-restrictive practices by maritime trade unions in some industrialised countries, and the occasional unpopularity of some of these countries in the developing world, which can cause difficulties for those flying the flag of the unpopular country, may figure more largely than tax alone in deciding where to register one's ships.

Shipping Havens and Centres

118. Although many countries may aspire to become shipping havens by offering flag-of-convenience terms for registration, most of the business is done by a handful of havens the "leaders of the table" having been in the business for a long time. At the end of 1974 Liberia was the leading "maritime nation" being credited with 55.3 million tons gross of registered shipping (out of a world total of 311.3 million gross registered tons), followed by Panama with 11 million tons. Of other havens, Cyprus with 3.4 million tons and Singapore with 2.8 million have risen rapidly, although it seems that the position of Cyprus may have been eroded partly by the war in that country and the possibility of its partition, and partly by the competition of Greece itself in trying to bring its shipowners home.

119. Singapore clearly has a long lead in Asia and since Singapore is of growing importance as a financial centre and also has a key geographical position as a port and entrepot, and considerable dockyard facilities, it seems to be soundly based as a centre for ship registration. Panama, which is strategically placed on the canal between the Atlantic and Pacific Oceans, is a natural haven for Latin America which is also widely used by North Americans.

120. A shipping centre in the new style is Malta, which enacted its Mercantile Shipping Law in 1973, and is well situated geographically between Europe, Africa, and Asia, athwart the shipping route between Suez and the Straits of Gibraltar. Malta is an independent, non-aligned country with excellent harbour and dockyard facilities, currently being expanded by the building of a supertanker repair dock. Shipbuilding facilities are also being substantially extended, and a new development is that of entrepot/transhipment services. Cargoes carried on east-west shipping services are landed in Malta for re-distribution by ships plying north and south to the southern coasts of Europe and to the northern coasts of Africa.

121. The intention is to be selective in accepting ship registrations so as to preserve a good image in the maritime world. Consular services have been set up in various parts of the world and there is the usual exemption from income tax for shipping profits, with registration fees broadly in line with those of shipping havens.

"FREE PORTS" AND "DUTY-FREE ZONES"

Entrepot Trade and Processing Industries

122. Freeports occur more commonly in the world than is generally thought, and in fact virtually all large ports allow the import and re-export of goods, by way of

entrepot trade without seeking to impose customs duties. The goods may be stored in bonded warehouses or there may be an enclosed area of the port where goods may be held pending import or re-export.

123. Sometimes, however, a country may set up an area large enough to contain industries which will process imported raw materials into goods for export, at a seaport or airport (e.g., Shannon in Eire). Such arrangements may be convenient more from the physical ease of handling materials with an absolute minimum with no hauls from port to factory and back by road or rail, than from the tax viewpoint. Even where the factory is well outside the port or airport area, customs duty and sales taxation on the materials and products that are exported, are in principle exempted and it is merely a matter of arranging either not to charge such duties at all or to make rapid refunds where duties are charged initially.

Income Tax on Export Industries

124. Some countries, in conjunction with port or airport development, establish industrial zones or "estates" in the port area and in order to encourage use of the facilities for manufacturing industry which is export-oriented, grant income tax exemption on the profits from the industry for a period of years. Where part of the product is sold in the country itself the exemption would normally be reduced proportionately.

Tax-Sparing of Exempted Profits

125. Where a company set up to manufacture goods for export under tax exemption incentives is the subsidiary of a larger company subjected to tax in some industrialised country, the effect of the exemption may be partly nullified if dividends paid out of the exempted profits to the parent company are taxed in the recipient company's assessment. The remedy is for the investing country to grant "tax-sparing" relief in respect of the exempted profits, by recognising the profits as "taxed" at the normal rate in the country of origin for relief purposes. Such provisions may be found in many of the tax treaties between developed and developing countries, but some countries, notably the U.S.A. refuse to give such relief.

126. Where no sparing relief is given, some deferment at least of the tax which would otherwise be imposed on the exempted profits may be possible by judicious use of a tax haven. This would be another rather respectable use of a haven — to avoid the original intention of the exemption being frustrated by the action of the investing country!

Death, Succession, Inheritance, and Gift Taxes

127. Most full-fledged tax havens do not seek to impose any of the above taxes, but such levies are often a factor to consider in the more limited havens, where there is either an orthodox tax system with moderate tax rates which applies to everyone, or where some special more favourable regime is granted to a new settler in a country where high personal taxation prevails generally.

128. A country may have natural advantages in providing congenial living conditions for the affluent retired of other countries. It would make sense for it to offer a special regime in respect of death duties etc., since the odds are on retirees making substantial contributions in this field because their average life expectancy is so much less than that of the population as a whole. There is no sign that apart from some Swiss cantons, any country has so far implemented such an incentive, though of course "havens" such as Bahamas, Bermuda, Caymans, Isle of Man, Jersey, Guernsey, Andorra, Monaco have no death duties at all. Some countries have very low rates such as the Falkland Islands (maximum rate 10 percent).

129. One factor in favour of an attractive residential haven country instituting a special "deal" for new retiree settlers is that some revenue could then be assured, whereas it is often possible for an affluent person, coming from a more sophisticated country where he will have the advice of tax specialists, so to arrange his affairs that little death duty liability will arise in the new country. A small country with limited resources will obviously have even greater difficulty in coping with avoidance than the more industrialised, who with all their legal resources still themselves have difficulty in coping.

130. A retired person, seeking a peaceful life, with as few as possible areas of uncertainty, and knowing that "there are no pockets in shrouds" or that he cannot take his wealth with him when he dies, may be quite pleased to settle for a certain guaranteed level of tax on his remaining estate to apply when he goes into his final exile.

"VETTING" OF DEVELOPERS, PROMOTERS, BANKERS AND OTHERS

131. While it is not usual to run security checks on the ordinary routine offshore companies that are registered in their hundreds in the main tax havens, experience has shewn, even if the point was not already obvious, that much more care is needed if the concern which it is proposed to register is to go in for banking, investment trust operations, insurance or other financial matters.

132. A country newly entering the haven field would, therefore, be well advised to establish from the outset more stringent rules for the types of operation mentioned above. In addition it is a simple, but necessary precaution to prohibit the use in the title of a newly-registered ordinary company, any term such as "bank", "trust", "finance", "insurance" or the grammatical derivatives of those words, plus the translation into any other language of the words. If this is not done there is always the possibility that an unscrupulous promoter will use such words in the title of his offshore company to hoodwink investors in some far-off country.

133. Moreover, where a model set of Memoranda and Articles of Association for a company are embodied as a table or schedule in the Company Laws, it is as well to exclude activities such as banking and insurance operations from the permitted activities, which, otherwise, may be as wide as possible.

134. Where the promoters of a company are to run banking, trust, or insurance operations, it is now usual to make stringent security checks starting with asking for bankers' and other references from the applicants. In

addition reference will usually be made to organisations such as Dun & Bradstreet in the U.S. and the National Credit Bureau in Britain and other organisations which specialise in providing credit and other "credentials" (or lack of them) to enquirers. Where the promoter claims to be a barrister or member of some other professional association, lists of members may be consulted or enquiries made of the association concerned.

135. Since the Police Departments of major countries, and in particular their Fraud Sections have a keen interest in keeping informed about the activities of swindlers and fraudulent promoters who may have passed through their hands, it is mutually useful to keep in touch with such Departments, with whom it is often possible to establish rapport because of the common interest in preventing scandal and fraud, and the older tax havens have usually made such valuable contacts.

IFA INTERNATIONAL FISCAL ASSOCIATION NEWS

U.S. BRANCH

On January 14, 1977 the President of the U.S.A. Branch of I.F.A. sent a circular letter to the members containing much information which is also of interest to members of other national groups and to our readership in general. The most significant parts of the letter are reproduced below.

U.S.A. BRANCH ACTIVITIES

National meeting

For the first time, the U.S.A. Branch held a National Meeting ("U.S. Congress") in San Francisco on November 17-18, 1976. The West Coast Regional Committee, under the leadership of Harry Horrow, undertook the organization of the meeting and did an outstanding job. The calibre of the program and speakers was exceptional. By reason of competition from other meetings (particularly those dealing with the then newly enacted Tax Reform Act of 1976), the attendance (about 75) was not up to our hopes or expectations. Nonetheless, we plan to give the National meeting concept another try and have tentatively scheduled for November 3-4, 1977 in New York, to be organized by the Northeast Regional Committee under Walter O'Connor's leadership. We all owe Harry Horrow, Frank Walsh and the other members of the West Coast Regional Committee our gratitude for a magnificent effort.

Regional committee activities

All the regional committees were extremely active this past year, each one mounting its share of technical meetings on various subjects of interest to the membership. The subjects ran the range from sensitive payments to integration of corporate and shareholder taxation.

Canadian — U.S. meeting

In addition, the West Coast Regional Committee and the Canadian branch jointly sponsored an all-day session on taxation of natural resources, held in Calgary. My compliments to the regional committee chairmen for a job well done!

Speech of Dutch Undersecretary *

I might also point out that one of the programs sponsored by the Northeast Regional Committee featured as speaker Dr. Martin J. van Rooijen, the Dutch Parliamentary Undersecretary of Finance. This again demonstrates our unique position, as a constituent of the only truly international tax organization in existence, to call upon tax experts from abroad to appear at U.S.A. Branch programs. I hope in future we will take more advantage of this capability.

German — U.S. meeting

We are planning to conduct a joint meeting with the German branch in New York, April 21-22, 1977. The program is being designed under the able guidance of Paul Farber in conjunction with representatives of the German branch. The basic thrust of the program will be to exchange views and ideas on tax problems of U.S. businesses operating in Germany and German businesses operating in the U.S.A. With recent overhaul of the German tax system, the session will be extremely timely.

Functional committees

The functional committees continue to operate at full steam. With the size of our branch and the many activities undertaken, these committees are essential to our continued efficient operation. My thanks to Jim O'Brien for his able efforts in connection with the committee operations.

Tax treaty committee

I might point out that as at January 1, 1977, we have formed a new functional committee, a Tax Treaty Committee. I have asked Bob Patrick, fresh from his position as the U.S. Treasury's International Tax Counsel (where treaties were a major portion of his responsibility), to chair this new committee. As we envisage it, the major purpose of such a committee would be to provide business and professional input to Treasury in connection with their ongoing and future treaty negotiations. We believe that there is a real need for such an activity and that I.F.A. is the ideal organization to undertake it.

MEMBERSHIP

Net growth of our individual membership is relatively negligible, as new memberships virtually offset loss of memberships through attrition. We wish to continue to confine our membership to persons with a real interest in the area, but our membership among academicians and economists is relatively small and could use strengthening.

Corporate and firm sponsoring memberships continue to decline (31 at latest count). Within the next month or so, each council member whose firm is not represented among the sponsoring members will receive a letter from me requesting that he or she make a determined effort to enlist their firm as a sponsoring member. Perhaps later we will make such a solicitation from other than council members. In this endeavor, I expect to lean heavily on the Membership Committee and the regional

* See page 64.

liaison membership representatives. It is essential for our continued financial health that we substantially increase our sponsoring memberships (at $100 per annum).

Gordon Nicholson, who has chaired the Membership Committee for the last two years will be stepping down from this post. Gordon was appointed as his firm's National Director of Tax Services and will no longer be in a position to devote substantial time to I.F.A. activities. I offer our congratulations and gratitude to Gordon. Mark Cohen has graciously agreed to assume this position for the coming year.

PROCEDURAL MANUAL

I am pleased to report that the branch procedural manual, outlining the duties, functions and responsibilities of the officers, the council, the executive committee and the committee chairmen, was issued in May 1976. Although important contributions were made by many individuals, Julian Phelps spearheaded the project and deserves a vote of thanks from all of us. It is incumbent upon all of us to strive to keep the manual up to date.

FINANCES

Our financial position remains solid despite a very tight 1976, under the diligent stewardship of our Treasurer, David Bertrand. Inflationary pressures have caused Central I.F.A.'s portion of our dues to continue to increase, although our dues have not risen in several years to keep pace. With this in mind, we have been forced to consider a dues increase (to $35) for 1977. This will be discussed at the forthcoming annual meeting.

ANNUAL MEETING

The 1977 annual meeting will be held on February 11, 1977 at the Plaza Hotel in New York. David Foster, International Tax Counsel, will be our featured speaker. By now, I trust that you all have received the notice, and I hope to see many of you there.

UNITED KINGDOM BRANCH

During the coming months, the British I.F.A. Branch will hold a number of meetings on subjects of topical interest.

Development Land Tax is the subject of a meeting to be held on March 9. Topical Tax Questions will be discussed on March 30. On March 31 and April 1, the second Anglo-Swiss Tax Seminar will be held in London.

CANADIAN BRANCH

The next meeting of the Canadian Branch of I.F.A. will be held on April 1, 1977 in Toronto. A summary of the proposed agenda which is entirely devoted to the interpretation of tax treaties, follows:

Morning sessions

— General principles of interpretation (speaker: Mr. David A. Ward).

— Definitions: residence of individuals and corporations, enterprises and permanent establishments (speaker: Mr. Geatan Drolet).

Luncheon Speaker

Mr. Gerard Coulombe on "The work of the Fiscal Committee of the O.E.C.D."

Afternoon sessions

— Gains on alienation of property (speaker will be indicated later).

— Property income (speaker will be indicated later).

JOINT BRANCH MEETINGS

In addition to local activities, several branches of I.F.A. have organised in the past and are to organise in the future joint seminars with other branches.

In recent years, inter alia the following meetings were held:

Anglo-Dutch Seminars, in Amsterdam and London

Anglo-German Seminars, in Hamburg and London

Anglo-Belgian Seminars, in Brussels and London

Benelux Tax Seminars, in Luxembourg and Amsterdam

The following meetings are scheduled in 1977:

Second Anglo-Swiss Seminar, London, March 31/April 1

U.S. German Tax Seminar, New York, April 21-22 (dealing with the taxation of businesses in the U.S.A. and Germany).

NIGERIA

The Employment Implications of the 1976/77 Federal Government Budget: A Comment.

by F. Akin Olaloku *

I. Introduction

The Federal Government budget for the fiscal year 1976/77 completely conforms to the now familiar pattern of the post-civil war budgets, with the battle against inflation being the most important single feature. Once more, the nation has been treated to the same barrage of measures (as in past years) all aimed at increasing the supply of essential goods and services (food, housing and transportation), which have been identified as the most important cause of the current inflation in the economy.

In encouraging the increased supply of the above essential goods and services, the specific fiscal measures adopted include considerable reduction in the cost of their inputs. For example, import duties on all categories of machinery for food production have been abolished, while the duties on a wide range of imported food items as well as excise duties on certain locally processed foods have been reduced to the barest minimum. In addition to these, the government has also slashed and in some cases maintained the existing policy of outright abolition of duties on imported raw materials with the aim of aiding the increased output of some locally based industries. In this connection, attention has been focused particularly on imported raw materials for the building and construction industry such as cement and iron rods as well as for some consumer goods industries like textiles, foot wear, electronics and household utensils. In order to increase the supply of transportation facilities and thus aid an easier and freer flow of goods and people, the Government, in addition to liberalizing the importation of medium-sized cars, has also brought down the import duties on some categories of commercial vehicles and their spare parts. Finally, one further fiscal measure adopted by the Government to curb the current inflation in the economy is the restriction placed on the rate of government spending. This measure is particularly significant in the sense that the rapid rate of public spending which has characterised the last few years has constituted an important factor in the inflationary pressures being presently experienced in the economy.

Year after year since the civil war, or more specifically, at least since 1972, the Federal Government has adopted specific anti-inflationary measures directed at solving the problem of supply shortages in the economy. But in retrospect, the inflationary situation against which this solution is ultimately directed, has worsened from year to year. This inability on the part of the Government to grapple very effectively with the problem of inflation is either due to the failure to diagnose the problem correctly or the failure to adopt real and effective measures. But to my mind, with the existing flood of evidence about the causes of inflation in the Nigerian economy, it appears that the Government's difficulties are more related to the latter factor.

The problem of inflation is a world-wide phenomenon and in an increasingly economically interdependent world, finding solutions to the problem is a formidable task. This fact is attested to by the current experience in other countries of the world. It may therefore appear to be asking the Federal Government too much to provide a final solution to the problem all at a go. But certainly, the measure of achievement so far, leaves very much to be desired, considering the fact that the war against inflation has raged continuously for about five years. Although the present budget appears to be more articulate in its emphasis on the problem, the degree of achievement will greatly depend on the effectiveness with which the announced measures are pursued.

II. Level of Employment

In this comment, I am less concerned with the analysis of the likely impact of the fiscal measures on the task of decelerating the rate of inflation, but rather more with the implications of the budget for another economic policy objective, namely, the level of employment. In other words, I am trying to examine the extent to which the measures announced in the budget will provide increased scope for the creation of more job opportunities.

The world-wide problem of inflation has unfortunately and inevitably become coupled with another problem which has arisen mainly from the conflict of the objectives of maintaining stable price levels (i.e. controlling inflation within acceptable bounds) on the one hand, and full employment on the other. This development has created another dimension to the task of finding solutions to the inflation problem in the sense that policy makers have had to operate policy instruments for controlling inflation under the big constraint that unemployment must be maintained at an acceptably prescribed level. Thus, by and large, in almost, if not all the developed countries, the militant fight against inflation has taken place against the background of the possibility of unacceptably high rates of unemployment,

* Senior Lecturer, Department of Economics, University of Lagos.

with the result that achievements about the control of inflation have been very limited. This indicates a dilemma between the two policy objectives — a dilemma that can only be resolved by a trade-off of one policy objective (low rate of inflation) for the other (high rate of unemployment).

According to economic theory, prices and wages are negatively related to the rate of unemployment. Thus, rising wages and prices are usually accompanied by very low rates of unemployment. But in practice, the experience in many countries, not the least in the developing countries, has been different: high rates of unemployment have co-existed with high rates of inflation, thereby leading to a worsening of the trade-off between the two and making much more difficult a reasonably acceptable simultaneous achievement of the twin objectives.

III. Inflation and Unemployment

The current inflationary situation in the Nigerian economy can be described to have reached the crisis proportion and hence, the government's great concern to do something about it. But in the absence of any reliable figure of its rate, one cannot as yet say the same about the situation with unemployment, although according to the records in the Federal Ministry of Labour's register, its level has risen considerably since the civil war. Given this fact, it will appear that the inflation — unemployment dilemma is not yet as critical in Nigeria as in the developed countries. But this does not mean that the Government should lose complete sight of the unemployment problem. Looking over the Federal Government budgets for the last couple of years, there is ample evidence to support the view that unemployment has not been recognised as a serious issue of government economic policy. Despite the Government's explicit expression of a definite commitment in its development plans to reduce the level of unemployment, nowhere in any of the budgets of the past few years was it emphasised explicitly as an objective of economic policy, towards the achievement of which fiscal measures are specifically directed. However, a good many of the fiscal measures adopted in these past few years, while heavily anti-inflationary in their purpose and direction, have had implications for the level of employment in the economy one way or the other, especially to the extent that such measures affect the production process in the various industries concerned. The measures adopted in the present budget are no exceptions to this trend.

Many of the anti-inflationary measures in the present budget, especially those that aim at increasing the supply of certain essential goods and services the shortages of which have occasioned rising prices, have implications for employment. For example, the shortages of three most essential goods and services have been identified as the major cause of the present inflationary pressure in the economy. These are food, housing and transportation. Government measures to bring down inflation are therefore directed towards increasing very substantially the supply of these goods and services. Some of these measures would exert short-run effects while the effects of some others are of a long-term nature. While the former category consists of those measures aimed at easing imports, particularly of certain food items in order to supplement domestic supply, in the latter category are measures designed to increase the level of output in those industries producing the essential goods and services which are in short supply.

In terms of their implications for employment, the long-term measures which are designed to exert direct impact on the level of domestic output of the goods and services in short supply is of greater relevance. All things being equal, the considerable encouragement which the output of food will receive from the measures for implementing the government's programme of "operation feed the nation" is likely to increase employment opportunities not only in agriculture, but also in all food processing and food-related industries, although the extent of employment generation will depend on the capital/labour ratios or factor-intensities in the relevant industries. This becomes particularly significant considering the fact that one of the important measures for encouraging the production of food is the complete abolition of import duty on all types of machinery used for food production. If anything, this measure, by making the employment of capital relatively cheaper than that of labour, is likely to encourage the substitution of the former for the latter, with a consequent adverse effect on the level of employment. One would also tend to think that the measure to protect some domestic industries by the imposition of import quotas as well as an outright ban on imports in certain cases, by encouraging expansion in domestic industries, should have the effect of creating more job opportunities. But again, the extent to which this will happen, will depend on the rate of labour utilization in the industries concerned.

The measure to increase the target of the government housing programme from 60,000 to 200,000 units during the current plan period should result in a considerable expansion in the construction industry as well as in all construction-related industries. Furthermore, the

TAXATION IN NIGERIA

Nigeria currently consists of nineteen states which to a certain extent have their own tax systems. However, most individuals and companies are subject to a uniform income tax. Customs duties are also uniform throughout the country.

Individual Income Tax: rates range from 10-50% (on incomes over ₦ 30,000).

Company Tax : 40% on all income exceeding ₦ 6,000.

A summary description of the Nigerian tax system is to be found in *African Tax Systems*, a loose-leaf publication of the International Bureau of Fiscal Documentation.

Government's decision to rely as much as possible on the use of building materials locally produced for the implementation of its relatively gigantic housing programme should provide an added boost to the level of output and thus to the level of employment in the industries specializing in the production of building materials. These industries are quite wide-ranging and they include quarrying, wood, glass, metal, asbestos, cement, brick ceramics and paint among others.

The effect on the level of employment of the resulting expansion of the level of economic activity in the above industries will, as we noted before, depend on their labour absorptive capacity. For example construction itself in this country has become, by and large, a relatively capital-intensive industry, with the result that any expansion in the industry can at best have a marginal effect on the level of employment. On the other hand, the induced expansion in the construction-related industries is likely to produce more positive results with respect to the level of employment, given the fact that these other industries are relatively much less capital-intensive.

Finally, there are some other measures in the present budget which are not limited to particular industries, but have some implications for the overall level of employment in the economy. One such measure is the introduction of a new interest rate structure designed to implement the Government's policy of the discriminatory treatment of investment in the private sector of the economy. For example, the decision to make relatively cheaper credit available to stimulate investment in the productive sectors of the economy should also stimulate employment in these sectors. But again, as in the many other cases already considered above, the ultimate result will depend on the nature and condition of technology in the relevant sectors.

IV. Conclusion

In conclusion, although the measures in the 1976/77 Federal Government Budget, like the measures in the budgets of the past few years, are mainly and specifically directed towards the solution of the acute inflation in the Nigerian economy, they have some implications for the level of employment in the economy. A good many of the measures that aim at easing supply shortages in the economy by increasing the level of output should also increase the level of employment. Also, measures that are designed to encourage private investment in certain sectors of the economy should exert similar effects. On the face of it, however, the effects on employment will ultimately depend on the labour absorptive capacity in the industries or sectors of the economy where the Government measures are likely to lead to expansion in the level of economic activity.

While the severity of the inflation now being experienced in the economy has certainly made its control economic policy objective "number one", the Government in its pursuit of this objective should be careful not to sacrifice the other objectives of economic policy, especially the employment objective. Thus, in adopting specific measures for the control of inflation in future budgets, the Government is urged not to lose sight of their implications for other economic policy objectives. Additionally, for more positive results, measures specifically designed to reduce the level of unemployment should also be adopted in future budgets.

BUDGETARY PROCEDURE

The normal budgetary procedure in Nigeria is that proposals are first discussed in the highest policy making body, i.e. the Supreme Military Council. After approval by this body they are announced over the radio and television by the Head of State. Subsequently the Commissioner for Finance gives a greater detail and a further breakdown of the announced measures, usually at a press conference. So far as the measures of the 1976-77 Budget are concerned they became effective on April 1, 1976. The Budget measures are usually later formally enacted in an Appropriation Decree.

The Nigerian Budget 1976/77*

On March 31, 1976 His Excellency Lieutenant General Olusegun Obasanjo, Head of the Federal Military Government of the Federal Republic of Nigeria outlined the government's budget proposals of the fiscal year 1976-77 in the annual Budget Speech. This was later followed by a press statement on the budget, delivered by the Federal Commissioner for Finance, which went into considerably more detail as to the measures proposed in the budget itself. Extracts of this statement — being mainly the highlights relating to fiscal matters — are shown here below.

The Commissioner first outlined the objectives to be attained by the budgetary measures as follows:

(i) increase of food production and supply;
(ii) establishment of new industries particularly in rural areas in line with Government policy of industrial dispersal;
(iii) construction of more houses;
(iv) containing and then reducing the existing high price levels, and the expansion of local plant capacities to produce more manufactured goods;
(v) the decongestion of the ports in order to speed up the inflow of essential goods and commodities;
(vi) continued protection of local industries;
(vii) reasonable importation of essential commodities to make up for shortfalls in local production and as a check against continued inflation.

He also pointed out that the Government was aware that artificial shortages are often created by manufacturers and trade associations so as to push up prices. Government is, therefore, taking measures during fiscal 1976-77 to counter such manoeuvres.

The main fiscal proposals deemed necessary in the light of the above then followed viz.:

* Extracts are reproduced from Recurrent and Capital Estimates of the Government of the Federal Republic of Nigeria 1976-77 published by Federal Ministry of Information Printing Division, Lagos.

Agriculture

In addition to the existing duty free importation of agricultural machinery for soil preparation, import duty has also been abolished for all types of machinery imported for food production. Import duties on food items have been considerably reduced. The duty on groundnut oil, cotton seed oil, and all cooking oils, is reduced from 33 1/3 percent to 20 percent; sardines from 10 percent to 5 percent; the duty on stockfish has been abolished; while that on groundnut for local processing has also been abolished but placed under approved user schemes to check possible abuses. Duty has also been abolished for local processors of baby food, while other forms of baby foods import duty has been reduced to 5 percent.

Transportation has direct influence on the cost of food. The steep increase in the cost of imported vehicles and spare parts has raised transportation cost. In order to reduce this or at least keep it at its current level import duties on trucks and lorries have been reduced from 15 percent to 10 percent; while duties on motor spare parts have been reduced from 33 1/3 percent to 10 percent. Furthermore, special purpose motor lorries and vans are now to be dutied at 15 percent instead of 33 1/3 percent while the import duty on river craft has been reduced from 50 percent to 33 1/3 percent. Import duty on tyres for trucks has also been reduced from 55k to 35k per kilogram.

Building Industry

The abolition of import duty on cement has been maintained while import duty on semi-finished iron rods has been reduced from 15 to 10 percent. The duty on glass which is an important material in building industry has also been reduced from 33 1/3 to 20 percent. A new Tariff item for plastic ceiling tiles has been introduced, and the duty reduced from 66 2/3 to 33 1/3 percent. Import duty on raw materials for pipe manufacturing has been abolished, while the duty on pozzolana has been reduced from 33 1/3 percent to 10 percent.

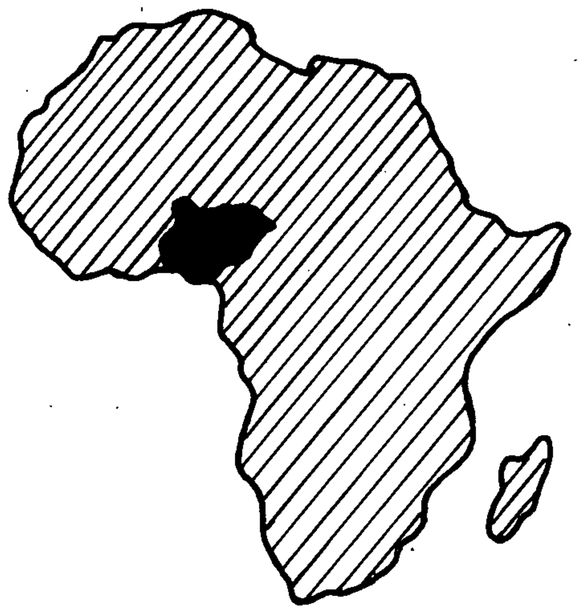
In addition, the Federal Government, in order to encourage more housing constructions has decided to give special assistance to housing estates built by companies or organisations provided Government or local authority will be involved in the fixing of rents to be charged. The types of assistance to be given include: enhanced capital allowance of a total of 30 percent in the first year and 10 percent annual allowance thereafter will be given on expenditure relating to construction of Housing Estates. To qualify for these benefits, an estate must contain at least 50 housing units.

Other Local Industries

As a further assistance to local manufacturers, duty on a wide range of imported raw materials has been considerably reduced in favour of the following:

(a) *Textile Industry*
Import duty on dyeing chemicals has been reduced from 10 to 5 percent.

(b) *Car Assembly*
The local car assemblies will continue to enjoy the protection accorded them through quota restriction on the importation of the range of cars assembled locally. However, because Nigerian assembly plants cannot as yet fill the gap in the supply of these classes of cars, there will be an increase in the quota of the small and medium size cars that will be imported in fiscal 1976-77. The Federal Commissioner for Trade will announce the new quotas. The permissible quotas will decline as the capacities of assembly plants increase.



(c) *Footwear Industry*
The duty on the various categories of imported material for the manufacture of footwear has been reduced from 66 2/3 percent to 20 percent.

(d) Exemption from duties on imported raw materials has also been granted to the electronics, metal fabrication and kitchen utensils and equipments manufacturing industries.

Import Prohibition

The present policy of unrestricted imports has contributed immensely to the congestion at our ports and consequently the inflationary pressure. While effort is continuing to decongest Nigerian ports there is need to hold off the importation of certain goods which would only add to the problems at the ports. Accordingly the importation of a number of commodities which can either be easily produced locally or already have local substitutes or are in ships at the ports and on the high sea in large quantities have been banned for six months with effect from today. Government is aware that for most of the items banned there are sufficient stocks at Nigerian ports to last for the duration of the ban. No undue hardship on the public is anticipated. Some items have been placed under licence. The items banned or placed on licence are contained in the Import Prohibition Amendment Order.

The prohibition of the importation of these commodities will also make it possible for local industries producing similar goods to expand and increase their profit margins. In the light of the prohibitions, the Government has decided to reintroduce

excise duties ranging generally from 2 to 5 percent on these goods. At this juncture the need is stressed for all local manufacturers to normalize their relations with the Department of Customs and Excise by paying the excise taxes.

Other Fiscal Measures

(i) *Company Tax*
Under the existing law, the first ₦ 6,000 profit made by any company is exempted from tax while any profit in excess of this amount is taxed at a flat rate of 40 percent. It has now been decided to revert to the pre-1975-76 Budget rate of 45 percent. However, the first ₦ 6,000 profit made by any company still remains tax-free.

(ii) *Claim for Losses*
Under Decree No. 47 of 1972, companies can claim a deduction for losses which they have sustained in any trade or business during any preceding year of assessment in respect of income tax. There is no limit to the number of years that this can be done, with the result that some companies have taken it upon themselves to keep on accumulating so-called losses over the years. Henceforth the period for the carry forward of unabsorbed losses will be limited to 4 years. After such period any unabsorbed losses will lapse.

(iii) *Capital Gains Tax Act, etc.*
It is common knowledge that properties, assets, etc. have changed hands in recent years yet no appreciable revenue has accrued to the Federal Government as a result of the Capital Gains Tax Decree, mainly because necessary information, etc. does not come through when properties change hands with handsome capital gains therefrom. It has therefore become necessary to amend section 44 of the Capital Gains Tax Decree to make it obligatory for the Commissioner of Stamp Duties to demand tax clearance certificates when checking documents on sale by companies of properties and other assets before the

documents are accepted for stamping and registration. This will ensure that the Federal Board of Inland Revenue has the opportunity of collecting revenue from capital gains tax during the process of the assets changing hands from the vendor to the purchaser. The transaction will only be finalised after this has been done. Tax clearance certificates will also be obtained before change of title or ownership of assets or properties is made by the Registrar of Lands.

Exchange Control Measures

In connection with exchange control the Commissioner made the following comments relating to management, technical and royalty fees:

"The present policy of allowing a fixed fee only in the first five years of establishment and thereafter a percentage of gross profit for deserving cases will continue. Fees based on turnover or net sales will however apply to royalties only. In the present economic situation when the speed of development could render management techniques, licences and patent rights obsolete under five years, it is necessary to review the whole policy. This will be done after proper consultation in the interest of all parties. Other factors to be taken into account are the state of technology of the industry concerned, research and development efforts and the speed of transfer of technology and know-how to Nigeria."

Before ending his statement the Commissioner issued a warning to the business community to co-operate in holding down and reducing prices and outlined the measures which he would be obliged to take in the case of non-co-operation:

"Ladies and gentlemen, I suspect the question uppermost in your minds, as almost in the mind of every Nigerian is how the fiscal measures will benefit the common people of this country. The doubt is justified from past ineffectiveness of similar measures. I want to assure you that this Administration is very much concerned with this problem. The fact is that the Government gives, but some other interest groups take it away and keep it for themselves. In fact prices are raised on the very goods for which duties and excise taxes are reduced by Government. However, this Administration is determined to see that those who control the supply of goods and services pass on these concessions to the consumers. For this purpose, I wish to take this opportunity to inform the public that this Government does not have set dates for changes in fiscal measures. We shall keep a very watchful eye on price movements. Our company income tax measures will be reviewed on a continuing basis. We shall impose retroactive excess profit tax in step with the rate of price increases. If the general price level should rise 20 percent, that would be the tax rate. If it should rise by 60 percent, excess profit tax for the year of this price rise would also be 60 percent. We will also adopt other measures in our arsenal to make unearned profit very unprofitable. It is my personal hope that the business community will co-operate to hold down and reduce prices so that Government will not be compelled to take such measures."

WHAT TO EXPECT IN THE MARCH ISSUE

The U.S. Tax reform Act of 1976: Congress chases the foreign dollar (Part II)
(see table of contents at page 63)

by James H. Dobson and Virginia M. Tarris

The recent fiscal situation in Japan

PRENTICE~HALL,INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

Prentice Hall Announces:

The most strikingly different new tax guide ever published for taxpayers with income from foreign sources.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Continuously Supplemented. . . . . Always Up - to - Date

This outstanding new Service is created specifically to help save money for:

U.S. INDIVIDUALS
with investments and/or earned income from a foreign source

U.S. CORPORATIONS
with income from foreign sources

FOREIGN CORPORATIONS
with income earned or taxable in the U.S.

NONRESIDENT ALIENS
receiving income from, or taxable in the U.S.

If you fit any of these categories — or if you counsel, advise, or in any way service any of these categories — U.S. TAXATION OF INTERNATIONAL OPERATIONS will be an invaluable new tool for you.

It will deliver management benefits — operations benefits — tax benefits.

In clear, direct language, backed up by practical, tested practices of acknowledged experts in international business operations, the new work spells out how the taxpayer can best take full advantage of every popular, every sophisticated, and every little-known tax-saving device.

Authoritative, specific guidance from one source devoted exclusively to this kind of vital help has been non-existent — until now.
With the first 1972 publication of the innovative U.S. TAXATION OF INTERNATIONAL OPERATIONS this important need is now fulfilled. And bi-weekly "Report Bulletins" will keep the guide as new and up to the minute as the day you receive it.

Personal response to this new publication has been even more enthusiastic than our most optimistic projections. Subscriptions are now being accepted by mail for $ 186 a year.

Address your request to Dept. S-RR-103, Prentice-Hall Inc., Englewood Cliffs, N.J. 07632 and specify U.S. TAXATION OF INTERNATIONAL OPERATIONS, 1-year introductory charter subscription.

Annual payment is not due until 20 days after receipt of the new, ready-for-reference volume.

THE ISRAELI EXPERIENCE OF USING THE TACHSHIV FOR ESTIMATING THE TAXABLE INCOME.

by Prof. Arye Lapidoth*

Modelled on British law, the Israeli Income Tax ordinance originally presupposed the keeping of books of account by all "self employed" taxpayers, although there was no express statutory obligation to keep books. Following the British practice, each tax return was supposed to be audited and an assessment made of the actual taxable income. Where no account books were kept, or where those kept were found inadequate, the taxpayer's income was assessed "to the best of the Inspector's judgment". The "best judgment assessments" were meant to be made in exceptional cases.

However, since its establishment, in 1948, Israel has encountered widespread non-compliance, and the tax administration has been confronted with great difficulties in attempting to determine and tax the actual income of the "self employed" taxpayers. It has therefore experimented various methods of estimating income; at the same time the declared policy has always been that of encouraging bookkeeping.

This article deals with the tachshiv, *which is a peculiar method of estimating income experimented by the Israel tax system.* Tachshiv *(plural* tachshivim*) is a modern Hebrew word. It has been translated by A. Morag as "standard calculation charts".* [1] *Wilkenfeld has used the term "standard assessment guides".* [2] *In the English translation of Sharef's Report, the* tachshivim *are referred to as "standard estimates".* [3] *One may also describe the* tachshiv *as "economic directions". The basic idea of* tachshiv *is to provide the inspector who must estimate the taxable income derived from a certain source of income "to the best of his judgment" with useful tools which will help him better arrive at the taxpayer's income, in the absence of comprehensive, reliable information, such as that provided by proper bookkeeping.*

General Concept of the Tachshiv

The *tachshiv* normally contains a general economic survey of the trade, business or profession dealt with for a given tax year. The *tachshiv* further gives a general idea of the nature of the economic activity involved. It then attempts to sort out the factors, obtainable from independent reliable source of information, which could be used as indicators of the profit. Once those indicative factors are ascertained the inspector is shown how to use them to compute the taxable income. For example, a *tachshiv* for ice production would be based on the annual amount of water consumption by the taxpayer. Given that the amount of water consumed by the ice factory may be obtained from the water bills paid by the taxpayer, the inspector may get an idea of the amount of ice produced. If the inspector is further provided with data concerning ice prices and the average rates of either gross or net profits, he may pursue to estimate the profits of the taxpayer with reasonable approximation.

A *tachshiv* may also be used as a supplement to incomplete bookkeeping. Thus, where the Israeli *kibbutzim* do maintain bookkeeping but do not differentiate between deductible revenue expenses and expenses for capital purposes or domestic use, which are not deductible, a *tachshiv* is prepared which specifies the normal operational and maintenance costs of the various branches; the amount of these costs is allowed as a deductible expenditure. [4]

The actual application of the *tachshiv* to the assessment of the taxable income of a *kibbutz* has not been challenged in any reported case.

The *tachshivim* are prepared and constantly brought up to date by the economists of the Revenue Administration. The economists base the various types of *tachshivim* on economic studies and research aiming at finding simple factors, such as consumption of water or electricity, the type of machinery used by taxpayer, the number of employees and the location of the business. Preference is given to "factors" that can be used, without too complicated calculations, to arrive at a fairly close estimation of the taxpayer's profit. The "factors" should further be of such a nature that the information about them can be ascertained by the Assessing Officer with reasonable accuracy. A good *tachshiv* should have more than one indication of income. The *tachshiv* is not rigid; it is flexible enough to make it adjustable to the special circumstances of the taxpayer to whom it is applied.

A further feature of the *tachshiv* is that before it is issued it is, as a rule, negotiated with the various representatives of the various groups of taxpayers in an attempt to reach an "agreed *tachshiv*". Where no agreement is reached, the *tachshiv* would nevertheless be issued as an "unagreed *tachshiv*". Both agreed and unagreed *tachshivim* are accessible to the public. It should further be mentioned that the economists who prepare the *tachshiv* use, among other sources of information, data obtained from a taxpayer in the same line of business who happened to maintain proper bookkeeping.

The taxable income under a *tachshiv* is commonly determined in the following three stages:

1. The Assessing Officer is first guided as to how to estimate the taxpayer's total amount of trading receipts, sometimes also referred to as "the turnover" of the business.
2. The next stage is to determine the "gross rate of profit", thus arriving at the taxpayer's "gross profit".

> It should be noted that the estimated "gross profit" contemplated by the *tachshiv* does not, as a rule, take into account any estimated labour expenses. Since the payment of employment income is subject to withholding of tax under the Pay-As-You-Earn basis, the *tachshiv* normally allows only for de-

---

duction of the *actual* labor expenses incurred by the taxpayer. The taxpayer must prove those expenses by producing the documents relating to the tax which he deducted at source from payments which he made to his employees.

3. The third stage is that of determining the "net profit". This is done by further allowing the taxpayer to deduct certain expenses, specified by the *tachshiv*, provided that he can support the claimed expenses by proper receipts. The expenses specified by the *tachshiv* include items such as property tax, municipal business rate, rent, water and electricity bills.

In certain types of business the turnover can be fairly accurately ascertained. For example, it is fairly easy to ascertain the turnover of taxpayers who distribute, at a fixed price, a product which is supplied by a well known supplier. A *tachshiv* made for such types of business is mainly concerned with estimation of the deductible expenses. The expenses may be estimated at a fixed percentage of the turnover. *Tachshivim* of this type, also referred to as "*tachshiv* of expenses", have been prepared, for example, for distributors of dairy products supplied by leading producers. As has been shown, the *tachshiv* prepared for the *kibbutzim* also has the nature of a "*tachshiv* of expenses".
A variation of the same method may be the determination of a fixed gross profit presumably derived by the taxpayer. Thus the *tachshiv* for butchers presumes a fixed profit for each pound of meat.
In fact, the first *tachshivim*, which were prepared for farm and plantation income, were "*tachshivim* expenses". For example, citrus, which is one of the main exports of Israel, is exported as well as sold within the country through the Citrus Marketing Board, which is a body corporate constituted by a special statute enacted to regulate the export and marketing of citrus. Hence, the Revenue is in a position to get a reasonably accurate information about the gross income received by the owner of the plantation for his products. The *tachshiv* for citrus plantations was mainly aimed at estimating the average expenses and expenditures incurred by the taxpayer in growing the fruit, thus enabling the Assessing Officer to estimate the taxable income. Similar "*tachshivim* of expenses" were prepared for other farm products which are marketed through marketing boards which maintain sophisticated books of account.

The *tachshiv* for citrus plantations, like indeed other *tachshivim*, does not as a rule contemplate any loss. However, a taxpayer who claims to have sustained a loss is not precluded from claiming such a loss, provided he can support his claim by proper books and records.

Where the turnover cannot readily be ascertained, the main problem of the *tachshiv* is to determine the factors from which the turnover may be deducted. Here are some illustrations of such factors as have been used by various *tachshivim*.

The number of employees and the location of the business are the main indicators of the turnover of businesses such as groceries, restaurants, barber shops and cafés.
In a *tachshiv* for a business such as a carpenter's workshop or a garage, account is also taken of the skill of the workers. In certain types of business, such as sub-contractors employed by builders, the number of employees in itself cannot be reasonably indicative of the estimated profits. Hence, the Assessing Officer is urged by the *tachshiv* to look for more relevant information.
Another major indicator of income is the type of equipment used by the taxpayer. That indicator is used, for example, by *tachshivim* prepared for the taxation of truck drivers and taxi drivers.
The *tachshiv* may be based on both the equipment and the number of employees as, for example, the *tachshiv* for printing houses.
Where the goods sold are subject to sales tax, the amount of sales tax paid by the taxpayer may be indicative of the taxpayer's turnover. Such a factor is used, for example, for jewellers.

In theory, the *tachshivim* should not be used for the estimation of some kind of average income in lieu of the actual income. They should rather be used as a useful economic guide for the Assessing Officer, who is bound, lacking more accurate data, to assess the actual taxable income of the taxpayer "to the best of his judgment". However, the Assessing Officers soon realized that if they departed from the directions of a *tachshiv* they would be in an awkward position: although in principle the onus of proof lies with the taxpayer to show that an assessment is excessive, in fact the Assessing Officers must show grounds for their deviation from the *tachshiv*, in order to rebut an allegation of arbitrariness. Consequently, the Assessing Officers would normally follow the *tachshiv* and assess the taxpayers accordingly.

As a result, rather than making "best judgment" assessments of the actual income, the Assessing Officers in effect taxed the taxpayer's estimated income, computed on the basis of averages. Thus, although legally the *tachshivim* were never regarded as substitutes for assessments of the real taxable income, in practice that is what they amounted to.

Arguments pro and contra the Tachshiv

One of the main criticisms of the *tachshiv* is that its use has the effect, not of taxing income, but of taxing the various factors which are indicative of the taxable income according to the *tachshiv*.
For example, if the number of employees of a grocery is indicative of the grocery's turnover, then the assessed tax will assume the nature of an employment tax.

It is further argued that the extensive use of the *tachshiv* may also lead to schemes of tax evasion and tax avoidance. One form of circumventing the *tachshiv* may be that of managing the business in such a way as to be in a more favorable position from the *tachshiv* point of view. Such arrangements may range from schemes which may be regarded as tax avoidance to schemes of evasion in which actual cheating is involved. Some of such schemes may also result in a distortion of the normal economic behavior.

For example, when the *tachshiv* for groceries used to be based largely on the number of customers officially attached to the grocery to get their rations of food, shopkeepers would prefer to open "delicatessen shops", to which only few customers were officially attached. Other examples include the reluctance of taxpayers to replace their machinery when the model and year of production of the machinery was an indicator of income under the *tachshiv*. In some cases, taxpayers tried to get around the *tachshiv* by giving false information about factors which were relevant to the computation of taxable income according to the *tachshiv*. Thus an ice factory whose production and, consequently, the taxable income was determined in accordance with the consumption of water, would try to get part of the water from a secret, disguised source of supply.

Similarly, a workshop might get some of its electricity in a disguised form, in order to artificially reduce the amount of electrical consumption which would be indicative of machine work carried out in the workshop. A fairly typical device for decreasing an estimated assessment based on a *tachshiv*, which takes into consideration the number of employees, is to reduce the number of employees either genuinely, in which case the device might assume the nature of tax avoidance, or by fraudulent failure to report some of the employees, which scheme amounts to tax evasion.

Those who defend the *tachshiv* point of that a good *tachshiv* is not based on o single "indication" of income. Efforts a made to construct the *tachshiv* on mo than one "indication", thus reducing t room for tax avoidance, as well as reta ing the nature of a tax on income, which good *tachshiv* should have.

[Continued at page 102]

The 'tachshiv' in other countries.

A fair distribution of the tax burden among taxpayers presupposes a correct application of a country's tax laws. However, this will only be possible if the taxpayers are able to declare their taxable income in the prescribed manner. In practice, it appears that in particular small businessmen, farmers, traders etc. who have received little training in this field are not equipped to meet the obligations which the law imposes. This problem is encountered not only in Israel but in other countries as well and many of them have resorted to solutions in which the taxpayer's income is determined in relation to certain criteria which are easily ascertained such as the surface area of an agricultural enterprise, the raw material purchased, the gross receipts etc.

For comparison the Editors have selected a number of European countries in which legal provisions exist which allow the tax administration and the taxpayers to agree on a certain lump sum income tax assessment.

Belgium

Article 248 of the Belgian Income Tax Code authorizes the Belgian tax administration to estimate the income of a taxpayer if he fails to submit sufficient proof as to the correctness of his tax return. In such a case the tax administration will compare the taxpayer's income with that of three other taxpayers which are in approximately the same financial position and it will take into account the capital invested, the turnover, the number of employees, the power used, the annual rental value of the land exploited etc. The tax administration is also authorized to negotiate with taxpayers which belong to the same business group the basis on which a lump sum assessment will be made. If an agreement is reached such agreement will be valid for three consecutive assessment years. The agreements usually provide that no lump sum assessment will be made (i) if the taxpayer keeps proper financial records or if he is in a position to prove the amount of his income and (ii) if the tax administration can prove that the taxpayer's real income is substantially higher than the income which would be computed under the lump sum procedure. The lump sum tax assessment usually relates to a number of physical facts which are inherent to the business, such as the quantities of flour, butter and sugar used by a bakery, the quantities of alcoholic beverages purchased and the prices charged by cafes, the weight of meat purchased by butchers etc.

Germany

Section 13a of the Individual Income Tax Act provides for lump sum assessment of agricultural and mixed agricultural and forestry enterprises which are not obliged to keep regular accounts. Lump sum assessment is made annually and it is the sum of a basis amount, the value of work of the entrepreneur and his family, the rentals received, a certain amount representing the annual rental value of the residence of the entrepreneur and certain additional amounts. The basis amount (Grundbetrag) equals one-twelfth of the "Ausgangswert" which is the sum of the estimated values of the land used by the entrepreneur.

France

In France various lump sum assessment systems exist for taxpayers who carry on business, agricultural or professional activities.

Small businesses which are carried on by individuals may benefit from lump sum assessment if their turnover does not exceed 500,000 Fr.Frs. in case of trading or hotel business and 150,000 Fr.Frs. in all other cases (mainly the rendering of services). The main purpose of lump sum assessment in this case is to determine the income which the business would normally produce thus eliminating exceptional profits or losses. Criteria which may be used are the quality of the technical equipment, the number of clients, local conditions and the personal qualifications and qualities of the taxpayer. The lump sum assessment is determined for a period of two years at the end of the first year.

Lump sum assessment for agriculture is available to those taxpayers whose receipts do not exceed 500,000 Fr.Frs. per year. The assessment is collectively determined per region and it is based on the average yield per hectare (2.47 acres) by the Commission départementale des impôts. In some cases also other criteria are used such as the number of animals or of fruit trees, the quantity of grapes harvested etc. In case of calamities such as flood, hail storms, frost etc. the taxpayer may request a reduction of the taxable base. Special rules exist for forestry exploitation whose income is deemed to equal the so-called "cadastral income" for purposes of the land tax. Lump sum tax assessment is also accorded to taxpayers who derived income from so-called non-commercial activities such as professions and other activities which are neither a business nor an employment, provided that their annual receipts do not exceed 175,000 Fr.Frs. The tax assessment is based on taxpayer's gross receipts, the number of his employees and the salaries paid as well as fees paid to third persons.

Spain

Certain taxpayers may benefit from lump sum tax assessment under the so-called "Estimación objectiva" system in which case they are not subject to tax on their real income but are taxed on an income which is attributed to them. For this purpose a committee ("Junta") is set up with representatives of the Ministry of Finance and taxpayers as members. The Committee determines the total profit made within a year of all enterprises within a certain district which are engaged in similar activities. The total profit is then allocated to each individual enterprise. Factors which influence the allocation are gross sales proceeds, the quantity of raw materials used, social charges paid etc. Certain industrial enterprises and enterprises whose capital or turnover exceeds a certain amount are excluded from benefiting from lump sum taxation.

An argument against the tachshiv is that, being based on averages, it may tend to be more favorable for the more efficient taxpayer and less favorable for the less successful. Whereas it may not necessarily be wrong, from an economics point of view, to discourage the less efficient enterprises by taxing them more heavily, clearly it is not equitable and violates the common notion of a just tax which is imposed on the principle of the ability to pay. Admittedly, the principle of the ability to pay is by no means universally accepted as a guide for equity in taxes. However, if the Revenue wishes to adopt a tax policy which encourages the more efficient, such objective should be made clear, so that full consideration should be given to the question of which type of economic activity is to be encouraged, rather than being an obscure, unmeasured consequence of the use of *tachshiv*.

The taxation of the average income may also have the effect of mitigating the progression of income tax rates. A taxpayer who files a return of his actual income will normally report less income in the first five years of his business and more income when the business has developed. He will thus reach a higher income bracket when his profits grow. On the other hand, the taxation of average income will normally not take full account of the development of the business. Hence, the taxpayer's income may be overestimated in the first years and under-estimated in a later period. The effect may thus be a spreading of income over time, which commonly results in paying less tax.

On the other hand, assessments based on averages do not as a rule recognize losses, unless the taxpayer keeps books of account.

Another criticism of the *tachshiv* relates to the "negotiated *tachshivim*". Originally, the *tachshivim* were intended for the best judgment assessment of small income taxpayers who did not, and could not be expected to keep sophisticated books of account. The assessment of those taxpayers usually involved tedious bargaining. After the *tachshivim* were introduced, the bargaining between the taxpayer and the Revenue, though not entirely eliminated, has undoubtedly declined. The *tachshivim* were mostly negotiated between the Revenue and the representatives of the various sectors to which they applied, such as taxi drivers, craftsmen, farmers, etc. They were not kept secret but were made known to the individual taxpayers. Consequently, the notorious bargaining with each taxpayer was limited to bargaining of the various factors indicative of income, within the framework of the *tachshiv*.

To do justice to the *tachshiv* one should also mention one more advantage to this method. Before the *tachshiv* was introduced, the "best judgment" assessments of income derived from the same line of business had greatly differed from one office to another. The use of the *tachshiv* brought about more uniformity in the "best judgment" assessments of similar sources of income all over the country.

However, the *tachshivim* have grown in number, covering about 100 sectors of the economy. They have not been limited to small income taxpayers but have been extended to pressure groups of taxpayers who were under a legal obligation to keep books. Instead of reporting their actual income, based on proper bookkeeping, these taxpayers were assessed to tax in accordance with *tachshivim*.

Since the preparation of the *tachshiv* was based, among other things, on discussions with experienced tax inspectors as well as on economic research, the *tachshiv* has further been advantageous in another way. It has enabled the inspectors of the various income tax offices to benefit from the experience gained by senior inspectors, as well as from the economic data and analyses prepared by the conomists of the head office.

The Revenue maintains that were it not for the negotiated *tachshivim*, many taxpayers would have escaped tax altogether. The Revenue further maintains that the proper use of the *tachshivim* should have resulted in the assessments of the actual or more than the actual income, thus serving as a deterrent to taxpayers who did not keep books.

In fact, however, the "negotiated *tachshivim*" have been used long after the taxpayers grew accustomed to the idea that they had to pay income tax. Moreover, the use of *tachshivim* has apparently resulted in underestimation, since the pressure-group taxpayers insisted on being assessed in accordance with "a negotiated *tachshiv*" rather than keep books.
Indeed, some of the "negotiated *tachshivim*" were strongly criticized for being much too favorable to certain pressure groups and thus discriminative against other groups of taxpayers.

A common technique of preparing a *tachshiv* for a certain sector was to find taxpayers who did keep adequate books and records and attempt to draw conclusions from the analysis of their books of account in respect to factors which may be relevant to a *tachshiv*, such as the amount of basic materials needed for production, the percentage of gross or net profit, etc. The taxpayers who were selected for the model were commonly well-established firms which kept sophisticated books; it has been questioned whether such firms could be used as a guide for the assessment of the productivity and profitability of the common firm which did not keep adequate books of account.
The Revenue maintains that every effort is made to find a small business which keeps books and to use such a business as a model for the *tachshiv*.

A serious problem related to taxpayers who did maintain some bookkeeping and yet preferred to conceal them and rely upon the *tachshiv* in the hope that the resulting assessment will be more favorable to them. Indeed, such tactics were employed also where the taxpayer anticipated a more favorable estimated assessment which was a "best judgment" assessment not based on a *tachshiv*. If the "estimated assessment" proved to be excessive, the taxpayer would surprise the Assessing Officer by producing his books and records for the first time when the assessment was reviewed, either administratively at a hearing of an "objection", or in the District Court sitting as a court of income tax appeals. The admissibility in evidence of such documents for the first time in court was raised in *Soslik v. Assessing Officers*. [5]

It was decided by the Supreme Court that the taxpayer is not precluded from producing for the first time in court evidence which he had not brought before the Assessing Officer; but this, of course, may greatly affect his credibility.

The *Soslik* case, which the taxpayer eventually lost, disclosed a typical case of a taxpayer, in this instance a builder, whose tactics were to refrain from submitting any tax return, although he presumably did keep some sort of books of account. He would then get an estimated assessment, to which he would object, and finally reach a settlement. Clearly, where a *tachshiv* is used and the taxpayer may have an idea of what the estimated assessment is likely to be, such tactics may be even more readily used by him.

Legal Nature of the Tachshiv

Having considered the technique of the *tachshiv* and some of the economic as well as administrative problems which are involved in its extensive use, the legal nature of the *tachshiv* may now be more closely examined. [6]

5. C.A. 204/53, *Soslik* v. *Assessing Officer*, *Piskei Din* 1037.
6. For further details of the development of *tachshiv* techniques, the reader is referred to the thorough study of H.C. Wilkenfeld, *op. cit.* pp. 144-150.

The Report of the Commission for the Examination of the Methods of Assessing and Collecting of Income Tax in the State of Israel, 1954 (Sharef's Report) recommended the use of the *tachshiv* as the best means of assessment where bookkeeping could not be made obligatory. It was recommended by the Report that tax returns declaring an amount of taxable income, which is not less than the amount which would have been arrived at by the aid of the *tachshiv*, should be accepted without audit unless the Assessing Officer had some information that the taxpayer underdeclared his income.

Only where the declared income was less than the *tachshiv*, or where the Assessing Officer had information indicating that the real income was more than the *tachshiv*, should the tax return be audited.

In order to understand the recommendation one has to bear in mind that the Israeli tax system has not yet adopted the "self assessment" method. Subject to relatively few exceptions (mainly of small income employees), most of the returns are audited. The idea of the recommendation was apparently that the Assessing Officers should not waste their efforts on a thorough auditing of small income taxpayers; instead, they should concentrate on the big earners. It is not clear to what extent that goal was achieved. One thing seems clear. It is submitted that as a result of the extensive use of the *tachshiv*, and the acceptance of returns which more or less amount to the figures envisaged by the *tachshiv*, the "best judgment" assessment of the real income has in effect been replaced by the taxation of estimated income.

It should be noted that the introduction of the *tachshiv* was not accompanied by any legislation. Thus, taxpayers have not been given any statutory right to submit estimated tax returns. Nor have the Assessing Officers been legally empowered to substitute any estimated assessments for the original "best judgment assessment" envisaged by the Income Tax Ordinance.

Theoretically, the *tachshiv* did not relieve the taxpayers of their duty to declare their actual, rather than estimated, income. However, the taxpayers soon realized that, where the *tachshiv* is used, its effect could be that of underestimating income. Hence, instead of challenging the right of the Revenue to apply the *tachshiv*, taxpayers would argue that the *tachshiv* was not properly applied under the circumstances. Thus, they would try to establish special circumstances to which the lower scale of the *tachshiv* should be applied. Clearly, allowing the taxpayers to scrutinize the detailed process of the *tachshiv* assessments and to find fault with a certain item makes those assessments very vulnerable and the task of the Courts reviewing them difficult.

An early case which dealt with the weight which should be attached to an estimated assessment based on a *tachshiv* was *Attorney General* v. *Leviter*. [7] In that case the Supreme Court reversed the decision of the Haifa District Court, which interfered with an estimated assessment based on a *tachshiv*, substituting for that assessment an assessment which the Court thought to be more appropriate having regard to the same *tachshiv*.

That case may be compared with the more recent decision of *Yahalomei Keren Or, Ltd.* v. *Assessing Officer*. [8] (hereafter referred to as the diamond case). The taxpayer, a cutter and exporter of diamonds, submitted a return which was not based on proper books of account. Therefore the assessment was made on the basis of a *tachshiv*, which was agreed upon by the Revenue and the Diamond Dealers Association. The taxpayer did not challenge the *tachshiv*, neither did he argue that the *tachshiv* was not properly applied, except for one point. The taxpayer proved that a certain debt owed to him by his Japanese customer, amounting to $56,000, had proved to be a bad debt which could not be recovered. The amount of the bad debt was more than the entire taxable income of the taxpayer for the year in question. The *tachshiv* failed to make any reference to bad debts and did not indicate how they should be treated. The taxpayer argued that when applying the *tachshiv* the loss resulting from the bad debt should be taken into consideration. The Revenue rejected that claim, maintaining that refraining from making any reference to bad debts in each *tachshiv* should be interpreted as an indication that a deduction for bad debts should not be allowed when a *tachshiv* is used as the basis for the assessment. The Tel Aviv District Court was of the opinion that the Revenue's interpretation of the *tachshiv* was correct and accordingly upheld the assessment and dismissed the taxpayer's appeal. On appeal, the Supreme Court overruled the decision of the District Court, holding that under the circumstances the deduction in respect to the bad debt should be allowed.

The Supreme Court first dealt with the argument put up by the Revenue, namely, that under Section 33 of the Income Tax Ordinance, no deduction should be allowed in respect of any trading expenses (including bad debts), otherwise deductible, unless proper books of accounts were kept. The Court dismissed that argument, holding that when dealing with a *tachshiv*, which, in principle, takes into consideration the normal expenses of the business anyway, it would not be proper to ignore so significant an item of expense as a bad debt which amounts to more than the whole profit. Admittedly, the court continued, the *tachshiv* is based on estimates of averages and, hence, a taxpayer who did not keep books of account should not be allowed to argue that in his special case the Revenue should deviate from the *tachshiv*. However, like any other "best judgment" assessment, an estimated assessment based on a *tachshiv* may be reviewed and interfered with if it is found to be arbitrary. The court agreed that the *tachshiv* should generally be regarded as exhaustive, with regard to all regular items of trading expenses which are normally incurred in the production of the income. Such expenses were presumably taken into account by the *tachshiv*. However, disregarding an exceptional bad debt, the court held, was unreasonable and arbitrary.

Before making an attempt to evaluate the decision of the Supreme Court, it should be mentioned that the Court was also influenced by the following special circumstances of the case, to which it referred in the second part of its judgment.

It has been established, the Court stressed, that in the special branch of industry in question, namely, diamonds, it is very common to make assessments based on *tachshiv* rather than to require the taxpayers to keep books of account. A witness for the taxpayer, whose testimony was not contradicted, testified that, as far as he knew, there were only one or two companies in the diamond industry which kept books of account. It appears, the Court added, that regarding all taxpayers in the country, there is a reluctant putting up with a situation in which the taxpayer in effect has the option either to submit books of account or to refrain from submitting books of account and request an assessment based on a *tachshiv*. Furthermore, the Court added, it has been established by the taxpayer that in the diamond industry the Revenue has positively agreed to accept the method of assessments based on *tachshiv*. Regarding bad debts, there was evidence that the Revenue has allowed the deduction of bad debts when applying the *tachshiv* to diamond dealers in more than eight cases. The taxpayer further submitted to the court a letter signed by the Income Tax Commissioner, authorizing the Assessing Officers to allow the deduction of bad debts at their descretion, where they are satisfied that the bad debts should be allowed in a particular case. Hence, the Court concluded, the *tachshiv* should be read in the light of the Commissioner's letter and genuine bad debts be allowed. The denial of the right to deduct a bad debt to one taxpayer while, at the same time, allowing a similar deduction to other taxpayers, without any reason, also amounts to discrimination.

Theoretically, the diamond case can be reconciled with previous decisions, such as the *Leviter* case, [9] which was decided in 1957. Indeed, the Court in the diamond case appears to have been anxious to stress that, although an estimated assessment would not, as a rule, be interfered with, the taxpayer is still entitled to show that the estimated assessment was arbitrary. The

8. C.A. 110/72 27 *Piskei Din*. (Part 1), p. 446.
9. C.A. 98/56, *Attorney General* v. *Leviter*, 11 *Piskei Din* 465.

contention of the taxpayer that he should not be taxed for the year in question was further supported by the special circumstances which have been established by him in that particular case.

However, in fact the attitude of the Supreme Court towards estimated assessments based on *tachshiv*, as reflected in the diamond case, is definitely different from its attitude in the *Leviter* case. The *Leviter* case was decided in the beginning of 1957, shortly after the use of *tachshiv* as a base for estimated assessments had begun. At that time there was still some hope that the use of estimated assessments would be only transitional, and that eventually most taxpayers would be made to keep books of account, thus limiting the use of estimated assessments to those taxpayers, such as small businesses, who could not be reasonably expected to maintain elaborate books and records. At that time the Supreme Court showed reluctance to interfere with estimated assessments which were made in the absence of reliable books and records, stressing that a taxpayer who did not keep books of account did so at his peril. Indeed, that principle was again stressed in the diamond case. Yet it seems that now the Court was more ready to interfere with estimated assessment. As a result, its decision may have the effect of prolonging the non use of accounts. Indeed, the decision in the diamond case expressly confirmed what is common knowledge, namely that in practice the level and scope of bookkeeping, though substantially improved, still leaves much to be desired.

Problems Resulting from the Tachshiv System

The decision in the diamond case, although given in very special circumstances, raises some important questions regarding bookkeeping and the nature of estimated assessments, particularly those based on a *tachshiv*. The first question relates to the effect of Section 33 of the Income Tax Ordinance, (originally numbered as Section 18). That provision categorically disallowed any deductions and allowances unless the taxpayer produced proper accounts. It was introduced in 1943 and was amended only in 1975. Now, if that provision is not applicable where a *tachshiv* is used, because it would be improper to disregard so important an expense item as a bad debt, it is difficult to imagine any circumstances in which it would not be improper to invoke Sec. 33. One of the main purposes of making bookkeeping compulsory is that the verification and audit of the receipts and expenses may more easily be made where the taxpayer has maintained proper accounts and records. The mere fact that the estimated assessment is based on a *tachshiv* which does allow the deduction of normal expenses, it is submitted, does not make it improper to apply Sec. 33. On the contrary, the *tachshiv* is also used for the next year, and if the taxpayer recovers the debt which was thought bad, the taxpayer will not feel obliged to disclose that fact. It follows that when *tachshiv* is used Sec. 33 may be quite properly invoked. Furthermore, the wording of Sec. 33 is explicit; indeed, it is mandatory. It does not empower the Assessing Officer to disallow the deduction of expenses, otherwise deductible, at his decretion; it is phrased in mandatory words, namely, it disallows the deduction unless books of account are propperly maintained. The narrow construction which was given to Sec. 33 by the Supreme Court has greatly limited its effectiveness as an instrument to encourage bookkeeping. Apparently the only effect of Sec. 33 will now be that of conferring upon the Revenue the discretion to disallow expenses in the absence of bookkeeping, which decretion should be exercised only in proper cases. The interpretation which the Supreme Court has given Sec. 33, it is submitted, is a further acknowledgment of the view that Sec. 33 has failed to make taxpayers keep books of account. It has shown that the court would prefer not to give full effect to an express statutory provision, although it may agree with the object of the Legislature, if it appears to the Court that the literal application of the statute would, in its opinion, cause great injustice. The decision of the Supreme Court, it is submitted, shows that the Courts, to use the Court's phraseology, have reluctantly put up with the situation in which bookkeeping is, in practice, regarded as optional.

It should be noted that after the decision in the diamond case the Income Tax Administration issued a circular (No. 19/27 of February 10th 1974), which gave the court's decision a narrow interpretation. It directed the Assessing Officers to follow the court's decision, and allow the bad debt, only where the amount of the bad debt exceeded the amount of the taxable income based on the *tachshiv*, as was the case in the diamond case. Otherwise, the bad debt should not be recognized, unless specifically allowed by the *tachshiv*. In any case, the circular added, under Sec. 33 no set off of losses, resulting from allowing the bad debt, should be allowed.

It should further be noted that in 1975, after the decision in the diamond case, Section 33 was redrafted. It now refers to "unacceptable books" and deals with the following three situations:

Subsection (a) generally empowers the Assessing Officer to deny the taxpayer who did not keep "acceptable books" the right to deduct expenses.

Subsection (b) deals with a taxpayer whose books have been found to be "unacceptable in aggravating circumstances". Such a taxpayer shall not have any right to set off losses, neither shall he be allowed to make any deduction for bad debts.

Subsection (c) deals with a taxpayer who did not comply with the obligation to keep books at all. Such a taxpayer shall not be entitled to set off any losses; he shall not be allowed to deduct bad debts; he has further been denied the right to deduct any sum in respect of interest and depreciation allowance.

"Acceptable books" have been statutorily defined as books of account which the Assessing Officer neither refused to accept nor rejected, or books which the assessing officer decided either not to accept or to reject but his decision was overruled by the "committee for acceptability of books" or the court.

In its new form Sec. 33 is interpreted by the Revenue as counteracting the effect of the court's decision in the diamond case.

Another problem which the decision in the diamond case raises relates to the nature of the "best judgment assessments" which are based on a *tachshiv*. Here the decision is, at the same time, clarifying and confusing. The decision clarifies the issue of the nature of the *tachshiv* by demonstrating that the *tachshiv* must be regarded as a "best judgment" assessment rather than the "normal" or "average" or any other type of estimated assessments which do not purport to be assessments of actual income, but rather serve as substitution for the real income (like the French *forfait* or the Japanese "White Return" system). The Supreme Court has made it quite clear that, although the *tachshiv* makes use of "averages", the final assessment based on the *tachshiv* remains a "best judgment" assessment which aims at assessing the actual income. As such it can be set aside if it is proved to be arbitrary.

On the other hand, the effect of the Court's decision is that of making the "best judgment" assessment more vulnerable. Hitherto the courts were very reluctant to enter a discussion of the details of the computation of the taxable income where the assessing officer was justified in making use of the *tachshiv*. Now it seems that the taxpayer will feel free to argue that an extraordinary expense has been improperly disregarded by the Revenue when a *tachshiv* has been rightly applied. In other words, the Courts may have to decide not only whether a certain expense is deductible in principle, but also whether it is an unusual expense which, although incidental to the trade and hence deductible, is still unusual and hence not included in the *tachshiv*

Once that point is decided, the next point for the Court to decide is whether the amount of the alleged expense is great enough to make it improper to disregard the expense and thus establish that the assessment was arbitrary. Finally, the Court will have to decide whether to believe that the taxpayer has genuinely incurred the expense, even though no proper books of account were kept. As a result, it is submitted, the *tachshiv* assessment may assume a different nature from that of a regular "best judgment" assessment. Admittedly, the Court has emphasized that the assessment, although based on a *tachshiv*, should nevertheless be regarded as a regular "best judgment" assessment which could and should be set aside if it is found to be arbitrary. However, it is submitted, the decision in effect amounts to an approval of the taxpayer's failure to comply with the statutory obligation to keep satisfactory books and records and declare his actual income accordingly. Instead, the effect of the decision is that of giving the taxpayer the option to be taxed on his estimated income, computed in accordance with a *tachshiv*, in lieu of his actual income based on proper books and records. He may further show fault with the way in which the *tachshiv* was applied to his special case. The court did not go so far as to suggest that the *tachshiv* was a method of estimation alternative to "best judgement" assessment of the actual income. And yet, once the taxpayer is allowed to elect to be taxed on a *tachshiv* basis and show that the Revenue improperly disregarded a specific item of expense, it looks as though the question is no longer what the taxpayer's actual income was, but rather how the "average income" should be best adjusted to his own special case.

The decision in the diamond case is confusing in yet another way. It appears that it may have the undesirable effect of putting a taxpayer, who did not keep any books of account whatever, in a highly favored position; he can prove higher actual deductions but the Revenue cannot prove higher actual income.

The decision in the diamond case tends to prolong non-use of accounts. A different decision which may have a similar effect, though indirectly, is that given by the Supreme Court some ten years earlier, concerning the deductibility of a usurious interest paid by a builder. [10] In that case a builder who kept proper books of account claimed a deduction for usurious interest which he allegedly paid. The dealer did not disclose the names of the money-lenders, though requested to do so, arguing that the money-lenders gave loans only to clients who would not disclose their names. Any disclosures would ruin the builder's credit and have the effect of cutting him off from any source of financing (except the banks, which gave only limited loans). The Assessing Officer did not find any fault with the books of account and hence accepted them. However, he refused to allow the deduction of usurious interest for two reasons: first, the relatively low rate of profit reported by the taxpayer; and sesondly, the refusal to disclose the names of the money-lenders.

Subject to certain adjustments, the Supreme Court in principle decided in favor of the Revenue (as did the District Court in the first instance). It should be added that the practice which the taxpayer alleged to have existed was common knowledge; in fact, it was not at all disputed. It appears that the court was mainly concerned with the public policy aspect of the case, as well as the difficulty involved in verifying a payment of usurious interest where the name of the payer would not be disclosed.

Reading the decision delivered by the court in the diamond case, one cannot help wondering: given that the payment of high rates of interest by builders is common knowledge, would the builder not have been better off if he refrained from maintaining bookkeeping altogether and was consequently taxed on a *tachshiv* basis? Clearly, a standard *tachshiv*, which is based on "averages", would have taken into account the high rates of interest which are commonly paid by builders.

One may also pose the question: why should a taxpayer who failed to keep books be allowed to deduct a special expense, as in the diamond case, whilst his fellow-man who maintained perfect bookkeeping be denied the right to deduct an expense which he admittedly incurred only because he would not disclose the names of the persons to whom he had paid the money?

Another legal problem involved in the use of a *tachshiv* method relates to the possible taxation of the income which has escaped the underestimated assessments based on a *tachshiv* and is subsequently reflected in growth of the taxpayer's "net worth". Such a "growth" may indicate some unreported taxable income; however, the estimated assessments based on *tachshiv* are basically "best judgment" assessments which are presumably aimed at the actual income. Hence, the "growth" of the taxpayer's "net worth" may, at the most, indicate that the previous *tachshiv* assessments had been based on underestimation.

In the absence of a specific legislation authorizing the Assessing Officer to tax the income which escaped the tax, such income, it is submitted, cannot be legally taxed at all, unless the power of "review" vested in the Commissioner of Income Tax by Sec. 147 of the I.T.O., is invoked. Admittedly, the Commissioner of Income Tax may review previous assessments and increase the assessment. Furthermore, for the exercise of that power of "revision", and increasing the assessment, "discovery" of *new facts* is not essential; a conviction that the assessment under review was based on a mistake of the law would suffice to establish the right of "revision". Thus, in C.A. 264/64, [11] the Assessing Officer originally decided not to impose income tax on a profit derived from a sale of land. A few years later the Commissioner of Income Tax reviewed the case and, although no new facts were discovered, decided that the transaction involved amounted to an "adventure in the nature of trade" which was subject to income tax. The taxpayers were assessed accordingly; the assessment was affirmed by the Court. Nevertheless, it is thought, the power of "revision" is not suitable for the correction *ex post facto* of the underestimation caused by *tachshiv* assessments. Besides the more complicated procedure of revision and the period of limitation during which it may be exercised, one should also bear in mind that in the absence of a discovery of new facts, the power of revision, as has been rightly observed by the Courts, should be exercised carefully and in exceptional cases only.

The legal difficulty involved in the eventual taxation of untaxed income resulting from underestimation lends further support to the suggestion that the exact nature and use of the *tachshiv* should be defined by appropriate legislation. Indeed, it is suggested that some thought should be given to whether it may not be more advisable to admit that the use of the *tachshiv* in fact amounts to an assessment of an average "estimated income", which should be treated as such, with all the consequences that follow, rather than to continue to treat the *tachshiv* as if it serves as a basis for the "best judgment" assessment of the *actual income.*

The Tachshiv leads to Tax Evasion

The "best judgment" assessments based on the *tachshiv* have been strongly criticized in Israel recently. The main criticism has been that the use of *tachshiv* has resulted in gross underestimation of taxable income. It has been further argued that since large amounts of income have thus escaped the tax, the *tachshiv*, among other factors, might have accounted for the widespread tax evasion in the country. Some economists in the Revenue Service who prepared the *tachshivim* maintain that the *tachshiv*

10. *Beit Zakay Co. Ltd.* v. *Assessing Officer* (C.A. 522/63), *Piskei Din*, Vol. 18 (Part Two), p. 548.
11. *Ben-Zion* and *Meron* v. *Assessing Officer*, 19 *Piskei Din* (Vol. 1), p. 245.

method is basically a good one. They admit that the assessments based on the *tachshiv* in effect tax only part of the actual income; in their opinion, however, the fault does not lie with the *tachshiv* but rather with the way in which it is applied. The Assessing Officers who apply the *tachshiv*, they maintain, tend to be too lenient with the taxpayers.

Erosion of the Tax Base

The *tachshiv* was also one of the issues examined by the Tax Reform Commission, headed by Professor Ch. Ben Shachar, which was appointed on 15th December 1974. In its report, submitted to the Minister of Finance on 12th March 1975, the Commission notes that the use of the *tachshiv* brings about a considerable erosion of the tax base. Taxpayers whose income is above the standard *tachshiv* benefit from the use of the *tachshiv*, whereas those whose income falls short of the *tachshiv* succeed in getting assessments which are lower than the *tachshiv*. They do so either by keeping books and records or through public pressure. The Commission, however, is aware of the fact that the *tachshiv* may be useful as a guidance for estimation of income.

Recommendations for Improvement

With a view to preventing the erosion of the tax base as well as encouraging bookkeeping, the Commission made the following recommendations. The *tachshiv* should not be negotiated with the representatives of the groups of taxpayers. The *tachshiv* should be issued before the end of the tax year. The *tachshiv* should not have the effect of shifting the burden of proof from the taxpayer who does not keep books onto the Assessing Officer. On the other hand, the *tachshiv per se* should not constitute sufficient grounds for rejecting the books kept by the taxpayer. In addition to the *tachshiv*, the Assessing Officer should be provided with indices and indicators concerning the development of prices and economic activity during the tax year in question; these may guide the Assessing Officer in auditing the returns, especially in the absence of bookkeeping.

Apparently the Commission recommends that the use of the *tachshiv* be limited and that the assessments based on bookkeeping be extended. Indeed, the Report stresses the importance of bookkeeping and recommends that it should be obligatory for all taxpayers who derive income from business or profession, including small-income taxpayers. The Report makes it quite clear that assessments based on bookkeeping, even though they may be unsophisticated, are preferable to assessments not based on bookkeeping. Hence, the Report recommends the introduction of incentives to taxpayers who keep accounts and disincentives to those who do not.

The recommendations regarding the use of the *tachshiv*, however, are vague; it is not clear how the Commission envisages the role of the *tachshiv* when the reform is implemented. The Revenue Service too is puzzled; it does not understand exactly what it is supposed to do with the *tachshiv* once the recommendation of the Commission is accepted.

Nor do the taxpayers seem to be happy with the recommendation to insist on bookkeeping. The diamond sector, for example, has already protested. It claims that the obligation to keep accounts will ruin its business, which is allegedly based on non-use of accounts world-wide. There are also other sectors who seem to regard the assessments based on a *tachshiv* rather than on accounts as their "vested right". It remains to be seen what changes, if any, the *tachshiv* will undergo.

To date the experience of using the *tachshiv* in Israel may be summed up as follows. It was very useful at the beginning. It has eventually reached an impasse, presumably for the following reasons. Its use was not confined to unsophisticated small income taxpayers; it was too widely applied, including sophisticated taxpayers who could and should have been expected to keep books and records. It was not used provisionally until all taxpayers were made to keep some sort of accounts, whether sophisticated or unsophisticated; it was practised for too long, until regarded as a "vested right". Its use resulted in underestimation and hence encouraged taxpayers to refrain from keeping books and records.

Finally, the application of the *tachshiv* caused some confusion because its objectives and nature were not properly defined. Furthermore, the introduction of the *tachshiv* was not accompanied by any legislation whatever.

The Income Tax Ordinance (Amendment) Law (No. 22), 5735-1975, added a series of provisions encouraging taxpayers who keep books and discouraging those who do not. The amendment demonstrates that the Revenue is determined to change-over to assessments of actual income based on proper tax records. It does not, however, mention the *tachshivim*. Thus one of the most outstanding features of the Israeli income tax system has remained conspicuously absent from any statutory provisions of the law.

On December 6, 1976, a Bill was published for a further amendment of the Income Tax Ordinance.[12] Three provisions of the Bill (Secs. 19-22) propose the introduction of a new type of assessment, termed "an assessment according to the highest income obtainable in a business or profession similar to that of the taxpayer". The issues that can be raised in an appeal against such an assessment have also been limited.

The proposed amendment fits in the series of statutory provisions aimed at ensuring compliance with the legal obligation to keep books. It is assumed that taxpayers who fail to comply with the legal obligation to keep books of account do so because they prefer to be taxed on the basis of a *tachshiv* or other "average" income. The object of the amendment is to empower the Revenue to assess the taxpayer's income according to the highest obtainable income, thus making the non-keeping of books not worthwhile.

Under the proposed Sec. 145A of the Income Tax Ordinance where a taxpayer failed to keep books as required by law or failed to base his tax return on such books the Assessing Officer may assess his income according to the highest amount of income obtainable in a similar business or profession.

The taxpayer is not deprived of his right of appeal against such an assessment. The grounds of appeal, however, have been limited. Under the proposed Sec. 153(c) where the assessment was based on a *tachshiv* the taxpayer may only disprove the facts which served as a basis for the application of the *tachshiv*. It follows that the taxpayer is not entitled to challenge the correctness of the *tachshiv* itself; nor may he challenge the computation of the income according to the *tachshiv*.

The proposed law further stipulates that where the assessment was not based on the *tachshiv* the taxpayer may only show that the "highest obtainable income" fell short of the assessment made upon him.
The taxpayer has been retained the right to argue that he is not legally bound to keep books.

The proposed amendment, if passed as law, will be the first statutory provision expressly referring to the *tachshiv*. Unfortunately, it only deals with one aspect of the *tachshiv*. It proposes to use the maximum averages of the *tachshiv* as a further measure to ensure compliance with the legal obligation to keep books. It does not refer to the question what nature the *tachshiv* will assume and how it is going to be used, if at all, not as a punitive assessment for not keeping books. It appears that more comprehensive legislation of the nature and use of the *tachshiv* is long overdue.

12. Income Tax Amendment Law (No. 25), 5736-1976. The Bill was published in *Hatzaot Chok* No. 1268 of 14th *Kislev* 5737 (Dec. 6, 1976) p. 38.

A View of Tax Reform.

by Ross Parsons

Professor of Law in the University of Sydney, Australia.

May I say that I am honoured by the University's invitation to give this lecture and most impressed by the interest in tax reform, reflected in your willingness to listen to me. When I was in London in 1966, you had just introduced a "separate" system of corporation tax and a capital gains tax, and you were having some difficulty in adjusting to the new taxes. There was talk of an unusual incidence of suicides among accountants and tax lawyers. In the years between you have replaced purchase tax and selective employment tax by a value added tax and turned back to an imputation system of taxing company profits — I am not sure how finally. You have introduced a gift tax and integrated it with your estate duty under the name of capital transfer tax. You have had a development gains tax and now have a development land tax. And I believe your are again considering a wealth tax. I would have thought that by now all passion for reform would have been spent.

The *Asprey Committee* (The Commonwealth of Australia Taxation Review Committee) to which the Chairman has referred was established late in 1972 to review the whole Federal tax system. It was established, and its members appointed, by the McMahon Government — a coalition of the liberal and country parties, which you might call the conservative parties in Australian politics. Its chairman was a judge — Mr. Justice Asprey of the New South Wales Supreme Court. Its members were an economist, an accountant, a business executive and myself. There was a change of Government very soon after the members of the Committee were appointed. The new Government — a Labor Government with Mr. Whitlam as Prime Minister — confirmed the establishment of the Committee and made no change in its membership.

The Committee received and considered more than 600 submissions — a demanding, sometimes tedious, but instructive exercise — and it conferred with a number of experts, some of them from the United Kingdom. It presented a Preliminary Report [1] in June 1974, and a Full Report [2] in January 1975, both of them, of course, to the Labor Government. The Full Report was made public in May 1975, along with the Report of another Committee [3], the *Mathews Committee*, which had been set up to consider the effects of inflation in relation to the personal income tax scale and the calculation of taxable business income. I will refer to the *Mathews Committee* again in the course of this lecture. Since the publication of the Full Report of the *Asprey Committee* we have had another change of Government, assisted by the action of the Queen's representative in dismissing Mr. Whitlam. The new Government is again a coalition of the conservative parties, this time with Mr. Fraser as Prime Minister.

Some months ago I spoke to an audience at Marysville in Victoria. My subject then was the *Asprey Committee's* proposals in regard to company tax. I made some observations about the United Kingdom experience — how you adopted a "separate" system under a Labour Government and returned to an imputation system under a Conservative Government. I suggested that one's

TAX REFORMS

— Is not all tax reform an expression of policy?

— Is not the formulating and implementing of policy a matter for politicians?

— Was not the Australian Asprey Committee therefore a waste of time?

To the first two of these questions, Professor Parsons answers "Yes". In his following paper, he attempts to answer the third question.

At present, several countries find themselves in the need of tax reform. In his lecture at the opening session of the I.F.A. Congress in Madrid (1972), Professor Amoros Rica referred to the "continuing process of the reform" (see his article "Some Reflections on Permanent Tributary Reform" in XXVIII Bull. 179 (May 1973)). Taxes have long ceased to be a means to cover public expenditure. More and more taxation has become one of the main tools of government policy in a wide socio-economic perspective. Taxes on income and consumption have become very high and, consequently, complicated.

Should a tax reform aim at a simplification of the tax system, at a reduction of the tax burden on the individual citizen, or at an increase of public revenue? Complicated and high taxes easily lead to tax avoidance and tax evasion. The interests of the individual and of the society to which he belongs do not always seem to be the same.

In this issue, we have the great pleasure of publishing the text of a lecture on Australian tax reform proposals delivered by Professor Parsons at Queen Mary College, University of London, which was attended by "all the cognoscente of the tax world in London", as one of the good Bureau friends put it.

The next issue will contain a detailed paper dealing with the report of the Tax Reform Committee of Hong Kong.

The aspect of tax avoidance and tax evasion is touched upon in this issue in the from of a selective bibliography, see page 117.

* Lecture delivered at Queen Mary College, University of London, on 20th January 1977.

politics may have a bearing on the choice one makes between a separate system and an imputation system. At the end of the discussion that followed one questioner, in the manner of an aggressive television interviewer, put this to me: Is not all tax reform an expression of policy? Is not the formulating and implementing of policy a matter for politicians? Was not the *Asprey Committee* therefore a waste of time? The present lecture is in some respects an attempt to answer that third question. The answer to the first two questions is clearly "yes". I should say that the Chairman at Marysville kindly released me from an obligation to answer my questioner — it was time to close the session — but I confess I was somewhat shattered.

Scope of Australian Tax Reform

By its terms of reference, as you might have guessed, the Committee was commanded to carry out its review *in the light of the need to ensure a flow of revenue sufficient to meet the revenue requirements of the Commonwealth*. We were denied the opportunity to recommend that very popular kind of reform which would relieve us of our tax burdens. There were other commands in the terms of reference: to have regarded to the equity, the simplicity and the efficiency of the tax system. The Committee added other values to the list — that incentives to work, to save and to invest should not be destroyed, and that large inherited fortunes are undesirable — values which it judged the Australian community thinks important. The Committee was invited to formulate proposals for reform *either by way of making changes in the present system, abolishing any existing forms of taxation or introducing any new forms of taxation*. One could not ask for wider scope.

In fact, the Report did not propose that we should tear down the existing structure and begin afresh, as did the Carter Report in Canada. The recommendations of the Committee could all be described as modifications of the existing system.

Many of the changes recommended are obvious ones. Equity requires that the base of the income tax should be extended to include capital gains. Efficiency (which generally the Committee equated with neutrality) requires the replacement of the present narrow-based sales tax by a broad-based tax on goods and services. Equity requires an integration of the death and gift taxes, and reforms to the bases which will make those taxes effective. Equity and neutrality require an integration of the company tax and personal income tax.

Equity in a Tax System

All of these changes were recommended by the Committee. But the more important recommendations relate to the significance to be given to particular taxes. These may not be so obvious because they depend on judgments as to relative weightings to be given to different values where they give contradictory directions as to changes in the law. Let me assume that equity in a tax system can best be served by an income tax, because income is the best measure of how much tax an individual should pay and only a direct tax on income can be closely related to the individual's income. This involves a notion of equity which has become an article of faith — a faith of which economists since Haig and Simons have been high priests. I confess that I find some of the details of the faith more confounding than the doctrine of the trinity: I am thinking of the Carter Commission conception of discretionary economic power. But it is a faith which is generally accepted by the Australian community, and it is not relevant that I might prefer a different measure of how much tax an individual should pay. My own choice, in company with Kaldor would, in fact, be expenditure as the measure of tax liability.

Let me then make the assumption. Yet this notion of equity will be served by an income tax only if the base of the tax has been expanded to include capital gains and the base has been refined in other respects which must make it ever more complex. Some of this refining will seek to take count of inflation. When this is done, if it can ever be done in any thoroughgoing way, an income tax must become desperately complex. And the greater the amount of distributional equity one seeks to achieve through an income tax, the greater will be the damage the tax does to incentives.

The weighting to be given to equity is thus the basal question for the tax reformer to answer.

On the answer depends the significance to be given to income tax and the attendant cost to simplicity and incentives. The Committee sought to make a judgment of the emphasis the Australian community would give to equity. Such a judgment must be the underpinning of any proposals for reform a committee may make. The personal views of members of the committee are clearly not appropriate. Economists, of course, offer a lot of statistics, and lawyers offer a good deal of comparative tax law. But statistics and comparative law cannot yield values. The judgment of my Committee could, I suppose, be described as a guess, but it was informed by the submissions that had been considered. And I think could be said to be supported by experiences with tax changes which Governments have had in recent years and to which I will make reference later in this lecture.

The Committee's judgment was this. The community expects the tax system to be progressive in relation to income at the upper end of the scale of incomes. Over the middle band of incomes the community will accept as fair a system which is roughly proportional in relation to income. In this band distributive equity is not thought important. At the lower end of the scale of incomes there should be no tax, so far as this can be achieved, and situations of special need should be assisted by transfer payments.

Flowing from this judgment, the Committee sought to draw conclusions as to the role of the income tax in the Australian tax system. At the lower end of the scale

incomes there should be no positive direct tax on income. Equity should be served by social service expenditure, by social service grants and adjustments to minimum wages. Eligibility for grants should be determined by objective tests of need — old age, sickness, unemployment, having children — and no means tests should be applied. Grants should be subject to income tax if, when added to other income, they come within the range of the income tax. Equity will be served in these ways at the lower end of the scale of incomes without the disincentives which attend a negative income tax. In the middle band of incomes, there is no need for a direct tax on incomes. Equity will be served by a tax on goods and services, operating on income spent, and by effective death and gift taxes operating on income saved. At the higher end of the scale of incomes there is a continuing need for a direct tax on incomes. But the cost to incentives will be lessened by lower marginal rates. The rates will be lower because of the general shift away from income tax and because the redistribution function of the income tax will be reinforced by effective death and gift taxes.

Diminishing Role of Income Tax

The Committee's judgment of the emphasis the community would give to equity is thus the primary explanation of the most important recommendation of the Committee — that there should be a movement away from income tax towards a broad based tax on goods and services levied at a uniform rate. I say it is the primary explanation. The Committee entertained some skepticism about the assumption that a refined income tax is necessarily an effective instrument for achieving equity. In recent years there have been offers by both Labor and Conservative Governments in Australia to trade a decrease in income tax for restraint by employees in making wage demands. I believe that offers to trade in this way have been within your experience. And we have recently had a good deal of industrial action by employees in support of a claim that the employer should pay his employees' medibank levies — in effect that the employee should have one part of his direct tax on income paid for him. Such offers to trade and such claims suggest that wages are fixed in net-of-tax terms — that the direct tax on income is passed on, in which case its function in serving equity must be defeated. But the Committee did not press its skepticism too far. There is room for a like skepticism about the incidence of tax on goods and services.

If one becomes too skeptical about the general assumptions that the incidence of income tax is on the taxpayer and that the incidence of tax on goods and services is on the consumer, it becomes nearly impossible to hold any views about tax policy.

Not more than a dozen years ago personal income tax accounted for a little more than one third of Australian Federal revenue. The fraction is now well over one half. The recommendation of the Committee is that we should reverse the trend. But reversing the trend will not be easily achieved, even if Government comes to be persuaded that it should be done. One perhaps hopeful development is the indexation of the personal rate scale introduced by legislation passed in May 1976.

Indexation

Indexation was a recommendation of the *Mathews Committee*, the Committee to which I made some reference at the outset of this lecture. The *Asprey Committee* devoted a good deal of attention to tax drift — to the way in which a progressive income tax, in conditions of inflation, will, in real terms, take an ever increasing amount in tax, unless the scale is adjusted. But the Committee preferred to leave the protection of the subject against this so-called "taxation-by-stealth" to regular action by Government. It was content to recommend that an indexed scale should be published each year with the budget papers so that comparisons might be drawn with the actual scale imposed. Mathews, however, recommended formal statutory indexing. In the 1975 election campaign which followed the tumultuous event of November 11th, 1975, Mr. Fraser promised indexation of the personal rate scale. He made good his promise in legislation enacted in May last year. The legislation provides for automatic indexation of the scale, to take effect at the commencement of each year of tax on 1st July, on the basis of the increase in the consumer price index in the twelve months to the previous 31st March, less any part of that increase due to indirect taxes. The scale, as so indexed, has been imposed for 1977-78, but not, as yet, for any subsequent year of tax. It is true that Mr. Fraser's action fitted rather well into a pattern of economic measures which did not include increases in tax. But what he has done may prove to be more significant than a declaration of rates of tax for 1977-78 and subsequent years, and an imposing of the rates declared for 1977-1978. Indexation involves some kind of legislated promise to cut income tax back once a year to the level in real terms which prevailed a year previously. Unmaking indexation is likely to be looked on as a breach of faith by the present Government, unless it is unmade in order to reduce income tax in real terms, and I rather think that a Labor Government will feel inhibited about allowing income tax to increase in real terms. Stabilising the share of gross national product taken by the income tax is not of course to reduce the emphasis on income tax unless a general increase in tax occurs. But this much can be said: if one is to retreat, one must first stop advancing, and this we seem to have done.

Centralisation or Federalism?

If indexation of the rate scale is a hopeful development, there is another which is not so hopeful, because it could lead to an increase in the significance of income taxes in the total system of Federal and State taxes. Mr. Fraser and the coalition parties are Federalists and want the States to raise more of the revenue they spend. At present the States rely heavily on reimbursements from the Federal income tax and grants from the Federal Government. Mr. Fraser is seeking to restore

income taxing powers to the States. As a practical matter, they lost the power to impose income taxes in 1940 — a war-time development which has been with us ever since. Mr. Fraser is not finding the going easy. The States are not so very anxious to have responsibility for raising revenue, at any rate through income taxation. State politicians know that electorates are persuaded that it is more blessed to receive than to give, and the way to popularity is to spend money that has been raised by someone else. The conservative parties lost office in the New South Wales elections last year. One explanation is that Labor scared the electorate into believing that a vote for the conservatives, allied as they are to the parties that make up Mr. Fraser's Government, was a vote for the "double taxation" of income. I am not sure that there isn't a lesson in this for a United Kingdom Government that might seek to implement the *Layfield Report*.

My own view is that the cause of federalism would be best served by giving the States powers to impose sales tax, which I think could be administered jointly with Federal sales tax. But this would require constitutional amendment which is extraordinarily difficult to achieve in Australia.

Increased Taxation of Goods and Services

The movement from income tax to taxation of goods and services will require skilful management, so that the gradual increase in taxes on goods and services is matched by a decrease in income tax, and increases in social service grants and in wages at and near the minimum. Wages will need to be increased at levels where income tax relief will not cover increases in taxes on goods and services. If wages continue to be indexed by the *Arbitration Commission*, it will be necessary to exclude increases in the cost of living due to increases in taxes on goods and services from the index that is used.

The Committee devoted a good deal of attention to the form of the tax on goods and services. It sought to monitor what was happening in the United Kingdom in the operation of value added tax and concluded that a value added tax was the appropriate form.

Integrated Death and Gift Taxes

The other important proposal by the Committee concerned with the significance of a tax in the tax system relates to death and gift taxes. The Committee proposed an integration of the present Federal taxes and reforms in each case of the tax base so as to make them effective taxes, which at the moment they are most certainly not. Integration and reforms to the tax base will increase the significance of the integrated taxes in the tax system. The present Federal death duty, in the Committee's view, is paid *principally from the estate of those who (die) unexpectedly, or who (have) failed to attend to their affairs with proper skill.*

Integration as proposed by the Committee would produce a tax very much like your capital transfer tax. My Committee's proposal was made to the Government in the preliminary report about the time your Green Paper was published and was made without knowledge of what was proposed in the United Kingdom. In fact there is a common origin for our proposals and for your tax in the writings of American scholars and of your Professor Wheatcroft. There are nonetheless some differences between our proposals and your tax, for example we would cumulate gifts by reference to their present values, you would cumulate by reference to historical amounts. Given continuing inflation, cumulation by reference to historical amounts will, I suggest, frustrate the purpose of your capital transfer tax.

The Committee saw the objectives of the integrated taxes as serving to restore some of the achievement of redistribution which would be lost by the movement away from income taxation to taxes on goods and services, and as limiting the growth of large inherited fortunes, which might otherwise be a consequence of that movement. I should say that the Committee did not attempt to translate its judgment on what was the community demand for redistribution and the value of preventing large inherited fortunes into any rate structure for the integrated taxes. I would express my own view however that the Australian community would not ask for a rate scale even approaching what you have adopted. A lower rate scale lessens the problems of payment of duty by an illiquid estate — the estate of a small businessman or primary producer — to a point where it should be possible to solve them by provisions for payment by instalments and for deferral of tax. The problems of payment of duty by an illiquid estate which is otherwise a viable economic entity are the most commonly asserted argument against death taxes in Australia.

The Committee rejected an annual wealth tax, as an alternative or as a supplement to the integrated death and gift taxes. There are some disincentives to work, save and invest to the integrated death and gift taxes, but the Committee saw the disincentives associated with an annual wealth tax as more damaging. There are greater problems in framing the base of an annual wealth tax only too evident from your Parliamentary Committee report. I cannot see how one can tax the wealth of a man who saves for his retirement and at the same time exempt the wealth comprised in another man's pension scheme. If one taxes the wealth in a pension scheme should not one tax the potential wealth of another man who may confidently expect a golden handshake? And a wealth tax involves much greater administrative and compliance costs.

The Committee rejected the idea of an inheritance tax or an accessions tax, being unconvinced that the burden of such a tax falls on the beneficiary (which is said to be one of its virtues) and unconvinced that in Australia there is need to encourage the wider dispersion of bequests (which is said to be another of its virtues).

There are difficulties in the way of achieving integrated death and gift taxes in Australia. The States, as well as the Commonwealth, impose such taxes and achieving a rational system for the whole of Australia will require either the co-operation of the States in enacting uniform

legislation or that they agree to be displaced. Experience in fields other than tax indicates that the first alternative is not practical politics. The second alternative may not be so unlikely. Of late the States have been competing with one another in promises of relief from death duties. Mr. Bjelke-Petersen in Queensland has now outbid them all, and since 1st January 1977 State death and gift taxes have been abolished in Queensland. Already the estate agents handling Gold Coast developments are proclaiming Queensland as the world's most desirable death tax haven: warmth and golden sands to prolong your life and no tax to trouble your dying. The establishment of a tax haven in Queensland will make it extremely difficult for the other States to maintain effective taxes, and all the State taxes, I think, are likely to disappear.

Corporation Tax: Return to Imputation System

I would like now to make special reference to some changes in the income tax proposed by the Committee. These concern changes in the system of company tax and the adoption of capital gains tax. Since 1940 we have had a "separate" or "classical" system of company tax. The Committee has proposed that we should return to an imputation system, a more rational imputation system, however, than our pre-1940 system. The Committee recommended that in the long-term we should have full imputation — a credit available to the shareholder for all the tax paid by the company on the profits whence his dividend has been paid. Immediately, a partial imputation system was recommended involving a dividend tax credit of one-third to one-half, on the assumption of a 50 percent company tax rate. The partial imputation would not adopt the advance corporation tax procedures which are part of your system. For the present the credit procedures would follow the Canadian model. The Committee thought that when the long-term objective of full imputation comes to be implemented it will be necessary to look hard at your advance corporation tax procedures. I should say that I am not personally persuaded that those procedures are consistent with what the Committee thought were the values which an imputation system serves — the equity and neutrality of the tax system. If it is thought appropriate that the company should have credit for foreign tax or relief from tax by an initial capital allowance, the shareholder should have it too. I concede that the operation of the imputation system should not require the Revenue to apply a credit against tax on other income, or refund tax to the shareholder, when the Revenue has not in fact received tax from the company. But the advance corporation tax system may result in tax being paid which would not have been paid had the business been carried on in a partnership of the shareholders.

The object of an imputation system should be to assimilate, as far as possible, the tax treatment of company and partnership. In addition to the imputation system the Committee proposed that Australia should follow the United States Sub-chapter "S" model, and allow shareholders in a restricted class of companies an election to have the company's profits taxed in a manner such as applies in taxing partnership profits.

I should say that the Committee was not prepared to accept an argument that company tax is not borne by the shareholders — that it is passed on by the company — and it may therefore be ignored in judging the equity of the tax on dividends.

If our present company tax is passed on, the indication must be that we should repeal it and replace it with sales tax which does not discriminate against the more efficient production. But the repeal would expose what would then be seen to be a gross inequity — an immunity from income tax of the undistributed profits of companies which, on the hypothesis, they have all along enjoyed. The assertion that company tax is passed on is not an argument against the adoption of an imputation system. It is an argument against any income tax at the company level and the person who makes the assertion is surely bound to tell us how, as a matter of a regime of general application, to tax company profits without imposing a tax at the company level. If he cannot, the assertion that company tax is passed on becomes an argument against income tax at large: it demonstrates that in an important area of its operation, an income tax cannot achieve the equity which is its sole justification.

I would think that there is a good deal of support in Australia for an imputation system. It promises some income tax relief and that is always popular. I suspect that the Revenue may not, however, be too happy about it. If Australia adopts an imputation system it will face pressure from other countries, especially the United States, to extend the imputation credit to non-residents. Australia is presently renegotiating its treaty with the United States. Yet it seems to me that what comes of these negotiations will reflect the relative bargaining powers of the two countries and the skills of the negotiators. If we have to surrender tax to the United States we will have to surrender it whether we do or do not have an imputation system.

Capital Gains

May I turn now to the Committee's proposals in regard to the taxing of capital gains. An income tax, I have said, is justified only by its claim to serve equity; it should be true to that claim. This is the whole case for a capital gains tax. It is a case which the majority of the Committee accepted, though with obvious misgivings about whether the extension of the base of the income tax which is involved can be fairly defined. The distortions in the operation of a tax to which inflation can give rise are nowhere more evident than here. The corrective which the Committee, by a majority of the majority, proposed is that a fraction only of capital gains should be included in the base of the income tax and that this fraction should vary with the rate of inflation. As a minority of the majority, I rejected this proposal — the implication is that the fraction will be increased when a period of high inflation has passed and the consequence will be that a taxpayer who has held an asset during the period of high inflation, but has realised the asset after that period has passed, will be denied the

special relief. If relief to deal with a period of high inflation is contemplated, it should, in my view, be provided by an indexation of costs of property held during the period. It will be necessary to prescribe an indexation factor for each year of the period. Such special relief will of course be rough and ready. It should not be applied so as to give rise to a loss, and it will be subject to the criticism that it will give an advantage to a taxpayer who acquired his asset with borrowed funds.

Current Value Accounting

All the members of the Committee were persuaded that a method of indexing gains which seeks to identify the taxpayer's net investment in the assets realised and to index the cost of that net investment is simply beyond the limits of effective legal and administrative action. The Committee's conclusion on this issue may be taken also as a conclusion in regard to the income tax generally, though it had left to the *Mathews Committee* the task of proposing what should be done in regard to the effects of inflation in distorting the base of the present income tax. This was the other matter specially assigned to that Committee. Mathews proposed that a modified current value accounting should be applied in determining profits subject to tax where a business holds trading stock — opening stock should be written up to a value as determined by the replacement costs of closing stock. Mathews also recommended that the amount of annual depreciation allowable on plant should be determined by reference to the replacement cost of that plant, though in this case replacement cost would be determined by simply applying an index to the cost of that plant.

Mathews gained some support from the recommendations of your *Sandilands Committee* which, curiously, makes no reference to Mathews. But Sandilands recommends only a temporary expedient to replace you

Taxation in Australia.

A SYNOPSIS

Taxes may be levied either by the Commonwealth or by the States (New South Wales, Victoria, Queensland, South Australia, Western Australia and Tasmania) or the two internal Territories (the Australian Capital Territory and the Northern Territory). In addition "rates" are imposed by the local governments and similar authorities on the value of land within their jurisdicton.

A – COMMONWEALTH TAXES

1. Income tax — The Commonwealth is the sole income taxing authority. The tax is imposed on individuals and companies.

Individuals

A system of steeply graduated rates applies. The minimum taxable income is $1,040. Rates range from 20% to 65%.

A provision is made for adjustments in the schedule of rates to account for inflation.

Companies (resident and non-resident)

Public companies

On all taxable income — 42½ percent.

Private companies

On all taxable income — 42½ percent.
"Undistributed profits" — 50 percent additional tax.

2. Payroll tax — This is levied by the Commonwealth on wages paid by an employer in the two internal territories: the Australian Capital Territory and the Northern Territory. The rate is 5 percent of the gross wages paid or payable, subject to certain exemptions if total wages paid by an employer do not exceed a certain level.

3. Estate duty — The estate duty rates vary from 3 percent to 27.9 percent. Death duties imposed by the States may be deducted from the estate. A rebate is allowed for the lesser of the duty paid outside Australia on personal property situated outside Australia or the Commonwealth duty payable on such property.

4. Gift duty — Gift duty is imposed at rates ranging from 3 percent to 27.9 percent.

5. Sales tax — It is payable generally at the wholesale level, on the sale value of non-exempt goods or commodities. It is a single point tax. The general tax rate is 15 percent. Special tax rates of 2.5 percent (for household goods) and 27.5 percent (for goods such as jewellery, television receivers, watches, passenger cars etc.

6. Customs duties — The rates vary according to the type of goods and their country of origin. Ad valorem duties and specific duties are in use. In addition, "primage duties" are imposed on some importers.

7. Excise duties — They are imposed on the wholesale value of certain classes of locally produced goods e.g. tobacco, spirits, etc.

8. Special industry taxes — e.g. Wool tax.

B – STATE TAXES

1. Payroll tax — It is levied by all the states on wages paid or payable by an employer in their respective jurisdictions. The rate is 5 percent of the gross wages, subject to certain exemptions.

2. Land tax — Land tax is imposed on all the states on the unimproved capital value of land owned.

3. Death duties — They are imposed in all the States other than Queensland and the Northern Territory. The rates are based in some states in the dutiable value of the estate as a whole and in others on the amount received by each individual beneficiary.

4. Gift duties — They are imposed in Victoria and South Australia. Stamp duties paid in such States on deeds of gift or settlement are credited against the gift duties.
In New South Wales, Queensland, Tasmania and Western Australia, stamp duties are imposed on deeds of gift or settlement.

5. Stamp duties — They are imposed in all States and the internal "territories".

6. Other taxes — e.g. tax on motor vehicles, betting etc.

emporary expedient of 12 November 1974. A perma-
nent solution is to be found by a Royal Commission.

The Mathews recommendations drew a good deal of cri-
icism from our Tax Department, some of it on equity
grounds. They will give special treatment to businesses
holding trading stock and will favour those businesses
hat are highly geared. After after a first blaze of enthu-
iasm support for the Mathews recommendations has
vaned somewhat in the business community. Recently
he chairman of our largest company, Broken Hill
Proprietary Limited, observed rather plaintively that the
Mathews recommendations in regard to trading stock
vill not be very helpful to his company because it does
ot hold stocks of steel; it manufactures to order.

But Mr. Fraser included the implementing of the
Mathews recommendations in his election promises in
November-December 1975 after the dismissal of Mr.
Whitlam, and he is now about to take some action to
onour his promise. We are told that legislation will be
ntroduced in the autumn session of Parliament which
vill have some affinity with the Mathews recommen-
ation in regard to stock. A deduction in determining
axable income will be allowed of the amount which
esults from the application of one half of the increase
n the "goods" element in the consumer price index to
he value of opening stock. The application of an index
o the value of opening stock of course abandons the
heory of current value accounting without adopting the
ompeting theory of current purchasing power account-
ng. And the Government proposals, again no doubt in
he interests of simplicity, differ from Mathews in con-
emplating a permanent relief and not merely a defer-
al of tax. We have been told that the Government
roposals will apply to most kinds of trading stock but
ot to land or to shares and other securities.

Meanwhile the Australian accounting bodies have issued
rovisional recommendations requiring the application
f current value accounting — or current cost account-
g as their version is called — in computing business
rofits. The Australian bodies got their provisional re-
ommendations out just ahead of your accounting
ody. The Australian business community has shown
ery little enthusiasm for the recommendations. They
ill no doubt accept them if this is necessary to ob-
in the Government's tax concession, but there is no
ggestion as yet that the two will be linked. A deflat-
g of published profits is not something to be wel-
omed for its own sake. Calculations that have been
ade suggest that the deflating will be dramatic.

have no faith in the application of current value ac-
unting, in any form, in determining the amount of
usiness profits to be subject to income tax. Current
lue accounting may be helpful in judging the perform-
ce of a business considered as an entity distinct from
proprietors and creditors. But it has no place in de-
rmining the base for a tax whose only claim to exist-
ce is that it serves equity between individuals. I know
at the suggestion I made a moment ago about index-
g of costs for capital gains tax purposes, which has
parallel in the Government's proposals in regard to business profits, is equally vulnerable. But it is offered only as a rough and ready corrective, and I readily concede that it will produce almost as much inequity as it will cure. The Mathews recommendations seek to attract some validity from accounting theory which is distinctly irrelevant.

The whole debate about correctives for the distortions caused by inflation only demonstrates that the measure of equity that can be achieved by an income tax is indeed limited.

The *Asprey Committee* thought that the tax on capital gains should extend to gains deemed to be realised on gift and death — the income tax should be true to its claim to serve equity. It considered, however, that some compromise was necessary in order to mitigate the effects of a tax on capital gains on incentives to save and invest. It proposed that there be an exemption from the tax of a specified amount of gains, not less than $40,000, deemed to be realised on death or realised after attaining the age of 65, or upon permanent incapacity.

Prospects of Capital Gains Tax in Australia

You may perhaps be interested in the prospects of a tax on capital gains in Australia. We almost had one two years ago. Following the preliminary report of the Committee the Labor Government announced the introduction of a capital gains tax on 17th September 1974, with effect from that date. But this proved to be a false start. A period of high inflation is not the most propitious time to introduce a capital gains tax which, as it was proposed on 17th September 1974, would not have had any provisions to deal with the distortions caused by inflation. On 29th January 1975 (four months later) it was announced that the Government's plans for the introduction of the capital gains tax had been postponed. The withdrawal of the tax was explained as a contribution to the restoring of business confidence. We have, of course, had a change of Government and I doubt that Mr. Fraser has in mind a capital gains tax, at least during the life of the present Parliament.

May I now mention two experiences of the Labor Government in attempting to change the tax law, which I think have a bearing on the emphasis the Australian community would give to equity. The first relates to the taxing of fringe benefits; the second relates to a surcharge on investment income.

Taxation of Fringe Benefits

The Committee Report deals at some length with the strengthening of the law and its administration in regard to the taxing of fringe benefits. In advance of the Full Report, the Labor Government had, as part of the September 1974 Budget, introduced legislation to tax the value of the private use by an employee of a motor vehicle provided by his employer — more popularly described as "company car" provisions. These provisions owed much to the Canadian model. The company car provisions were greeted by howls of protest indicating just how widely this fringe benefit is enjoyed throughout the electorate. The motor car manufacturers claimed that the provisions would affect continuing purchases by companies of fleet vehicles and this, in turn, would be damaging to the economy. As part of the package of measures to restore business confidence, which included the withdrawal of the capital gains tax at the beginning of 1975, it was announced that the legislation would be repealed. The company car provisions died without having produced a dollar of tax. The moral in all this is, I suppose, that the majority of electors are not as persuaded of the need for equity in the tax system as the Labor Government thought they should be, or indeed, as the *Asprey Committee* judged they were.

Investment Income Surcharge

The second experience relates to investment income surcharge. As part of the September 1974 Budget the Labor Government introduced an investment income surcharge. As first announced it was to be a surcharge at 10 percent of the taxpayer's average rate of tax and would be applied to all taxpayers. It was then modified to become a surcharge operating only when the taxpayer's taxable income exceeded $5,000. Like the company car provisions, the investment income surcharge was not well received. The *Asprey Committee* in its Full Report drew attention to the bias against saving already involved in the income tax — it limits what can be saved and diminishes the rewards for saving. There may be a case for taxing investment income derived from inherited wealth if one could identify such wealth, but I fail to see the case for an investment income surcharge of general application. The Committee also drew attention to the fact that in conditions of inflation some forms of investment income may be unreal. Indeed most members of the Australian community have in the past several years enjoyed a negative real return on their investments. The Committee recommended the repeal of the investment income surcharge. In the August Budget 1975, the last before it lost office in December, the Labor Government announced the repeal of the surcharge but offered no explanation for the repeal. The tax died without even a whimper. I suspect that the Government had decided that the experiment with the surcharge was electorally damaging. The moral of this story may be that the electorate is more concerned about incentives to save and invest than the Labor Government imagined they were.

Role of Tax Review Committee

It is time to return to my questioner at Marysville. Was the *Asprey Committee's* work a waste of time? One measure of usefulness would be the amount of change in the law the Committee has inspired. The Committee's recommendations have had an influence on the shape of the personal income tax scale and on the method of dependents' allowances and allowances for personal expenses. I have not dealt with those recommendations in this lecture. The recommendations of the Committee in another area not dealt with in this lecture — income taxation and the mining industry — have for the most part been endorsed by the *Industries Assistance Commission* and have led to changes in the law.

Parliament has been told recently that the Committee's Report is "under active consideration" by Government. But the economy is in a less than happy state and now may not be the time for other changes such as the adoption of the recommendation in regard to an imputation system of taxing company profits, or the adoption of other recommendations which I have not mentioned, such as those relating to the taxing of the income of trusts or to the ways of taxing foreign source income and the income of non-residents. In any case the most important of the Committee's proposals — for a shift from income tax to taxation of goods and services, and for an increase in the significance of death and gift taxes — are long term proposals. Indeed a sudden and radical shift from income taxation to taxes on goods and services would be most unfair to those who had saved under an income tax and now, on retirement, come to spend under a tax on goods and services.

I have the impression that no political party in the United Kingdom supports the idea of a *Royal Commission on Taxation* recently proposed by the *Sandiland Committee*. The preference seems to be for Parliamentary Committees. Judged by the amount of changes in the law, they may appear to be more useful. But then they deal with proposals which have already received some Government support. Your Parliamentary Committee on the system of taxing company profits — split rate or imputation — was useful in influencing the choice that was made. I am not sure how one should assess your Committee on the wealth tax. In Australia we have had one Parliamentary Committee on taxation in recent times. Its terms of reference were confined to death taxes in Australia. By a majority it recommended that we should continue to have such taxes and that they should be more effective and at higher rates. The minority recommended the abolition of death taxes. The majority consisted of all the members of the Committee who were members of the Labor Party. The minority members consisted of all those who were not members of the Labor Party. I am sure there is a lesson in that.

A tax review committee has, of course, a technical role. It may be able to show how the law can be made a better expression of the values it already seeks to express. But I would put its principal claim to usefulness in this way: the submissions it considers, its report and the discussion which should follow are a valuable means of communication between the electorate and government. This communication is not confined by the limits set by a Government proposal for changes in the law, and the communication is not filtered through the preconceptions of persons who are members of political parties and each committed to his party's platform.

At the very least a tax review committee might hope to deflect a politician from pursuing one or other of the dogmas of his party's platform — by, for example, the introduction of an investment income surcharge — at the cost of values which the community thinks important, and, even more sadly for the politician, at the cost of his electoral support. And a politician might be brought to see that some values he seeks to express are already adequately expressed in the tax system — that a wealth tax added to death and gift taxes may not redistribute wealth, but simply inhibit the creation of wealth. The tax may serve no more than an expression of corrosive envy.

At the highest a tax review committee may some day inspire a Government to attempt a restructuring of a tax system on the basis of contemporary community values and not the dogmas, most often the shibboleths, of the party platform. Whether or not the *Asprey Committee* was a waste of time is of course for others to judge. I am content to say that a tax review committee need not be a waste of time.

The Recent Fiscal Situation in Japan.

1) The economic slowdown has brought ith it serious fiscal difficulties for govern- ent both at the national and local level nd the possibility of securing the tax evenue estimated in the original budget or the fiscal year 1976 now mainly relies n business profit prospects. In order to ttain real economic growth of around even percent without relying more on xport boost, it is felt that about a twenty ercent increase in public works expendi- ure over the current year's level will be ecessary in the fiscal year 1977. The Min- try of Finance expects recovery of do- estic demand, especially investment in lant and equipment, to be slow and ex- ansion of public works spending should, herefore, get priority over a reduction in x.

he main problem recently has been to nd appropriate sources of revenue to nance the government deficit. The rev- ue from tax and non-tax sources in the xt fiscal year can be estimated at most as ound ¥ 20 trillion and no considerable crease in revenue can be expected. The inistry will, therefore, be unable to duce the current deficit of ¥ 7.3 trillion ich is 29.9 percent of estimated total venue as shown in the general accounts the national budget. The 1977 budget is kely to exceed ¥ 28 trillion and bond- ues will increase to almost ¥ 8 trillion.

) In the supplementary budget of No- mber 12 the Government decided to opt new measures to stimulate the econ- ny for the current fiscal year; these in- lve an additional increase in public ending and loans. These pump-priming easures, which include revival of a project the two Government-owned corpora- ns — the Japan National Railways and e Nippon Telegraph and Telephone Pub- Corporation — increased financing for all-scale industries and housing, and pro- otion of public works, are expected to ve the economic effect of creating ost a ¥ 1 trillion increase in domestic mand. The monetary policy which is w under examination includes a cut in long-term interest rates as an investment incentive.

There has been a great deal of argument in the Diet and elsewhere concerning compensatory cuts in both individual and corporation income taxes. Opponents of this measure stress the fact that the relative burden of individual income tax here is lower than that in other major advanced countries, that the extra disposable income resulting from such tax cuts will go into savings, and that the Government's enormous budget deficit will not be eliminated in these coming years without proper tax reform. Nevertheless, a promise of cuts in income tax was felt to be an attractive slogan in the campaign for election to the House of Representatives in December 1976, and the Ministry of Finance is likely to be unable to resist these political pressures in preparing the 1977 budget.

Many economists do not expect a small tax cut to result in any increase in consumption and labour groups wish a tax cut to be made, in order to compensate for the loss of real income resulting from price rises, by increasing the tax-free base (at present ¥ 1,830,000 for a family or four). There is also an argument among business management in favour of a substantial tax cut in order to ease labour's wage demands. Moreover, some people recommend a cut in corporation income tax by the introduction of an investment deduction scheme for the promotion of investment in the private sector. Others, however, oppose this because its effect is dubious. In spite of strong public support for income tax cuts, the Ministry of Finance knows well that a tax cut in the fiscal year 1977 will make it even more difficult to raise the burden of income tax in subsequent years in order to deal with the problem of inflation.

(3) The Taxation System Council of the Finance Ministry in the expectation of a huge revenue shortage is considering selective tax increases in the fiscal year 1977. An outline of the reform is reported as including consolidation of numerous tax breaks which are given for a limited length of time and a raising of rates of preferential income taxes such as that levied on income from interest. The abolition of several reserves such as reserves for price fluctuations, for overseas market development, and for overseas investment losses will result in an increase in revenue of about ¥ 100 billion. The total increase in revenue in the next fiscal year as a result of the above mentioned reform can be expected to be around ¥ 300-400 billion.

Because of slow sales of ten year interest-bearing bonds to individuals, the Ministry has decided to issue shortly a new type of bond in order to encourage public subscription and cover revenue shortage. Under the agreement between the Ministry and a consortium of banks and brokerage houses, the yield of the new five year discounted bonds to the subscriber will be 7.781 percent per annum while the interest actually received will amount to 6.643 percent as result of a tax levied at the time of purchase.

(4) The Ministry is intending to revise its decree relating to the system for the legalisation of consolidated corporate financial statements. This system, which aims at publication of the business results of the parent company together with those of its subsidiaries (covered by the new system are those in which the parent company owns equity interests of fifty percent or more), will be started as from the fiscal year 1977 with the purpose of acquainting stockholders with the management performance of the company.

About six hundred out of around twenty-seven hundred corporations will prepare consolidated documents. The Ministry, however, has decided to postpone temporarily enforcement of a consolidated tax system until after the next fiscal year.

International Tax Avoidance and Tax Evasion.

A Bibliographical Survey in Geographical and Chronological Order

Over the years, we have received several letters from readers interested in literature concerning tax evasion and tax avoidance, and our librarian has been able to supply them with a bibliographical list of literature likely to be of interest. We are now, for the first time, publishing this list in view of the interest of many readers in the subject. This list is, of course, far from complete; especially as we have excluded books purely on tax havens (a few of which were mentioned in a bibliography on Tax Havens in No. 2, 1977 of the Bulletin). Our librarian welcomes additions to this list from readers.

U.S. Tax Reform Act of 1976 - Congress chases the foreign dollar.

J. H. Dobson & V. M. Tarris

PART TWO *

V. MONEY OR PROPERTY MOVING OUT OF THE UNITED STATES

1. Portfolio debt investment

A. *Prior law*

All persons, in whatever capacity, paying money from interest, dividends and other similar types of income from sources within the U.S., to non-resident aliens or foreign corporations were required to withhold a tax equal to 30 percent of the income. The law exempted interest received by a non-resident alien or foreign corporation from deposits in banks, savings institutions, or amounts held by insurance companies, from being considered income from a source within the United States, if such income was not connected with a trade or business. Such an exemption increased the desirability of portfolio investment by foreign corporations and helped provide the United States with foreign capital. The exemption was due to expire on December 31, 1976.

B. *The Tax Reform Act*

Act Section 1041 makes permanent the exemption from withholding tax of interest from banks, savings institutions, or insurance companies if the income is not connected with the conduct of a trade or business in the United States by the foreign lender.

2. Ruling requirements for certain exchanges involving foreign corporations

A. *Prior law*

Domestic corporations involved in organizations, liquidations, and reorganizations normally are not required to recognize (i.e. currently pay tax on) any gain resulting from such transactions. When a foreign corporation was involved in certain of these transactions, however, the Internal Revenue Service would not consider the foreign corporation as a corporation (and thus able to take advantage of the non-recognition provisions) unless the taxpayer had established to the satisfaction of the Secretary of the Treasury that the exchange was not in pursuance of a plan having as one of its principal purposes the avoidance of income tax. The taxpayer was required to obtain a ruling to this effect before the transaction began.

This advance ruling requirement applied to exchanges involving contributions of property to controlled corporations, all tax-free corporate reorganizations,[24] and the liquidation of subsidiary corporations. Without corporate status in these transactions, all the gain realized on the transfer of property would have to be recognized.

Taxpayers desiring corporate status had to obtain the ruling before the transaction could take place. Even if the transaction involved two foreign corporations, such a ruling was required for the non-recognition of gain. If no ruling was obtained, gain had to be recognized by the U.S. taxpayers. There was no means provided for compelling the Revenue Service to issue a ruling, adverse or otherwise, and virtually no means for appealing an adverse decision, since the law required only that the Secretary be satisfied that the transaction was not for tax avoidance purposes.

For many years, the taxpayer had no idea what ruling he could expect to be given on any particular transaction. There were no general criteria

Part One was published in the February 77 issue, p. 51.

24. These reorganizations are: a statutory merger, a stock-for-stock reorganization, a stock-for-assets exchange, a spin-off or split-off, a recapitalization, and a mere change in identity, form or place of organization.

available to help him determine the possible consequences of a particular transaction. In 1968, however, the Internal Revenue Service issued "Guidelines" which outlined the probable treatment for various transactions. These Guidelines indicated that before the Secretary would give his consent for certain transactions, the taxpayer would have to include in his income a sum of money representing the gain which was being realized in the transaction and which would be recognized if corporations were not involved. This money was called a "toll charge". Since these were Guidelines only, however, the Internal Revenue Service still reserved the right to make an individual ruling in whatever manner it desired. Thus the taxpayer still had no absolute certainty as to the treatment expected.

B. The Tax Reform Act

The amendments in Act Section 1042(a) were designed to provide a taxpayer with some degree of certainty as to the treatment which would be given to a transaction. They also attempt to alleviate the harshness of the rule requiring advance approval of a transaction and restrict the ruling requirement to those transactions where U.S. taxes could be permanently avoided. Finally, the amendments provide for court review of adverse rulings or the non-issuance of a ruling.

The only transfers of property requiring a ruling by the Secretary are those involving transfers of property by a U.S. person to a foreign corporation. No ruling will be required for transfers into the U.S. or for transfers involving only foreign corporations. There are four types of transfers currently recognized as taxable transactions which will now require such a ruling. They are: the transfer of property occuring when a U.S. subsidiary is liquidated into a foreign parent, the transfer of property to a foreign corporation which is controlled by the transferor after the transfer, the acquisition of a U.S. corporation's assets by a foreign corporation, and the acquisition of a U.S. corporation's stock by a foreign corporation. The ruling requirement for these acquisitions is limited as well. When the only property transferred to the foreign corporation is stock or securities of a foreign corporation which is a party to the transfer taking place, no ruling is required. In addition, the Secretary of the Treasury may by Regulations designate situations where property is transferred out of the United States and where no ruling is required. These situations will most likely be where there is no significant tax avoidance possibility or where the Secretary could easily determine a formula for the gain which must be recognized. Under the new law it is no longer required that the ruling be obtained before the transaction. Now the taxpayer has until the close of the 183rd day after the beginning of the transfer to file a request for the ruling.

The fact that certain transfers no longer require a ruling should not be taken to mean that they will no longer be regulated. Act Section 1042(a) requires that the Secretary of the Treasury promulgate Regulations dealing with these transfers. The Regulations must include the circumstances under which 1) gain must be recognized currently or amounts must be included in gross income as a dividend or 2) gain can be deferred, as well as the extent to which adjustments must be made to earnings and profits, or the basis of stock or assets because of such transactions. Foreign corporations will *not* be considered corporations only to the extent necessary to prevent the avoidance of income tax.

One of the more significant changes in the law is that the new section will provide for court review of an adverse determination or for a court ruling on the request in the event of undue delay. In the case of an actual controversy involving a determination or the failure to make a determination, a party to the transaction may request a declaratory judgment dealing with the ruling [25]. This declaratory judgment will be given by the United States Tax Court and will have the force and effect of a Tax Court decision. The Tax Court review may be of the adverse determination, of the failure to make a determination concerning the avoidance of income taxes, or of the terms and conditions under which the favorable ruling was given by the Secretary. The Tax Court also is given the power to make its own reasonable terms and conditions.

This section was effective on October 9, 1975. The Secretary must promulgate the Regulations required under the new law by January 1, 1978. Until that time, however, all transactions require a ruling by the Secretary. For any transaction which took place after December 31, 1962 and before December 31, 1975, solely between foreign corporations, a taxpayer has 183 days after the enactment of the bill to file a ruling request for the non-recognition of gain. Thus, U.S. shareholders of foreign corporations involved in taxable exchanges where the corporation were unaware of the ruling requirement, or where the shareholder were unaware of the exchange until it was too late to obtain a ruling may now request tax-free treatment of such transactions.

3. Contiguous country branches of domestic life insurance companies

A. General description

Domestic life insurance companies like all U.S. corporations, are taxable on their world-wide income. They are of course allowed a foreign tax credit for any taxes paid on their foreign source income to a foreign country in which they do business. If the tax rate of the foreign country is less than that of the United States the domestic corporation's effective tax rate for a business in such foreign country is higher than the rate applicable to its competitors who are corporations of such foreign country. The shareholders of a mutual life insurance company are the policyholders, who receive the benefits of any income earned by the company. Therefore, a tax rate which is higher in the United States than in the foreign country only serves to reduce the distribution to that country's policyholders. The result is that the U.S. companies' policies are le

25. A declaratory judgment is a judgment which declares the rights of the parties or expresses the court's opinion on a question of law, without ordering anything to be done. Thus, a declaratory judgment could rule that a transaction was not subject to tax even before the tax administration has decided whether or not to tax the transaction.

ttractive in that country. Since the earnings of a branch of a mutual ife insurance company selling poli-ies in a foreign country would be available only to the policyholders of the company, who are also resi-dents of that foreign country, dis-tributions of earnings normally would have no effect on U.S. taxa-ion.

B. The Tax Reform Act

To help alleviate any competitive hardship which the current tax law mposes on domestic life insurance ompanies doing business in Canada r Mexico, Act Section 1043 adds ection 819A to the tax law. To be ligible for the benefits under this ew section, the domestic mutual nsurance company must be a life nsurance company, with a contig-ous country life insurance branch. The company must make an election or this special treatment, such elec-ion being effective until revoked vith the consent of the Secretary.

ligible contiguous country life in-urance branches are those branches f domestic life insurance companies hich issue insurance contracts (life, ealth, accident, annuity or reinsur-nce) in connection with the lives or ealth of residents of countries ontiguous to the U.S., have their rincipal place of business in that ountry, and would be a mutual life surance company if they were sep-ate domestic insurance companies. he taxpayer must establish and aintain a separate branch account r such contracts, in accordance ith its regularly employed method accounting if this separates U.S. ems from branch items, and in ac-rdance with Treasury Regulations it does not. When the election is ade, the domestic company must cognize all gain which would have en recognized if the branch assets d been sold.

nce the separate branch is estab-hed, any payments to the domes-life insurance company made m the separate branch account all be treated as if they were re-ived from a third person. Income m the contiguous country branch all be recognized by the domestic mpany only when it is repatriated such domestic life insurance mpany. No taxes paid to the for-n country on separate account items will be allowed as a tax credit or deduction. Income repatriated to the United States is treated as a divi-dend from a foreign subsidiary. The dividend must be grossed-up and a tax credit for such dividends will be allowed.

A domestic stock life insurance company may transfer assets to a contiguous foreign country for the same type of treatment without ob-taining the normally required ruling from the Secretary of the Treasury that such transfer is for purposes other than the avoidance of income tax, and without paying an excise tax on the transfer of appreciated assets. (For a brief discussion of the excise tax, see Part II.B.4.) The do-mestic corporation will have to recognize the gain which would have been realized had the transferred as-sets been sold.

This section is applicable for taxable years beginning after December 31, 1975.

4. Losses on bonds etc. for foreign banks

A. General description

Prior to the enactment of the Tax Reform Act of 1969, U.S. banks could treat gains from the sale of corporate and government bonds and other evidences of indebtedness as capital gains and could deduct losses from such sales as ordinary losses. Corporations which would have been considered banks except for the fact that they were foreign corporations treated such gains and losses as capi-tal gains and losses. As such, the foreign banks could take advantage of the capital loss carryover. Such carryover could be applied only against gains resulting from the same type of transaction that gene-rated the loss. The Tax Reform Act of 1969 revoked this preferential treatment as of July 11, 1969. Thereafter gains and losses on such transactions were treated as ordinary income and losses, subject to the full inclusion in their income of both gains and losses. A transitional rule permitting a limited exception for U.S. banks was enacted [26] There was no transitional rule for foreign banks. They were therefore left with capital carryover which they could not use.

B. The Tax Reform Act

Act Section 1044 adds a subsection to the tax law and establishes a tran-sitional rule for the treatment of bond etc., losses for corporations which would be considered banks ex-cept for the fact that they are for-eign corporations. The section's ef-fectiveness is retroactive to taxable years beginning after July 11, 1969.

This rule allows a foreign bank to use its remaining capital loss carryover. The net gain from sales or exchanges of bonds, etc., shall be considered as gain from the sale or exchange of a capital asset (and thus subject to tax at the preferential capital gain rate) to the extent that this gain does not exceed the capital loss carryover from the same type of sale or ex-change for taxable years beginning before July 12, 1969. The capital loss carryover does not reduce the amount of current gain; it merely provides for the recognition of cer-tain gain as capital rather than or-dinary income. Thus, if a foreign bank with an unused capital loss carryover of $2,000 recognized $10,000 of ordinary income on the sale of bonds, etc., in 1970, it can now amend its tax return to recog-nize ordinary gain of $8,000 and capital gain of $2,000. This will in effect permit the foreign bank to pay taxes on $9,250 rather than on $10,000 of income.

Act Section 1044 also provides that the time limitations for refunds or credits shall not be applicable for this transitional rule if the claim for such creditor refund is filed within 1 year of the date of the enactment of the Act.

---

26. Under this transitional rule, if the net long-term capital gains from the sale or exchange of bonds, etc., held by a bank on July 11, 1969, exceeded the net short-term capital loss for the year from the sale of the same type of bonds, etc., the excess is treated as a capital gain to the extent that it does not exceed the net gain on the sale or exchange of all bonds, etc. for the year. Capital gains for bonds, etc., held on July 13, 1969 are determined by multiply-ing the amount of capital gains without applying any special rule by a fraction whose numerator is the number of days prior to July 12, 1969 the security was held, and whose denominator is the total number of days the security was held.

The effect of this section is to give foreign banks the same type of transitional treatment currently being given to domestic banks and to allow them the use of their capital loss carryover available on July 12, 1969.

VI. SPECIAL CATEGORIES OF FOREIGN TAX TREATMENT

1. Possessions corporations

A. General description

As a kind of incentive to investment in U.S. possessions, the United States established special rules for the tax treatment of investment in U.S. possessions. These rules were designed to help induce U.S. corporate investment in active trades and businesses in Puerto Rico and the possessions. Under these rules, individuals or domestic corporations operating a trade or business in a possession of the United States were entitled to exclude from their gross income all income of possessions corporations from sources without the United States, including foreign sources income earned outside the possession in which the corporation conducts a business. They were not permitted the use of the foreign tax credit for any taxes paid to possession governments, however.

To be eligible for the income exclusion, the individuals or corporations had to satisfy 2 conditions: 1) 80 percent or more of their gross income for the 3 year period immediately preceding the close of the taxable year must have been derived from sources within a possession of the United States and 2) 50 percent or more of the gross income for such period of the corporation or of the individual (on his own or as an employee or agent of another) must have been derived from the active conduct of a trade or business within a possession of the United States.

All dividends received in the United States by the corporation or individual were taxable. In addition, domestic corporations were not allowed to take advantage of the 85 percent deduction normally granted for intercorporate dividends [27]. This exclusion resulted in little repatriation of earnings and in the domestic corporations seeking other outlets for their possessions corporation's earnings. Also, because the corporate taxpayers are domestic corporations, the possessions corporation could be liquidated into the parent without the recognition of gain or loss (this advantage is available to all corporations owning 80 percent or more of another corporation it liquidates).

Possessions corporations were permitted to be included in the consolidated return of an affiliated group of corporations in years in which they incurred losses. The result was that domestic corporations paid no taxes on their possessions corporations' income in gain years if it was not repatriated, while they were able to reduce their total tax burden in loss years. In effect, the corporation received a double tax benefit.

B. The Tax Reform Act

The amendments to the possessions corporation law are designed to eliminate some of the potential for abuses of the possessions corporations without eliminating the corporations altogether. Such corporations may still be an important aid to investment in U.S. possessions. The changes continue to exempt trade or business income derived in the possession and investment income earned in the possession, while they result in the elimination of the exemption for income from investments outside the possession. Also, although foreign source investment income from possessions business earnings will be taxed, possessions corporations will be able to repatriate the income to the United States without liquidating and without resulting in the payment of substantial taxes by the domestic corporation.

To achieve the changes outlined above, the sections of the tax law dealing with possessions corporations now have one rule for individual owners of possessions corporations and one rule for corporate owners of possession corporations. Act Section 1051 retained the treatment under the prior law for individuals controlling possessions corporations. It added Section 936 to the possessions corporations rules. Corporations operating possessions corporations will now be taxed on their possessions corporations' world-wide income in the same way that any other U.S. corporation is taxed. However, the corporation is allowed a 48 percent foreign tax credit (called the Section 936 credit) for the business and qualified investment income from possessions. To be eligible for this credit, a corporation must meet the same requirements as were necessary for the original possessions corporation benefits. The credit will be given to the domestic corporation regardless of whether the possessions corporation had paid any taxes to the possession country.

The section denying the intercorporate deduction for dividends has also been amended. The general 85 percent deduction will be allowed in all cases for dividends returning to the United States and the 100 percent deduction will be allowed to corporations which elect to be treated under the new Section 936.

Consolidated returns may be filed only in the case of initial losses. Once the election for the Section 936 credit is made, consolidated returns may not be filed for 10 years. Losses occurring at the beginning of the operation of a possessions corporation must be recaptured if foreign source income is derived in later years (see a discussion of this provision in Part IV.B.2. above).

In determining the amount of tax attributable to the income from the active conduct of a trade or business or to qualified possessions source investment income, losses from other sources must be taken into account. Qualified possessions source investment income is income only from sources within the possession in which the possessions corporation conducts a trade or business. The taxpayer must establish that the funds invested were derived from such activity. This is to prevent the loss of capital to the possessions countries.

27. In the U.S. tax law, corporations receiving dividends from other corporations are permitted to deduct 85 percent of the dividend from their income. The deduction is increased to 100 percent for dividends from a small business investment company and for certain "qualifying dividends" — i.e. dividends from a member of an affiliated group of corporations but only if: 1) an election for such treatment was made; 2) the dividends were distributed out of earnings and profits of a taxable year ending after December 31, 1963; and 3) the distributing company and the receiving company were members of the affiliated group for the same time.

f a corporation is eligible for the Section 936 credit, any taxes paid to a foreign country or possession are not treated as creditable taxes and no deduction for such taxes is allowed. The new tax credit is available only for corporate income tax paid.

This section is effective with taxable years beginning after December 31, 1975.

2. Western Hemisphere Trading Corporations (WHTCs)

A. *Prior law*

Prior to the enactment of the Tax Reform Act, the United States allowed WHTCs a reduction on the corporate income tax payable on their income as a WHTC. A WHTC is defined in the tax law as a domestic corporation, 1) all of whose business (except for incidental purchases) is done in a country or countries in North, Central, or South America, or the West Indies, 2) which derives 95 percent or more of its gross income for the three years immediately preceding the close of the taxable year from sources without the United States and 3) which derives 90 percent of its gross income from that period from the active conduct of a trade or business. Such WHTCs were allowed a reduction of up to 14 percentage points on their corporate income tax. The reduction is determined by multiplying the normal taxable income by a fraction, the numerator of which was 14 and the denominator of which was the sum of the normal tax and the surtax which would have been effective (presently a total of 48).

This provision was intended to provide an incentive to establish corporations in countries in the Western Hemisphere. It was useful for corporations whose business involved operations in other countries in the Western Hemisphere. A lower U.S. tax rate permitted such corporations to operate competitively with foreign corporations established in Western Hemisphere countries with low tax rates, while retaining U.S. ownership of the investments.

B. *The Tax Reform Act*

Beginning with the taxable year 1976, the numerator in the multiplier described above to determine the tax reduction will be reduced. For 1976, the numerator is 11 percent; in 1977 it will be 8 percent. This is further reduced to 5 percent in 1978 and to 2 percent in 1979. For years beginning after 1979, the section is repealed altogether. Act Section 1052 also contains provisions deleting references to the WHTC from other sections of the tax law.

This amendment will help provide general tax equity for income derived from all foregin sources.

3. China Trading Act Corporations

A. *Prior law*

Corporations organized under the China Trading Act (a section of the U.S. civil law) were given special tax benefits. Although subject to the same tax rates as other corporations CTA corporations were entitled to a special deduction against their taxable income. This special deduction was equal to a proportion of the corporation's income derived from sources within Formosa and Hong Kong which was the same as the proportion which the par value of the stock held by residents of Formosa, Hong Kong, the United States or its possessions, or individual citizens of the United State bore to the par value of all outstanding stock of the corporation. Thus, if 100 percent of the corporation's shares were held by the above persons and 100 percent of its income was derived from sources within Formosa and Hong Kong, such a corporation could in principle exclude 100 percent of its income subject to taxation.

There was a further limitation on the deduction, however; the excluded taxable income could not exceed the amount distributed by the corporation to the above shareholders as a special dividend. This dividend was an amount at least equal to the amount of U.S. tax that would be due were it not for the special deduction. Thus, CTA corporations could in effect operate free of tax. In addition, monies distributed as dividends to residents of Formosa and Hong Kong were not included in the shareholders' gross income and were thus exempt from taxation altogether.

There are presently only 3 active CTA corporations, while there are many other corporations trading in Hong Kong and Formosa without the advantage of these tax benefits. Congress felt that there was no present justification for the special tax treatment afforded to CTA corporations.

B. *The Tax Reform Act*

Act Section 1053 repeals the provisions of the law relating to CTA corporations. This is done in a 3 year phaseout period. The special deduction and the exclusion of dividends to residents of Formosa and Hong Kong will be reduced by 33 1/3 percent for the taxable year beginning in 1976 and by 66 2/3 percent for a taxable year beginning in 1977. Effective December 31, 1977, the section of the tax law dealing with the CTA corporations is repealed. At that time also, all references to the CTA in other sections of the tax law are also repealed.

VII. ANTI-BRIBE AND ANTI-BOYCOTT MEASURES

1. Bribes

A. *Prior law*

Under the prior law the only anti-bribery tax measure was a provision that denied a tax deduction for amounts paid to officials or employees of a foreign government if such payments would have been illegal if subject to the laws of the United States. This provision applied only to the question of deductible expenses of a domestic business; it did not apply to foreign subsidiaires. This situation led one publication to advise recently that "the denial of deductions for a questionable payment can be avoided in some cases by having questionable payments made through a foreign company" [28].

B. *The Tax Reform Act*

Under the new law special provisions apply to bribes or similar payments made to a foreign government official or employee after November 3, 1976. If the payment was made

28. INTERNATIONAL TAX REPORT, October 4, 1976, at 3.

by a controlled foreign corporation [29] the payment will be considered Subpart F income. Thus, U.S. shareholders of the CFC will be taxed on the amount of the bribe as if it were a dividend distribution to them. Also, such a payment by a CFC will not reduce the earnings and profits of the CFC. This means that the payment will not be an expense for purposes of reducing the amount of subsequent distributions by the CFC that will be considered dividends. Thus, bribe amounts may be taxed twice.

In the case of an illegal payment to an official or employee of a foreign government made through a DISC [30] the amount of the payment will be deemed a profit distribution and will be currently taxed in the hands of the shareholder. This means that a bribe paid by a DISC not only will not be a deductible expense but also will lose the deferral benefits for the amount of the payment.

2. Boycotts

No anti-boycott tax measures existed prior to the passage of the Tax Reform Act. Now a number of special provisions apply to a taxpayer who participates in or cooperates with an international boycott after November 3, 1976 or, in the case of operations under a contract entered into before September 2, 1976, after December 31, 1977. A person has participated in or complied with an international boycott if:

(a) a condition of doing business with the government or a person of a country is: to refrain from doing business in another country or with the government, companies or nationals of that country; to refrain from doing business with any U.S. person engaged in trade in another country or with the government, companies or nationals of that country; to refrain from doing business with any company whose ownership or management is made up of individuals of a particular nationality, race or religion; or to refrain from hiring or employing individuals of a particular nationality, race or religion;

(b) a condition of sale of a product to the government or a person of a country is: to refrain from shipping or insuring the product with a company which does not participate in an international boycott.

A business who participates in an international boycott is subject to three possible sanctions. First, all such businesses will have part or all of their foreign tax credit disallowed. The amount of credit disallowed is either the actual taxes paid on operations concerning which boycott agreements had been made (if this amount is established by the taxpayer) or a percentage of total foreign taxes based on the "international boycott factor". This factor will reflect the ratio of boycott-related income to total foreign income. (Note, however, that taxes which are not creditable are still allowed as a deduction from taxable income.)

Second, if the business engaged in the boycott is a controlled foreign corporation, boycott income will be treated as Subpart F income and will be subject to current taxation in the hands of the U.S. shareholders. The amount of boycott income to be included in Subpart F income will be either the amount of non-Subpart F income shown by the taxpayer to have been earned from boycott operations or the product of total non-Subpart F income multiplied by the international boycott factor.

Third, if a DISC participates in a boycott the amount of DISC income eligible for deferral will be reduced by either the amount of deferred income shown by the taxpayer to have been earned from boycott operations or the product of the total deferred DISC income multiplied by the international boycott factor.

Thus, the Tax Reform Act penalizes boycott activities of U.S. taxpayers by disallowing credit for taxes paid on income from such activities and by denying the deferral advantages normally available from engaging in foreign activities through a controlled foreign corporation or a domestic international sales corporation.

VIII. THE DOMESTIC INTERNATIONAL SALES CORPORATION

A. General description and prior lau

As an incentive to stimulate expor sales, Congress in 1971 provided fo the tax benefits of a Domestic Inter national Sales Corporation (DISC) [31] It is actually little more than a pape corporation designed to give export ing companies a tax advantage. Th DISC is exempt from most taxes. I is liable for withholding taxes, othe employment taxes, and various othe miscellaneous taxes.

To be eligible for the DISC status a domestic corporation must hav only one class of stock with a mini mum par value of $2,500, elect suc DISC status, and have income, a least 95 percent of which consist of "qualified export of receipts'

Although the DISC itself is not taxe on its income, a DISC shareholde must include in his income a deeme dividend of his share of certain i come items and 50 percent of the e cess of taxable income of the DIS Subsequent distributions of amoun previously taxed as deemed div dends were excluded from the shar holder's gross income.

If the corporation loses its DIS status, a shareholder is deemed receive as a dividend his pro ra share of the DISC income accum lated tax-free during previous yea Such distributions are deemed to received in equal installments in ea of the next 10 years after the term nation or disqualification (limite however, to the number of imm diately preceding years that the c poration was a DISC).

The shareholder must include in income each year amounts actua distributed by the DISC, deem

29. See Part III above for an explanati of controlled foreign corporations and treatment of Subpart F income.
30. See Part VIII for an explanation DISCs.
31. For a more extensive discussion of DISC, see L.S. Ullman, *The Domestic ternational Sales Corporation ("DISC A United States Tax Vehicle to Encour Exports*, 26 BULLETIN FOR INTER TIONAL FISCAL DOCUMENTATION (1972).

dividends, deemed distributions for disqualification, and certain gains.

The Tax Reform Act modified the benefits of the DISC.

B. The Tax Reform Act

Act Section 1101 retains the present deferral benefits, but limits them by requiring that certain additional income be included in the deemed dividend. The Tax Reform Act adds the following new items to those previously considered deemed distributions: 1) 50 percent of the taxable income of a DISC for the year which is attributable to military property; 2) the taxable income for the taxable year attributable to "base period export gross receipts"; and 3) the sums required to be included because of participation in a boycott or because of bribes (discussed in Part VII above).

The "base period export gross receipts" are the basic amount of export receipts fixed by law. They are defined as that portion of the adjusted taxable income in excess of 17 percent of the average export gross receipts for the base period. These receipts are deemed distributed to the shareholders prior to the computation of the present deemed distribution of one-half the DISC taxable income.

In other words the principal tax deferral advantage now accrues to a DISC only if it increases its sales. If its sales remain constant, it would now have only one half of 33 percent, or 16 1/2 percent, of its taxable income available for tax deferral. In contrast with the pervious 50 percent.

The base period for a taxable year beginning before 1980 is the taxable year beginning in 1972-1975. After 1979, it is the taxable years beginning in the 4th, 5th, 6th, and 7th calendar years preceding such calendar year. If the DISC did not have a taxable year beginning in one of the base period years, it is deemed to have a taxable year with receipts of $0.

Obviously it is to the advantage of the shareholder to have low base period export gross receipts, since this increases the amount of current gross receipts which can be deferred. To insure that the base period export gross receipts which are attributable ot a DISC for purposes of deemed distributions are appropriately matched with the current period export receipts, and to prevent the creation of multiple DISC's to reduce base period export gross receipts, Act Section 1101 adds rules dealing with controlled groups and the separation of a DISC from the trade or business giving rise to the DISC income.

If more than one member of a controlled group (all corporations with 50 percent or more common ownership) qualifies as a DISC, the export gross receipts and taxable income, etc, must be aggregated as provided by Regulations of the Secretary, as necessary to prevent circumvention of the new DISC provisions.

When the ownership of a DISC and the trade or business which produced the export gross receipts of the DISC are separated, the new owner of the trade or business is treated as having additional export gross receipts during the period attributable to the business. This provision is designed to prevent the separation of a DISC and the trade or business in order to reduce base period export gross receipts.

Shareholders who own 5 percent or more of the stock of one DISC, and who owned during the base period of such DISC 5 percent or more of the stock of a second DISC, must include in their share of the base period export gross receipts of the first DISC their share of the base period export gross receipts of the second DISC. This is designed to prevent an artificial reduction in the base period export gross receipts (e.g. by creating a new DISC which would have base period receipts of $0 and would now have half the business of the old DISC).

Under the new law, the recapture of accumulated DISC earnings on the disqualification of a DISC is also spread out over a maximum 10 year period but now the actual maximum is equal to twice the number of years the DISC was in existence.

Act Section 1101 also amended the DISC rules to clarify the source of income to be included in a shareholder's income on the disposition of stock of a DISC. This rule will also apply when the corporation disposes of the stock in certain transactions which normally would not require the recognition of gain: i.e. the distribution of stock to a shareholder with respect to his stock; the distribution of such stock as part of a plan of complete or partial liquidation; or the sale of such stock as part of a plan of liquidation completed within 12 months. In these situations, the shareholder must include in his income as a dividend the gain attributable to the accumulated DISC income which was accumulated in taxable years of the corporation when the shareholder held its stock. Gain recognized on DISC stock distributed as a partnership share shall also be considered ordinary income.

The Tax Reduction Act of 1975 terminated DISC benefits for natural resource products subject to cost depletion. Act Section 1011 modifies this to terminate such benefits for natural resource products subject to the allowance for percentage depletion. Taxpayers exporting depletable natural resources pursuant to a contract with fixed price and quantity shall continue to receive the benefits, however.

The Tax Reform Act modified but did not eliminate the DISC benefits. However, the GATT Council, in response to a complaint filed by the E.E.C. Commission, determined that the DISC provision is an export subsidy in violation of the GATT. This determination, although having no effect on Congress, may provide the impetus necessary to repeal the DISC benefits altogether.

Fiscal and Economic Studies Center, Madrid.

The Fiscal and Economic Studies Center (Centro de Estudios Tributarios y Económicos) was created in Madrid during the 1960-1961 academic year by the Madrid Chamber of Commerce (Cámara de Comercio) and the Spanish Fiscal Law Association (Asociación Española de Derecho Financiero).

The Center was founded to completely satisfy the following two social needs:
(i) several professionals wanted to improve their work by means of updating and improving their knowledge acquired during their academic studies, but were not able to find proper centers for that purpose;
(ii) companies expected to have, within their tax and economic technical staff, persons who not only had theoretical and scientific knowledge but were also able to show a command and understanding of that knowledge when applied to the practical reality to which it referred. Companies had concluded that training provided by superior studies was not complete, nor generally useful to the kind of work expected from professionals.

The Fiscal and Economic Studies Center expected to give to these professionals the complementary training that companies and professionals themselves wanted, with a special emphasis on fiscal subjects. Every concept in the Spanish fiscal system was therefore studied, primarily in a practical way. In addition, economic and financial analysis, and general and company accountancy, were also studied.

With similar purposes and in addition to what has already been mentioned, the establishment of a new section of studies was decided; this section was intended specifically for those who already were or wanted to be company lawyers. In this way two branches were established: one of Fiscal Studies and one of Company Lawyers.

Since the beginning, 14 groups have attended the Fiscal Studies Course, and 6 groups have attended the Company Lawyers Course, a total of 430 students (57 of them in the last mentioned branch) belonging to 186 companies which have sponsored most of the students.

The Center's name is widely known, as is proved by increasing applications for entry. Its reputation is based on the guidance from personalities acting within the Board of Directors, on the teachers' staff, and finally, on the courses' comprehensiveness and the program's content.

The teaching staff is composed of approximately 30 prestigious and devoted persons, including university and technical school professors, government lawyers, notaries, inspectors of various agencies of the Finance Ministry, economists, engineers and architects.

Beginning with the 1975-1976 academic year, a close cooperation was established with the Madrid bar association which, in addition to valuable suggestions, has provided the Center with renowned lawyers who have been included on the Professors' Staff.

After 15 years of fruitful work on behalf of professional companies and the Spanish society, a new branch has been established by the Center. The name of this new branch is Financial and Fiscal Accountancy and it is devoted to graduates and non-graduates who have been working in companies as directors or as accountancy chiefs. This new branch has a staff of 20 new professors. During the 1975-1976 period, 207 students divided into the three above-mentioned branches will attend 830 classes developed by more than 40 teachers, all of whom have a well-known prestige.

The subjects covered by each branch and course are the following:

Fiscal Studies Branch, First Course: 1. Written Contracts; 2. Economical and Financial Analysis; 3. General Accountancy; 4. Smuggling; 5. Rural Immovable Tax; 6. Urban Immovable Tax; 7. General Tax Law; 8. Tax on Business Income; Business Licence Fee; 9. Earned Income Tax; 10. Capital Income Tax; 11. Inheritance Tax; 12. Property Transfer Tax; 13. Finance Organization; 14. Tax System; 15. Tax Economic Theory.

Fiscal Studies Branch, Second Course: 16. Company Accountancy; 17. International Tax Law; 18. Tax Administration; 19 Local Finances; 20. Special Taxes; 21. Luxury Tax; 22. Individual Income Tax; 23. Corporation Tax; 24. Sales Tax; 25. Tax Procedures; 26. Special Tax Regimes; 27. Customs Income; 28. Fees and Parafiscal Levies.

Enterprise Lawyers' Branch, First Course: 1. Written Contracts; 2 Foreign Trade; 3. General Accountancy; 4. Rural Immovable Tax; 5. Urban Immovable Tax; 6. Administrative Law; 7. Civil Law; 8. Labor Law; 9. Commercial Law; 10. Penal Law; 11. Procedural Law; 12. Tax on Business Income: Business Licence Fee; 13. Earned Income Tax; 14. Organization System; 15 Property Transfers; 16. Local Taxes

Enterprise Lawyers' Branch, Second Course: 17. Enterprise Accountancy; 18 Smuggling; 19. Administrative Law; 20 Procedural Law; 23. Urban Law; 24. Individual Income Tax; 25. Capital Income Tax; 26. Corporation Tax; 27. Sales Tax 28. Bank Operations; 29. Tax Procedure 30. International Law Relations.

Financial and Fiscal Accountancy Law Single Course: 1. General Accountancy 2. Accountancy and Enterprise; 3. Analytical Accountancy; 4. Accountancy General Plan; 5. Accountancy Law; 6. Market and Financial Sources; 7. Internal Financing; 8. External Financing; 9. Public Aid 10. Corporation Tax; 11. Sales Tax; 12 Property Transfer Tax; 13. Local Taxes

Each course has 166 45-minute classes Classes are scheduled on Monday, Wednesday, and Friday evenings; the first class held from 7:30 to 8:15; and the second class from 8:30 to 9:15.

Tests on the subjects covered in each trimester are taken on scheduled dates. A list of approved students will be submitted to the Director by the Chief of the Study Office. A special test will be given in September for those students who were not approved.

Titles of "Graduated in Fiscal Studies" "Company Lawyer", and "Financial and Fiscal Accountancy" are granted only if at least 75 percent of the classes have been attended. Simple compliance with the above-mentioned minimum, without taking examinations or without being approved makes it possible to obtain, at the end of each course, an "attendance certificate".

There are two kinds of diplomas awarded the "profit diploma" and the "profit and merit diploma". The second diploma will be granted by the Center Director to the students with the best grades who have also prepared a written work, previously submitted to the Director.

FRANCE

On 4th November 1976 the Court of Appeal of Aix-en-Provence sentenced a taxpayer for tax fraud and improper financial records to:

8 months of imprisonment (suspended)
and
a fine of 20,000 Fr.Frs
and
the loss of the right to carry on any industrial or commercial profession during a period of 5 years
and
the suspension of his driving licence during a period of 5 years.

COUNTRY BY COUNTRY SURVEY OF LOOSE-LEAF PUBLICATIONS . . .

AUSTRIA

IE EINKOMMENSTEUER 1972

y Franz Hofstätter and Kurt eichel. Wirtschaftsverlag Dr. Anton rac, Graben 17, Vienna I.
upplemented: regularly twice per ear.

oose-leaf publication in three vol-mes dealing exclusively with in-ome tax in Austria. Volume I con-ains the full consolidated text of the resent income tax law as stated as f July 1976. In addition former ersions of consolidated texts of the ncome tax back through 1954 are ppended (approx. 800 pages). Vol-me II contains condensed texts of levant case law as of May 1976 (62 ages). Volume III contains a de-iled commentary on income tax as f July 1976. The material is kept up date by the issue of supplement-y pages.

EBÜHREN UND VERKEHRSTEUERN, TEMPEL- UND RECHTSGEBÜHREN, RUNDERWERBSTEUER, ERB-HAFTS- UND SCHENKUNGSSTEUER ESETZE, KOMMENTAR MIT ENT-HEIDUNGEN, BEWERTUNG, BILANZ-ND BERECHNUNGSBEISPIELE

K. Fellner and W. Fellner. Avail-le from the authors: Florianerweg , 4470 ENNS.
pplemented: when necessary.

ose-leaf publication in three vol-nes containing the text of and a mmentary on general principles d procedures of tax laws, and the ties levied on various kinds of legal official documents.

INTERNATIONALES STEUERRECHT

Innerstaatliche Vorschriften und zwischenstaatliche Vereinbarungen mit Erläuterungen unter Berücksichtigung der Rechtsprechung, by Robert Pollak and Alfred Philipp. Manzsche Verlags- und Universitätsbuchhandlung, Kohlmarkt 16, A-1014 Vienna.
Supplemented: regularly scheduled.

First release of a loose-leaf publication on Austrian international tax law, containing general explanations (inter alia, the O.E.C.D. Model Tax Convention), texts of and comments on double taxation treaties concluded by Austria, unilateral relief measures, etc. Future supplements will contain remaining texts of tax treaties and treaties to be concluded in future.

KOMMENTAR ZUM BEWERTUNGS-GESETZ

by Alfred Twarock, Rudolf Wittman and Karl Frühwald. Wirtschaftsverlag Dr. Anton Orac, Vienna.
Supplemented: annually.

Second edition of loose-leaf guide containing the text and amendments to the law of 1955 and the commentaries thereto. The material is up-to-date to February 1976. Included in the commentary are the most recent developments in the higher and lower courts after the amendment law of 1972 which has brought legal insecurity by abolishing some valuation prescriptions introduced in the amendment law of 1971. The material is kep up-to-date by new and replacement pages.

KOMMENTAR ZUM GEWERBESTEUER-GESETZ

by Alfred Philipp. Wirtschaftsverlag Dr. Anton Orac, Vienna.
Supplemented: regularly.

Loose-leaf publication containing the text of the Trade Tax Act of 1953, as amended, and implementing laws and regulations thereto. The material is kept up-to-date by the issue of supplementary pages.

KOMMENTAR ZUM GRUNDERWERB-STEUERGESETZ

by Alois Czurda. Wirtschaftsverlag Dr. Anton Orac, Vienna.
Supplemented: regularly.

Loose-leaf publication on the Austrian transfer tax on real property. Full text of the law and implementing statutes are printed. Case law, worked examples illustrate the explanation Civil law in connection with the subject is considered. Great attention is paid to the tax incentives for construction activities. A comprehensive index is appended.

KOMMENTAR ZUR LOHNSTEUER

by Adolf Werner and Wilhelm Schuch. Wirtschaftsverlag Dr. Anton Orac, Vienna.
Supplemented: two or three times per year.

Loose-leaf publication explaining in detail the wage tax. Texts of law and other relevant statutes in connection therewith, as well as case law, are appended. The material is kept up-to-date by the issue of supplementary pages.

KOMMENTAR ZUR MEHRWERT-STEUER

by Alexander Kranich, Hanskarl Siegl, Josef Waba Wirtschaftsverlag Dr. Anton Orac, Vienna.
Supplemented: regularly (at least annually).

Loose-leaf publication containing text of and commentaries on the value added tax in Austria. Worked examples, references to case law elucidate the problems. The material is kept up-to-date by the issue of supplementary pages.

KOMMENTAR ZUM ZOLLGESETZ 1955

By Karl Mathes. Wirtschaftsverlag Dr. Anton Orac, Vienna.
Supplemented: regularly.

Loose-leaf publication containing text of Austrian custom law and implementing regulations as well as connected by-laws; comment and case law are appended. The material is kept up-to-date by the issue of supplementary pages.

DIE KÖRPERSCHAFTSTEUER

by Egon Bauer and Oskar Mayr. Wirtschaftsverlag Dr. Anton Orac, Vienna.
Supplemented: regularly.

Loose-leaf publication on Austrian corporate income tax, text of and comment on the corporate income tax law.

DIE ÖSTERREICHISCHEN ABGABENGESETZE — TEXTAUSGABE

by Paul B. Hassler. Wirtschaftsverlag Dr. Anton Orac. Vienna.
Supplemented: two or three times per year.

Loose-leaf publication in two volumes containing full text of and implementing regulations to major tax laws in force in Austria (e.g. corporate and individual income tax, wage tax, turnover tax, net worth tax). The material is kept up-to-date by the issuance of supplementary pages.

DAS RECHT DER DOPPELBESTEUERUNG IN ÖSTERREICH

By Anton Lager.
Wirtschaftsverlag Dr. Anton Orac, Vienna.
Supplemented: once per year.

Loose-leaf publication in two binders on Austrian international tax law, containing general explanations of terms used in international tax law such as domicile, permanent establishment etc., texts of and comments on double taxation treaties concluded by Austria, case law and regulations. Full text and explanation of the O.E.C.D. model treaties on direct taxes and on death duties are appended. The material is kept up to date by the issue of supplementary pages.

STEUERRECHTLICHE TABELLENSAMMLUNG

Wirtschaftsverlag Dr. Anton Orac, Vienna.
Supplemented: regularly.

Loose-leaf publication containing 450 tables relating to turnover taxes, trade taxes, corporate taxes, individual income taxes, excise taxes, social securities etc. Information of tax rates in previous years has been included.

EUROPE

THE TAXATION OF PATENT ROYALTIES, DIVIDENDS, INTEREST IN EUROPE

Volume I of "Guides to European Taxation".
International Bureau of Fiscal Documentation, Amsterdam, Netherlands.
Supplemented: regularly.

Loose-leaf publication in English containing a summary of all taxes levied on intercorporate patent royalties, dividend and interest, as each type of income flows from one

European country to another, and to Canada and the U.S.A. Each bilateral situation is examined from the point of view of national tax law and takes into account the provisions of relevant double taxation treaties. Each chapter follows the same common outline to facilitate direct comparison. The countries covered are Austria, Belgium, Denmark, Finland, France, German Federal Republic, Greece, Ireland, Italy, Liechtenstein, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

THE TAXATION OF COMPANIES IN EUROPE

Volume II of "Guides to European Taxation".
International Bureau of Fiscal Documentation, Amsterdam, Netherlands.
Supplemented: quarterly.

Loose-leaf publication in four binders. A practical, time saving information guide to the practical aspects of all taxes encountered at the different stages in the life of a company. Included are the organizational aspects of the formation of companies, taxation of the formation of capital, taxation of company mergers, corporate tax aspects, other taxes such as value added tax, not worth tax and miscellaneous taxes, such as local, property and land taxes, and stamp duties. Each chapter follows the same common outline to facilitate direct comparison. The present work includes the following countries: Belgium, Denmark, France, German Federal Republic, Ireland, Italy, Luxembourg, Netherlands, United Kingdom, Austria, Spain, Sweden, Switzerland, Greece and Norway. Text of E.E.C. directives and bibliography are appended.

THE TAXATION OF PRIVATE INVESTMENT INCOME

Volume III of "Guides to European Taxation".
International Bureau of Fiscal Documentation, Amsterdam, Netherlands.
Supplemented: regularly.

Loose-leaf publication containing comparative analyses of the effective tax burden on dividends and interest received by individuals in the 11 major countries of Western Europe and the United States of America. It covers the various taxes imposed in each country on dividends, interest and capital gains received by resident individuals. Included are comparative charts illustrating the net dividend received on a corporate pre-tax income of 100 units, and the income a corporation must earn for the shareholder to receive a dividend of 10 units (before individual income tax). The countries covered are Austria, Belgium, Denmark, Finland, France, West Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, United Kingdom and the U.S.A.

VALUE ADDED TAXATION IN EUROPE

Volume IV of "Guides to European Taxation".
International Bureau of Fiscal Documentation, Amsterdam, Netherlands.
Supplemented: quarterly.

Loose-leaf publication containing comparative survey of the system of value added taxation adopted in Western European countries. Each country chapter follows the same common outline to facilitate immediate comparison. The present work in two binders already covers eleven countries: Austria, Belgium, France, West Germany, Ireland, Italy, Luxembourg, Netherlands, Norway, Sweden and the United

Kingdom. A bibliography is appended.

UPPLEMENTARY SERVICE TO UROPEAN TAXATION

nternational Bureau of Fiscal Documentation, Amsterdam, Netherands.

upplemented: monthly.

Loose-leaf publication in 9 binders containing extensive, relevant tax data on the European (including East European) countries. Organized in 5 sections: Section A covers the tax rates on corporations (with tax bases and social security contributions); Section B, the tax rates on individuals; Section C contains the English texts of virtually all major double taxation treaties concluded by European (including East European) countries; Section D covers official documents such as E.E.C. Directives, O.E.C.D. Draft Conventions, etc.; and Section E provides an extensive world-wide bibliography of official documents and of new tax publications (books, periodicals, etc.).

CAPITAL TAXES ENCYCLOPAEDIA

Editorial Board: Sir JOHN FOSTER, K.B.E., Q.C.; E.E. RAY, B. Com., F.C.A.; and B.J. SIMS, LL.B., F.T.I.I., Solicitor. Editor for Scottish Law: W.F. BOWES, W.S. Managing Editor: LESLIE J.P. LIVENS A.T.I.I.

To meet the need for a reference book on Capital Transfer Tax which not only goes beyond the introductory level, but which is also always up to date. Butterworths have published a major new work called *Capital Taxes Encyclopaedia*. In it a team of specialist contributors deal with every aspect of CTT in full detail. Service Issues are published (and charged separately) to keep this loose-leaf work up to date and to expand its subject matter.

£40.00 net (including Service Issue 3).

LAND DEVELOPMENT ENCYCLOPAEDIA

Edited by GEORGE DOBRY, Q.C., M.A.; W.R. STEWART-SMITH, B.A., LL.B. Barrister; and MICHAEL BARNES, B.A., Barrister.

To assist the practitioner in coping with the sweeping changes in the law affecting the development of land, Butterworths have prepared a new work entitled *Land Development Encyclopaedia*. This reproduces the material of the Community Land Act 1975 and the Development Land Tax Act 1976, comments on them in detail and produces an on-going service to keep subscribers up to date with future developments in this area of the law. The Editors, themselves distinguished authors and experts in the field of Development Gains Tax, lead a team of specialist writers. The work is loose-leaf and Service Issues will be sent and charged separately to keep the work up to date.

£35.00 net (including Service Issue 1).

SPITZ: TAX HAVENS ENCYCLOPAEDIA

General Editor: BARRY SPITZ, Doctor (summa cum laude) of the University of Paris (Law), B.A., LL.B. (Rand), of Gray's Inn, Barrister.

This authoritative volume covers all relevant material to enable the practitioner to assess the relative merits and disadvantages of the various tax havens. The basic principles of the tax haven are set out, followed by chapters on specific tax havens, each written by an expert on that area. The volume is loose-leaf so that information pertaining to a specific area can readily be updated and additional chapters added by means of Service Issues. The work now contains twenty countries.

£50.00 net (including Service Issue 3).

Overseas orders are subject to a despatch charge.

Butterworths, Borough Green, Sevenoaks, Kent TN15 8PH, England. Showroom: Bell Yard, Temple Bar, London WC2

List of Tax Treaties. **India**

concerning comprehensive double taxation treaties on income
The list is up to date as of November 30, 1976

ABBREVIATIONS:

BULL = Bulletin for International Fiscal Documentation. International Bureau of Fiscal Documentation, Amsterdam.

African Budgets.

The recent Afro-Arab summit meeting in Cairo has once more shown the crucial problems which the developing countries of Africa have to face. With the exception of Nigeria, on which country we reported in the previous issue, African countries are bound to suffer from increased oil prices. The UNCTAD meeting in Nairobi has not been satisfactory for the developing countries in general, with their mostly one-sided natural resources. The North-South dialogue will not be concluded in the near future. Meanwhile, the countries of the third world must deal with the current problems of development.

Little is generally known about public finance in Africa, except to a limited group of insiders. We feel that the Bulletin should more regularly report on those countries' economic policies as reflected in their budgets. The following brief notes deal with the budgets of Ghana for 1976/77 and Zambia for 1977.

Details about the tax systems of both countries are published in the Bureau's two volume loose-leaf publication "African Tax Systems", *also available in a French edition* "Systèmes Fiscaux Africains".

The Ghana Budget, 1976-77 *

Reproduced below are the most important of the tax changes proposed in the Ghana Budget for 1976-77 delivered on July 21, 1976

I. DIRECT TAXES

Personal Income Tax

Two years ago when Government introduced a minimum wage of ₵54.00 per month for all workers in the country, the tax-exempt income of individuals was increased from ₵400.00 per annum to ₵648.00 per annum. However, if an individual's chargeable income exceeded ₵648.00 per annum, the only tax-free income he enjoyed was ₵300.00. As the current rates structure which exempts only ₵300.00 per annum appears to be unfair to all individuals whose chargeable incomes exceed ₵648.00 per annum, Government has decided to increase the tax-free income of all individuals who pay tax from ₵300.00 per annum to ₵648.00 per annum. It is estimated that this measure will result in a revenue loss to Government of about ₵3.5 million. It is hoped, however, that with effective collection envisaged in the 1976-77 fiscal year, this loss will be recovered.

Government has also decided to limit the highest rate of income tax for individuals and bodies of persons to 70 pesewas in the Cedi for chargeable incomes in excess of ₵10,728.00 per annum and to introduce a surtax of 10 percent on chargeable incomes exceeding ₵14,400.00 per annum but not exceeding ₵50,400.00 per annum and 15 percent surtax on chargeable incomes exceeding ₵50,400.00 per annum.

Company Tax

It has been decided that companies shall continue to pay company tax at the existing rates.

Deductions allowed for the purpose of ascertaining the income of any person

To ascertain the income of any person for income tax purposes, all outgoings and expenses wholly and exclusively incurred in the production of the income are regarded as allowable deductions. Certain expenses which are considered not necessary in the production of the taxpayer's income are nevertheless charged against profits. To safeguard the revenue position, it has been decided that only outgoings and expenses which are wholly, exclusively and necessarily incurred in the production of the income should qualify as allowable deductions.

Tax-exempt Corporations which pay Dividends

Formerly, before dividends were paid, tax was deducted at the company rate whether or not the company paying the dividends was exempted from tax on its profits, But now, the Income Tax law provides that dividends are no longer taxable in the hands of shareholders. It follows, therefore, that the shareholders of tax-exempt corporations of companies which pay dividends earn more money on their investments than the shareholders of other corporations or companies which are not so exempt. In the interest of equity all corporations which pay dividends to their shareholders should be liable to tax on their profits.

* Note submitted by Mrs. Elizabeth de Brauw, member of the Bureau; research staff.

The new rates strcuture for individuals o bodies of persons is as follows:

Income Tax

Chargeable income	*Rate of Tax %*
For every Cedi of the first ₵648	Nil
For every Cedi of the next ₵240	5
For every Cedi of the next ₵480	7½
For every Cedi of the next ₵480	10
For every Cedi of the next ₵960	12½
For every Cedi of the next ₵960	15
For every Cedi of the next ₵960	25
For every Cedi of the next ₵1,200	35
For every Cedi of the next ₵2,400	45
For every Cedi of the next ₵2,400	60
For every Cedi exceeding ₵10,728	70

Surtax

Chargeable income	*Rate of Tax %*
For every Cedi of the first ₵14,400	Nil
For every Cedi of the next ₵36,000	10
For every Cedi exceeding ₵50,400	15

As a result of these changes the rates stru ture for pensioners will now be as follow

Income Tax

Chargeable income	*Rate o Tax %*
For every Cedi of the first ₵1,020	Nil
For every Cedi of the next ₵480	2½
For every Cedi of the next ₵960	5
For every Cedi of the next ₵960	7½
For every Cedi of the next ₵960	25
For every Cedi of the next ₵1,200	35
For every Cedi of the next ₵2,400	45
For every Cedi of the next ₵2,400	60
For every Cedi of the next ₵10,728	70

Surtax

Chargeable income	*Rate Tax %*
For every Cedi of the first ₵14,400	Ni
For every Cedi of the next ₵36,000	10
For every Cedi exceeding ₵50,400	15

Capital Allowances for Rubber, Oil Palm and other Plantations

In furtherance of the Government's po to promote and encourage investmen agriculture, it has been decided to g

capital allowances to any person (i.e. any company or individual or body of persons) who establishes large-scale rubber, oil palm and other plantations in the country. The initial capital allowance on qualifying plantation expenditure shall be 10 percent and the annual allowance shall be such rate *per centum* as shall be determined by the Commissioner of Income Tax to be just and reasonable having regard to the productive life of the plantation and its estimated value at the end of such productive life.

Capital Gains Tax

It has been realised that the collection of revenue in respect of capital gains is held up because of a provision in the Capital Gains Tax Decree, 1975 (N.R.C.D. 347) which permits an owner who disposes of a chargeable asset in order to use the full sale proceeds to acquire a similar chargeable asset within a period of one year, to avoid payment of the tax. As this provision tends to defeat the purpose of the whole Decree, it has been decided to limit the application of the provisions to transactions affecting dwelling houses only. This amendment shall take effect from the date on which the Capital Gains Tax Decree, 1975 came intro force, that is 22nd August, 1975.

II. INDIRECT TAXES

Minerals Duty

In order to save mining companies producing low grade ores and companies operating on the margin from the burden of the minerals duty is has been decided to amend the rates of mineral duty as follows:

Yield Ratio	*Rate of Duty*
Over 0 and up to 25 percent	5 percent of the value of minerals won (previously 10 percent)
Over 25 and up to 45 percent	10 percent of the value of minerals won
Over 45 and up to 60 percent	15 percent of the value of minerals won
Over 60 and up to 75 percent	20 percent of the value of minerals won
Over 75 and up to 100 percent	25 percent of the value of minerals won

Casino Revenue Tax

It has been decided to abolish the 2½ percent tax on the gross revenue of all casinos with immediate effect. However, the table of tax payable by casinos has been changed as follows:

	Tax per Table at ₵
Casinos in Accra	24,000.00 (previously 10,000)
Casinos outside Accra	12,000.00 (previously 5,000)

SUMMARY OF GHANAIAN TAXATION

Income Tax: is payable on the income of individuals and legal entities accruing in, derived from, brought into or received in Ghana. Non-residents are liable to tax on income accruing in or derived from Ghana. Rates are as follows:

A. *Individuals:*
   (i) residents: at present chargeable income not exceeding 648 Cedi is exempt; income exceeding this amount is chargeable to tax at rates from 5 percent (on the first 240 ₵ over 300 ₵) to 75 percent (on every Cedi exceeding 14,400).
   (ii) non-residents: tax rates are the same as for residents but tax may not be less than 35 percent of total income.
   (iii) pensioners: pension income not remitted out of Ghana is charged at rates between 2½ percent and 70 percent, the first 1,020 ₵ being exempt.
   (iv) income from rent is charged at rates varying between 5 percent (on the first 5,000 ₵) and 30 percent (on income exceeding 50,000 ₵).

B. *Companies:* residents and non-residents alike are liable to tax at the rate of 55 percent for industrial companies and 65 percent for commercial companies. Special rates of 35 percent, 45 percent and 50 percent apply to wholly owned Ghanaian companies whose turnover does not exceed 200,000 ₵.

Deduction at source: tax is deducted at source from employment and pension income, interest and royalties — but not on dividends — at the appropriate rate of company or individual income tax. Dividends are not taxable in the hands of shareholders.

Capital gains tax: levied on the disposition of buildings, business assets, land, stocks and shares at rates between 15 percent and 55 percent.

Gift tax: payable by recipients of gifts *inter vivos* of buildings, securities, land and cash, the value of which exceeds 2,000 ₵, at rates between 5 percent and 15 percent.

Mineral oil profits tax: payable on profits from mineral oil operations at the rate of 50 percent. No income tax is payable on income subject to this tax.

Customs duties: generally ad valorem at rates between 5 percent (reduced rate) and 150 percent (luxury rate).

Excise duties: generally ad valorem between 5 percent and 75 percent on certain locally produced goods e.g. alcohol, tobacco and soap.

Stamp duty: duty varies according to nature and value of deed.

Sales tax: 10 percent sales price or value.

Mineral duty: charged on minerals won in mining operations. For present rates see p. 133.

Import Licences Levy

There is already in existence under the Imports and Exports (Fees) Regulations, 1975 (L.I. 1025) an import licence levy ranging from 5 to 150 percent. In place of the differentiated rates, however, Government has decided to introduce a flat 10 percent levy on the face value of licences issued to importers. This levy shall be paid by the prospective importer to the Commissioner of Income Tax who will issue a receipt for it. Both the serial number and amount of levy paid will be endorsed on the import licence before it is released to the importer, by the Ministry of Trade and Tourism. To facilitate the collection of this levy, Government has decided that henceforth, the Ministry of Trade and Tourism shall furnish the Commissioner of Income Tax with details of all import licences which have been issued to importers.

Companies granted tax exemption under the Capital Investments Decree, 1973 (N.R.C.D. 141), shall not be liable to pay the levy during the period of exemption. Similarly, import licences in respect of agricultural machinery and inputs as well as licences issued to charitable organisations will not attract the levy. The import licence levy shall be allowable as an expense in ascertaining the income of any person or company.

Miscellaneous

The hotel and restaurant proprietor's tax will be abolished and an advertisement tax of 15 percent will be imposed on the cost of every advertisement made through advertising media.

Zambia-The 1977 Budget *

The Budget for 1977 was presented in Parliament on 28th January, 1977 by the Minister of Finance, the Hon. John Mwanakatwe. The reaction of the public to the budget proposals was generally favourable. The consensus of opinion was that the budget was fair and reasonable in the context of the difficult economic situation prevailing in the country.

ECONOMIC CONDITIONS

The Minister of Finance referred to the economic conditions in the country at length. These may be summarised as follows:

(a) the low level of prices fetched for copper, the main income earner of the country
(b) a large deficit in the balance of payments. The overall deficit in 1976 was estimated at K105 million
(c) the large increase in consumer prices mainly attributed to inflationary trends abroad.

ECONOMIC POLICY

The significant features of the economic policy announced by the Minister of Finance are the following:

(a) diversification of the economy with a view to eliminating complete dependence on copper as the mainstay of the economy. Mention was made of the facts that copper is a wasting asset and is subject to erractic fluctuations in price.
(b) the concentration of the bulk of financial and manpower resources on the development of agriculture.
(c) promotion of small scale industries geared towards import substitution and exports.
(d) tight control on the issue of import licences with a view to the control and restriction of imports to essential items.
(e) the encouragement of private enterprise, in particular foreign private investment.

MEASURES TO GIVE EFFECT TO ECONOMIC POLICY

Various measures were announced to give effect to the economic policy. Some of these briefly stated are as follows:

(1) The existing subsidies on fertiliser and maize, the main agricultural product of the country, will be maintained.

(2) The appeal to the managements of parastatal organisations to concentrate more on small scale industries. For this purpose and with a view to making these organisations more viable and enabling them to produce more goods and services they will be allowed to charge economic prices for their products.

(3) In order to encourage exports exporters registered with the Ministry of Commerce will be given priority in the allocation of import licences and priority in the allocation of foreign exchange. These are in addition to the existing incentives such as the exemption of items meant for export from sales tax and excise duty and the repayment of customs duty paid on raw materials used by a large number of industries.

(4) The most significant measures announced are perhaps the exchange control concessions designed to attract foreign private investors and inspire confidence in the business community generally. With effect from the financial year ending 30th June, 1977 private investors will be allowed to remit either 15 percent of the paid up capital of their companies or 50 percent of the profit whichever is less. The corresponding figures at present are 10 percent and 30 percent. Expatriate farmers will be allowed to remit annually 12½ percent of their after tax profits from 1st April, 1977 as against the prevailing 10 percent. A new scheme, under which a reasonable final emigration allowance would be allowed, is to be introduced. The quantum of such allowance would depend on a number of factors such as the age of the applicant, the value of assets and length of stay in the country. A necessary and, perhaps, long overdue proposal is that the application should be supported by tax returns. If implemented properly this measure would effectively serve the dual purpose of checking some of the abuses relating to exchang control and of ensuring that what a perso seeks to take out of the country is consi tent with his earnings and savings over th years.

REVENUE MEASURES

Having forecast an overall budgetary de cit of K152.1 million the Minister a nounced a series of measures designed raise K53.65 million in revenue for t year. Some of these measures are conside ed below.

INCOME TAX

A noteworthy feature in this year's budg is the relatively insignificant changes in i come tax especially in relation to person income tax. The existing rates of person income tax are set out in the followi table:

Chargeable income	*Ra*
First 500	5.0
Next 1,500	10.0
Next 2,000	22.5
Next 2,000	32.5
Next 2,000	45.0
Next 2,000	55.0
Next 2,000	65.0
Exceeds 12,000	75.0

The only change which will come in force on 1st April, 1977 is the increase the existing rates of 22.5 percent and 32 percent to 25 percent and 35 percent. T practical result of the change is that a p son having a chargeable income in excess

SUMMARY OF ZAMBIAN TAXATION

Income Tax: is payable on the income of individuals and legal entities receiving income from a source within or deemed to be within Zambia. Individuals and legal entities ordinarily resident in Zambia are also subject to income tax on dividends and interest from a source outside Zambia. Rates are as follows:

A. *Individuals:* income less exemptions and allowable deductions is subject to a graduated rate of income tax of 5 percent on the first K 500 ranging to 75 percent of the income in excess of K 12,000.

B. *Companies:* current rate 45 percent to be increased to 50 percent.

Death duties: are payable on death on the principal value in excess of K 15,000 of taxable property of which the deceased was at his death competent to dispose. Rates vary from 4 to 10 percent.

Customs duties: there are both ad valorem and specific duties, the rates vary from 5 to 50 percent plus a 10 percent temporary surcharge on all imports.

Excise duties: payable at specific rates on goods indicated in the tariff which are manufactured or produced in Zambia. The rate is charged per pound or per gallon as the case may be.

Stamp duty: payable on legal documents and instruments, the rate varies according to the nature and the value expressed in the document.

Sales taxes: are imposed on imported goods, goods manufactured locally and goods and services provided by hotels and restaurants. The rate is generally 10 percent, but may differ for certain locally manufactured goods.

Levies: Zambia imposes a number of levies on, for instance, dairy produce, agricultural products, African beer, tobacco and entertainment.

* Note submitted by our correspondent Mr. A de Silva, Zambia.

K2,000 for the year will pay more income ax subject to a maximum of K100. The hange is intended to affect only marginal- y the middle and higher income groups.

The present rate of income tax on compa- ies, which has been in force since 1 April 969, is 45 percent. The rate will be in- reased to 50 percent with effect from the ncome tax year ending on 31st March, 977.

ELECTIVE EMPLOYMENT TAX

The tax was originally introduced in 1975 nd was intended to be more an incentive o Zambianisation in the private sector, s evidenced by the exemptions from the ax in the Selective Employment Tax Act, han as a revenue raising measure.

The rate in 1975 was 5 percent and the tax as allowed for income tax purposes. In 976 the rate was increased to 10 percent nd the tax was no longer allowed for in- ome tax purposes. With effect from 1st pril 1977 the rate has been further in- reased to 15 percent and the tax will be llowed for income tax purposes as in 1975.

announcing the new rate the Minister Finance said that there is little evidence at since the tax was introduced the pace Zambianisation has been accelerated. he effectiveness of the tax as an in- rument for stepping up the pace of Zam- anisation was doubtful from the outset d it would appear that the real remedy s elsewhere. This fact was acknowledged by the Minister of Finance when he said that the key to the solution of the problem lies in formulating a massive training programme for local technical and professional personnel in accordance with the country's manpower requirements for the next decade.

EMPLOYMENT PERMIT FEES

Expatriates can be employed in the country only if they possess valid employment permits issued in terms of the Immigration Act. A prescribed fee is charged for the issue of a permit. The present fee of K50 has been increased to K100. The increase is a further measure for encouraging the Zambianisation programme.

EDUCATION LEVY

An education levy estimated to add K1 million to revenue has been proposed from 1st April 1977 on all registered companies whether parastatal or private on the basis that these organisations have benefited from the costly and continuing government programme of education and training.

The Minister of Finance substantiated his views by quoting figures which indicated that the total amount spent by the Ministry of Education had increased from K18.4 million in 1964/65 to K87.6 million in 1974 and K115 million in 1976. The amounts stated include both capital and recurrent expenditure.

CUSTOMS DUTY

A change in the basis of valuation from f.o.b. to c.i.f. for customs duty purposes is being contemplated. The Minister of Finance said he would put forward the new system for approval by Parliament as and when he finds it feasible. Unless there is an adjustment in the rates at which duty is charged and other adequate measures are taken the change could have an adverse effect on the already very high cost of living in the country.

CONCLUSION

In his conclusion the Minister of Finance said that the proposals he has made are intended to balance the requirements of the taxpayer and those of the nation as a whole. He also said that he had deliberately avoided making proposals which would hit the low earners hard and make their lives unbearable. It might be mentioned here that in the sphere of personal income tax the changes in the rates will not, as pointed out by the Minister of Finance, affect in any way an average Zambian family composed of a working husband, wife and three children earning K3,600 or less per year i.e. the chargeable income of K2,000 referred to in the note above on income tax plus the personal allowance of K1,000 and child allowance of K600 at the rate of K200 per child.

Finally the Minister of Finance stated that this year's Budget has been prepared with this main objective in view — that the road to prosperity in Zambia lies in *self-reliance*. Evidance of this is provided inter alia by the measures outlined earlier to give effect to the economic policy.

r. ROY JENKINS ON TAX HARMONIZATION

an address of 8 February, 1977 in which he presented the E.C. Commission's programme for 1977, Mr. Roy Jenkins, esident of the Commission, said the following on the subject tax harmonization in the E.E.C.

lue Added Tax (VAT). The Commission's prime concern at the ginning of this year is to see the proposal for the sixth VAT ective adopted before 1 March 1977, so that the Community be financed entirely from its own resources from 1 January 78. The Commission will carry on implementing the action gramme for taxation — transmitted to the Council on 30 July 75, E.C. Bulletin 7/8-1975, points 1401 to 1404 — taking the ps described below.

ect taxes. In the second half of 1977 the Commission will sent a proposal for extending to *collective investment undertakings* the application of the principles of the proposed directive concerning the harmonization of systems of company taxation and of withholding taxes on dividends. (See for this proposed directive the special issue of "European Taxation", February/March/April, 1976 — *Editor's Note*).

Tax evasion (indirect taxes). In the second half of 1977 the Commission will send the Council a proposal on *mutual assistance and cooperation* between national tax authorities in the field of indirect taxes, similar to the one already presented on direct taxes.

Prior consultation procedure. The Commission will transmit to the Council in the second half of the year a proposal for introducing a prior consultation procedure for important tax measures which national authorities may envisage in areas coming under the tax harmonization process.

From Prentice Hall

An indispensable aid for American businessmen, investors and corporations engaged in or planning foreign operations and for those in foreign countries planning or doing business in the United States —

TAX TREATIES

This definitive guide is indispensable for any businessman or corporation that sells, buys, manufactures, or invests in the United States — as well as for any American businessman or corporation that does business in foreign countries. It tells you:

- o How and where to handle your investments while eliminating the chance of double taxation.
- o How much of your investment income will be protected by tax treaty exemptions.
- o How much business Americans can carry on in a foreign country and vice versa without becoming taxable as a "permanent establishment."
- o How to protect your employees who are temporarily at work abroad from a double tax burden.

In Tax Treaties, you'll also find:

1. The full official text of every existing treaty, supplementary treaty, or protocol relating to income taxes and estate and gift taxes between the United States and each of its tax-treaty countries, including model treaties showing the latest trends.
2. Annotated editorial text arranged in a Uniform Paragraph Plan . . . makes for easy direct comparison of provisions of one tax treaty country with another . . . permits a single unified index which works hand in hand with this unique setup. You'll make sure, speedy decisions at the flip of a wrist.
3. Official reports on each treaty giving you the background behind the provisions; why particular treaty articles were included; and what each provision means to you.
4. A Special Finding List at the beginning of the editorial summary for each country . . . speeds you quickly to explanatory and official material that affects you.
5. Monthly REPORT BULLETINS, analyzing the latest treaties, decisions and rulings, keep you right on top of today's fast breaking tax treaty developments . . . (plus Current Matter containing the most recent U.S. court decisions and IRS rulings giving you the latest judicial and official word on tax treaties.)

In today's constantly expanding international commerce, expert tax-managing or tax-counseling of business activities between the United States and each of its treaty countries is a must — so keep up to date with Prentice-Hall's TAX TREATIES.

To order a one-year introductory subscription to this unique publication at the low rate of only $ 120, address Department S-TT-103.

Tax Aspects of the Activities of Transnational Corporations and International Double Taxation.

*by A. Atchabahian**

CONTENTS

1. *Taxation on the income of transnational corporations and international double taxation.*
2. *Transfer prices and international double taxation.*
3. *Exchange of information between tax authorities: its scope and objectives.*
4. *Legislative criteria relating to taxation on the income of transnational corporations in force in certain countries of the Western Hemisphere.*
5. *From isolation to co-operation.*

1. *TAXATION ON THE INCOME OF TRANSNATIONAL CORPORATIONS AND INTERNATIONAL DOUBLE TAXATION*

Viewed from the aspect of the problem of international double taxation, an analysis of the taxation of the profits of transnational corporations revolves basically around one essential question: how are the different types of income they receive to be allocated, in order to determine the tax base available to each of the tax jurisdictions which considers itself entitled to tax such income?

The desired outcome is that under no circumstances should the total tax on a given portion of the corporations' income be higher than that which would result from the application of the higher of the tax rates in effect in the countries concerned.

The failure of the general criteria for the international allocation of income applied in different countries to coincide may well result in international double taxation, since the tax jurisdictions concerned with a certain portion of income will almost certainly overlap. Accordingly, the total tax required from the enterprise by the different tax authorities may well be so high that the disposable income, or profits after tax, is no longer regarded as a fair return on the investment involved. At all events, the tax factor, *ceteris paribus*, may be a deterrent to the movement of capital.

It is undoubtedly important to identify the jurisdictional principle in force with regard to income tax in each country, so that the effect of its application to activities of an international character can be measured. However, this can do no more than provide the general framework or terms of reference for approaching the subject, in the sense that it makes it possible to define the circumstances in which income is taxable according to the tax law.

The resulting conclusion does not in itself solve the problem of the actual allocation of each type of income, nor does it decide how income related to international activities is to be allocated to the tax jurisdictions concerned.

The generally complex nature of modern large transnational corporations, resulting from their geographical dispersion, the types of activity they undertake, or from their operational modalities, also makes the task of allocating their income to one or other of the tax jurisdictions in which they perform their activities highly complex. Hence it would be advisable, apart from the application of general principles of jurisdiction, for tax legislation to include specific provisions laying down the criteria for determining the source of each kind of income, in order to permit sound income allocations with regard to such enterprises which could serve as a basis for their taxation.

In other words, regarding interest, dividends, royalties, personal services' retribution, fees, sale of personal or real property, capital gains, etc., the tax law should state in what terms it deems that they are income from domestic or from foreign source. Broad technical discrepancies on the criteria can be found in this respect. Thus, for example, in matters related to interest there are at least two approaches toward identifying their source: the country which pays the interest, or the country where the principal is utilized, as different from the former. As to personal services, it can be maintained that income derived from rendering them has its source either in the country where they are performed, or conversely in the country where the income is to be paid, where different from the former. Likewise, concerning royalties it could be argued that their source is to be located in the country where the patent or the trade mark is utilized, or that such a source is in the country where the payment is to be made, if differing from the former.

* Senior transnational corporations affairs officer at the United Nations Centre on Transnational Corporations. Views expressed in this article are solely those of the author and do not represent the position of the Centre on Transnational Corporations.

Evidently, this is a relevant question whatever the jurisdictional principle adopted as far as income taxation is concerned. It is of no small concern even in the case of countries which tax income world-wide, to determine whether a given income is from domestic or foreign source.

As we shall see later, in commenting upon United States legislation, such a distinction is essential so as to apply the full tax rates in force in the country to income deemed as domestic. If a certain income is regarded as being from a foreign source, in principle it would mean that a foreign tax would be applicable and that eventually a claim for tax credit will be filed against the United States federal income tax.

Furthermore, the treatment of expenses should also be considered in order to define their deductibility, either in allowance of domestic or of foreign source income.

Peggy B. Musgrave points out, in the following clear terms, the advisability of overcoming existing discrepancies in criteria among tax legislations in this matter:

"General international acceptance of basic source rules is needed to prevent overlapping of tax jurisdictions among source countries with possible damaging effects on tax neutrality and internation equity. Furthermore, in the absence of uniformly enforced standards of tax base division, there is an inducement to the multinational corporation to arrange its activities, transactions, and bookkeeping so as to minimize its tax liability, leading to discretionary transfer pricing and profit shifting onto the books of its affiliates in low tax jurisdictions. Tax rate differentials, import duties, and foreign exchange restrictions may all influence the pattern of profit shifting, and inefficiencies together with inequitable loss of tax base among the countries of source are likely to ensue. It thus seems to be desirable that internationally accepted jurisdictional rules be established and enforced." [1]

A report prepared for the fifth meeting of the United Nations Group of Experts on Tax Treaties between Developed and Developing Countries, arrives at similar conclusions, suggesting that it would be

"desirable that procedures be devised to harmonize the views of the countries concerned respecting the principles of allocation and adjustment, and to make possible the effecting of the appropriate correlative adjustments despite possible obstacles under domestic law, so as to protect the taxpayers involved from the problems of inconsistent administrative positions. The accomplishment of those necessary procedures would be more readily made if there could be progress towards internationally acceptable methods and guidelines of allocation."[2]

The Guidelines for Tax Treaties issued as a compendium of the work done by the Group of Experts point out that the adoption of clear principles and techniques for the allocation and apportionment of income at the international level would accomplish two things:

(1) it would reduce the chances that an international business caught between two taxing jurisdictions would be unfairly taxed; (2) at the same time, it would assure that such enterprises would not use their flexibility to slip between the national authorities. [3]

The International Fiscal Association, at its annual congresses of 1971 and 1975, also engaged in extensive discussions of the various aspects of the international allocation of income and expenses, and was able to assemble related information from several countries. [4] The resolution approved during the Congress of 1971 specifically notes, in its first paragraph, "that the reallocation by tax authorities of income or expenses between related entities in different countries often results in economic double taxation". [5]

2. *TRANSFER PRICES AND INTERNATIONAL DOUBLE TAXATION*

Although the tax provisions in force represent the legal background for the international allocation of income obtained by transnational corporations, it may happen that these corporations seek to go beyond these provisions and achieve a different allocation structure, thus altering the amount which each tax jurisdiction can take as its taxable base. This can be done by means of pricing policy for the internal transfer of goods and services, that is, transfers between the parent company and its affiliates or among the affiliates themselves. The result may be an international allocation of the income obtained by transnational corporations quite different from that intended by the tax legislation of the countries involved.

Clearly, the tax consequences of intra-company transfer pricing are of interest to the transnational corporations' home countries and to their host countries as well. A study carried out by the United States Senate Committee on Finance notes:

1. Peggy B. Musgrave, "International Tax Base Division and the Multinational Corporation", *Public Finance*, 1972, pp. 395-396. This idea for the common acceptance of certain technical criteria, as a background for the determination of the source of income, particularly with reference to its application to activities of inter-jurisdictional scope, is also maintained by Charles E. McLure, Jr in "State income taxation of multistate corporations in the United States of America", included in the publication, *The impact of multinational corporations on development and on international relations. Technical papers: Taxation*, United Nations publication, Sales No. E.74.II.A.6), p. 61. See also Eugene F. Corrigan, "Interstate Corporate Income Taxation -- Recent Revolutions and a Modern Response", in *Vanderbilt Law Review*, vol. 29, No. 2 (March 1976), pp. 423-442; it contains ideas that, *mutatis mutandis*, are valid for the determination of the taxable income of transnational corporations, viewed from a new perspective and with innovative proposals.

2. This topic of international income allocation, frequently in conjunction with transfer prices, dealt with in the following section, has been extensively analysed in various reports submitted to the meetings of the Group of Experts. See, in particular the *Fifth Report*, Part II, chaps. II, III and IV (United Nations publication, Sales No. E.75.XVI.1) and the *Sixth Report*, Part One chaps. I and II, and Part Two, chaps. III and IV (United Nations publication, Sales No. E.76.XVI.3). The quotation above is from the Fifth Report, paragraph 104, p.22.

3. *Guidelines for Tax Treaties between Developed and Developing Countries* (United Nations publication, Sales No. E.74.XVI 5), paragraph 51, page 12.

4. International Fiscal Association (IFA), *Cahiers de droit fiscal international*, vols. LVIb and LXb.

5. International Fiscal Association (IFA), *1972 Yearbook* (Rotterdam, 1972), p. 26.

"The chief strategy of tax minimization by multinational companies is manipulation of transfer prices. Subsidiaries can be instructed to set high prices on intra-corporate shipments to high-tax countries, and low prices on those to low-tax countries." 6

The Annex to the Declaration of 21 July 1976 by Governments of OECD Member Countries on International Investment and Multinational Enterprises, contains some guidelines for the enterprises. In one of the two guidelines dealing with taxation it is said:

"Enterprises should refrain from making use of the particular facilities available to them, such as transfer pricing which does not conform to an arm's length standard, for modifying in ways contrary to national laws the tax base on which members of the group are assessed." 7

These views would appear to be confirmed by the fact that transnational corporations with parent companies in certain countries — including the United States — attach great importance to the tax variable in determining their transfer price policy. 8

It might be appropriate, in order to seek an explanation of this manipulation through transfer pricing, to study the structural and operational basis on which transnational corporations function. In this regard, Kopits explains that an affiliated firm established abroad may exhibit various characteristics depending upon its relationship to the parent company, or to the level it occupies in the whole production process: (a) it can be a horizontal extension of the parent company, whose activities it reproduces; (b) it can be vertically integrated forward, in other words, it may operate at a stage in the production process closer to the final product; (c) it can be vertically integrated backward, meaning that its activities precede those of the parent company in the production process, providing the parent with certain inputs, raw materials or intermediate goods; (d) it can be a unit within a conglomerate of diversified economic units, comprehending the total enterprise, devoting itself to the manufacture or trading of goods through activities which may or may not be related to those of the parent company. 9

It may easily be concluded that whatever the modalities of the relationship between the parent company and the affiliate, it is capable of creating an intensive transfer of resources in both directions. This intricate network of intra-company transactions can be used for the transfer of income designed to optimize the total tax burden or liability of the transnational enterprise as a whole.

On the other hand, goods subject to intra-company transfer — particularly in the case of any sort of vertical integration among the units forming the transnational corporation — very often have no equivalents in the market whose prices could be compared with those attributed to the products transferred internally within the framework of the global enterprise.

This peculiarity of goods transferred within a transnational corporation is logically related to the fact that these corporations frequently operate in an oligopolistic market structure. 10 Hence, it may be validly inferred that the transnational corporation is in a position to perform at different degrees of manoeuverability with respect to the abovementioned transfer prices, whether they refer to final products or to intermediate goods.

Clearly, these are all factors that help to render the auditing task of tax administrations very difficult.

It must also be taken into account that in the handling of transfer prices use may even be made of so-called "tax havens" as intermediary bases for the transactions, with a view to minimizing the tax burden for the transnational corporation. "Tax-havens" are utilized for the fictitious transaction of goods and services, as well as to deviate the financial flow resulting from the retribution of capital or the rendering of services (payments for dividends, interest, royalties, fees). This flow too may go to "tax-havens", seeking to reduce the tax obligation.

In connexion with this topic of transfer prices, an international double taxation case may also be created. Let us suppose that in auditing the prices declared by a corporation, the purchasing country reaches the conclusion that they have been too low, and announces a shortfall in the tax paid; the transfer prices resulting from such an adjustment do not coincide with the prices taken into consideration for the tax returns filed by the corporation in the selling country — which we assume is not a "tax-haven". It is easily conceivable that an international double taxation case could be created.

For example: country A, in which the transnational corporation's parent company is located, has agreed that $100 should be the transfer price for an article sent to the corporation's subsidiary in country B, with which country A has no tax treaty; if the latter, once it has investigated the case, finds that the price should be $75, obviously there would be international double taxation on the difference of $25. In other words, if the subsidiary in country B sells the article for $115, the tax adjustment will mean that the tax base will not be $15 — the amount exceeding $100 not taxed by country A — but $40, that is to say the $15, plus $25 which, to some extent, partially or totally, must already have been taxed by country A, when it took into consideration $100 as the selling price for the article.

6. United States Senate, Committee on Finance, *Implications of Multinational Firms for World Trade and Investment and for U.S. Trade and Labor* (Washington, 1973), p. 133. The study notes subsequently: "Transfer-price manipulation can be used for purposes other than tax optimization. When a country prohibits remittance of dividends, the transfer prices can be raised and the dividends taken out that way." (p. 135).
7. Organisation for Economic Co-operation and Development (OECD) *International Investment and Multinational Enterprise* (Paris 1976) p. 16.
8. David K. Eiteman and Arthur T. Stonehill : *Multinational business finance* (Addison-Wesley Publishing Co. Inc., Massachusetts, 1975) p. 366. The other countries whose transnational corporations would follow the same pattern are Canada, France and Italy; corporations based in the Federal Republic of Germany, Scandinavia and the United Kingdom, on the other hand, would attach less importance to the tax variable in establishing their transfer prices.
9. George F. Kopits, "Taxation and Multinational Firm Behaviour: A Critical Survey"; *Staff Papers*, vol. XXIII, no. 3 (November 1976), p. 626. This analysis is based mainly on the one made by Richard E. Caves in "International Corporations: The Industrial Economics of Foreign Investment", *Economica*, vol. 38 (February 1971) pp. 3-11.
10. See Frederick T. Knickerbocker, *Oligopolistic Reaction and Multinational Enterprise* (Boston, Harvard University, 1973).

The enterprise may attempt to remedy the situation before the tax authorities of country A. However, it may encounter centain obstacles for example, the statute of limitations may already be in effect by the time the auditing procedures in country B have finished, or it may even no longer be able to use the amount of additional tax it had to pay in country B as a consequence of the adjustment as a tax credit against the tax in country A.

This situation of international double taxation might perhaps be avoided if a tax treaty were in effect between country A and country B and its provisions contemplated certain measures to solve cases like the one just described.

An idea of the real magnitude of this question of transfer prices for the activities of United States transnational corporations operating in the Western Hemisphere may be gathered from the statistical information published in 1975 by the United States Department of Commerce. This information includes the final data relating to United States direct investments abroad during 1966.

The statistics are based on data supplied by 3,354 parent companies incorporated in the United States; these companies had abroad, in 1966, 20,544 majority-owned affiliates (at least 50 percent of the equity capital belonging to the parent companies); 2,105 (62.7 percent) of the reporting firms had active operations in Canada, through affiliates, and 1,258 (35.5 percent) in Latin America. [11]

The number of affiliates in Canada was 4,102 (approximately 20 percent of the total of 20,544 in the world at large) and in Latin America 4,545 (22.1 percent of the total).

All 20,544 affiliates taken together had total sales of $97.783 million in 1966. Of that total, the existing affiliates in the Western Hemisphere (outside the United States) had sales amounting to $38,140 million (39 percent); $23,876 million (24.4 percent) in Canada, and $14,264 million (14.6 percent) in Latin America. The latter amounts include transactions with the parent company or other affiliates; the corresponding amounts were $2,924 million (12.2 percent of total sales), in the case of Canadian affiliates, and $3,143 million (22 percent of total sales) in the case of affiliates in Latin America. [12]

3. *EXCHANGE OF INFORMATION BETWEEN TAX AUTHORITIES: ITS SCOPE AND OBJECTIVES*

It is virtually axiomatic that in order to cope adequately with problems relating to the international allocation of income and expenses, and to transfer pricing — which can, as we have seen, distort allocations based on the tax legislation — there must be an exchange of information between tax administrations.

In every country, these administrations are empowered, to a greater or lesser extent, to investigate the correctness of the declarations of taxpayers.

However, unlike the case of enterprises whose activities are mainly or exclusively undertaken within national boundaries, and which are not affiliates of foreign enterprises, the thorough implementation of investigative activities regarding the tax liabilities of transnational corporations demands special information which is not always available within the country. With respect to the latter, it is very often necessary to seek information from abroad, that is to say, from the country in which the transnational corporation's parent company is located, or from the countries in which first or second tier affiliates are established.

It is important, therefore, in order to comply with this need for information, that there should be appropriate machinery for making available, or giving access to, the information sought, with special reference to the activities of transnational corporations.

In that sense, the purpose of getting information at the international level used to encounter understandable difficulties, so much so having in mind the confidential nature usually attributed by tax legislation to data connected with the determination of taxpayers' taxable income. At present, the tool on which the countries rely chiefly for gathering data from abroad is exchange of information; a provision agreed upon between the contracting parties to that end occurs regularly in treaties for the avoidance or alleviation of international double taxation.

Actually, it is recognized that this mechanism for the exchange of information does not always function as expeditiously and satisfactorily as would be desirable. Because of this, it is agreed that it should be strengthened in order to effectively achieve the objective of enabling the tax administrations to issue the most correct and incontrovertible assessments for those taxpayers to whom the information refers.

Consequently, the non-existence of a juridical relationship of an international nature, binding each of the signatory Governments to a bilateral treaty to provide the other party with the data that the latter may ask for in conformity with the provisions agreed upon between them, constitutes a marked deficiency. In such circumstances, the possibility of building up, at the international level, an exchange of information about the taxpayers whose tax obligations are under scrutiny depends on contingent and even uncertain factors, whose negative effect could make the effort totally inoperative.

11. There were 1,471 United States parent companies engaged in active operations in developing countries all over the world; the 1,258 parent companies mentioned above represent 85.5 percent of that total.

12. United States Department of Commerce, Bureau of Economic Analysis, *U.S. Direct Investment Abroad, 1966: Final Data* (Washington, D.C., 1975), tables on pp. 197-207.

In the Western Hemisphere there are relatively few developing countries that have in effect comprehensive international tax treaties related to the taxes on income and on capital. Brazil has been the most active country by far in negotiating tax treaties; it has in force treaties with Belgium, the Federal Republic of Germany, Finland, France, Japan, Norway, Portugal, Spain and Sweden. Trinidad and Tobago has in effect treaties with Canada, the United Kingdom and the United States; Peru and Argentina have signed treaties with Sweden; (the treaty signed in 1966 between the Federal Republic of Germany and Argentina, and denounced by the latter in 1972, is partially in force again since 1976);

Barbados and Jamaica have arrangements in regard to the United Kingdom, whose treaties with the United States are applicable to the former two countries; also in force are treaties signed by the Netherlands Antilles with the Netherlands, the United Kingdom and the United States, and Jamaica and Canada have a treaty in effect related to certain kinds of income.

It is clear from the foregoing that machinery for the exchange of tax information, with reference to particular taxpayers and covered by provisions in tax treaties, is not available to the great majority of developing countries in the hemisphere. Their tax authorities are thus prevented from taking advantage of a potentially important means of becoming better acquainted with transnational corporations operating in those countries. The background material that the countries might be able to assemble in such a way would allow them to reach far better-based decisions on taxing the profits of transnational corporations. We do not know whether there is any alternative procedure serving the same purpose, and if so, to what extent it is effective.

Conversely, despite the fact that the developing countries of the Western Hemisphere attract more investment by United States companies than any others in the developing world, the United States tax authorities can get hardly any tax information on the many United States affiliates operating in countries with which the United States has no tax treaty. Canada faces the same situation, though to a lesser extent.

The United States has comprehensive income tax treaties in force at present with 37 countries, whereas Canada with 16 countries. All these treaties include clauses on exchange of information between the competent authorities of the signatory parties. The exchange is made automatically or sometimes at the special request of one of the contracting parties.

The far-reaching effect that may result from the implementation of a request of this sort is indicated by the case of A.L. Burbank and Co. Ltd., decided on 22 October 1975 by the United States Court of Appeals, Second Circuit. According to this decision, there is no impediment to prevent the tax authorities of the United States, in complying with the terms of the treaty signed with Canada, from supplying the latter country with the information requested for a tax investigation which it is undertaking, with respect to a given taxpayer, even though the United States has no immediate fiscal interest in that taxpayer, in the sense of any pending tax debt.

All this suggests the advisability of seeking some solution to this deficiency, perhaps by means of an agreement or understanding of a multilateral character, applicable throughout the hemisphere, whereby the exchange of information would be facilitated, and at the same time encompassed with all the safeguards provided in that regard in bilateral treaties for the avoidance of international double taxation. [13]

In this way it would be possible to form an actual infrastructure with the information received by each country from the other countries, which would be in addition to the information gathered internally.

It could evolve into a valuable tool for tax administrations to use in order to neutralize attempts at tax evasion, which, among other causes, might be influenced by the manipulation of transfer prices in the internal transactions of transnational corporations.

The Fifth Report of the Group of Experts referred to above contains the following remarks on the importance of having a good system for the exchange of information:

"It was recognized that solutions to the problems of allocation were linked to the aspect of exchange of information . . . A considerable part of the difficulties in solving allocation situations lay in the absence of relevant information. For example, countries in which goods were sold desired information as to the costs involved in producing the goods; countries whose companies were being charged for services desired information on the amount and nature of the expenses involved. As a consequence, constructive steps to increase the exchange of information among tax administrations would aid in the appropriate solution of allocation issues. Such adequate information might also be useful in allaying the fear and suspicion of tax authorities that the tax allocations always involved over-reaching or other manipulation by the companies involved. [14]

4. *LEGISLATIVE CRITERIA RELATING TO TAXATION ON THE INCOME OF TRANSNATIONAL CORPORATIONS IN CERTAIN COUNTRIES OF THE WESTERN HEMISPHERE*

For the purposes of this analysis, there are two distinct groups of countries: on the one hand, there is the United States, which is the home country of the great

13. The Scandinavian countries have agreed upon a multilateral convention solely on exchange of fiscal information. *Tax Treaties Between Developed and Developing Countries: Fifth Report*, (United Nations publication, Sales No. E.75.XVI.1) para. 120, p. 20.

14. *Tax Treaties Between Developed and Developing Countries: Fifth Report* (United Nations publication, Sales No. E.75.XVI.1) para. 103, p. 22. The subject of exchange of information between tax authorities has been discussed by the Group of Experts at all its sessions, beginning with the first in December 1968. The corresponding published reports frequently related such an exchange to the aim of combatting various forms of tax fraud, tax evasion and tax avoidance, which could be committed by individual and corporate taxpayers, including among the latter the transnational corporations. In that regard, among other considerations contained in the aforesaid reports by way of conclusion, it is pointed out the uneven situation that the countries face when they do not have signed tax treaties with respect to those which have signed them.

majority of the most important transnational corporations in the world, and Canada, a developed country which, though to a much lesser extent than the former, is also the home country of transnational corporations: on the other there are all the remaining countries, which are at varying stages of development and which chiefly play the role of host countries to the affiliates of these corporations.

In inquiring into the different tax legislations in force in the hemisphere, and trying to extract the adopted criteria, in matters concerning international allocation of transnational corporations' income and expenses — obviously including treatment of transfer pricing of goods and services — the case of the United States will be analysed in the first group of countries, and some of the legislations that contain more specific provisions in that regard in the second group of countries.

I. Along with the fact that in the entire world the United States is the home country for the majority of the largest transnational corporations, the fact that the federal income tax, as a principle, taxes the world-wide income of every taxpayer, be this an individual or a corporation should be taken into account. Hence, American legislation is justifiably one of the most elaborated in taxing the income of these enterprises.

Sections 482 and 861 of the Internal Revenue Code, and their corresponding regulations, are the main provisions concerned with the allocation of income and expenses. Obviously, these provisions apply also to transnational corporations.

Since it was adopted in 1928, Section 482 has not been substantially amended. One of its most important objectives has been and still is to neutralize the legally undesired tax effects resulting from the transfer of profits between economically related enterprises.

Until early in the 1950s, Section 482 and its then existing regulations were very seldom applied by tax authorities to determine the income obtained by taxpayers with operations of international scope.

As the 1960s have experienced the great use of the modern United States transnational corporation with multiple activities all over the world, the need was felt to regulate Section 482 in greater detail. During 1968 and 1969, therefore, new regulations were approved for this Section. They explain its provisions as follows:

"The purpose of section 482 is to place a controlled taxpayer on a tax parity with an uncontrolled taxpayer, by determining, according to the standard of an uncontrolled taxpayer, the true taxable income from the property and business of a controlled taxpayer . . . The standard to be applied in every case is that of an uncontrolled taxpayer dealing at arm's length with another uncontrolled taxpayer" (Income Tax Regulations, Section 1.482-1. (b). Scope and purpose (1).

The criterion of arm's length dealing in the relationship between one taxpayer and another is plain in the context of the regulations and has so far been unequivocally upheld by the courts in the United States.

In the exercise of his tax auditing authority, the Commissioner of the Internal Revenue Service can proceed in one of two ways, as he deems more appropriate: he can adjust each particular transaction which took place between controlled taxpayers, or he can adjust the annual gross income of the taxpayers involved.

The regulations provide specifically for three methods of calculating the price to be regarded as an arm's length price established between uncontrolled taxpayers; they also indicate the cases in which each method should be applied. Among the three methods that follow, the first mentioned is usually given priority, since it accords most closely with the general and basic criterion cited earlier:

(a) the comparable uncontrolled price method, which seeks to compare a merchandise's market price with the price taken into consideration for the transaction between controlled taxpayers;
(b) the resale price method, calculated on the basis of discounting the resale margin or mark-up from the arm's length price at which the merchandise would be sold by an uncontrolled buyer;
(c) the cost-plus method, calculated on the basis of adding the mark-up to the cost of the merchandise, on the assumption that the transaction is carried out by an uncontrolled seller.

On the other hand, the regulations for Section 482 also provide that if none of the three methods can reasonably be applied, owing to the facts and circumstances present in a particular case, the administrative authority may use any other method which it regards as appropriate.[15]

Section 861 of the Internal Revenue Code deals with the determination of sources of different types of income and contains special and quite precise provisions in that regard.

In January 1977, detailed regulatory clauses were approved for Section 861, designed to prevent enterprises like the transnationals from tending to claim their deductions principally or totally with respect to their income from United States sources, their objective being to increase the amount of income tax paid abroad and credited against the United States income tax.

This would be the case, for instance, of transnational corporations making significant research and development expenditures, usually concentrated in the parent company's home country; if it is assumed that the products resulting from that research activity will be sold in the home country and in the countries in which affiliates are located as well, the total deduction for those research expenses should not be claimed against

15. Among other papers and studies reflecting the experience gathered in applying Section 482 and its regulations, at the international level, see: United States Department of the Treasury *Summary Study of International Cases Involving Section 482 of the Internal Revenue Code* (January, 1973); Michael G. Duerr *Tax Allocations and International Business* (New York, The Conference Board, 1972).

the parent company's income in the home country but according to certain criteria for apportionment between domestic and foreign income.

This is the basic idea of the newly approved Section 861 regulations: deductions must be apportioned according to the ratio between domestic gross income and foreign gross income. There are provisions governing the deduction of interest, research and development expenses, and net operating losses. Expenditures by the parent company supposedly in support of foreign affiliates' administrative activities are generally regarded as non-deductible expenses.

II. The prevailing jurisdictional principle in the developing countries of the hemisphere is one that taxes territorial income; therefore, foreign income is, by these terms, excluded from the sphere of taxation.

Several countries' tax legislation — Argentina, [16] Bolivia, [17] Guatemala, [18] Panama [19] — are slanted to the idea that transnational corporations' affiliates are autonomous entities, so to speak, and then state that the base for the tax on their profits be determined on the ground of separate accounting. [20] This separation should be from the accounting of the parent company and from the accounting that belongs to other branches and establishments or affiliates of the aforesaid company, provides the Argentine statute; the Panamanian regulations also demand separation from the accounting of other branches and affiliates existing in other countries. In order to determine the true net income from domestic sources, the necessary rectifications in the outcome resulting from the accounting of the firm have to be made.

For lack of sufficient accounting, or if the net income of domestic source is not accurately reflected, the tax authority will be able to deem that affiliate or branch and parent company form an economic unit and to determine the net taxable income. The Argentinean and Panamanian regulations state that the net income from domestic source will be determined on the basis of the results obtained by independent enterprises devoted to identical or similar activity.

This intended analogy between the income tax treatment of transnational corporations' affiliates and the income tax treatment of independent enterprises that undertake activities similar to them, can be inappropriate, owing to reasons already pointed out previously, that is to say, usually transnational corporations perform, at world level, in a market of oligopolistic structure, and furthermore, in a given country, they might not have for their products any partner in the market.

Still having in mind income determination of transnational corporations' affiliates, for tax purposes, the Argentinean and Panamanian legislations empower their tax authorities to require antecedents, information and data they may deem necessary for clarifying the internal relations between the affiliate operating in the country and the parent company abroad (the requirement may also be extended to define the relationships with affiliates operating in other countries, state the Panamanian regulations), as well as in order to estimate the internal transfer prices of goods.

In the concrete implementation of the provisions commented in the last two sentences is where the insufficiency of available information within each country is much more noticeable. Such a situation perhaps would be possible to overcome by means of the exchange of information between tax authorities of different countries, that is to say, at the international level.

Whenever there exists a marked discrepancy between the market prices and the invoicing prices for the goods exported and imported, the income tax legislation of Guatemala empowers the competent authority to investigate in order to determine the taxable income, to that end following the provisions applicable to exports and imports.

The provisions of the Guatemalan tax legislation in regard to imports and exports are similar to those in force in Argentina, Bolivia, Mexico, Peru and some countries of the hemisphere. In any event, this set of rules is not sufficient to cover the complex gamut of goods transactions engaged in by transnational corporations at the world level, prices for which very often do not depend upon the course of competitive markets.

Although on the one hand the text of the Panamanian regulations quoted is sufficiently clear in recognizing the importance that tax investigation may have in matters relating to transfer prices in intra-company transactions, mention should be made on the other of provisions of the Panamanian Fiscal Code facilitating the re-invoicing operations by transnational corporations.

To that end, Article 694, paragraph 2, section a), of the Fiscal Code provides that "will not be considered as produced within the territory of the Republic of Panama income originating from the following activities: (a) Invoicing, from an office established in Panama, the sale of merchandise or products for an amount higher than that for which such merchandise or products have been

16. Law 20628, (income tax), art. 14, as amended by Law 21481.
17. Decree Law 12853/75, regulations for the tax on enterprises' income, art. 21.
18. Decree on income tax regulations, art. 14.
19. Decree 60/65, income tax regulations, art. 6.
20. Apportionment of the transnational corporations' worldwide total income, based on different factors, would be another technical approach to the international allocation of their income. The resulting taxable base, on the part of each of the countries where an affiliate was established, would be taxed in accordance with the tax rate there in force.
Several countries' tax legislation (Argentina, Bolivia, Brazil, Guatemala, Peru, Venezuela) with regard to certain activities of international scope and performed by enterprises not incorporated in the country, apply a technique which holds similarities with the aforesaid apportionment method for the international allocation of income. These legislations state the legal presumption, without admitting proof to the contrary in most of the cases, that a fixed percentage of the gross income is regarded as net income from domestic source. This solution is applied to business like international transportation, international news agencies insurance and re-insurance operations; foreign movie film distribution.

invoiced to the office established in Panama, provided that the merchandise or products are moved abroad only; . . ."

Mexico is one of the Western Hemisphere's countries which imposes its income tax on world-wide basis, for individuals and corporations as well.

According to the Mexican income tax law, "agencies or branches of foreign enterprises, established in the Republic", as well as domestic enterprises, are taxed on their total taxable income, "whatever be the location of the source their income stems from" (Art. 3, paragraph I, section c).

Thus the principle of taxing income world-wide is established. However, the law does not contain source rules for the different types of income, or any general criteria for allocating them and expenses, which is particularly important for those taxpayers whose activities are international in character, or who are economically related to other taxpayers in the country, or to other enterprises abroad.

The tax authority possesses powers whereby it can adjust the tax declaration of the taxpayer. These powers are established in Article 19, paragraph VI, section b), of the income tax law, which provides that there may be deemed as aggregate income, susceptible of being taxed, *"the difference between the price declared by the taxpayer and the price determined by the Ministry of Finance and Public Credit, when the price used by the taxpayer is not the true market value. In such cases, the Ministry will determine the price, taking into account the invoice price, the official price, or the current price in the domestic or foreign market".*

The regulations provide that branches of foreign enterprises in the Republic must give evidence that the price at which goods are received from their parent company is equivalent to their production cost, plus transportation costs and import duties only. If such evidence is not provided, the taxable income will be presumptively estimated by the tax authorities (Art. 43).

Once again it should be pointed out the limited effectiveness which these kind of provisions may have, if the action they provide for is not enhanced by the possibility of getting additional information from tax authorities of other countries.

5. *FROM ISOLATION TO CO-OPERATION*

To sum up what has been said previously in this paper, we may conclude that the tax treatment of the income of transnational corporations is a topic of interest to home and host countries alike. All of them are understandably anxious to avoid that, at one extreme, any part of that income should go untaxed, "falling between the cracks", or, at the other, any portion of such income should be subjected to international double taxation.

The problem to be solved, then, lies in arriving at appropriate definitions of the facts on which the taxation of the income of transnational corporations depends, so as to allow each country in which these corporations operate to enjoy an appropriate share of the tax base, as required by the corresponding tax laws.

The tax administrations, and particularly those of developing countries, are faced with two sets of considerations: on the one hand, national considerations, and on the other, considerations of an international character, both closely interrelated.

The national considerations have to do with the legislative approach in force in most of these countries. In this regard, the relative paucity of provisions capable of defining the tax base of taxpayers whose activities are international in scope and whose ownership and decision-making processes are controlled by entities located abroad as accurately as possible is noticeable throughout the developing country tax legislation that has been commented upon here as a representative sample of prevailing legislative thought in those countries. The advisability of more precise tax provisions in this respect applies to every country, whatever jurisdictional principle it adopts, whether one based on source or one based on residence, or a combination of varying proportions of both. That kind of standard would facilitate the task of those authorities in exercising their powers to audit and assess the tax liabilities of every taxpayer.

The tax provisions in question should aim at defining, for each characteristic type of income, the terms according to which it would be regarded as having a domestic or a foreign source. The same should be done with regard to expenses, so as to specify under what conditions they are deductible, and from what income, domestic or foreign, as being related respectively to the production of income within the country or outside it.

This degree of precision with respect to the tax treatment of income and expenses cannot be achieved through the existing general statements contained in the legislation in effect. A similar precision should be extended to explicitly regulate on methods and techniques for the readjustment of transfer prices, whenever the tax authorities deemed that the prices taken into account by the corporation are inacceptable.

The considerations of an international character relate mainly to the insufficient knowledge about the activities of transnational corporations, their vast dimensions and their interwoven complexity, that results from information supplied solely by existing affiliates in each developing country. This information must be supplemented by that which the parent company and other affiliates in other countries can provide. Above all, information from the tax authorities of other countries is needed to bring about a better understanding of the subject.

It would be highly desirable, therefore, to devise a suitable machinery to that end, as long as there is no network of comprehensive tax treaties for the avoidance or alleviation of international double taxation between the developing countries of the Western Hemisphere and at least those industrialized countries from which the major transnational corporations come. This should not preclude agreements among the developing countries themselves, also to be recommended.

Any action on only one of these fronts, the domestic or the international, would not adequately solve the tax equation in its entirety.

If the option chosen were simply to prepare legal provsions more specific than those now in existence, which would envisage detailed technical solutions for the problem of allocating taxable income and deductible expenses, clearly the tax administrations would have available a much better juridical basis on which to make their decisions.

However, unless at the same time the foundation was laid for an active exchange of information at the international level, the tax administrations would remain in their present isolation, as far as taxation on the income of transnational corporations was concerned. Co-operative efforts on this place would be of general benefit.

In other words, the interplay of the measures adopted at both levels would serve to assure a revenue distribution among countries in accordance with the true scale upon which each one is affected by the tax events stemming from transnational corporation activities.

Furthermore, while, on the one hand, the decision-making processes of tax administrations would attain a higher degree of objectivity and rationality in their dealings with transnational corporations, on the other, these corporations would enjoy much greater certainty regarding the tax treatment and international allocation of their income and their deductible expenses.

NORTH SEA DIVERS TRAPPED IN THE TAX NET

The British Government is planning to treat divers working for companies operating in the North Sea as salaried employees rather than as self-employed persons. The consequence would be that the employers must deduct income tax under the Pay-as-you-earn provisions.
The Government's decision which is based on Section 38 of the 1973 Finance Act which extended U.K. tax laws to the Continental Shelf will meet with strong opposition from the Divers Action Committee who predicts a reduction of skilled divers available for bringing on stream new oil fields and the inspection and maintenance of off-shore structures.

AFTER THE COFFEE ALSO THE TEA?

The Indian Government in its wish to reserve sufficient tea for home consumption has decided to impose an export levy of Rs 5 per kilogram on tea exports.

It hopes that because of this measure there will be more tea available for the Indian home market and that it may help to reduce prices.

However, the export tax will not be imposed on the export of tea bags containing not more than 2.5 grams net of tea, of tea packed in containers with up to 1 kilogram net of tea and instant tea.

FRANCE INTRODUCES CAPITAL GAINS TAXATION:

A MAJOR BREAKTHROUGH IN CONTINENTAL TAXATION PHILOSOPHY.

The taxation of capital gains has always been a controversial problem in the European countries. Whereas the United States when introducing its first income tax law in 1913 did not make a distinction between "normal" income and capital gains (a more favorable treatment of capital gains was introduced in 1921), European countries have generally excluded capital gains from the scope of their income tax laws. The first European country which took the big step and introduced a general capital gains tax was the United Kingdom, which in 1971 completed its present capital gains tax legislation. The European continental countries, however, continued to consider capital gains as non-income (and thus not taxable), although they allowed major exceptions to this rule. For instance, capital gains derived by an individual or corporate taxpayer engaged in business activities are without exception considered to be part of the taxpayer's business income and subject to tax at normal — or sometimes at reduced — rates. Private individuals may be subject to income tax with respect to the sale of property if there is speculative intent, and in many cases the law assumes such intent if the sale takes place within a specified period of time. In many cases the sale of real property is regarded with a wary eye and the law imposes stricter rules. Another major exception is that many countries subject gains derived from the sale of shares to income tax if the shareholder owns a substantial interest in the company.

Among the Continental countries, France already possessed advanced legislation which brought many capital gains within the scope of income tax. Especially with respect to real property gains, the legislature had taken extensive precautions against certain lucrative real property transactions escaping taxation. For instance, gains derived through the sale of land after it has been subdivided or parcelled by the taxpayer and gains derived through the sale of unimproved real property (generally referred to as "building sites" or *terrains à bâtir*) are taxed. A further measure was to deem the sale of real property within ten years from its purchase a speculative transaction subject to income tax unless the taxpayer could prove that no speculative intent existed. However, gains derived through the sale of personal property were generally not subject to income tax with the exception of gains derived from the sale of shares of a company in which the shareholder (together with his spouse and next of kin) owned an interest of more than 25 percent.

However, the French Government under its President, Mr. Valéry Giscard d'Estaing wished to go one step further and, on February 11, 1975, installed a Committee for the study of the introduction of a general capital gains tax (Commission d'étude d'une imposition généralisée des plus-values) chaired by Mr. Albert Monguilan, president of a division of the Cour de Cassation (Supreme Court) which is generally referred to as the "Monguilan Committee" after its Chairman. This Committee in a remarkably short period of time produced on July 28, 1975 its report containing numerous recommendations. It was the Committee's opinion that the introduction of a general capital gains tax, i.e. the extension of the scope of income tax for private taxpayers, the treatment as income of something which hitherto has been considered to be capital, to go back in the past to trace the origin of the taxpayer's property to ascertain the amount of capital gain, whilst not knowing whether the taxpayer intends to use the proceeds for purposes of consumption or for reinvestment showed more than one bold stroke in the Government's plans. However, the Commission was also of the opinion that the French taxpayers would accept the new concepts, provided that the rates of the capital gains tax would remain moderate and provided that no class of taxpayers would be permitted to evade this tax.

On April 20, 1976, the Government presented the Bill for the introduction of a general capital tax to Parliament and after much debate it was enacted in Law No. 76-660 of July 9, 1976. However, the Government did not come through unscathed since it had to accept numerous amendments before Parliament was prepared to pass the Bill.
In its present form the major features of French capital gains taxation, which became generally effective on January 1, 1977 (with the exception of gains on the sale of securities, which will only become subject to the tax starting from January 1, 1978), can be summarized as follows.

Principle

In principle all gains derived from the disposition of goods and valuable rights by private persons (i.e. persons who do not dispose of such goods and rights in the carrying on of business activities) are subject to normal income tax at graduated rates. The new Law does not introduce a separate capital gains tax.

Real property

A. Sale within two years

Gains derived from the sale or other disposition of real property within two years after its acquisition must be added to taxable income. The taxable gain is the difference between the purchase price increased by costs (see below) and the sales price.

B. Sale within ten years with speculative intent

Since 1963 special rules exist for the sale of real property within ten years after its acquisition (which is presumed to be effected with speculative intent unless non-speculative intent can be proven by the taxpayer). The new Law, however, excluded certain property whose sale is clearly non-speculative, such as inherited real property, real property which is expropriated by the Government, agricultural real property, etc.
The taxable gain is the difference between the sales price and the revalued acquisition price. This revaluation price is determined by adding to the acquisition price 3 percent of the acquisition price for each of the first five years which have elapsed after acquisition and 5 percent for each subsequent year. The taxable gain thus computed is subsequently divided by 5 and the resulting amount is added to the taxable income. The *additional* income tax thus computed is multiplied by 5 to arrive at the income tax due with respect to the capital gain.

C. Other sales

Capital gains realized through the sale or other disposition of real property which does not come under the two preceding categories are subject to tax on the difference between the sales price and the sum of the following amounts:
- purchase price (or value if the property is inherited);
- costs for the acquisition of the property (this may be fixed at 10 percent of the acquisition price);
- costs for construction or enlargement of the property;
- costs for improvement of the property which are sufficiently important not to be considered as costs connected with the rentals;
- costs connected with roads.

The purchase price and the amount by which it may be increased is adjusted for inflation through the use of a so-called "average consumption price index". In order to arrive at the taxable capital gain the resulting amount must be reduced by 5 percent of the acquisition price for each year exceeding the tenth year of possession. For unimproved real property (building sites) the above percentage is reduced to 3.33 percent. This amount is further reduced by a deduction of 6,000 Fr.Frs., increased to 75,000 Fr.Frs. in the case of expropriation.
The tax is also computed by adding one fifth of the taxable capital gain to the taxpayer's income and by multiplying the additional tax by 5 (see the taxation of speculation gains, supra). However, in this case the taxpayer may spread the payment of the tax in equal installments over five consecutive years.

D. Exemptions

Exempt from capital gains taxation are:
- the disposition of the taxpayer's principal residence, provided that the has occupied it for at least five years or from the moment of purchase or that he is forced to sell because of family circumstances;
- the disposition of the taxpayer's secondary residence, provided that he meets the above conditions vis-à-vis his secondary residence and provided that he does not own his principal residence;
- the disposition of real property (improved and unimproved) which the taxpayer has owned for at least 20 years (30 years for so-called "building sites");
- the disposition of real property used for agricultural or forestry purposes which are not exploited by the taxpayer, provided that the sales price per square meter does not exceed certain limits prescribed by the Law;
- real property sold for less than 30,000 Fr.Frs.

In addition, where the value of the total real property owned by the taxpayer is less than 400,000 Fr.Frs. no capital gains tax is imposed (with the exception of building sites or buildings which are sold within ten years after their acquisition). Retired persons whose income is so low that no income tax is due are — with the same exceptions — also exempt from capital gains taxation with respect to the sale of real property.

E. Capital losses

Capital losses may not be deducted from capital gains derived from the sale or disposition of personal property or from ordinary income, with the exception of capital losses incurred by certain persons who have repatriated the losses from overseas.

F. Non-residents

Non-resident persons deriving capital gains from the sale or other disposition of real property situated in France are not subject to the graduated rates of French individual income tax but to a flat 33 1/3 percent rate. However, a residence owned by such taxpayers in France falls outside the scope of capital gains taxation.

G. Secondary residences

Taxpayers subject to capital gains taxation with respect to the sale or other disposition of their secondary residence benefit from the following additional relief:
- the interest of the first ten years paid with respect to loans to finance the purchase of the residence is added to the purchase price (to a maximum amount of 7,000 Fr.Frs. per year increased by 1,000 Fr.Frs. for each dependent child).

Personal property

Capital gains derived from the sale or other disposition of personal property are treated in approximately the same manner as real property gains. However, the fixed cost deduction is 2 percent instead of 10 percent.
Only capital gains with respect to property held for less than *one* year (two years for real property) are treated as ordinary income. Other capital gains must be adjusted for inflation by the average consumption price index and the tax due may be spread over 5 years. Long-term gains (i.e. those derived through the sale or other disposition of personal property held for more than 10 years) do not entitle the taxpayer to further adjustments as is the case for long-term real property gains (5 or 3.33 percent).

Special rules apply to capital gains connected with the sale or other disposition of securities (stocks and bonds). In the first place the new capital gains legislation will only become effective with respect to these gains on January 1, 1978. Secondly, no capital gains tax will be due with respect to securities held for more than 10 years or if the proceeds of their sale in a certain year did not exceed 20,000 Fr.Frs.
In addition certain securities are always exempt, such as:
- State bonds;
- other bonds, unless they have been indexed to take inflation into account, if they are convertible into shares, of if they are profit sharing bonds;
- securities covered by a long-term savings engagement;
- certificates issued by investment funds.

Individual investors may request to be authorized to open an "investment account" (generally with a bank) in which their taxable securities (and also to a certain limit non-taxable bonds) will be placed, provided these securities are quoted on a stock exchange. The advantage offered by this arrangement is that the taxpayer can frequently change the contents of his portfolio without becoming subject to capital gains taxation. Only when he realizes part of the portfolio will he become subject to tax.

Persons owning (together with their spouse and next of kin) an interest of more than 25 percent in a French or foreign company are subject to the normal capital gains tax provisions. However, if the participation has been held for more than 10 years there will be no exemption, but the provisions of the old legislation, under which a 15 percent tax is due on any capital gains derived from the sale or other disposition of such participation or part thereof, are revived.
Taxpayers who derive a capital gain connected with securities may choose the general 6,000 Fr.Frs. deduction or a deduction of 50 percent of the amount of capital gains.

Precious metals, jewels, objets d'art etc.

Special rules apply to the sale of precious metals (gold, silver, platinum etc.), jewels, objets d'art, collector's items and antiques which are subject to a lump sum capital gains tax in the form of a flat rate on the proceeds of the sale, i.e. 4 percent on the sale of precious metals, 3 percent on the sale of other items if not sold at public auctions and 2 percent if the sale is effected through a public auction.

D.A. v. W.

NOUVEAU REGIME D'IMPOSITION DES PLUS-VALUES EN FRANCE

Loi No. 76-660 du 19 juillet 1976 (J.O. du 20 juillet 1976)

par Maître Max-Hubert Brochier & M. Jean-Pierre Allavena

1. INTRODUCTION

Une cession s'entend de toute opération (vente, échange) ayant pour effet de faire sortir un élément de l'actif.
Lorsqu'un élément de l'actif est cédé, pour un prix supérieur à sa valeur comptable résiduelle, la différence représente "une plus-value" qui doit en principe être comprise dans les bénéfices imposables.
La plus-value est, selon la définition du Larousse, l'accroissement de la valeur d'un bien entre deux appréciations successives.
La Loi No. 76-660 du 19 juillet 1976 porte imposition des plus-values en France.
Pour les valeurs mobilières, le nouveau régime entrera en vigueur le 1er janvier 1978.
Pour les autres biens, il entrera en vigueur le 1er janvier 1977.
Cette loi, qui comprend quatorze articles traite:

- de l'imposition à l'impôt sur le revenu des plus-values de cession d'immeubles bâtis et non bâtis, et également de certaines biens meubles;
- de la création d'une taxe sur les ventes d'or, de bijoux, d'objets d'art;
- de l'harmonisation de la taxation des plus-values d'origine professionnelle;
- de la modification des règles de taxation des plus values de cession des charges et offices.

Quelles en sont les dispositions essentielles?

. LES PERSONNES IMPOSABLES

.1. LES PERSONNES PHYSIQUES

ont visées toutes les personnes phyques, quelle que soit leur nationali-, qui ont leur domicile réel en France. es titulaires de pension de vieillesse on imposés sur le revenu en sont exoérés, dans la mesure où elles n'étaient pas xables antérieurement.

Des règles spéciales régissent le cas des français non résidents ou des étrangers ayant leur domicile réel hors de France.

2.2. Les sociétés de personnes

Ce sont essentiellement:

1) les sociétés en nom collectif,
2) les sociétés civiles immobilières qui ne sont pas soumises à l'impôt sur les sociétés,
3) les sociétés immobilières "transparentes" aux yeux du droit fiscal,
4) les sociétés à responsabilité limitée de famille qui ont opté pour le régime fiscal des sociétés de personnes.

3. LES BIENS VISES PAR LA LOI

3.1. LES IMMEUBLES

En règle générale, les plus-values réalisées à l'occasion de cessions d'immeubles sont imposables. Mais les plus-values réalisées à l'occasion de la cession d'immeubles ne sont passibles d'aucune imposition lorsqu'ils sont entrés dans le patrimoine du contribuable:

- depuis au moins trente ans pour les terrains à bâtir;
- depuis au moins vingt ans pour les autres immeubles.

3.1.1. *Les exonérations*

3.1.1.1. *Les cas d'exonération relatifs à la nature du bien*

a) La résidence principale

Est exonérée toute plus-value résultant de la vente d'une habitation principale.
Sont donc considérés comme résidence principale: les immeubles ou partie d'immeuble constituant la résidence habituelle du propriétaire depuis l'achèvement ou l'acquisition, ou pendant au moins cinq ans.
La condition de durée est supprimée lorsque la cession est motivée par des conditions d'ordre familial, ou de changement de résidence, ou par une mise à la retraite.
Pour les Français domiciliés hors de France, il y a exonération dans la limite d'une résidence par contribuable.

b) La résidence secondaire

Sont considérés comme résidence secondaire les autres immeubles ou parties d'immeuble.
Pour être exonéré de l'imposition de la plus-value, il faut:

1) que le propriétaire de la résidence secondaire ne soit pas également propriétaire de la résidence principale,
2) qu'il ait eu la libre disposition de cette résidence pendant cinq ans au moins.

La condition de temps est supprimée lorsque la vente est motivée par un changement de lieu d'activité, un changement de résidence consécutif à une mise à la retraite, ou motivé par des impératifs d'ordre familial.

4. CONCLUSION

c) Les terrains agricoles ou forestiers

(i) Cession:

L'imposition de la plus-value ne s'applique pas lors de la cession de terrains agricoles ou forestiers ou lorsque ces terrains supportent une construction d'usage agricole. Néanmoins ces terrains ne pourront être cédés à un prix supérieur à celui qui doit être déterminé par décret.
Ce prix ne pourra être inférieur à:
— 33 F le m^2 pour les vignobles d'appellation contrôlée ou pour les cultures florales;
— 11 F le m^2 pour les cultures fruitières ou maraichères;
— 5 F le m^2 pour les terrains agricoles ou forestiers.

Pour les peuplements forestiers, il y a exonération quel que soit le prix de cession.

(ii) Le remembrement:

Les biens échangés dans le cadre d'opérations de remembrement ou d'opérations assimilées, d'opérations d'échanges amiables individuels ou collectifs sont exonérés de la taxation.
Les soultes versées par les collectivités sur plus-values transitoires ou permanentes consignées au procés-verbal de remembrement rural sont également exonérées. Ces exceptions sont limitées aux opérations conformes aux procédures réglementaires en vigueur.

d) L'expropriation

Les plus-values immobilières réalisées à la suite de la déclaration d'utilité publique prononcée en vue d'une expropriation sont exonérées quand il est procédé au remploi de l'indemnité pour l'achat d'un ou plusieurs biens de même nature dans un délai de six mois et sous réserve que ces plus-values n'aient pas été taxables sous le régime antérieur.
Néanmoins le remploi de l'indemnité d'expropriation doit être fait dans le délai de six mois du règlement de cette dernière.

3.1.1.2. *Les cas d'exonération relatifs à la valeur du bien*

a) le prix de cession de l'immeuble

Lorsque le montant de la cession ne dépasse pas 30.000 Francs, il n'y a pas lieu d'imposer la plus-value réalisée.
Il est alors tenu compte de l'ensemble des cessions réalisées au cours d'une même année. Les cessions exonérées de l'impôt sur les plus-values n'entrent pas en ligne de compte.

b) la valeur de l'ensemble du patrimoine

Il y a également exonération lorsque le patrimoine immobilier familial n'excéde pas 400.000 Francs.
Cette somme est majorée de 100.000 Francs par enfant à charge, à partir du troisième.
L'évaluation du patrimoine immobilier s'effectue au jour de la réalisation de la plus-value, le bien vendu étant inclus dans le patrimoine évalué.
L'administration tiendra compte des dettes contractées pour l'acquisition et la réparation du patrimoine.

3.1.2. *Les immeubles situés à l'étranger*

Sont visés les contribuables domiciliés en France et qui sont soumis à l'impôt sur le revenu en ce qui concerne les revenus fonciers qu'ils perçoivent d'immeubles situés à l'étranger.
La plus-value ayant pour origine la cession de ces immeubles, est soumise à la présente loi sous réserve des conventions internationales fiscales existant en la matière.

3.1.3. *Détermination de la plus-value imposable*

Notons que la plus-value est constituée par la différence entre le prix de cession et le prix d'acquisition d'un bien par le cédant.

3.1.3.1. *Le prix de cession*

Est retenu le prix tel qu'il résulte de l'acte de vente.
La valeur vénale déterminée pour la perception des droits d'enregistrement ne pourra être retenue que lorsqu'il aura été établi que le prix figurant dans l'acte a subi une dissimulation.
A ce prix, on inclue les charges et indemnités prévues au contrat.
On retranche du prix ainsi déterminé, les frais de vente subis par le vendeur.
Il s'agit essentiellement du versement d'une commission à un intermédiaire ou à une agence, ou des frais de publicité.

a) le cas de la rente viagère

Doit être retenu le prix fixé dans l'acte, car c'est lui qui a servi à la constitution de la rente viagère.
A défaut, la valeur prise en compte pour la fixation des droits de mutation sera retenue.

b) le cas d'échange

Au regard du droit fiscal, il s'agit d'une double vente, aussi c'est la valeur réelle du bien acquis qui est retenue.
Il y a exonération lorsque l'échange a lieu dans le cadre d'opérations de remembrement et assimilés. Toutefois, le caractère spéculatif de l'opération peut être prouvé. Dans ce cas, le prix de cession est déterminé en tenant compte de la soulte versée ou reçue.

3.1.3.2. *Les prix d'acquisition*

a) acquisition à titre onéreux

Il s'agit du prix effectivement payé. C'est donc le prix figurant dans l'acte d'acquisition qui doit être retenu.
1) En présence d'un bien reçu en échange, le prix d'acquisition est la valeur réelle du bien cédé au coéchangiste, compte tenu éventuellement des soultes versées ou reçues.
Lorsque l'opération d'échange a eu lieu sous un régime d'exonération, la plus-value est estimée en fonction de la date et du prix d'acquisition du bien remis en échange.
2) En cas d'acquisition au moyen d'une rente viagère, doit être retenu comme prix d'acquisition, dans toutes les hypothèses, le capital représentatif de la rente au jour de l'acquisition du bien.

b) acquisition à titre gratuit

L'acquisition provient soit d'un héritage, soit d'une donation.
Entrent dans la catégorie des donation, les différentes mutations à titre gratuit entre vifs:
— les donations,
— les donations en avances d'hoiries,
— les donations partages,
— les donations par contrat de mariage.

Le prix retenu est celui de la valeur vénale du bien au jour de l'acquisition, c'est à dire, soit celui de la date d'acquisition, soit celui du décès.
En pratique, la valeur à retenir est celle qui aura servi de base au calcul des droits de succession ou de donation.
Pour les donations datant de moins de cinq ans, la plus-value est alors déterminée en fonction de la date d'acquisition faite par le donateur et de la valeur du bien à cette date.
Il s'ensuit que la durée de détention est appréciée en fonction de la date d'acquisition du bien par le donateur.
Le prix de revient est alors celui de la valeur d'acquisition par le donateur.

c) majoration du prix d'acquisition

Au prix d'acquisition tel qu'il vient d'être déterminé, on intègre les frais d'acquisition, les dépenses de construction ou d'amélioration ainsi que, sous certaines conditions, les intérêts d'emprunts pour l'acquisition ou la réparation d'une résidence secondaire.

(i) les frais d'acquisition:

Il s'agit des frais du contrat tels que les frais d'actes, les droits de timbre et d'enregistrement, les honoraires du notaire, les commissions.
S'il n'est pas possible au vendeur de prouver le montant de ces frais, il a la possibilité de déduire forfaitairement 10 pour cent du prix d'acquisition.

En cas d'acquisition à titre gratuit, il est possible de déduire les frais d'acte et de déclaration, mais il n'est plus permis d'y intégrer les droits de succession ou de donation.

(ii) les autres dépenses:

Au prix d'acquisition, peut être intégré le montant des dépenses de construction, de rénovation, d'agrandissement, de reconstruction et d'amélioration qui ont été réalisées depuis l'acquisition.
Ces dépenses seront prises en considération à condition de ne pas avoir été déjà déduites du revenu imposable et de ne pas présenter le caractère de dépenses locatives.
Les travaux effectués par le cédant, sont conjoint ou les membres de sa famille sont pris en compte dans les mêmes conditions que précédemment.
Le contribuable a le choix alors pour la prise en compte de ces travaux à inclure au pris d'acquisition:
- le montant réel des travaux, mais il est difficile de justifier de coût de la main d'oeuvre;
- un montant estimé de manière forfaitaire en appliquant le coefficient trois au prix des matériaux utilisés.

En cas de plus-value à moyen et long terme, et lorsqu'il ne sera pas possible de justifier les frais exposés, le montant des dépenses pourra être fixée au choix du cédant:
- soit à titre d'expert,
- soit forfaitairement à 15 pour cent du prix d'acquisition.

(iii) les intérêts d'emprunts:

Sont pris en compte les intérêts des emprunts contractés pour l'acquisition ou la réparation d'une résidence secondaire, dans la limite de 7.000 Francs par an, plus 1000 Francs par personne à charge.
Cette possibilité est limitée aux dix premières annuités de l'emprunt.

(iv) les honoraires des consultations fiscales:

Ceux-ci demandés au contribuable à l'occasion d'une opération soumise à l'imposition de la plus-value pourront être ajoutés au prix d'acquisition.

3.1.4. *Modalités des consultations de la plus-value*

Elle n'est pas imposée d'une manière uniforme.
Il faut établir une distinction selon que la plus-value ait été réalisée:
) à court terme, c'est-à-dire moins de deux ans après l'acquisition du bien;
) à moyen terme, c'est-à-dire entre deux et dix ans de l'acquisition du bien;
) à long terme, c'est-à-dire entre dix et vingt ans pour les immeubles, et entre dix et trente ans pour les terrains à bâtir.

Toutes les opérations immobilières réalisés à titre professionnel ne sont pas concernées par la Loi nouvelle.

Sont exclus de l'application de cette Loi:
- les personnes qui habituellement achètent des immeubles en vue de les revendre tels que les marchands de biens;
- les profits de lotissement réalisés par les marchands de biens;
- les profits de construction qui procèdent d'opérations à caractère habituel.

3.1.4.1. *Les plus values à court terme*

Les plus-values réalisées moins de deux ans après l'acquisition du bien sont assimilées à un revenu annuel imposable.
Dans le cas, il n'y a aucun correctif tenant compte de l'érosion monétaire, et il n'y a aucune atténuation au système de la progressivité de l'impôt sur le revenu.
Cependant les abattements prévus par la Loi sont applicables et notamment celui de 6000 Francs.

3.1.4.2. *Les plus-values à moyen terme*

Sont visées ici les plus-values réalisées sur un bien détenu entre deux et dix ans.
Sont maintenues les dispositions antérieures concernant les plus-values spéculatives.

a) les plus-values spéculatives

Sont visés les profits réalisés de manière occasionnelle par des particuliers à l'occasion de la cession d'immeubles achetés ou construits depuis moins de dix ans.
Ces profits sont imposés au même titre que des bénéfices industriels et commerciaux.
Ne peuvent être réputées spéculatives que les cessions à titre onéreux à l'exclusion des mutations à titre gratuit et des expropriations.

(i) Les biens soumis à imposition:

Il s'agit essentiellement:
- des immeubles bâtis ou non bâtis;
- des actions ou parts de sociétés de copropriété transparente;
- des droits immobiliers ou mobiliers;
- des titres de sociétés civiles immobilières.

Les immeubles non bâtis concernés par cette imposition sont:
- les terrains nus ou recouverts de constructions destinées à être démolies;
- les immeubles inachevés;
- les droits de surélévation d'immeubles préexistants.

Seuls les terrains destinés à la constructions et dont la cession est assujettie à la T.V.A. sont soumis à cette imposition.

(ii) Les biens non soumis à imposition:
— La résidence principale

Pour ne pas être imposable, le propriétaire doit avoir occupé personnellement sa résidence principale, et cette occupation doit avoir éte effective depuis son acquisition ou son achèvement, ou avoir duré cinq ans au moins.
Si les conditions exigées n'étaient pas remplies, le cédant ne pourrait échapper à l'imposition qu'en démontrant qu'il bénéficie d'une des présomptions d'intention non-spéculative prévue par la Loi.

— Le cas de l'échange

Le terrain reçu dans le cadre de la procédure d'un échange avec une collectivité publique n'entre pas dans le champ d'application de l'imposition.

— Autres cas

La présente Loi permet d'échapper à cette imposition dans les cas suivants:
- la première cession d'une résidence secondaire par une personne qui n'est pas propriétaire de sa résidence principale;
- la cession des terrains agricoles ou forestiers;
- les opérations qui sont présumées ne pas avoir d'intention spéculative.

(iii) Conditions nécessaire à application du régime des plus-values spéculatives:

Trois conditions sont exigées
- le bien doit être cédé à titre onéreux;
- il doit être possédé par le cédant moins de dix ans;
- il doit s'agir d'une opération spéculative.

L'intention spéculative se définit par le fait d'acheter pour revendre.
Il existe un certain nombre de cas dans lesquels l'intention spéculative est exclue.
Il en est ainsi lorsque la cession de l'immeuble est motivée par un changement de résidence ou une meilleure utilisation familiale alors qu'il a été personnellement occupé par l'acquéreur ou le constructeur, par son conjoint, ses descendants, ses ascendants.

Il n'y a pas intention spéculative lorsque:
- l'immeuble vendu n'est plus la résidence principale du contribuable, mais l'a été pendant cinq ans;
- la cession est motivée par la modification de la famille, du nombre de personnes à la charge du contribuable, à un divorce ou à une séparation de corps, à la survenance d'une invalidité du contribuable, à un règlement judiciaire ou à une liquidation des biens;
- l'immeuble a été cédé à une collectivité publique, à une société d'économie mixte;
- la cession de la résidence secondaire est motivée par des considérations familiales ou professionnelles.

(iv) Détermination de la plus-value imposable:

Dans le cas de réalisation d'une plus-value ayant un caractère spéculatif, celle-ci est constituée par la différence entre:
- le prix de cession auquel il aura été loisible de déduire les frais supportés par le cédant (tels que les commissions versées à un intermédiaire);
- le prix de revient du bien cédé. Il est constitué par le prix d'acquisition augmenté du coût réel des frais d'acquisition et des impenses. On y intègre également les intérêts des emprunts contractés pour l'acquisition ou la construction.

Ce prix est alors majoré:
- de 3 pour cent pour les cinq premières années écoulées,
- de 5 pour cent pour chaque année écoulée au-delà de la cinquième.

(v) Modalités d'imposition:

Désormais, le régime prévu par la nouvelle Loi s'applique ici.
La plus-value déterminée est diminué des abattements prévus et le système "de la division par cinq" s'applique également. Seul, le paiement fractionné ne profitera pas à ce type de plus-value imposable.

b) les plus-values n'ayant pas un caractère spéculatif

Ce sont essentiellement les plus-values réalisées par des biens qui avaient été reçus par héritage ou donation ainsi que les plus-values ne présentant pas de caractère spéculatif et qui demeurent imposable sous la nouvelle Loi.
La plus-value imposable est déterminée de la même manière qu'en ce qui concerne les plus-values à court terme.
Le prix d'acquisition est revisé proportionnellement à la variation de l'indice moyen annuel des prix à la consommation depuis la date de l'acquisition ou de la dépense. Ce coefficient n'affecte pas les intérêts d'emprunts faits pour l'acquisition d'une résidence secondaire.
La plus-value ainsi déterminée et déduction faite des abattements éventuels est intégrée dans le revenu global imposable selon le système de la division par cinq et le paiement de l'impôt correspondant peut être étendu sur un période de cinq années.

3.1.4.3. *Les plus-values à long terme*

Ce sont les plus-values réalisées à l'occasion de la cession de biens détenus depuis plus de dix ans.
Ce sont les mêmes règles que pour la détermination de la plus-value imposable réalisée à moyen terme et ne présentant pas de caractère spéculatif.

EXEMPLE I (l'imposition d'une plus-value spéculative)

Soit un immeuble acquis le 2 mai 1970 pour une valeur de 400.000 Francs.
Il est revendu le 2 juillet 1977 par une valeur de 800.000 Francs.
Des impenses ont été faites en 1973 pour une valeur de 40.000 Francs.
Les frais d'acquisition se sont élevés à 30.000 Francs.
Ce contribuable a pour l'année de référence une revenu imposable de 150.000 Francs.
Sa situation de famille est telle qu'il a droit à quatre parts.

— *Détermination du prix d'acquisition*
L'immeuble a été acquis pour 400.000 Francs. A cette some on intègre le montant des frais, soit:
400.000 + 30.000 = 430.000 Francs
Ce prix est revalorisé de 3 pour cent pour les cinq premières années, et de 5 pour cent par an pour celles écoulées au-delà de la cinquième.
L'immeuble est achété en 1970, et il est revendu en 1977 soit:
5 ans à 3 pour cent + 2 ans à 5 pour cent ce qui donne une revalorisation de 25 pour cent
Montant de la revalorisation:
430.000 x 25 pour cent = 107.500 Francs
Le prix d'acquisition brut est donc:
430.000 + 107.500 = 537.500 Francs
En 1973, le contribuable a effectué des impenses pour un montant de 40.000 Francs.
Le montant de revalorisation de ces impenses s'établit comme suit:
de 1973 à 1977, il s'est écoulé quatre ans, ce qui donne 4 x 3 pour cent = 12 pour cent
40.000 x 12 pour cent = 4.800 Francs
Les impenses revalorisées s'établissent donc à:
40.000 + 4.800 = 44.800 Francs

Le prix d'acquisition total est donc de
537.500 + 44.800 = 582.300 Francs

— *Détermination de la plus-value imposable*
La plus-value brute est donc la différence entre le prix de vente et le prix d'acquisition ainsi déterminé:
800.000 — 582.300 = 217.700 Francs
Pour obtenir la plus-value taxable, on déduit les abattements correspondants, et notamment l'abattement général de 6.000 Francs.
La plus-value imposable est donc de:
217.700 — 6.000 = 211.700 Francs

— *Montant de l'imposition de cette plus-value*
On applique, pour déterminer le montant de l'impôt dû au titre de la plus-value, le système de "la division par cinq".
Le contribuable a un revenu imposable de 150.000 Francs. Il a droit a quatre parts.
Au titre de l'année de référence (et selon le barème applicable pour les revenus de l'année 1975), il aurait dû normalement acquitter un impôt sur le revenu d'un montant de: 35.135 Francs
Suivant le système instauré, on divise le montant de la plus-value imposable par cinq:
211.700 : 5 = 42.340 Francs
Le montant normalement imposable des revenus augmenté du cinquième de la plus value nous donne:
150.000 + 42.340 = 192.340 Francs
Montant de l'impôt que ce contribuable devrait régler sur cette somme:
52.071 Francs
On fait donc la différence entre le montant de l'impôt dû normalement et celui qui vient d'être déterminé:
52.071 — 35.135 = 16.936 Francs
Ce chiffre représente le montant de l'impôt dû pour le cinquième de la plus-value
L'impôt dû au titre de la plus-value est de:
16.936 x 5 = 84.680 Francs

EXEMPLE II (plus-value réalisée à moyen terme et non-spéculative)

Soit un immeuble acquis le 2 mai 1970 pour une valeur de 400.000 Francs.
Il est revendu le 2 juillet 1977 pour une valeur de 800.000 Francs.
Des travaux ont été faits en 1973 et s'élèvent à 40.000 Francs.
Les frais d'acquisition sont de 30.000 Francs.
Ce contribuable a pour l'année de référence un revenu imposable de 150.000 Francs.
Sa situation de famille est telle qu'il a droit à quatre parts.

— *Détermination du prix d'acquisition*
L'immeuble a été acquis pour 400.000 Francs.
A cette somme, on intègre le montant des frais d'acquisition qui peuvent être évalués forfaitairement à 10 pour cent.
400.000 + 400.000 = 440.000 Francs
L'immeuble a été acquis en 1970, il faut donc corriger le prix d'acquisition en appliquant le coefficient de revalorisation prévu.
Il est de 1,52, d'après le tableau en vigueur cette année.
Le prix d'acquisition brut est donc de:
440.000 x 1,52 = 668.000 Francs
Des travaux ont été effectué en 1973 pour un montant de 40.000 Francs.
Il convient de revaloriser le coût de ces travaux en appliquant le coefficient de revalorisation de référence pour l'année 1973, soit 1,27.
Montant des travaux revalorisés:
40.000 x 1,27 = 50.800 Francs
Le prix d'acquisition total est donc de:
668.800 + 50.800 = 719.600 Francs

— *Détermination de la plus-value imposable*
La plus-value brute est donc la différence entre le prix de vente et le prix d'acquisition ainsi déterminé:
800.000 — 719.600 = 80.400 Francs
Pour obtenir la plus-value taxable, on déduit les abattements correspondants, et notamment l'abattement général de 6.000 Francs
80.400 — 6.000 = 74.400 Francs

— *Montant de l'imposition de cette plus value*
On applique, pour déterminer le montant de l'impôt dû au titre de la plus-value, le système de la "division par cinq".
Le contribuable a un revenu imposable de 150.000 Francs.
Il a droit à quatre parts.
Au titre de l'année de référence (et selon le barème applicable pour les revenus de l'année 1975), il aurait dû normalement acquitter un impôt sur le revenu d'un montant de: 35.135 Francs
Suivant le système instauré, on divise le montant de la plus-value imposable par cinq:
74.400 : 5 = 14.880 Francs
Le montant imposable des revenus augmenté du cinquième de la plus-value nous donne:
150.000 + 14.880 = 164.880 Francs
Montant de l'impôt que le contribuable devrait sur cette somme:
41.087 Francs
On fait la différence entre le montant de l'impôt normalement dû, et celui qui vient d'être déterminé:
41.087 — 35.135 = 5.952 Francs
Ce chiffre représente le montant de l'impôt dû pour le cinquième de la plus-value.
L'impôt dû au titre de la plus-value est donc égal à:
5.952 x 5 = 29.760 Francs

a plus-value nette ainsi déterminée sera iminuée:

- de 5 pour cent par année de possession au-delà de la dixième pour les immeubles autres que les terrains à bâtir.
- de 3,33 pour cent par année de possession au-delà de la dixième pour les terrains à bâtir.

La plus value ainsi déterminée, et déduction faite des abattements éventuels, est intégrée dans le revenu global imposable selon le système de la division par cinq, et le paiement de l'impôt correspondant peut être étendu sur une période de cinq ans.

3.1.4.4. *Les abattements*

a) Cas général

Un abattement forfaitaire de 6.000 Francs est appliqué pour l'ensemble des plus-values réalisées au cours d'une même année. Il s'applique même en cas de plus-values réalisées à court terme. Néanmoins, il ne pourra s'appliquer qu'une seule fois, si plusieurs plus-values sont réalisées au cours de la même année.

b) Cas particuliers

(i) L'expropriation:

Un abattement de 75.000 Francs est appliqué aux plus-values immobilières ayant pour origine une ou plusieurs expropriations au cours d'une même année. Cet abattement ne peut être cumulé avec l'abattement de 6.000 Francs.

(ii) Les résidences secondaires:

Bénéficie de cet abattement la première cession de la résidence secondaire imposable, laquelle doit avoir été détenue depuis cinq ans au moins.
La plus-value est alors diminuée de 20.000 Francs pour chacun des époux, et de 10.000 Francs par enfant vivant ou représenté.
Cet abattement est de 30.000 Francs pour les veufs, les divorcés ou les célibataires. Cet abattement se cumule avec celui de 6.000 Francs.

3.2. LES MEUBLES

L'imposition des plus-values étant généralisée, elle s'applique également aux meubles de toute nature. Cependant, le Législateur a prévu un système particulier pour la vente des métaux précieux et objets de collection.

3.2.1. *Les plus-values autre que celles realisées sur les valeurs immobilières*

3.2.1.1. *Les biens mobiliers imposables*

Il s'agit essentiellement des profits réalisés:
1) A l'occasion des opérations de Bourse de Marchandises;
2) à l'occasion des opérations sur devises étrangères lorsqu'elles ne se rattachent pas à une activité professionnelle;
3) sur les plus-values professionnelles obtenues, alors que l'activité professionnelles a été exercée moins de cinq années, et que les recettes sont inférieures aux limites du forfait;
4) sur la vente des objets précieux en cas d'option pour le régime des plus-values;

5) sur la vente des meubles divers comme les chevaux de course, les bateaux de plaisance.

3.2.1.2. *Exonération*

Sont exonérés les meubles d'usage courant. Il s'agit entre autres des meubles meublants, des appareils ménagers, des voitures automobiles.

3.2.1.3. *Détermination de la plus-value imposable*

Ces règles sont identiques à celles qui s'appliquent en matière de plus-values immobilières.

Le prix d'acquisition est majoré des frais de restauration et de remise en état.

La plus-value ainsi obtenu est intégralement taxée lorsqu'elle a pour origine la cession d'un bien détenu depuis moins d'un an.

Pour la période allant de un à dix ans, le correctif pour érosion monétaire est pris en considération.

En ce qui concerne les plus-values réalisées sur des biens détenus depuis plus de dix ans, le Législateur n'a prévu aucun abattement pour longue durée de détention, ni de limitation dans le temps.
L'abattement de base de 6.000 Francs est applicable dans tous les cas.

EXEMPLE III (plus-value réalisée à long terme)

Soit un immeuble acquis le 2 mai 1958 pour 100.000 Francs.
Il est revendu le 2 juillet 1977 pour une valeur de 400.000 Francs.
Ce contribuable a pour l'année de référence un revenu imposable de 150.000 Francs.
Sa situation de famille est telle qu'il a droit à quatre parts.

— *Détermination du prix d'acquisition*

L'immeuble a été acquis pour 100.000 Francs. A cette somme, on intègre le montant des frais d'acquisition évalués forfaitairement à 10 pour cent.
100.000 + 10.000 = 110.000 Francs
L'immeuble ayant été acquis en 1958, le coefficient d'érosion monétaire applicable est de 2,49
Le prix d'acquisition est donc de:
110.000 x 2,49 = 273.900 Francs

— *Détermination de la plus-value imposable*
La plus value brute est donc la différence entre le prix de vente et le prix d'acquisition ainsi déterminé:
400.000 — 273.900 = 126.100 Francs
L'abattement autorisé est de 5 pour cent l'an, au-delà de la dixième année l'immeuble ayant été acquis en 1958 et revendu en 1977, l'abattement est de: 5 pour cent x 9 = 45 pour cent
Montant de l'abattement à déduire:
126.100 x 45 pour cent = 56.745 Francs
Plus value nette:
126.100 — 56.745 = 69.355 Francs
Plus value taxable:
69.355 — 6.000 = 63.355 Francs

— *Montant de l'imposition de cette plus-value*
On applique le système de "la division par cinq".
Le contribuable a un revenu imposable de 150.000 Francs. Il a droit à quatre parts.
Le montant de l'impôt sur le revenu s'élève à: 35.135 Francs
Le montant de la plus-values divisé par cinq donne:
63.355 : 5 = 12.671 Francs
Le montant des revenus imposables augmenté du cinquième de la plus-value s'élève à:
150.000 + 12.671 = 162.671 Francs
Montant que le contribuable devrait sur cette somme:
40.203 Francs
Différence entre le montant de l'impôt dû et celui qui vient d'être déterminé:
40.203 — 35.125 = 5068 Francs
Impôt dû au titre de la plus-value:
5.068 x 5 = 25.340 Francs

Le système de la division par cinq, et le paiement de l'impôt sur une période de cinq ans sont applicables. Il n'y a pas de paiement fractionné pour les plus-values réalisées à court terme.

Pour être imposable, la plus-value doit résulter d'une cession supérieure à 20.000 Francs. Il est tenu compte de l'ensemble des cessions réalisées au cours d'une même année.

3.2.2. *Les plus-values réalisées sur valeurs mobilières*

Sont atteintes toutes les opérations sur titres effectuées par les particuliers dans le cadre de la gestion normale d'un portefeuille.

3.2.2.1. *Les cas d'exonération relatif à la nature du bien*

1) Les emprunts d'Etat.
Entrent dans cette catégorie les emprunts 4,5 pour cent et 7 pour cent de 1973.
2) Les valeurs mobilières à revenu variable à condition d'être cédées plus de dix ans après leur acquisition.
Sont toutefois passible de l'impôt au taux de 15 pour cent les cession de titres de sociétés passibles de l'impôt sur les sociétés lorsque les droit détenus par le cédant, son conjoint, leurs descendants, ou ascendants, ont dépassé ensemble 25 pour cent des bénéfices sociaux à une période quelconque au cours des cinq années précédant la cession.
3) Les autres obligations et titres de créances sous réserve de ceux que la Loi déclare imposables.
4) Les titres cédés dans le cadre d'un engagement d'épargne à long terme.
5) Les parts de fonds communs de placement.
Cette exonération s'applique lorsque ces parts on été souscrites en application de la Législation sur la participation des travailleurs aux fruits de l'expansion des entreprises ou des plans d'épargne des entreprises.
Sont également exonérés les titres cédés qui ont été acquis dans le cadre de cette Législation et de celle relative à l'actionnariat dans les entreprises. Néanmoins ces titres doivent revetir la forme nominative et doivent comporter la mention d'origine.
6) Les titres cédés par les fonds communs de placement dans le cadre de leur gestion.

3.2.2.2. *Les titres non-exonérés*

1) Les obligations assorties d'une clause d'indexation ou d'une clause de participation aux bénéfices.

2) Les obligations assorties d'une clause de conversion en action ou d'échange contre des actions.
3) Les obligations incorporées dans un compte spécial d'investissement à condition que leur valeur n'excéde pas un dixième du montant des actions figurant dans le même compte au moment de leur apport, de leur achat ou de leur souscription, et n'excéde pas un montant total de 50.000 Francs.

3.2.2.3. *Exonération relative à valeur des titres cédés*

Lorsque le montant de la cession ne dépasse pas 20.000 Francs, il n'y a pas lieu d'imposer la plus-value réalisée.
Il est tenu compte de l'ensemble des plus-values d'origine mobilière effectuées dans le cours de l'année.

3.2.2.4. *Les cas des opérations concernant les valeurs mobilières*

Sont exonérés égalements:
1) Les titres remis lors de la conversion ou d'échange d'obligations en vertu du contrat de souscription d'origine.
2) Les titres échangés dans le cadre des opérations de fusions ou scissions de sociétés, ou d'offres publiques d'échange.

Et ce, à condition que les droits détenus n'excédent pas une participation supérieure à 25 pour cent.

3.2.3. *Détermination de la plus-value imposable*

3.2.3.1. *Détermination du prix d'acquisition*

a) Actions et parts de société

1) En règle générale, le prix d'acquisition des actions et parts de sociétés s'apprécie, abstraction faite des droits de souscription et d'attribution intervenus depuis. Ces droits sont pris en compte s'ils sont l'objet d'une cession postérieurement à l'entrée en vigueur de la présente loi.
Dans ce cas, le prix net de la cession est défalqué de celui de l'acquisition. Il est fait application des règles de réévaluation, s'il y a lieu.
2) Le prix d'acquisition des titres reçus lors d'une augmentation de capital est le montant de la somme versée par le souscripteur et des droits acquis à cet effet.
3) Lorsqu'il y a distribution d'actions gratuites, la date d'entrée dans le patrimoine est réputée être celle des actions qui ont donné droit à cette attribution.
4) En cas de cession partielle portant sur une série de titres acquis à des dates différentes, le prix d'acquisition retenu est celui des titres acquis à la date la plus ancienne par priorité.

b) les valeurs mobilières à revenu variable ou obligations

Le contribuable a le choix entre les solutions suivantes en ce qui concerne la détermination du prix d'acquisition:
1) Le prix d'acquisition éventuellement modulé par les correctifs apportés par la loi.
2) Le dernier cours côté au comptant avant l'entrée en vigueur de la présente loi.
3) Une valeur forfaitaire calculée sur la moyenne des cours des sept années précédant l'entrée en vigueur de la loi. Dans ce cas, les dispositions concernant la réévaluation du prix d'acquisition ne pourront être appliquée que pour une période de quatre ans précédant la mise en application de la présente loi.

c) Majoration du prix d'acquisition

Le prix d'acquisition est majoré des frais afférents à l'acquisition à titre gratuit, à l'exclusion des droits de mutation, lorsqu'il s'agit d'une acquisition à titre gratuit.
Le prix d'acquisition est celui de la valeur vénale du bien au jour de l'entrée de ce bien dans le patrimoine du vendeur en présence d'une acquisition à titre gratuit.
En cas d'acquisition à titre onéreux, les frais afférents à cette acquisition sont pris en compte.
Le cédant peut fixer forfaitairement ces frais en matière mobilière à 2 pour cent. On peut y ajouter le montant des honoraires dûs en raison des consultations fiscales demandées à l'occasion d'une cession donnant lieu à imposition.

3.2.3.2. *Les prix de cession*

C'est le prix tel qu'il résulte de l'acte de vente.
En matière mobilière s'appliquent les mêmes règles que celles examinées pour la plus-value immobilière.

3.2.3.3. *Modalités d'imposition de la plus-value*

a) Plus-values réalisées à court terme

Les plus-values sur biens mobiliers réalisées moins d'un an après l'acquisition dudit bien sont intégralement assimilées à un revenu et taxée comme tel. Elles bénéficient toutefois d'un abattement de 6.000 Francs avant imposition.

b) Plus-values réalisées à moyen terme

Ce sont celles réalisées entre un et dix ans. Ces plus-values sont diminuées de 50 pour cent avant imposition, mais cet abattement ne peut se cumuler avec celui de 6.000 Francs.
Après réduction éventuelle de moins-values réalisées au cours de l'année, le système de la division par cinq est applicable.
Le total des plus-values est divisé par cinq. Le résultat ainsi obtenu est ajouté au revenu global net. Une fois calculé l'impôt dû sur cette somme, et celui normalement dû sur le revenu courant, on fait la différence entre ces deux termes.
Le chiffre ainsi obtenu représente la cinquième de l'impôt correspondant à la plus-value.
L'impôt est donc égal à cinq fois la cotisation supplémentaire ainsi obtenue.

c) Plus-values réalisées à long terme

Les plus-values mobilières réalisées plus de dix ans après l'acquisition des titres sont exonérées par la Loi.

d) Les moins-values

Les moins-values réalisées sur des valeurs mobilières soumises à l'imposition sont imputables sur les plus-values de même catégorie réalisées dans l'année ou dans les cinq années suivantes. Elles ne peuvent être en aucun cas déductibles des revenus imposables du contribuable.

3.2.4. *Création et fonctionnement du compte spécial d'investissement*

3.2.4.1. *Création*

La loi réserve la faculté aux personnes physiques et aux clubs d'investissement de constituer auprès d'intermédiaires agréés, un compte spécial d'investissement.
Celui-ci est destiné à l'acquisition et à la détention d'un portefeuille de valeurs mobilières côtées en Bourse.
Il est alimenté par des versements en espèces.
Toutefois pourront être intégrés à ce compte:
1) les titres recueillis par voie de succession, pour la valeur retenue pour l'assiette des droits de mutation à titre gratuit.
2) Les titres détenues lors de l'entrée en vigueur de la Loi, ils pourront alors être déposés dans un délai de six mois.

Ce compte est constitué par des valeurs mobilières soumises à la taxation, et n'entrant pas dans le champ d'application de l'article 160 du C.G.I.

3.2.4.2. *Fonctionnement du compte*

Dans le cadre d'un compte spécial d'investissement, ne sont soumis à l'imposition des plus-values que les retraits de compte qu'ils aient lieu en espèces ou en titres.
Pour déterminer cette plus-value, le capital investi est divisé en un certain nombre de parts.
Le prix de la part est évalué en fonction de la valeur globale du compte.

EXEMPLE IV (fonctionnement d'un compte spécial d'investissement)

Année n:
Ouverture d'un tel compte, avec un apport de 40.000 Francs en titres. Cet apport donne lieu à la création de 400 parts fictives de 100 Francs chacune.

Année n+2:
Le titulaire du compte fait un apport en espèces de 20.000 Francs.
La valeur globale du compte est alors de 64.000 Francs avant apport.
La valeur de la part est de:

$$\frac{64.000}{400} = 160 \text{ Francs}$$

L'apport de 20.000 Francs donne alors lieu à la création du nombre de parts suivant:

$$\frac{20.000}{160} = 125 \text{ Parts}$$

Le titulaire a donc au total 525 Parts

Année n+3:
Un apport de 20.000 Francs est effectué.
La valeur globale du compte est alors de 105.000 Francs avant apport.
La valeur de la part est de:

$$\frac{105.000}{525} = 200 \text{ Francs}$$

Nombre de parts attribuées:

$$\frac{20.000}{200} = 100 \text{ Parts}$$

Le titulaire a donc au total 625 Parts

Année n+7:
Le titulaire du compte effectue un retrait de 60.000 Francs.
La valeur globale du compte est de 187.500 Francs.
La valeur de la part se monte à:
187.500 : 625 = 300 Francs

Nombre de parts représentées par le retrait de 60.000 Francs:
60.000 : 300 = 200 Parts

Ce nombre de parts correspond aux apports les plus anciens, donc à ceux effectés à l'année n.
La valeur de la part à l'année n était de 100 Francs.
La valeur d'acquisition des 200 Parts cédées est donc de:
200 x 100 = 20.000 Francs

La plus-value est réalisée à moyen terme, il convient d'appliquer le coefficient d'érosion monétaire correspondant
Le coefficient appliqué est de 1,60 (fictif).
Valeur d'acquisition réévaluée:
20.000 x 1,60 = 32.000 Francs

Plus-value brute:
60.000 — 32.000 = 28.000 Francs

Plus-value taxable:
Les valeurs mobilières bénéficient d'un abattement de 50 pour cent.
La plus-value taxable est donc de
14.000 Francs

En ce qui concerne la détermination de la plus-value, tout apport est assimilé à l'achat d'un certain nombre de parts, et tout retrait à une cession de parts.
La plus-value est calculée en faisant la différence entre le prix des parts cédées auquel correspond le retrait, avec le prix d'acquisition d'un nombre équivalent de parts correspondant aux apports les plus anciens.
Le prix d'acquisition, lors d'une plus-value réalisée à moyen terme, est réévalué en fonction du coefficient de hausse des prix.
En cas d'exonération, le délai de dix ans est calculé à compter de la date des apports auxquels correspond le retrait.
Le titulaire d'un compte a la possibilité d'avoir des disponsibilités de remploi. Le montant de ces disponsibilités ne doit pas excéder 15 pour cent de la valeur estimable et globale du compte pendant un délai de deux mois.
Les revenus qui ont pour origine le titre détenu ou les produits des liquidités ne peuvent être porté au crédit de ces comptes.

3.2.4.3. *Maintain du régime antérieur*

Antérieurement à cette loi, les opérations de Bourse effectuées à titre habituel par les particuliers étaient imposables au titre des bénéfices non-commerciaux.
Ces dispositions ont été maintenues dans le but "de pouvoir taxer plus lourdement les opérations habituelles qui s'apparentent beaucoup plus à des actions spéculatives qu'à la gestion normale d'un portefeuille.

3.3. DISPOSITIONS ANNEXES

3.3.1. *Les rapatriés*

La loi du 15 juillet 1970 a institué une contribution nationale à l'indemnisation des Français ayant été dépossédés de biens situés dans un territoire antérieurement placé sous la souveraineté, le protectorat ou la tutelle de la France.
Pour effectuer cette indemnisation, l'Administration a donné aux différents biens une valeur d'indemnisation.
En se basant sur cette valeur, la Loi a prévu d'allouer aux rapatriés une indemnité.
La loi actuelle assimile à une moins-value, la différence entre la valeur d'indemnisation et l'indemnité effectivement reçue.
Cette moins-value peut s'imputer sur les plus-values réalisées.
Cette déduction sans limite de durée ne peut pas dépasser 75.000 Francs. Elle s'opère sur toutes les plus-values réalisées, qu'il s'agisse de plus-values mobilières ou immobilières.
Une seule restriction est posée à ce principe, la plus-value réalisée ne doit pas être imposable suivant les dispositions en vigueur avant cette nouvelle Loi.
C'est ainsi que sont exclues les plus-values réalisées sur les terrains à bâtir.

3.3.2. *Les sociétés par actions non-côtées en bourse*

La loi a visé à faciliter le contrôle de la nouvelle imposition sur les plus-values réalisées en matière mobilière.
Aussi, ces dispositions particulières ne concernent pas:
1) les sociétés côtées en Bourse,
2) les sociétés dont le capital social n'est pas divisé en actions.

Sont visées par ces dispositions spéciales: "Les sociétés par actions dont les titres ne sont pas inscrits à la côte officielle d'une Bourse de Valeurs ou ne sont pas admis aux négociations du marché hors côte".
Ces sociétés ont l'obligation soit:
1) de prévoir la mise sous forme nominative de toutes les actions d'une manière obligatoire.
2) de laisser aux actionnaires le choix entre:
   a) la conversion de leurs titres en titres nominatifs,
   b) le dépôt des titres dans un établissment financier tel une banque, un établissement financier habilité à recevoir des dépôts ou encore un agent de change.

La première assemblée générale ordinaire ou extraordinaire fixée après l'entrée en vigueur de la Loi, doit obligatoirement statuer sur la modification des statuts ainsi imposée.
A défaut, le président du Tribunal de Commerce homologuera la modification qui lui aura été soumise par les représentants légaux de la société.

3.3.3. *Les contribuables domiciliés à l'étranger*

3.3.3.1. *Les personnes visées*

Il s'agit d'une part:
— des personnes physiques ayant leur domicile réel hors de France quelle que soit leur nationalité,
— des personnes morales ayant leur siège social hors de France.

3.3.3.2. *Les personnes exonérées*

Il s'agit des Organisations Internationales et des Etats Etranger, des Banques Centrales, et des Institutions Publiques Financières de ces Etats.

3.3.3.3. *Le mode d'imposition*

La présente Loi prévoit un prélèvement d'un tiers, c'est-à-dire de 33 1/3 pour cent. Le prélèvement de 50 pour cent qui existait auparavant pour les terrains à bâtir et assimilés, et les profits réalisés par des professionnels ne subsistera qu'à l'égard de ces derniers.

3.3.3.4. *Les biens visés*

a) les biens immobiliers

Le prélèvement s'applique sur les plus-values résultant de la cession:
1) d'immeubles bâtis ou non bâtis,
2) de droits immobiliers,
3) d'actions ou parts de sociétés non-côtées en Bourse en constituées par un capital comprenant principalement de tels immeubles ou de tels droits.

Cette législation s'applique aux immeubles situés en France; les Français domiciliés à l'étranger bénéficiant de certaines exonérations.

b) les biens mobiliers

(i) les valeurs mobilières:

Le prélèvement n'aura lieu qu'en ce qui concerne les valeurs mobilières représentant une participation supérieure à 25 pour cent.
Dans ce cas, le prélèvement a lieu lorsque ces valeurs sont détenues depuis moins de dix ans.
Il n'y a pas de prélèvement pour toutes les autres valeurs mobilières qu'elles soient françaises ou étrangères.

(ii) les marchandises:

Les Etats Etrangers, Institutions Publiques Etrangères, et personnes n'ayant pas leur domicile en France ou leur siège social ne sont pas imposées pour les plus-values réalisées sur des marchandises achetées ou vendues sur un marché à terme de marchandises.

3.4. IMPOSITION DES METAUX ET OBJETS PRECIEUX

3.4.1. *Champ d'application*

3.4.1.1. *Les biens visés en cas de cession*

a) les métaux précieux

Selon la terminologie courante, il s'agit de l'or, de l'argent, et du platine.

L'imposition s'applique aux lingots d'or et aux pièces d'or françaises ou étrangères. A noter cependant que les métaux précieux constituant la monture de bijoux entrent dans la catégorie des objets précieux.

b) les objets précieux

Figurent dans cette catégorie:

(i) les objets d'art:

Ce sont essentiellement:
— Les tableaux, peintures, dessins, aquarelles, gouaches, pastels, monotypes, qui ont été exécutés entièrement de la main de l'artiste.
— Les gravures, estampes, et lithographies, tirées en nombre limité de planches entièrement exécutées de la main de l'artiste.
— Les productions de l'art statuaire, de la sculpture et des assemblages entièrement exécutés de la main de l'artiste. Les fontes de sculpture lorsque le tirage est limité à huit exemplaires lorsqu'elles sont contrôlées par l'artiste.
— Les tapisseries tissées entièrement de la main de l'artiste sur métier de haute ou de basse lisse, ou exécutées à l'aiguille d'après maquettes ou cartons, le tirage doit être également limité à huit exemplaires avec contrôle de l'artiste.
— Les exemplaires uniques de céramiques exécutés et signés de la main de l'artiste.
— Les émaux sur cuivre exécutés entièrement à la main limités à huit exemplaires numérotés avec la signature de l'artiste et de l'atelier d'art. Sont exclus les articles de bijouterie, d'orfévrerie et de joaillerie.

(ii) les objets de collection:

Ce sont les monnaies, médailles, les timbres et les livres précieux, les autographes, les armes, les instruments de musique.
En règle générale "les objets pour collections présentant un intérêt historique, archéologique, paléontologique, ethnographique et numismatique, ainsi que les collections et spéciments pour collections de zoologie et de botanique, de minéralogie et d'anatomie".

(iii) les objets d'antiquité:

Sont concernés, les objets d'art et les meubles anciens, ainsi que les antiquités françaises ou étrangères.

(iv) les bijoux:

Il s'agit des montures comportant du métal précieux et des pierres, et également des pierres non serties.

3.4.1.2. *Les personnes imposables*

Ce sont les personnes physiques qui dans le cadre de la gestion de leur patrimoine privé réalisent la vente de tels biens.
Sont exonérées les personnes qui font le commerce de ces biens à titre professionnel lorsqu'elles vendent. A titre d'exemple sont exonérés les bijoutiers, les antiquaires, les marchands de tableaux, les établissements financiers ou bancaires.

3.4.1.3. *Les opérations soumises à l'imposition*

L'imposition s'applique à la vente qu'il s'agisse d'une vente amiable ou aux enchères publiques.
L'exportation est assimilée à une vente, il s'ensult que les biens exportés sont imposables, sauf si l'exportation a un caractère temporaire.

3.4.1.4. *Les exonérations*

Elles concernent uniquement les objets précieux. Sont exonérées:
a) Les biens dont la vente est faite à une Musée National, un Musée classé contrôlé par l'Etat, ou à une Collectivité Locale, à une Bibliothèque Nationale, ou une autre Bibliothèque de l'Etat ou d'une autre Collectivité Locale.
b) Les ventes dont la valeur ne dépasse pas 20.000 Francs étant précisé que chaque vente doit être considérée de manière isolée.
c) Lorsque le propriétaire du bien n'a pas en France sa résidence habituelle, et lorsque d'autre part, le bien exporté a été acquis en France auprès d'un professionnel, ou a donné lieu au paiement de la taxe lors de son acquisition, et lorsque le propriétaire du bien est en mesure de justifier d'une importation antérieure.
d) Lorsque le contribuable qui n'a pas en France sa résidence habituelle, vend aux enchères publiques les objets en question.

3.4.2. *Modalités de la taxation*

3.4.2.1. *Les métaux précieux*

La Loi nous précise que la vente des métaux précieux est soumise à une taxe de 4 pour cent sur le prix de vente. Cette taxe s'applique sans franchise ni décôte.
C'est ainsi que pour une vente de 20.000 Francs, la taxe due est de:
20.000 x 4 pour cent = 800 Francs

3.4.2.2. *Les objets précieux*

a) décôte

Lorsque le montant de la vente est compris entre 20.000 Francs et 30.000 Francs, le prix de vente est diminé d'une décôte égale à la différence entre 30.000 Francs et ce prix.
Au-dessus de 30.000 Francs, il n'y a aucun abattement. L'abattement est à considérer pour chaque vente prise d'une manière individuelle.

Les limites de la décôte prévues par la présente Loi pourront être revisées lorsque l'indice moyen annuel des prix à la consommation aura varié dans un proportion de 10 pour cent.

b) le taux de la taxe

Le taux de la taxe est fixé à 3 pour cent. Ce taux est ramené à 2 pour cent dans le cas de vente aux enchères publiques. Toutefois, le contribuable a la faculté d'opter pour l'imposition selon le régime général des plus-values.
La base de la taxation est alors le montant de la plus-value réalisée du fait de la vente. Le vendeur devra justifier la date et le prix d'acquisition du bien vendu.

EXEMPLE V

Soit un tableau vendu pour la somme de 25.000 Francs. Cette vente est inférieure à 30.000 Francs, il y a donc lieu d'appliquer la décôte.
Montant de la décôte:
30.000 — 25.000 = 5.000 Francs
Prix imposable:
25.000 — 5.000 = 20.000 Francs
Montant de la taxe:
20.000 x 3 pour cent = 600 Francs

c) paiement de la taxe

Le montant de la taxe doit être versé par l'intermédiaire ou à défaut par l'acheteur du bien. C'est à l'acheteur d'en récupérer le montant auprès du vendeur.
Le versement doit s'effectuer dans les trente jours de la vente. Les mêmes garanties de recouvrement qu'en matière de taxe sur le chiffre d'affaires s'appliquent ici.

3.5. TAXATION DES PLUS-VALUES D'ORIGINE PROFESSIONNELLE

Le Législateur a entendu réaliser une harmonisation des textes existants et portant sur l'imposition des plus-values d'origine professionnelle.
Désormais, l'imposition de la plus-value est fonction du chiffre d'affaires réalisé.

3.5.1. *Exonération*

Les plus-values réalisées dans le cadre d'une activité agricole, artisanale, commerciale ou libérale sont exonérées lorsque le montant des recettes n'excéde pas la limite du forfait ou de l'évaluation administrative. Rappelons que les limites du forfait sont actuellement de:
— 500.000 Francs pour les ventes de marchandises et la fourniture de logement;
— de 150.000 Francs pour les services;
— de 500.000 Francs en matière agricole;
— de 175.000 Francs pour les professions non-commerciales.

Cependant il faut en outre:
1) que l'activité professionnelle ait été exercée à titre principal,
2) qu'elle ait été exercée pendant une durée de cinq ans au moins.

Si ces deux conditions ne sont pas remplies, les plus-values seront imposées selon le régime général des plus-values réalisées par des particuliers.

3.5.2. *Imposition*

Le régime des plus-values d'actif immobilisé réalisées à court terme et à long terme applicable aux professions industrielles et commerciales, puis aux professions agricoles est applicable également aux professions non-commerciales.
Le taux d'imposition des plus-values en matière de bénéfices non-commerciaux est de 10 pour cent.
Les cessions de terre d'une entreprise agricole ne peuvent être imposées qu'à la condition de figurer à l'actif du bilan.

3.5.2.1. *Imposition des fruits de la propriété industrielle*

Les cessions de brevets étaient, jusqu'à présent dispensées d'imposition, à la seule condition que l'inventeur ne participe ni directement, ni indirectement à son exploitation.
En revanche les redevances perçues par les inventeurs ou leurs héritiers en ce qui concerne la concession des licences d'exploitation de brevets étaient imposables au titre des bénéfices non-commerciaux.
Désormais sont placées sous le régime des plus-values à long terme:
1) la cession de brevets, de procédés ou de techniques;
2) La concession de licences exclusives d'exploitation;
3) La concession de licences d'exploitation en ce qui concerne un secteur géographique déterminé ou une utilisation particulière;
4) La cession de brevets ou la concession de licences exclusives d'exploitation de brevets en cours de délivrance.

Ces droits doivent faire partie de l'actif immobilisé et ne pas avoir été acquis à titre onéreux depuis moins de deux ans.
Les redevances perçues à l'occasion de l'exploitation de ces droits de propriété industrielle n'entrent pas dans ce régime d'imposition lorsqu'elles viennent en déduction de l'assiette de l'impôt dû par le concessionnaire, et lorsque des liens de dépendance existent entre l'entreprise concédante et l'entreprise concessionnaire.
Les redevances venant de la concession de licences non-exclusives de brevets, procédés ou techniques ou de la cession, ou de la concession de marques de fabrique sont imposables au titre des bénéfices non-commerciaux, au taux normal de l'impôt.

3.5.2.2. *Les biens ayant appartenu pendant un laps de temps au patrimoine privé de l'exploitant*

Lorsqu'un bien a figuré pendant un certain laps de temps dans le patrimoine privé du contribuable avant de figurer au bilan de l'entreprise, la plus-value correspondant à cette période est taxée dans les conditions édictées pour celles réalisées par des particuliers.
Il y a donc dans ce cas, d'une part, imposition selon le régime des plus-values réalisées par des particuliers, et, d'autre part, imposition selon le régime des plus-values réalisées par des professionnels.
Dans ce cas, il y a exonération des terrains agricoles ou forestiers. Il n'y a pas imposition à la triple condition:
1) qu'il ne s'agisse pas d'un terrain à bâtir,
2) que le terrain ait été exploité dans le cadre d'une activité agricole principale,
3) que cette activité ait été exercée pendant cinq ans au moins.

3.5.2.3. *Profits immobiliers professionnels et profits de construction*

a) Lotissement

Les lotisseurs professionnels ayant la qualité de marchands de biens sont imposés suivant les règles des bénéfices industriels et commerciaux.
Par contre, lorsque le lotisseur n'a pas la qualité de marchand de biens, c'est le régime des plus-values réalisées entre particuliers qui est applicable.
L'exonération prévue pour les opérations de caractère patrimonial et les modalités particulières de fixation du prix de revient des terrains lotis ont été supprimées.

b) Opérations de construction

Les opérations de construction donnent lieu à perception d'un prélèvement de 33 1/3 pour cent lorsqu'elles sont réalisées par des personnes physiques ou des sociétés de personnes.
Ce prélèvement peut être libératoire de l'impôt sur le revenu. Dans ce cas, la Loi prévoyait un mode pariculier de calcul du prix de revient qui subissait certaines corrections.
Ce système est supprimé par la nouvelle Loi.

3.5.2.4. *La cession des charges et offices*

Pour toutes ces cessions, le montant de la plus-value imposable est constitué par la différence entre le prix de cession et d'acquisition compte tenu des frais accessoires inhérents.

Le système qui permettait d'appliquer un coefficient de réevaluation pour les Etudes acquises avant le 31 décembre 1960 a été supprimé.
Lorsque la cession s'effectue après deux ans d'exercice de la profession ou à la suite du décés du contribuable, la plus-values est imposé au taux de 10 pour cent. Ce taux était antérieurement de 6 pour cent.
Si la cession a lieu avant deux ans d'exercice de la profession, la plus-value est intégrée pour sa totalité au revenu imposable et soumise à l'impôt sur le revenu.

3.5.2.5. *Les Sociétés Civiles Professionnelles*

Les associés sont personnellement soumis à l'impôt sur le revenu pour la part des bénéfices qui leur est attribuée.
Les modalités d'imposition sont identiques à celles en vigueur lors de la cession personnelle d'une charge ou d'un office. L'apport d'une clientèle ou d'éléments d'actif destinés à l'exercice de la profession a le caractère d'une cession à titre onéreux et peut donc donner lieu à une plus-value imposable.
En ce qui concerne les sociétés civiles professionnelles, la taxation de ces plus-values peut être reporté au moment de la transmission ou du rachat des droits sociaux par l'intéressé.
La taxation ultérieure est alors établie selon le régime applicable au moment de l'apport.

3.6. OBSERVATIONS

Le Gouvernement présentera, chaque année, à partir de 1978, un document en annexe du projet de Loi de Finances qui précisera les points suivants:
1) Le produit de l'impôt,
2) le nombre des assujettis,
3) la répartition par catégorie de biens, des cessions imposées,
4) le nombre des litiges avant opposé l'administration et les contribuables,
5) la nature des difficultés d'intervention auxquelles aura donné lieu l'application de la Loi et les solutions retenues,
6) l'effet de l'impôt sur l'évolution des transactions et le comportement des épargnants,
7) le coût de recouvrement de l'impôt,
8) l'évolution des éléments de calcul de la plus-value.

4. CONCLUSION

Par la Loi du 19 juillet 1976, le Législateur a mis notre législation fiscale en harmonie avec les autres pays.
C'est ainsi que les Etats-Unis d'Amérique ont taxé les plus-values depuis 1913, la République Fédérale d'Allemagne depuis 1925, et la Suède depuis 1928.
Le Japon, la Belgique, le Royaume-Uni, l'Espagne, l'Irlande, l'Italie ont adopté une telle législation au cours de ces dix dernières années.
Il y a lieu de noter que sont imposées les plus-values réalisées sur la quasi-totalité des transactions en Espagne, aux U.S.A., en Islande et au Japon.
Les Etats-Unis prévoient quelques exonérations pour les résidences principales, et le Japon fait porter les exonérations sur les actions.
Le Royaume-Uni exclut de l'imposition les habitations principales et les automobiles ainsi que certaines valeurs mobilières.
La Suède prévoit l'imposition des plus-values réalisées tant sur la vente des biens mobiliers qu'immobiliers.
En Allemagne, pour être imposables, les plus-values immobilières doivent être réalisées avant deux ans, et avant six mois pour tous les autres biens. Il en est de même au Luxembourg.
En Belgique, seules sont imposées les plus-values réalisées sur les terrains à bâtir revendus avant huit ans.
L'Italie et la Suisse imposent les plus-values réalisées à l'occasion de la vente d'immeubles.
La Loi qui est complexe, a prévu que ses conditions d'application seront précisées en tant que de besoin par des décrets en Conseil d'Etat. Cette mise au point exigera certainement beaucoup de soins.
Si un jour l'impôt sur le capital, dont on a tant parlé dernièrement, était appliqué en France, il faudrait alors songer, comme l'a dit le Président Edgar Faure, à l'abrogation pure et simple de cette nouvelle loi sur les plus-values.

CAPITAL GAINS TAX ON SECURITIES — FRENCH GOVERNMENT HESITATES

On April 6, 1977 the French government announced that it will postpone the introduction of capital gains taxation on securities (which was planned for January 1, 1978) with another year to January 1, 1979.
One of the reasons given is that the current stock index at the Paris Stock Exchange which is ominously low, may have an adverse effect on investment and the creation of new employment so that the further extension of the application of the capital gains legislation seems inopportune at this moment. In addition, it would give the French tax administration some more time to draft the rulings with respect to the capital gains tax on securities.
However, it seems likely that there are also political reasons behind the new Government decision. It may be recalled that the Government parties were heavily defeated in the recent municipal elections, which indicates that the Government may have lost a substantial part of its support under the middle classes. Another aspect which may have influenced the Government is that the Gaullists were against the introduction of the capital gains tax and that Mr. Chirac, the former Prime Minister, made very few efforts to conceal his dislike of the tax when he was in office. Postponement of the introduction of a major part of the tax or even a discrete abolition might help to clear the political atmosphere between the present coalition partners.

TAX GLOSSARY

by H.W.T. PEPPER *

ABATEMENT — A term broadly used for deductions in computing tax, and particularly those which reduce the *rate* payable, e.g. the deductions commonly given to individual income taxpayers for dependants, and the application to individuals of graduated tax rates commencing at a level lower than the rate applied to companies (corporations); as regards sales tax, deductions or reliefs, such as those allowed under the French VAT system to small traders.

ABATTOIR TAX — A tax encountered in some countries, usally as a specific sum per head of animals slaughtered, and intended either as a service tax on this among other *services*, or as a semi-luxury tax where the majority of the population subsists on a non-meat diet.

ABONNEMENT — The system used in Italy, in connection with the old multi-stage sales tax, to estimate the liability of traders in cases of inadequate or unreliable records. See also FORFAIT. Such methods are commonly used in most countries where business records are unsatisfactory, though most do not have any specific name for such administrative methods.

ABORTIVE PROSPECTING, ALLOWANCE FOR — Where the explorations of mining entrepreneurs are unsuccessful and the area being prospected is abandoned for further exploration, some countries provide an income tax allowance in respect of the expenditure incurred on the exploration, permitting the allowance to be off-set against other mining income. Where the prospecting, though initially abortive, is not abandoned, it is not usual to grant an allowance because subsequent exploration by the same entrepreneur may prove successful, in which case the whole cost of all the prospecting would usually be depreciable as being the cost of setting up the eventual mine.

ABSORPTION OF TAX — Term applied when a sales tax is not wholly shifted forward to the purchaser of the goods or services but partly borne by the seller or entrepreneur. (See also SHIFTING OF TAX.)

"A BUCK IS A BUCK IS A BUCK" — The phrase used colloquially to express the recommendations of Canada's Carter Commission (Royal Commission on Taxation which reported in 1967), that broadly speaking, all net incomings should be taxable (sometimes known as the accretion concept). An individual's taxable base would include income in the ordinary income tax sense plus realized capital gains, gifts and bequests, and plus certain inputed income including income earned by life insurance companies on policy reserves, and plus fringe benefits that could be quantified for tax purposes, all ranking as equally taxable.

ACADEMIC TAX — A levy proposed by the Soviet Union in September 1972 and variously also known as the "Brain Tax", "Diploma Tax", "Education Tax", "Exit Tax", and "Graduates Tax" upon those wishing to emigrate from Russia who had received their education and training there. The levy purported to recoup for the State the cost of educating each emigrant but was not apparently to be abated by the number of years a would-be emigrant had worked in Russia since graduating.

ACCELERATED DEPRECIATION — In many states entrepreneurs may opt for additional depreciation allowances during the first few years after acquisition of business assets. Such allowances exceed the actual depreciation by use of the assets and are intended as an incentive to capital investment, improving the cash flow of the business by reducing the tax payable in the years concerned. (See also FREE DEPRECIATION.)

ACCESSIONS TAX — A tax on money or other assets received by a taxpayer by way of gift or bequest. Both types of receipts or "accessions" are usually taken into account in applying graduated rates of tax. (See also "A Buck is a Buck. ." and "CAPITAL TRANSFER TAX".)

ACCOMMODATION OCCUPIED BY EMPLOYEE — Many states levy income tax on the value of the ("Fringe") Benefit (or Perquisite) inherent in the provision by the employer of free or subsidised residential accommodation for an employee, including a director or executive. Where the accommodation is necessarily occopied as a condition of the employment, e.g. apartments over a shop or factory, it is usual to regard the arrangement as "Representational" rather than as a clear benefit, and not to levy extra tax. Other examples of non-taxable or not fully taxable types of accommodation are — a cottage on a farm (where there is an implication that the employee may be called out at night to deal with sick livestock), excessively large accommodation allotted to a minister of religion with the implication that he will hold meetings of his followers on the premises.

ACCOUNTING BASIS — Method of calculating income tax, (in some cases also sales tax and payroll taxes) by reference to a taxpayer's accounting year instead of by reference to a tax year or fiscal year. (See also, however, ACCRUALS BASIS, and regarding V.A.T. ACCOUNTS BASIS.)

ACCOUNTING PERIOD — While income tax is normally computed by reference to the income of a full (fiscal) year and for an individual, by reference to his personal circumstances of that year, an accounting period may sometimes be adopted instead. Where an enterprise consistently makes up its accounts to a fixed date in the year other than the last day in the fiscal year some states accept the accounting year instead of the fiscal year for the purpose of calculating the years's tax liability. The alternative is to apportion the profits of two accounting periods (See APPORTIONMENT OF INCOME), which may delay the determination of liability to tax. On change of accounting date it may be necessary to apportion profits so as to ensure that no more nor less than 12 months' profits are charged for any one year. (See also ANNUALISATION, CHANGE OF ACCOUNTING DATE). For other taxes such as sales tax, and flat rate payroll taxes it is usually of less significance to relate the tax to fiscal years except where a change in the *rate* of tax is related to the beginning of the fiscal year.

---

* *With the assistance of the staff of the International Bureau of Fiscal Documentation.*

ACCOUNTS BASIS — The method of computing V.A.T. as a percentage levy on the excess of sales over purchases is known as the "accounts basis". The method remains a theoretical concept as none of the V.A.T. countries uses it. The advantage of the method is that it would enable an exemption or abatement of tax at an earlier level to be carried through to the final price of the goods or services where it was desired to give a tax preference, e.g., to handicrafts or perishable farm produce, without altering the impact of tax at the wholesale and retail levels. The disadvantage would be the greater complexity of the tax and the possibility that neither the producer nor the consumer would receive the appropriate benefit from the tax forgone.

ACCRETION CONCEPT — The principle that a taxpayer should be taxed not solely on defined income but on the amount by which his wealth increases annually for whatever reason. (See also ACCRETION, NET.)

ACCRETION, NET — The net accretion method of computing income is used when trying to compute the true income in cases where there has been tax evasion. The method is also enshrined in the tax legislation in a number of countries, particularly in Latin America as a normal method of calculating profits for assessments in some cases whether or not the taxpayers's records are inadequate. The net wealth, or "worth" (assets less liabilities) of a taxpayer at certain dates, e.g., the beginning and end of the base tax year, are compared and the taxable income for the period is computed as the net increase or accretion of wealth between the comparison dates plus what has been spent on personal consumption, etc. Specifically non-taxable receipts*, such as gifts or bequests, may be deductible in such calculations. (* or those subjected to other taxation).

ACCRUALS BASIS — Normal method of calculating income tax, and sales taxes, by reference to income earned and sales made during the taxable period, rather than to the cash received or drawn in respect of the income or sales.

ACCUMULATED EARNINGS TAX — A tax levied in the USA where income tax is adjudged to have been avoided by unreasonably large accumulations of profits by corporations. Where, as in the USA, tax is levied on corporations' profits and also on the shareholders on the dividends paid out of those profits, the latter tax may be avoided or delayed by non- or deferred distribution. This type of tax is also levied in other states with similar tax structures.

ACCUMULATION SETTLEMENT — A device for avoiding high rates of personal income tax by transferring assets to a trust in which the investment and yield therefrom may be accumulated until the coming of age of a minor child. The total funds may be transferred at that time to the (now adult) child without attracting tax, under the tax regimes of some states. Whilst the funds are accumulating, tax is normally payable only by the trust, not by the donor, while the child may obtain a refund of some or all of the tax paid by the trust when he attains his majority.

ACQUISITION: OF STOCKS & SHARES BY DIRECTORS ETC. — Some corporate enterprises have schemes under which directors and key executives may acquire shareholdings on favourable terms, either as a mere FRINGE BENEFIT (q.v.) or as an incentive to help make the enterprise more prosperous and thus enhance the value of the shares of the enterprise (including their own holdings) so that they may make a capital gain over the price at which they acquired the shares. Under some tax systems income tax is applied to the gains by specific provisions in the tax law. In other states the gains may be treated as capital so that more favourable tax treatment results, and the value of the 'incentive' element in the scheme is accordingly increased.

ACQUISITION DUTIES — Taxes on the acquisition of assets by bequests or gift. (See DEATH DUTIES, GIFT TAXES.)

ADDED VALUE — Broadly, the difference between the cost price for goods paid by the entrepreneur and the sale price of the same goods, the difference in money terms representing the value added either by processing, or merely distributing, the goods concerned. (See also "Value Added Tax" and "Gross Profit".)

ADDED VALUE TAX — A tax on ADDED VALUE (q.v.). See VALUE ADDED TAX.

ADMINISTRATIVE COSTS — The cost, usually expressed as a percentage of the yield, of collecting a tax, sometimes referred to as the "expense ratio".

"ADMINISTRATION" OF ESTATE — Under the laws of certain countries there is an "administration period" which commences on the death of an individual and ends when the deceased's assets have been realised, distributed or conveyed to trustees where they are to be held in trust. Special tax provisions may be necessary in respect of this period to ensure that the income arising is properly attributed to those entitled to it, and charged at the tax rates appropriate to them.

ADMISSION TAXES — Taxes on the price of admission, usually to places of entertainment or "spectacles", including cinemas, theatres, cabarets, nightclubs, bullfights, football and boxing matches. The tax is usually either ad valorem or graded as a series of specific levies in line with the relative price brackets.

ADOPTED CHILD — An allowance is often made from income tax for a dependent child which has been adopted formally under adoption laws, or de facto where a child, for example, the orphaned child of a relative, has been taken informally into the household. Sometimes there are religious or other obstacles to formal adoption under a country's adoption laws and a liberal attitude to the granting of a deduction is often taken, either in the tax law or in the administration of it, to give due credit for what is normally socially desirable, i.c., that a child should be brought up with a family rather than in an institution.

ADUANAS — Spanish for customs duties.

AD VALOREM DUTIES — The ad valorem concept (Ad valorem = "According to value") is widely applied to customs duties and almost invariably to sales taxes, except that in the case of customs duties ad valorem duties are sometimes linked with minimum "specific duties" (q.v.) where valuation is likely to present problems.

ADVANCE RULINGS — Where an entrepreneur or investor wishes to set up an enterprise or make an investment, he may wish to know in advance the precise effect of the tax laws of the country in which he is interested on what he wishes to do. To a large extent the effect of the laws may be gauged by reference to the texts and to explanatory booklets prepared officially, but for greater detail or more complicated proposals it may be necessary to consult the administration. In some states (Holland is a good example) advance rulings are given of what the position would be where the proposals are set out clearly. In Britain the extent to which the tax law is modified to avoid hardship in practice is set out in published booklets explaining the concessions. Other countries tend to be reluctant to give rulings on the grounds that the case put to them is "hypothetical", in which case the person concerned can only resort to trying to obtain professional advice in the private sector.

ADVANCE CORPORATION TAX — Advance payments of corporation tax (A.C.T.) under the British system, consisting, in fiscal year 1976-77, of 35/65ths of each dividend paid, have to be accounted for by the end of the quarter of the year in which the dividend occurred. The pre-payments are set in due course against the MAINSTREAM CORPORATION TAX (q.v.) payable by the company on its income.

ADVENTURE IN THE NATURE OF TRADE — One of the terms used in the British definition of "trade" for the purposes of income tax. "Trade" is defined by both statute and case law as being somewhat wider than the narrow concept of a regular commercial trade when income tax is to be applied. Most states similarly extend by one means or another the concept of "trade" or "business" in their tax laws.

ADVERTISING TAX — Taxes on advertisement hoardings (taxes sur les affiches) are not uncommon. A fairly recent development (in Britain) is a tax or levy on the advertising revenue of commercial television companies. In that country also a graduated tax on the advertising revenue of newspapers was mooted but not found acceptable, possibly because newspapers are not usually viable on the basis of the sale proceeds of the edition itself and need advertising revenue to survive, and to tax the latter might thus be classed as an indirect tax on knowledge or freedom of speech. Retail Sales taxes on advertising *materials* (brochures, handbills) are common, e.g., in the States of the U.S.A., and on the services of advertising agents under TVA systems. (See also Newspaper Tax.) Sweden has recently (1971) introduced a 10 percent advertising tax.

AFFIDAVIT — The term is used for the declaration of assets etc., made for death duty purposes by the executors of a deceased person or order that the tax liability may be computed. If in the course of administration further assets or debts of the estate come to light, a corrective affidavit may be filed.

AFFILIATED CORPORATIONS — Corporate enterprises may, under the laws of many states, be regarded as "affiliated" or "grouped" where one has voting control of another, or both are controlled by a third, or where both are members of a GROUP (q.v.).

AFFILIATION PRIVILEGE — A number of states (e.g. Austria, Britain, France, Holland, Luxembourg, USA) permit affiliated companies or corporations certain tax privileges, such as the "grouping" of profits and losses to minimise total tax payable (where one affiliate makes a profit and another a loss). Another relief commonly accorded relates to inter-affiliate dividends — these are relieved, in effect, from all vestiges of "double" or DUAL TAXATION (q.v.). The privileges are available to affiliated enterprises which are resident in the country concerned — some states (e.g. France, Holland) extend the privilege to non-resident affiliates.

AGENCY — A concept of importance in determining the liability within a country or state to income tax or sales or use tax of an entrepreneur outside that country or state. A person is taxable in a country if he trades *in* rather than merely *with* that country. In the former case an agent has to be identified who is performing enough acts on behalf of his principal to attract income tax liability as carrying on a trade. It is customary to define these acts of trade in double taxation agreements between countries. States in a federation may also agree upon similar guide-lines so as to delimit more precisely the liability to state income taxes. Similar problems also arise with sales and use taxes, e.g., in the states of the U.S.A. where a body of case law precedents and agreements between states on particular points is gradually being built up into a general code. A third application of "agency" is evinced in the powers usually taken by a country to declare a person an "agent" of a non-resident for the purpose of collecting tax due on income arising in the country (rent, royalties, interest, dividends, profits) where such income clearly falls to be taxed. The agent is usually the person who collects the income and who may or may not have certain other duties according to the nature of the income and what is involved in collecting it.

AGENTS, TAX — Tax agents or accountants specifically authorised by law to act for a taxpayer in fulfilling his obligations towards and agreeing his tax liability with the tax department are a feature of the tax scene in some countries. It is usual to stipulate basic qualifications for those wishing to exercise this profession so that the taxpayer is properly advised. The qualifications are gradually raised for newcomers to the professions. Such agents may be helped by hand-outs and explanations provided by the administration but agents found guilty of aiding or abetting tax evasion by taxpayers may have their licences cancelled.

AGE RELIEF — Some states abate income tax for taxpayers above a certain age, commonly 65, either by providing a higher exemption limit or by allowing a specific additional deduction for the age factor. Britain uses the former method, the USA grants an extra "exemption" deduction for each spouse or single person over 65, and various such reliefs are to be found in other tax systems. Abatement of other taxes, such as tobacco duty, have at times been made in favour of the old and indigent, but have proved difficult to administer. Some States in the USA abate property tax to the aged.

AGGREGATION — The system of adding together an individual's income from all sources for the purpose of computing his liability to a graduated income tax. Aggregation also applies to the assets of a deceased person which are liable to graduated estate, succession, or transmission duties. As an anti-avoidance device, aggregation is sometimes employed to counteract avoidance by a married person transferring income or capital to a spouse, or to minor children, or, in the case of "death duties" by inter-vivos transfers within a few years of death. For this purpose income of the married couple, or parents plus minor children, is aggregated for the purpose of applying the scale of graduated rates of tax. For "death duties" all assets including those disposed of within a few years of death are aggregated.

AIRCREW, TAXATION OF — As in the case of SEAMEN (q.v.) special rules are sometimes employed in determining the tax, particularly where income tax is to be dealt with, for air crews. Sometimes the place of assessment will be the head office of the airline or charter company, sometimes the residence of the airman, and occasionally the base airport from which the airman is allocated his route or duties. The matter is often covered in the articles of a Double Taxation treaty between two countries where the airline concerned provides air services between the two countries.

[to be continued]

COUNTRY BY COUNTRY SURVEY OF LOOSE-LEAF PUBLICATIONS . . .

EUROP. ECONOMIC COMMUNITY

DROIT DES AFFAIRES DANS LES PAYS DU MARCHE COMMUN

Tome V: Régimes Fiscaux
Edition Jupiter, 21-23 rue Mont-Thabor, 7500 Paris.
Supplemented: regularly.

Loose-leaf publication on "Business Law in the Countries of the European Economic Community" consisting of various volumes divided into eleven Parts. Part V deals with taxation. Each Part deals with one subject, only, but following a common outline it makes a comparison with every country of the Economic Communities possible. Every text of the legislation is published in the home-language and in the French translation, thus enabling a proper interpretation of the law. The texts are analysed and interpreted in studies prepared by lawyers of every country in question. The material is kept up to date by the issue of supplementary pages.

DROIT D'ETABLISSEMENT — NIEDERLASSUNGSRECHT

JURA EUROPAE series: Droit des pays de la Communauté Economique Européenne/Das Recht der Länder der Europäischen Wirtschaftsgemeinschaft.
Verlag C.H. Beck, Wilhelmstrasse 9, Munich 40.
Editions Techniques Juris-Classeurs, 123 Rue d'Alésia, 75014 Paris.
Supplemented: regularly.

Loose-leaf publication providing an outline of the provisions relating to the establishment of a business, the rendering of services and the exercise of a free profession in each of the firs six EEC member countries. An introduction concerning the aims of the European Economic Community is appended. The text is bilingual. (French and German).

DROIT FISCAL — STEUERRECHT

JURA EUROPAE series: Droit des pays de la Communauté Economique Européenne/Das Recht der Länder der Europäischen Wirtschaftsgemeinschaft.
Verlag C.H. Beck, Wilhelmstrasse 9, Munich 40.
Editions Techniques Juris — Classeurs, 123 Rue d'Alésia, 75014 Paris.
Supplemented: regularly.

Loose-leaf publication providing an outline of the tax system in each of the first six EEC member countries following a common outline to facilitate comparison. The text is bilingual. (French and German).

DROIT DES SOCIETES — GESELLSCHAFTSRECHT

JURA EUROPAE series: Droit des pays de la Communauté Economique Européenne/Das Recht der Länder der Europäischen Wirtschaftsgemeinschaft.
Verlag C.H. Beck, Wilhelmstrasse 9, Munich 40.
Editions Techniques Juris — Classeurs, 123 Rue d'Alésia, 75014 Paris.
Supplemented: irregularly.

Loose-leaf publication providing an outline of the company law system in each of the first six EEC member countries following a common outline to facilitate comparison. The text is bilingual. (French and German).

VERDRAGSTEKSTEN EN AANVERWANTE STUKKEN (EEG, EURATOM, EGKS)

Samsom, Alphen a/d Rijn — Kluwer, Deventer.
Supplemented: regularly.

Loose-leaf publication containing text of treaties and documents related thereto. The treaties involved are the European Economic Community, the European Community for Atom Energy and the European Community for Coal and Steal.

LES PRINCIPALES OBLIGATIONS DES EMPLOYEURS EN MATIERE SOCIALE DANS LES PAY DE LA CEE

by Andre Frine: CED/Samsom, 7 rue Philippe de Champagne, 1000 Brussels.
Supplemented: quarterly.

Loose-leaf publication explaining in general terms the labour and social regulations in each of the countries of the European Economic Community. The obligations of employers which result from national labour legislation and social security legislation are especially dealt with.
In the chapter on international social law a very brief description of the obligations for the social security of migrant workers and the free movement of workers, according to the EEC regulations, has been given. An English version translated by Vivian Oppenheim-Lewis entitled: Employer's liabilities under social service legislation in the countries of the European Common Market, has been included. The material is kept up to date by the issue of supplementary pages.

STEUERN UND ZÖLLE IM GEMEINSAMEN MARKT

Edited by Rudolf Regul. (Original editor Heinrich Megow).
Nomos Verlagsgesellschaft, P.O. Box 610, D-7570 Baden-Baden.
Supplemented: three to four times per year.

Loose-leaf publication dealing with the activities within the European Economic Community in the field of taxation and customs regulations. Surveys of the customs and the tax systems in each member country as well as the common policy towards harmonization thereof are set out. Double taxation treaties between the member countries and with third countries are dealt with. Text of relevant statutes concerning the European Economic Community as well as related statutes and the OECD model tax treaty are appended. The material is kept up to date by the issue of supplementary pages.

EUROPEES KARTELRECHT

Handboek voor de Europese Gemeenschappen.
Samsom, Wilhelminalaan 1, Alphen a/d Rijn — Kluwer, Postbus 25, Deventer.
Supplemented: regularly.

Loose-leaf publication dealing with anti-trust laws in the member countries of the EEC. Text of case law in the national languages and related statutes are printed. Text of decisions by the Commission is in the Dutch language with reference to the authentic text language. The material is kept up to date by the issue of supplementary pages.

FISCALITE EUROPEENNE

by Pierre Fontaneau.
Les Cahiers Fiscaux Européens, 51 Avenue Victoria, 06000 Nice.
Supplemented: quarterly.

Loose-leaf publication in seven volumes which expose the tax systems of each country of the member states of the European Communities according to a common outline to facilitate comparison. The countries covered are Belgium, France, German Federal Republic, Italy, Luxembourg, Netherlands and the United Kingdom. A comprehensive index is appended. The material is kept up to date by the issuance of supplementary pages.

TABLEAUX FISCAUX EUROPEENS

by Pierre Fontaneau.
Les Cahiers Fiscaux Européens, 51 Avenue Victoria, 06000 Nice.
Supplemented: regularly.

Loose-leaf publication, in three volumes, providing comparative tax tables with respect to the provisions of the individual income tax, the corporate income tax and the tax on value added systems in eight member states of the European Communities (i.e. Belgium, France, German Federal Republic, Italy, Netherlands and the United Kingdom). The material is kept up to date by the issue of supplementary pages.

Tax Reform and Fiscal Policy in Hong Kong.

by Y.C. JAO *

In early 1976 the Government of Hong Kong appointed a six-member committee to examine the existing tax system of Hong Kong with a view to recommending suitable tax reforms. The committee, officially known as the Third Inland Revenue Ordinance Review Committee, had the following terms of reference:

"Having regard to the economic circumstances of Hong Kong which dictate —
(a) a comparatively low level of direct taxation;
(b) that the system at given tax rates should be as productive of revenue as possible; and
(c) that the relevant legislation should be simple and inexpensive to administer;
to consider the present system of taxation of profits and other forms of income contained in the Inland Revenue Ordinance, and in particular —
(a) the system of voluntary aggregation under Personal Assessment;
(b) the taxation of husbands and wives;
(c) the treatment of dividends and its relation to the taxation of corporate profits;
(d) the treatment of interest and the relief for interest paid;
(e) the territorial ambit of the various charges (having regard, *inter alia*, to the effects of changing commercial practices and recent case law);
(f) the taxation of benefits in kind;
(g) the notional basis of the property tax charge;
(h) the taxation of specific classes of taxpayer, including profits from shipping; and
(i) the adequacy of existing relief for expenses incurred by businesses and employees; and then to make recommendations to the Governor on or before 15th December 1976."

The Committee formally began work on June 14, 1976 and after six months' deliberations, submitted its report to the Hong Kong Government on December 13, 1976. The Johnstone Report, as it is now called (named after the chairman of the Committee, Mr. J.A. Johnstone, *a distinguished British tax expert), has recently been released.* [1] *In tabling the Report to the Legislative Council, the Financial Secretary of Hong Kong,* Mr. C.P. Haddon-Cave, *stated that a working party will be formed under his chairmanship to study the financial, economic, social and political implications of the recommendations, taking into account also public comments so that the policy can be formulated and necessary amendments to the law be drafted at a later stage.*

* Senior Lecturer in Economics, University of Hong Kong. The present writer was a member of the Johnstone Committee, but as the Committee has now been dissolved on completion of its task, this paper represents of course his personal views only.

Because of its obvious importance for the future development of Hong Kong's tax system, and in view of Hong Kong's own growing stature as a trading and financial centre, a detailed analysis of the Report and its recommendations is called for. Section I of this paper discusses the historical and economic background to the Report. Section II then summarizes its recommendations, explains their rationale, and appraises their significance. Section III reviews briefly recent trends in fiscal policy, particularly the proposals contained in the latest 1977-78 Budget announced on March 2, 1977.

I

As the official name of the Committee implies, an inquiry into various aspects of the tax system had been conducted on two previous occasions — in 1952-54 by the Inland Revenue Ordinance Committee, and in 1966-68 by the Second Inland Revenue Ordinance Committee. However, the two earlier review bodies did not concern themselves with the basic structure of the Ordinance, with the result that their recommendations were largely of a technical and administrative nature only. In announcing the appointment of the Third Review Committee, however, the Financial Secretary expressly stated that *"by contrast, the intention is that the third Review Committee will examine the basic structure of the Ordinance. By 'basic structure' I mean such matters as the existence of separate schedular taxes, the territorial ambit of the charge and the lack of progression in the rates. The Committee will also be asked to consider the treatment of dividends, and in particular, the proposals formulated in 1975 for a dividend withholding tax and associated measures."* Thus the Johnstone Committee had a wider and more significant scope of inquiry than its predecessors. At the same time, the Financial Secretary also prescribed certain bounds by saying that *"the committee will not be required to concern itself with administrative matters nor with questions of fiscal policy, that is to say, actual rates of tax. In addition, the Committee will not deal with the level and extent of personal allowances, except insofar as they are related to any particular terms of reference, such as the taxation of husbands and wives."* [2]

Like its predecessors, one important reason for the establishment of the Johnstone Committee was the need to raise additional revenue. In this connection it is perhaps useful to review briefly the more important milestones in the evolution of Hong Kong's tax system. For the sake of brevity we need go no further back than to 1939, when a War Revenue Committee was appointed to consider the possibility of introducing income tax into the Colony. In deference to fierce opposition at that time to any form of full-scale income tax, the Committee eventually proposed the introduction of a "partial income tax" on the model of the 1932 Ceylon Income Tax Ordinance. Specifically, it recommended that a schedular type of taxation, consisting of corporation profits tax, property tax, salaries tax, and business profits tax, be established, and that profits tax be confined to only those profits arising in, or derived from Hong Kong. [3] These recommendations were duly incorporated in the 1940 War Revenue

1. *Report of the Third Inland Revenue Ordinance Review Committee*, Hong Kong, 1977.
2. *Official Report of the Proceedings of the Hong Kong Legislative Council*, February 25, 1976, pp. 568-569. In a footnote to his speech the Financial Secretary explained that by "administrative matters" he meant matters of machinery such as the collection of tax, the tax commissioner's powers, appeal procedures, penalties and so on.
3. *Report of the War Revenue Committee*, in *Sessional Papers Laid Before the Legislative Council of Hong Kong*, 1940, pp. 3-39.

Ordinance, which in turn was amended in 1941 to bring interest into the tax net. Immediately after the war, a taxation Committee in 1946 recommended the replacement of the War Revenue Ordinance by a new Inland Revenue Ordinance. 4 An attempt to widen the territorial ambit in order to cover not only income arising in or derived from the Colony, but also received in the Colony, was rejected; however, the schedular system was retained and two new concepts, the standard rate and personal assessment, were introduced into the 1947 Inland Revenue Ordinance. In 1952 the Inland Revenue Ordinance Committee was appointed. As it did not consider the underlying principles of the Ordinance, its recommendations were of minor importance. It did however recommend the repeal of a provision authorizing a company to deduct tax from dividends, and the withdrawal of an existing concession which enabled a taxpayer to gross up his dividends along with his other income for personal assessment and then to set off the dividend tax against his liability. 5

The Second Inland Ordinance Review Committee was appointed in 1966 and although it was also concerned only with administrative and technical matters, their recommendations, contained in their reports in 1967 and 1968, were much more important than that of its predecessor. 6 Among its major recommendations were, first, a limited extension of the profits tax by deeming certain specific items of income, such as royalties, subsidies, and rent to be profits arising in, or derived from, Hong Kong, and second, the replacement of the artificial preceding year basis of assessment of salaries and profits tax by the current year basis and the introduction of a system of provisional tax. The Committee also recommended increased powers to the Commissioner of Inland Revenue to tackle the problem of tax evasion. Over a period of years these recommendations were accepted and duly enacted into the Ordinance.

The proximate origin of the Third Inland Revenue Ordinance Review Committee can be traced to the 1973 Budget speech, in which the Financial Secretary drew attention to the fact that the narrow territorial ambit had been further eroded through case law decisions and loopholes in the existing law. This theme was further elaborated in his 1974 Budget speech in which he broached the idea of amending the Ordinance to tackle the type of case which *"involves a business conducted by a person having a permanent establishment in Hong Kong which then proceeds to earn profits which cannot possibly be said to be attributable to any permanent establishment anywhere else and which, in all probability, have not been declared for tax anywhere else. This can be done by means of 'back to back' arrangements, that is to say, reinvoicing, agency agreements, servicing agreements and a host of other similar devices."* 7 He singled out two industries, shipping and banking, for specific consideration on account of substantial tax avoidance. This proposal did not find favour with the Legislative Council however. In the following year, when the Financial Secretary had to look for another source of additional revenue, he therefore proposed a new tax on dividends with effect from 1976. As a temporary bridging measure, he increased the rate of corporation profits tax from 15 percent to 16½ percent pending the introduction of the dividend tax. At the same time, he also proposed the appointment of a third Review Committee to consider the existing tax structure as a long term measure. Again the proposal of a new tax on a hitherto untaxed income soon ran into stiff opposition, so the referral of this controversial issue to an independent commission was the only way out of the impasse.

1975 was a difficult year for Hong Kong, particularly in the first quarter. The Colony, heavily dependent on export trade, was hard hit by the world-wide recession. When the Financial Secretary presented his Budget for 1975-76 on February 26, 1975 he therefore had to plan for a deficit for the second consecutive year in a row. Even though the deficit could be covered by borrowing, the need for increasing tax yield was quite pressing.

But apart from the purely budgetary consideration, there were also other good reasons why a fundamental review of the tax system was overdue. The 1947 Inland Revenue Ordinance, as we have seen, was based essentially on the recommendations of a war-time committee. During the thirty years since 1947, the economy of Hong Kong has undergone profound changes. Whereas in 1947 Hong Kong was a small entrepot with a population of 1.75 million, today it is a leading trading, manufacturing and financial centre with a population of 4.5 million. Yet, notwithstanding successive amendments, largely of a technical nature, the underlying principles and basic structure of the Ordinance remain as they were thirty years ago. A fresh reappraisal of its rationale in the light of contemporary economic environment would therefore be both desirable and timely. Moreover, as a result of growing sophistication in business and commercial practices, many loopholes in the Ordinance have come to light, making it less productive of revenue than it could be. There are also inherent inequities that can no longer be tolerated just because the tax rates are low. Finally, social attitudes have been rapidly changing in Hong Kong, and pressure has been mounting for the provision of more public services. In response to this demand the Government has launched ambitious long-term programmes on housing, education, social welfare and public works requiring huge capital expenditures whose costs moreover have been escalating together with inflation. The financial implication of this is reflected in the fact that in recent years, the growth of public expenditure has far outstripped that of public revenue. Thus, from fiscal year 1970-71 to fiscal year 1974-75, total public expenditure increased by 157 percent, but total public revenue increased by only 93 percent. Although the deficits in the two fiscal years 1974-75 and 1975-76 can be largely attributed to economic recession, it is also clear that the halcyon days when Hong Kong can take fiscal surplus for granted are over. Quite apart from short-run exigencies, therefore, there is a need for long-term tax reform so that the tax structure can be made more productive at any given tax rates.

This then is a short survey of the historical and economic background to the appointment of the Johnstone Committee. It may also be appropriate to describe briefly how the Committee actually worked. Before it was convened advertisements were inserted in local newspapers inviting written representations from individuals and organizations on any aspect of the Committee's terms of reference. Altogether 31 organizations and firms and 133 individuals responded by sending in written submissions. These were carefully scrutinized and considered on their merits. A total of 26 formal meetings were held to discuss matters within the Committee's purview. From time to time government officials and other experts were interviewed and consulted on administrative and technical issues. In view of Hong Kong's international status the Committee also studied reports of similar review bodies in other countries, particularly the reports of the Radcliffe Commission (1953-55) in the United Kingdom and the Asprey Committee (1974-75) in Australia. The overriding concern, however, has always been Hong Kong's own interests and special position, and at no time was there any intention of transplanting ideas and proposals from other countries without examining carefully their validity and suitability for Hong Kong.

II

Before we discuss and explain the recommendations of the Johnstone Report, it is necessary to summarize for the reader's easy reference and understanding the major features of Hong Kong's present tax system. 8

The first feature is that Hong Kong adheres to the "source" rather than the "residence" principle. This means that only income "arising in or derived from" Hong Kong is chargeable to tax. Income from non-Hong Kong sources but received by a resident in Hong Kong is excluded. Second, there is no full income tax as such; instead, tax is levied on specified sources of income, namely, property, salaries, profits and interest. This is known in tax literature as the schedular system, whose origin can be traced to Addison's Act of 1803 in the United Kingdom. The nearest equivalent to full income tax is an option called Personal Assessment. This however is a form of relief whereby individuals with earnings and profits, normally chargeable at the standard rate on each separate source, may elect to be assessed on total Hong Kong income, claiming personal allowances and paying tax at a sliding scale of marginal rates used for Salaries Tax. The advantage of such an option disappears when tax at the sliding scale on total income less personal allowances exceeds tax at the standard rate on total income from all local sources without allowances. The present Ordinance does not contain, as elsewhere, a sweep-up clause bringing under charge any other income not explicitly described. There is thus no tax on dividends and capital gains. Nor is there any tax on wealth and gift *inter vivos*. On the other hand, the major headings under the schedular system have been broadened over the years to bring various incomes within their orbit. Thus the Salaries Tax reaches not only salaries and wages, but also pensions and remuneration from every kind of employment. The Interest Tax applies to interest on money lent and bank deposits, as well as to annuities. Business profit is also widely defined to include copyright and patent royalties, rental income from property, income from leasing of machinery and equipment, and agricultural and other kindred operations. Furthermore, there are other taxes, such as Estate Duty, Stamp Duty, Entertainments Tax, Betting Duty, Hotel Accommodation Tax and so on that are governed by separate ordinances rather than by the Inland Revenue Ordinance. In addition, there is also another tax known as the Rates, which in the British tradition is a kind of tax for local services such as police, water, street lighting etc., but which nevertheless is outside the scope of Inland Revenue Ordinance. Given the schedular framework, it cannot be said that taxation in Hong Kong is unduly narrow in its coverage. The third feature is the low level of tax rates and lack of progressivity. The standard rate, which applies to Property Tax, Interest Tax, and Business Profits Tax, has been increased over the years from 10 percent to 15 percent by two steps of 2½ percent each. In 1975-76 a total surcharge of 2 percent was added to the standard rate for corporation profits only. These are of course uniform rates irrespective of the level of taxable income. The charge for the Rates has recently been lowered to 11.5 percent of rental value. For Salaries Tax and Personal Assessment, there is a sliding scale of marginal rates, ranging from 5 percent for the first HK$10,000 to 30 percent for the sixth HK$10,000, but subject to the limitation that total tax paid shall not exceed 15 percent on gross income before deduction of personal allowances. This means in effect that, for him whose net taxable income exceeds HK$50,000, there is a flat rate of 15 percent on his *gross* income without the benefit of allowances. A sliding scale also applies to Estate Duty, ranging from a minimum of 6 percent on estates valued between HK$300,000 and HK$400,000 to a maximum of 15 percent on estates valued in excess of HK$1 million, estates under HK$300,000 being exempt. Stamp Duty consists of two components: fixed duties vary from HK$0.15 to HK$50, whilst *ad valorem* duties range from HK$0.025 per cent to 2.25 percent. However, buyers and sellers of shares have each to pay a duty of 0.4 percent on the total value of transactions. Entertainment Tax is charged on the price of admissions to cinemas and now averages about 8 percent. Betting Duty is at present charged at 25 percent on cashsweep contributions and lotteries, and 11 percent on other bets. Hotel Accommodation Tax is levied at 4 percent on hotel bills paid by the guests. Crown Rent is now charged at 3 percent of the annual rateable value of the property, all real property being regarded as leasehold rather than freehold in the eyes of the law. As Hong Kong is a free port, there is no general import duty, except for some specific duties on a few commodities. Generally speaking, indirect taxes and non-tax revenue account for well over 60 percent of total revenue, and since direct taxes are in turn mostly charged at a flat rate, the tax system as a whole tends to be somewhat regressive.

We are now in a position to discuss and explain the recommendations contained in the Johnstone Report. The Report is organized into ten chapters and three appendices. Apart from the first introductory chapter, the other chapters are concerned with substantive matters of suggested reforms. It may therefore be convenient to follow the order in which the recommendations are presented.

1. Personal Assessment

As stated above, Personal Assessment is a form of relief whereby a taxpayer's income from various sources is aggregated at his election. This option is open to local residents only. A wife (unless she is living apart from her husband) and a person under eighteen are also excluded. From the total income, after due allowance for interest paid and charitable donations, personal and family allowances, the net taxable income is reached, which then is chargeable at the rates specified in the Second Schedule of the Ordinance. Obviously, a taxpayer will only elect Personal Assessment if it is to his advantage. One of the main deficiencies of this system is the administrative waste and duplication involved. This arises from the incompatibility between personal assessment and the schedular system, which are based on different conceptual approaches. Thus, separate returns have to be issued for each tax and separate files and records maintained; when taxpayers elect Personal Assessment, refunds of overpayment have to be made. This is particularly cumbersome where Property Tax is involved, for separate assessments have to be issued for each rateable unit of property. Thus during the fiscal year 1975-76, 63,368 cases of Personal Assessment were dealt with, of which 39,920 were refund cases. Compared with 1970-71, the number of cases increased by 54 percent, while refund cases increased by 77 percent. 9 Clearly, manpower engaged in such work could be more productively employed in other areas, such as checking and preventing evasion. More serious are the horizontal inequities arising from the co-existence of Personal Assessment and the schedular system. The Report gives two examples where in one case a taxpayer with large business profits and a salary outside his own business will pay much less tax than another taxpayer with the same total income but all of which comes from salaried employment. In the second case, a taxpayer with a relatively large salary coupled with other incomes such as

9. *Annual Departmental Report by the Commissioner of Inland Revenue for 1975-76*. Hong Kong.

interest pays much less tax than another taxpayer with the same total income but which consists entirely of profits and interest. Various combinations of income from employment, business profits and property are undoubtedly possible to generate such horizontal inequities. For these reasons, the Report recommends that (a) a single composite return covering all four sources of income should be brought into use in order to minimize unnecessary operations and duplication and (b) the present voluntary system of personal assessment be repealed and replaced by a mandatory system of assessment on total income in order to correct the anomalies mentioned earlier. This would also provide an initial basis for the introduction of a more progressive tax structure should it be thought necessary. As we shall also see later, this mandatory system, together with the abolition of Property Tax and its integration into Business Profits Tax, should eliminate a great deal of matching collections and refunds and thus enhance efficiency and productivity as well as achieve greater equity.

2. Taxation of Husbands and Wives

This was the topic in the terms of reference which attracted more representations than others, the main theme of the majority being a request for separate tax assessment on the respective incomes of husband and wife, particularly in regard to earnings from employment. Under the present Ordinance, the salaries of a husband and his wife are aggregated, and for the purpose of aggregation the income of a married woman (unless she lives apart) is deemed to be the income of her husband. In 1970-71 a working wife's allowance of HK$3,000 was granted which was however repealed in 1973-74 as part of a package adjustment under which the personal allowance was increased from HK$7,000 to HK$10,000.

Advocates of separate assessment have rested their case on a woman's right to her own income and property and her independent status. It has also been alleged that under aggregation, the wife's earnings are subject to higher marginal rates and this acts as a deterrent to trained and qualified females from joining the labour force. On the other hand, without disputing a married woman's legitimate right and social status, there is also a highly respected school of international opinion that regards the family as the basic tax-paying unit on grounds of equity and ability to pay. This is represented for example by the 1954 *Radcliffe Report* and the 1966 *Carter Report.* 10 It is also interesting to note that in Australia, notwithstanding its long tradition of separate taxation of spouses, the *Asprey Report* has nevertheless recommended the introduction of an option for joint assessment. 11

Furthermore, complete disaggregation is certain to cause substantial loss to fiscal revenue, and give rise to abuses such as fictitious employment of the wife and income-splitting. It also discriminates against those families where there is only one bread-winner.

The opposing views were carefully weighed by the Johnstone Committee but members could not reach a unanimous agreement. The majority however felt that complete disaggregation could not be justified on grounds of equity, fiscal productivity, and administrative simplicity. It is estimated that there are now well over 50,000 wives in employment in Hong Kong, and to allow them separate assessment would create problems of administrative complexity and revenue loss of staggering proportions. The relevant passage in the Report (paragraph 59) reads:

"We had to acknowledge the stubborn fact that any close approximation to a complete separation of the income of husband and wife would result in a considerable loss of revenue and would thus lead to a relatively higher tax burden for those husbands who are the only income earners of their families — and very probably an absolutely higher one if tax rates needed to be adjusted to compensate for the short-fall."

Moreover, under the schedular system in Hong Kong, a married woman is already given *de facto* separate assessment under Profit Tax, Property Tax and Interest Tax. On the other hand, the Committee was, of course, aware that extra expenses are involved for a wife to work outside her home, that social attitudes regarding the status of women in Hong Kong are rapidly changing, and that it is desirable to give some encouragement to educated and trained married women to join the labour force thus contributing to economic growth and well-being of the community. Accordingly, the Committee agreed that the *"grant of some significant measure of relief for wives' earnings provided that the preference does not go beyond what is reasonable"* was justified and recommended the reintroduction of the working wife's allowance to be set at a fixed percentage of the personal allowance. The actual level of the "fixed percentage" was left open as it was felt that this was a matter of fiscal policy that should be decided by the government in the light of the current fiscal situation, but during the discussions a range of 30 percent to 50 percent was envisaged. The Committee advised that elementary precautions should be taken against income-splitting. It also recommended that the new allowance should, where appropriate, be available also against trading or professional profits.

3. Dividends and Corporate Profits

The proposal to introduce a Dividend Withholding Tax (DWT) and the associated Undistributed Profits Tax (UPT) was perhaps the most controversial item on the agenda for the Review Committee. Before outlining the proposal, it may be helpful to recall that the 1947 Ordinance did provide for the deduction of tax from dividend at the standard rate by a company from so much of the dividend declared payable as corresponded, on a proportional basis, to the part of the company's profits with a Hong Kong origin. If the shareholder was a second company, the rule was that the dividend was excluded from its assessable profits. If the shareholder was an individual and he elected for Personal Assessment, the dividend was duly grossed up along with his other incomes and he was allowed to set off the dividend tax against his personal assessment liability. In other words, there was a rough-and-ready kind of imputation system at work so that in effect there was no tax on dividends. In 1955 the Ordinance was amended on the recommendation of the first Inland Revenue Ordinance Committee: the provision authorizing corporations to deduct tax from dividends was repealed, and dividends ceased to be taken into account under Personal Assessment.

In his 1975-76 Budget speech on February 26, 1975, the Financial Secretary expressed the view that a withholding tax on dividends should be introduced to widen the base of direct taxation. As a stop-gap measure to protect revenue, a surcharge of 1½ per cent was added to the standard rate of 15 percent on corporation profits, pending the approval and implementation of the DWT. 12 In the 1976-77 Budget, the surcharge was raised by another half percent. The Financial Secretary also disclosed that a Bill had been drafted so that (a) resident corporations were required to deduct tax at 3½ percent from all dividends; (b) a tax at 7 percent would be imposed on undistributed profits where the pay-out ratio of dividends fell short of 50 percent; (c) on introduction of

10. *Second Report of the Royal Commission on the Taxation of Profits and Income*, Cmd. 9105 of 1954, London, Chapter 6; *Report of the Royal Commission on Taxation*, Ottawa, 1966, Vol. I, pp. 17-18. The same opinion was also expressed in the very recent *Report on the Inquiry into the Taxation of the Income of Married Women*, South Africa, 1976.

11. *Report of the Australian Taxation Review Committee* (Asprey Committee), 1975, chapter 10.

12. *Official Report of the Proceedings of the Hong Kong Legislative Council*, February 26, 1975, pp. 494-495, and pp. 533-53

the DWT, the surcharge on resident corporations would be withdrawn but that on non-resident corporations would remain, as the latter would not be within the scope of the two new taxes. 13

As mentioned earlier, the proposal had met with strong opposition both at the Legislative Council and from the business community. Critics pointed out that the proposed tax involved double taxation of the same fund in the hands of both the corporation and the shareholder. The 7 percent undistributed profits tax was particularly strongly criticized as being coercive and damaging to business confidence. In defence, the Government argued that double taxation did not exist since a corporation is an entity separate from its shareholders, and in any case the fact that the DWT was set at a rate very much below the standard rate already minimized whatever double taxation that might exist. The higher rate on undistributed profits was necessary in order to discourage avoidance of the DWT on the very reasonable norm of a 50 percent pay-out ratio.

In examining the theoretical basis for a change, the Committee recognized that from the purely legal point of view, the corporation is a separate entity from its shareholders, but expressed the view that *taxation levied in a community will interfere least with the progress of that community if its structure takes due account of economic realities rather than legal forms (paragraph 74).* On the practical working of the scheme there was some difference of opinion among the members as to its feasibility. The majority held however that a DWT would be unsound without a system of imputation. Since the proposed tax would fall on profits (including profits from the sale of capital assets) originating outside Hong Kong, this could generate pressure for changing the situs of companies. Any legislation to block this migration or to limit the charge of the DWT to assessable profits of Hong Kong origin would be too complicated and not worthwhile in terms of potential yield. Another area in which anomalies can arise is where a company both receives and pays out dividends. The period during which a setoff could be claimed was limited to one year and this was considered to be too short. The Committee also expressed disquiet at the UPT rate being set at twice the DWT rate of 3½ percent: *The need for self-finance in order to promote expansion without raising outside capital may be very pressing, and where this factor is present the imposition of any financial penalty seems to us wrong. (Paragraph 85).* There was a suggestion to modify the original proposal by lengthening the period of claims for tax credits to three years, and reducing the level of UPT to 6 percent, but this compromise did not find favour with the majority. The differential rates on resident and non-resident companies could also create anomalies. The Committee conceded that ways could be found to tackle the various problems mentioned, but the ensuing legislation would be so complicated as to violate the guideline of simplicity stated in its terms of reference. Accordingly, it recommended that the 1975 plan to introduce DWT and UPT be abandoned, but that the surcharge on corporation profits be retained at one or two percentage points higher than the standard rate. The surcharge could be regarded as a kind of franchise tax in recognition of the various advantages which a corporation enjoys (limited liability, easier access to the capital market, wider dispersion of shareholders etc.)

. Interest and Relief for Interest Paid

Under the present Ordinance, a tax at the standard rate is withheld at source from any interest arising in or derived from Hong Kong with the exception of interest on Tax Reserve Certificates, approved government bonds, and savings deposits. Interest payments to banks, corporations, authorized pawn-brokers and money-lenders whose incomes are subject to Profits Tax are also excluded. The Committee discussed the important principle of where the source of any given interest is located, and in contrast to the prevailing tendency of the law courts to give preponderant consideration to the place where the original credit or loan is given, came to the conclusion that the economically valid test should be the place where the credit or loan proceeds are actually employed. In the words of the Report, *the purpose must be to subject to tax under the Inland Revenue Ordinance all significant flows of income which are the result of economic activity carried on in Hong Kong rather than elsewhere. This purpose would be better served if the charging words in the Ordinance were supplemented by a provision ascribing a Hong Kong origin to interest paid by a person carrying on a trade or business here on money borrowed by him and employed or expended in, or in connection with, the production of the assessable profits of that trade or business (paragraph 100).* Where the fund raised is used partly for Hong Kong and partly for overseas activities the interest should be notionally divided into two separate components for the purpose of applying the new provision. This provision was also considered necessary to prevent possible manipulations for tax avoidance purposes. Apart from establishing this guiding principle, the Report also corrects a minor anomaly by granting a set-off to non-profit making trustees who both receive and pay out interest. It further recommends that the definition should be widened to cover any surplus that may arise in the redemption of certificates of deposit and similar entitlements. On the question of relief for interest paid, the Committee was of the opinion that present provisions under the Ordinance are quite adequate and did not see any justification for widening relief. In particular, it rejected the suggestion from several correspondents that interest paid on money borrowed for the purchase of owner-occupied residences should qualify for relief. Quite apart from the fact that owner-occupiers are already exempt from Property Tax, the suggested relief would involve considerable unfairness to rent-payers.

5. Territorial Ambit of the Charges

As mentioned earlier in the article, Hong Kong adheres to the "source" principle of taxation, under which only income arising from or derived in Hong Kong is subject to taxation. This principle was established by the 1940 War Revenue Committee, enshrined in the 1947 Inland Revenue Ordinance, and reaffirmed by the 1968 Final Report of the Second Review Committee. In inviting representations from the public the Johnstone Committee received many submissions from trading and professional bodies to the effect that any attempt to widen the ambit of the charge to profits and earnings from abroad could well be counter-productive in that many international trading, manufacturing and financial institutions which have regional or branch offices in Hong Kong would migrate elsewhere. While the Committee regarded this as an opinion not capable of proof or disproof, it conceded that the risk could be a serious one with adverse consequences to the economy. Paragraph 110 of the Report is well worth quoting in full:

"In the circumstances, we have come to the conclusion that the broad principle of excluding profits and earnings received in Hong Kong but having their origin elsewhere should continue to operate. Although we have pointed out that the exclusion makes the ambit of the Inland Revenue Ordinance narrower than that of the income tax codes of many other territories, it can also be said that the rule of exempting particular types of income originating outside a country's borders is well recognised as a method of preventing the international double taxation which could otherwise create obstacles to world trade. For instance, France, the Netherlands and Switzerland do not impose tax on the profits earned through foreign branches by firms established in those countries: again, the Netherlands, Switzerland and in certain cases, Canada do not charge resident companies in respect of the dividends they draw from overseas subsidiaries.

---

13. *Official Report of the Proceedings of the Hong Kong Legislative Council*, February 25, 1976, pp. 552-553.

Having reaffirmed the source principle, the Committee then considered the detailed application of the principle to the individual categories of taxes in the light of changing commercial practices and case law that have developed since 1947.

For obvious reasons, there is no problem with Property Tax as far as geographical location is concerned. The practical working of the ambit rule for Salaries Tax is less simple, as over the years many multinational corporations, financial institutions and other international bodies have established regional offices in Hong Kong whose personnel, while based in Hong Kong, may render services or often travel out of Hong Kong. Under the present Ordinance, the general test is that the emoluments of an "office or employment of profit" which arise in or are derived from Hong Kong, supplemented by a further rule that any earnings which an employee derives from the rendering of services within Hong Kong during a period of more than 60 days in the year of assessment are also chargeable. The Committee considered the present double test and existing Inland Revenue departmental interpretation and practice as being quite adequate and therefore had no change to propose in the law.

It is in the area of Profits Tax that the source principle has been put under the greatest strain. The original intention of the Ordinance was that if the main supervision of a business took place in Hong Kong, the profits derived had a Hong Kong origin unless it could be clearly shown that they were due to the intervention of a permanent establishment elsewhere. However, over the years as a result of technological advances in communications and transportation, and growing sophistication in commercial practices and "tax planning", it is not difficult for peripatetic directors or senior executives to make *ad hoc* arrangements for contracts to be signed outside Hong Kong. Although it is clearly the existence of the business and its management in Hong Kong which enables the contract to be negotiated and later carried out so as to yield a profit, such profit unfortunately may in the eyes of the law be considered as arising outside Hong Kong, and in recent years there have been in fact a number of adverse court decisions resulting in an erosion of the tax base. The Committee therefore recommended that, although there should be no general extension of the tax to profits made outside Hong Kong, there ought to be legislation deeming what is called the "intermediate category of profit" to have Hong Kong origin. *The category of profit in question would be defined by specifying that it was profit accruing in the course of the carrying on of a trade or business actively exercised in Hong Kong which was not substantially caused by the action (on behalf of the trade or business) of a branch organisation located outside Hong Kong. The word "substantially" has been included to take care of the case where there is a branch which does something trivial like handing out a catalogue to an enquirer whereas a director comes over specially from the Hong Kong headquarters to negotiate and conclude the actual contract (paragraph 126).* The "branch organisation" is defined to be identical to the concept of "permanent establishment" normally used in double taxation conventions. The same principle of levying tax on the "intermediate" category of profits" is also extended to banking institutions and other deposit-taking companies which accept deposits from the Hong Kong public and in turn redeposit the proceeds in overseas markets (such as the Euro-dollar market) to profit from the interest differentials. The reason for this extension is that the financial institutions in question make use of Hong Kong infrastructure to acquire local deposits, the interest payments on which are tax-deductible, while interest receipts on Euro-dollar deposits are not due to the substantial intervention of any permanent establishment elsewhere and yet are not brought within the tax net. It is also consistent with what has been discussed earlier under the heading of "interest and relief for interest paid". Interest receipts by individuals and non-financial concerns from depositing funds abroad are not however regarded as falling within the "intermediate category of profits".

6. Benefits in Kind

Under the existing Ordinance, the general principle is that a benefit in kind is taxable only if it is convertible into cash. The exceptions to this rule are employers' contributions to an approved retirement scheme, subsidized housing, and holiday warrant or passage granted by an employer, or any allowance to purchase one. In the case of accommodation provided by the employer either in the form of actual quarters or a tenancy allowance, the rule is that the beneficiary is taxed to the extent that his rental contribution, if any, falls short of certain fixed percentages of his cash income. For private residence, this is fixed at 10 percent, while for an hotel, hostel or boarding house it is 8 percent where the accommodation consists of not more than 2 rooms and 4 percent where not more than one room is provided. The value of any holiday warrant or passage granted by an employer to an employee, or any allowance to purchase one, including payment for the transportation of personal effects, is not regarded as income.

The Committee regarded the present provisions on the taxation of fringe benefits as being generally reasonable and adequate, and recommended extension of the charge only to cases where the employer meets the costs of public utilities and domestic servants of the employee. The Committee also recommended that where a director's remuneration in a director-controlled company is artificially low (compensating himself by drawing larger dividends) in order to keep down the cash income for the calculation of value of quarters provided, the Commissioner of Inland Revenue should be empowered to use the net assessable value of the quarters for calculation of any tax liability.

7. Property Tax

Property Tax under the existing Ordinance is charged on the owner of land/or buildings. There is exemption for owner-occupiers, for unoccupied premises and for corporation-owned properties used for earning profits chargeable to Profits Tax. Unincorporated business firms can set off Property Tax paid, on premises owned and used to earn their profits, against the Profits Tax payable, while individuals claiming Personal Assessment can also set off Property Tax paid against their liabilities under Personal Assessment, any over-payment being eligible for refund.

Before April 1, 1976, Property Tax was charged at the standard rate on the rateable value — the estimated annual rent at which the property might be expected to be let at arm's length and was in turn based on the valuation list prepared by the Rating and Valuation Department — less 20 percent allowances for repairs and outgoings. Because revaluation was done relatively infrequently — normally every four years — there has been a tendency for the valuation list to lag seriously behind the actual market values. As from April 1, 1976 a new concept of net assessable values of land and buildings was introduced. The reason for this change is that while Rates are a tax on occupiers of premises towards defraying the cost of local services, Property Tax is a tax on income derived from ownership of property, a distinction which justifies some divergence in the underlying valuations. The assessment of Property Tax values independently of rating valuation lists would enable such values to be fixed in line with current market rental levels and not on a "tone of the list" basis. This new system, while coming closer to the actual current rental value as the tax base, still entails the levying of tax on a notional basis in cases where the premises are owned by a corporation not carrying on business in Hong Kong, where a taxpayer resides at more than one property, where the property is occupied either rent free or at less than the full market value by persons other than the owner's immediate family, and where clubs and similar institutions that own premises do not carry on any profit-making trade or business.

In the course of its deliberations and interviews of officials, the Committee was struck by the inefficiency of the tax as reflected in its declining relative share of revenue, by its cumbersome administration (three government departments are involved: the Treasury, Inland Revenue Department, and Rating and Valuation Department); by the waste of manpower required in handling offsetting collections and refunds; and last but not least, by the built-in inequities that result from the divergence between assessed value and actual rental value. After examining various alternatives for improving the system, the Committee came to the conclusion that only by treating actual rental income as part of the total income in a composite return can the above inefficiency, waste, and inequities be eliminated. Accordingly, it was recommended that Property Tax in its present form be abolished, and that the relevant section of the Ordinance be amended so that the exploitation of the ownership of property for pecuniary gain is treated as a business and therefore subject to Profits Tax. This recommendation is also consistent with the mandatory assessment of total income mentioned under Personal Assessment. As a corollary, it was further recommended that the relevant section be amended to disallow excessive payments of rents to directors of director-controlled companies.

8. Specific Classes of Taxpayer

Terms of reference (h) required the Committee to consider certain specific classes of taxpayer. Under the present Ordinance, there are special sections to cover the assessment of life and non-life insurance corporations, resident and non-resident ship-owners, clubs and trade associations because of the specialized nature of their business. Among them the most important are undoubtedly shipping companies as it has been pointed out by the Financial Secretary in several Budget speeches that resident ship-owners, while making use of the infrastructure and other amenities of Hong Kong, have nevertheless succeeded in arranging their affairs in such a way as to pay very little, if any, Profits Tax.

This is done by a complicated chain of organization whereby the *de facto* ship-owners form an investment company in Hong Kong, which takes shares in an offshore company set up in a tax haven. This offshore company in turn acquires a ship and registers it under a flag of convenience, and appoints a management company in the same or another tax haven to be its management agent with full authority to manage the ship but mainly to negotiate and conclude its charter parties. Although negotiation may be done in Hong Kong, all the charter parties are legally executed outside of Hong Kong. At the end of the organizational chain, a sub-agent is appointed in Hong Kong to do whatever is required for the operation of the ship, e.g. recruiting officers and crews, handling finance etc. The end result is that the resident ship-owners, notwithstanding the fact that they are actually carrying on the business of ship-owning, that they have a permanent management in Hong Kong which controls and manages the ship's operations, and that they are the ultimate beneficiaries of profits from the charter hire, can nevertheless claim to bear no liability to profits tax. A small commission is paid to the Hong Kong sub-agent, which is chargeable to tax in Hong Kong, but this of course bears no real relation to the actual size of operating profits. Over the years the business of Hong Kong ship-owners has expanded tremendously and it is estimated that they now own roughly 25 to 30 percent of the world's tonnage registered under flags of convenience, so that the revenue loss from their deliberate avoidance can no longer be ignored.

In considering the various possibilities to bring the resident ship-owners' earnings within the ambit of Profits Tax, the Committee reached the conclusion that any attempt to lift the "corporate veil" would be complicated and in any case ineffective, since the ship-owners could easily move the first unit in their organizational chain, the Hong Kong investment company, to an offshore location. However, the Committee was of the opinion that since there is a general international accord whereby a non-resident ship-owner is nowhere taxed on his charter-hire earnings, charter hire attributable to a permanent establishment outside Hong Kong should not be excluded from the Hong Kong earnings. Accordingly, it was recommended that the relevant sections of the Ordinance should be amended so that all relevant earnings by a resident ship-owner under charter parties, wherever signed, should rank as Hong Kong receipts; conversely, a non-resident ship-owner's earnings under charter parties signed in Hong Kong should be excluded from Hong Kong receipts, in order to bring the law into line with international practice. The non-resident ship-owners will however be taxed on freight and carriage lifted from Hong Kong on a fixed percentage basis. It was further recommended that "charter hire" should be more precisely redefined to correct the error made in a 1971 amendment (which in turn was based on a recommendation by the Second Review Committee) the practical effect of which has been to reduce even further the Hong Kong tax payable by resident ship-owners. Specifically, "charter hire" should be defined to include all sums receivable under charter parties with the exception of those from general charters (trip or voyage charter) without demise.

The Committee however did not see adequate grounds for changing the existing provision relating to other specific taxpayers. It only recommended that non-trading clubs should not pay Property Tax on their premises. Even this recommendation is a contingent one, since no problem will arise if the other more fundamental recommendation — that Property Tax be abolished and replaced by Profits Tax on net actual rental income — is accepted.

9. Relief for Expenses

Under the present Ordinance, there are different rules for expenses that can be legitimately deducted from income derived from employment or business. The general test for allowing a deduction of outlay from Salaries Tax liability is that (i) the outlay must not be capital expenditure; (ii) it must not be an expense of a domestic or private character; and (iii) it must have been "wholly, necessarily and exclusively" incurred in the production of the earnings in question. The first part of the test is reasonable enough — since the Ordinance imposes no tax on capital gains, capital expenditures should not be offset against taxable earnings, except in the case of a productive asset undergoing slow wastage which needs to be compensated for by depreciation allowances. The second part of the test is also evident, as the family circumstances of the taxpayer are taken care of by personal and child allowances. It is the third part that has attracted some adverse comments as being too stern and restrictive. 14 As however there are now more than 200,000 persons subject to Salaries Tax, the Committee was of the opinion that a strict interpretation of the rule was still necessary, otherwise speculative claims would be put forward which would make the administration unduly costly. The Committee also felt that, as a general principle, the costs that have to be incurred to enable the employee to discharge his duties should be borne by his employer. While concluding on balance that the existing expenses rule should remain unaltered, the Committee recognized that current ruling regarding membership of professional and learned societies appears to be unduly restrictive, and accordingly recommended that subscriptions to professional societies concerned with spreading knowledge, or with indemnifying members of a profession, should be deductible for Salaries Tax purposes.

---

14. For an earlier discussion, see P.G, Willoughby, "The deduction of expenses for profits tax and salaries tax", *Hong Kong Law Journal*, Vol. 5 Part I, Jan. 1975, pp. 39-72.

With respect to the rule for business, although there are special provisions in the Ordinance for various categories of outlay (e.g. expenditures on scientific research or gifts for technical education), the normal test for deductibility is that (i) the expenditure must not be of a capital nature and (ii) it must be incurred in the production of chargeable profits. The first part of the test is subject of course to the qualification that capital allowances are in fact granted for the depreciation of capital assets such as premises, plant and machinery. Again, the Committee did not think that existing provisions, with a few exceptions, need to be revised. The Committee received a large number of proposals from trade organizations and individual businessmen for more liberal treatment of expenses, most of which it felt constrained to reject. Among those rejected were, for example, removal expenses, purchase of designs, trade mark and patents, and redundancy payments on termination of a business. The Committee also turned down suggestions that the rate of depreciation allowance for machinery be raised, and that the "straight-line" method should replace the "reducing-balance" method now being used. Nor did the Committee think that the concept of Current Cost Accounting (or inflation accounting) should now be introduced into Hong Kong for tax purposes. It also could not see any justification for granting leasehold depletion allowances to encourage industrial development. Only in two areas could the Committee find sufficient grounds for relaxing the expense rule. One was concerned with short-term leases and the other with charity. The Committee therefore recommended that relief be granted for short-term lease (up to a maximum of three years) where the payment by a lessee of a premium is akin to rent in advance and that a gift in kind to a charity be recognized as an "approved charitable donation" for reducing tax liability. Finally, on the carry-forward of losses, the Committee corrected a minor drafting anomaly in a 1975 amendment by recommending that when a trading loss is carried forward for set-off, under Personal Assessment, it should reduce the aggregate income for all tax purposes.

These are then the specific proposals for reforms of the tax system. At present the Government is studying closely the various implications of the Report as well as its technical and administrative aspects. Assuming that the major recommendations will eventually be accepted, their significance can be broadly appraised as follows.

First, the source principle, which as we have noted earlier, is a distinguishing characteristic of the Hong Kong tax system, will be preserved. In the judgement of the Johnstone Committee, the limited territorial charge has been an important determinant of Hong Kong's emergence over the past thirty years into a major international trading, manufacturing and financial centre. But this principle will be modified in several important respects: (a) where profits of a business, whether financial or non-financial, carried on actively in Hong Kong are earned without the substantial intervention of a permanent establishment elsewhere; (b) where interest is earned on overseas deposits by financial institutions that acquire and accept local currency deposits in Hong Kong; (c) where interest is paid on funds borrowed overseas but employed and used for profit-making activities in Hong Kong; (d) charter hire earnings by resident and non-resident ship-owners. The reason for these modifications is that, as a result of technological progress and growing sophistication of commercial practices and "tax planning" techniques, many multinational corporations or companies with international ties have succeeded in attributing a non-Hong Kong source to Hong Kong profits. The purpose is therefore to plug certain important existing loopholes and thus increase revenue productivity and achieve greater equity. The proposed recommendation with respect to shipping profits also has the added advantage of consistency with international practice. As to whether such reforms are feasible, the ability of those affected, particularly the resident ship-owners, to work out new avoidance devices is not underestimated. However, in framing its recommendations, the Committee has already ruled out those measures that are patently unworkable. In any case, the Commissioner of Inland Revenue is now undertaking a technical appraisal of the recommendations and will report to the Government shortly. In addition, there is the question of whether those affected by the tax change will leave Hong Kong. This is an issue that cannot be resolved by *a priori* reasoning. The present writer is inclined to think, however, that the threat of mass migration is minimal. It is not easy to find another location like Hong Kong where low taxation is combined with modern infrastructure and other excellent facilities. Provided there is no drastic change in the political situation that threatens the present *status quo* of Hong Kong, it is difficult to believe that mass exodus of business will take place because of a mild programme of tax reforms. It is important that Hong Kong should keep its taxation low and the ambit of its tax charges confined within its territorial limits, but it is equally important that Hong Kong should not be turned into a happy hunter-ground for tax-dodgers.

Second, as a result of the suggested mandatory system of composite return of and assessment on aggregate income, the present schedular system will in effect come to an end. The final result will not be quite like a full income tax because certain incomes, such as dividends, capital gains, gifts etc. are excluded. In addition, of course, it still has a territorial limit, so that it is far from being a global income tax. However, the recommendations do constitute an important step towards the evolution of a full income tax system. The abolition of Property Tax and its integration into the Profits Tax is consistent with this trend. The proposal that actual rental income, rather than the assessed value, should be used for tax purposes is also significant in that the Committee has correctly foreseen the unnecessary controversy that can arise if the notional basis continues to be used for assessing tax liability on real property and accommodation (see Section III below).

Third, as fiscal policy was expressly excluded from its terms of reference, the Committee could not make any explicit recommendation on matters like tax rates and personal allowances. However, this does not mean that the Committee was not acutely aware of the importance of vertical equity. In fact, the Report gives strong hints that personal allowances should be adjusted upwards to compensate for inflation (paragraph 28), and that the mandatory system of tax return and assessment would be "an essential step towards the introduction of a further degree of progressivity should this be thought necessary" (paragraph 46). The personal view of the present writer is that, while the low tax rates and the absence of progressivity have undoubtedly been conducive to rapid economic growth — the average annual growth rate of Hong Kong's national income being close to 8 percent in real terms during 1974-76 — and that a gradual and automatic process of "levelling up" is much to be preferred as a redistributional strategy, there is nevertheless room for introducing more progressive rates into taxes on income and wealth, provided the rates are not set at too steep a level as to produce disincentive effects on work effort and enterprise. In an age of rising expectations, it is important that not only the absolute level of the standard of living of the poorer sections of the community should improve, but also that the relative gap in income and wealth as between different social groups should also be reduced as much as possible.

Fourth, among the recommendations of the Committee, quite a few relate to tax relief. The loss to revenue involved will not be inconsiderable. However, the rationalization contained in other recommendations will hopefully plug existing loopholes, achieve greater efficiency, and thus generate higher revenues. On balance it is reasonable to expect that revenue productivity will increase at the existing level of tax rates.

Finally, in addition to the usual criteria of good fiscal performance such as economic growth, equity, efficiency, simplicity and so on, the Committee in its deliberations was also guided by what one might call "working principles". One of these was that, in examining the tax implications of any transaction, the Committee always focused more attention on the underlying economic reality rather than the outward legal form. A good example is the treatment of interest receipts and payments, as described earlier. The other working principle was that certain desirable social activities could be better promoted through the expenditure rather than the tax revenue side of the public budget. But the Committee would not support both more spending and more tax relief for the same field of activity, being deeply conscious of the inflationary consequences that such a recommendation, however popular with the public, would entail. A good example is that, while the Committee strongly endorsed the Government's policy of building more public housing estates, both for lease and for sale, for which annual increase in ear-marked expenditure is required, it could not accept the argument that interest payments on the mortgage loan of a home-purchaser should be eligible for relief. In this particular case, moreover, there is the added question of horizontal equity between home-owner and rent-payer. In short, sound fiscal principle should not be sacrificed on the altar of social expediency.

To conclude then, our broad appraisal is that, given its closely defined scope of inquiry, and the wider social and political constraints confronting Hong Kong, the Review Committee has proposed a comprehensive but realistic programme of tax reforms. If accepted and implemented, these recommendations will eliminate much waste and duplication, achieve greater equity among tax-payers, plug many loopholes and increase revenue productivity, without however any need of raising the existing tax rates or introducing complicated legislation. Some transitional difficulties in implementation are to be expected, but ultimately, the tax reforms can only enhance and strengthen Hong Kong's position as a trading, industrial and financial centre.

III

As mentioned earlier in Section I, the Johnstone Report is being studied in depth by the Government. The tax proposals in the Budget for 1977-78 announced on March 2 by the Financial Secretary were therefore unrelated to the recommendations of the Report. All of them are in the nature of tax concessions because of the better than expected outturn of the current 1976-77 fiscal year — an estimated deficit of HK$ 355 million being likely to be turned into a huge surplus of HK$ 850 million.

The first concession concerns Rates, a local tax on the occupier of premises based on the assessed rental value of the property. In 1976 a revaluation of rateable values was made after a four year lag, the outcome of which was that the new values represented on average an 80 percent increase on the old ones. Since Rates are payable by, or at least shiftable to, the tenants, the announcement of the new rateable values last November gave rise to a public furor reminiscent of the Crown Rent affair in 1971-73.[15] In the ensuing controversy there has been much confusion and misunderstanding stemming largely from a failure to distinguish between the rateable value — revaluation of which is necessary to bring it more in line with open market value — and the actual tax rate applied to such value, which is flexible as part of the government's fiscal policy. Thus, pending the completion of the revaluation exercise, the General Rate percentage was increased by two points in 1975-76, and another point in 1976-77 to protect revenue. The understanding then was that downward adjustment would be made when the new revaluation had been carried out. As public feeling was running high, however, the Government felt constrained to make an announcement in early January, some two months before the Budget, that the General Rate for urban areas would be reduced from 12 to 7½ percent, while the Urban Council rate would be reduced from 6 to 4 percent. The Budget speech gave formal confirmation of this reduction, i.e., the total rates payable in the urban areas as from April 1, 1977 will be 11½ percent, against the previous 18 percent. The general rate for the suburban New Territories will vary from 7 percent to 11 percent. Even allowing for the reduction in tax rates, tenants will still have to pay higher Rates because of the new rateable value. To cushion the impact of the increased Rates payable, a scheme of relief was proposed whereby Rates payable in 1977-78 and 1978-79 should not increase by more than one-third compared to the preceding year, though for pre-war rent-controlled premises the scheme will continue after 1978-79. It is estimated that some 120,000 people will benefit from the scheme. In passing, it should be pointed out that Rates are governed by the Rating Ordinance and were therefore outside the terms of reference of the Third Inland Revenue Ordinance Review Committee.

The second concession concerns lower-income taxpayers. There are now some 290,000 Salaries Tax files, but of those already processed, 62 percent have assessable incomes of less than HK$ 30,000 per annum, contributing however only 9.5 percent of total tax collectible. Since the assessments will be small and not worth collecting in terms of administrative costs, the Financial Secretary therefore formulated a proposal that will have the effect of removing 45,000 small taxpayers from the tax net, keeping out a further 10,000 who would otherwise become liable for provisional tax for the year 1977-78, and bringing some relief to salaries and personal assessment taxpayers in the lower and middle income ranges. The main points of this proposal are:

(a) The basic personal allowance of HK$ 10,000 for the taxpayer and his spouse will be retained. To this a supplementary allowance of HK$ 2,500 each will be added, which however will be reduced by 20 percent of the amount by which the taxpayer's income exceeds the supplemented basic allowance until the point is reached where the entire supplement disappears. In absolute terms, taxpayers with income of about HK$ 36,000 (approximately US$ 7,600) per annum and below will receive the greatest benefit.

(b) Concurrently, child allowances will also be increased. The allowance for the first child will be increased from HK$ 3,000 to HK$ 4,000; for the second child from HK$ 2,500 to HK$ 3,000; and for the third child from HK$ 1,500 to HK$ 2,000. The allowances for the fourth to sixth child will remain at HK$ 1,000 each and for the seventh to the ninth child at HK$ 500 each. These new allowances will be effective for provisional Salaries Tax for the year 1977-78, and for final Salaries Tax and Personal Assessment for the year 1976-77 as well. It is estimated that the number of Salaries Tax and Personal Assessment taxpayers benefiting from the increased allowances will be about 193,800.

The third set of tax relief relates to Stamp Duty. First, certain archaic heads under the Stamp Ordinance will be eliminated, at a cost of only HK$ 30,000, but sparing the legal and financial professions some inconvenience. Second, as a further earnest of the Government's intention to promote home ownership, the

15. For a discussion of the affair, see Y.C. Jao, "Landuse policy and land taxation in Hong Kong", in John Wong (ed.), *The Cities of Asia: A Study of Urban Solutions and Urban Finance*, Singapore, 1976, pp. 277-303.

ceiling on low-value properties that enjoy concessionary rates of Stamp Duty will be raised to HK$175,000. For properties up to HK$100,000, only the fixed charges of HK$20 will be levied, and on properties up to HK$815,000, an *ad valorem* rate of one percent will be charged. The new platforms will also extend to voluntary dispositions *inter vivos*.

The final relief has to do with Estate Duty. The exemption limit will be raised from HK$300,000 to HK$400,000. The limit on funeral expenses will be increased from HK$5,000 to HK£10,000, and the further limitation of 2½ percent of the value of the estate allowance for funeral expenses will be abolished.

The total costs to revenue of these concessions will amount to about HK$127 million, thus reducing estimated revenue to HK$8,285 million (approximately US$1,863 million). As estimated expenditure is HK$8,245 million (approximately US$1.854 million) this still leaves a small surplus of HK$40 million (about US$9 million) for the 1977-78 Budget.

These tax proposals, which will take effect from the fiscal year 1977-78 beginning April 1, 1977, have been very well received. The ingenious supplementary allowance with a "claw-back" feature deserves a particularly high mark, for it will not only relieve or even eliminate the tax burden of the lower-income group, but will be relatively inexpensive in terms of the loss to revenue. It will certainly be much cheaper than an across-the-board increase in personal allowance which incidentally will also reduce the effective tax for those who can afford to pay it. On grounds of equity, fiscal productivity and administrative simplicity, the new scheme is to be highly commended.

One other potential tax development that could be of considerable international significance is the question of interest withholding tax. As a result of Hong Kong's raising stature as a financial centre, there has been growing interest on the part of foreign financial institutions (including the World Bank itself) in issuing Hong Kong dollar denominated bonds. However, the requirement of withholding interest at source has so far been a stumbling block. In his Budget speech the Financial Secretary disclosed that a working party has been set up, under the chairmanship of the Secretary for Monetary Affairs, to advise him on the monetary and tax implications of permitting international financial institutions access to the local bond market.

In his speech the Financial Secretary also described the objectives of budgetary policy in Hong Kong to be *first, progressively, and to the maximum extent that the economy will permit, to implement approved Government policies and programmes in such a way as to secure the public interest; secondly, to ensure that revenue is raised as equitably as possible between particular classes and groups of taxpayers or potential taxpayers; thirdly to minimise any adverse effects of public expenditure and of the fiscal system on the internal cost/price structure of the economy and private investment decisions so that the growth rate of the Gross Domestic Product is not constrained or business confidence damaged.* The stress on equity is significant because, as we have seen in Section II, the whole Johnstone Report is permeated with an acute concern about the elimination of inequity and closure of loopholes that are being exploited by a privileged class of taxpayers or potential taxpayers. International tax experts therefore will watch with interest what the Government's final decision on the Report will be.

Space consideration does not permit a detailed analysis of Hong Kong's fiscal policy which must form the subject for another article. However, certain features of fiscal policy that have been evolving under the present Financial Secretary should be briefly noted. *The first feature* is that, in order to achieve the objectives of budgetary policies outlined above, certain guidelines have been formulated which, though not absolutely rigid, are meant to impose a degree of discipline. They are (a) that recurrent expenditure should absorb no more than 80 percent of recurrent revenue and that at least 60 percent of capital expenditure should be financed by the surplus on recurrent account; (b) that at least half of the deficit on capital account should be financed by capital revenue and no more than half with debt; (c) that annual debt service should not, at any time, exceed income earned on fiscal reserves; (d) that the ratio of direct to indirect taxation should ideally be 45:55 and that of direct and indirect taxation taken together to all other recurrent revenue should ideally be 65:35; (e) that the relative size of the public sector, defined as the ratio of public expenditure to Gross Domestic Product, should not exceed 20 percent.

Second, a notable innovation has been the introduction of a longer-term outlook by including in the Budget a 4-year forecast of the economy and public finances. This feature was totally absent in the budgets presented by previous Financial Secretaries. Last year, Hong Kong's economic performance was so exceptionally good that the actual growth rate in real terms, now known to be 16.2 percent, far exceeded the original estimate of 9 percent. For the next few years, an annual real growth rate within the range of between 6 and 8 percent has been envisaged as being feasible up to 1980-81.

Third, although fiscal neutrality is still being regarded as of paramount importance, some evidence that budgetary policy has been used for "fine-tuning" the economy can be discerned. Thus, for two consecutive fiscal years, 1975-76 and 1976-77, a deficit was deliberately planned for reflationary purposes, though last year the recovery of the economy was so unexpectedly rapid that the projected deficit has been turning into an embarrasingly large surplus. For the current fiscal year 1977-78, therefore, a small surplus has been budgeted. In any case, instead of trying to balance the budget every year, as in the past, the purpose now appears to be balancing the budget over the whole business cycle.

Finally, a more rigorous cost-consciousness about public services is also being developed. Certain public services, such as education and medical services, obviously should not be charged for at cost, but according to the Financial Secretary, *in a low tax environment, all other things being equal, public services must be charged for, at least on a cost-related basis, provided adequate remission arrangements are available when required.* Last year an appropriations-in-aid system was introduced, under which certain fees and charges would not be credited to General Revenue, but would be used to offset approved expenditure. Broadly speaking, receipts classified as appropriations-in-aid are incomes received by government departments or government-owned enterprises from the provision or sale of services to the public (e.g., fees for certificates and licences, sales of services such as airport, railway, post office, water supply etc.). Allocation of funds from General Revenue to each department will then be the total estimated expenditure less the estimated appropriations-in-aid. The advantage of this system is that, by putting the finances of certain departments on a quasi-commerjcial basis, the true costs of governmental activities will be more readily apparent, and that the departments concerned will have the incentive to increase receipts from fees and charges and to reduce expenditure.

SOME MAJOR TAX REFORMS SINCE 1945

The postwar period was marked by the need for many countries to re-establish their economy. New principles as to the role of government gained momentum. It was the time to reconsider the tax systems and some major tax reforms were the result. Ever since tax legislation has been on the move. In fact, one may speak of a continuous tax reform. Sometimes, the whole tax system was reviewed. Some of these reforms were prepared by special committees whose reports had, and still have, a significance across national borders. The following is a selected list of major tax reforms enacted or still under review, indicating where possible the reports of government or special committees.

AUSTRALIA

1961: Report of the Commonwealth Committee on Taxation (Ligerwood Committee).
1972: Appointment of the Taxation Review Committee (Asprey Committee) to review the entire federal tax system.
1975: Publication of the Asprey Report.
1975: Report of the Committee of Enquiry into Inflation and Taxation (Mathews Committee).

Relevant Reports: Ligerwood Report — Asprey Report — Mathews Report, all published by the Government Printer, Canberra, Australia.

BELGIUM

1962: Abolition of the schedular system of income taxes (which had existed from 1919) by a unitary system. Introduction of the imputation system of corporate income tax.

Relevant Reports: Official Explanation to the tax reform (Document Chambre des Représentants 264 (1961-1962) No. 1) and Report of the Finance Committee of the House of Representatives (Document Chambre des Représentants 264 (1961-1962) No. 42). (Dutch and French).

CANADA

1948: Completion of a general revision and re-codification of the rules under the old legislation.
1952: Income Tax Act, result of recommendations made in the reports of several Royal Commissions.
1962: Royal Commission on Taxation, chairman Kenneth Lem. Carter. Assignment was a complete revision of the Canadian income tax system.
1966: Publication of the Commission's Report, referred to as the "Carter-Report".
1972: The Carter-Report resulted in a new Income Tax Law, introducing, inter alia, an imputation system in order to alleviate the double economic tax burden on distributed corporate profits.

The Carter Report: Report of the Royal Commission on Taxation, 1966, published in six volumes, available from Roger Duhamel, F.R.S.C., the Queen's Printer and Controller of Stationery, Ottawa, Canada.

FRANCE

1948: Replacement of the schedular income tax system by a semi-unitary system under which a separate corporate income tax was introduced and a proportional tax (essentially schedular in nature) and a progressive surtax on total income of individual taxpayers.
1959: General report of the Fiscal Study Group on the French tax system (Brasart Report).
1961: General report of the Fiscal Study Committee (subjects: the taxation of the flow of capital and individual income tax rates).
1965: Introduction of the imputation system of corporate income tax.
1977: Introduction of capital gains taxation.

Relevant Reports: Brasart Report (Statistiques et Etudes Financières 1959 Suppl. 125).
Rapport de la Commission d'Etudes Fiscales (Statistiques et Etudes Financières 1961 No. 152 p. 1442).
"Orientations de la réforme de l'impôt sur le revenu des personnes physiques" (Journal Officiel — Conseil économique et social 1969 No. 9).
Monguilan Report on capital gains taxation (2 volumes), published by La Documentation Française, Paris.

GERMAN FEDERAL REPUBLIC

1948: Monetary reorganization, with certain tax consequences.
1953: So-called "Small Tax Reform" introducing, inter alia, an alleviation of the double economic tax burden on distributed corporate profits by applying a lower corporation tax rate on distributed as compared to non-distributed profits.
1968: Tax Reform Committee assigned to review the whole German tax system.
1971: Report of the Committee resulting in a step-by-step reform of the major tax laws during the period 1972-1977.
1977: New corporation tax; introduction of a full imputation system.

Relevant Reports: Gutachten der Steuerreformkommission 1971, one volume. Schriftenreihe des Bundesministeriums der Finanzen, Heft 17, available from Wilhelm Stollfuss Verlag, Bonn, Federal Republic of Germany.

HONG KONG

1966: Appointment of the Second Inland Revenue Ordinance Review Committee.
1967/1968: Interim and Final Reports of the Committee.
1976: Report of the Third Inland Revenue Ordinance Review Committee (Johnstone Committee).

Relevant Report: Johnstone Report (Government Printer, Hong Kong).

ITALY

1958: The so-called "Vanoni-Reform" named after the Minister of Finance Prof. Ezio Vanoni, who largely prepared it from 1949 until his death in 1955. Purpose: a more equitable tax burden and simplification of the tax system. Result: *Testo Unico delle imposte dirette* (Unified Text concerning direct taxes) effective as of 1 January, 1960.
1973: Direct Tax Reform. Abolition of the schedular tax system, substitution by a synthetical system as in most other European countries. Progressive personal income tax. Corporation tax. Effective 1 January, 1974.

Relevant Reports: Relazione del Vice-Presidente del Comitato di studio per l'attuazione della reforma tributaria al Ministro delle Finanze Luigi Preti (Report of the Vice-President of the Tax Reform Committee to Mr. Luigi Preti, Minister of Finance). February 28,

1967, in: Associazione Bancaria Italiana, Serie "Documenti" No. 6, Bancaria, Roma, 1967.
Reports of the Minister of Finance concerning the introduction of the new individual, corporation and local income taxes appeared (in Italian) in: Bollettino Tributario d'Informazioni, No. 23, December 15, 1973.

INDIA

1953: Appointment of Taxation Enquiry Commission headed by dr. John Matthai.
1954: Matthai Report published. It deals with the income tax system in relation to: redistribution of wealth, development, capital formation, inflation, deflation. The Finance Act, 1955 and subsequent Acts gave effect to the recommentations.
1956: Nicholas Kaldor, Indian Tax Reform, Report of a Survey. Proposal to introduce as a single operation taxes on income, capital gains, personal expenditure, gifts. All proposals were enacted in subsequent years but the Expenditure Tax was later repealed.
1958: Report of the Law Commission of India recommending replacement of the Income Tax Act, 1922.
1961: Income Tax Act, 1961 replacing the Act of 1922.
1967: Final Report on the Rationalisation and Simplification of the Tax Structure, by S. Bhoothalingam.

Relevant Reports: Report of the Taxation Enquiry Commission, 1953-54, 3 volumes, Government of India, New Delhi, 1955.
Kaldor, Nicholas, Indian Tax Reform: Report of a Survey Government of India, Ministry of Finance, Department of Economic Affairs, New Delhi, 1956.
Bhoothalingam, Final Report on Rationalisation and Simplicity of the Tax Structure, Government of India, Ministry of Finance, New Delhi, 1968.

JAPAN

1947: General Tax Reform.
1949: Report on Japanese Taxation, by the Shoup Mission, headed by Prof. Carl S. Shoup. Many of the comprehensive proposals were enacted but soon afterwards either repealed or modified.
1955: Establishment of a Tax Advisory Commission, whose recommendations resulted in several tax reforms.
1964: Report of the Tax Commission on how the fundamental system of taxation should be adjusted to the progress of the national economy and society.

Relevant Reports: Report on Japanese Taxation by the Shoup Mission, in 4 volumes, General Headquarters, Supreme Commander for the Allied Powers, Tokyo, 1949.
Second Report on Japanese Taxation by the Shoup Mission (Tokyo, 1950).

REPUBLIC OF KOREA

1948: Introduction of a modern tax system based on the recommendations of the Tax Law Committee.
1953: H.P. Wald's Report and Recommendations for the Korean Tax System.
1959: Report by the Tax Consultants Group headed by Dr. Hall.
1974: Comprehensive Tax Reform.

SWITZERLAND

1976: Proposal to harmonise the direct tax legislation of the Cantons and to modify the direct federal tax legislation. While approved by the Swiss Federal Parliament, the proposal is still subject to a referendum.

Relevant Reports: Explanatory Memorandum of the Swiss Government published in German in the Bundesblatt (Official Gazette) No. 17 of 3 May, 1976, pages 1384-1574.

UNITED KINGDOM

1955: Royal Commission on the Taxation of Profits and Income, Final Report.
1964: White Paper: "A Scheme for an Accounts Basis for Income Tax on Company Profits", Cmnd. 2347.
1965: A result of the above report and the White Paper introduction of the Corporation Tax according to the classical system. Introduction of a general capital gains tax.
1972: Replacement of classical system by an imputation system of Corporation Tax.

Relevant Reports: Final Report of the Royal Commission on the Taxation of Profits and Income, June 1955 (Command Paper — Cmnd. 9474).
Report from the Select Committee on Corporation Tax (House of Commons, Session 1970/71), October 1971.

Bibliography

Books.

SIMON'S TAX CASES

Cumulative tables and index 1973-1976. London, Butterworths 1977. 54 pp. (B. 100.226)

U.K. FISCAL IMPLICATIONS OF INTERNATIONAL TRADE

By Peter Sharp. London, Institute of Chartered Accountants in England and Wales, 1976. 130 pp.
Monograph focussing the many tax problems associated with international trade with emphasis on the practical approach of the subject. Texts of the Income and Corporation Tax Acts 1970 are appended. The material is updated as of May 15, 1976. (B. 100.159)

U.S.A.

BORDER TAX ADJUSTMENT ON COMMODITIES AND INCOME

By M.B. Krauss and G.C. Hufbauer. Washington, Office of Tax Analysis, U.S. Treasury Department, 1976. OTA Paper No. 18 September 1976. 36 pp. (B. 100.171)

DESTINATION PRINCIPLE BORDER TAX ADJUSTMENT FOR THE CORPORATE INCOME AND SOCIAL SECURITY TAXES

By G.N. Carlson, G.C. Hufbauer and M.B. Krauss. Washington Office of Tax Analysis, U.S. Treasury Department, 1976. OT Paper No. 20, November 1976. 26 pp. (B. 100.172)

FEDERAL TAX GUIDE

Englewood Cliffs, Prentice-Hall, 1977.
Loose-leaf publication consisting of four volumes designed to provide information on the federal income tax code. The text of the Internal Revenue Code and the income tax regulations cover three volumes. Explanation, current reports on changes and index fill another volume. Supplements will keep the material updated. (B. 100.096)

FISCAL CENTRALIZATION AND TAX BURDENS

State and regional financing of city services. By Roy W. Bahl and Walter Vogt. Cambridge, Mass., Ballinger Publishing Comp., 1975. 173 pp.
Study which examined the equity implications of financing city government functions at regional and state levels. (B. 100.184)

INTERNAL REVENUE CODE

Including 1976 Amendments; Income, Estate and Gift Tax Provisions. Chicago, Commerce Clearing House, Inc., 1976. ± 2200 pp., $ 8.50.
Text of income, estate and gift tax provisions of the Internal Revenue Code as amended by the Tax Reform Act 1976 printed with annotations. The non-income tax provisions of the Code as well as excise taxes and other regulatory taxes are excluded. Relevant current tax rates are appended. (B. 100.160)

INCOMES UNDER LOW AND HIGH TAX RATE SYSTEMS: 1929 vs. 1973

By Gabriel G. Rudney. Washington, Office of Tax Analysis, U.S. Treasury Department, November 1976. OTA Paper No. 17, September 1976. 18 pp.
Empirical study comparing data on incomes in 1929, a year when a low tax rate system was in effect, and 1973, a year when high tax rates and many tax incentives were in effect. (B. 100.162)

MASTER FEDERAL TAX MANUAL WITH TAX COORDINATOR PREFERENCES

1977 Edition. Fully revised to reflect the '76 Tax Reform Law. Prepared by Tax Research Institute of America, Inc. New York, The Research Institute of America, Inc., 1976. 527 pp.
This manual helps in preparing 1976 federal income tax returns, and provide specific guidance to tax consequences of transactions occurring in 1977. (B. 100.217)

THE RIA COMPLETE ANALYSIS OF THE '76 TAX REFORM LAW

October 1976, second printing. New York, The Research Institute of America, Inc., 1976. 272 pp., $ 7.95.
Research report prepared by The Research Institute of America which outlines all the changes made by the 1976 Tax Reform Act. (B. 100.144)

IN THIS ISSUE

Four issues of the *Bulletin* in its new format and style have now appeared. The large number of new subscriptions seems to indicate that the present formula appeals to people in many different functions who want to be informed on new developments in taxation in various parts of the world. It is not only factual information we wish to supply but also the background and philosophy, thus giving a theoretical basis for articles of practical value.

It is, of course, true that a taxpayer's main concern is how much he will have to pay when involved in international transactions. There are also good reasons for him to consider the role of taxation within a country's national economy or socio-economic policy. The present issue of the *Bulletin* draws attention to this aspect from various angles.

In many countries nowadays the public sector is involved in the economy through other means than taxation alone. Funds are transferred in the form of social security benefits, grants of all kinds and many other payments which in one way or another aim at a redistribution of income and wealth and which at the same time may stimulate the economy. In the case of the Netherlands, lower and middle income groups do not only pay tax (if at all) in the lower brackets of progression, but they also benefit from a sophisticated system of child allowances, exemption from tuition fees at schools or universities, grants for children who follow higher education, as well as subsidies in cases where the rent of houses or flats exceeds a given proportion of their income. If this income reaches a certain ceiling, many of these benefits are lost while at the same time the progressive income tax scales take away a larger part of consumable income. The Dutch Council for middle and higher executives examined the combined effects of taxation and other measures. In individual cases these effects may result in the paradoxal situation that an increase of gross income leads to a net decrease. In a more comprehensive manner the situation in THE NETHERLANDS — which may exist in other countries as well — is described in the article by Professor *Halberstadt* and Mr. *de Kam*.

The role of taxation may also be considered from a quite different angle. Those engaged in business in a foreign country will be generally interested in the level of taxation imposed by the central government; in many countries, local taxation may be significant as well. In federally organized countries it may even well happen that taxation of the political subdivisions is more important than federal taxation. There may be historical reasons for this but it is also possible that the whole structure of a country's tax system is the result of a political-economic concept which is particular to the country concerned. In a period where business relations between Western and East European countries tend to increase in number and significance, the article on Federalism in YUGOSLAVIA by Professor *Bogoev* is of current interest.

Small independent or autonomous territories whose economics often are not diversified are nevertheless members of the international community. Their problems and the opportunities they sometimes offer are a matter of concern and interest to a larger group of people, for different reasons and varying degrees. In this issue attention is given to the situation in two groups of islands in the Caribbean in an article by Mr. *Nizar Jetha* and Mr. *Nurali Peera* on the LEEWARD & WINDWARD ISLANDS. A series of brief notes on the budgets of developing countries is continued by a survey on MALAYSIA. Further, it is interesting to note that the existing tax treaty network is expanding, indicating that an increasing number of developing countries want to be more actively involved in the tax aspects of international trade and investment. Countries in South East Asia are more and more aware of the value of tax treaties. Their involvement may have significance for the development of new principles in international taxation along the lines of the special U.N. Group of Experts. This issue contains a survey of the treaties concluded by SINGAPORE following a similar survey on treaties to which INDIA is a party (No. 1977/3). At a later stage, various treaty clauses will be treated comparatively.

As usual, this issue of the *Bulletin* gives information on new tax publications, on existing loose-leaf services on a country by country basis (new supplements are announced in the loose-leaf section of the Bibliography), as well as on tax conferences or seminars to be held during the coming months.

All this background information, combined with different types of documentation on taxation developments, is possible as a result of the international team work organized and coordinated by the research staff of the International Bureau of Fiscal Documentation. In this context, local expertise is indispensable and we are grateful for the world-wide support we receive.

There are many trends of which all those involved in tax matters ought to be aware. At domestic levels, the role of taxation is if not predominant at least of crucial significance. There is every reason to believe that internationally this role will become more and more important as well. The *Bulletin*, by recognizing the need for a more fundamental approach, has embarked on a new course which is again reflected in this issue.

Tax Rates in the Netherlands:

A Suitable Case for Treatment.

Victor Halberstadt*/ Flip de Kam**

I. INTRODUCTION

Early in 1975 the Dutch government published its *Interim Note on Income Policy*. After publication of the *Interim Note* the steady debate on the role of taxation as an instrument to influence the personal distribution of incomes has markedly intensified. In addition, the nature and degree of inequality have moved to the centre of political and academic discussion ever since. At the same time a general consensus emerges that the improvement in recent years of lower real incomes — especially through minimum wage legislation and certain tax measures — compared to the development of net average labour income of (semi) skilled workers, might put an increasing strain on industrial wage relations.

A main feature of the public sector in The Netherlands should be noted here. The minimum benefits in publicly financed income transfers are equal to the net legal minimum wage, as from 1974. At present a relatively large part of the population (about a third) is receiving such transfers. These are important factors in making tax revenues of the public sector — expressed as a percentage of Net National Income — one of the highest in the OECD-area (52.6 pct.). See also Table 1. As a consequence the average worker is heavily taxed at the moment. This will be illustrated in paragraph 4. High rates endanger social solidarity between workers and non-workers. Moreover the heavy tax burden seems to affect labour supply in a negative way.

The share of indirect taxes in the structure of public revenues is clearly smaller than in a number of other comparable developed economies. After France, The Netherlands rank second in the weight of social insurance burdens. Social insurance contributions as a percentage of Net National Income nearly doubled during the past ten years. The dramatic rise of these contributions in The Netherlands obviously has important implications for any distributive policy, since their impact is quite different from — for instance — the progressive income tax. Marginal income tax rates are already high in The Netherlands, climbing from 20 percent to 72 percent on taxable income exceeding Dfl. 155,000 (seven times the taxable income of an average worker). The income tax structure is therefore clearly progressive. Especially middle-to-high incomes are confronted by steeply rising rates. On the other hand lower incomes are subject to a relatively heavy burden of social insurance contributions.

*Table 1. Tax structure of The Netherlands 1977**

	millions of guilders	as % of total
Total tax revenue:		
1. On goods and services	30,085	25.25%
2. On personal income	32,900	27.61%
3. On corporate income	7,600	6.38%
4. On net wealth	1,015	0.86%
5. On other taxes	40	0.03%
6. On social insurance contributions from households	25,856	21.70%
7. On social insurance contributions from employers	21,647	18.17%
Total tax revenue	119,143	100 %

* Local taxes excluded.

Source: *Miljoenennota 1977 (Budget Plan 1977), p. 77. Begroting Sociale Zaken 1977 (Ministry of Social Affairs Budget 1977), No. 3. Annex VI, p. 22-23.*

The combined rate of these public levies might explain growing rumours about a rapidly emerging black money "circuit". General awareness of successful tax avoidance practices is spreading quickly. Many seek legal ways to lighten their tax burden. These developments are by some observers considered added proof that the present combined rates of income tax and social insurance contributions are generating increasing resistance among taxpayers.

2. THE INTERIM NOTE ON INCOME POLICY

In its *Interim Note on Income Policy* the government attempts a more comprehensive and consistent set of policies with regard to the distribution of income and wealth. Instead of ad hoc or partial policies towards specific aspects of (re)distribution, it tries to present an overall picture. Thus it takes into account the distribution of incomes before and after taxes and transfers (whether in money or in kind). A wide range of policy proposals is outlined. However, the *Interim Note* indicates that possibilities for an exclusively national tax policy are limited, in view of potential emigration of labour and capital. Therefore, emphasis is put on in-

* Professor of Public Finance, University of Leyden.
** Assistant-Professor of Public Finance, University of Leyden.

fluencing the formation of primary income, as the most effective tool for realising redistributive goals.

The government stresses the point that a further use of the income tax to implement an income policy would increasingly stimulate taxpayers to avoid the tax burden or to adjust primary income (tax-shifting). The *Interim Note* expresses serious doubts concerning a greater role of the income tax in (re)distribution. Employees may attempt to compensate for the impact of income tax on their net incomes by demanding higher gross wages. Some results of econometric analysis in this field suggest that rising income tax and social insurance contributions have been an element in surging pay demands of recent years.

Discrepancies between intended and effective taxation clearly frustrate (re)distributive effects. The government considers the erosion of the tax base too large already. Measures against tax avoidance, better administrative control and international exchange of relevant information are announced. A more stringent application of present tax law is emphasized. Closing of certain tax loopholes is under consideration. Special attention will be given to budgetary and income policy aspects in defining the income concept and certain items deductible in computing taxable income.

Personal distribution of incomes after income tax in The Netherlands was about 25 percent more equal than before tax, both in 1950 and in 1967. It follows from ample statistical evidence that during the period 1950-1967 the income tax did *not* induce a further levelling of personal income differences.

By now still another problem — largely neglected in the government's *Interim Note on Income Policy* — can no longer be disregarded. The in many ways surprising and uncoordinated pattern of combined public levies on income and of income-related grant programmes is deservedly getting growing attention. In American literature this problem is known as the "notch-problem". Both marginal and average rates are affected as we will show hereafter.

In Section 3 we shall enumerate the taxes considered and develop a comprehensive definition of the concept of marginal and average tax rates, that will be used throughout this article. After that, in Section 4, we present the main results of our calculations on marginal and average tax burdens in The Netherlands for the year 1976. In Section 5 we proceed with a short comment on these findings and draw some inevitable conclusions.

3. DEFINITIONS

We consider the (first order) distributional impact of the most important income-based public levies:

a. the individual income tax [1];
b. social insurance contributions, consisting of:
   (i) national insurance premiums (old age pension, disability benefits, widows and orphans allowance, family (children) allowance and special medical provisions);
   (ii) insurance for employed (mainly disability benefit, unemployment benefit and sickness benefit);
   (iii) obligatory insurance against medical costs, for most employed and certain lower and medium income groups.

Social insurance programmes in The Netherlands are mainly financed by way of contributions (premiums) from employers and households, though in recent years the government provided an increasingly important support out of the national budget. The rates vary from programme to programme. However, a common characteristic is that contributions are proportional with income up to a ceiling and thus are a flat charge at higher income levels.

Social insurance systems can pursue two kinds of objectives: to insure the individual against loss of income and to reach a more equal distribution of incomes. The insurance principle at present (still) dominates the scene of social programmes in The Netherlands, though its relative importance is fading.

We define the *average* tax rate as that part of yearly gross income which is taken in income tax and in social insurance contributions (x 100). We define the *marginal* tax rate as the part of an individual's rise in gross income with Dfl 1,000, which is taken in income tax and in social insurance contributions, *or* lost in income-related grant programmes (x 100). We take into account only two main national grant programmes, i.e. *housing rent-subsidies* and the *system of student-grants and -loans.*

Housing-policy of the present government seeks to guarantee that every adult can be independently housed for a price that is in reasonable proportion to his or her income. Those with lower incomes do not have to pay more than a certain percentage of their income in rent. A "gap" with actual higher rent is bridged by individual means-tested rent-subsidies, that shrink with rising income. Individuals are entitled to a diminishing rent-subsidy until their taxable income surpasses Dfl. 33,000.

Depending on parental income, students can claim a combined loan/grant to cover their cost of living and education. Insofar as parental taxable income exceeds a certain minimum (Dfl. 16,950), the maximum loan/grant is curtailed by 43 percent of the difference.

4. MAIN RESULTS

In order to compute *theoretical average rates* we have to establish a relation between gross income on the one hand, and the base for social insurance contributions and taxable income on the other hand. First we shall briefly explain our main assumptions. [2]

1. In The Netherlands there is only one (national) income tax.
2. A detailed description of assumptions and computations in C.A. de Kam and T. de Vries, "Over de gemiddelde druk van enige collectieve lasten" (On the average burden of some collective charges), in *Economisch Statistische Berichten*, 30 June 1976, p. 625-630.

We concentrate on employees not in government service. This group consists of *circa* two thirds of the working population. We assume they receive only labour-income, have two children under 16 and a non-income earning wife. [3] For those not under the obligatory insurance against medical cost we take into account a comparable voluntary premium. Furthermore we only allow for the following deductions:

a. 2.35 percent contribution in private pension-schemes;
b. 5.6 percent contribution for insurance for employed;
c. 11.9 percent contribution for national insurance;
d. 4 percent for deductible expenses (maximum Dfl. 950), a deduction that is automatically applied to labour-income.

The results are given in Table 2.

*Table 2. Income tax and social insurance contributions as percentage of gross personal income, under assumptions (1976)**

Gross (labour) income	Income tax (pct.)	Social insurance contributions (pct.)	Total (pct.)
Dfl. 18,500 (legal min. wage)	5.7	25.9	31.6
Dfl. 26,000	10.3	26.0	36.3
Dfl. 35,000	14.3	24.6	38.9
Dfl. 50,000	21.2	18.9	40.1
Dfl. 120,000	44.0	7.9	51.9
Dfl. 200,000	54.1	4.8	58.9

* Married couple, two children under 16.

Source: see footnote 2.

There is of course a difference between the tax rates which theoretically apply and the real tax burden. This margin results from a number of causes. Certain types of income may be exempt (i.e. most capital gains on assets that are not part of business capital). Moreover there are a number of legal means to lower the amount of income tax due. Personal allowances, deductions, opportunities to treat part of normal household expenditures as deductible business expenses, fringe benefits that are inadequately taxed, etcetera, provide opportunities to decrease the tax bill. And then there is downright fraud.

In Table 3 we present some recent empirical evidence concerning the redistributive impact of the progressive income tax rate-structure (*excluding* social insurance contributions) for the year 1970. Tax units in deciles 1 to 9 relatively gain, those in the top decile are losing. The last column gives average tax rates for each decile. It is interesting to note that for the "super rich" (top 0.01 percent of all taxpayers) the income tax works out regressive. Apart from a probably falling ratio of taxable to total income at the (very) top, this pattern is caused by special rates for certain types of (mostly capital gains) income, accruing to the top-decile.

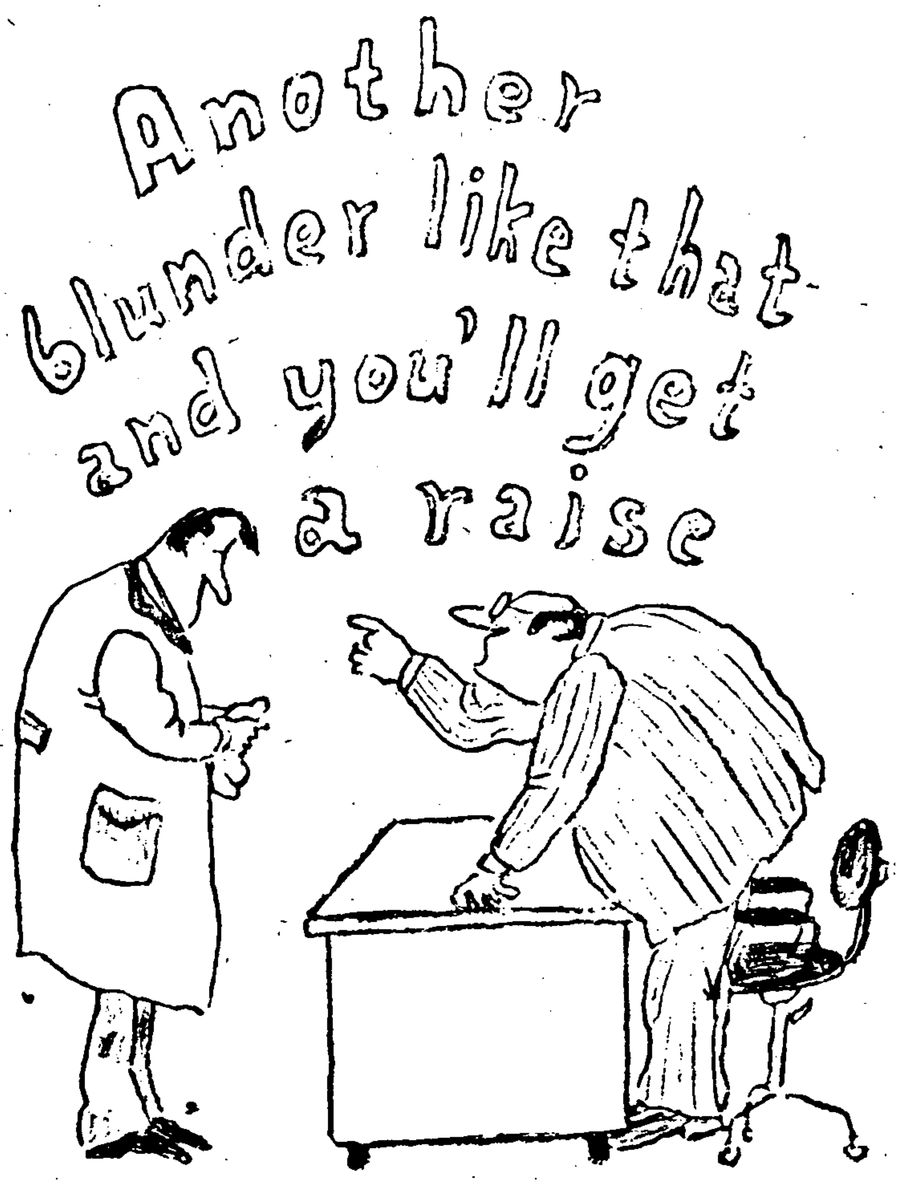
Table 3. Income tax burden by deciles, Netherlands, 1970 (Total income figures)*

Decile	Income share before tax	Income share after tax	Tax as percentage of taxable income
Bottom decile	1.2%	1.5%	1.8%
2nd decile	3.0%	3.5%	3.2%
3rd decile	4.6%	5.2%	5.1%
4th decile	6.0%	6.7%	6.9%
5th decile	7.4%	8.1%	8.9%
6th decile	8.7%	9.4%	9.5%
7th decile	10.1%	10.7%	11.0%
8th decile	12.1%	12.8%	11.5%
9th decile	14.9%	15.2%	14.3%
10th decile	32.0%	26.9%	30.0%
Top 5%	22.4%	17.4%	34.8%
Top 1%	9.6%	5.6%	51.2%
Top 0.01%	1.1%	0.8%	40.9%

* Excluding negative incomes.

This indicates a growing importance of tax expenditures for the rich.

In order to compute *theoretical marginal rates*, as defined earlier, at a number of income-levels we again have to establish a relation between gross income and taxable income, because the size of the rent-subsidy and the student loan/grant depends on (parental) income in the previous year. [4] We use the assumptions already mentioned. Furthermore we had to estimate an "average" loss of rent-subsidy as marginal rates may slightly vary with total yearly rent. Moreover we now assume that one child studies but is no longer living at home, while the second child is under 16, in secondary school and still living at home.
The results (rounded) are given in Table 4.



5. SHORT COMMENT ON FINDINGS

From Table 2 it is clear that the social insurance system in The Netherlands is financed in a strongly degressive way. The reasons are:

— contributions are levied at a flat rate, in proportion to income,
— but only up to a relatively low maximum income-ceiling, and,
— contributions are tax-deductible, and thus worth more to taxpayers as marginal income tax rates are higher.

Social insurance contributions tend partly to offset the redistributive effects of progressive income taxation. It would appear that for example the government, parliament, civil servants and the population at large do not sufficiently realize the distributional impact of the combined public levies considered in this article. Such lack of insight hampers rational decision-making on matters of (re)distributional policy.

3. These are the usual assumptions in government publications.
4. For reasons of simplicity we further base our calculations on taxable income in the current year (i.e. 1976). This does not distort the results in a significant way.

A Reasonable Story?

There is nothing unusual about you being 42 years old, married, with two children (an 18-year-old son studying economics and living away from home and a 16-year-old daughter in secondary school) and a gross salary of Dfl. 26,500, excluding vacation bonus. A normal, common enough situation.

But it is most certainly unusual, not to say bewildering, what happens if you get a promotion to department chief and a raise in salary of Dfl. 4,000.

Now, a Dfl. 4,000 increase in salary is certainly reasonable in such a situation; you have more responsibility on your shoulders, more concerns to worry over. Moreover, the tax administration and other institutions are each going to want their piece of your raise.

Now comes the bewilderment: namely, that in reality the result of your raise is a net *loss* of about Dfl. 1,000 per year!

Yes, you really have read it correctly: a Dfl. 1,000 loss! Take a look at the following calculations and see what happens:

Elements of income:		*before promotion:*		*after promotion:*
Gross salary		26,500		30,500
Less: wage tax, pension premiums, social insurance premiums, and national health insurance premiums or private health insurance costs		7,749		10,364
Net salary		18,751		20,136
Child benefit payments	+	1,824	+	1,824
Study allowance for the son	+	7,935	+	6,381
Compensation for study costs of the daughter	+	300		—
Daughter's tuition	—	88	—	117
Rent subsidy (figured on a rent of Dfl. 5,850 per year)	+	1,380	+	850
		30,102		29,064

This example could even be considered a "favorable" example of your promotion in that it does not consider the possible costs for care by general practitioners and dentists.

[From SOCIAAL ECONOMISCH MANAGEMENT, Brochure "Balans voor een inkomensbeleid", with kind permission of the publishers.]

The same conclusion stands as far as marginal rates are concerned. The combined marginal rate of income tax and social insurance premiums for employed in The Netherlands fluctuates around 45 percent at all income-levels, up to Dfl. 50,000. In the income-range Dfl. 25,000 - 40,000 the loss of income-related grants poses special problems. Marginal rates over 100 percent are no longer an exception. [5] At the same time — judging from the income tax rate — everybody seems to agree that a maximum-rate of 72 percent is the limit.

We feel that the problem of average and marginal tax rates in The Netherlands needs more attention and after thorough study adequate treatment. The present situation could endanger the credibility of the tax system in an unacceptable way. One solution certainly worth considering is to combine a number of now separately levied social insurance contributions with the income tax, in order to create a more consistent rate-structure. Given present and projected budgetary needs it seems that a high average rate of taxes for all taxpayers is inevitable. It might be possible, however, that integration of public levies results in a more acceptable over-all pattern of rates.

But then there is still the problem of marginal rates, mainly created by income-related grant programmes. We seem to get entwined in insoluble contradictions

5. By now there are more than 400,000 recipients in the housing rent-subsidy programme and over 200,000 students benefiting from the loan/grants programme.

*Table 4. Marginal tax rates as percentage of additional gross personal income, under assumptions (1976)**

Gross (labour) income after rise of Dfl. 1,000	Income tax (pct.)	Social insurance contributions (pct.)	Subtotal income tax and social insurance contributions (pct.)	Loss in grant-programs (pct.)	Total (pct.) **
Dfl. 19,000 (legal minimum wage + 1,000)	21.3	26.0	47.3	—	47.3
Dfl. 26,000	22.3	26.3	48.6	55.7	104.3
Dfl. 35,000	26.0	16.4	42.4	50.0	92.4
Dfl. 50,000	48.8	—	48.8	—	48.8
Dfl. 120,000	67.4	—	67.4	—	67.4
Dfl. 200,000	70.2	—	70.2	—	70.2

* Married couple, rented house, one child under 16, the other child studying and not living at home.

** Extra tax relief and child allowance for higher-income parents with children studying and not living at home, are not taken into account here.

here. On the one hand ending grant programmes would meet heavy opposition by many who believe them necessary to compensate for present inequalities of income and opportunity. On the other hand, flattening out the marginal rate, i.e. give higher transfers to present recipients and bring more people (with higher incomes) in the programme, is impossible because of the strained budgetary picture. In this situation it is paramount not to introduce new income-related programmes that intensify present problems. Regrettably more of such programmes are on some politicians' drawing-boards just now.

Introduction of those plans would — in our opinion — lead to increasing resistance among taxpayers, in combination with diminished incentives to work and a growing tendency to avoid taxes or to evade them outright. Such socially undesirable effects should be prevented.

As to the more general issue of redistributive policy we may conclude that of course virtually every government activity influences the distribution of income. However, the measurement of effectiveness is difficult. We lack a coherent frame for analysis and many relevant data, e.g., on shifting and incidence of taxation.

There can be little doubt that collection and timely analysis of data on the systems of burdens and benefits, resulting from public sector activities, are a necessary condition for more effective and efficient distributive policies.

Policy studies and academic debate on the optimal tax structure, and moves in some countries towards tax reform, all prove that at present this condition is far from being fulfilled. This poses a challenge for policy oriented research, as a combined effort by both tax lawyers and public sector economists alike.

CONFERENCE DIARY

JUNE 1977

AMR International: Current strategies and techniques (including tax aspects of structuring mergers and acquisitions). London (United Kingdom) June 1 (cont'd). (English).

Management Centre Europe: International Tax Management (including inter-company pricing, licencing, service fees, valuation of goods for customs duty, VAT and other purposes). London (United Kingdom) June 16-17 (English).

Trends in Fiscal Federalism.

by Prof. Dr. Ksente Bogoev *

I. WORLD CENTRALIZATION TRENDS

Trends towards the strengthening of centralism in both unitary and federal countries have reached the point where the central authorities, wielding their sovereignty and fiscal powers, have become the dominant factor in the use of the fiscal system and fiscal policy measures for aims of economic and social politics in the fields of allocation, development and distribution.

The possibility of autonomous fiscal initiatives on the side of the local and regional authorities in the unitary countries, or on the side of the federal units in federal countries has been considerably restricted. Their financial dependence on the central sources has increased and they have been directed towards the cooperation in and the application of stabilization policies and the wider economic and social programmes which have been passed by the central authorities.

A large number of factors objectively conditions these trends. There is "a formidable set of forces operating through time that promote an increasing degree of centralization within the public sector". [1] First of all, wars, economic crises and recessions swiftly increase the responsibilities of and the intervention by the central authorities. The centralization of the public sector and its increased administrative, political and economic powers are actually caused by technological and economic development, industrialization and modernization of the structure of the economy. All of these require a greater concentration of financial powers and measures.

Central government and local authorities

This complex system of relationships forms the basis of the opinions of those who hold that modern fiscal policy can be successfully carried out only if its basic subject is the central government. The increases in knowledge, mobility and real income which follow economic growth reduce the framework for an independent budgetary policy at the level of lower governments. The central government either takes over the considerable sources of fiscal revenues, such as income tax and turnover tax, entirely, or controls the major share in them, while having also acquired broad rights to incur debts and having concentrated in its hands powerful means for economic and social transfers in order to finance its active political, economic and social commitments.

These trends all over the world (particularly in those countries with a longer tradition of local autonomy) have led to a conflict between local independence and the centralizing powers; this conflict results from the "economic, social and technical pressure of our time", where local independence is becoming marginal rather than absolute. [2]

Subventions

This process is not brought about by usurpation or suspension of the functions of local communities or by the narrowing of the domain of their responsibilities, but by a strong expansion of the radius of the functions of central governments. While faced with an increase of their own responsibilities, lower authorities are primarily preoccupied with overcoming the deterioration of the local treasuries, their lack of abundant sources of revenue and their static nature. Although there are many examples of a diversification of local taxation and of a branching out towards more productive and more flexible sources of revenue, such as personal income taxes and turnover taxes, there are countries where the independent fiscal domain of local authorities remains presently insufficient, so that an increase of subsidies from the central government has become the basic exit from the fundamental deficiencies in local finances. It is common to find countries where subsidies cover an average of approximately one-third of local expenditure, but in many countries this proportion is considerably higher. "Subventions from higher authorities thus loom large on the local government's horizon", despite all the complaints of the local authorities about the erosion of their traditional autonomy. [3]

By varying the amounts and the conditions of subsidies and loans which they transfer, central authorities maintain a constant influence on the level and structure of local expenditure, depending on the economic situation of the country concerned, and induce cooperation in the realization of the increasing number of broad economic and social programmes. Local authorities in many countries take part in infrastructural programmes on that basis and also in the form of measures for implementing regional and spatial development policy and by realizing social programmes connected with employment, housing, special allowances for the poor and children, educational progress, environmental conservation, etc.

Division of functions

Although all this involves a certain loss of sovereignty, it forms a basis

for some sort of partnership and integration with the plans of the central authorities. Recent theories, which have been generally accepted, emphasize the fact that coordination between central and regional authorities is inevitable, taking into consideration the extent of decentralized expenditure and the increasing importance which has been given to the correction of regional imbalances of a structural and stabilizing nature.

Apart from the fact that the optimal degree of decentralization varies in the different countries, decentralization is inherent in federalism and its basic philosophy is built on the division of functions and the realization of common interests and aims on the basis of the independence of the federal units. It is an indisputable fact, however, that the trend towards the strengthening of centralism in the course of this century has caused serious frictions in the relations between central authorities and federal units. This phenomenon has brought about many pessimistic conclusions about the prospects of federalism, some of them even predicting its end. [4]

Fiscal federalism

Since financial relations generally have their origin in, and are considerably determined by, the political structure new dynamic trends on the political front have also made themselves strongly felt in fiscal federalism. The centralization of public functions has led to the centralization of fiscal functions in the federations. The traditional distinction of tax resources between indirect taxes (such as consumption taxes, customs duties and excises) levied by the federation, and direct taxes levied by the federal units, could not survive. Recent experiences in the United States of America, the Federal Republic of Germany and Switzerland indicate that modern individual and corporate income taxation cannot, in practice, remain outside the fiscal domain of the central authorities:

The contemporary theory of fiscal federalism justifies the strengthening of the financial powers of the central authorities in order to meet the objective needs of economic and technological development and in consideration of a stronger coordination. It is believed that the federation should levy those taxes which depend on the general state of the economy and which influence that state decisively.

Therefore, from an economic and administrative point of view, modern taxation of income and capital, which is effectively used for aims of stabilization and redistribution, can be more rationally applied at the central government level rather than on the basis of the co-existence of different laws in each federal unit, which would result in complications of double taxation and a division of fiscal liabilities among a larger number of tax authorities. According to this concept, the essence of the fiscal autonomy of the federal units should be their right to vary their expenditure and taxes reasonably within the framework of their functions. [5] The categorical standpoint held in an evaluation of fiscal federalism in the 1970's in the United States is typical in this respect:

"Bearing in mind the great mobility of capital and labour beyond geographical boundaries, it does not make sense to have 51 independent income taxes on individuals and corporations, with mild differences in the definition of taxable income and residence and with interstate allocational formulae, plus innumerable local variations in income or revenue taxation". [6]

Such trends in financial relations in the federations have also brought changes in the system of distribution of fiscal sources between the federation and the decentralized units. They have been manifested in two directions.

Systems of distribution

Firstly, the system of separation, or separate revenues, based on both the traditional concept of a division of functions between the different levels of governments and the independence of such governments' actions within the framework of their responsibilties, has been abandoned because of the emphasis put on the interdependence between different levels of governments and the need for their common, cooperative commitments in the realization of wider aims of the country's economic and social policy. It is believed that the inadequate behaviour of decentralized organs under a division of tax sovereignty can hinder the effective application of stabilization policies. In addition, the traditional separation of the federal units' taxation systems from the system of the federation is an obstacle to the achievement of harmonization and a more adequate balance between the taxation systems of the federal units as well as those of the local authorities. The prevailing alternative systems to separation are combined systems in which the various governments share the same or common sources of revenue. A mixed system of revenue sharing has the advantage of allowing a more adequate financial equalization and the elimination of large differences in fiscal burdens on the territories of different governments.

Secondly, the unequal distribution of fiscal capacities and the differences in the level of development and economic structure between different federal units (horizontal fiscal imbalances), as well as the imperfect correlation between the revenue resources and the obligatory public functions of different levels of governments (vertical intergovernmental fiscal imbalances), also impose the trend of strengthening the granting of subsidies in the system of federal finances which, as has been correctly stated, is a practice of the federal countries which is as old as the countries themselves. The fiscal development of the 20th century is characterized by a considerable increase in the use of subsidies as an integral part of the process of centralization and simultaneously of the cooperation between, and the common responsibility of, the various

levels of governments, in carrying out the long list of public services. [7]

The effect of subsidies

From the point of view of their importance as far as size, economic effects and political implications are concerned, the problem of subsidies is one of the dominant questions in the discussions about the federal finances. Thus, whether the federation should support a certain minimum level of public services for the citizens of each federal unit with its policy of subventions and financial equalization remains a controversial point. While this approach contains elements of a limited regional equalizing of income and the satisfying of recognized needs, the alternative approach suggests a comprehensive satisfying of the needs of every citizen in all federal units. [8] In practice, the United States of America is considered to be more committed to the former system, while the latter approach prevails in the federal Republic of Germany.

An interesting problem is the dilemma related to the policy of subsidies, i.e. the problem of equality of individuals and federal units in matters of federal finances from an economic point of view, versus the allocative effectiveness of the subsidies (the dynamic consideration). There are, in fact, those, who hold that the policy of financial equalization by means of subsidies which are given to areas with insufficient resources prejudices the rate of the general economic growth. It would be more appropriate to concentrate efforts on areas which are rich in potential, despite the fact that those areas already have high incomes and a high rate of growth (here, the subsidies in question are obviously those which are intended to support economic growth and not those merely intended to cover financial needs of public functions in the narrower sense of the term). [9]

Theory and practice affirm the necessity of respecting both aspects of the policy of financial equalization in federations: the vertical, when the transfers in question are between different levels of government (because of the imperfect correlation between revenues and obligatory public functions); and the horizontal, when the transfers are between different governments at the same level but with unequal fiscal capacities (between "rich" and "poor" federal units).

Contributions by the lower authorities

As a rule, evaluations of the experiences of fiscal federalism based on a system of contributions, or "cotisation", tend to be negative. The state of the central government is considered to be weak if it is to a high extent dependent on the contributions of the member countries for its financial needs. This sytem, which existed previously, was abandoned with the strengthening of the authority of the federation and attempts to reinstitute such relations in those federations proved to be a pure anachronism. [10] It is held that expenditure for public defence, for example, which is inherent to a central government, as well as certain other responsibilities of the central government, cannot be rationally covered without the federation's own revenue sources. There are those who hold that even the confederations can no longer depend on contributions ("cotisation") for their financing and that they should have their own taxation rights and rights to incur debts, even though supranational governments do not usually make revenue from their own resources, but have a system of "support payments" from the member countries. In that case, the problem of the criteria for these "support payments" or the amount of contributions always arises. The generally accepted principle is that the amount of contributions to the higher authority's finances should be determined in proportion to the taxation capacity of each member country.

II. DECENTRALIZATION AND ELIMINATION OF THE STATE IN PUBLIC FINANCE IN YUGOSLAVIA

The development of the financial relations between the socio-political communities (different levels of government) in Yugoslavia is not characterized by the strengthening of the financial power of the centre, but rather by trends in the reverse direction, namely by a decentralized division of functions and realization of common functions at the federation level by means of equal cooperation from the federal units (the Socialist Republics and the Socialist Autonomous Provinces). The impetus for vertical decentralization of functions and the affirmation of inter-republic and inter-communal collaboration in the community arises not only from the specific features of Yugoslav federalism (i.e. its multinational structure), but also from the concept of the state and of the responsibilities of the communes, which have wide autonomy. A particular feature of the development of decentralization in financial relations has been the process of eliminating the state from many public functions, the organization of the functions on the basis of self-management and a system of "defiscalized" financing.

Vertical decentralization

Although the decentralization of public financing has been a continuous process, three separate periods can be distinguished, each with its particular characteristics.

1. In the period between 1947 and 1951 a method of totally united and centralized public financing was in use, with a hierarchy of functions. Federal legislation decided on the absolute unity of the budgetary and taxation systems for all levels of government. Throughout the country, there was a consistent application of the principle of horizontal equality of taxation ("equal taxation of equals") and the tax resources were distributed according to the principles of a system of sharing in the revenue of the higher governments. This left limited possibilities of financial independence for the Republic and the Provinces. Balancing of

the budgets of all levels of governments and equalization of the standards of public services were achieved with a policy of subsidies and differentiated revenue-sharing.

The problem of coordination of public finance policies did not even arise. "Harmonization" was fully realized within the framework of a single budget structure for all governments, through its preparation and implementation procedures and through the supremacy and competence of the higher organs of authority to carry out global and structural harmonization of all elements of financing.

2. From 1952 until the constitutional amendments of 1971, there was a continuous process of decentralization and elimination of the state in relations and in financing of general and collective spending (public consumption). This period was primarily characterized by the abandonment of the single budget for all governments and the removal of hierarchy in fiscal relations between the different levels of government. The independence of the Republics, the Provinces and the local authorities in their budgetary rights was consistently stated. At the same time, especially from 1955 onwards, a vigorous decentralization of functions was carried out, together with local financing, thus affirming the concepts of the communal system. The system of sharing revenue was abandoned and all efforts were directed towards the strengthening of a system of separation of revenues. As regards the policy of fiscal equalization, the method of discretional distribution of subsidies was abolished and criteria of objectivity and stability were introduced into the mechanism of these transfers. Then began a gradual transfer of functions to the Republics and local communities for differentiation of the size of revenues (rates of taxation) which belonged to them. At first, this was decided within the framework of stated maximum limits for different forms of taxation, but later generalized delimitation evolved and developed into methods of agreed harmonization of the size of the tax burden.

Simultaneously with the evolution of the vertical decentralization of fiscal decision-making, a process of eliminating public financing from the budget was realized. This was based

ARTICLE 9 OF THE YUGOSLAV CONSTITUTION DEALING WITH SELF-MANAGEMENT *

"Self-management in work organizations shall include in particular the right and duty of the working people:

1) *To manage their work organizations directly or through bodies of management elected by themselves;*
2) *To organize production or other activities, to promote the development of their work organizations, and to lay down working and development plans and programmes;*
3) *To decide on the exchange of products and services and on other matters relating to the operation of their work organizations;*
4) *To decide on the use and disposition of social resources and to employ them with economic efficiency, so as to ensure the highest possible returns for work organizations and the community;*
5) *To distribute the income of their work organizations and provide for the development of the material base of their work; to allocate income among the working people; to fulfil the work organizations' obligations towards the community;*
6) *To decide on the admission of working people into their work organizations and their dismissal, and on other labour relations; to determine working hours in the work organizations in conformity with general working conditions; to secure internal supervision and make their work public;*
7) *To regulate and promote their working conditions; to organize industrial safety measures, and rest; to provide conditions for their education, and to advance their own and the general standard of living;*
8) *To decide on the split-up of their work organizations and on turning parts of them into separate organizations, and to decide on merger and association of their work organizations with other work organizations.*

Exercising their self-government rights, the working people in socio-political communities shall decide on matters concerning the guidance of economic and social development, the distribution of the social product, and other affairs of common concern.

Citizens directly concerned, representatives of the organizations concerned, and representatives of the community may participate in the management of work organizations regarding matters of special concern to the community.

In order to secure a uniform socio-economic position for the working people, self-management rights of the working people employed in state agencies, socio-political organizations or associations shall be regulated by statute or by-laws, in conformity with the nature of work of these agencies and organizations.

Working people shall exercise self-management in the unified socio-economic system in accordance with the Constitution, statute and their by-laws, and shall be held accountable for their work.

Any act violating the self-management rights of the working people shall be unconstitutional."

* From "Foreign Investment in Yugoslavia" (1974), published by the Committee for invisible transactions of the OECD (Paris).

on the concept of elimination of the state in social functions and the growing independence of their financing. In this period, a multitude of independent public funds was set up, the principle of budgetary unity lost importance and a multi-budget system for financing of public expenditure at all levels of governments became widespread. The range of social institutions which acquired independent financial status widened and their functions were organized on the basis of self-management. The whole system of social security was constituted on the basis of self-management and has consistently relied on self-financing from earmarked contributions.

The decentralization and the gradual elimination of the state from public financing created a new and developed structure of public financing and posed the problem of coordination of fiscal decisions on the side of the independent participants on the vertical and horizontal scales. Nevertheless, the question of coordination could be successfully solved throughout this period, owing to the fact that, until the constitutional amendments of 1971 and the new constitutions of 1974, basic fiscal legislation for regulating the tax and budgetary systems, as well as fund financing, were a function of the federal government and had common foundations for the whole country. This is no longer true.

3. The third period, which began with the constitutional amendments of 1971, brought about radical changes, especially in two fields: that of fiscal federalism, particularly in the position and prerogatives of the Federation, and that of the financing of collective spending which was taken out of the budget completely and reformed to a separate subsystem of public financing based on self-management.

The position of the Federation

The basic changes in the position and the functions of the Federation took place in the following fields:

— There was a shift from the system of revenue separation under which the Federation retained the most abundant sources of revenue, such as turnover tax, duties, personal income tax, etc. in its hands to a system of *contributions* or "cotisation", where the sources of revenue of the Federation would not even cover 50 percent of its budgetary needs. Thus, the most vital factor in the provision of the necessary revenue for the Federation's budget became the *contributions* which the Republics and Provinces paid out of their fiscal revenues.

The only important source of revenue which the Federation has at its disposal under the new system is customs duties. Owing to the known advantages of these duties for economic purposes over fiscal ones and also because of the sensitivity of this revenue to extra-fiscal influences, especially in years of acute instability at home and abroad and difficulties in the balance of payments, this leading source of the Federation's own revenue causes constant instability in the support of the Federation's public functions.

The global amount of contributions which the Republics and Provinces must pay to balance the Federation budget is determined each year in proportion to the difference between the total expenditure in the Federation's budget and its own revenues. The contribution ("cotisation") to be paid by each Republic or Province is determined according to its economic and fiscal capacity, that is, its total income in the sense of "national" income and payment of sales tax.

— The last constitutional amendments established the requirement that the Federation budget must be sent to the Republican and Provincial Assemblies before it is put to vote, and that the latter must agree on the total amount of the Federation's expenditure.

If the revenues are lower than expected or if the budgetary equilibrium is upset, the Federation is obliged to ask the Republics and Provinces to agree on a reconsideration of the amount of budgetary expenditure, that is, on an increase of the Republican and Provincial contributions. The instability of the financing of the Federation's budgetary expenditure makes the manner and scale of deficit financing of the Federation an urgent question.

— Through its legislation, the Federation has lost its sovereignty to decide on a single tax and budgetary system for the country as a whole. The Federation's legislation now regulates only its own financing. The Republics and the Provinces have become competent to decide on their own legislation which is to be applied in their territories with respect to taxation, budget and other forms of public financing at local and republican level. The only exception to this fiscal sovereignty of the Republics and the Provinces is the general sales tax, the receipts of which belong to the revenue of the Republics and Provinces, but which is levied equally throughout the country according to a federal law. Such an institutional structure undoubtedly forms the basis for a change-over from a single fiscal system to a differentiation of the fiscal structures of the Republics and Provinces in all their elements.

The Republics are empowered to introduce all taxes, fees and other fiscal revenues and they decide on the distribution between the Republics' and local authority's budgets. For their financing, the Republics now mainly depend on the general and Republican sales tax and on the taxation of the income of enterprises.

The Republics have constitutional responsibility to financially balance deficits in local governments' budgets. The criteria applied for subsidies to the local authorities differ in each Republic and Province, but the average size of the subsidies in the whole country is about 30 percent of the total amount of the local communities' budgets.

The local communities decide on the size of their revenues independently, that is, they themselves determine the fiscal burden to be imposed within their territory and the choice of priorities and the standards in the financing of their public functions. Their main sources of revenue are the local retail sales tax, the income tax on individual workers and the taxation of incomes obtained in the private sectors of agriculture, small crafts and professional services, as well as the taxes on property.

— Public funds at the Federation level have been discontinued, except the fund for the faster growth of the less developed Republics and Provinces. The federation has no right to use non-budgetary sources in its financing. The right of the Federation to incur debts is also conditioned by prior agreements with all the Republics and Provinces.

— Changes have also been made in the system of subsidies from the Federation's budget to the less-developed Republics and Provinces: the global amount of the subsidies is decided in proportion to, and as a fixed percentage of, the average gross national product for the entire five-year period, for which there are plans for economic and social development in the country. The size of the subsidies is determined by law on the basis of agreements with the Republics and Provinces. The subsidies are block subsidies: they are transferred to the less-developed Republics and Provinces without a designated function. The beneficiary Republics themselves decide on the use of the subsidies. The basic criterion in determining the size of the subsidy is the increase of the per capita revenue in the less-developed Republics and Provinces to the approximate average in the country as a whole. These changes in the system of subsidies ensure their greater stability and flexibility in the formation of financial means, depending on economic dynamics.

— There has been a further decentralization of the functions which were previously financed at the Federation level. The Federation's budget now includes the following areas: National defence — mainly the regular army, since territorial defence is provided for at the levels of the Republics and the communities; subsidies to the less-developed Republics and Provinces; social security for war veterans, war invalids and the military; material reserves; and the work of the Federal administration.

Decentralization and elimination of the state in public financing

The relations in, and the characteristics of, fiscal federalism in Yugoslavia mentioned above only apply to the domain of public financing which includes the traditionally "pure" functions of the state: administration, defence, law and order, and certain kinds of transfers. These, however, account for less than one-half of the total means for public financing (i.e. less than 20 percent of the national income). The other part, that is, the larger part of public financing expenditure, consists of that sector of public functions which provides collective consumption goods of importance for the individual and public standard living (called "collective spending", in Yugoslav terminology), in the fields of education, science, culture, social security, etc. This area of public expenditure is structurally and financially entirely separate from state financing from the budgets of all levels of government and all kinds of taxation.

From the point of view of federalism, it should be noted that all these public activities are decentralized, i.e. they are financed only at local and republican levels.

Collective spending in the new Yugoslav system is financed within the framework of *the self-managing communities of interest*, which have been organized separately in each area of the public functions mentioned above. For example, all institutions and organizations in the area of compulsory education in the territory of a community are united in a community of interest; likewise, the institutions and organizations in the area of culture or science, etc. all have their own community of interest.

Contributions form the basic kind of revenue which supports the self-managing communities of interest. They are a specific kind of public, non-fiscal revenue. They have been introduced on a basis of self-management and do not have the force of state decisions or laws. The size of the contributions is decided by the assemblies of the self-managing communities of interest, which consist of representatives of both the providers of public goods and the beneficiaries of those goods. Thus, within the self-managing communities of interest supply and demand in the field of collective spending are brought together and balanced out. In this way, the contributions represent an income which workers in education, science, culture and other social activities earn through what might be called an exchange of their labour for the labour of the beneficiaries of their services, that is, primarily the workers in the enterprises and in the private sector.

Obviously, the services, that is, the goods, of collective spending cannot be left to the laws of market allocation; therefore, the social and economic reasons behind this approach to collective spending in the Yugoslav system must primarily be regarded as an intention to establish this sector of public activities consistently on a basis of self-management, to provide development in these social activities, both in their structure and overall, and furthermore, to harmonize them more directly with the material capacities and needs of the society. In this institutional approach, the beneficiaries of the services of collective spending are given direct influence on the programmes of the organizations engaged in this field and on the use of the means which are supplied for their financing. Finally, this system will contribute to the creation of a more equal status between the working people in social activities and the working people in other activities and will ensure an indispensable degree of solidarity in satisfying collective needs.

As to its global financial, economic and social effects, collective spending represents a very relevant element in the balances of distribution, growth and stabilization; it represents more than 20 percent of the national income. Therefore, its importance must not be considered in isolation, but as an integral part of the other domain of public financing which belongs to the traditional fiscal functions of the state.

Coordination in public financing

Bearing in mind the extremely decentralized structure of public financing and the great number of autonomous decision-makers involved, the question of the principles, methods and instruments for the realization of effective coordination in financial decisions and the harmonization of the foundations of the system of public financing is of great importance for Yugoslavia.

Considering the constitutional authority of the Republics and Provinces to raise taxes and other fiscal revenues and to totally regulate public financing in their areas, a lack of coordination and of measures to harmonize the foundations of the system of public financing in the framework of the country as a whole would easily lead to drastic differentiations between the fiscal systems of the Republics and Provinces which, if taken to extremes, would tend to create eight different fiscal systems in the single Yugoslav market (the Yugoslav Federation consists of six Republics and two Provinces). The heterogeneity of the system of public revenues and public financing in general is further underlined by the autonomy of the subsystem of collective spending. Except for the fact that these are managed by the Republics and Provinces themselves, the revenues in this area, in their particular and cumulative effect, equal the effect of direct taxation and have to be taken into consideration from all aspects of fiscal policy, both from the micro- and macro-economic points of view.

Because of all these characteristics of the decentralized model of public financing and the pluralism of its institutions, a particular respect for certain principles in the concept of its harmonization and the coordination of public financing becomes vital. These principles are as follows:

a) *to prevent any differentiation of the system and policies of public financing which would lead to any of the following consequences:*
   — *distortion of economic conditions and competition in the domestic market;*
   — *a hindering of the free mobility of goods and production factors;*
   — *the inclusion of elements of fiscal discrimination which are based on the residence of taxable subjects or the territorial origin of products;*
b) *to effectuate the necessary coordination of the policy of public financing at all levels in connection with the effective application of common measures in growth and stabilization policies;*
c) *to prevent such use of taxes and contributions which would lead to a shifting of the fiscal burden between the Republics and Provinces; and*
d) *to keep the differences in the level of taxation within such limits as would not weaken the social and political homogeneity of the country.*

Because of the possible implication of the branching-out and decentralization of public finance, the constitution of the Federation and the constitutions of the Republics and Provinces contain explicit clauses on harmonization and coordination in this sphere. The basic coordination which should be realized for the sake of maintaining unity and stability in the domestic market takes the form of direct agreements between the Republics for the purpose of harmonizing the basic elements of the taxation system and taxation policies. This kind of horizontal harmoniza-

tion of fiscal policy of the Republics and Provinces is assisted by the intercommunal collaboration within the Republics and Provinces.

In the event of market disturbances, or when the interest of the country, in the case of emergency, require it, the Federation is permitted to intervene in order to harmonize relations in fiscal policies throughout the country.

The constitution categorically forbids measures or actions which might cause any fiscal discrimination in the treatment of individuals or legal entities between the Republics, or which might introduce open or hidden fiscal barriers in the circulation of production factors or goods from one area to another.

Finally, because of the dual system of the financing of public spending in Yugoslavia, with "pure" spending financed by the state on the one hand, and collective spending financed on a basis of self-management on the other hand, a new institution has been introduced to coordinate these two domains of public financing. It is called *the balance of financial means for "pure" and collective public consumption* and it is the responsibility of the communities, the Republics and the Provinces. Its aims are to determine the optimal global relations between the two fields of public spending and to conform them with both the overall financial capacity of the economy and the basic aim of economic policy within the framework of each level of government.

Tax Structure and Policy in the Windward and Leeward Islands of the Caribbean Community.

By Nizar Jetha
and Nurali Peera*

The most striking feature of the economies of the Windward and Leeward Islands is the coexistence of a relatively high rate of investment with negligible domestic savings. Given the paucity of their resources, these countries will continue to need substantial inflows of external capital, but it is unlikely that the high magnitude of the prevailing resource gap can be maintained indefinitely. Mobilization of domestic resources for development thus constitutes a major issue confronting the Eastern Caribbean countries. Since public sectors assume important roles in these economies, tax policy has a pivotal part to play in lifting the rates of domestic savings. The object of this paper is to review the islands' tax structures and to compare them with those in other Caribbean countries in order to arrive at some broad conclusions for future taxation policy. The Windward Islands form the focus of the analysis in this paper, but the economic and fiscal structures of the Eastern Caribbean countries display sufficient similarities to permit the extension of policy conclusions to the Leeward Islands.

I

The Windward (Dominica, Grenada, St. Lucia and St. Vincent) and the Leeward (Antigua, St. Kitts-Nevis-Anguilla and Montserrat) Islands consist of seven small territories scattered over 500 miles, with a combined land area of 1,170 square miles, and an estimated 1970 population of 475,000. Economic co-operation among these countries which had been largely confined to the monetary sphere through the membership of the Eastern Caribbean Currency Authority (ECCA) and the use of a common currency, received a strong impetus in 1968 when the seven countries combined to form the Eastern Caribbean Common Market (ECCM). During the same year, the ECCM countries also joined the Caribbean Free Trade Association (CARIFTA), a broader grouping that included five larger states in the Caribbean (viz., Jamaica, Trinidad and Tobago, Guyana, Barbados and Belize). Since May 1974, all ECCM countries have become members of the Caribbean Community and Common Market (CARICOM), which superseded CARIFTA. Politically, Grenada has been fully independent since February 1974, whereas Montserrat is still a colony; the remaining five enjoy full internal self-government, but the United Kingdom retains responsibility for foreign affairs and defence. [1]

Agriculture and tourism dominate the Eastern Caribbean economies. The agricultural sector accounts for about a fifth of the GDP, and provides virtually all commodity exports. Export production is narrowly based, with the bulk of earnings on visible trade derived from bananas, sugar, cocoa and nutmegs. Tourism has emerged as the most dynamic sector in recent years: gross foreign exchange receipts from tourism now contribute about 60% of the islands' foreign exchange earnings, though net receipts are likely to be much lower given the high import content of the expenditures that characterizes the tourist industry throughout the Caribbean.

In the overall macroeconomic picture, the concomitance of a relatively high rate of investment and a low rate of domestic savings stands out. The investment ratio of one-third of GDP reflects in part the diseconomies of scale encountered in small economies, but is nevertheless remarkable. Gross domestic savings, on the other hand, have been negligible in recent years, and may have even turned negative in some years, implying an excess of consumption over domestic income. The resource gap — measured by the excess of imports of goods and non-factor services over exports of goods and non-factor services — amounts to some 40% of the GDP, reflecting the large imbalance between investment and domestic savings [2] (Table 1). The maintenance of this unusually wide gap has been made possible by inflows of private as well as public capital.

The heavy reliance on external resources is reflected in the countries' central government finances (Table 2). About 70-80% of the islands' central government capital expenditures have, in recent years, been financed through external assistance, mainly grants. The United Kingdom is by far the largest source of capital finance. In 1972/73, out of estimated external financing of EC$40.8 million for the capital budgets, EC$29.1 million came from the United Kingdom. [3] Canada, the second largest source, provided EC$9.3 million. The remaining EC$2.5 million was provided by the Caribbean Development Bank, which is one of the key institutions of the Caribbean integration movement, and is expected to emerge as a major source of development finance

* International Bank for Reconstruction and Development, Washington, D.C., and University of Salford, England, respectively. The views expressed here are personal and should not be attributed to the institutions to which we are attached. We are indebted to Sidney Chernick, Lady Hicks, Manmohan Agarwal and Paul Applegarth for helpful comments.

1. An excellent account of the islands' economies is to be found in Carleen O'Loughlin, *Economic and Political Change in the Leeward and Windward Islands* (Yale University Press, New Haven, 1968). For recent developments, the most useful are *Carifta and the New Caribbean* (Commonwealth Caribbean Regional Secretariat, Guyana, 1971); and *From Carifta to Caribbean Community* (Commonwealth Caribbean Regional Secretariat, Guyana, 1972).
2. Statistics for the ECCM countries are seriously deficient, both quantitatively and qualitatively. The latest year for which GDP data are available for all countries is 1971.
3. The East Caribbean dollar is pegged to, and since 1973 floats with, Sterling at EC$4.80 per £.

for the islands' capital budgets. In addition to providing development aid, the U.K. has also been granting budgetary aid amounting to about EC$6-7 million annually towards recurrent expenditure. [4]

TABLE 1

RESOURCE AVAILABILITY AND USE IN THE WINDWARD AND LEEWARD ISLANDS, 1971

	EC$ million	% of GDP
1. Gross domestic product (Y)	377	100.0
2. Imports of goods and non-factor services (M)	273	72.4
3. Exports of goods and non-factor services (X)	117	31.0

8. Resource use (C + I)	533	141.3
9. Gross domestic savings (Y − C)	−27	−7.2

Sources: Government statistical publications; CARICOM Secretariat, Georgetown, Guyana.

Domestic resources for capital budgets have been tapped mainly through borrowing. Market borrowing through the issue of debentures and Treasury bills is now undertaken by most countries, and is a relatively recent development, dating from the late sixties. The support for local securities has come primarily from national provident funds, commercial banks, insurance companies, ECCA (through its fiduciary issue), and Caribbean governments and financial institutions. Public savings present a dismal picture. Although tax receipts have shown impressive growth over the period 1968-73, the current budget has been in deficit each year before taking account of the budgetary aid, and since 1971, even with this aid. Furthermore, there is reason to believe that the actual outturns have been worse than is suggested by the estimates for 1972-73. [5]

In terms of growth and employment-generation, the performance of the ECCM countries has not been very satisfactory during the sixties: GDP at constant prices grew at an annual average rate of about 3% during 1961-71, and employment remained unchanged in absolute numbers. The desirability of accelerating growth cannot be stressed too much in a region which has a per capita income of about US$340 (1971), one of the lowest in the Western hemisphere. Moreover, unless past performance is improved on significantly, the unemployment problem may become unmanageable. The rate of unemployment, estimated at 10% of the labour force in most islands, does not seem to have risen between 1960-70 because a high rate of emigration limited population increases at the rate of only 1% per annum, and the labour force remained constant. Should the rate of emigration decline significantly in the seventies — and there are indications that this is already occurring as a result of the more restrictive immigration policies of Canada and the United States — the rate of population growth will be much higher and the rate of growth of the labour force higher still.

Although a continuing dependence on external resources is inevitable in the short term, it seems highly improbable that a resource gap of the present magnitude can continue to be filled by external capital over a prolonged period. Higher domestic savings will, therefore, have to constitute an integral part of any development strategy that seeks to achieve a higher rate of economic growth. The public sectors, whose shares in GDP and capital formation had already reached 20% and 30%, respectively, in 1971, are playing a rapidly growing role in the Eastern Caribbean. The chances of generating the needed savings will thus be much improved if the islands' public sectors achieve reasonable surpluses on their current budgets. Hence, tax policy will be an important determinant of the overall savings performance.

II

The review of tax structures that follows in this section draws on the experience of the "more developed countries" (MDCs) of the CARICOM [6] for comparison, but for convenience, the "less developed countries" (LDCs) are represented by the Windward Islands only. The subsequent section examines a number of hypotheses concerning tax effort and structure, utilizing observations for all CARICOM countries except Belize. The final section then briefly considers some of the major implications for the evolution of tax policy in the LDCs.

In the Windward Islands, four taxes — income tax, import duties, consumption tax and excises — account for over four-fifths of tax revenues (Table 3). Income taxes contribute only 23% to tax revenues. Import duties, the single most important tax source, bring in about 43%, while the relative shares of consumption and excise taxes amount to 15% and 3% respectively. The overall contribution of export duties to tax revenues (2.5%) masks considerable inter-island variation in their relative importance. Land and house taxes play a very limited role in the tax systems. A recent development has been the introduction of various taxes on tourism (e.g., hotel and airport taxes).

Broadly, the major difference between the tax structures of the LDCs on the one hand, and the MDCs on the other, is that the latter derive a much greater proportion of tax revenue (45%) from income taxes — nearly twice as high as that in the LDCs; this is partly due to the greater importance of company tax revenues in the MDCs. The major indirect taxes are relatively less important and account for about 42% of tax revenues. As in the LDCs, export and land taxes are relatively unimportant. [7]

Personal Income Tax. The structure of income tax throughout the English-speaking Caribbean still retains the basic features inherited from the British administration. In general, personal income tax in the CARICOM is characterized by wide-ranging personal allowances that are generous relative to per capita income; and this is coupled with fairly steep marginal tax rates. In the Windward Islands, besides single and married allowances

4. The aid statistics given here are derived from donor sources and are not comparable with those in Table 2 because of different fiscal years, time lags, etc.
5. The economic and financial position of most ECCM countries has deteriorated recently, partly as a result of higher oil prices.
6. Jamaica, Trinidad and Tobago, Guyana and Barbados.
7. A detailed description of the tax structure of one MDC will be found in Nizar Jetha, "The Structure of Major Taxes in Guyana", *Bulletin for International Fiscal Documentation*, Vol. XXX, no. 2, February 1976.

) Imposed only by Trinidad and Tobago; equivalent to a consumption tax.

TABLE 4

COVERAGE OF PERSONAL INCOME AND COMPANY TAXES IN SELECTED CARICOM COUNTRIES

	Year	Number of Tax Returns Reviewed	Tax Returns as % of Population	Gross Incomes (Personal and Corporate) Reviewed [a] as % of GDP
Grenada	1970	6,767	7.4	38
St. Lucia	1971	6.279	6.1	33
Jamaica	1965	79,925 [b]	4.6	40
Guyana	1970	90,000 [c]	12.4	28
Barbados	1968	34,341	14.4	76

Sources: Report of the Commissioner of Income Tax for the Year-ended 31st March, 1966 (Government Printer, Kingston, Jamaica); Annual Report of the Commissioner of Inland Revenue for the Year 1969-70 (Government Printing Office, Barbados); interviews with officials dealing with taxation.

a) There is some double-counting involved since dividends received by residents appear as part of both personal and company incomes.
b) While precise data are lacking, it is known that the number of taxpayers is now much larger.
c) This figure seems to be on the high side.

deductions are granted for children, dependent relatives and housekeepers. The practice of giving a measure of relief for the taxpayer's and the spouse's earned income is also widely prevalent. The major features relating to savings comprise deductions for life insurance premiums, and for contributions to pension and provident schemes. The imputed income of owner-occupied housing is taxable in most countries, but substantial differences exist in the computation of such income (Appendix Table IV). Capital gains are not treated as taxable income. The minimum marginal rates range from 3-10%, and the maximum, from 50-65%. The MDCs grant the same type of allowances and deductions as the LDCs and their effective tax rates are also broadly comparable (Chart I).

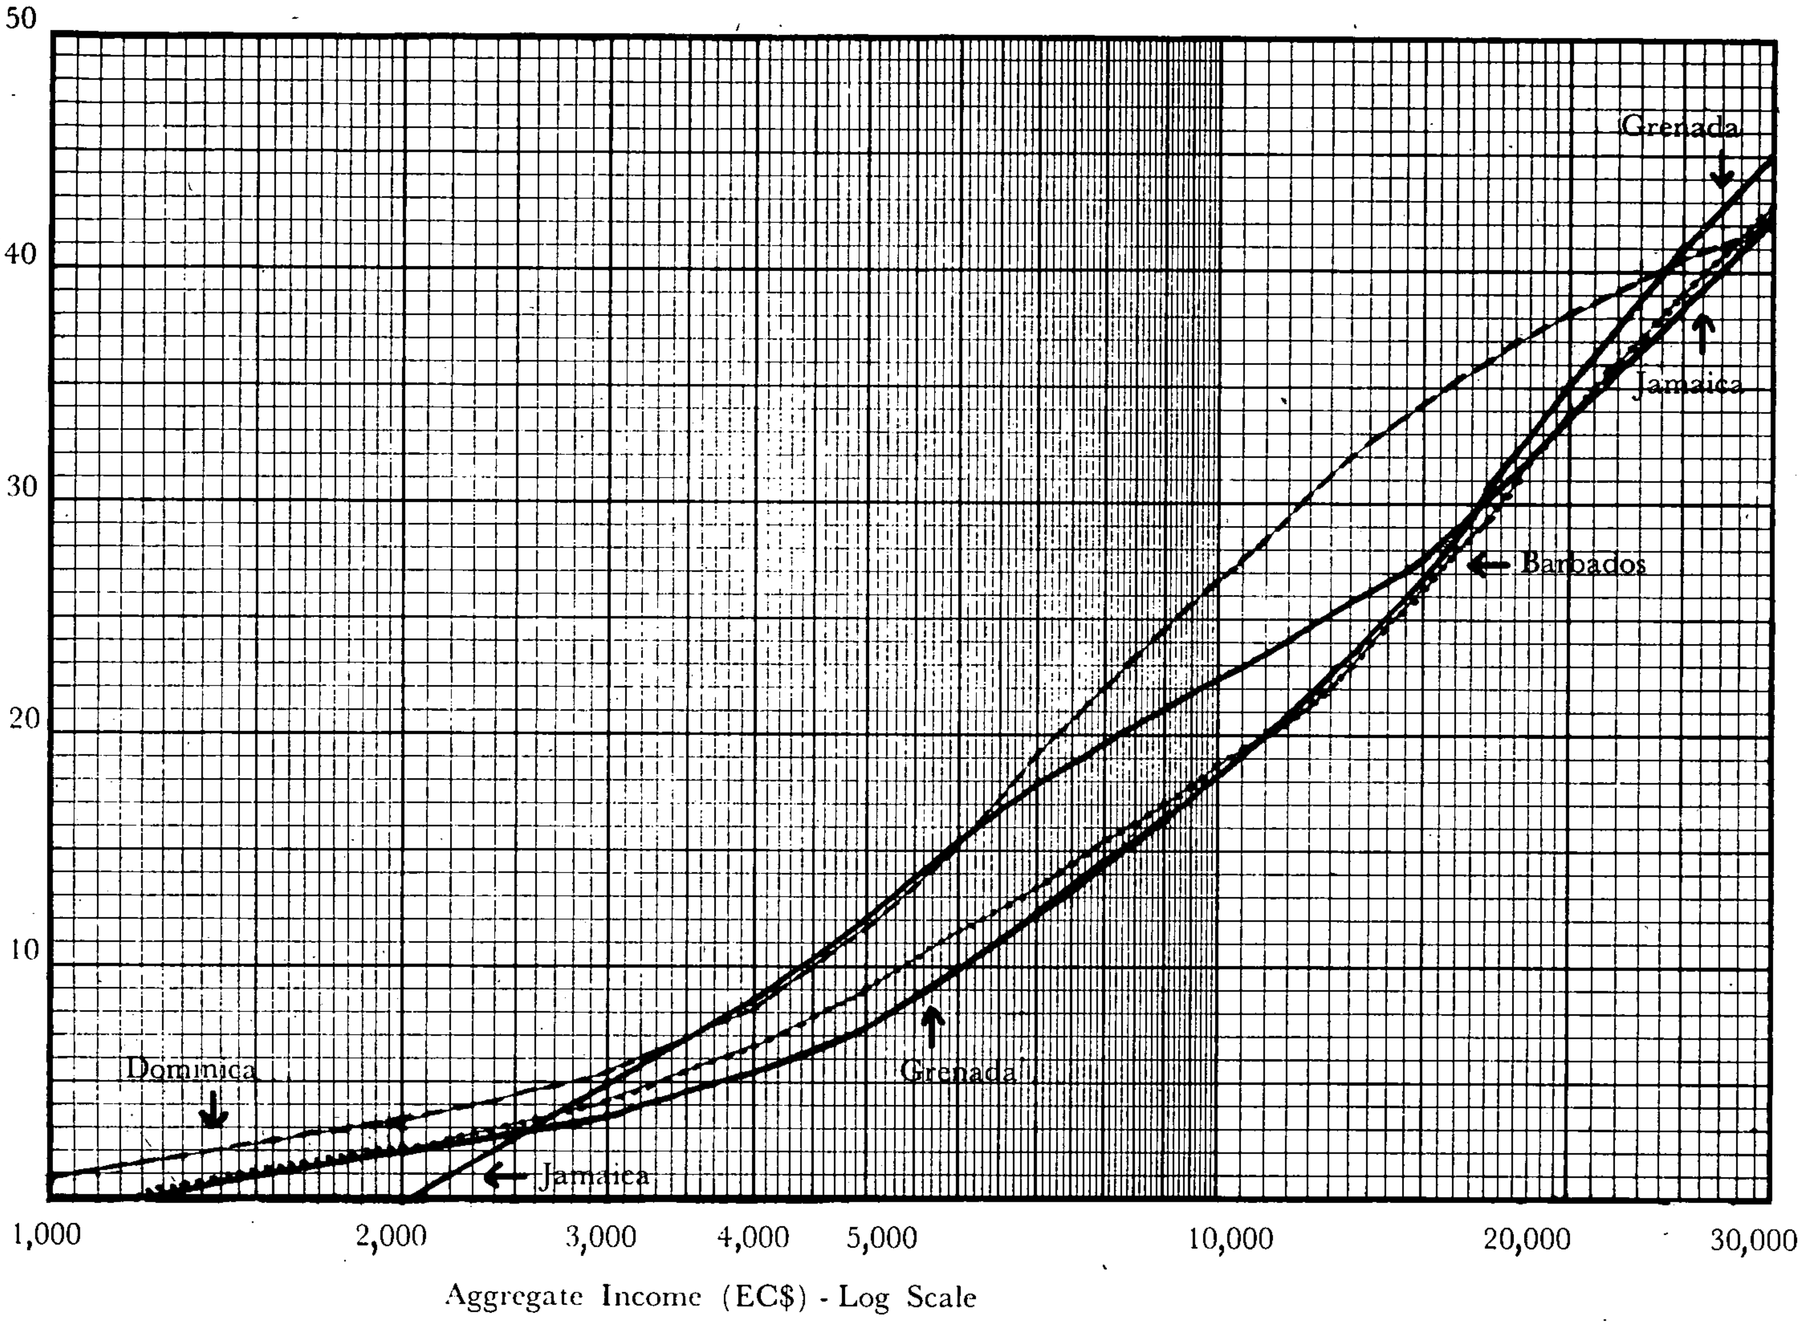
The Caribbean countries also display the two major shortcomings of income taxes frequently encountered in developing countries: restricted scope and ineffective taxation of agricultural incomes. Income tax has not been used as a vehicle for mass taxation: for instance, in St. Lucia and Grenada, only 6-7% of the population files income tax returns, so that the fraction of the population actually paying income tax is even less (Table 4). The proportion of GDP assessed for income and company taxes — another convenient index for judging the coverage of income taxes — is also low, and amounts to about 30-40%. Barbados has succeeded in assessing 14% of the population and 76% of GDP for tax, but the situation in the other MDCs parallels that in the LDCs. [8] Inadequate coverage of agricultural incomes is probably one of the major reasons for the limited income tax bases: St. Lucia, which can be taken to represent the LDCs, manages to assess for income tax a mere 5% of the GDP derived from the agricultural sector. In Barbados, the ratio of total agricultural incomes assessed to agricultural GDP is much higher (16%), but the performance of the other MDCs has not been as good (Appendix Table V).

Company Tax. The region displays a bewildering variety of company tax systems, ranging from company income tax at the one end of the spectrum, to a full corporation (profits) tax, at the other. The main difference between a company income tax and a corporation tax is that resident shareholders receiving dividends can claim credit against their income tax liability for the former, but not the latter. In the Windward Islands, companies are taxed through an income tax at the rate of 40-45%. MDCs as a group do not have a uniform system of company taxation, but in general, companies are taxed either partly through an income tax and partly through a corporation tax (as in Guyana), or wholly through a corporation tax (as in Barbados). Substantial differences also exist in the magnitude of deductions allowed in the computation of taxable profits and the scope of withholding taxes on foreign remittances (such as dividends and interest payments). The former is due largely to dissimilar depreciation schedules; the latter is a direct consequence of the differing obligations under double taxation agreements.

Harmonization of fiscal incentives for industry has helped to attenuate somewhat the effects of the region's disparate company tax practices on new investments. An "approved enterprise" either qualifies for complete relief from payment of customs duties and income taxes (including corporation tax) for a specified number of years, or for a concessionary rate of income tax on profits derived from "non-traditional" exports. In the former case, the maximum number of years for which relief may be granted depends on the share of domestic value-added in the sales price, whereas in the latter case, the maximum reduction in income tax rates varies with the fraction of total profits accruing from exports. In either case, however, the extent of tax relief granted by individual countries is at their discretion subject to the permissible maximum. [9]

Indirect Taxes. With the exception of a few commodities that are subject to special duties, imports into the ECCM have faced a common external tariff since October, 1972. Special duties are lower than the corresponding common duties, and are particularly important in respect of alcoholic beverages, petroleum products, motor vehicles, cameras, jewellery and perfumes. A country is not, however, obliged to impose the special duties; it may apply the appropriate common duty or any other rate in between.

The common external tariff (CET) adopted by the MDCs on August 1, 1973, is to be extended to the ECCM countries over a five-year period starting from 1977. The CET is divided into preferential and general rates; the former are confined to goods originating in and consigned from the British Commonwealth and the latter applying to imports from all other countries. For most commodities, general rates exceed preferential rates by about 10%. Under the CET, raw materials and capital goods bear comparatively low rates of tax with somewhat higher rates imposed on semi-manufactured goods and the highest rates applied to finished goods. Foodstuffs, however, enter duty-free, except where protective considerations are involved. In general, the tariff is characterized by both moderate nominal rates and rate differentiation between "necessities" and "luxuries".



Although the ECCM and CET rates are identical for over 50% of the commodities, the former are substantially lower for commodities such as spirits, cigarettes, petroleum products, clothing, durable consumer goods and other luxury goods; revenue considerations are likely to be particularly important in these cases. For example, the CET rates on spirits are about 2½ to 4 times the highest special rates in the Windward Islands; the general CET duty on clothing is 45% as against the general ECCM rate of 30%; and the CET for most durable consumer goods and "luxuries", levied at the rates of 30% and 45%, is 10-15% above the relevant ECCM rates.

Consumption taxes were introduced in the Windward Islands in 1968 to compensate for the anticipated loss of revenue following the removal of import duties on goods originating from the other members of the CARIFTA, as well as the loss of freedom to vary the level of import duties on non-CARIFTA imports. [10] The tax is neutral as regards area-origin: specified goods, whether domestically-produced or imported (from CARICOM as well as non-CARICOM sources) are taxable. Exports and goods utilized as materials by a manufacturer are exempt, however. The price realized by the manufacturer in the "open market" constitutes the tax base for domestically-produced goods. For imports, the practice varies: some countries levy the tax on the c.i.f. value, whereas others regard the c.i.f. value plus the import duty payable as the tax base. Except in Dominica, consumption taxes in the Windward Islands have narrow coverage and limited rate differen-

8. During the early fifties, gross incomes reviewed as percentage of GDP ranged between 10-25% in the MDCs. See A.R. Prest, *A Fiscal Survey of the British Caribbean* (H.M.S.O., London, 1957), p. 105.
9. See *Agreement on the Harmonisation of Fiscal Incentives to Industry* (CARICOM Secretariat, Georgetown, July 1973) for further details.
10. The LDCs have been permitted to retain import duties, for protective or revenue purposes, on certain goods imported from the MDCs. All such duties are to be phased out by 1983, however.

Chart I - Effective Rates of Income Tax : Single Person

Grenada, Dominica, Jamaica and Barbados

tiation. This is reflected in the concentration of revenues on a few commodities: for example, in St. Lucia, alcoholic beverages and tobacco were responsible for 65% of the yield of consumption taxes in 1973.[11] Dominica imposes consumption taxes on a wide range of commodities at rates ranging from 5-40%.

Excises are levied on domestic products only, but for obvious reasons an imported CARICOM product is subject to an excise equalization tax at a rate equivalent to that on a similar domestic product. Low level of manufacturing activity has limited the scope for excise taxation in the Windward Islands. Rum has traditionally been the only, or the major, excisable product; tobacco and beer are also excisable in some countries. The introduction of consumption taxes has further reduced the usefulness of excises from the point of view of revenue.

The structure of indirect taxation in the MDCs differs from that in the LDCs in three major respects. Firstly, a much lower proportion of tax revenues is raised through import duties. Secondly, the reliance on excises is much higher, and domestic production accounts for a greater proportion of total consumption tax collections. Thus, the share of consumption tax on locally produced goods amounts to only 27% in Dominica, as against 36% in Guyana, and 69% in Jamaica.[12] These aspects mirror the greater degree of industrialization in the MDCs, where the fraction of total GDP originating from manufacturing varies between 10 and 15% as compared to less than 5% in the LDCs. Last, but not the least, the rates of indirect taxation are generally higher in the MDCs; this reflects the adoption of the CET, and more widely based and differentiated "internal" taxes, such as consumption taxes and excises. It is worth noting that retail sales taxes have recently been introduced in Jamaica (1973) and Barbados (1974). The Jamaican tax is rather selective, being confined to a limited number of consumer durables. By sharp contrast, the Barbadian tax has extensive coverage, with all retail transactions regarded as taxable unless specifically exempted; among the

11. Based on the data for the period January 1 to November 27, 1973.
12. The data for Dominica relate to January 1 — October 31, 1973; for Guyana, to 1972; and for Jamaica, to the fiscal year 1972/73.

major categories of goods exempted are food, fertilizers and pesticides, machinery and capital equipment, building materials, transport equipment and exports.

Export and Land Taxes. Export and land taxes constitute the two main taxes aimed specifically at the agricultural sector in the Windward Islands. Some form of export taxation exists in all the islands except St. Vincent, where it was abolished in 1972. Coverage varies between the islands and is fairly comprehensive in Grenada and Dominica, but is confined to a single product (bananas) in St. Lucia. Given the high commodity concentration of the islands' exports, the bulk of the revenue is derived from two to three products even where the tax is broadly based. Only Grenada has succeeded in raising significant amounts from export duties.

Land taxes are levied in all the islands except Dominica. While all prevailing taxes are based on acreage rather than value, the rate structures vary a great deal. Grenada levies a flat rate of EC$0.50 per acre for residents and EC$5 for non-residents. St. Vincent, on the other hand, has adopted an incremental rate structure, tax rates varying from EC$1 per acre for the first 10 acres to EC$6 per acre for holdings of more than 500 acres. In St. Lucia, also, tax rates vary with the size of the holdings: those under 10 acres are not taxable, but thereafter rates rise from EC$0.25 per acre for holdings of under 50 acres to a maximum of EC$1 per acre for holdings of 500 acres and over.

In the MDCs, export taxation was, until recently, confined to Guyana. Barbados has now imposed a levy on sugar exports and Guyana has supplemented export taxes with a sugar levy to take advantage of a favourable trend in sugar prices; in the former country, however, the proceeds are not allocated to the central government budget. [13] Land taxes are levied in all countries other than Guyana, the most common form of such taxation being the site value (unimproved land) tax.

III

Economic, political and social factors may be expected to affect a country's tax effort and structure. The influence of certain economic characteristics — such as, per capita income, average import propensity, and the fraction of GDP originating in agriculture — has been extensively investigated, notably by Musgrave. [14] In this section, similar hypotheses are examined for eleven CARICOM countries with a view to extending the comparative study in the previous section at a somewhat more aggregative level, and to collate the results with those obtained by Musgrave.

The CARICOM is not an economically homogeneous area: the members of this regional union are at different stages of development; in general, the LDCs have lower per capita income, obtain a larger proportion of output from agriculture, and rely more heavily on imports. In terms of non-economic characteristics, however, the CARICOM constitutes a fairly homogeneous community: these former British dependencies in the Caribbean share a common speech, outlook, customs, geographical and climatic environment, and political institutions. Hence, there is considerable justification for suppressing the political and social variables in considering the determinants of tax effort and structure. A comparison of the results obtained here with those based on Musgrave's sample, which covers countries with much more diverse social and political circumstances, should, therefore, be of interest.

The results of regressing the aggregate tax ratio, T/GDP, on certain indicators of economic structure are comparable with those obtained by Musgrave (Table 5). T/GDP is not associated with per capita income, Y_c, (equation 1), and this is in conformity with Musgrave's findings for low-income countries. T/GDP is also not explained by the share of imports, M/GDP, (equation 2), a result similar to that found by Musgrave. Finally, it is found that not only is there no association between T/GDP and the fraction of output originating in agriculture, A/GDP, but even the sign of the coefficient of A/GDP is contrary to *a priori* expectations (equation 3). The last result is at variance with that found by Musgrave, whose estimate is based on a sample that contains both low- and high-income countries. Musgrave did not estimate the equation for low-income countries alone; when this is done — using his data for countries with per capita income of under US$600 — the coefficient of A/GDP remains significant, but the R^2 falls substantially (from .54 to .30). The inclusion of Y_c in our equations 2 and 3 does not change the picture (equations 4 and 5); this is not surprising since Y_c is highly correlated with M/GDP and A/GDP.

In contrast with their complete failure to explain levels of taxation, the selected indices are found to be of considerable importance as determinants of tax structure. Following Musgrave, most of the hypotheses relate to the share of indirect taxes in total tax revenue, T_i/T. In order to avoid definitional problems, and to ensure comparability, T_i is defined to comprise the major indirect taxes such as import, consumption, excise, and other similar taxes.

The share of indirect taxes, T_i/T, is negatively related to per capita income (equation 6), and positively to the share of imports (equation 7) and the share of agriculture (equation 8). This is consistent with a priori expectations, and the association is further confirmed when T_i/GDP is substituted for T_i/T (equations 9, 10, and 11, respectively). But when Y_c is combined with A/GDP (equations 12 and 13), the coefficients of A/GDP lose their significance; these results are likely to be unreliable, however, because of the problem of multicollinearity.

Two further results, which concern the general nature of indirect taxes, relate T_i/T and T_i/GDP to T/GDP, and are worth noting. Musgrave postulates a positive association between T_i/T and T/GDP on the grounds that "...direct taxes are given initial preference but that indirect taxes are resorted to increasingly after direct tax rates have reached higher levels..." [15], but gets a statistically significant coefficient with a wrong sign. The present sample yields a positive coefficient for T/GDP, but the coefficient is not significant (equation 14). The inclusion of Y_c does not render the relationship significant, though the sign of the coefficient of T/GDP changes (equation 15). As Musgrave points out, the relationship between T_i/T and T/GDP may well be non-linear. Finally, the association between T_i/GDP and T/GDP is found to be positive (equation 16); moreover, the in

13. Jamaica and Guyana recently imposed greatly increased taxation of bauxite and alumina through production levies; these production levies are akin to export duties.

(21) *	T_p/T	=	20.9 (12.6)	− 0.17 (A/GDP (2.22)			.45

T = Tax revenue; Y_c = per capita GDP; M = imports; A = value added by agriculture; T_i = revenue from major indirect taxes; T_y = income tax (personal and corporate) revenue; T_p = personal income tax.

* 8 observations (Windward Islands and MDCs).

Source: Statistical data given in Appendix Table I.

clusion of Y_c yields the right signs for both the coefficients, and the fit also improves (equation 17).

The results pertaining to the share of income taxes in total tax revenues, T_y/T, substantiate some of the conclusions reached with regard to indirect taxation. T_y/T is found to be positively associated with Y_c, and negatively with A/GDP (equations 18, and 19, respectively). Since the LDCs and MDCs derive vastly different proportions of income tax revenues from company taxes, it is interesting to replace T_y/T by the share of personal income tax in total tax revenue, T_p/T. When this is done for the countries for which the requisite data are available (viz., Windward Islands and the MDCs), the results remain significant (equations 20 and 21). The last result is noteworthy: it brings out the negative impact of A/GDP on T_y/T, thereby supporting the suggestive evidence of the previous section.

To sum up the statistical evidence, it appears that differences in tax effort do not depend on the structural characteristics of the economies. On the other hand, the overall rate of indirect taxation and tax effort show a high positive correlation, and a large part of the variation in the relative importance of indirect taxes is explained by the selected indices of development. Also, more direct evidence has been found concerning the influence of per capita income and the share of agriculture on the relative importance of personal income taxes.

IV

Given the small size of the corporate sector and limited domestic production of manufactures, the prospects for revenue growth should be the greatest in taxes on personal income and imports. It follows, *inter alia*, that the coverage of income and consumption taxes, and the effectiveness of the various taxes impinging on the agricultural sector, will need careful consideration in any strategy of tax reform. Section III, above, suggests that indirect

taxes are likely to dominate the tax structure in the foreseeable future. Nevertheless, a conscious effort is needed to develop direct taxes; otherwise, their share in total tax revenues could fall drastically. Such a trend would be undesirable on equity grounds. In the difficult task of restructuring taxes in the LDCs, the experience of the MDCs (other than that of Barbados in the area of income taxation) in the spheres of personal income taxation and agricultural taxation is not of much relevance, but recent developments in the MDCs in indirect taxation provide a useful guide to what needs to be done. The remaining part of the paper discusses the major taxes from the viewpoint of their revenue potential. [16]

Personal Income Tax. The curtailment of the range and the magnitude of various allowances and deductions granted under the income tax holds out the best prospects for an enhanced contribution from this source. There is little doubt that the structure of allowances has greatly eroded the tax base. To use St. Vincent as an illustration, single persons become liable to income tax only when their gross income is twice the per capita income, and a married person with four children begins to pay tax only when his income is more than six times the per capita income. Clearly, the tax net cannot be cast very widely in this situation. Since the attainment of internal autonomy, the role of the government has changed from that of a passive provider of law and order and basic infrastructure, to one of an active agent in promoting economic development; the system adopted during colonial times cannot therefore be expected to meet present revenue requirements. A thorough overhaul of the system of income tax allowances is long overdue.

Considerations of space preclude a comprehensive analysis of the structure of allowances, but some illustrations indicating the unrealistic nature of certain allowances are in order. The provisions concerning earned income allowances, the treatment of imputed income of owner-occupied housing, and contributions to pension and provident schemes provide good examples. The earned income allowance is very costly in terms of the revenue foregone since, given the economic structure of the LDCs, virtually everyone qualifies for it. Even in the United Kingdom, where it originated, the rationale of this allowance has never been formulated with sufficient cogency. In any case, in countries desperately short of savings, the case for an earned income allowance must be regarded as questionable. As for the taxation of imputed income of owner-occupied housing, the widespread undervaluation of properties and the application of rather low percentages to capital values for deriving imputed income have, together, transformed the assessment of imputed income, in a significant proportion of cases, to an allowance because interest payments exceed the imputed income. Finally, the treatment of contributions to private pension and provident schemes, and national provident funds, is also very generous: in the former case, while benefits are taxable, no limitations are placed (except in Grenada) on the deductible contributions; in the latter case, not only are the benefits tax-exempt, but all contributions are also deductible.

The Windward Islands have been considered collectively to keep the discussion manageable, but it is not intended to imply that an identical structure of rates and allowances should be adopted. Indeed, since these countries are likely to face divergent revenue requirements, it is important that each country is in a position to adapt its personal income tax to the revenue needs. It is essential that each country retains some major independent sources of revenue, whose structure and rates it could vary in accordance with its needs; otherwise, a number of countries are likely to find themselves in a fiscal "straight-jacket". Given the loss of independence over import duties following the membership of the CARICOM, and the desirability of maintaining broadly similar company tax structures and rates within a common market, personal income and consumption taxes are the only major independent tax sources available to the LDCs. It would, therefore, be a grave error to harmonize either personal income taxation or consumption taxes within the CARICOM. [17]

Company Taxation. The LDCs may need to change the system of company taxation in the interests of fiscal harmonization within the CARICOM, and to renegotiate their double taxation agreements so as both to safeguard their revenues and to ensure that the benefits of fiscal incentives are transmitted to foreign investors. The revenue effects of these measures are likely to be small however.

The trend in the MDCs has been towards the replacement of company income taxes by corporation taxes. The LDCs may, therefore, need to consider a similar policy. The substitution of an income tax on companies by an equi-rate corporation tax could be expected to give greater encouragement to profit retentions since, with the abolition of credit for the taxes paid by companies, dividends are likely to suffer higher rates of tax in the hands of resident shareholders. Thus, the revenue effect will depend primarily on the magnitude of income tax credits which are avoided in relation to the tax revenues lost through greater retention of profits. In the context of the LDCs, however, the revenues are unlikely to change materially. There are two reasons for this. Firstly, a substantial fraction of dividends will be received by foreign investors, whose tax liability will not change under a corporation tax. Secondly, private companies (i.e., limited liability companies "controlled" by less than five persons), which represent the predominant form of corporate organization, would tend to substitute salaries and fees for dividends in order to reduce their overall tax liability.

The renegotiation of the current double taxation agreements with the main investing countries for the purpose of securing a more favourable division of tax revenues has been under consideration in the LDCs for some time. The prevailing agreements, negotiated decades ago, greatly restrict the powers of the LDCs to tax income remitted to non-residents. It is particularly important that the LDCs should be in a position to impose a withholding tax on interest payments made to non-residents, since under the existing provisions a highly-geared foreign company can minimize its contribution to the LDCs' revenues by transferring most of its income through interest payments rather than dividends. "Tax sparing" features also need to be embodied in the new agreements to ensure that tax concessions by the LDCs benefit foreign investors instead of foreign treasuries. [18]

The recent double taxation agreement negotiated between the LDCs and the MDCs represents a step in the right direction. The

16. Problems of tax administration will not be discussed here, but it need to be mentioned that improved administration could help to raise revenue significantly. Strengthening of income tax administration, in particular deserves high priority in every LDC. Greater regional co-operation in tax administration could facilitate this.

17. According to the Article 40 of the Common Market Annex of the *Treaty Establishing the Caribbean Community*, "Member States agree to study the possibility of approximating income tax systems and rates with respect to companies and individuals".

18. See J.D. Pounder, "The Need for Double Taxation Treaties in Caribbean Countries" (mimeographed, October 1973).

agreement will ensure that the flow of capital from the MDCs to the LDCs is not impeded by tax considerations, in addition to safeguarding the latter's revenues and ensuring that the tax inducements granted by the LDCs are not negated by the policies of the MDCs. A favourable treatment for the LDCs is secured by defining "permanent establishment" more broadly than is normally the case, by permitting the LDCs to impose their full rates of income tax on interest payments made to MDCs, and by providing for concessional rates of tax on dividend and interest payments made by the MDCs to the LDCs. The "tax sparing" aspect is taken care of by providing that when an LDC-based company distributes to MDC residents profits which are exempt from any LDC tax under the scheme for the harmonization of fiscal incentives to industry, such distributions are also exempt in the MDCs. [19]

Indirect Taxes. The consumption tax is the most flexible, independent, indirect tax available within the context of economic integration. The fact that no two countries of the CARICOM have contiguous boundaries also permits greater disparity in tax rates than is usual with common markets. The long period envisaged for the full implementation of the CET, the moderate nature of the nominal CET rates, and the low degree of rate differentiation between different categories of goods underline the desirability of using consumption taxes more vigourously than in the past, both for revenue purposes and for spreading the burden of indirect taxes in the desired manner. A careful examination of the MDC indirect tax systems should prove rewarding in this respect. The introduction of retail sales taxes would, however, be premature; given the countries' present stage of development, the objectives of a retail sales tax can be achieved, with greater administrative ease, through consumption taxes.

Three further points need to be made for completeness. Firstly, it is desirable that all countries relate the consumption tax on imports to the sum of the c.i.f. value and import duty payable. The advantage of this procedure is that the consumption tax on final goods would leave the rate of effective protection unchanged. Secondly, the absorption of various levies on imports into consumption taxes is to be strongly recommended: quite apart from simplifying administration, this would make it easier to understand the effects of the taxes. Levies such as package taxes, stamp duties and surtaxes on imports have proliferated in recent years, and one or more of these taxes are imposed in all Windward Islands; their importance varies from 4% of import duty collections in Grenada to 20% in St. Lucia. Thirdly, given the need to utilize fully the available revenue sources, the maintenance of special import duties does not make sense; if low duties on certain goods are deemed desirable for encouraging tourism, then a less costly method of achieving this objective would be to establish "duty-free" shops for *bona fide* tourists.

Agricultural Taxation. An improvement in the operation of income tax on the agricultural sector, and substitution of the existing land taxes by those on market values should form the key elements of a strategy for an adequate taxation of agricultural incomes. While export duties have a role to play — at least, until the effectiveness of the income tax is increased substantially — greatly increased reliance on these taxes would not be advisable in view of their deficiencies from the points of view of equity and resource allocation. [20]

There is little doubt that the income tax has not succeeded in taxing even the estates adequately. It may well be that the income tax, in its present form, is not suitable for assessing agricultural incomes in the Eastern Caribbean environment, requiring as it does, relatively sophisticated taxpayers and proper accounts. Where these are lacking, the introduction of an income tax on agricultural incomes based on imputed incomes deserves serious consideration. This is a convenient place to mention that in view of the intrinsic difficulties in taxing agricultural incomes, and the consequent use of agriculture as "tax shelter", the right to deduct "losses" in agricultural activities from profits derived from other activities should be withdrawn.

A land tax based on market values could make a sizeable contribution to revenues. [21] The current land tax rates are rather low: assuming a uniform price per acre of EC$1,000, the present land tax on, say, a holding of 100 acres amounts to a mere 0.19% of the market value of the holding even in St. Vincent, where the tax rates are higher than in the other islands. In practice, there is great variation in the price per acre — the price range being roughly estimated at EC$500-5,000 per acre in the Windward Islands — and, therefore, the incidence of the present tax is likely to be haphazard. In view of the wide disparity in the price per acre, it is unlikely that a land tax based on acreage — even if levied at steeply graduated rates — can yield substantial revenues without degenerating into an unacceptably regressive tax. A tax related to market values is, therefore, to be preferred. The valuation problems should not prove insurmountable given the small size of the islands. Moreover, the operation of the tax could be simplified considerably by exempting holdings of less than a given size, since the distribution of land holdings is skewed: in Dominica and Grenada, for example, although holdings over 25 acres account for only 2-3% of total holdings, the corresponding acreage is over 50%. [22] A more effective system of land taxation is also needed to encourage better utilization of land; this is particularly important because a substantial proportion of agricultural land in the Windward Islands is left idle, and underutilization is more frequent on large estates.

---

19. See *Agreement for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with respect to Taxes on Income and for the Encouragement of International Trade and Investment* (CARICOM Secretariat, Georgetown) for further details.
20. There is an additional constraint to the use of export duties. Article 18 of the Common Market Annex of the *Treaty Establishing the Caribbean Community* prohibits the imposition of export duties on goods exported by one member state to another. Certain transitional arrangements have been provided for in the Treaty to deal with export duties that existed before the establishment of the Caribbean Community.
21. Lady Hicks had recommended the introduction of effective taxes on real property as early as 1963. See Report of the Fiscal Commissioner (Ursula K. Hicks), *Federation of East Caribbean Territories* (Cmnd. 1991, H.M.S.O., London, 1963), para. 108.
22. Data derived from the 1971 agricultural surveys for Dominica and Grenada.

Approved provident and pension schemes	f)	—"—	Employees' and employers' contributions are deductible. Pensions are taxable.	
Treatment of imputed income of owner-occupied housing	Imputed income taxable; mortgage interest deductible	Imputed income not taxable; but mortgage interest deductible	Imputed income (= 6% of capital value) taxable; mortgage interest deductible	In general, imputed income (= 3% of capital value) taxable Post-1965 houses under 30,000 exempt. In both cases, interest deductible

Source: Income Tax Ordinances.

a) Wife's earned income, if any, assessed separately, and husband allowed 1,500 and wife 1,000; but wife's income taxed at special marginal tax rates.
b) "Child" includes a step-child, a legally adopted child, or illegitimate child living with and maintained by the taxpayer. Allowance given for child over 16 (but under 25) only if receiving full-time instruction at a college, or full-time training lasting not less than two years for a trade or profession.
c) Allowed only where a relative incapacitated by old age or infirmity is maintained.
d) Available only to a widower for a relative taking care of his children or acting as his housekeeper.
e) In all countries, the relief is further restricted in the case of each policy to 7% of the capital sum assured.
f) Contributions (whether paid by employer or employee) of up to 10% of the employee's remuneration are deductible. Annuities paid are taxable.

COUNTRY BY COUNTRY SURVEY OF LOOSE-LEAF PUBLICATIONS . . .

FEDERAL REPUBLIC OF GERMANY

ABC FÜHRER LOHNSTEUER

By W. Hartz, J. Meesen, N.G. Wolf.
Schäffer & Co. GmbH, Hackländerstr. 33, 7000 Stuttgart I.
Supplemented: three times per year.

Loose-leaf publication service providing extensive information on wage taxation. The relevant texts are appended.

ABC FÜHRER SOZIALVERSICHERUNG

Schäffer & Co. GmbH, Hackländerstr. 33, 7000 Stuttgart I.
Supplemented: annually.

Loose-leaf publication providing extensive information on social insurance legislation in the Federal Republic of Germany.

AUSSENSTEUERGESETZ

By W. Wöhrle.
Schäffer & Co. GmbH, Hackländerstr. 33, 7000 Stuttgart I.
Supplemented: annually.

Loose-leaf publication on the German Foreign Tax Law containing the text of the law, comments thereon, the rulings and the German — Swiss double taxation treaties on income and capital and succession duties.

DEUTSCHE GESETZE

Verlag C.H. Beck, Wilhelmstr. 9, 8000 Munich 40.
Supplemented: one or more times a year.

The 50th jubilee edition of compilation of consolidated texts of German laws originally prepared by Heinrich Schönfelder presents the revised text of the civil code, commercial code, company law, procedural law and related statutes. As a loose-leaf publication the material will be updated by supplements.

DEUTSCHE STEUERPRAXIS — NACHSCHLAGEWERK PRAKTISCHER STEUERFALLE

Edited by G. Felix.
Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.
Supplemented: six times per year.

Reference book in three binders dealing with tax cases of importance for practitioners.

DEUTSCHES HANDELS ARCHIV

Bundesanzeiger, Postfach 108007, 5 Cologne I.
Supplemented: 24 times a year.

Survey of customs duties throughout the world. For many countries the important regulations for im- and exportation of goods have been included. The compiled material is suitable for filing in loose-leaf form.

DOPPELBESTEUERUNG

By R. Korn, G. Dietz, T.H. Debatin.
Verlag C.H. Beck, Wilhelmstr. 9, 8000 Munich 40.
Supplemented: twice per year.

Loose-leaf publication designed to provide the text of each double taxation treaty concluded by the Federal Republic of Germany (with general comments). Text of the OECD draft convention is appended.

FORMULARBUCH DER STEUER- UND WIRTSCHAFTSPRAXIS

Erich Schmidt Verlag, Herforderstr. 10, 48 Bielefeld.
Supplemented: once per year.

Loose-leaf handbook designed to explain the German taxation system, company law, and civil law with form examples for practical purposes. The material is updated by supplements.

GEWERBESTEUERGESETZ

By Hans Müthling and Ernst Fock.
Verlag C.H. Beck, Wilhelmstr. 9, 8000 Munich 40.
Supplemented: annually.

Loose-leaf publication containing text and comment on the trade tax law.

HANDBUCH DER EINFUHRNEBENABGABEN

V.d. Linnepe Verlagsgesellschaft K.G.
Bahnhofstr. 28, 58 Hagen.
Supplemented: five times per year.

Loose-leaf publication in two binders containing information on all excises and taxes (other than customs duties) levied upon importation, including turnover taxes, throughout the world.

HANDBUCH DER GmbH, 3rd edition

Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.
Supplemented: regularly.

Loose-leaf publication of handbook containing a survey of the company law, accounting principles, tax law, labour legislation and forms in connection with the limited liability company (GmbH).

HANDBUCH DES UMSATZSTEUERRECHTS AUSKUNFTSWERK UBER DAS GESAMTE UMSATZSTEUERRECHTS GESETZE — RICHTLINIEN — KOMMENTARE

Hermann Luchterhand Verlag, Postfach 1780, 5450 Neuwied.
Supplemented: regularly.

Loose-leaf publication of handbook on the turnover tax containing the full text of the 1967 turnover tax law (value added tax), the implementing regulations and a detailed comment in general terms per subject matter. The material is kept up to date by the issue of replacement and supplementary pages.

KOMMENTAR ZUR ABGABENORDNUNG UND FINANZGERICHTSORDNUNG

By. W. Hübschmann, E. Hepp, A. Spitaler, 7th edition.
Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51. 1976.
Supplemented: regularly.

Loose-leaf publication regarding a revised comment on the new German Fiscal Code 1977. Supplements will be delivered in 1977 and thereafter. The whole work will have approximately 5,500 pages to be issued in 6 volumes.

KOMMENTAR ZUM EINKOMMENSTEUERGESETZ

By F. Lademann, E. Lenski and H. Brockhoff.
Richard Boorberg Verlag, Scharstr. 2, D-7000 Stuttgart 80. 1970.
Supplemented: two or more times a year.

Third edition of a loose-leaf explaining the German individual income tax law. Text of the law and other relevant legislation is appended.

KOMMENTAR ZUR EINKOMMENSTEUER (EINSCHL. LOHNSTEUER) UND KÖRPERSCHAFTSTEUER

Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.
Supplemented: regularly.

Loose-leaf publication of monograph containing comment and text on the individual income tax (including wage tax) and the corporate income tax law.

KOMMENTAR BEWERTUNGSGESETZ — VERMÖGENSTEUERGESETZ

Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.
Supplemented: regularly.

Loose-leaf commentary (with text) on the valuation law for purposes of the net worth tax law.

KOMMENTAR ZUM AUSSENSTEUERGESETZ

By. H. Flick, F. Wassenmeyer and H. Becker.
Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51. 1973.
Supplemented: one or more times per year.

Extensive loose-leaf publication explaining the foreign tax law which affects the taxation of Germans engaged in activities abroad, as well as foreigners engaged in activities in Germany.

KOMMENTAR ZUM ERBSCHAFTSTEUERGESETZ

By R. Kapp, 6th edition.
Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.
Supplemented: twice a year.

Sixth edition of loose-leaf publication containing comments on the death duty and gift tax law. Text of statutes is appended.

KOMMENTAR ZUR EINKOMMENSTEUER UND KÖRPERSCHAFTSTEUER

By C. Hermann and G. Heuer.
Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.
Supplemented: four times a year.

Eighteenth edition of loose-leaf publication in eleven volumes of a text handbook considered to be the most authoritative commentary on the individual income tax and the corporate income tax levied in the Federal Republic of Germany. This work is simply referred to as "Herrmann-Heuer" and is not only useful for the tax practitioner but also for the researcher in tax philosophy.

KOMMENTAR ZUM GEWERBESTEUERGESETZ

By E. Lanski and W. Sternberg.
Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.
Supplemented: twice per year.

Detailed loose-leaf commentary on the trade tax law in the Federal Republic of Germany. Text of relevant law in connection with the subject is appended.

KÖRPERSCHAFTSTEUERGESETZ 1977

By K.D. Kläschen.
Stollfuss Verlag, Postfach 287, 53 Bonn 1.
Supplemented: annually.

Loose-leaf commentary (with text) on the corporate income tax law effective as of January 1, 1977 (Corporate income tax reform law of 1977).

MEHRWERTSTEUER

Textsammlung mit Gesetze, Durchführungsverordnungen und Verwaltungsvorschriften.
Verlag C.H. Beck, Wilhelmstr. 9, 8000 Munich 40.
Supplemented: regularly.

Loose-leaf publication in one volume in the series "text publications", dealing with the turnover tax (value added tax) in the Federal Republic of Germany; including full text of the 1967 value added tax law, its implementing decrees and administrative regulations. Comprehensive indices are appended.

PRAKTISCHER FÜHRER DURCH DAS STEUERRECHT

Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.
Supplemented: annually.

Practical loose-leaf guide to German tax law.

RECHTS- UND WIRTSCHAFTS-PRAXIS, STEUERRECHT

Forkel Verlag, Postfach 104, 7000 Stuttgart-Degerloch.
Supplemented: monthly.

Loose-leaf publication service in 13 binders containing comment on the fiscal code, the income tax law, corporate tax law, succession duty, trade tax law and on various other tax subjects. The full texts of tax laws are appended, as well as commentaries on tax developments in other countries.

STEUERERLASSE IN KARTEIFORM

Edited by G. Felix.
Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.
Supplemented: regularly.

Loose-leaf publication in 17 binders containing text of tax rulings issued by the tax administration; with annotations.

STEUERFOLGEN IN DER WIRTSCHAFTS- UND RECHTSPRAXIS

By M. Enders.
Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.
Supplemented: three times per year.

Loose-leaf publication dealing with tax implications arising in practice from economic and legal transactions.

STEUERGESETZE;
Textsammlung mit Verweisungen und Sachverzeignis

27th edition.
Verlag C.H. Beck, Wilhelmstr. 9, 8000 Munich 40.
Supplemented: three times a year.

Twenty-seventh edition of loose-leaf publication containing consolidated text of German tax laws with cross references.

STEUERRECHTSSPRECHUNG IN KARTEIFORM

Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.

Loose-leaf publication in 46 binders containing the text of the most important tax cases for the years 1944 to 1959; and the text of all tax cases after 1959 of the supreme tax court.

STEUERRICHTLINIEN

Verlag C.H. Beck, Wilhelmstr. 9, 8000 Munich 40.
Supplemented: twice per year.

Loose-leaf publication containing text of implemented regulations on tax law issued by the Federal tax administration; with cross references. A comprehensive index is appended.

STEUERSTRAFRECHT

By G. Kohlmann.
Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.
Supplemented: annually.

Loose-leaf publication of monograph, dealing with the penal tax law of the Federal Republic of Germany.

STEUERTABELLEN: LISTEN, TABELLEN, ÜBERSICHTEN FÜR DIE STEUERPRAXIS.

Verlag C.H. Beck, Wilhelmstr. 9, 8000 Munich 40. 1972.
Supplemented: two or three times per year.

Loose-leaf publication containing compilation of various tax summaries, such as depreciation tables and other practical information.

TAXATION IN THE FEDERAL REPUBLIC OF GERMANY
World tax series — Harvard Law School Germany-reports

By Henry J. Gumpel.
Commerce Clearing House, Inc., 4025 W. Peterson Avenue, Chicago 60646.
Supplemented: regularly.

Loose-leaf publication in two volumes providing explanation in the English language of the tax system in the Federal Republic of Germany. New tax developments are reported in *Germany-Reports* and the basis material is kept up to date by the issue of replacement pages.

UMSATZSTEUERGESETZ — MEHRWERTSTEUER, Kommentar

By K. Plückebaum, H. Malitzky, 10th edition.
Verlag Carl Heymanns, Gereonstr. 18-32, D-5000 Cologne I.
Supplemented: regularly.

Loose-leaf publication in 9 binders. Comprehensive textbook on the turnover tax law (value added tax) levied in the Federal Republic of Germany includes 1951 turnover tax system where relevant to the present 1967 value added tax. The full text of the 1967 turnover tax law is set out section by section, and each section is followed by comment, notes and references to all the cases which have a bearing on the section; worked examples and relevant implementing regulations; includes the value added tax directives prepared by the European Economic Community and other sections of tax laws relevant in connection with the turnover tax system; comprehensive index.

UMSATZSTEUERGESETZ (MEHRWERTSTEUER) Kommentar

By G. Rau, E. Dürrwächter, H. Flick and R. Geist.
Verlag Dr. Otto Schmidt, Ulmenallee 96-98, 5 Cologne 51.
Supplemented: two times a year.

Loose-leaf publication in 3 binders containing text and comment on the turnover tax law (value added tax) levied in the Federal Republic of Germany. The full text of the statute is printed and each section is followed by annotations and comment prepared by the authors with reference to case law; with cross references. Comprehensive index.

UMSATZSTEUERGESETZ (MEHRWERTSTEUER) mit Durchführungsbestimmungen, Nebengesetzen und Verordnungen sowie den einschlägigen internationalen Verträgen und Abkommen. Kommentar.

By A. Hartmann and M Metzenmacher. 6th edition.
Erich Schmidt Verlag, Herforderstr. 10, 4800 Bielefeld.
Supplemented: regularly.

Sixth revised edition of loose-leaf publication in 4 volumes of a textbook on turnover tax (value added tax) levied in the Federal Republic of Germany. Includes full text of the statute, regulation and comments, with case law.
The work also includes text of relevant international agreements and conventions with respect to turnover tax. Comprehensive index.

USTG-MEHRWERTSTEUER

By O. Sölch, K. Ringleb, H. List, L. Müller.
Verlag C.H. Beck, Wilhelmstr. 9, 8000 Munich 40.
Supplemented: annually.

Loose-leaf monograph explaining the turnover tax system (value added tax) in the Federal Republic of Germany. Text of the law and implementing provisions are appended.

UMWANDLUNGSRECHT

By S. Widmann, P. Mayer.
Stollfuss-Verlag, Postfach 287, 53 Bonn.
Supplemented: regularly.

Loose-leaf publication containing text and comment of the reorganization law in general and with particular reference to taxation.

UMWANDLUNGSSTEUERGESETZ 1969

By. G. Loos.
Verlagsbuchhandlung des Instituts der Wirtschaftsprüfer GmbH, Cecilienallee 36, D-4000 Düsseldorf.
Supplemented: once per year.

Loose-leaf publication of monograph containing comment on the 1969 reorganization tax law. Relevant text is appended.

Malaysia: Tax Changes for 1977.

Extract from the Malaysian budget for fiscal year 1977 presented by Finance Minister Tengku Razaleigh on October 29, 1976.

Having already explained to the House the economic position and the Government accounts, I now come to the tax changes for the 1977 Budget.

The tax proposals and changes in the tax structure that I will now introduce, have been designed in accordance with the Budget Strategy that I outlined earlier. These tax changes will help to:—

(a) *stimulate* economic growth, particularly industrial expansion;
(b) *reduce* the cost of living particularly of our people in the lower income groups.

These tax changes will incur some sacrifice of the present revenue receipts. Nevertheless these measures are to be adopted so as to achieve the socio-economic objectives that I have mentioned.

The Government is therefore doing its share and it is hoped that the private sector will contribute its own share by responding effectively to these new incentives.

It is also hoped that the lower income groups amongst our people who will benefit from these tax sacrifices, will now be able to increase their *savings*.

These sacrifices in tax receipts foregone are expected to be compensated by the better growth prospects of the economy, which will consequently increase the tax receipts, at the existing rates.

I would like to mention at this stage that any reference to estimated revenue yield which I might make is the estimated yield for a full year even though I might not say so specifically. I shall deal first with direct taxes.

Individual Income Tax

For resident individuals deduction for personal relief from total income in arriving at the chargeable income has remained the same for several years. Representations have been made repeatedly in this House and elsewhere to increase the deduction for personal relief and relief for wife.

The Government has carefully considered these representations and has decided that in order to ameliorate the difficulties faced by taxpayers in the lower income group, certain concessions should be made.

It is, therefore, now proposed that instead of increasing the personal relief deductions from total income in arriving at the chargeable income, each resident individual, excluding the working wife, who elects to be assessed separately on her employment income, be granted a *tax rebate* of $ 60. The Government prefers to grant a flat rate rebate rather than increase the personal relief deduction from total income mainly on grounds of equity. Lest someone may interpret that the $ 60 rebate as being trivial, let me clarify what this rebate really means.

The tax rebate of $ 60 would have the same effect as though the personal relief deduction from total income is increased by $ 1,000 to those in the lowest taxable income group, but if personal relief deduction is given to every taxpayer regardless of his total income, the beneficiaries will be those in the higher income bracket.

The proposed tax rebate of $ 60 should therefore not be mistaken to be only a small amount if one converts it into its relief equivalence. I would like to cite the following examples in order to make this point clear. For taxpayers in:

6% tax bracket the rebate = $ 1,000 relief
12% tax bracket the rebate = $ 500 relief
55% tax bracket the rebate = $ 109 relief

If a flat increase in the personal relief deduction from total income of $ 1,000 is given, for example from the current $ 2,000 level to $ 3,000, in absolute money terms, it is the higher income group who will benefit more. If a $ 1,000 extra personal relief deduction is given, the taxpayer in the lowest 6 percent tax bracket will benefit by only $ 60 (i.e. 0.06 x 1,000) in terms of the reduction in his tax liability; to the taxpayer in the 12 percent tax bracket the extra personal relief will give him a benefit of $ 120 (i.e. 0.12 x 1,000) in tax reduction; *but* to the taxpayer in the 55 percent tax bracket, it will bring him a benefit of $ 550 (i.e. 0.55 x 1,000) in tax reduction.

The granting of the $ 60 tax rebate will not apply to working wives who elect to be assessed separately on their employment income because presently a working wife qualifies for the higher personal relief deduction of $ 2,000 together with an earned income relief deduction and also the benefit of lower tax burden arising from separate assessment.

Based on the same method of rebate for the taxpayer, I propose to grant to a resident individual, other than a working wife who elects to be assessed separately on her employment income, a further tax rebate of $ 30 in respect of the non-working wife, or a working wife who does not elect to be assessed separately on her employment income.

This proposal will come into force for the year of assessment 1977 and subsequent years of assessment.

The above measures will result in the loss of revenue amounting to $ 17.4 million.

Development tax

At present under the Supplementary Income Tax Act, 1967, a person other than an individual, for example a company, will have to pay a minimum development tax of $ 100 or $ 250 or $ 500 according to the paid-up capital even if it does not make any profit, and in the case of a club or association, trust, estate of a deceased person or a Hindu joint family, it will have to pay a minimum development tax of $ 100. I propose that this minumum development tax should be abolished, and tax should be payable only when profit is made by the company or other relevant person. Where there is no profit no tax should be payable. Where income (i.e. profit) arises from the development source, either 5 percent thereof or the minimum development tax whichever is the greater will still be payable.

Development tax is now levied on individuals once their income from development source exceeds $ 3,000 or $ 2,000 in the case of a partner with a partnership source. In both cases they are taxed on every ringgit of the income without allowing any relief. Given a flat rate of 5 percent tax the absence of such relief means that those who are not liable to income tax are still caught with the liability to development tax and there is a greater burden for those with development income of just above $ 3,000 or $ 2,000 for a partner with a partnership source, particularly among the lower income group with income up to $ 8,000.

A perennial complaint on the imposition of the development tax comes particularly from the small growers in the agricultural sector and farmers. Since by definition income from agricultural activity or farm is included under business income, the levy of development tax has subjected the smallholders, farmers and other agricultural producers to the development tax. Unlike the estate sector which is run by companies, the smallholders are finding it difficult to obtain adequate income from their agricultural activity. The imposition of the new development tax as such becomes an additional burden to them apart from the fact that these people do not get a good bargain in the marketing of their produce.

In order to relieve the burden on the lower income group, I propose that, in respect of individuals only, income in excess of $ 3,000 or $ 2,000 for a partner with a partnership source be subject to development tax. Thus an individual with income of, say, $ 5,000 should only be taxed on $ 2,000 at the present rate of 5 percent. If he is a partner with a partnership source, the 5 percent development tax is payable on any income in excess of $ 2,000.

This proposal will come into force for the year of assessment 1977 and subsequent years of assessment and it will entail in the loss of revenue of $ 12.7 million.

Taxation of Cooperative Societies

Taxation of cooperative societies also needs to be reviewed in the light of the present situation.

For the years of assessment up to and including the year of assessment 1967 any cooperative society registered under any written law relating to the registration of cooperative societies was totally exempt from income tax. However, as from the year of assessment 1968 a cooperative society is exempt from tax only if the principal activities of the society consist of:—

(a) transactions with its members or other registered cooperative societies;
(b) marketing the produce or products of its members; or
(c) selling to its members goods purchased for the purpose of being so sold.

From this it will be seen that only cooperative societies who satisfy any of these three conditions are exempt from income tax. The current provisions and scheme of taxation applicable to cooperative societies are not entirely free from administrative difficulties. This is simply because of the fact that what necessarily is the principal activity of a cooperative society in one year, in view of developments, may not remain so in a subsequent year and may in fact turn out to be a subsidiary activity resulting in making some other activity as the principal activity in that subsequent year. Hence there is the possibility of a cooperative society being exempt from tax in one year but becoming liable to tax in another year, resulting in cumbersome administration. Each case has to be dealt with and reviewed annually in the light of its annual accounts. Further as cooperative societies embark in multifarious activities, the exemption based on the principal activity may render the income from various other activities, the sum total of which may even exceed the income from its principal activity alone, also exempt from tax. The present scheme and provisions therefore are liable to be abused. Hence a revision is necessary.

The Government of course realises that the cooperative movement, particularly those based on the principle of mutuality, needs to be encouraged in order to play a useful role in the economy. Many, through Government tax incentives, have since then succeeded to stand on their own feet and are able to earn substantial income.

I now propose that the existing tax exemption clause on income of cooperative in the Income Tax Act, 1967 be deleted. All cooperatives subject to certain exemptions to be mentioned, will now be subject to tax. However, in recognition of the fact that the cooperative movement is encouraged by the Government, the tax to be imposed will not be at the same level as that for companies. It is reasonable to expect that cooperatives should also contribute their share to meet the revenue needs of the nation.

It is proposed that the income of all cooperatives be taxed on the following rates:—

Chargeable income	*Rate of tax* (%)
For every dollar of first $10,000	5
For every dollar of next $10,000	7
For every dollar of next $10,000	10
For every dollar of next $10,000	14
For every dollar of next $10,000	20
For every dollar of next $25,000	23
For every dollar of next $25,000	27
For every dollar of next $50,000	30
For every dollar of next $100,000	34
For every dollar of next $250,000	37
For every dollar of next $500,000	40

Realising the various circumstances and problems surrounding existing and new cooperatives, the above tax proposed shall only apply subject to the following conditions:—

(a) a tax exempt period of five years from the date of registration to be allowed;
(b) after the five years, cooperatives having members' fund of $ 500,000 or less shall continue to be tax exempt;
(c) a deduction should be allowed against income up to a maximum of 25 percent of net income for contributions to statutory reserve fund required to be created under the Cooperative Societies Ordinance;
(d) excess profit tax and development tax shall not be levied on the income of cooperative societies;
(e) distribution of income made by cooperative societies shall not be taxed in the hands of the members and no credit shall be given to the members for the income tax paid by the cooperative society making the distribution.

The above provisions are intended to allow new cooperatives an inception period before they are subjected to tax in order to solve the problems of small cooperatives, and to meet the need to allow for untaxed working fund which is compulsory under cooperative law, and which will eventually be returned for public purpose in the event of liquidation.

Given the above provisions, only the large and profitable cooperatives will bear the imposition of the new tax and therefore the agricultural and fishermen's cooperatives would not likely be liable to this new tax. Given the 25 percent deduction from income prior to tax and the scale rates applicable, the tax burden on most cooperatives would, in effect, be much less than that falling on companies.

This proposal will come into force as from the year of assessment 1977 and is expected to yield an estimated $11.5 million.

Withholding tax on interest paid to non-residents

Presently interest derived from Malaysia by a non-resident on an approved loan is wholly exempt from tax. Approved loans are those made after 1st January 1972 for the purpose of financing development projects or for the purchase of capital equipment for development projects and formally approved for the purpose of this tax exemption. Any interest received by a non-resident on any other loans, deposits or other indebtedness is subject to a withholding tax at 15 percent on the gross amount of the interest.

In order to encourage and facilitate further flow of funds from abroad which I trust will help stimulate mobilisation of additional funds required for investment, I now propose to exempt the interest paid to non-residents for long-term deposits or loans from abroad of not less than 3 years made from 1st January 1977.

Gratuity received by employees

Gratuity received by an employee is taxable, but gratuity received on retirement due to ill health or on reaching the age of 50 in the case of a female employee and 55 in the case of a male employee is fully exempt from tax provided the employee

has completed 10 years service with the employer paying the gratuity. If the conditions for such exemption are not satisfied, the gratuity received by the employee at the instance of cessation of employment is taxable by spreading the amount of the gratuity for the period of the employment with the employer paying the gratuity or for a period of 5 years whichever is the shorter.

In paying gratuity on termination of employment the employer generally takes into consideration the whole service of the employee. Where the period of service is more than five years, I consider the spreading of the amount of gratuity for a period of only five years would be somewhat burdensome to the employee. I propose that the tax liability be spread out over a period of 10 years or the actual period of employment, whichever is the shorter. The 10-year period will still be within the time for raising additional assessements and will thereby ensure that the full amount of the gratuity is still taxable.

The proposed change in taxing gratuity paid on termination of employment will be effective as from the year of assessment 1977.

The estimated revenue loss for the reduction in the tax burden in respect of gratuity would be in the region of $ 3 million.

Pensions payable to retired employees

Related to the reduction in the tax on gratuity, I also propose to exempt pensions received by residents from income tax payment with effect from the year of assessment 1977. As Hon'ble Members are aware, majority of pensioners are retired Government employees. As there are only a few retired persons under pension schemes operated by private sector organisations, the exemption from income tax on pensions payable to retired persons will benefit mostly ex-Government employees. I would like to emphasize here that this exemption will be taken into account as one of the benefits granted by the Government in any revision of salaries of Government employees which may come about in the future.

The loss of revenue in giving exemption from income tax on pensions is estimated to be $ 3.3 million.

Accelerated Depreciation Allowance

Presently accelerated depreciation allowance in the form of increased intial allowance of 60 percent is given for timber extractions and to the tin industry. In order to encourage the establishment, modernisation and expansion of selected industries or activities, I now propose that accelerated depreciation allowance in the form of an annual allowance of 80 percent on plant and machinery (instead of the normal annual allowance at rates prescribed for various industries) be accorded to certain industries on a selective basis, particularly to agro-based, and resource based, food and other essential industries for expenditure incurred during the basis period for assessment years 1978, 1979 and 1980. This means that the economic activity expanded in 1977, 1978 and 1979 would qualify for this concession. The annual allowance of 80 percent is granted in lieu of the normal allowances prescribed in the Income Tax (Qualifying Plant Annual Allowance) Rules, 1968. The initial allowance of 20 percent however remains unchanged. This means that 100 percent or the entire amount of the capital cost of plant and machinery is allowed to be written off for tax purposes in one year. It is hoped that such accelerated depreciation allowance will provide incentive for some industries to be set up and for existing ones to modernise and expand their capacities for increased and more efficient production. This accelerated annual allowance will be granted to the following types of industries:

1. Slaughtering, preparing and preserving meat (including processing and packing activities and quick-freezing).
2. Pineapple canning (including pineapple juice).
3. Canning and preserving of fruits (other than pineapple) and vegetables, and their juices (including dehydrated and quick-frozen fruits and vegetables and canned soups).
4. Canning, preserving and processing of fish, crustacea and similar sea-foods (including fish and sea-food soups and specialities).
5. Manufacture of coconut oil (refined and unrefined).
6. Manufacture of sago and tapioca flour, tapioca flakes and chips, ragi and other products of sago and tapioca.
7. Manufacture of biscuits (including prawn crackers and ice cream cones).
8. Production of prepared feeds for animals and fowl (including dog and pet foods), mixed, canned, frozen and dried.
9. Manufacture of rubber products such as industrial and mechanical rubber goods, rubber specialities and sundries e.g. gloves, mats, sponges and other vulcanised articles etc. (excluding manufacture of tyres and tubes, and any other form of production, processing or manufacture of natural rubber).
10. Manufacture of structural clay products.
11. Manufacture of pottery, china and earthenware.
12. Foundries.
13. Manufacture of structural metal products.
14. Manufacture of brass, copper, pewter and aluminium products.
15. Manufacture of metal and wood working machinery.
16. Manufacture of special industrial machinery and equipment (except metal and wood working machinery) for specialised industries such as food machinery, textile machinery, paper industry machinery, chemical industry machinery, oil refining machinery etc.
17. Shipbuilding and repairing (including specialised marine engine and ship parts manufacture, conversion, alteration and breaking-up of ships).
18. Manufacture of professional, scientific, measuring and controlling equipment (including surgical, medical, orthopedic and optical instruments, radar equipment, X-ray and electric therapeutic apparatus).
19. Manufacture of wooden and cane containers and small cane ware.
20. Manufacture of furniture and fixtures (mainly of wood and other materials other than metal).

THE 1977 INCOME TAX CHANGES IN THE REPUBLIC OF SOUTH AFRICA

By Dr. Erwin Spiro

As it appears from the budget speech which Senator O.P.F. Horwood, the Minister of Finance, delivered on March 30, 1977, there will generally be no increase this year in income tax or loan levy on individuals or on companies. There are, however, certain concessions designed to encourage saving and the provision of housing for employees. The following changes may be mentioned.

Taxation of agricultural co-op societies
Co-operatives will be liable for tax in respect of tax years beginning on or after April 1, 1977. The normal rules for the determination of the taxable income of ordinary companies now also apply to agricultural co-operatives, but having regard to the particular operational circumstances of these co-operatives some adjustments have been provided for.

In the first instance, surpluses of agricultural co-operatives which are declared, in whatever form except dividends, to members within six months of the close of the financial year, will be allowed as a deduction for tax purposes. As at present, the distribution will, on allocation, be taxable in the hands of the recipients.

In the second instance, as in the case of industrial undertakings in prescribed circumstances, co-operatives will be granted a building investment allowance and an annual allowance in respect of factory buildings and buildings used for the storage of agricultural products of producers.

In the third instance, as a bridging measure, agricultural co-operatives, in determining their taxable income, will be permitted, for the first ten years, to deduct repayments of loans which the Secretary for Inland Revenue is satisfied were raised to provide facilities for the storage or primary processing of the products of their members.

Oil mining
It is proposed to increase the maximum rate of the normal tax which will eventually be payable by oil mining companies. The reason for the increase is to bring the rates into line with those of other countries who also increased their rates as a result of the energy crisis. Particulars will be discussed below (Companies (v)).

Pension and retirement annuity funds
The maximum deduction in respect of current contributions to a pension fund will be increased from R 1,500.00 to R 1,750.00 per annum and to a retirement annuity fund from R 3,000.00 to R 3,500.00. Whereas arrear pension contributions are not at present deductible, a maximum deduction of R 1,000.00 per annum will now be allowed in this respect. The maximum exemption in respect of lump sum payments from pension, provident and retirement annuity funds will be increased from R 40,000.00 to R 45,000.00.

Housing allowance
Employers (other than farmers and mining companies where other provisions apply) are at present allowed to deduct 25 percent of expenditure on housing for their employees up to a maximum of R 2,500.00 per dwelling. In order to encourage employers to provide such housing the maximum will be increased to R 3,000.00.

Insurance premiums, medical expenses
Primarily in order to encourage saving and the making of adequate provision for old age, and also because of the rising cost of medical services, the maximum combined abatement for insurance premiums and medical expenses will be, subject, however, to the conditions applying to all abatements, increased from R 700.00 to R 1,000.00 for a married person and from R 600.00 to R 750.00 for an unmarried person.

Rates of income tax (normal tax)
Apart from oil mining companies there have been no changes in the rates, including surcharge and loan levy, and the position is as follows.

Persons other than companies
Persons other than companies are, in respect of the year of assessment ending February, 1978 or June 30, 1978, subject to the tax at the rates contained in the two tables annexed to this article. Provided the basic tax is R 150.00 or more, there is added a surcharge of 10 percent. In the case of a natural person who is over sixty years of age on the last day of the year of assessment and whose taxable income for that year is R 5,000.00 or less the surcharge is not payable at all. There is also a loan levy of 10 percent which is subject to the same conditions as the surcharge. The basic tax is in each instance calculated on the taxable amount, that is the amount remaining after deducting from taxable income the abatements applicable.

Due regard being had to the surcharge of 10 percent and the loan levy of 10 percent, the maximum marginal rate is 72 percent.

Companies
The rates for companies in respect of taxable income derived in the Republic of South Africa and taxable income derived in South-West Africa for the year of assessment, that is the financial year ending during the twelve-month period from April 1, 1977, to March 31, 1978, are as follows:

(i) *taxable income derived otherwise than from mining:* if derived in South-West Africa 35 cents per R 1 and if derived elsewhere than in South-West Africa — that is in the Republic of South Africa — 40 cents per R 1. A surcharge of 7½ percent of such tax and a loan portion of 15 percent thereof are to be added to such tax. The effective rate is thus 42.875 and 49 cents per R 1, as the case may be.

(ii) *taxable income derived from gold mining:*
(a) on any mine other than a post-1966 gold mine an amount determined in accordance with one of the formulae laid down plus a surcharge (which is not payable in respect of certain assisted gold mines) equal to 10 percent of the said amount and a loan portion equal to 15 percent thereof;
(b) on a post-1966 gold mine an amount determined in accordance with one of the formulae laid down plus a surcharge of 10 percent of the said amount and a loan portion of 15 percent thereof;
(c) in the form of excess recoupments over capital expenditure accruing to companies which are or have been gold mining companies the average rate of tax as determined in accordance with the Act or 35 cents per R 1 whichever is higher.

(iii) *taxable income derived from mining for diamonds:* 45 cents per R 1 plus a surcharge of 10 percent of such amount and a loan portion of 15 percent thereof.

(iv) *taxable income derived from mining operations other than mining for gold or diamonds:* the position is the same as in the case of a non-mining company (see (i) above).

(v) *taxable income derived from mining for natural oil:* since 1967 up to the present, but without the rates being subject to annual fixations, if derived from mining for natural oil (excluding gas) 50 cents per R 1 and if derived from mining for natural oil in the form of gas 40 cents per R 1, subject, however, to a reduction of the normal tax to or by such an amount as the Minister of Mines, in consultation with the Minister of Finance, may determine. Where sulphur, salt or any other mineral is won in the

course of mining for natural oil, the income derived from the mining of such sulphur, salt or other mineral is deemed to be derived from mining for natural oil. In addition to such tax there will be now payable, in respect of taxable income derived from mining for natural oil (excluding gas) won during any year of assessment ending on or after April 1, 1977, by way of additional normal tax, an amount equal to forty percent of the amount remaining after deducting the said amount of normal tax from such taxable income, subject, however, to a reduction to or by such an amount and on such conditions, as the Minister of Mines, in consultation with the Minister of Finance, may determine.

ANNEXURES / Table I

Taxable amount		Rates of tax in respect of married persons
Where the taxable amount — does not exceed R 1,000		9 percent of each R 1 of the taxable amount;
exceeds	but does not exceed	
R 1,000	R 2,000	R 90 plus 10 percent of the excess over R 1,000;
R 2,000	R 3,000	R 190 plus 10 percent of the excess over R 2,000;
R 3,000	R 4,000	R 290 plus 11 percent of the excess over R 3,000;
R 4,000	R 5,000	R 400 plus 12 percent of the excess over R 4,000;
R 5,000	R 6,000	R 520 plus 14 percent of the excess over R 5,000;
R 6,000	R 7,000	R 660 plus 16 percent of the excess over R 6,000;
R 7,000	R 8,000	R 820 plus 18 percent of the excess over R 7,000;
R 8,000	R 9,000	R 1,000 plus 20 percent of the excess over R 8,000;
R 9,000	R 10,000	R 1,200 plus 22 percent of the excess over R 9,000;
R 10,000	R 11,000	R 1,420 plus 24 percent of the excess over R 10,000
R 11,000	R 12,000	R 1,660 plus 26 percent of the excess over R 11,000;
R 12,000	R 13,000	R 1,920 plus 28 percent of the excess over R 12,000;
R 13,000	R 14,000	R 2,200 plus 30 percent of the excess over R 13,000;
R 14,000	R 15,000	R 2,500 plus 32 percent of the excess over R 14,000;
R 15,000	R 16,000	R 2,820 plus 34 percent of the excess over R 15,000;
R 16,000	R 17,000	R 3,160 plus 36 percent of the excess over R 16,000;
R 17,000	R 18,000	R 3,520 plus 38 percent of the excess over R 17,000;
R 18,000	R 19,000	R 3,900 plus 40 percent of the excess over R 18,000;
R 19,000	R 20,000	R 4,300 plus 42 percent of the excess over R 19,000;
R 20,000	R 21,000	R 4,720 plus 44 percent of the excess over R 20,000;
R 21,000	R 22,000	R 5,160 plus 46 percent of the excess over R 21,000;
R 22,000	R 23,000	R 5,620 plus 48 percent of the excess over R 22,000;
R 23,000	R 24,000	R 6,100 plus 50 percent of the excess over R 23,000;
R 24,000	R 25,000	R 6,600 plus 52 percent of the excess over R 24,000;
R 25,000	R 26,000	R 7,120 plus 54 percent of the excess over R 25,000;
R 26,000	R 27,000	R 7,660 plus 56 percent of the excess over R 26,000;
R 27,000	R 28,000	R 8,220 plus 58 percent of the excess over R 27,000;
R 28,000		R 8,800 plus 60 percent of the excess over R 28,000.

Rates of other taxes contained in the Income Tax Act

Non-resident shareholders' tax
The non-resident shareholders' tax is 15 percent of the amount of the dividend or interim dividend in question.

Undistributed profits tax
The undistributed profits tax is 33 1/3 cents on every R 1 by which the distributable income as defined exceeds the amount of dividends distributed during the specified period as defined.

Non-residents tax on interest
The non-residents tax on interest is 10 percent on the amount of the interest in question.

Donations tax
The donations tax is at progressive block rates, the block exceeding R 90,000.00 being taxable at the rate of 25 percent.

Table II

Taxable amount		Rates of tax in respect of persons who are not married persons
Where the taxable amount — does not exceed R 1,000		12 percent of each R 1 of the taxable amount;
exceeds	but does not exceed	
R 1,000	R 2,000	R 120 plus 12 percent of the excess over R 1,000;
R 2,000	R 3,000	R 240 plus 13 percent of the excess over R 2,000;
R 3,000	R 4,000	R 370 plus 14 percent of the excess over R 3,000;
R 4,000	R 5,000	R 510 plus 17 percent of the excess over R 4,000;
R 5,000	R 6,000	R 680 plus 20 percent of the excess over R 5,000;
R 6,000	R 7,000	R 880 plus 23 percent of the excess over R 6,000;
R 7,000	R 8,000	R 1,110 plus 26 percent of the excess over R 7,000;
R 8,000	R 9,000	R 1,370 plus 28 percent of the excess over R 8,000;
R 9,000	R 10,000	R 1,650 plus 30 percent of the excess over R 9,000;
R 10,000	R 11,000	R 1,950 plus 32 percent of the excess over R 10,000;
R 11,000	R 12,000	R 2,270 plus 34 percent of the excess over R 11,000;
R 12,000	R 13,000	R 2,610 plus 36 percent of the excess over R 12,000;
R 13,000	R 14,000	R 2,970 plus 38 percent of the excess over R 13,000;
R 14,000	R 15,000	R 3,350 plus 40 percent of the excess over R 14,000;
R 15,000	R 16,000	R 3,750 plus 42 percent of the excess over R 15,000;
R 16,000	R 17,000	R 4,170 plus 44 percent of the excess over R 16,000;
R 17,000	R 18,000	R 4,610 plus 46 percent of the excess over R 17,000;
R 18,000	R 19,000	R 5,070 plus 48 percent of the excess over R 18,000;
R 19,000	R 20,000	R 5,550 plus 50 percent of the excess over R 19,000;
R 20,000	R 21,000	R 6,050 plus 52 percent of the excess over R 20,000;
R 21,000	R 22,000	R 6,570 plus 54 percent of the excess over R 21,000;
R 22,000	R 23,000	R 7,110 plus 56 percent of the excess over R 22,000;
R 23,000	R 24,000	R 7,670 plus 58 percent of the excess over R 23,000;
R 24,000		R 8,250 plus 60 percent of the excess over R 24,000.

PRENTICE~HALL,INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

Prentice Hall Announces:

The most strikingly different new tax guide ever published for taxpayers with income from foreign sources.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Continuously Supplemented. . . . . Always Up - to - Date

This outstanding new Service is created specifically to help save money for:

U.S. INDIVIDUALS
with investments and/or earned income from a foreign source

U.S. CORPORATIONS
with income from foreign sources

FOREIGN CORPORATIONS
with income earned or taxable in the U.S.

NONRESIDENT ALIENS
receiving income from, or taxable in the U.S.

If you fit any of these categories — or if you counsel, advise, or in any way service any of these categories — U.S. TAXATION OF INTERNATIONAL OPERATIONS will be an invaluable new tool for you.

It will deliver management benefits — operations benefits — tax benefits.

In clear, direct language, backed up by practical, tested practices of acknowledged experts in international business operations, the new work spells out how the taxpayer can best take full advantage of every popular, every sophisticated, and every little-known tax-saving device.

Authoritative, specific guidance from one source devoted exclusively to this kind of vital help has been non-existent — until now.
With the first 1972 publication of the innovative U.S. TAXATION OF INTERNATIONAL OPERATIONS this important need is now fulfilled. And bi-weekly "Report Bulletins" will keep the guide as new and up to the minute as the day you receive it.

Personal response to this new publication has been even more enthusiastic than our most optimistic projections. Subscriptions are now being accepted by mail for $ 186 a year.

Address your request to Dept. S-RR-103, Prentice-Hall Inc., Englewood Cliffs, N.J. 07632 and specify U.S. TAXATION OF INTERNATIONAL OPERATIONS, 1-year introductory charter subscription.

Annual payment is not due until 20 days after receipt of the new, ready-for-reference volume.

MANZsche Verlags- und Universitätsbuchhandlung — A-1014 Wien I., Kohlmarkt 16 — AUSTRIA

INTERNATIONAL TAX LAW

(INTERNATIONALES STEUERRECHT)

by Dr. Alfred Philipp and Dr. Robert Pollak

Loose-leaf edition. Supplement 1 and 2, 1977. 776 pages in 1 plastic binder. AS 930,—

The first two supplements of this loose-leaf commentary on international tax law contain: general definitions and explanations; summary of national and bilateral measures to stop double-taxation (the latter based on the sample agreement of the OECD); a summary of the methods to avoid double-taxation; treatment of singular problems and the latest bilateral treaties on double taxation between Austria and:

Belgium	Liechtenstein	Switzerland
Greece	Netherlands	Spain
Great Britain	Pakistan	Turkey
Ireland	Poland	Hungary
Israel	Portugal	

The next supplements will contain the other treaties with all new annexes.

To be ordered at

MANZsche Verlags- und Universitätsbuchhandlung — A-1014 Wien I., Kohlmarkt 16 — AUSTRIA

Bibliography

Books.

The publications listed in this bibliography have recently been acquired by the Bureau's library which will gladly supply further information upon request (please quote the reference numbers). They should, however, be ordered through a bookseller or direct from the publisher indicated, and not through the Bureau.

Taxation and Government's Savings.

by G. Thimmaiah *

The need for increasing the average as well as the marginal savings rates to quicken the pace of economic development of underdeveloped countries can hardly be exaggerated. On this point at least there seems to be a consensus among economists irrespective of their allegiance to different schools of thought and ideologies. Several policy designs have been suggested by economists for achieving higher rates of savings in underdeveloped countries. Of these suggestions, those related to increasing the total domestic savings through fiscal measures are very prominent. But there is a divergence of opinion regarding specific fiscal policy measures to increase savings in these countries. One opinion is that these countries should try to promote savings through exempting savings from taxation. This opinion is backed by the traditional argument that savings are dependent on disposable income and, therefore, the higher the income, the higher the MPS (marginal propensity to save), and vice versa. From this it follows that if the Government wants to encourage private saving it must exempt savings from taxation, particularly from direct taxation, e.g. income tax. This suggests two tax policy designs: (1) the selective exemption of desirable savings from direct taxes, (2) the non-selective exemption of all types of savings. The second policy design implies: (a) a Fisherian type of income tax where taxable income is defined to include only consumption, (b) a Kaldorian type of expenditure tax, and (c) indirect taxes including excise duties, a sales tax, a turnover tax, etc. But the tax principle which emerges from these alternative tax designs to encourage private savings through tax incentives is regressive. The reliability of this line of argument has been questioned, however, by Richard Goode. [1]

The second opinion is that these countries should increase government savings by resorting more to indirect taxes with a view to taxing a majority of the people. It is maintained that because of the general poverty of the masses and the relatively negligible portion of rich people in underdeveloped countries, direct taxes based on the progressive taxation principle with the usual minimum exemption limit cannot cover many people and hence cannot yield an increasing amount of tax revenue to the Government. Therefore, it is recommended that in order to reach a greater number of people through taxation it is necessary to levy taxes on goods and services consumed by large numbers of people. This invariably calls for a sales tax, excise duties, etc. on commodities and services of mass consumption. Besides, it is argued that the payment of taxation entails the use of money. This spreads the extent of monetization which in turn quickens the pace of development by changing the attitude of the people with respect to the earning and spending of money income. An effective way of increasing the extent of monetization is by making as many people as possible pay taxes. This can be achieved by resorting to the taxation of commodities of mass consumption. Further it is maintained that in underdeveloped countries almost all income groups of the society who are operating within the monetary economy are affected by the national and international demonstration effects. These effects push up their average as well as their marginal consumptions. Most of this consumption would be non-essential in nature. Therefore, it is necessary to curb such misdirected consumption by levying high rates of commodity and service taxes and by augmenting government savings. Furthermore, it is argued that in underdeveloped countries governments have been incurring expenditures on free medical services, educational facilities, road development and other social and economic infrastructure facilities which are enjoyed by the masses. Therefore, it is recommended that the only way to make them contribute to development efforts and to make them feel like partners of development efforts is to levy indirect taxes on commodities and services which are consumed by the majority of the people.

The third opinion is that both direct and indirect taxes should be used to reduce the incremental consumption and divert it to public sector savings, thereby increasing the total domestic savings in the economy. [2] *The logic of this argument is that the Government should use steeply progressive taxation and higher rates of indirect taxes to divert the increased income from the non-essential consumption of both upper and lower income groups. This will not lower the savings rate of the private sector since the savings rate of the upper income groups in these countries is not very high because of the operation of the national and international demonstration effects, and the savings of the lower income groups are lower because of both low income and the operation of the demonstration effect. The traditional view that the rich people save more as their income increases does not hold true in underdeveloped coun-*

tries, primarily because the upper income groups are not as savings-minded as their counterparts in developed countries were in the early stage of their economic development.

Finally, there is the radical view which maintains that in underdeveloped countries it is necessary to expand the public sector even at the expense of the private sector not only as a means of achieving a rapid rate of economic development but also as a means of developing the economy in the socially desired direction. It is maintained that if the private sector is encouraged to undertake investments, on the basis of profit motivations, in whatever field of economic activity it desires, a major portion of the national investment may tend to go to luxury and other socially undesirable fields of activity. Therefore, the Government should try to encourage the expansion of the public sector by diverting the savings from the private sector to the public sector, mainly through taxation. According to this point of view, "taxation, therefore, remains as the only effective financial instrument for reducing private consumption and investment and transferring resources to the Government for economic development". [3]

Relation between taxation and savings

It becomes clear from the foregoing description that the relationship between taxation and savings is assumed to be direct and simple. It is believed that taxation reduces the disposable income of all the sectors of society and thereby reduces their conspicuous consumption. The resultant taxation prevents the incremental income from going to incremental consumption in the case of the upper, middle and even the lower income groups and thereby enhances the public sector savings. As there is a possibility that the higher taxation of upper income groups might reduce their savings, which form a major part of household and corporate savings, economists are not sure of the effect of the steeply progressive taxation of income, wealth, assets and so on. However, the logic in regard to the relationship between indirect taxation and savings seem to be very clear, namely that such taxation reduces consumption and increases the public sector savings.

An important aspect which is ignored in this kind of discussion is the impact of high taxation on consumption by the Government. It has been maintained by Stanley Please [4] that when governments raise more revenue, the normal tendency is to increase their expenditures on defence and on current consumption. In this context, therefore, increased public revenue through increased taxation will only reduce the total domestic savings by encouraging the governments to increase their consumption expenditures. In other words, Mr. Please has maintained that increased taxation by itself will not ensure increased government savings because of the possibility of increasing the government's non-productive expenditures. This point of view is similar to that of Mr. Northcote Parkinson [5] who has sarcastically observed that when governments find more revenue the only economy they make is in thinking how to spend it. Therefore, it is quite possible that increased taxation resulting in increased public revenue might make the governments complacent about any economy in expenditures and as a result it might increase the consumption expenditure of the governments in underdeveloped countries. This possibility must be examined in order to establish that additional taxation will promote savings in underdeveloped countries.

Furthermore, for the purpose of analysing the impact of taxation on savings it is not sufficient if we study only the relationship between taxation and government savings. It is also necessary to study the interconnections between taxation and government savings, taxation and government consumption, taxation and household savings, taxation and private consumption, taxation and corporate savings, and, finally, taxation and total domestic savings. The logical (*a priori*) relations can be established in the following way:

If the taxation and government savings vary directly, it means taxation and private consumption vary inversely and/or taxation and government consumption vary inversely. This would leave the private savings unaffected. If the taxation and household savings vary directly and taxation and private consumption vary inversely, taxation and total savings should vary directly. However, it is quite possible that taxation and private consumption, and taxation and household and corporate savings may vary inversely so as to increase the government savings or offset any increase in government consumption. Similarly, taxation and private consumption may vary inversely and taxation and private savings may vary inversely also, but taxation and government savings may vary directly so as to increase the total savings. If the taxation and government savings vary directly, this may be due to a reduction in Government consumption and/or a reduction in private consumption. Hence, taxation should vary inversely with government consumption and/or private consumption. However, the positive relation between taxation and government savings might be the result of the negative relation between the taxation and household and/or corporate savings keeping the consumption of the government and/or private sector constant or rising. In other words taxation and government savings may vary directly but taxation and household and/or corporate savings may vary inversely, while at the same time taxation and government and/or private consumption may vary directly also. These behaviour relations may or may not show a positive relation between taxation and total domestic savings depending upon the magnitude of variations in the savings

and consumption of the government, household and corporate sectors. Therefore, in order to know the influence of taxation on government savings and on total domestic savings, we need to know the relation between taxation and government consumption, and household and corporate savings and consumption. Further the influence of direct taxes on household and corporate savings and on private consumption must be examined separately in order to test the earlier mentioned views about their particular type of association as well as to suggest tax policy designs for increasing total domestic savings.

Taxation and savings in India

In India the taxation policy has been designed by the Government of India and to some extent by the State Governments to increase the Government revenues. The Five Year Plan documents [6] very clearly declare the policy of the Government in regard to the mobilization of financial resources through additional taxation. As a result, the country has resorted to additional taxation measures which include: (1) the introduction of new taxes, (2) the extension of old taxes to new tax bases by reducing exemptions and by increasing the coverage and (3) increasing the tax rates. As a result of all these measures, the ratio of tax revenue to GNP has increased gradually though slowly. For instance the ratio of tax revenue to GNP which was only about 6 percent in 1950-51 has increased to 15 percent in 1972-73 as shown in Table 1. However, in recent years doubts have been expressed as to whether this increased resource mobilization through additional taxation has really generated additional savings in the economy at all. It has been observed by Narottam Shah that "In the early years after independence, a bold effort at resource mobilization by a Finance Minister was always regarded as something highly creditable for two reasons. First, all responsible people appreciated the great need for augmenting public resources for economic development. Secondly, everyone understood that any Finance Minister who dares to risk unpopularity by raising resources — particularly through non-inflationary methods like taxation — deserves high admiration for his courageous service to the nation. But of late it has become difficult to be enthusiastic about the efforts at resource mobilization, however bold they might be. Rather the time has now come to ask the pointed question: Resource mobilization for what? This question has to be asked because the experience of recent years indicates that the nation has not much to gain from resource mobilization by the Government". [7] This doubt has been the outcome of two reasons: (1) the unimpressive increase in the national savings rate, and (2) the unprecedented increase in the non-developmental expenditures. In addition to these two reasons, the increasing number of reported cases of public corruption and wastage of public funds have added credibility to the belief that additional taxation might not have resulted in additional savings in the economy. In this connection, however, reliable empirical studies have been lacking though not totally absent. Perhaps one of the earliest attempts to study the influence of taxation on government savings was made by Ramesh K. Diwan [8] by using linear regression analysis. He has found that during the period between 1950-51 and 1962-63, current tax revenue exerted a significant positive influence on government savings. Also, K. Krishnamurthy [9] made a study of the influence of taxation, income and prices on government savings in India. He has studied the impact of taxation on the marginal saving ratio by regressing the marginal saving ratio on the rate growth of income, rate of increase in prices and the marginal tax ratio. He has used both time series and cross-section analysis for the period of ten years from 1951 to 1961 excluding 1957. As indirect evidence he also found the influence of the marginal rate of taxation on total and private consumption. His study reveals a high association between taxation and savings in India. In his own words, "The results for India revealed significant negative association of tax rate with the marginal rates of private and total consumption and hence, a positive link to the saving rate. Inclusion of other variables did not alter the result of the tax variable." [10]

Another study by S.K. Singh [11] is related to taxation

Table I

Tax Revenue in Relation to GNP in India

Year	Percent of total tax revenue to GNP	Percent of direct taxes revenue to GNP	Percent of indirect taxes revenue to GNP
1950-51	6.0	2.0	4.0
1951-52	7.0	2.0	5.0
1955-56	8.0	2.5	5.5
1956-57	8.0	2.0	6.0
1960-61	9.0	2.0	7.0
1961-62	10.0	3.0	7.0
1962-63	11.0	3.0	8.0

and savings in India but it is only a part of his major study of the determinants of aggregate savings. He has used taxation as one of the determinants of savings and estimated its influence on both savings and marginal rates of government savings in 54 underdeveloped countries including India. According to him, "... while on the average the Government saves 10 percent out of its taxes at the margin, in countries around the development level of $100 of per capita income, it saves 16 percent out of the extra dollar. Thus advocates of increasing the overall saving rate by taxation get mild support. The increasing tax rate would increase the overall savings rate in the economy but very slowly indeed. Thus taxes would have to be increased by about 6 percent of the GNP in LDCs for governments to save an additional 1 percent of GNP". [12] He has also tested Please's hypothesis and found that the weaker version of the hypothesis is confirmed in underdeveloped countries. But in Singh's study India is included in the aggregate of 46 underdeveloped countries and as a result it is not singled out for an in-depth study as in the case of Krishnamurthy's study. Krishnamurthy's study is no doubt based upon both time series and cross-section analyses, but it refers to a period during which additional taxation was not resorted to by the government on any large scale. This is also the case with Diwan's study. It can be observed here that the most important innovations in taxation in India were implemented during the Second Five Year Plan and they reached the productive stage of yielding revenue towards the end of the Third Five Year Plan. Moreover, neither Krishnamurthy nor Diwan examined the influences of direct and indirect taxes on savings separately. Such an examination is necessary from the point of view of testing the opinions about taxation and savings mentioned earlier as well as for suggesting specific tax policy designs for increasing aggregate savings.

Other than those two studies some attempts have been made to study taxation and government savings together in underdeveloped countries. For instance, Elliot R. Morss [13] has found a significant relation between taxation and savings through indirectly relating taxation and private and total consumption. Professor Houthakker has studied the influence of the total revenue of the government on its savings in both developed and developing countries by using cross-section analysis. He has found that the governments with low revenues saved relatively more. [14] However, both these studies exclude India. Professor J.G. Williamson [15] has made a study of the determinants of household savings in Asian countries including India. He has found that direct taxes do not affect real household savings in the short-run though they do reduce real household savings in the long-run.

Data and methodology

This study is intended to find out the extent of the influence of taxation on government savings in India covering a period of thirteen years from 1960-61 to 1972-73. It is based on the data published by the Central Statistical Organisation [16] in its recent publication. Though the data regarding savings and national income are not reliable in India, in recent years the Central Statistical Organisation has tried to improve the quality of these data and I have used these data in this study. For the purpose of reliability of the data, I have taken the net as well as gross household savings, NNP and GNP and taxation data at current prices from the same source. However, I have used the wholesale price index prepared by the Economic Adviser. It would have been appropriate to use the all India cost of living index in order to find out the impact of inflation on savings. But in the absence of such an index, and instead of using the available cost of living index of urban non-manual workers or of industrial workers who constitute a very minor portion of the people, I have used the index of wholesale prices by shifting its base to 1960-61. For the purpose of estimating the influence of inflation on corporate savings I have used the index of prices of manufactured goods only, by separately working it out based on the break-ups given by the Economic Adviser. Further, I have used the interest rate which is an average of the rates on one year fixed deposits. This rate fairly indicates the movement of interest rates in the economy as far as the organised sector of banking is concerned.

In this study I have used linear multiple regression analysis to estimate the extent of the influence of taxation on Government, household, and corporate savings. It is a well known fact that the household savings of a country are influenced by many economic and non-economic factors. However, I have selected only some important economic determinants of household savings for the purpose of this study. I related household savings to direct tax revenue, indirect tax revenue, per capita income, rate of growth of income, the wholesale price index and interest rates. It is necessary to mention here that I am only interested in the influence of taxation on savings, and other important economic determinants of savings are taken into account in the regression with a view to determining the relative influence of taxation on savings when it is operating along with other important factors.

I have tested the nature and extent of the influence of direct and indirect taxation on marginal savings. The justification for focusing the attention only on marginal savings should be obvious. Tax measures have been used to divert an increasing portion of the national income to savings. In order to investigate whether taxation has achieved this objective or not, it is only appropriate to

study the relation between marginal tax revenue and marginal savings. Further, I have used both gross and net marginal savings, although it is the net savings which really matter in increasing the pace of economic development. Finally, I have tested the influence of marginal tax revenue on marginal savings with as well as without a time lag. In order to verify indirectly the results obtained through regressing marginal savings on marginal tax revenue, I have also tested the extent of the restraining influence of taxation on the consumption of the Government and the private sector.

Taxation and government savings

Here Government savings refer to marginal net as well as gross Government savings, including savings of the Government departments, departmental public undertakings, and public corporate savings. I have included in the regression estimates the marginal Government consumption ratio as an indirect verification, and have excluded the interest rate since it is irrelevant. The results are:

Table 2

Relative shares of Government savings, household savings and Private Corporate Savings in the total domestic savings of the country

Year	Net Govt. Savings as % of net domestic savings	Net household savings as % of net domestic savings	Net private corporate savings as % of net domestic savings	Net domes-savings as % of NDP (at factor cost)

$\bar{R}^2 = 0.4075$; F-value = 2.63517

$$\left(\frac{\Delta GGS}{\Delta GNP}\right)_t = \underset{}{0.40087} \underset{(-0.33239)}{-0.42596} \left(\frac{\Delta Td}{\Delta GNP}\right)_{t-1} \underset{(1.26126)}{+1.54333} \left(\frac{\Delta Ti}{\Delta GNP}\right)_{t-1} \underset{(-0.10744)}{-0.00742} \left(\frac{\Delta GNP}{\Delta P}\right)_{t-1}$$

$$\underset{(0.94521)}{+2.07356} \left(\frac{\Delta GNP}{GNP}\right)_{t-1} \underset{(-1.63367)}{-3.47612} \left(\frac{\Delta Pw}{Pw}\right)_{t-1} \underset{(-1.79276)}{-1.37638} \left(\frac{\Delta Gc}{\Delta GNP}\right)_{t-1} \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (4)$$

$$\bar{R}^2 = 0.2639; \qquad \text{F-value} = 0.70451$$

Where:

NGS	=	net government savings at current prices
GGS	=	gross government savings at current prices
NNP	=	net national product at current prices
GNP	=	gross national product at current prices
Td	=	revenue from direct taxes
Ti	=	revenue from indirect taxes
P	=	population of the country
Pw	=	wholesale price index with 1960-61 as a base
Gc	=	government consumption expenditure at current prices
$\bar{R}^2$	=	adjusted coefficient of multiple determination
Δ	=	change in the relevant variable in the fiscal year indicated
t	=	current fiscal year
t-1	=	previous fiscal year
***	=	t - coefficient (shown in parentheses) is significant at 10 percent level
**	=	t - coefficient significant at 5 percent level
*	=	F-value significant at 5 percent level.

The foregoing results indicate that both direct and indirect taxation exerted a negative influence on marginal net as well as on gross government savings but the negative influence of indirect taxation is significant only in the non-lagged relations. The adjusted coefficients of multiple determination are also significant for these relations. However, it would be rewarding to probe further and find out the influence of taxation on marginal Government consumption before we come to any conclusion regarding the influence of taxation on marginal Goverment savings.

Taxation and Government consumption

The following are the results of the regression between marginal government consumption and marginal tax revenue and other relevant independent variables:

$$\left(\frac{\Delta Gc}{\Delta GNP}\right)_t = \underset{(1.60486)}{-0.12804} \underset{}{+0.91615} \left(\frac{\Delta Td}{\Delta GNP}\right)_t \underset{(3.89149)}{+1.16365} \left(\frac{\Delta Ti}{\Delta GNP}\right)_t \underset{(-0.18105)}{-0.0051} \left(\frac{\Delta GNP}{\Delta P}\right)_t \underset{(+1.29069)}{1.10453} \left(\frac{\Delta GNP}{GNP}\right)_t$$

$$\underset{(-1.68385)}{-0.66994} \left(\frac{\Delta Pw}{Pw}\right)_t \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (5)$$

$$\bar{R}^2 = 0.8602; \qquad \text{F-value} = 14.29262$$

$$\left(\frac{\Delta Gc}{\Delta NNP}\right)_t = \underset{}{-0.15745} \underset{(2.65142)}{+1.07761} \left(\frac{\Delta Td}{\Delta NNP}\right)_t \underset{(5.43000)}{+1.27673} \left(\frac{\Delta Ti}{\Delta NNP}\right)_t \underset{(1.55665)}{+0.03301} \left(\frac{\Delta NNP}{\Delta P}\right)_t$$

$$\underset{(5.43000)}{-0.28795} \left(\frac{\Delta NNP}{NNP}\right)_t \underset{(-2.15615)}{-0.80270} \left(\frac{\Delta Pw}{Pw}\right)_t \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (6)$$

$$\bar{R}^2 = 0.9156; \qquad \text{F-value} = 24.46779$$

$$\left(\frac{\Delta Gc}{\Delta GNP}\right)_t = \underset{}{0.38659} \underset{(\ 1.12790)}{+0.75175} \left(\frac{\Delta Td}{\Delta GNP}\right)_{t-1} \underset{(-1.58684)}{-1.35252} \left(\frac{\Delta Ti}{\Delta GNP}\right)_{t-1} \underset{(\ 0.15501)}{+0.00622} \left(\frac{\Delta GNP}{\Delta P}\right)_{t-1}$$

$$\underset{(-2.14620)}{-1.97864} \left(\frac{\Delta GNP}{GNP}\right)_{t-1} \underset{(\ 6.10612)}{+2.60247} \left(\frac{\Delta Pw}{Pw}\right)_{t-1} \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (7)$$

$$\bar{R}^2 = 0.8060; \qquad \text{F-value} = 11.86988$$

$$\left(\frac{\Delta Gc}{\Delta NNP}\right)_t = \underset{}{0.38247} \underset{(\ 0.95889)}{+0.58546} \left(\frac{\Delta Td}{\Delta NNP}\right)_{t-1} \underset{(-3.13032)}{-1.18127} \left(\frac{\Delta Ti}{\Delta NNP}\right)_{t-1} \underset{(\ 0.56513)}{+0.01867} \left(\frac{\Delta NNP}{\Delta P}\right)_{t-1}$$

$$\underset{(-1.19682)}{-2.342994} \left(\frac{\Delta NNP}{NNP}\right)_{t-1} \underset{(\ 5.48895)}{+3.05335} \left(\frac{\Delta Pw}{Pw}\right)_{t-1} \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (8)$$

$$\bar{R}^2 = 0.8501; \qquad \text{F-value} = 10.14375$$

The foregoing results indicate that indirect taxation had a significant positive influence on marginal Government consumption in the case of a non-lagged relation whereas it had a significant negative influence in the case of a lagged relation. Though these results can be interpreted to be inconclusive, the t-values are higher in the case of the non-lagged relation than in the case of the lagged relation. Moreover, direct taxation had a positive influence on government marginal consumption in the case of both lagged and non-lagged relations. Apart from these, taxation generally determines the level of marginal government consumption in the same fiscal year whereas its influence on marginal government savings is normally lagged. Therefore, the foregoing results in the case of non-lagged relations would suggest that the increasing tax revenue has been devoted to meeting the increasing consumption of the Government in India. Thus, the earlier results indicating a negative significant influence of taxation on marginal government savings is supported by these results showing the positive significant influence of taxation on marginal government consumption. But as a further indirect test of these results, it would be necessary to analyse the influence of taxation on marginal household savings, marginal corporate savings and marginal private consumption.

Taxation and household savings

Marginal household savings are regressed on the same independent variables as in the case of marginal government savings except that the interest rate is introduced as an appropriate substitute. The results are:

$$\left(\frac{\Delta NHS}{\Delta NNP}\right)_t = \underset{}{-0.36813} \underset{(-1.01081)}{-2.52501} \left(\frac{\Delta Td}{\Delta NNP}\right)_t \underset{(\ 1.06003)}{+1.63414} \left(\frac{\Delta Ti}{\Delta NNP}\right)_t \underset{(-0.16350)}{-0.02477} \left(\frac{\Delta NNP}{\Delta P}\right)_t$$

$$\underset{(\ 0.24927)}{+2.32014} \left(\frac{\Delta NNP}{NNP}\right)_t \underset{(\ 1.40398)}{+3.48297} \left(\frac{\Delta Pw}{Pw}\right)_t \underset{(-0.67753)}{-0.16174} (\ r)_t \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (9)$$

$$\bar{R}^2 = 0.0635; \qquad \text{F-value} = 1.39132$$

$$\left(\frac{\Delta NHS}{\Delta NNP}\right)_t = \underset{}{-1.05653} \underset{(-0.22148)}{-0.68533} \left(\frac{\Delta Td}{\Delta NNP}\right)_{t-1} \underset{(0.91232)}{+2.05939} \left(\frac{\Delta Ti}{\Delta NNP}\right)_{t-1} \underset{(0.17293)}{+0.03183} \left(\frac{\Delta NNP}{\Delta P}\right)_{t-1}$$

$$\underset{(0.51984)}{+6.16222} \left(\frac{\Delta NNP}{NNP}\right)_{t-1} \underset{(1.08953)}{+3.53144} \left(\frac{\Delta Pw}{Pw}\right)_{t-1} \underset{(-1.15416)}{-0.39003} (\Delta r)_{t-1} \quad \ldots\ldots\ldots\ldots\ldots (10)$$

$$\bar{R}^2 = 0.0876; \qquad \text{F-value} = 0.79498.$$

Where: r = average of interest rates on one year deposits.

Here I have examined the influence of taxation only on net marginal household savings as the data on gross household savings are not readily available. The foregoing results indicate that direct taxation had a negative influence on the net marginal household savings whereas indirect taxation had a positive influence in both the lagged and the non-lagged relations. However, these results are not significant as evidenced by low t-values, low values of adjusted coefficients of multiple determination, and low F-values.

Taxation and corporate savings

Corporate savings here include only savings of private corporate organisations. The determinants of marginal private corporate savings differ slightly from those of marginal household savings. Here the interest rate becomes less important whereas the corporate profit becomes more relevant. The data on corporate profits are taken from Reserve Bank of India studies on Company Finances. Further, I have used only the wholesale price index for manufactured commodities rather than the index for all commodities, which is not relevant. Here again, for want of reliable data on gross marginal corporate savings, I have used only net marginal corporate savings. The results of the regression for net marginal corporate savings are as follows:

$$\left(\frac{\Delta NCS}{\Delta NNP}\right)_t = \underset{}{0.05860} \underset{(-1.24168)}{-0.12214} \left(\frac{\Delta Td}{\Delta NNP}\right)_t \underset{(-0.93410)}{-0.06038} \left(\frac{\Delta Ti}{\Delta NNP}\right)_t \underset{(0.71738)}{+0.00369} \left(\frac{\Delta NNP}{\Delta P}\right)_t$$

$$\underset{(-1.20570)}{-0.42956} \left(\frac{\Delta NNP}{NNP}\right)_t \underset{(-1.72477)}{-0.22615} \left(\frac{\Delta Pm}{Pm}\right)_t \underset{(1.07773)}{+0.04048} \left(\frac{\Delta CPB}{CPB}\right)_t \quad \ldots\ldots\ldots\ldots\ldots (11)$$

$$\bar{R}^2 = 0.3703; \qquad \text{F-value} = 2.47528$$

$$\left(\frac{\Delta NCS}{\Delta NNP}\right)_t = \underset{}{-0.00859} \underset{(1.23749)}{+0.17008} \left(\frac{\Delta Td}{\Delta NNP}\right)_{t-1} \underset{(-0.30854)}{-0.02804} \left(\frac{\Delta Ti}{\Delta NNP}\right) \underset{(-0.49807)}{-0.00364} \left(\frac{\Delta NNP}{\Delta P}\right)_{t-1}$$

$$\underset{(0.53954)}{+0.26176} \left(\frac{\Delta NNP}{NNP}\right)_{t-1} \underset{(-0.18694)}{-0.03391} \left(\frac{\Delta Pm}{Pm}\right)_{t-1} \underset{(1.01515)}{+0.05225} \left(\frac{\Delta CPB}{CPB}\right)_{t-1} \quad \ldots\ldots\ldots\ldots\ldots (12)$$

$$\bar{R}^2 = 0.0894; \qquad \text{F-value} = 0.79774$$

Where: Pm = wholesale price index of manufactured commodities with 1960-61 base.
CPB = Corporate profit before tax.

The results show that indirect taxation had a negative influence on net marginal corporate savings both in lagged and in non-lagged relations, but that direct taxation had a negative influence in the case of a non-lagged relation and a positive influence in the case of a lagged relation. In both these cases however, the influence is not significant.

Taxation and private consumption

I have tested the nature and extent of influence of taxation on marginal private consumption in the following way:

$$\left(\frac{\Delta Pc}{\Delta GNP}\right)_t = \underset{}{0.12459} \underset{(4.30529)}{+0.70217}\left(\frac{\Delta Td}{\Delta GNP}\right)_t \underset{(-0.27245)}{-0.35005}\left(\frac{\Delta Ti}{\Delta GNP}\right)_t \underset{(1.99166)}{+0.18296}\left(\frac{\Delta GNP}{\Delta P}\right)_t$$

$$\underset{(-1.07877)}{-4.14884}\left(\frac{\Delta GNP}{GNP}\right)_t \underset{(1.06389)}{+0.12599}\left(\frac{\Delta Pw}{Pw}\right)_t \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (13)$$

$$\bar{R}^2 = 0.8361; \qquad \text{F-value} = 11.99831$$

$$\left(\frac{\Delta PC}{\Delta NNP}\right)_t = \underset{}{-0.61644} \underset{(0.30032)}{+0.92166}\left(\frac{\Delta Td}{\Delta NNP}\right)_t \underset{(1.76968)}{+3.19231}\left(\frac{\Delta Ti}{\Delta NNP}\right)_t \underset{(2.11604)}{+0.37773}\left(\frac{\Delta NNP}{\Delta P}\right)_t$$

$$\underset{(-0.55711)}{-6.41921}\left(\frac{\Delta NNP}{NNP}\right)_t \underset{(1.40392)}{+0.38277}\left(\frac{\Delta Pw}{Pw}\right) \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (14)$$

$$\bar{R}^2 = 0.4924; \qquad \text{F-value} = 3.05584$$

$$\left(\frac{\Delta PC}{\Delta GNP}\right)_t = \underset{}{-0.64667} \underset{(25.42871)}{+0.77684}\left(\frac{\Delta Td}{\Delta GNP}\right)_{t-1} \underset{(6.49131)}{+2.50366}\left(\frac{\Delta Ti}{\Delta GNP}\right)_{t-1} \underset{(2.98246)}{+0.09143}\left(\frac{\Delta GNP}{\Delta P}\right)_{t-1}$$

$$\underset{(1.14471)}{+1.09569}\left(\frac{\Delta GNP}{GNP}\right)_{t-1} \underset{(-8.86326)}{-0.34675}\left(\frac{\Delta Pw}{Pw}\right)_{t-1} \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (15)$$

$$\bar{R}^2 = 0.9894; \qquad \text{F-value} = 155.37437$$

$$\left(\frac{\Delta PC}{\Delta NNP}\right)_t = \underset{}{-0.95496} \underset{(0.10991)}{+0.060284}\left(\frac{\Delta Td}{\Delta NNP}\right)_{t-1} \underset{(0.76476)}{+3.05959}\left(\frac{\Delta Ti}{\Delta NNP}\right)_{t-1} \underset{(-0.93228)}{-0.29273}\left(\frac{\Delta NNP}{\Delta P}\right)_{t-1}$$

$$\underset{(1.20932)}{+25.17856}\left(\frac{\Delta NNP}{NNP}\right)_{t-1} \underset{(-0.46065)}{-0.23948}\left(\frac{\Delta Pw}{Pw}\right)_{t-1} \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (16)$$

$$\bar{R}^2 = 0.1930; \qquad \text{F-value} = 0.39993$$

The foregoing results regarding the influence of taxation on marginal private consumption show that on the whole taxation had a significant positive influence on marginal private consumption. This would indicate that both direct and indirect taxation did not have a restraining influence on marginal private consumption. This goes to disprove the hypothesis that taxation diverts increasing income from private consumption to government savings. Therefore, our earlier findings relating to the influence of taxation on marginal Government savings are once again reinforced by these results.

Conclusion

The foregoing study leads to the following tentative conclusions: (1) taxation had a significant negative influence on marginal Government savings and (2) taxation had a significant positive influence on marginal Government consumption.

These results suggest that even if taxation favourably affects the marginal domestic savings and marginal household savings, it cannot be taken for granted that this is achieved by restraining the marginal consumption of the Government and/or the private sector as Messrs. Krishnamurthy and Morss have concluded. The relationships are so complex that they have to be analysed in greater detail to know the effect of taxation on savings in underdeveloped countries.

Table 3

Relative share of the Government's Consumption Expenditure in the Government's Revenue and Gross Domestic Product

Year	Government consumption expenditure as % of GDP	Government consumption expenditure as % of GDP of the Govt. sector	Government consumption expenditure as % of Govt.'s total revenue	Government consumption expenditure as % of total tax revenue
1960-61	7.23	70.61	63.58	71.40
1961-62	7.54	69.59	61.85	69.79
1962-63	8.53	73.12	63.04	70.57
1963-64	9.54	81.45	65.59	74.59
1964-65	8.70	77.57	64.49	71.53
1965-66	9.52	75.13	66.05	73.33
1966-67	9.06	73.74	64.52	71.27
1967-68	8.59	71.35	67.59	74.68
1968-69	9.09	70.31	67.21	75.60
1969-70	9.18	69.01	66.88	75.51
1970-71	9.31	72.18	66.09	73.73
1971-72	10.25	69.14	65.89	73.14
1972-73	10.09	N.A.	63.95	70.15

Note: The difference between the Government consumption/tax revenue and net Government savings/tax revenue ratios may be attributed to capital consumption in the public sector.

International Bar Association

An international tax luncheon was held in Paris on 16th May 1977. It was organized under the joint auspices of the French Section of the Committee on Taxes of the I.B.A. Business Section, Tax Planning International and Tax Management.

The topic discussed related to the implications of recent tax law reform in France as regards the French — U.S. tax treaty and, more generally, to the various pending problems raised by the application of that treaty and the proposed new tax law reform in the United States.

The Meeting was presided over by Me J.C. Goldsmith, Chairman of the I.B.A. Business Section, Committee on Taxes. Leonard Silverstein of Silverstein and Mullens in Washington, Chief Editor of Tax Management, accompanied by the main executives of Tax Management and Tax Planning International, were also on the Panel.

Among the guests of honour were primarily Mr. Pierre Kerlan Chief of the International relations department, General Department of Taxes, French Finance Ministry, and Me Jacques Lassier, Chairman of the I.B.A. Business Section.

The speakers were:
- Mr. Pierre Kerlan and Me J.C. Goldsmith for France,
- Mr. Leonard Silverstein and Mr. R.T. Tait for the United States.

Fiscal Incentives for the Development of Northeast Brazil.

by Professor Pedro Massone *

1. PRELIMINARY REMARKS

Brazil should be included among those countries that have made extensive use of incentives to promote development. Its experience covers a wide range: export promotion, sectorial incentives, regional incentives, as well as other kinds of incentives; however, within this range, regional incentives constitute perhaps the most elaborate and successful kind.

The present Brazilian system of regional incentives was first established in 1961 with the basic aim of promoting the Northeast regional development.

According to the original pattern, enterprises could deduct up to 50 percent of their income tax liability for investment in industrial activities located in the Northeast region.

This system proved to be an effective instrument to stimulate the expansion and development of the concerned region. In a short period the money deposited with the Brazilian Northeast Bank for investment in the Northeast region reached a considerable amount and was assigned to a large number of projects in that area.

The plan was afterwards extended to another region (the Amazon) and to certain economic sectors (fishing, tourism, and forestry). This expansion of the original plan and the establishment of social interest programs (Plan for National Integration, Program for Land Distribution, etc.) led to the absorption of an important part of the funds originally intended for the Northeast region.

The Brazilian Government decided to reformulate some main features of the tax incentive system under discussion not only for the foregoing reason, but also taking other problems into consideration. Thus, by Decree-Law No. 1376 of December 12, 1974, it established several funds, namely, the Northeast Investment Fund (Finor), the Amazon Investment Fund (Finam), and the Sectorial Investment Fund (Fiset). All these funds are primarily formed by amounts derived from part of the taxpayers' income tax liability which are deposited with special banks, administered and controlled by special agencies, and finally invested in the purchase of shares issued by companies operating in the concerned region or sector.

With the establishment of this new set of rules, decisions concerning investment previously taken by the companies deducting the incentive from their income tax and depositing it with the special bank (taxpayer company) are now the responsibility of the corresponding agencies administering the fund.

On the other hand, the taxpayer companies are entitled — after making the proper deposits — to receive securities representing an interest in the pertinent fund — securities which are afterwards to be changed into shares belonging to the fund's portfolio.

Alongside the above mentioned incentives available to enterprises, there are also similar incentives for individuals, whose implementation is simpler.

Moreover, a separate set of tax incentives and financial support is provided for those enterprises operating in the eligible region when they develop projects that are considered by the proper agency to be of interest for the development of that region.

Although several rules dealing with incentives are common rules applicable to the development of the Northeast region as well as to other regions (Amazon) and sectors alike, the scope of this article will be limited to the Northeast region; if it is necessary to cover those common rules, the subject will be dealt with from the Northeast point of view only.

* University of Chile, Valparaíso. This article has been prepared on the basis of some material provided to the author by Mr. João Lopes Filho, advogado at the Superintendencia do Desenvolvimiento do Nordeste in Brazil, to whom he wants to express his gratitude.

8. FINAL REMARKS

2. GENERAL INCENTIVES AVAILABLE TO ANY ENTERPRISE
(enterprises operating inside or outside the Northeast region)

2.1. General remarks and general limit

In Brazil, enterprises (the term enterprises encompasses legal entities and individual enterprises) are subject to income tax at a normal flat rate of 30 percent. Nevertheless, according to the system of incentives under consideration, legal entities and individual enterprises can reduce their income tax liability by opting to have part of it (up to a maximum of 50 percent) invested in some specified areas or economic sectors through special funds established by law and, to a certain extent, selected by the taxpayer. In order to enjoy the benefits of this tax reduction, the taxpayer is supposed to select in its yearly income tax return the investment funds through which its saved income tax will be invested. In this selection the taxpayer must take into account not only the above-mentioned general limit of 50 percent of its income tax liability, but also some other specific limits established separately for each fund.

2.2. Specific limits

As stated above, the maximum amount of income tax that can be applied to the specified investments is limited to 50 percent of the tax liability. But, in addition to this general or global limit, there are some special or particular limits according to which the tax to be invested through a specific fund can not exceed a certain percentage of the income tax liability of the enterprise. These special limits or percentages of income tax liability are separately established for each fund, as follows:

(i) The enterprise can apply up to 50 percent of its income tax to be invested through the Northeast Investment Fund (FINOR), and/or through the Amazon Investment Fund (FINAM), in projects considered by the concerned agency to be of interest for the economic development of the region, in sectors such as industry, agriculture and telecommunications. Tourism, fishing and forestry projects to be developed in the area are also eligible to receive investments through these Funds in spite of the fact that they belong to other sectors included separately within the global system of incentives.
In the case under discussion the percentage representing the specific limits is the same as established for the general limit. Moreoever, the intent of the ruling is that the enterprise may decide to invest the whole saved income tax through any of the two funds or divide the saved income tax between them, but in any case the combined amount to be invested through both funds cannot exceed 50 percent of the income tax liability of the enterprise.

(ii) The enterprise can apply up to 50 percent of its income tax to be invested through the Sectorial Investment Fund—Forestry Section in forestry projects to be developed in the Northeast or Amazon region, when the investment is to be done under certain special rules of implementation that will be covered under Section 3.3.(a) (rules established for taxpayers controlling the enterprise receiving the investment).

(iii) The enterprise can apply to 12 percent of its income tax to be invested through the Sectorial Investment Fund-Tourism Section in tourism projects approved by the Tourism National Council.

(iv) The enterprise can apply up to 25 percent of its income tax to be invested through the Sectorial Investment Fund-Fishing Section in fishing projects approved by the Fishing Development Superintendency.

(v) The enterprise can apply up to a percentage of its income tax (the percentage varies according to the taxable year) to be invested through the Sectorial Investment Fund-Forestry Section, in forestry projects approved by the Brazilian Institute for Forestry Development. The percentages of income tax that can be applied in this case are:
— for the taxable year 1974 — 45 percent;
— for the taxable year 1975 — 40 percent;
— for the taxable year 1976 and later years — 35 percent.

(vi) The enterprise domiciled in Espiritu Santo State can apply up to 33 percent of its income tax to be invested through the Fund for the Economic Recovery of Espiritu Santo State. This possibility is only available until the 1978 financial year.
It appears that the enterprise can even concentrate its saved tax in only one eligible fund, when it is allowed by the specific limit of the fund (i.e. the Northeast Investment Fund or the Amazon Investment Fund). On the other hand, if the enterprise wants to invest its saved tax in funds with more stringent limits, it must distribute the saved tax between several funds.

2.3. Additional percentages

There are some additional percentages of the income tax liability of an enterprise that can be applied — or even that must be applied — to be invested through other specified channels, and these are dealt with separately because they are not included in the 50 percent general limit and are not affected by it. These additional percentages are the following:

(i) The enterprise can apply up to 1 percent of its income tax to be invested in new shares issued by the Brazilian Aeronautic Enterprise. This possibility is only available until the 1980 financial year.

(ii) The enterprise can apply up to 1 percent of its income tax (2 percent as of the 1977 financial year) to be invested in specific reading and writing teaching projects developed by the Mobral Foundation. Instead of this possibility, the enterprise can deduct from its income tax liability a sum ranging between 1 and 2 percent of such liability, if it corresponds to amounts already donated to the Foundation during the taxable year. This incentive is only available until the 1979 financial year.

(iii) The enterprise must apply 5 percent of its income tax to investment through the enterprise Plan for National Integration.

INVESTMENT IN NORTHEAST BRAZIL

The fiscal incentives resulted in 1970 in investments in an amount of almost 3,300 million Cruzeiros. The industrial sector received about 75 percent of this sum, i.e. 2,600 million Cr. Other sectors received the following sums:

agriculture and cattle breeding	672	million Cr.
telecommunication	27	million Cr.
tourism (hotels)	15	million Cr.
electricity	40	million Cr.
sugar industry	8.7	million Cr.

At 1975 prices, industrial investments in the Northeast of Brazil, from 1963 on, total 30,000 million Cr. This sum is distributed between States as follows:

Maranhão	— 517.8 million Cr.
Piauí	— 1,298.2 million Cr.
Ceará	— 2,439.7 million Cr.
Rio Grande do Norte	— 1,026.3 million Cr.
Paraíba	— 2,127.3 million Cr.
Pernambuco	— 8,204.2 million Cr.
Alagoas	— 1,053.9 million Cr.
Sergipe	— 304.5 million Cr.
Bahia	— 12,037.6 million Cr.
Minas Gerais	— 1,006.0 million Cr.

3. IMPLEMENTATION OF THE INCENTIVES COVERED UNDER THE PREVIOUS SECTION

3.1. General implementation rules

The income tax saving scheme available to enterprises that have been covered under Section 2 does not operate automatically. In fact, the enterprise is supposed to express — in its income tax return — its intention or decision of using a percentage of its income tax for investment through one or more of the eligible channels.

Moreover, in order to have the saved income tax invested in accordance with the purpose established by law, several other implementation steps are to be taken. In addition to properly filing the income tax return, the enterprise must file a collection form in due time with one of the banks that are entitled to receive federal revenue. [1]

Once the tax to be used for eligible investments (saved tax) has been deposited, the Federal Revenue Office issues in triplicate a nominative provisional certificate

1. From these Banks the funds are transferred to the Bank of Brazil and from here that part of the saved tax corresponding to the Northeast Investment Fund is transferred to the Brazilian Northeast Bank. If the deposit or payment is done after the financial year is over, the sums will be entered into the National Treasury account and the benefit will be lost for the taxpayer enterprise.

stating that the saved tax will be used to be invested through the eligible channels, the so-called Certificate of Application of Fiscal Incentives.

Within one year from the issuing date of the provisional certificate, the enterprise must deliver that certificate in order to exchange it for another document. For this purpose the enterprise delivers the three copies of the Certificate to the Brazilian Northeast Bank — or to other specified institutions that have been named to act as agents of the Northeast Investment Fund — immediately receiving back one of the copies, duly certified. [2]

Within 45 days, the Brazilian Northeast Bank or other agent receiving the provisional certificate (Certificate of Application of Fiscal Incentives) delivers a new document to the taxpayer, namely the Investment Certificate, representing an interest or share in the Northeast Investment Fund; this certificate is nominative and endorsable.

The enterprise holding Investment Certificates may use them in the following ways; they may:

(i) use the certificates to buy shares in enterprises receiving investments from the Northeast Investment Fund; these are nominative shares which are sold by auction and can only be transferred after 4 years from the exchange date, i.e. from the date on which the shares were changed for the Investment Certificates;
(ii) sell the certificates in the stock exchange to private investors;
(iii) use the certificates to guarantee obligations to the federal government agencies; and
(iv) keep the certificates in order to receive the profits that may result from the operations of the Northeast Investment Fund.

3.2. Investment of the saved tax by the Northeast Investment Fund

On the other side, the Northeast Investment Fund is managed and represented by the Brazilian Northeast Bank in its capacity of agent and depositary of the funds. The Bank invests the available funds in those projects which are considered by the Northeast Development Superintendency to be of interest for the Northeast economic development in sectors such as industry, agriculture and telecommunication.

The funds can also be invested in the area, in projects related with fishing, tourism, and forestry sectors, but in these cases the project approval is issued by the sectorial agency, namely the Fishing Development Superintendency, the Brazilian Tourism Enterprise, or the Brazilian Institute for Forestry Development. These agencies and the Northeast Development Superintendency are supposed to contact each other in order to harmonize their activities related to the Northeast region.

The Brazilian Northeast Bank invests through the subscription of shares issued by corporations operating in the Northeast region under the rules and instructions given by the Northeast Development Superintendency. In certain cases a special permit can be granted by the government in order to place funds by means of investing them in bonds issued by the same kind of enterprises whether convertible into shares or not.

It is emphasized that the above only gives a brief outline; the rules according to which the investments are made are much more complicated if all details are taken into account. However, at this stage it is sufficient to give only an overview, since the subject will be discussed again and in more detail in Section 6.

3.3. Special implementation rules

The general incentives available to all enterprises and the investment of saved tax may in some cases be implemented according to special rules. These special rules represent a more direct and simple procedure and they are available when there is a certain affinity between the investing enterprise (taxpayer) and the enterprise receiving the investment.

To be more precise it is necessary to state that there are two different sets of special rules each of which applies to two rather different situations, viz: (a) rules for controlling enterprises; and (b) rules for the case of "total identity".

(a) *Rules for controlling enterprises:* One of these sets of special rules applies to enterprises or groups of related enterprises which isolatedly or jointly hold at least 51 percent of the voting stock in the corporation receiving the investments of saved taxes through the Northeast Investment Fund. For these purposes "related enterprises" are those enterprises the majority of whose voting stock is controlled directly or indirectly by the same individual or legal entity; the controlling enterprise is also considered as part of the groups and it can profit from the arrangement.

In order that this set of special rules be available it is also necessary that each enterprise or group of related enterprises included in the arrangement hold at least 5 percent of the voting capital of the corporation receiving the investment.

When the above mentioned requirements are met, the enterprises or group of related enterprises are entitled to receive directly, and after delivering their provisional certificates (Certificates of Application of Fiscal Incentives) to the Brazilian Northeast Bank, shares issued by the enterprises receiving the investment from the Northeast Investment Fund. These shares are nominative and non-transferable for four years.

---

2. If these steps are not taken at the proper time the corresponding value will accrue to the Fund itself and will be lost for the taxpayer.

This means that some major steps are avoided, namely those of issuing Investment Certificates and their ensuing exchange into shares issued by the enterprises receiving the investment.

(b) *Rules for the case of total identity:* The second set of special rules deals with the case of "total identity" between the enterprise holding the Certificates of Application of Fiscal Incentives and the enterprise receiving the investment from the Northeast Investment Fund. This is to say that the same enterprise is acting on both sides: investing the saved tax and receiving the investment.

When this is the case, the concerned enterprise is entitled to receive, within one year and after delivering its provisional certificates (Certificates of Application of Fiscal Incentives), its own shares subscribed by the Northeast Investment Fund which had so far been held by the Brazilian Northeast Bank. The enterprise, after receiving its own shares, is supposed to distribute them among its shareholders according to the number of shares held by each of them at the exchange date (date on which the shares were received in exchange for the provisional certificate).

It is necessary to remember that these are nominative shares that can only be transferred after four years from the date of exchange. In this case the distribution of the shares is a special exception that applies only to that distribution.

4. GENERAL INCENTIVES AVAILABLE TO ANY INDIVIDUAL

4.1. The incentives available to individuals

In Brazil, individuals are subject to a personal income tax at progressive rates ranging from 3 to 50 percent. [3]

Within the set of incentives established in order to promote the Brazilian Northeast development, a special benefit related to the personal income tax of individuals is also included.

In fact, under the Income Tax Regulation [4] individuals are entitled to deduct from their personal income tax liability varying percentages related to the sums that they, during the taxable year, applied to certain specified investments considered to be of economic or social interest. These percentages are different for each kind of investment and they range from 3 to 42 percent. [5]

The 42 percent applies to the amounts invested in the subscription to and the payment of nominative shares or endorsable nominative shares issued by industrial or agricultural enterprises considered to be of interest for the Northeast economic development. This deduction can also be based on the direct subscription of shares (quotas) in the Northeast Investment Fund.

It is necessary to stress that the amount of the particular deduction under consideration represents 42 percent of the sums invested in the subscription and the payment of a certain kind of shares. This means that the amount of the reduction is proportionate to the amount invested.

However, there is another proportion or rate to be taken into consideration. In fact, the total personal income tax reduction available to individuals and based in investments considered to be of economic or social interest (which may also include investments not related to the Northeast development) is also limited in a certain sense by the amount of the income tax liability normally incurred by the individual.

Using more precise terms, the whole tax reduction based on previous investment cannot exceed a certain percentage as applied to the tax liability itself. The percentage (to be applied to the tax liability) varies according to the amount of the individual's personal gross income as shown in Table 1.

TABLE I

*Amounts of gross income**		*Limit of the reduction*
Lower limit CR$	*Upper limit CR$*	*(percentage to be applied to the normal tax liability*
—	100,000.00	60%
100,001.00	134,300.00	55%
134,301.00	183,900.00	50%
183,901.00	241,500.00	45%
241,501.00	331,200.00	40%
331,201.00	529,300.00	35%
529,301.00	—	30%

* Amounts vary yearly and those mentioned in the table were established by Portaria MF No. 473 of December 3, 1976.

It is now clear that the amount of the whole deduction available to individuals is determined by three factors, namely the amount of the investment, the amount of the gross income, and the amount of the tax liability. It can also be noted that the amount of the deduction is increased by increasing the investment and by increasing the tax liability; however, the percentage of the deduc-

3. Note that individual enterprises are treated like legal entities for income tax purposes; the incentives available to them are therefore included in Sec. 3.

4. The income tax legislation in Brazil consists of Laws, Decree-Laws and Decrees. These documents are consolidated from time to time into a single text which is called Income Tax Regulation (Regulamento do Imposto de Renda) and is issued by Decree.

5. There are 15 items or percentages to be deducted, but considering their extent and the scope of this article the discussion will be strictly limited to the item directly related to the Brazilian Northeast development. There are also other sums to be deducted from the income tax liability and to be invested after filing the income tax return, will not be covered because they are not included in the subject of this article.

tion is diminished by increasing the gross income amount.

4.2. The implementation of this incentive

The procedure to be followed in order to benefit from the incentive we are discussing (available to individuals) is much simpler than that provided for enterprises discussed in Sections 2 and 3. On the other hand the opportunity or timing according to which the incentive is implemented is in a certain sense the opposite of that provided for those enterprises.

Where enterprises and the incentives discussed in Section 2 are concerned, the first step of the taxpayer is to deduct (apply) a certain amount of its income tax to be invested through certain channels and for some specified purposes, without on that occasion making any actual investment at all; the real investment will be done afterwards in a pluriphased process.

However, where individuals are concerned and the incentive discussed in this Section is dealt with, the taxpayer must, during the taxable year, subscribe and pay in advance for eligible shares, namely shares issued by industrial and agricultural enterprises considered to be of interest for the Northeast development by the related Superintendency.

In addition, the individual taxpayer investing in shares must at the very moment of subscribing the eligible shares give written notice to the issuing company of his intention of deducting the invested amount from his income tax liability.

The company receiving the investment and the above-mentioned notice is supposed to register a transfer ban preventing the disposal of the shares during a period of two years. The company receiving the investment also delivers the proper voucher stating that a subscription under the specific standards has been done.

The final step to be taken by the taxpayer (individual) is to deduct in his personal income tax return the sums invested in the eligible shares. It is also necessary to state in the individual income tax return the investments that make the deduction available, as well as the date and specifications relating to the subscription and the payment of the eligible shares, and the date and specifications relating to the registering of the transfer ban affecting the shares. Once the income tax return has been properly filed the implementation of the benefit is complete except for the fact that the Office of Federal Revenue ensures that the deductions comply with the legal requirements.

5. SPECIAL INCENTIVES AVAILABLE TO ENTERPRISES OPERATING IN THE NORTHEAST REGION

5.1. General remarks

So far we have discussed general incentives available to *any* enterprise — and also those general incentives available to *any* individual — irrespective of the place or area within Brazil where they carry on their activities. In addition to those general incentives, enterprises operating in the Northeast region of Brazil, or to be established in the same area, are eligible to receive other special incentives according to the nature of the project they develop or intend to develop, especially with regard to the importance of those projects from the point of view of national interest.

The incentives that can be granted to enterprises operating in the Northeast region are the following: customs duty exemption, customs duty reduction, income tax exemption, income tax reduction, State benefits, and Municipal benefits.

5.2. Customs duty exemption and customs duty reduction

(a) A customs duty exemption can be granted by the Northeast Development Superintendency for those projects to be developed in the Northeast region and considered to be of relevant national interest, which necessitates approval by the Northeast Development Superintendency, by the Customs Policy Council and finally by the Brazilian President. The approval of the Customs Policy Council is to ensure that there is no other similar project in Brazil.

(b) A customs duty reduction can be granted by the Northeast Development Superintendency for assets necessary to develop certain specified industrial projects.

The eligible assets include equipment, machinery, instruments, accessories, and tools not produced in Brazil. The customs duty reduction can amount to 50 or 80 percent according to the sector to which the project belongs.

Eligible sectors are included in two separate lists prepared by the Industrial Development Council, namely, one list for those sectors that can benefit from an 80 percent reduction and another list devoted to those other sectors that instead can benefit from 50 percent reduction.

The 80 percent reduction is available for projects included in some of the following sectors:

(i) production of machinery and equipment, including production of their components;
(ii) production of machinery and equipment for agriculture, transportation and forestry;
(iii) production of components for the electric, electronic and mechanic industries;
(iv) production of railroad equipment;
(v) production of vehicles for public transportation;
(vi) naval and aircraft construction;
(vii) non-ferrous primary metallurgy;
(viii) production of cement and heat resisting materials;
(ix) production of cellulose and paper;
(x) production of fertilizers and pesticides for agriculture, including production of their raw materials;
(xi) production of basic chemical and pharmaceutical raw materials;
(xii) mineral extraction industry; and
(xiii) industries and activities linked with national security as defined by the National Security Council.

5.3. Income tax exemption

Industrial and agricultural undertakings established in the Northeast region as of July 12, 1963 onwards and starting operations not after December 31, 1978 are exempted from income tax for up to ten years from the date on which they started or start operation.

This exemption can be extended by the Northeast Development Superintendency up to 15 years, in those cases in which the project development is thought to face special disadvantages due to its unfavourable location and to the low rate of returns to be expected from investment.

The income tax exemption that we are discussing must be accepted by the Northeast Development Superintendency, which gives notice of such acceptance to the proper Federal Revenue Agencies.

The taxpayers to whom the benefit is granted are nevertheless supposed to file normal income tax returns where the saved income tax is to be calculated and stated. This saved tax must be incorporated into the enterprise's capital during the tax year following that receiving the benefit from the exemption, and must then be invested in the Northeast region in activities directly related to production.

There are some enterprises for which the exemption discussed under this heading is excluded, namely:

(i) industrial undertakings intended to produce goods considered by the Northeast Development Superintendency to be non-essential, unless these goods are to be exported (if the non-essential goods are to be exported, the exemption is still available); and
(ii) enterprises similar to others already established in the Northeast region unless
   — the benefit has already been granted to another similar enterprise, or
   — the new enterprise — preferably located in the less industrialized areas — is intended to supply markets located outside the region or to supply a local market or a limited area within the region.

5.4. Income tax reduction

Industrial and agricultural undertakings that were operating in the Northeast region on or before June 27, 1963 are entitled to enjoy an income tax reduction of 50 percent.

Industrial and agricultural undertakings established in the Northeast region on or after June 27, 1963 can also benefit from this 50 percent income tax reduction, unless they are entitled to an income tax exemption under the rules discussed in Section 5.3. This 50 percent income tax reduction does not exclude the possibility of taking advantage of the general incentives available to any enterprise and already discussed in Section 2, according to which any enterprise, irrespective of the area in which it operates, is entitled to a 50 percent deduction from its income tax liability in order to invest the saved tax through special funds.

Therefore industrial and agricultural enterprises operating in the Northeast region can combine in this way both incentives and thus obtain an effective tax reduction of 75 percent, paying only 25 percent of their normal income tax unless they are totally exempt.

Taxpayer enterprises enjoying the 50 percent income tax reduction granted to enterprises operating in the Northeast region must calculate and state in their normal income tax returns the saved tax; in this case also the tax must be incorporated into the enterprise's capital during the tax year following that receiving the benefit from the tax reduction, and then invested in the Northeast region in activities directly related to production.

5.5. Benefits granted by State governments and by Municipalities

Northeast State Governments also grant fiscal incentives and financial support to enterprises that decide to develop projects to be located in their territories.

These benefits encompass tax exemptions or tax reductions, loans for preparing projects, supply of sites located in industrial districts or zones at token prices, and subscription of preferential shares without voting rights.

Some Northeast Municipal Governments as well grant incentives and benefits to enterprises established in their territories.

6. FINANCIAL SUPPORT AVAILABLE TO ENTERPRISES IN THE NORTHEAST REGION

6.1. General remarks

Besides tax incentives, enterprises operating in the Northeast region are entitled to receive financial support by having the Northeast Investment Fund subscribe to their shares, or by being granted loans or by receiving other benefits. Some of these benefits cannot perhaps be properly considered "fiscal incentives", but will be also covered in this article because they appear to be closely related to fiscal incentives and should be included in a global outline of incentives that cannot be duly understood with a limited or partial approach.

Furthermore, irrespective of whether we are dealing with fiscal incentives or whether we are dealing with financial support, some common conditions and procedural requirements are to be met by an enterprise trying to take advantage therefrom. Special rules are provided in certain cases too. These general conditions and procedural requirements, and some special rules too, will be covered under this Section.

In addition to those general conditions and procedural requirements, some other standards or guidelines estab-

lishing priorities and even limiting the extent of the benefits are to be taken into account. These standards or guidelines will be dealt with in Section 7.

6.2. *Subscription of shares by the Northeast Investment Fund*

A very important financial support available to enterprises operating in the Northeast region is the possibility of receiving capital contributions through the subscription of shares by the Northeast Investment Fund. In order to receive these capital contributions, some procedural requirements must be complied with, namely, the preliminary application letter, the project approval, and the issuing and subscription of the shares.

(a) *The preliminary application letter.* The first step to be taken by the enterprise interested in receiving capital contributions from the Northeast Investment Fund in order to develop a project in the area is to submit a preliminary application letter with the Northeast Development Superintendency.

In this document, the project to be developed must be explained by staing its location (normally in Industrial Districts), the new employment opportunities involved, the market demand for the articles to be produced, the raw materials needed, the managerial experience of the enterprise or group undertaking the project, and a financial capacity consistent with the development of the project and with the standards or guidelines established by the Northeast Development Superintendency. Values must be expressed in special indexed units related to Readjustable Bonds of the National Treasury. The preliminary letter can be answered by the Northeast Development Superintendency in one of the following ways:

(i) that in principle the project satisfies the needed requirement on the basis that the technical, economic and financial information provided by the preliminary application letter is in order;
(ii) that the project does not satisfy certain general standards or guidelines established by the Northeast Development Superintendency, namely in article 21 of Order (Portaria) No. 83 of April 30, 1976;
(iii) that in principle the project does not satisfy the appropriate requirements on the basis that the provided information is insufficient to prove the technical, economic and financial feasibility of the project.

(b) *The project approval.* If the enterprise interested in receiving capital contributions from the Northeast Investment Fund gets a favorable answer to its preliminary application letter, it prepares a project under the rules established for this purpose by the Northeast Development Superintendency. Also in this case values must be expressed in special indexed units, related to Readjustable Bonds of the National Treasury.

Once it is prepared and within 180 days from the issuing of a positive reply to the preliminary application letter, the project is to be submitted by the enterprise to the Northeast Development Superintendency, which studies the technical, economic and financial aspects in order to decide its practicability and to determine its priority level.

After studying the project the Northeast Development Superintendency can decide through its Executive Secretary's Office or through its Board of Trustees:

(i) to ask the enterprise for more information about the project;
(ii) to introduce modifications or alterations to the project, which, in order to become effective, must be accepted by the enterprise;
(iii) that the project is simply approved; or
(iv) that the project is rejected.

If the project is approved, the Northeast Development Superintendency gives a notice to the enterprise including a copy of the ruling or decision approving the project, a copy of the report on which the ruling or decision is based and a schedule for investment and disbursement of the funds. Once the enterprise has received the notice of approval, it must accept the conditions put forward by the Northeast Development Superintendency, if any, and begin the development of the project, investing its own resources devoted to it.

(c) *Issuing and subscription of the shares.* At this stage the Northeast Development Superintendency controls the physical and financial development of the project and, if everything is in order, it issues a special permit granted to the Brazilian Northeast Bank in order that this institution be able to subscribe and pay the shares issued by the enterprise receiving the contribution, in name and behalf of the Northeast Investment Fund.

On the other hand, the enterprise is requested to comply with certain formal or legal requirements of the Brazilian Northeast Bank, namely: to produce the updated charts of incorporation, including the benefits granted to preferential shares; general assembly of shareholders or meeting of the board of directors approving the issuing of the shares.

When the above-mentioned legal requirements have been complied with, the Brazilian Northeast Bank, under the permit granted by the Northeast Development Superintendency, credits the current account of the enterprise, with a notice to the enterprise which from that moment can make use of the funds.

The Northeast Development Superintendency checks periodically if the funds are being properly invested by the enterprise receiving them, Moreover, enterprises receiving capital contributions from the Northeast Investment Fund must file quarterly a special form with the Northeast Development Superintendency reporting on the development of the project.

6.3. Granting of loans [6]

In addition to the possibility of receiving capital contributions from the Northeast Fund, enterprises operating in the Northeast region can take advantage of some other financial benefits or facilities, particularly by receiving loans under different rules.

The loans we have referred to do not exclude the possibility of getting capital contributions from the Northeast Investment Fund; nevertheless in order to combine both possibilities it is necessary to comply with those standards and guidelines that will be discussed in Section 7.

The available loans are the following: general loans, loans granted to agricultural enterprises using industrial procedures, and loans granted to small and medium size enterprises.

(a) *General loans.* Enterprises operating in the Northeast region can get loans or guarantees from the Brazilian Northeast Bank and from the National Bank for Economic Development, according to the rules of those banks, in order to develop projects previously considered by the Northeast Development Superintendency to be of interest for the Northeast development. For projects whose value is below a certain amount, approval of the Northeast Development Superintendency is even not necessary.

(b) *Special loans available to agriculture enterprises using industrial processes.* Special loans are available to those agricultural enterprises that are designed to submit animal or vegetable raw materials to industrial processes in order to improve and transform such raw materials, when such materials have not been previously industrially processed. A purely agricultural project can also benefit from these loans if the concerned enterprise enters into a contract in order to devote its entire production to supply a specified industry. In order to receive these loans, the enterprise is supposed to submit a preliminary application letter to the Northeast Development Superintendency. The terms of the loans (payment terms, correction for inflation, rate of interest) are different for different aspects of the project. This means that the purely agricultural part of the project receives more favorable terms than the industrial part of it, and that fertilizers (organic or chemical), seeds, rotation crops and other technical factors receive specially favorable treatment. The term for repayment of the loans can reach 12 years, with the first 3 years free; monetary correction ranges from none at all (agricultural part of the project), to a 10 percent prefixed monetary correction (industrial part of the project); and interest ranges from none at all (for fertilizers, seeds, rotation crops, and other technical factors) to 7 percent (for the rest of the project).

(c) *Special loans available to small and medium size enterprises.* Special loans are granted to small and mediim size enterprises established in the Northeast region by the Brazilian Northeast Bank and by official State owned banks in order to form their capital or to improve their productivity. For this purpose, "small or medium size enterprises" mean enterprises for whom the result of adding their previous fixed investment to the projected investment does not exceed 15 million cruzeiros. Enterprises belonging to groups of related companies whose global and net worth is above 30 million cruzeiros are not eligible to receive this kind of loans.

Hotels, motels, boarding houses, inns, and other similar facilities for tourists, if they are small or medium size according to the rules mentioned above, can receive loans granted to small or medium size enterprises, provided that they are located in interior areas of a State, preferably off paved federal roads. The terms of these loans vary according to the amount of the investment (previous fixed investment plus projected investment) but cannot exceed 7,500,000 cruzeiros, nor 70 percent of the investment amount (previous fixed investment plus projected investment).

7. GUIDELINES UNDER WHICH THE INCENTIVES ARE GRANTED

7.1. General remarks

According to what has already been seen, enterprises operating in the Northeast region are eligible to receive several benefits encompassing tax incentives (tax exemptions and tax reductions), and financial support (capital contributions and loans). The discussion has also covered the conditions or requirements to be met by enterprises interested in these benefits.

Nevertheless, it is necessary to stress that, besides those conditions or requirements, there are some pre-established standards or guidelines to be followed in order to receive the benefits. These standards or guidelines reflect some priorities in the concession of the benefits and some limits in the extent to which the benefits can be granted.

Although these standards or guidelines vary for different benefits, under this Section we will only discuss those standards or guidelines that can be considered important, namely those referring to the possibility of receiving capital contributions from the Northeast Investment Fund and those referring to the possibility of receiving loans from the Brazilian Northeast Bank or from the National Bank for Economic Development.

7.2. General guidelines referring to the possibility of receiving capital contributions from the Northeast Investment Fund

The possibility for an enterprise to receive capital contributions from the Northeast Investment Fund

6. Although the granting of loans is not a tax incentive, we will discuss it in this article because, in addition to what we have already said in Section 6.1., these loans are or can be related to the possibility of receiving capital contributions according to what will be seen in the next Section.

is influenced by a system of priorities in which the new projects are distributed into five different levels, namely, A, B, C, D, and E, A representing the highest priority.

Every project is included in a certain priority level according to the sum of the different marks or points it has been awarded under several fixed rules or factors. Thus, in order to have a project entering one of the priority levels it is necessary that it reach the minimum mark pre-established for that particular level.

On the other hand, the fact that a project is included in a certain level of priority determines the percentage of the project's cost that can be financed through capital contributions from the Northeast Investment Fund as compared to the total cost of the project (loans received from other sources are to be excluded from the cost of the project).

The different levels of priority, the marks or points necessary to enter each level and the financial consequences thereof are shown in Table II.

TABLE II

Level of priority	Marks or points needed to enter the level Lower limit	Upper limit	Rate of receivable capital contributions on the total cost of the project
A	50	—	75%
B	40	49	60%
C	30	39	50%
D	25	29	40%
E	—	24	30%

Some of the factors according to which marks or points are granted to a specified project are:

(a) Projects whose purpose is to implant, complement, modernize or enlarge:

(i) the electric system through the construction of generators, transmitters, distribution channels and rural electrification . . . . . 25 points

(ii) the telecommunications sytem through telegraphy, telephone and radio-communication, the interlinking by means of reciprocal transmissions two or more communities located in the Northeast region not constituting an urban unit . . 25 points

(b) Projects to be located as follows:

(i) in Maranhão and Piauí States, and in Fernando de Noronha Territory . . . . . 25 points

(ii) in Rio Grande do Norte and Sergipe States . . . . . 20 points

(iii) in Creará, Paraíba and Alagoas States and in that part of Minas Gerais State included in the Northeast region . 15 points

(iv) in that part of Pernambuco and Bahia States located in the Polígono das Secas and in that part of Bahia State located to the west of the border of the Polígono . . . . . 10 points

(c) Projects to implant, complement, modernize or enlarge processing industries that produce items considered by the Northeast Development Superintendency to be essential to the regional economic development, as follows:

(i) industries producing capital assets and basic intermediary assets . . . . . 20 points

(ii) industries producing other intermediary assets . . . 15 points

(iii) industries producing durables and textile goods . . 10 points

(d) Projects providing substitutes for imports or which devote at least 40 percent of their production to export . . . . 10 points

7.3. Special guidelines referring to capital contributions from the Northeast Investment Fund

In addition to the above-mentioned general guidelines, there are some special guidelines that in certain cases alter the availability or the amount of the capital contribution to be received under the general guidelines. These special guidelines can be briefly covered as follows:

(i) There are some specified kinds of projects for which capital contributions are excluded. Although there are several items determining this exclusion, they will not be covered here in detail. It suffices to say that these items relate mainly to the fact that the project is not economically important, the fact that the enterprise undertaking the project has already received capital contributions from the Northeast Development Fund (this exclusion is not absolute), or the fact that the promotors are not properly qualified to undertake the project.

(ii) Foreign controlled enterprises or foreign capital enterprises cannot receive capital contributions from the Northeast Investment Fund above their own resources invested in the project. This is to say that the invested resources from the enterprise must be equal to the capital contribution from the Northeast Investment Fund.

(iii) Projects to be developed in comparatively more developed areas (Recife, Salvador, neighboring areas, and industrial areas related to them) can only be included up to the B level of priority, being excluded from the A level.

(iv) Agricultural and cattle breeding projects are normally classified A and only in some specified and limited cases as B.

(v) Projects of high priority for the regional development of the Northeast can receive capital contributions under special rulings set down by the Northeast Development Superintendency without regard to the above-mentioned general guidelines.

7.4. Guidelines referring to loans

Loans granted by the Brazilian Northeast Bank and by the National Bank for Economic Development are also subject to standards or guidelines that in this case can be grouped into two different sets: whether they are or are not combined with the possibility of receiving capital contributions from the Northeast Development Fund.

When there is no capital contribution, the rules are very simple, namely loans granted by the Brazilian Northeast Bank cannot exceed 50 percent of the whole investment; and loans granted by the National Bank for Economic Development cannot exceed the amount of the fixed investment from the enterprise.

When there is a capital contribution from the Northeast Development Bank the standards to be followed are illustrated in Table III.

TABLE III

Level of priority [1]	Financial distribution		
	Bank loans [2]	Capital contribution [3]	Own resources [4]
A	50%	37.5%	12.5%
B	50%	30 %	20 %
C	50%	25 %	25 %
D	50%	20 %	30 %
E	50%	15 %	35 %

Notes:
1. For the marks or points needed to enter a certain priority level see the table in 7.2. above.
2. These loans can be granted by the Brazilian Northeast Bank or by the National Bank for Economic Development.
3. These capital contributions are to be received from the Northeast Investment Fund.
4. These resources are to be provided by the enterprise undertaking the project.

8. FINAL REMARKS

If legal aspects are taken into account fiscal incentives can be established in two ways. We focus more on the legal pattern in which some incentives can be cast. Within these limits, we briefly refer to tax exemptions and to tax reductions as a starting point.

Tax exemptions and tax reductions presuppose the existence of a general rule submitting some persons or facts to a certain amount of tax and, moreover, a second and special rule excluding or reducing for certain persons or facts the tax that otherwise would be due according to the general rule.

Tax exemptions and tax reductions (and perhaps other incentives too) do not normally operate automatically, in the sense that they are not just a direct consequence of the law establishing them, but rather presuppose also the existence of some conditions that must be met to make the benefit operative.

These conditions can be simple and be complied with without much effort; they can also be more complicated and demand an effort or involvement from the person interested in taking advantage of them.

From another angle, these conditions are sometimes to be met before the benefit is enjoyed, or sometimes to be met during the period in which the benefit is being enjoyed or even after it has been enjoyed. If the conditions are not met, the logical consequence would be that the benefit is lost and the whole tax is due, and rather not a compulsory obligation for the taxpayer to comply with the conditions.

There is still another possibility to which we want to point and which we want to stress in these final remarks: the taxpayer, in order to avoid or reduce his tax liability, can be supposed to assume a new and different obligation or debt (e.g. to deposit a certain amount of money for a certain period, to make a certain investment, etc.) or even several obligations.

In order to really consider whether we are facing a new obligation or debt as something different from a simple condition to make the exemption or rebate available, it is necessary that this new obligation have some kind of independence from the tax debt. This independence appears more clearly when there is the possibility, provided by the particular law or by the general legal system, that the debtor be compelled to comply with this new obligation, or also when the law provides several measures or mechanisms to strongly stimulate, to control, or even to ensure such compliance.

We can even think that in this case the taxpayer is placed before two different and alternative obligations in such a way that he must expressly or implicitly select one of them thus being freed from the other.

Any attempt to view in such a case the compliance with the new obligation without an independent approach and simply like a condition to enjoy the exemption or reduction, will only lead to an incomplete or partial view that — in addition to be inexact — can be misleading, especially for the exact understanding and interpretation of the law.

The incentives available in Brazil to enterprises discussed in Section 2 suggest that they were modelled in the design we have just discussed, although perhaps not quite consciously.

It is necessary to recognize that there are some features that seem to contradict our point of view, but they are in a certain sense minor and in any case it would be much more difficult and contradictory to consider the compliance of the "obligation" like nothing else than the fulfillment of a condition to make the exemption or reduction available. Perhaps lawmakers should consciously take into account the two possibilities we have considered and decide which of them suits better the aims of their policies, taking into account the importance they attach to the compliance of the new "obligation" as compared with the tax debt. This conscious decision could help to draft laws dealing with this subject more clearly and consistently and in this way facilitate their understanding and compliance.

NOTE ABOUT TRANSLATION

Several Brazilian institutions have been mentioned in this article by means of an English name translated from Portuguese. Thus, it is appropriate to give the original name for each of those English expressions used to mention such institutions, as follows:

Amazon Investment Fund: Fundo de Investimentos de Amazônia — FINAM
Bank of Brazil: Banco de Brasil
Brazilian Aeronautic Enterprise: Empresa Brasileira de Aeronáutica S.A. — EMBREAR
Brazilian Northeast Bank: Banco do Nordeste do Brasil S.A. — BNB
Brazilian Institute for Forestry Development: Instituto Brasileiro de Desenvolvimento Florestal — IBDF
Brazilian Tourism Enterprise: Empresa Brasileira de Turismo
Certificate of Application of Fiscal Incentives: Certificado de Aplicações en Incentivos Fiscais — CAIF
Customs Policy Council: Conselho de Política Aduaneira — CPA
Federal Revenue Office: Secretaria de Receita Federal
Fishing Development Superintendency: Superintendência do Desenvolvimento de Pesca — SUDEPE
Fund for the Economic Recovery of the "Espiritu Santo" State: Fundo de Recuperação Econômica do Estado do Espíritu Santo — FUNRES
Investment Certificate: Certificado de Investimento — CI
Mobral Foundation: Fundação Mobral — Movimento Brasileiro de Alfabetização
National Bank for Economic Development: Banco Nacional do Desenvolvimento Econômico
National Security Council: Conselho de Segurança Nacional
Northeast Development Superintendency: Superintendência do Desenvolvimento de Nordeste — SUDENE
Northeast Investment Fund: Fundo de Investimento do Nordeste — FINOR
Plan for National Integration: Plano de Integração Nacional — PIN
Program for Land Redistribution: Programa de Redistribuição de Terras e de Estímulos à Agroindústria do Norte e do Nordeste — PROTERRA
Readjustable Bonds of the National Treasury : Obrigação Reajustável do Tesouro Nacional
Sectorial Investment Fund: Fundo de Investimentos Setoriais — FISET (This Fund encompasses three separate accounts or Sections for fishing, forestry and tourism that are mentioned in the way mentioned below.)
Sectoria Investment Fund — Fishing Section: Fundo de Investimentos Setoriais — Pesca
Sectorial Investment Fund — Forestry Section: Fundo de Investimentos Setoriais — Florestamento e Reflorestamento
Sectorial Investment Fund — Tourism Section: Fundo de Investimentos Setoriais — Turismo
Tourism National Council: Conselho Nacional de Turismo

COUNTRY BY COUNTRY SURVEY OF LOOSE-LEAF PUBLICATIONS . . .

INTERNATIONAL

DOUBLE TAXATION OF NON-RESIDENTIAL SHIPPING

The Baltic and International Maritime Conference (BIMCO), 19 Kristianiagade, DK-2100 Copenhagen.
Supplemented: annually.

Loose-leaf publication providing information on freight taxes and regulations regarding "Double Taxation of Non-Residential Shipping" in all countries where, according to BIMCO information, double taxation in some form may be levied against non-residential shipowners.

FOREIGN TAX AND TRADE BRIEFS

By Walter H. Diamond. Matthew Bender, 1275 Broadway, Albany, N.Y. 12201.
Supplemented: monthly.

Loose-leaf publication in two binders designed to provide a general picture of information on taxation and trading laws in the principal nations of the world where United States capital is most frequently invested. Countries are listed in alphabetical order under the continent or section of the world in which they are located.

FOREIGN TAX AND TRADE BRIEFS

International Withholding Tax Treaty Guide. By Walter H. Diamond. Matthew Bender, 1275 Broadway, Albany, N.Y. 12201.
Supplemented: quarterly.

Loose-leaf publication designed as a quick reference guide to give the user information on the normal withholding tax rates and withholding tax rates under tax treaties, if any, of about 90 countries in the world on dividends, royalties, rentals, technical fees, interest and income from shipping and aircraft.

INTERNATIONAL TAX AGREEMENTS

United Nations, Department of Economic and Social Affairs, New York, N.Y. 10017.
Supplemented: once or twice a year.

Loose-leaf publication designed to contain the text of tax agreements (on income/capital, estate duty, income from maritime and air transport, etc.), concluded by all the countries in the world. The texts of the agreements are presented in an English and a French edition (Conventions Fiscales Internationales). The work consists of several volumes: the first seven are bound, the later ones, eight and nine, are loose-leaf. Volume eight entitled "World Guide/Répertoire Mondial" consists of schedules summarizing for each country the tax agreements signed, ratified, applied and amended. Volume nine contains the texts of the more recent double taxation agreements.

INTERNATIONAL TAX STRATEGY

Edited by M. Edwardes-Ker. In-Depth Publishing, Ltd., Alton House, Herbert Street, Dublin-2.
Supplemented: once or twice a year.

Loose-leaf publication designed as a guide to international tax planning for corporations using the practical opportunities for avoiding taxes. The aim of tax avoidance is to maximize after tax profits. Included are the following subjects: overseas trading activities, anti-avoidance measures, intercompany pricing, fiscal export incentives, international financing strategy, management services, lease, international mergers, shipping and aircraft operations, administrative head office, tax strategy for individuals, North Sea oil offshore companies, the international capital markets in Switzerland, in the United Kingdom, the Netherlands, holding companies, offshore funds, the no-tax havens, exchange fluctuations, etc.

INVESTING, LICENSING & TRADING CONDITIONS ABROAD

Business International Corporation, One Dag Hammarskjold Plaza, New York, N.Y. 10017.
Supplemented: monthly.

Loose-leaf publication in three volumes designed to provide information on trading with and operating in and from the major markets in countries on the free world. There is a country by country description of the following subjects: general political and foreign investment climate, state role in industry, rules of competition, remittability of funds, incentives, taxation, licensing, labour and foreign trade. An introduction in each volume provides a general overview of new trends in development in the region covered (i.e. Africa, Middle East, Europe, Asia, North America, Latin America).

TAX HAVENS ENCYCLOPAEDIA

Edited by B. Spitz. Butterworths Law Publishers, Ltd., 88 Kingsway, London WC2B 6AB.
Supplemented: twice a year.

Loose-leaf publication which sets out in part one, the law and practice of high tax countries, which can limit the tax advantages of foreign operations. Included in this part of the book are the United Kingdom, United States, France, Canada and Germany. Part two of the book contains the description of the tax systems in the most well known tax haven countries. The country services have been written by different authors, with an introduction by B. Spitz.

TAX HAVENS OF THE WORLD

By Walter H. Diamond and D.B. Diamond. Matthew Bender, 1275 Broadway, Albany, N.Y. 12201.
Supplemented: quarterly.

Loose-leaf publication in two binders containing information of the tax havens in the world. It reviews various areas such as government, labour, taxation, banking, transfer of funds, transportation, etc. to be considered in choosing a tax haven either for business purposes or as a retirement haven for individuals.

IRELAND

THE INCOME TAX ACT, 1967

With Statutory Regulations, etc. Cross-references to former enactments, Tables of Rates, Income Tax personal reliefs and an Index. Published by the Stationery Office, under the authority of the Revenue Commissioners. Government Publications Sales Office, G.P.O. Arcade, Dublin 1.
Supplemented: annually.

Loose-leaf publication in two volumes setting out the provisions of the Income Tax Act, 1967 and containing also certain statutory regulations which are affected by Finance Acts of 1967 and later years, as well as statutory regulations giving effect to double taxation agreements. A comprehensive index is appended.

IRISH INCOME TAX AND CORPORATION PROFITS TAX

By F.N. Kelly and K.S. Carmichael. HFL (Publishers), Ltd., 9 Bow Street, Covent Garden, London WC2E 7AL.
Supplemented: annually.

Loose-leaf publication which describes the law and practice of the income tax and corporation profits tax in Ireland excluding the six countries comprising Northern Ireland. A comprehensive index is appended.

THE LAW OF STAMP DUTIES

Containing the Stamp Acts, 1891 and amending statutes. Second edition. Published by the Stationery Office, under the authority of the Revenue Commissioners. Government Publications Sales Office, G.P.O. Arcade, Dublin 1.
Supplemented: irregularly.

Loose-leaf publication on the law of stamp duties. The work consists of four principal parts. Part 1 contains the Stamp Act, 1891, together with relevant sections of Finance and Revenue Acts, passed in the period between 1894 and 1971, which contain provisions affecting stamp duty. Part 2 contains the Stamp Duties Management Act, 1891, and amending provisions. Part 3 contains the special exemptions from stamp duty contained in Miscellaneous Acts other than Finance and Revenue Acts. Part 4 contains provisions in Miscellaneous Acts imposing, or otherwise relating to, stamp duty. A comprehensive index with various cross references is appended.

LUXEMBOURG

CODE FISCAL LUXEMBOURGEOIS

Edited by Joseph Sinner. Editions de l'Imprimerie St-Paul, P.O. Box 1908, 6-8, rue J. Origer, Luxembourg.
Supplemented: annually.

Loose-leaf publication consisting of nine volumes and containg the integral text in the original language (either French or German) of the tax laws of Luxembourg. Each section of the law is followd by annotations and full publication of relevant implementing regulations, ministerial directives and extracts of case law related thereto.

MOROCCO

LES CODES MAROCAINS: CODE FISCAL

Fiduciaire Marocaine d'Editions Techniques, 81, rue Colbert, Casablanca.
Supplemented: four times a year.

Loose-leaf publication containing text of tax laws, measures to encourage private investment as well as decrees by the Minister of Finance and summaries of case law.

GUIDE DES IMPOTS AU MAROC

Fiduciaire Marocaine d'Editions Techniques, 81, rue Colbert, Casablanca.
Supplemented: twice per month.

Loose-leaf publication containing a summary of taxes levied in Morocco. The material is updated by loose-leaf supplements contained in the magazine entitled "La Revue Fiduciaire Marocaine".

PRENTICE~HALL,INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

From Prentice Hall

An indispensable aid for American businessmen, investors and corporations engaged in or planning foreign operations and for those in foreign countries planning or doing business in the United States —

TAX TREATIES

This definitive guide is indispensable for any businessman or corporation that sells, buys, manufactures, or invests in the United States — as well as for any American businessman or corporation that does business in foreign countries. It tells you:

- o How and where to handle your investments while eliminating the chance of double taxation.
- o How much of your investment income will be protected by tax treaty exemptions.
- o How much business Americans can carry on in a foreign country and vice versa without becoming taxable as a "permanent establishment."
- o How to protect your employees who are temporarily at work abroad from a double tax burden.

In Tax Treaties, you'll also find:

1. The full official text of every existing treaty, supplementary treaty, or protocol relating to income taxes and estate and gift taxes between the United States and each of its tax-treaty countries, including model treaties showing the latest trends.
2. Annotated editorial text arranged in a Uniform Paragraph Plan . . . makes for easy direct comparison of provisions of one tax treaty country with another . . . permits a single unified index which works hand in hand with this unique setup. You'll make sure, speedy decisions at the flip of a wrist.
3. Official reports on each treaty giving you the background behind the provisions; why particular treaty articles were included; and what each provision means to you.
4. A Special Finding List at the beginning of the editorial summary for each country . . . speeds you quickly to explanatory and official material that affects you.
5. Monthly REPORT BULLETINS, analyzing the latest treaties, decisions and rulings, keep you right on top of today's fast breaking tax treaty developments . . . (plus Current Matter containing the most recent U.S. court decisions and IRS rulings giving you the latest judicial and official word on tax treaties.)

In today's constantly expanding international commerce, expert tax-managing or tax-counseling of business activities between the United States and each of its treaty countries is a must — so keep up to date with Prentice-Hall's TAX TREATIES.

To order a one-year introductory subscription to this unique publication at the low rate of only $ 120, address Department S-TT-103.

SINGAPORE:
Foreign Investment and Tax Treaties.

by M.P. Dominic *

1. Foreign investment plays an important role in Singapore. With its increasingly sophisticated commercial, industrial and financial facilities it is developing into a financial and regional headquarter centre for Asia and Pacific and as a manufacturing base. The Asian dollar market is well developed in Singapore.

2. The tax climate in Singapore is favourable for foreign investment. A resident is taxed on foreign income only when it is remitted. A non-resident is not taxed on foreign income even when it is remitted to Singapore. A company's residence in Singapore is based on the exercise of control and management of its business in Singapore; hence, possibilities exist, for accumulation of foreign income outside Singapore and for change of the company's residence when it desires to remit this income. The result of the residence change is that the accumulated foreign income will not be taxed when remitted. This can be done even if all the company's trading operations are exercised in Singapore. Integration of company taxation and shareholder's taxation by the deduction of company tax from the dividends paid to shareholders and by the grant of credit for the tax deducted against the shareholder's tax also plays an important influence in attracting investments. There is no tax on capital gains. In addition, various tax incentives are provided for the purpose of encouraging industries, exports, Asia-dollar market, shipping, reinsurance companies etc.

3. However, taxation of a foreign investor depends not only on Singapore taxation but also on taxation in the home country of the investor. In order to mitigate the burden of international double taxation, the Singapore Government is empowered under Section 49 of the Income Tax Act to conclude tax treaties with other countries. Singapore has concluded tax treaties with Australia, Belgium, Canada (not yet ratified), Denmark, France, Germany, Israel, Japan, Malaysia, Netherlands, New Zealand, Norway, Sweden, Switzerland, Thailand and United Kingdom. The purpose of this analysis is to make a comparative survey of these tax treaties in respect of certain types of foreign investments.

4. These tax treaties have taken into account the territorial basis of taxation in Singapore, its system of integration of company taxation and shareholder's taxation, non-taxation of capital gains and the provision of tax incentives. These treaties are generally based with certain modifications on the O.E.C.D. model treaty. The treaties generally provide for taxation at source of the following types of income:
   i) Industrial, commercial, agricultural and mining profits of a non-resident enterprise if it is engaged in business through a permanent establishment.
   ii) Professional income.
   iii) Remuneration for personal services except in the case of short-term employment.
   iv) Income from immovable property such as rents, mortgage interest, royalties etc.

5. The concept of permanent establishment is unknown in the Singapore internal tax law. However, the concept is adopted in all the tax treaties. The O.E.C.D. definition is followed with some variations. In the Malaysian tax treaty, no time limit is specified with respect to the treatment of building sites, construction or assembly project as permanent establishments. In the other treaties, they are considered as permanent establishments if they are carried on for more than 6 months.
   The supervisory activities in connection with the construction, installation or assembly project are deemed to be permanent establishments if they are carried on for more than 6 months (no time limit in the Malaysian treaty). The treaties also differ both among themselves and from the O.E.C.D. model with respect to criteria used to determine whether dependent agents are permanent establishments. The Australian and New Zealand tax treaties employ the principle of attribution in determining the profits taxable at source.

(to be continued on p. 275).

6. There is no dividend tax in Singapore. This is recognised in all the tax treaties by the provision of exemption of dividends paid by a Singapore Company from any tax other than the deduction of company tax. Under certain tax treaties when such dividends are paid to companies with certain specified percentages of shareholding, they will also be exempt in the other country. Rebate against Australian tax is provided in the Australian tax treaty and tax credit is granted in U.K. tax treaty for the underlying Singapore company tax. Some treaties provide matching credits [1] for dividends.

7. Interest derived from Singapore and paid to non-residents is subject to a 40 percent rate, which is reduced to 10 percent or 15 percent in a number of tax treaties. Interest paid to certain types of institutions is exempt in some of the treaties. It must be noted that the source rule in Singapore with respect to interest is very wide. Interest is deemed to be derived from Singapore if it is borne directly or indirectly by a person resident in Singapore or a permanent establishment in Singapore or where the funds provided by such loans are brought into or used in Singapore.

8. Royalties paid to non-residents are taxed at 40 percent. Under the tax treaties, a distinction is made between royalties and copyright and cinematographic royalties. Industrial royalties are either completely exempt or the tax is reduced to 15 percent. In the Norwegian tax treaty, exemption is granted also in Norway (resident country). The Israel tax treaty exempts taxation in the source country and limits taxation in the resident country to 15 percent.

9. Tax incentives are either in the Income Tax Act itself or in the Economic Expansion Incentives Act. The effectiveness depends also on the tax treatment in the home country of the investor. For this purpose, tax sparing credit is granted in the tax treaties with Australia, Belgium, Canada, France, Germany, Israel, Japan, Netherlands, New Zealand, Norway, Switzerland and the United Kingdom. Most of the treaties restrict tax sparing credit to interest and/or royalties. Some treaties (e.g. the United Kingdom) grant tax sparing credit even to taxes exempted or reduced under the Economic Expansion Incentives Act.

10. Matching credit is provided in a number of tax treaties for other income than dividends.

1. The Matching Credit is "a credit at a fixed rate or rates which the capital-exporting country grants for certain taxes of a developing country (usually withholding taxes on dividends, interest and occasionally other income from capital). The matching credit may be extended by statute or by treaty. It is not strictly a tax-sparing credit because it applies whether or not the source country waives or reduces its tax. Accordingly, the matching credit is more in the nature of a limited exemption than a device for preserving and reciprocating the tax relief extended by the developing country." — Tax Treaties Between Developed and Developing Countries, Fourth Report (United Nations, New York, 1973) p. 151.

Countervailing Duties in the United States; Disintegration of the GATT Agreement?

On April 12, 1977, the U.S. Court of Customs rendered a verdict on the case of *Zenith Radio Corp.* v. *The United States*. The Court held that the United States was required to imposing a countervailing duty on certain Japanese electronic products which received an exemption from a Japanese indirect tax when exported, despite the objection by the U.S. Treasury to the imposition of such a duty. Because of the potentially sweeping impact of this case, the opinion of the Court is reproduced here to a large degree. Following the opinion an explanation and an analysis are provided. *

Before RICHARDSON, NEWMAN and BOE, Judges

RICHARDSON, Judge: Plaintiff, a domestic manufacturer of various consumer electronic products, has instituted this action under 19 U.S.C.A., section 1303, for judicial review of the decision of the Secretary of the Treasury, and has moved for summary judgment pursuant to rules 4.12 and 8.2 of the rules of this court; and defendant has cross-moved for summary judgment. Plaintiff contends that the Government of Japan pays or bestows directly or indirectly a bounty or grant upon the exportation from that country of the aforesaid consumer electronic products in the form of the remission of, or exemption from, payment of a consumption tax to which these products would have been subjected had they not been exported. Defendant contends that the Japanese tax remission or exemption does not constitute a bounty or grant within the meaning of section 1303.

The essential facts of the controversy are not in dispute. The Japanese Commodity Tax Law, cited as Commodity Tax Law (March 31, 1962, Law No. 48) as revised, is a single-stage consumption tax which is levied usually at the manufacturing level on a fairly extensive list of consumer goods, inclusive of electronic products of the types manufactured by plaintiff. Rates of tax range generally from 5 to 40 percent. Upon exportation of these products from Japan, the tax is either remitted, if previously paid, or the products are exempted from the payment of the tax.

Plaintiff petitioned the Secretary of the Treasury in 1970, alleging that the exemptions from or refund of the so-called "commodity tax" under the aforementioned Japanese Commodity Tax Law when the said electronic products were exported from Japan amounted to the payment or bestowal of bounties or grants directly or indirectly, upon the manufacture, or production in, or exportation from, Japan of said consumer electronic products. The petition asked the Secretary of the Treasury to impose countervailing duties on these imported products in accordance with section 1303. On January 7, 1976, a "Final Negative Countervailing Duty Determination" in the case of "Certain Consumer Electronic Products From Japan" was published in the Federal Register at the instance of the Acting Commissioner of Customs upon the approval of the Acting Assistant Secretary of the Treasury. This determination stated that "a final determination is hereby made in this proceeding, that ... no bounty or grant is being paid or bestowed, directly or indirectly, within the meaning of section 303, Tariff Act of 1930, as amended (19 U.S.C. 1303), upon the manufacturer (sic), production, or exportation of certain consumer electronic products from Japan".

Plaintiff after giving notice to the Secretary of the Treasury of its intention to contest this determination, which notice was duly published in the Federal Register, then instituted this action for a review of this determination. The motions for summary judgment follow the joining of issue in said action. There is no question here but that the Japanese commodity tax in issue is either remitted when merchandise is exported from Japan if previously paid thereon, or the exported merchandise is not subject to the payment of tax. Plaintiff contends that the forgiveness of the commodity tax on exportation from Japan of the subject electronic products confers a direct or indirect benefit on the exportation of such products. Plaintiff argues:

... The Supreme Court and the special customs tribunals have repeatedly held that the remission of taxes on exportation constitutes the conferral of a bounty or grant within the scope of our countervailing duty law. The legislative history of section 303 of the Tariff Act of 1930, as amended, provides ample support for that position. The forgiveness of the commodity tax on the exportation of the subject electronic products from Japan is clearly a bounty or grant under section 303, and the Secretary of the Treasury should be required to direct the assessment of countervailing duties to offset the bounty or grant so bestowed.

Defendant contends that the Japanese commodity tax is not a bounty or grant within the meaning of section 1303. Defendant argues among other things:

The historical and legislative background of the countervailing duty statute demonstrates that the countervailing duty provision was intended to cover only the excessive remission of taxes directly related to the imported product. For over 75 years the Treasury Department construed the provision as applying only to such excessive remissions. Since at least 1951, Congress has been well informed of the Treasury's practice and has consistently failed to countermand it even though legislative amendments rendering all tax remissions subject to countervailing duty have been considered. Thus, Congress must be deemed to have approved the administrative interpretation.

Section 1303 reads in relevant part:

(a) Levy of Countervailing Duties.
(1) Whenever any country, dependency, colony, province, or other political subdivision of government, person, partnership, association, cartel, or corporation, shall pay or bestow, directly or indirectly, any bounty or grant upon the manufacture or production or export of any article or merchandise manufactured or produced in such country, dependency, colony, province or other political subdivision of government, then upon the importation of

* The analysis is provided by Mr. J. Dobson, J.D., Editor of EUROPEAN TAXATION.

such article or merchandise into the United States, whether the same shall be imported directly from the country of production or otherwise, and whether such article or merchandise is imported in the same condition as when exported from the country of production or has been changed in condition by remanufacture or otherwise, there shall be levied and paid, in all such cases, in addition to any duties otherwise imposed, a duty equal to the net amount of such bounty or grant, however the same be paid or bestowed.

Section 1303 has its genesis in section 5 of the Tariff Act of 1897.

In *Downs* v. *United States*, 187 U.S. 496 (1903), the Supreme Court of the United States held that tax remission is a form of indirect bounty within the meaning of section 5 of the 1897 Act.

The *Downs* case was cited almost immediately by the Board of General Appraisers for the proposition that tax remission upon exportation constitutes the conferral of a bounty or grant under the 1897 Act. See *F.W. Myers & Co.* v. *United States*, 6 Treas. Dec. 260, 264-265, T.D. 24306 (1903). It was also cited for the same proposition in *Notes on Tariff Revision* (1908), a 953-page document prepared for the use of the Committee on Ways and Means, U.S. House of Representatives, under the direction of the clerk of the committee, when the Congress was considering revision of the 1897 Tariff Act.

Section 5 of the 1897 Act was reenacted essentially unchanged as section 6 of the 1909 Tariff Act. The words "province or other political subdivision of government" were added, by the 1909 Act, thus broadening the scope of the statute. Hence, reenactment by Congress of the same language in the aftermath of the *Downs* decision and on the representation made to Congress by so eminent an authority on judicial construction as the assistant counsel of the Treasury Department, represents a classical example of congressional ratification of the judicial construction put upon this statutory language. Indeed, this court said as much in *American Express Company* v. *United States*, 67 Cust. Ct. 141, 150-151, C.D. 4266 (1971), affirmed without reaching this issue, 60 CCPA 86, C.A.D. 1087 (1973), a case involving the construction of section 1303 (prior to amendment by the Trade Act of 1974) as applied to the practice of the Italian Government in its remission of certain internal taxes upon the exportation of transmission tower units to the United States. And inasmuch as this language has been a part of every United States countervailing duty statute dating from 1897, the argument advanced by the Treasury Department that the teachings in *Downs* as to the counter-vailability of tax remission is *dicta*, is without support.

In this connection, the court notes that defendant advances the argument that Congress did not intend that the scope of section 5 of the 1897 Act should be any different than the predecessor statute was under the 1894 Act when non-excessive tax remission was expressly excluded from the countervailing duty measure applied to bounty-fed sugar importations (paragraph 182 1/2, Tariff Act of 1894), and that the legislative history indicative of such congressional intent "apparently had not been brought to the attention of the courts in prior cases". In other words defendant implies that the courts in *Downs* overlooked congressional limitations on the countervailing duty statute preserved for the 1897 Act from the 1894 Act as manifest in congressional debates.

It is true that the congressional proceedings culminating in section 5 of the 1897 Act were not a part of the record before the courts in *Downs*. Where the language of a statute is clear there is no need to resort to congressional debates to ascertain the intention of Congress. There is no indication that the language in section 5 of the 1897 Act lacked clarity or that it troubled the courts in any way in that case, necessitating resort by the courts to legislative history. And as for the congressional debates of the measure to which a large portion of defendant's energies have been directed, the Supreme Court had earlier warned against misdirection caused by reliance on remarks made during congressional debates, and as such, the debates would probably not have been considered relevant by the courts in *Downs*, anyway, given the clarity of the language of section 5.

But even if congressional debates could have been considered in *Downs*, they would not have changed the results reached by the courts in that case. Paragraph 182 1/2 of the 1894 Act had expressly excepted non-excessive tax remissions from the specific countervailing duty applicable to bounty-fed sugar imports while recognizing tax remission to be a form of indirect bounty. And of course, the term "net bounty" as used in the congressional debates on the measure by the 54th Congress clearly referred to the excess over the actual tax remitted. But the term "net amount of ... bounty or grant" introduced into section 5 of the 1897 Act by the 55th Congress is another matter. Even in the House version of the countervailing duty measure which was passed and set to the Senate it is to be seen that the House moved significantly away from the strictures of the countervailing duty provision as passed by the 54th Congress in proposing alternative measures which, if enacted into law would have given the United States the option of countervailing the full bounty or just the excess bounty above the tax remitted. The House version provided that bounty-fed sugar "shall pay, in addition to the foregoing rates, a duty *equal to such bounty, or so much thereof* as may be in excess of any tax collected by such country upon such article, or upon the beet or cane from which it was produced". (Emphasis added.) 30 Cong. Rec. 316 (1897).

The Senate substituted language for the House version which later became section 5 following the House accession to the Senate amendment. And after the Senate version was introduced through the Senate Finance Committee, the term "net bounty" was never used in the debates that followed in reference to the Senate proposal. On the contrary, the full amount of the German bounty (38 cents on refined sugar or 27 cents on raw sugar per hundred weight) was referred to by the senators as the "export bounty".

Since it is clear that the Senate debates indicate an intention on the part of that body of Congress to reach the full amount of the bounty paid under the language it proposed, the term "net amount of ... bounty ..." was obviously intended to apply to nothing less than the full amount of the benefit foreign exporters derived from their governments. But the Senate didn't stop here. In addition, it introduced the words "grant" and "bestow" for the first time in the countervailing duty measure.

As the Board of General Appraisers aptly pointed out with respect to the word "grant" in *Downs* (4 Treas. Dec. 405, T.D. 22984 (1901) at page 408) "While it involves the idea of a favor or benefit conferred by the Government, sometimes of an exclusive character, it does not necessarily embrace the act of appropriating or paying money out of the public treasury. Indeed, the word 'grant', in its broad signification, may well include the remission of a tax already levied and assessed by the authority of Government". And again, as the Supreme Court said in *Nicholas & Co.* v. *United States*, 249 U.S. 34 (1919) at page 39: "If the word 'bounty' has a limited sense the word 'grant' has not. A word of broader significance than 'grant' could not have been used".

There can be no question then, but that the 55th Congress was faced with a different challenge than that which confronted the 54th Congress, and as a consequence, responded to it with equally different legislation. As stated by the former clerk of the House Committee on Ways and Means in *Notes on Tariff Revision*, *supra* at page 834

with respect to section 5 of the 1897 Act, "This section was a new departure in tariff legislation ..."

There are other contentions advanced by the Government in connection with additional legislation enacted by Congress and international commitments of the United States involving policy decisions which do not supersede the acts of Congress. The court finds that the matters dealt with in these contentions do not temper the mandatory character of the countervailing duty statute in issue or illuminate the congressional intent underlying its enactment.

With respect to the Government's contention concerning the United States' commitment under Article VI(4) of Part II of the GATT, [1] it must be pointed out here that this contention has previously been considered and rejected by the courts. In *American Express Company* v. *United States*, this court said with respect to this argument:

... GATT is a trade agreement, which if in conflict with a law of Congress [19 U.S.C.A. § 1303], must yield to the latter.

And our appeals court went even further in that case in regard to this argument when it said [60 CCPA at page 97, footnote 14]:

That holding finds support not only in the reasoning of the Customs Court that a law of Congress prevails over a trade agreement but also in the fact that the United States undertook Part II of the GATT, which includes Article VI(4), "*** to the fullest extent not inconsistent with existing legislation". *Protocol of Provisional Application of the GATT*, 61 Stat. A2051 (1947).

Thus, it becomes readily apparent that although our countervailing duty statute (section 1303) speaks in more general terms of *bounties* and *grants* whereas the countervailing duty provision contained in Article VI(4) of Part II of the GATT refers specifically to exemption from or refund of taxes, the GATT's inconsistency "with existing legislation", has been determined by the construction put upon the statutory terms "bounty" and "grant" by the Supreme Court of the United States in *Downs* v. *United States*, *supra*, in holding that tax abatement or remission comes within the meaning of those terms.

The defendant represents that it has had a longstanding administrative interpretation of the countervailing duty statute which permits it to determine when in its judgment a bounty or grant is excessive and thus should be countervailed. This administrative interpretation is in conflict with the decisions of the Supreme Court of the United States construing the countervailing statute, and must yield. The Secretary of the Treasury, in administering the countervailing duty statute, must discharge his responsibility in accord with the congressional intent in that statute as interpreted by the Supreme Court of the United States.

The language of section 1303 is abundantly clear, having been construed by the courts in decisions which in turn have been approved by Congress. Generally, the scope of the statute has been held by the courts to be extremely broad; specifically, the statute has been held to embrace remissions of indirect taxes on exportation.

It is a familiar rule that long-established administrative practice is determinative only when the meaning of the statute is doubtful. *Pittsburgh Plate Glass Co.* v. *United States*, 2 Ct. Cust. Appls. 389, T.D. 32162 ... Therefore, an administrative practice in plain violation of the terms of the statute cannot be urged as determining the construction that should be given to it. [*United States* v. *Jules Raunheim (Inc.) et al.*, 17 CCPA 425, 431 (1930).]

Admittedly a decision adverse to either party will have certain affects upon domestic industry and lavor. It has been ruled that this court does not have equity jurisdiction, [2] and it would be inappropriate for the court to go beyond the statute governing the issue before it and attempt to balance the equities between industry and labor. Also, if this court were empowered to wade into the uncertain waters of foreign policy it might yield to the tempting protestations of defense counsel and assume the risk of making a determination in this area, but this is an area reserved to the executive and legislative branches of the Government.

The Japanese commodity tax involves the remission of an indirect tax and, as such, is countervailable under section 1303.

Judgment will be entered in accordance with this opinion.

ANALYSIS

In addition to this opinion, two concurring opinions were filed. They speak at more length on some of the issues discussed in the opinion of the Court but do not offer any different conclusions on these issues, so they are not reproduced here.

Reading through the opinion of the court, one finds a number of points which deserve comment. First, it is interesting to note that the *defendant* in this case is the U.S. government. The U.S. Treasury had taken the position that no duty was to be imposed and had defended this position in court against a challenge by a private manufacturer, *Zenith*. Thus, the recent description of this case as a sign of a new wave of U.S. protectionism [3] is erroneous, at least to the extent that it suggests that the U.S. government has supported protectionist measures.

A second, and very significant, point is that *Zenith* won the case on a summary judgment motion. This means that in the opinion of the court there was no genuine issue of fact in this case and that the law required a judgment in favor of the plaintiff. The Court's decision against the defendant did not turn on an unfavorable determination of the factual situation. Accepting all the factual assertions made by the defendant, the plaintiff was still entitled to judgment as a matter of law. The importance of this conclusion can hardly be overemphasized; it strongly indicates that the Court's decision is based on a general principle of law and not on a finding of a special fact situation. This suggests an enormous breadth of applicability of this decision. Any time there is a difference of taxation of domestic sales and export sales to the United States, the Treasury must impose a countervailing duty to the extent of the difference. The reason behind the difference and the economic effects of the duty cannot be taken into account.

The third point to be mentioned, and the principal importance of this decision, is that *all* tax reductions and remissions which apply to exports and not to domestic sales are bounties; it is not necessary that the remissions be in excess of taxes previously imposed. Because of the widespread use of turnover taxes,

1. This provision expressly prohibits contracting parties from levying countervailing duties against each other's products to offset export bounties aiding their exportation where the bounties are in the form of tax remissions or tax exemptions; and the Government maintains that such contractual obligation is binding on the United States.
2. Equity jurisdiction is an authorization for a court to consider additional facts or to grant additional relief beyond what is provided for in the relevant laws. When the remedies provided by law are incomplete, a court of equity may fashion a different remedy based solely on principles of fairness and justice.
3. *De Financieel Ekonomische Tijd*, June 3, 1977, p. 1.

including the mandatory imposition of value added tax by the E.E.C. member countries, this conclusion of the Court threatens to have major importance for trade with the United States. Companies in E.E.C. member countries exporting to the United States could have to pay a countervailing duty equal to the domestic VAT plus normal import duties plus any state and local sales taxes applicable to the sale of their goods in the United States.

In the opinion of the court, international considerations could not reduce the mandatory nature of the obligation of the Secretary of the Treasury to impose countervailing duties. The General Agreement on Tariffs and Trade (GATT) did not alter this obligation, either. Of course, GATT was adopted by the United States subject to existing laws, but even if that were not the case it would have to yield to laws of Congress. Thus, even though GATT declares that remission of indirect taxes is not an export subsidy, the United States is obligated to treat it as such and to impose a countervailing duty. This is clearly in violation of the GATT procedures and it promises to put even more pressure on an agreement already strained severely by the U.S. DISC legislation. [4]

The effects of this case could be extremely wide-sweeping. As has just been suggested, it could force the United States out of GATT. It would mean a countervailing duty on virtually all E.E.C. products. This could be expected to lead to increased tariffs on U.S. goods exported to E.E.C. countries, while the Zenith holding may have the same result with respect to exports to Japan. A major setback for efforts to reduce international trade barriers would result. At present, this decision is being appealed. Also, a similar suit has been instituted in the Court of Customs by U.S. Steel Corp. asking that the Treasury be required to impose a countervailing duty on steel imported from the E.E.C. It is possible that one or both of those actions will result in a return to the situation existing prior to the April 12th decision, where the Treasury imposed countervailing duties only where there was an excess remission of taxes by a foreign government to companies exporting to the United States.

Otherwise, that situation could only be reestablished by an amendment of the countervailing duty statute. Because of the political pressures involved, it is far from certain that the U.S. Congress would be willing to pass such an amendment.

---

In cooperation with Associated Business Programmes Ltd., the
INTERNATIONAL BUREAU OF FISCAL DOCUMENTATION
organized a 2½ day conference in Amsterdam (October 27 - 29, 1976) on –

TAX AND LEGAL ASPECTS OF TRADE AND INVESTMENT IN OIL COUNTRIES AND FINANCIAL CENTRES OF THE MIDDLE EAST

A few copies of the extensive Conference Manual are still available.

CONTENTS –

- **Legal Aspects:** licences, registration, necessary documents, characterising of contracts, bookkeeping requirements, languages to be used, local participation, ownership of immovable property, etc.
- **Financial Aspects:** Exchange regulations, investment incentives, ratio own funds/borrowings, etc.
- **Tax Aspects:** various taxes encountered, computation of the tax bases, investment allowances, setting-off of losses, tax treaties, etc.
- **Customs Aspects:** documents, quotas, customs duties, temporary importation of equipment, etc.
- **Branches**
- **Subsidiaries**

Write today for further details.

COUNTRIES COVERED –

Bahrain, Egypt, Iran, Iraq, Jordan, Kuwait, Oman, Qatar, Saudi Arabia, Syria and the United Arab Emirates.

ALSO INCLUDED ARE TEXTS OF –

Arab Economic Unity Treaty
Arab Tax Treaty

. . . and following tax treaties:

Iran – France
Iran – Germany
U.A.R. – Austria
U.A.R. – Finland
U.A.R. – Germany
U.A.R. – Italy
U.A.R. – Norway
U.A.R. – Sweden
U.A.R. – U.S.A.

PRICE: Dfl. 200 / US$ 80 including postage and packing

TAX GLOSSARY

by H.W.T. PEPPER *

AGRICULTURAL ABATEMENT — It is fairly common for a country to incorporate special relief measures in its tax code for the benefit of agriculture either because (a) farmers as a class are regarded as having less taxable capacity than the rest of the community, or because (b) the farm "lobby" is able to exert powerful political influence or because (c) it is regarded as economically desirable to provide incentives to encourage agriculture. At one time farmers in Britain paid income tax according to a figure based on the annual value of their land or on actual profit, whichever was less. A substantially reduced rate of death duty was formerly charged in Britain on bequests of agricultural land. In Eire, until recently no income tax at all was charged upon farming income, and in many states the tax payable on the agricultural sector is lower than on the industrial sector either by design, or because the administration is unable to cope fully with the problem of securing proper compliance with tax laws.

"AGRICULTURAL DEPRESSION" — Special relief for agricultural depression used to be a feature of the taxation of farmers in Britain at a time when these taxpayers were taxable on the annual value of their lands and only at their option by reference to actual profits. No special relief is necessary where agriculture is taxable on profits but special consideration, usually on an ad hoc nature, may be called for where other taxes are computed independently of income and there has been a cataclysmic fall in commodity prices or loss by catastrophe such as flood or hurricane. In Britain the Schedule B assessment (arbitrarily based with reference to annual value instead of profits) was reduced proportionately if farmer's rent was reduced — otherwise the farmer was assessed on actual profits.

AIRCREW, TAXATION OF — As in the case of SEAMEN (q.v.) special rules are sometimes employed in determining the tax, particularly where income tax is to be dealt with, for aircrews. Sometimes the place of assessment will be the head office of the airline or charter company, sometimes the residence of the airman, and occasionally the base airport from which the airman is allocated his route or duties. The matter is often covered in the articles of a Double Taxation treaty between two countries where the airline concerned provides air services between the two countries.

AIRPORT TAX — Charges made at airports on departure of passengers, sometimes called Departure Tax, Passenger Charge, Airport Service Charge etc. and levied at a flat rate per head. There may be no charge, or a lower charge for internal flights within the country making the charges. The levy is usually justified as a means of helping to pay for the maintenance of the airport and the passenger terminal facilities, particularly in less developed countries with new or enlarged airports.

ALCABALA — Cascade taxation applied by Spain from the 14th Century, of historical interest because also applied in Spanish settlements overseas and therefore having an influence on more recent sales taxes although the alcabala itself became oppressive after successive rate increases and was abolished in most countries.

ALIENS, TAX TREATMENT — Normally RESIDENCE (q.v.) and sometimes DOMICILE (q.v.) are factors affecting the tax liability of an individual and to a lesser extent, a company. Some countries, however, use nationality as a test for some purposes, for example, the USA taxes its own citizens, resident overseas, on their world incomes, subject to a minor exclusion in the case of income earned abroad, but taxes aliens only on their income arising within the USA (for obvious reasons). Non-resident aliens are, however, entitled to fewer reliefs in respect of their US income, than non-resident US citizens. Britain provides special relief from British income tax for non-resident British subjects which is not available to non-resident aliens.

ALIMONY — The term, often somewhat loosely applied to all types of payments, whether under deed, court order, or voluntary arrangement, by one spouse to another in cases of voluntary or legal separation, or divorce. For income tax a deduction or allowance is usually granted to the payer where the payment is compulsory. Voluntary payments may entitle the payer to the same personal relief for the dependent spouse as would be accorded if they were living together. Tax liability may also arise on the recipient but normally only where the payments are compulsory.

ALLOWANCES — Reliefs, abatements, or exemptions, generally made in computing income tax and some forms of sales tax and death duties. The term 'allowance' is generally used in Britain and countries with similar tax systems, e.g., 'child allowance' is the deduction for a dependent child in Britain. In the USA the term 'exemption' is preferred.

AMALGAMATIONS AND RECONSTRUCTIONS — Capital Gains tax is commonly charged on any surplus realised from the disposal of stock or shares in a company. Where the disposal results from the 'take-over' by one enterprise of another, or from the amalgamation or reconstruction of two or more companies such that the original shareholders remain as shareholders but with shares in a different company, but with effectively the same investment as before, the event is not regarded as a disposal in the gains tax laws of some countries (e.g. Britain). Since capital gains tax is in some cases regarded as a tax on the enjoyment of realised gains in the same way as income tax is a tax on 'spendable' income, some countries do not levy capital gains tax on any realised gains which are re-invested (or 'rolled over') in any manner.

AMERICAN SELLING PRICE (ASP) — The system whereby certain goods (e.g., benzenoid chemicals for dyestuffs) when imported into the USA were assessed for customs duty on the basis of the US selling price instead of the import price. The system of using retail selling prices in the importing country as a reference point for checking the declared import price is in fact

* With the assistance of the staff of the International Bureau of Fiscal Documentation.

little used, although such a system would often be useful to the administration particularly in small countries with limited resources for evaluating imports.

AMNESTY — Special terms sometimes offered to tax evaders at a time when the government is endeavouring to erode tax evasion. The amnesty is usually offered to give evaders an opportunity of declaring past omissions, usually on the basis that they will be guaranteed freedom from prosecution. Sometimes more generous terms, such as freedom from or abatements of penalties are offered, and sometimes an amnesty is offered on the basis of "no question asked", e.g. as to the source of the assets, provided tax is paid (with or without interest or penalties) on income or assets disclosed under the amnesty terms.

AMORTISATION — In general, depreciation of intangible assets, such as patents and trademarks, is called "amortisation".

AMORTISATION METHOD — A method of computing a credit under a value added tax regime where capital goods are purchased which have a useful life in the business for a period exceeding one year. The tax embodied in the price paid for the asset may be credited to the trader over a period of years corresponding with the life of the asset. The alternative method is to allow full credit in the year of purchase — this is known as the INVESTMENT METHOD (q.v.).

ANNUAL TAX — Income tax is often referred to as an annual tax because its structure in most countries is geared to annual computations of income, and reliefs, allowances, and abatements are provided by reference to the amounts appropriate to a year in the life of an individual taxpayer having regard to his responsibilities and outgoings for an average year. In some states, Britain is an example, the constitutional position is such that income tax has to be enacted annually by Parliament to ensure its continuity as an important revenue-raiser.

ANNUAL VALUE — The concept sometimes employed to assess the tax due on some benefit which does not produce a cash income. For example, the annual value of real estate occupied by the owner which may be taxable for income tax or property tax purposes, has been defined as the rent which the property is worth to let by the year, the landlord bearing the burdens normally borne by a landlord (e.g., external repairs) and the tenant bearing the burdens usually borne by a tenant. The concept may also apply to 'fringe benefits' to a director or employee such as free use of a car or yacht the annual value of which is more usually determined by reference to the cost and rate of depreciation plus the cost of maintenance.

ANNUALISATION — Annualisation is a term used in the USA to refer to the process of computing the equivalent annual sum to the profits made by an enterprise for an accounting period shorter than a year, assuming profits are realised at the same rate for the whole year as for the actual period recorded. Such a calculation may be done on a change of accounting date (though the tax payable may be reduced to a proportion of the year's tax appropriate to the actual period of the accounts).

ANNUITY — Annuities may be divided into two classes — "life" annuities and "annuities certain". The former are similar to the pensions of retired employees and may be provided by an employer through a life insurance company or out of a contributory or non-contributory pension fund set up for the purpose. Where provision is made for retirement annuities to employees, etc., under a formal scheme, it is usual for a tax deduction to be allowed for contributions both by employers and employees which reduce the current tax payable by each. The benefits received will become taxable when they commence on retirement of the employee. An "annuity certain" is an annuity for a fixed period of years and may be purchased by the annuitant, e.g., for a lump sum cash payment. The usual tax treatment of such annuities is to separate the capital and interest elements of the annuity and charge tax only on the latter. There have also been examples of provisions being made for taxes to be paid in annuity form, the best example being the Equalisation of Burdens (capital levy) tax imposed in Federal Germany after World War II which could be paid at once or spread over 30 years with the addition of interest. The annuity method may also be used, e.g., by writers, as a method of spreading the income tax burden where a substantial sum is receivable for a particular piece of work which is of high market value. Instead of selling for a lump sum the taxpayer may arrange to receive payment over a lengthy period so as to avoid the concentration or "bunching" of his receipts into a single year when the highest personal tax rate would be payable.

ANTI-AVOIDANCE MEASURES — Measures to combat the legal avoidance of taxation occupy an increasing proportion of the sections embodied in taxation statutes. The main types of measures include those endeavouring to set aside transactions which have a tax avoidance rather than a commercial motive. The oldest of such measures are probably the provisions to aggregate the income or assets of spouses as the simplest type of avoidance would be for the spouse with the higher income or capital to transfer, or purport to do so, some income or capital to the other spouse (see also AGGREGATION). In the case of transactions between associated persons the law may seek to impose arm's length prices (q.v.) for prices determined without relation to market values, etc.

ANTI-DELINQUENCY MEASURES — Following American usage "delinquency" with regards to tax is taken to mean non-payment as distinct from legal avoidance or unlawful evasion. Tax codes commonly include specific measures to compel the payments of tax by fixed dates (subject to sums held over pending the result of objection or appeal). Among other measures there are sometimes penalties for delay in rendering or filing a tax return, and late payment of tax may be penalised by specific penalty which may be related to the amount of tax, as well as interest for the period elapsed since the due date of payment. Collection may be pursued by Court action or by distraint upon business or private assets of the taxpayer or by sequestering sums due to the taxpayer from third parties under a Garnishee Order. In addition to measures prescribed within the taxation statute itself it may also be possible to invoke provisions of the general law with regard to collection of debts.

ANTI-DUMPING DUTIES — This term applies to discriminatory duties on goods alleged to have been 'dumped' (see DUMPING) to counteract the advantage which the exporter will gain by pricing his goods below the prevailing price in his own country of the same goods, and to avoid damage to the producers in the country levying the duties, who are producing the same type of goods.

[to be continued]

Bibliography

Books.

The publications listed in this bibliography have recently been acquired by the Bureau's library which will gladly supply further information upon request (please quote the reference numbers). They should, however, be ordered through a bookseller or direct from the publisher indicated, and not through the Bureau.

AUSTRIA

DAS UMSATZSTEUERGESETZ

Nach dem Stande vom 1. März 1977. Sechste Auflage. By Karl Dollak, Johann Jodl and Rainer Kallina. Vienna, Industrieverlag Peter Linde, 1977. 342 pp., ÖS 190.—.
Sixth revised edition of a textbook on the Austrian Turnover Tax Law. An introductory comment, the texts of Regulatory Ordinances and Ministerial Rulings are included as well. The book is updated as per March 1, 1977. (B. 100.319)

BELGIUM

SUCCESSIERECHT

Deel I, II en III. By O. van Acoleyen. Brussels, Fiscale Hogeschool, 1976. 515 + 482 + 370 pp., Bfrs. 3,600.—.
Handbook explaining the Belgian death duty in three bound books. The first two books contain the detailed treatise and the analysis of death duty, in particular, with cross references and footnotes. Historical review of the death duty as a kind of tax is considered. Comparison with the death duties levied in the neighbour countries of Belgium is included. The third book contains only the footnotes. (B. 100.275)

CANADA

CHARGING FOR PUBLIC SERVICES

A new look at an old idea. By Richard M. Bird. Toronto, Canadian Tax Foundation, 1976.
Canadian Tax Papers, December 1976, No. 59. 270 pp., CAN$ 7.—. (B. 100.290)

THE NATIONAL FINANCES 1976-77

Toronto, Canadian Tax Foundation, 1977.
272 pp., CAN$ 5.50.
An analysis of the revenues and expenditures of the Government of Canada. (B. 100.289)

COMMON MARKET (E.E.C.)

COLLECTION IMPOTS SUR LE REVENU ET SUR LES SOCIETES

Le régime fiscal des plus-values dans la C.E.E. By Pierre Fontaneau. Nice, Les Cahiers Fiscaux Européens, 1977.
Loose-leaf publication containing comparative study on the capital gain taxation in the member countries of the European Communities. (B. 100.335)

ECUADOR

LEY DE IMPUESTO A LA RENTA Y REGLAMENTO

9th Edition. Quito, Corporación de Estudios y Publicaciones, 1977. 182 pp.
Updated version of the Income Tax Law and Regulations in Ecuador issued in January 1977. (B. 15.629)

EUROPE

THE EUROPA YEAR BOOK 1977

A world survey. Volume I: International Organizations, Europe (including the U.S.S.R. and Turkey). London, Europa Publications, Ltd., 1977. 1457 pp., £ 40.— the set.
The first volume of a two volume edition covers international organizations and the countries of Europe. With its companion volume II, which deals with the countries of Africa, the Americas, Asia and Australia, it provides information on the political, economic, commercial and social institutions of the countries of the world. The publication is annually revised. (B. 100.318)

MEHRWERTSTEUER IN EUROPA

Mindelheim, Verlag W. Sachon, 1976. 346 pp. Second publication in the series "Mehrwertsteuer in Europa" (Value Added Tax in Europe) explaining the value added tax systems in Belgium, the Netherlands and Luxembourg with emphasis on exports to these countries. Text of the law is appended. (B. 100.314)

FRANCE

LAMY FISCAL

Tome I: taxes sur le chiffre d'affaires, enregistrement et timbre, taxes sur les véhicules, fiscalité immobilière. Tome II: impôts directs, taxes diverses, impôts locaux, contrôle, contentieux, pénalités. Paris, Lamy S.A., 1977. 708 + 1027 pp.
Annual publication containing an extensive explanation of the French tax legislation; supplements are issued regularly in order to keep the two volumes up to date. (B. 100.323)

STEUERN IN FRANKREICH

By Reinhard Pöllath and Albert J. Rädler, Cologne, Verlag Dr. Otto Schmidt, 1976. Erweiterte deutsche Fassung von "Les Impôts en France", Editions Francis Lefebvre.
German version of the French monograph "Les Impôts en France" by Claude Gambier and Yann Kergall. It is extended by an explanation of the tax aspects arising from the German-French business relation and as viewed in connection with the double taxation treaty between the two countries. (B. 100.322)

GERMAN FEDERAL REPUBLIC

BEWERTUNG DES GRUNDVERMÖGENS

Bewertungsgesetz mit Richtlinien zur Bewertung des Grundvermögens, Grundsteuergesetz mit Grundsteuer-Richtlinien, weitere Gesetzesauszüge und zahlreiche Anlagen. Stand 1.1.1977. Düsseldorf, IdW-Verlag, 1977. 363 pp., DM 30.—.
Text of relevant statutes for purposes of the valuation of and the tax on real property. (B. 100.331)

GRUNDSÄTZE ORDNUNGSMÄSSIGER BILANZIERUNG FÜR FORDERUNGEN

2., unveränderte Auflage. By Wolf Schäfer. Düsseldorf, IdW-Verlag, 1977. Schriften der Schmalenbach-Gesellschaft, Band 3. 155 pp., DM 25.—.
Study of the rules of proper commercial accounting with the emphasis on claims. The present work forms part of a series which studies the basic principles of drafting the balance-sheet in a regular way. (B. 100.334)

INDIVIDUALBESTEUERUNG ODER HAUSHALTSBESTEUERUNG UNTER BESONDERER BERÜCKSICHTIGUNG DES EHEGATTEN-SPLITTING

By Volkar G. von Obstfelder. Frankfurt—Bern, Peter Lang—Herbert Lang, 1976. Schriftenreihe des Sozialökonomischen Seminars der Universität Hamburg, Band 4. 268 pp.
Thesis on individual income tax or taxing the family unit with emphasis on the splitting system of married persons. (B. 100.320)

PRÜFUNGEN ANLÄSSLICH DER GRÜNDUNG, UMWANDLUNG, FUSION UND BEENDIGUNG VON UNTERNEHMUNGEN

By Friedrich Wilhelm Selchert. Düsseldorf, IdW-Verlag, 1977. 318 pp., DM. 60.—.
Study on the foundation, reorganization, merger and liquidation of enterprises from a point of view of business management and company law, which may be considered a guide-line for entrepreneurs in times of economic recession. (B. 100.227)

STEUERBERATER-JAHRBUCH 1976/77

Edited by Franz Hörstmann, Ursula Niemann and Gerd Rose. Cologne, Otto Schmidt Verlag, 1977. 528 pp., DM. 82.—.
Proceedings and lectures of the 28th congress of the German tax consultants held in 1976. Congress topics, inter alia, deal with the legal form of enterprises under the corporate income tax reform law, detailed questions of the corporate income tax reform law, recent case law with respect to profits taxation of companies, loss compensation in the case of international relations, and problems of international tax law. An extensive index is appended. (B. 100.254)

UNTERNEHMENSFORM NACH MASS

Ein kritischer Vergleich für die Praxis. 2. Auflage. By Hugo Zartmann and Peter Martin Litfin. Stuttgart, Forkel Verlag, 1977. 640 pp.
Second revised edition of a comparative study on the economical, commercial and fiscal aspects of the legal form of enterprises. (B. 100.276)

STEUERLICHER RATGEBER FÜR APOTHEKER

By Helmut Schuhmann. Stuttgart-Wiesbaden, Forkel Verlag, 1977. 263 pp.
Advisory book with respect to tax obligations of pharmacists. Tax laws discussed include the Fiscal Code, the Income Tax Law, the Trade Tax Law, the Turnover Tax Law and some other laws. An extensive index is appended. (B. 100.321)

STEUERRECHT

Ein systematischer Grundriss. 4. völlig überarbeitete und erweiterte Auflage. By Klaus Tipke. Cologne, Verlag Dr. Otto Schmidt, 1977. 534 pp., DM 42.—.
Fourth revised and extended edition of tax law compendium describing and analyzing the global tax law in the Federal Republic of Germany with references to literature and case law. Attention is paid to the new Fiscal Code and the new Corporation Income Tax Reform Law. (B. 100.326)

DIE VERANLAGUNG ZUR EINKOMMENSTEUER FÜR 1976

Einkommensteuergesetz, Durchführungsverordnung und Richtlinien, Anlagen, Rechtsprechung, Nebengesetze, Einkommensteuern-Tabellen, Stichwortverzeichnis, Düsseldorf, IdW-Verlag, 1977. 1014 pp., DM 31.—.
Annual guide for purposes of filing individual income tax return for 1976 assessment year. Relevant text of statutes is appended. (B. 100.332)

DIE VERANLAGUNG ZUR UMSATZSTEUER FÜR 1976

Umsatzsteuergesetz, Verordnung zur Durchführung des UStG, Erlasse, Verfügungen, Rechtsprechung, Nebengesetze u.a. Berlin Förderungsgesetz, Stichwortverzeichnis. Düsseldorf, IdW-Verlag, 1977. 1194 pp., DM 40.—.
Annual guide for purposes of filing turnover tax return for 1976 assessment year. Relevant text of statutes is appended.
(B. 100.333)

DIE VERMÖGENSTEUER-HAUPTVERANLAGUNG 1977

Bewertungsgesetz und Vermögensteuergesetz, Durchführungsverordnungen, Vermögensteuer-Richtlinien 1977, Erbschaftsteuergesetz, Aussensteuergesetz, Entwicklungsländer-Steuergesetz, zahlreiche Anlagen, Stichwortverzeichnis. Düsseldorf, IdW-Verlag, 1977. 516 pp., DM 26.—.
Triennial guide for purposes of filing the net worth tax return for the so-called 1977 main assessment. Relevant text of statutes is appended. (B. 100.330)

INDIA

FIELD'S LAW RELATING TO BURDEN OF PROOF IN CIVIL, LABOUR, COMMERCIAL, REVENUE, TAXATION AND CRIMINAL CASES

Second edition 1974. By T.L.V. Aiyar. Allahabad, Law Publishers, 1974. 1125 pp.
Revised second edition on law relating to the burden of proof including about 90 pages comment on the burden of proof under taxation laws. (B. 50.745)

SRINIVASAN'S COMMENTARIES ON HINDU SUCCESSION ACT AND RELATED INCOME-TAX LAW ALONG WITH GENERAL PRINCIPLES OF INHERITANCE

Second edition 1976. Revised by B. Malik and R.B. Sethi. Allahabad, Law Publishers, 1976. 726 pp.
Monograph concerning sectionwise comment on Hindu Succession Law and the related field in income tax law with reference to case law. (B. 50.746)

INDONESIA

HIMPUNAN KEPUTUSAN MENTERI KEUANGAN DI BIDANG PERPAJAKAN

Tahun pertama pelita I sampai dengan Maret tahun 1976. Jakarta, Berita Pajak, 1976. 811 pp.
Collection of tax regulations promulgated by the Minister of Finance during the First-Five Year Plan 1969 and up to and including the first quarter of 1976. The tax regulations are in chronological order. (B. 50.732)

IKHTISAR KEPUTUSAN MENTERI KEUANGAN DI BIDANG PERPAJAKAN

Tahun pertama pelita I sampai dengan Maret tahun 1976. Jakarta, Berita Pajak, 1976. 130 pp.

BUSINESS AND INDUSTRY ADVISORY COMMITTEE TO O.E.C.D. (B.I.A.C.)

Capital markets in South-East Asia. General report. Paris, Mission to South-East Asia, 1973. 68 pp.
General report to the Compendium to B.I.A.C. report on capital markets in South-East Asia. (B. 50.734)

COMPENDIUM TO B.I.A.C. REPORT ON CAPITAL MARKETS IN SOUTH-EAST ASIA

Paris, Mission to South-East Asia, 1973. 152 pp.
Study report on capital markets in South-East Asian countries. General economic information of the five ASEAN countries (Thailand, Singapore, Malaysia, Indonesia and the Philippines), Taiwan, Hong Kong and Japan are covered in this study. (B. 50.733)

SWEDEN

SKATTE- OCH TAXERINGSFÖRFATTNINGARNA 1977

Sådana de lyder den 1 Januari 1977. Stockholm, Liber Förlag, 1977. 555 pp.
Text of Swedish tax laws as of January 1, 1977. (B. 100.272)

SWITZERLAND

O.E.C.D. ECONOMIC SURVEYS: SWITZERLAND

Paris, Organisation for Economic Co-operation and Development, 1977. 62 pp., Fr.Frs. 10.—. (B. 100.274)

UNITED KINGDOM

THE BUDGET 1977

CBI representations to the Chancellor of the Exchequer. London, Confederation of British Industry, 1977. 36 pp., £ 1.50.
This publication sets out the views which the Confederation of British Industry has expressed to the Chancellor of the Exchequer in relation to the forthcoming Budget (29 March 1977) and Finance Bill. (B. 100.262)

CAPITAL TRANSFER TAX STATUTES 1976-77

Edited by A.L. Chapman. Croydon, Tolley Publishing Co., Ltd., 1977. 345 pp., £ 5.25.
Annotated and cross-referenced text of the capital transfer tax and related legislation published. Full texts of double taxation treaties in respect of death duties concluded by the United Kingdom with other countries are appended. (B. 100.255)

CAPITAL TRANSFER TAX TABLES 1977

Second edition; including grossing of tax free legacies and transitional relief for discretionary settlements. London, Butterworth & Co., 1977. 28 pp., £ 2.—. (B. 100.298)

CURRENT ACCOUNTING LAW AND PRACTICE 1977

By Robert Willott, London, Sweet & Maxwell, 1977. 565 pp., £ 9.50.
Second edition of a combination consisting of an easy reference, a source and a textbook. It deals with each accounting topic in alphabetical order in the Digest section. The statute section contains text for each accounting item, section C the case law, section D contains accounting standards and section E deals with a variety of other source documents (including exposure drafts, stock exchange requirements and overseas publications). (B. 100.338)

GROWTH AND CONTROL OF PUBLIC EXPENDITURE

London, The Institute for Fiscal Studies, 1976. 40 pp.
Published text of contributed papers by various authors to a one-day conference in March 1976 convened by the Institute for Fiscal Studies and the Chartered Institute of Public Finance and Accountancy on the subject Public Expenditure. (B. 100.250)

INCOME TAX

Including corporation tax and capital gains tax. 9th Edition. By Henry Toch. Plymouth, MacDonald & Evans, Ltd., 1976. 196 pp.
Text handbook for accounting students preparing for examinations on tax law. Questions and answers thereto are appended. (B. 100.232)

KEY TO CAPITAL TRANSFER TAX

Finance Act, 1976 edition. By K.R. Tingley. London, Taxation Publishing Company, Ltd., 1976. 334 pp., £ 4.25.
Annual updated edition of reference handbook on the capital transfer tax as in force on March 1, 1977. (B. 100.316)

SELF-ASSESSMENT FOR INCOME TAX

By N.A. Barr, S.R. James and A.R. Prest. London, Heinemann Educational Books, 1977. 218 pp., £ 7.50.
Study analyzing the income tax systems in the United Kingdom, the U.S.A., Canada and Sweden followed by arguments for and against self-assessment. The authors conclude in favour of a phased introduction of a system of self-assessment into the United Kingdom. (B. 100.317)

SERGEANT AND SIMS ON STAMP DUTIES AND CAPITAL DUTY

Seventh edition. By B.J. Sims and A.K. Tavaré. London, Butterworth & Co., 1977. 644 pp., £ 26.—.
Handbook on United Kingdom stamp duties and corporate capital duty. Texts of the laws and related acts imposing or relating to stamp duties are appended. The law is stated as of September 30, 1976. (B. 100.292)

TAXATION AND INCENTIVES

London, The Institute for Fiscal Studies, 1976. 45 pp.
Papers reproduced which were presented at a one-day conference on incentives to work convened by the Institute for Fiscal Studies. (B. 100.229)

TAXATION MANUAL

Income Tax; law and practice. 13th Edition. By A.L. Chapman and Percy F. Hughes. London, Taxation Publishing Company, Ltd., 1977. 728 pp., £ 9.—.
Revised and extended edition of manual on individual income tax laws. (B. 100.285)

UNITED KINGDOM TAXATION. OFFSHORE OIL AND GAS

A Bank of Scotland Information Service. Edinburgh, Bank of Scotland, 1976. 19 pp. (B. 100.296)

U.S.A.

THE EFFECT ON U.S. FOREIGN DIRECT INVESTMENT OF THE INTEGRATION OF THE CORPORATE AND PERSONAL INCOME TAXES

By James A. Griffin. Washington, Office of Tax Analysis, U.S. Treasury Department, 1977. OTA Paper 22, March 1974. 50 pp. (B. 100.313)

INCOME TAX REGULATIONS AS OF JULY 8, 1976

"Final" and "Proposed" under Internal Revenue Code. 3 Volumes. Chicago, Commerce Clearing House, Inc., 1976.
Income tax regulations in three volumes issued by the Treasury Department, explaining in detail the meaning and application of each section of the Internal Revenue Code. (B. 9880)

INFLATION AND THE TAX STRUCTURE

By Harvey Galper and John Mendenhall. Washington, Office of Tax Analysis, U.S. Department of the Treasury, 1976. OTA Paper No. 19, November 1976. 36 pp. (B. 100.248)

LE REGIME FISCAL APPLIQUE PAR LES ETATS-UNIS D'AMERIQUE AUX REVENUS DES INVESTISSEMENTS EFFECTUES DANS LES PAYS EN DEVELOPPPEMENT

New York, United Nations, 1976. 110 pp., $ 4.—.
Revised edition of study on taxation by the U.S.A. of income from United States private investment in developing countries. An English version is available. (B. 100.310)

REPORT ON U.S. EXPERIENCE ON INFLATION AND THE TAX STRUCTURE

By Harvey Galper, John Mendenhall and Michael Kaufman. Washington, Office of Tax Analysis, U.S. Treasury Department, 1977. OTA Paper 19 revised, February 1977. 30 pp.
(B. 100.312)

STUDIES IN PROPERTY TAXATION

Analyzing assessment equity; techniques for measuring and improving the quality of property tax administration. Proceedings of a symposium conducted by the IAAO Research and Technical Services Department in cooperation with the Lincoln Institute of Land Policy. Cambridge, International Association of Assessing Officers, 1977. 215 pp.
Text of papers presented at a symposium held in Cambridge, April 26-27, 1976. (B. 100.149)

TAX NEUTRALITY BETWEEN CAPITAL SERVICES PROVIDED BY LONG-LIVED AND SHORT-LIVED ASSETS

By F.M. Sunley. Washington, Office of Tax Analysis, U.S. Treasury Department, 1976. OTA Paper No. 10, February 1976. 17 pp.
Study paper focussing on two criteria for a neutral tax incentive (or disincentive) for investment. (B. 100.139)

PRENTICE~HALL,INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

Prentice Hall Announces:

The most strikingly different new tax guide ever published for taxpayers with income from foreign sources.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Continuously Supplemented. . . . . Always Up - to - Date

This outstanding new Service is created specifically to help save money for:

U.S. INDIVIDUALS
with investments and/or earned income from a foreign source

U.S. CORPORATIONS
with income from foreign sources

FOREIGN CORPORATIONS
with income earned or taxable in the U.S.

NONRESIDENT ALIENS
receiving income from, or taxable in the U.S.

If you fit any of these categories — or if you counsel, advise, or in any way service any of these categories — U.S. TAXATION OF INTERNATIONAL OPERATIONS will be an invaluable new tool for you.

It will deliver management benefits — operations benefits — tax benefits.

In clear, direct language, backed up by practical, tested practices of acknowledged experts in international business operations, the new work spells out how the taxpayer can best take full advantage of every popular, every sophisticated, and every little-known tax-saving device.

Authoritative, specific guidance from one source devoted exclusively to this kind of vital help has been non-existent — until now.
With the first 1972 publication of the innovative U.S. TAXATION OF INTERNATIONAL OPERATIONS this important need is now fulfilled. And bi-weekly "Report Bulletins" will keep the guide as new and up to the minute as the day you receive it.

Personal response to this new publication has been even more enthusiastic than our most optimistic projections. Subscriptions are now being accepted by mail for $ 186 a year.

Address your request to Dept. S-RR-103, Prentice-Hall Inc., Englewood Cliffs, N.J. 07632 and specify U.S. TAXATION OF INTERNATIONAL OPERATIONS, 1-year introductory charter subscription.

Annual payment is not due until 20 days after receipt of the new, ready-for-reference volume.

TAIWAN'S LAND TAX POLICY

by George E. Lent *

Perhaps no country has been more influenced by the land tax philosophy of Henry George than the Republic of China. Taiwan's land value tax (LVT) and land value increment tax (LVIT) can be traced directly to the principles for "equalization of land rights" declared by Dr. Sun Yat-sen, the founder of the Republic, who is known to have been a disciple of George. [1] *Dr. Sun's principles were promulgated in the Land Law of 1930, but this law was not introduced in Taiwan until 1945, when it reverted to Chinese rule.* [2]

The Land Law is a comprehensive plan for the implementation of Dr. Sun's principles for equalization of land rights, of which the land taxes comprise only one part (Part IV). Other sections deal with the principles of land rights and limitations on land ownership, procedures for land registration and cadastral survey, general rules for land utilization, and conditions and procedures for land expropriation. It is significant that land taxation forms an integral part of Taiwan's land policy, which is under the direction of the Ministry of Interior Affairs. The Ministry of Finance is charged only with collection of the tax, although it plays an important role in the formulation of land tax policy. A separate Statute for Equalization of Urban Land Rights was enacted in 1954; this supplements the Land Law and clarifies its application to urban property.

Although Dr. Sun inspired Taiwan's approach to the taxation of land, the measures enacted departed in many respects from his announced views. Moreover, the LVT and LVIT are limited to specified urban areas; a rural land tax (RLT) based on presumptive yields is enforced in areas not subject to the LVT, and a separate "house tax" is assessed on the value of improvements in both areas. The system is more complex than the usual references to it would suggest and it has raised many problems both of design of particular taxes and of their interrelationship. The relative importance of these four real estate taxes is shown by their revenue in the fiscal year 1975:

	Revenue (millions of NT$)	*Percentage of total tax revenue* [3]
Rural land tax	*2,179.7*	*2.2*
Land value tax	*1,438.1*	*1.5*
Land value increment tax	*2,616.5*	*2.7*
House tax	*2,896.2*	*3.0*
	9,130.5	*9.4*
Total tax revenue [4]	*96,939.3*	*100.0*

The main purpose of this paper is to examine the role of Taiwan's land taxes as an instrument of land policy.

TABLE OF CONTENTS

I. THE LAND VALUE TAX
1. Tax base and rates
2. The progressive rate structure
3. Preferential rate policy
a. Tax treatment of homeowners
b. Factory sites and industrial estates
4. Special surtaxes
a. Absentee landowners
b. Vacant land tax
5. How effective are land value taxes?

II. THE LAND VALUE INCREMENT TAX
1. Progressive features of the LVIT
2. Tax treatment of homeowners and factories
3. Tax treatment of gifts and bequests
4. Valuation problems

III. COORDINATION OF LAND TAX POLICY
1. Relationship to rural land tax
2. Taxation of improvements — the house tax

IV. CONCLUSIONS
1. The Land Value Tax
2. The Land Value Increment Tax
3. Coordination of land tax policy

Abbreviations used in this article:

LVIT - Land value increment tax
LVT - Land value tax
PSV - Progressive starting value
RLT - Rural land tax

I. THE LAND VALUE TAX

Although the amended Land Law of 1945 introduced a tax on the value of all land in Taiwan, its implementation was delayed until 1950. Taiwan had been under Japanese rule for 50 years and the period following retrocession, 1945-50, was marked by serious internal conflict which culminated in the relocation of the Government of the Republic of China to Taipei. At that time only the traditional rural land tax was in effect; this was based on an elaborate system of land classification that reflected agricultural productivity, and its transformation to a land value system posed serious difficulties. The LVT was enforced initially in 88 cities; instead of following the valuation procedures prescribed by the Land Law it was based on transfer values under the Japanese occupation adjusted for price increases. The Statute for Equalization of Urban Land Rights, enacted in 1954, superseded the Land Law and limited the LVT system to specified urban areas. Its tax provisions conformed in most respects to those of the Land Law.

1. Tax base and rates

The LVT is levied at progressive rates on the value of all land that is held by a landowner within the city planning area of a prefect (*hsien*) or special municipality. The law requires the landowner to declare the value of his taxable land; unless this is within 20 percent of the market value, the Government has the authority either to fix the value or to purchase the land at the declared value. In practice, official assessments are made every three years if land values have increased 50 percent or more; these are submitted to the landowner as the basis for his declaration, most of which are accepted at 80 percent. [5]

The progressive rate structure is based on multiples of the so-called progressive starting value (PSV) in each of 21 jurisdictions (Taipei, four cities, and 16 *hsien*). The PSV is the average value of seven ares of land in each jurisdiction (1 are = 100 square meters). Rate brackets start at 1.5 percent of the first PSV and increase for each 500 percent of PSV to a maximum of 7.0 percent:

Aggregate land value:	
Not in excess of PSV	1.5
100- 500 percent of PSV	2.0
500-1,000 percent of PSV	3.0
1,000-1,500 percent of PSV	4.0
1,500-2,000 percent of PSV	5.0
2,000-2,500 percent of PSV	6.0
over 2,500 percent of PSV	7.0

Preferential treatment is given to owner-occupied residential land of up to three ares, which is taxed at 0.7 percent; factory sites are taxed at the standard 1.5 percent rate; agricultural zones and green belt areas are subject to a uniform rate of 1 percent of declared value; and urban land in the enforcement zone that is in agricultural use is taxed at 1.5 percent of declared value. Penalty rates are imposed on vacant land and on land owned by a non-resident of the *hsien* where it is located.

2. The progressive rate structure

The most notable feature of the LVT is its graduated rate structure based on the total value of property of a landowner in each jurisdiction. In this respect the tax departs from the repeated statements of Dr. Sun that the rate should be a flat 1 percent or 2 percent. [6] Rates graduated with the size of land holdings serve both equity and social objectives of the state; these are based both on the desirability of limiting the acquisition and control of land, for speculative and other reasons, and the fact that the value of landholdings reflects ability to pay taxes. Since the incidence of land taxes is on the landowner, their graduation can be justified on much the same grounds as income taxes are graduated. Although no account is taken of debt incurred to finance land acquisitions, the landowner is thereby under further constraint to limit holdings; he will acquire additional land only to the point where the marginal cost (including taxes and cost of capital) equals the expected return on investment, including appreciation in the value of the land, less recapture by the LVIT upon its sale.

Data for the financial year 1974 show that about 43 percent of all LVT revenue was from land assessed at more than the 1.5 percent basic rate (Table I); of this, however, about one half was subject to the lower marginal rates of 2.0 percent to 3.0 percent, mostly at 2.0 percent. Most significant was the concentration in the 7.0 percent marginal rate bracket, which accounted for 16.6 percent of total LVT revenue, at an average rate of 5.4 percent.

Further analysis of landowners subject to marginal rates of 4.0 percent to 7.0 percent discloses that 87 percent was paid by 514 public and private corporations, 3 percent by 56 ancestral worship foundations, and only 10 percent by 302 individuals. The total area owned by these holders accounted for 5.5 percent of all privately-owned urban land subject to the LVT. This concentration in the hands of corporations raises an important question of whether the graduated tax can be defended by the principles indicated above. Has the tax, indeed, successfully limited land holdings of individuals, as the small number of taxpayers in the higher tax brackets suggest? Can progressivity be justified for corporate and foundation investments?

Because of the ease with which property can be transferred to members of the family, the above data undoubtedly conceal the extent of concentration in private ownership. [7] Transfers of land subject to the LVT are not assessed the 7.5 percent deeds tax, and until 1973 gifts were not liable for the LVIT. Moreover, not all urban land is covered by progressive rates; agricultural land lying within the urban enforcement area is taxed at a fixed 1.5 percent of declared value if it

5. About two thirds of the landowners in Taipei declared 8[illegible] percent of the 1974 values announced by the Land Department; the rest declared the announced or greater values.

does not exceed the announced value, and other agricultural land, including that within a city's administrative area, is taxable under the rural land tax. The LVT, therefore, will not become fully effective in equalizing urban land rights until these escape hatches are tightened.

The question of applying graduated rates to corporate land ownership deserves special attention, especially for commercial properties such as hotels, office buildings, and apartments located in high rent areas. A further classification of taxpayers in Taipei shows that nonprivate companies account for the preponderance of the tax at higher graduated rates, especially the 7 percent marginal rate; in fiscal 1975 they paid 81.5 percent of the LVT of corporations subject to this rate. These are quasi-government businesses, including those owned by the Nationalist party, which have extensive land investments. Although the usual principles of progressive taxation are not generally applicable to corporate bodies, they would appear to be no less subject to the control function of land taxes that is intended to equalize urban land rights. Moreover, the form of organization in which land is held would not be an equitable basis for discrimination in respect of such a tax.

One important consideration that militates against the replacement of graduated rates by a flat rate — advocated by some [8] — is the redistribution of the tax burden it would entail. If the present graduated rate structure were replaced by a flat rate system that yielded the same revenue, the burden on a few taxpayers now subject to higher rates would be reduced, while virtually all others would pay higher taxes. For example, a 2 percent rate, as against the 1974 average rate of 1.7 percent, would increase by about one third the average LVT on all but fewer than 2,000 taxpayers, and reduce it by about 45 percent on the small number now subject to a higher rate. As a result, the tax reduction would be capitalized in higher land values for many of these wealthier taxpayers, and they would enjoy a windfall gain.

If progressive taxation of urban property is to be retained, the present graduated rate structure based on multiples of the PSV in each *hsien* should be reformed. It is difficult to justify widely different property tax burdens on the same value of property in different *hsien* except on the basis of differences in the value of municipal services provided — which is not the case. For example, because the 1975 PSV in Taipei is five times that in Taichung, land in Taipei valued at NT$10 million is taxed at less than half the rate on the equivalent value in Taichung (2.0 percent vs. 4.2 percent).

Progression, in principle, should be based on the cumulative value of land holdings of each person in Taiwan. This would require a standard PSV for the entire country. Such a rate system, however, would result in serious revenue losses for all *hsien* whose present PSVs are less

8. See, for example, C. Lowell Harriss, *Land Policy, Land Taxation, and Economic Development, a Report on Land Taxes of the Republic of China* (Taipei, September 1971).

than the average, and would greatly increase revenues for municipalities such as Taipei, Kaohsiung, and Keelung that have very high PSVs (NT$1,880,000, NT$1,125,000, and NT$1,091,000, respectively). There does not appear to be any easy solution to this dilemma. One possibility is to nationalize the land tax revenues (now shared 20 percent with the provincial government) and to redistribute them to the municipalities and *hsien* on the basis of some formula related to assessed values in each prefecture. This would have the effect of increasing land value taxes in the wealthier cities such as Kaohsiung, Keelung, and Taipei, in order to support the less affluent local governments.

3. Preferential rate policy

As was indicated above, land tax policy is characterized by considerable rate differentiation that is intended to implement land policy objectives. Preferential rates are provided to encourage homeownership, industry, and greenbelt areas. Agricultural land located within urban planning areas, also given special tax treatment, is discussed separately below in connection with the rural land tax. The total area of this privately owned land, summarized below, comprises about one third of all taxable urban land area, and its assessed value accounts for more than one quarter of total assessed values:

	Number of taxpayers	*Area (hectares)*	*Assessed value (millions of NT$)*	*Tax rate*
Agricultural and greenbelt	13,010	531	753.4	1.0
Urban agricultural land	30,903	1,400	6,093.0	1.5
Factory sites	2,560	2,654	5,556.4	1.5
Industrial estates	468	517	441.6	1.5
Residential land	169,534	2,121	9,285.5	0.7
Total	216,475	7,223	22,129.9	
Grand total	868,151	22,089	83,000.0	

a. Tax treatment of homeowners

Homewoners are taxed at a rate of 0.7 percent on up to three ares of land — less than half the standard 1.5 percent rate. The principal rationale for such preferential treatment apparently is the encouragement of homeownership. However, the value of the lower rate to the average homeowner is minimal and is not likely to play more than a marginal role in the decision to own a home. In 1974 the average area per occupier of residential land was only 1.25 ares and the average LVT paid was NT$383 (equivalent to US$10). If the standard 1.5 percent rate were applied, the average tax would have been increased to only NT$820. Because of the great number of homeowners, however, LVT revenue in FY 1974 would have been increased by NT$88.4 million, an increase of 6.3 percent in total LVT revenue.

b. Factory sites and industrial estates

Considerably greater area is devoted to factory sites that are not subject to graduated rates. In 1974 there were 2,560 separate sites with an assessed value of NT$5.6 billion, in addition to 468 sites in industrial estates assessed at NT$0.4 billion. While the amount of taxes saved is not known, much of the land otherwise would have been subject to rates of up to 7.0 percent. Even assuming a modest average rate of 3.0 percent, the tax savings in 1974 would have been about NT$46.5 million.

A serious question can be raised, in principle, about the tax discrimination inherent in such preferential treatment. It can be understood only in the context of Taiwan's push for industrialization that has cost many times this revenue in income and other taxes foregone. Whether the tax concessions were justified by the results cannot be answered easily; but it is doubtful if such remissions of property taxes played more than a very minor role in the decision to undertake the manufacturing venture.

4. Special surtaxes

Other land policy objectives are seen in penalty rates that are imposed on absentee owners and on vacant land.

a. Absentee landowners

Lands owned by absentee landowners are taxed at double the rate otherwise payable. [9] In 1974 there were 4,057 absentee owners of 103 hectares, who paid NT$7.2 million in surtax. The relatively small area and revenue — 0.5 percent of the total — suggests that absenteeism is insignificant. It is not known, however, how well this penalty is administered, and it would be a relatively simple matter to escape the penalty by arranging for resident nominees to hold the land. In any event, it is not clear what useful purpose is served by this provision. It may reflect a common prejudice against absentee ownership of agricultural land that was carried over to the urban sector; or it might be seen as a compensatory tax on the division of property between two or more *hsien* so as to avoid graduated rates. Nevertheless, it is difficult to defend such a tax in a modern industrial society that depends on the mobility of capital within a country for its development.

b. Vacant land tax

The Equalization of Urban Land Rights Act imposes a surtax of not less than 200 percent or more than 500 percent on any private land that has been designated as a building site but has not been used for this purpose. Vacant land includes sites where the value of improvements is less than 10 percent of the declared value of the land. The law provided for the implementation of the tax in two stages, with priority given to unimproved land. Owners of vacant land were given three years (two years in Taipei city) to improve it; starting one year later, owners of underimproved land were given five years (one year in Taipei city) to alter, extend, or to reconstruct the building.

The tax on vacant land has had an uncertain life since its introduction in 1968. Following the introductory grace

9. Absentee owners are persons whose legal residence is in a *hsien* or municipality other than where the land is located.

period, revenue reached a peak of NT$21.6 million in 1973 when the tax was suspended because of the shortage of construction materials, and revenue dropped to zero by 1975. During this period the surtax is said to have induced about 50 percent of the landowners notified to improve their land within the prescribed time. [10]

Its limited application can be seen in the relatively small area to which it was applied — only 102.6 hectares by the beginning of 1974, which comprised less than 1 percent of all the land area covered by the LVT.

While justified in principle as an instrument to encourage better land utilization and to deter speculation, it is doubtful if the tax on vacant land was applied vigorously enough to achieve its purpose. The penalty tax appears to have been imposed at the lower end of the permissible scale — 200 percent — as the average rate in 1973 was 3.3 percent. In view of the underassessment of land values and the sharp rise in land prices, this rate could hardly have spurred new construction. In order to make the tax truly effective much higher penalty rates would have been necessary. [11] The three-year waiting period also provides too generous opportunities for speculative gains.

5. How effective are land value taxes?

In 1973, all land value taxes averaged about 1.8 percent of assessed values; the 1974 average rate was about 1.7 percent. However, there is a wide variation in effective rates, with homeowners paying only 0.7 percent and owners of factory sites and agricultural land paying 1.5 percent, the basic rate. About 20 percent of the revenue received from privately owned property was paid by individuals and corporations subject to the 7 percent marginal rate, whose LVT averaged about 6 percent of assessed values. The effectiveness of the LVT in achieving its announced land policy objectives, however, depends on its relationship to current market values. In this respect the LVT has fallen far short of its objectives, since assessments have lagged greatly behind market values. Only one reassessment was made between 1964 and 1974 when new values were declared, and the 1974 revaluation represented an increase of 150 percent over December 31, 1973 assessed values. [12] Even the new 1974 assessed values were estimated at some 85 percent of market values, and in Taipei about two thirds of the property owners declared values equal to 80 percent of the official estimates. It is likely, therefore, that the assessed values for 1974 represented no more than 70-75 percent of current market value.

It would appear from these estimates that the LVT for the fiscal year 1975 averaged no more than 0.5 percent of the market value of land. This ratio will, of course, decline over the next three years until a new assessment is made. The Government announced a 40 percent reduction in tax rates for 1976, with the result that the average tax rate on market values of land will drop to appreciably less than the 0.5 percent estimated above because of continually rising real estate values. This low ratio suggests that land vaue taxes are greatly below their potential and fall far short of the role envisioned for them by Dr. Sun Yat-sen. In view of the rapid appreciation in land values that has taken place over the last decade, tax rates of this level could have had negligible effects on land ownership decisions. [13]

II. THE LAND VALUE INCREMENT TAX

The LVIT originated in the far more revolutionary principle of Equalization of Land Ownership that formed part of Dr. Sun's Principle of Peoples' Livelihood. This was based on his belief that increases in the value of land were created by the community, through no effort of the landowner, and that the state should appropriate any increment in its value realized at the time of its transfer. He proposed that the value of land declared by the owner should be fixed indefinitely as the basis for any compensation on its disposal; all transactions in land would be settled through a state agency that would retain any payment in excess of this declared value.

The framers of the Land Law did not accept these proposals but enacted instead a tax on the increment in value of land realized at the time of its transfer; if land was not transferred within a period of ten years or within five years of the completion of construction in the area, the tax would also be applied on any increase in value. The Equalization of Urban Land Rights Act, 1954, however, significantly modified the Land Law. It limited the tax to increments in price over 1954 values on sales of land located within urban areas subject to the LVT. No tax was applied to unrealized increments on transfers by gift or inheritance, or to increases in value over a five-year or ten-year period. By 1964 land values set in 1954 had become unrealistic and new values were declared on the basis of new assessments. An amendment to the Act also authorized annual adjustment of these 1964 values for price changes.

1. Progressive features of the LVIT

The rate structure of the LVIT deserves special attention because of the nature of its graduation. Rather than being based on the absolute size of the increment, tax rates vary with the percentage increase in the increment over 1964 values or the previous sales price after 1964. Initially, they ranged from 30 percent on increments of less than 100 percent and increased by 20 percentage points for each succeeding 100 percent increment until they reached 100 percent on all increases over 400 percent of the original value. Successive amendments have

12. The assessed value of urban land subject to the LVT was raised from NT$82,176.7 million to NT$205,753.0 million as at December 31, 1974.
13. Land values in Taipei increased at an average annual rate of 22.8 percent between 1964 and 1974; adjusted for changes in the general price level, the rate of increase was 15.2 percent. Yuan-hsing Lin, "Index of Land Values in Taipei", Taipei City Bank, Monthly Review, July 1975 (in Chinese).

reduced the initial rate to 20 percent and lowered the maximum marginal rate to 80 percent. The following rate schedule was in effect in 1975:

Percentage increase in increment	*Rate (percent)*
Less than 100	20
100-200	40
200-300	60
over 300	80

Revenue has increased sharply in the last few years, notwithstanding the indexation of the basis, and it has overtaken the LVT in yield. In recent years, LVIT assessments have averaged about 38 percent of the increment in value on taxable sales of privately owned land. In 1975 about 60 percent of the revenue was attributable to transactions subject to the 80 percent rate, with an average tax rate of 57.5 percent (Table 2). However, this rate category accounted for only about one third of the total increase in land values reported (16.9 percent being non-taxable) and 15.6 percent of the number of cases (27.4 percent being non-taxable).

It is unclear what the rationale of the LVIT rate structure is. It implies that the rate of tax should increase with the rate of increase in value of land, regardless of the period of time held, rather than with the size of the gain itself. There is some precedent for this formula in older land tax laws of Denmark and Germany, and in more recent provisions of land increment taxes in Italy and Israel; however, most taxes on increments in land value (for example, those of Korea, Malaysia, New Zealand, and the United Kingdom) have been based on absolute increases in value. [14] If it is intended to arrest speculation in land, the tax may operate perversely since the longer land is held the more it tends to increase in value; although the rate of rise in different sections varies with the direction of land development and other factors, the LVIT makes no distinction as to holding period. No data are available for Taiwan that show the variation in the rate of increase in the land increment realized with the period held, but indirect data support the view expressed above. Most increases in land value reported in 1974 (63.5 percent) arose from *first* transfers since 1964; 46.3 percent of these gains were subject to the 80 percent marginal tax rate as against only 15.6 percent of the gains realized on successive transfers made since 1964.

Although there are many cases of sharp increases in urban land values within a short period of time, even in the most rapidly developing section of Taiwan the average annual increase in land prices (adjusted for price changes) between 1964 and 1974 is estimated at 20.8 percent. [15] It would, therefore, take about four years, on the average, for the gain to increase by more than 100 percent and more than seven years for it to exceed 300 percent and be taxed at the 80 percent marginal rate. It is doubtful if many so-called speculators base their operations on such long-term investments. Those who acquire the land for development, however, may require a long period to carry out improvements.

Increments in value realized from sale of land should be recognized for what they are — capital gains — and should be taxed as capital gains on the absolute amount of appreciation in the value of property that is realized by each person in the taxable year. Because of the special purpose served by the LVIT in the Equalization of Urban Land Rights, it would be desirable to retain this tax as a separate schedule rather than to integrate it with the income tax law. Rates should not be so low as to mitigate unduly their intended purpose of recapturing real increases in land value, nor so high as to deter the sale of land. [16] A rate scale ranging between, say, 30 percent on the first NT$100,000 to 60 percent on increments over NT$1,000,000 would appear to satisfy these requirements and would involve little or no loss of revenue. More than 90 percent of the taxpayers would pay the lowest rate, while the wealthier landowners would have most of their increment captured by the Government. Records show that in many cases increments of over NT$1,000,000 are now taxed no higher than 20 percent because the adjusted increase in value has been less than 100 percent.

2. Tax treatment of homeowners and factories

Gains from the sale of owner-occupied residential land are taxed at 10 percent; if the home is replaced within a specified period, this tax is refunded. The tax paid is relatively small — NT$21.6 million in 1975 on only 2,389 transactions. It is understood that claims for refund are rarely made, so that few sales apparently involve the replacement of a home.

This preferential tax treatment is intended to encourage home ownership. It would also appear to conform with the philosophy of the LVIT that is aimed at speculative gains. It is inconsistent, however, with the ability-to-pay principle of income taxation. If the "roll over" principle were retained and the LVIT were converted to a capital gains tax based on the absolute amount of gains realized, landowners would continue to enjoy deferment of taxes on sales of homes that were replaced. Because of indexation and the generally small land area occupied by a home (1.25 ares), the average increment realized on sale is low (about NT$100,000 in 1975); assuming an average rate of 33 1/3 percent, the LVIT on final sale would amount to about NT$33,300.

The increment on sales of factory lands is taxed at one half the standard rates; this is refunded if the factory site is replaced within a prescribed period. It is not known if factory owners have availed themselves of this provision, which may be of some significance in remov

ing possible deterrents to the relocation and decentralization of manufacturing industry.

3. Tax treatment of gifts and bequests

Although the Land Law provided for the taxation of increments in value of land transferred through inheritance or gift (Article 178), only gifts were made subject to tax under the 1954 Act, as amended. Consideration has been given to the extension of the tax to inheritances, but this has been resisted because of the duplication of the estate tax already imposed on such transfers. One proposal is to allow a credit against the estate tax for any LVIT assessed.

Estate and gift taxes now range to a maximum rate of 50 percent on the value of a net estate that exceeds NT$20 million. This lies below the 80 percent top marginal rate of the LVIT, and it is likely that in most estates involving urban land the LVIT would exceed the estate tax applicable. But revenue considerations, although of some importance, would appear to be less relevant than consistency in carrying out the objectives of the LVIT as originally embodied in the Land Act. If transfers of land by gift are made taxable and those at death are not, an incentive is given to the continued holding of land that otherwise might be made available for development. It seems clear, however, that the original 1964 or later declared value should carry over to property transferred at death if the LVIT is not extended to it, so that it would be fully subject to the LVIT if sold by the heirs.

4. Valuation problems

The land value increment is now measured by reference to values of land that are announced every year by the land administration office, and not by the reported sales price of land. This practice was adopted several years ago because of the unreliability of the sales price declared. As a result, virtually all taxable increments are less than the true gain realized on the property. This is due both to the policy of underassessing land and to rises in land values during the year.

In principle, the accuracy of the reported sales price should be self enforcing. This is because the selling price is the buyer's basis for computing future taxable increments on sale. If this price is reduced by collusion between buyer and seller, the buyer is at a possible tax disadvantage in the future unless he is able to extract a share of the seller's tax saving. He may, of course, have no expectation of selling the land in the near future and be indifferent about the value reported, or he may expect to engage in similar underreporting. One of the clearest opportunities for abuse is in the sale of land to a controlled company by the owner/manager.

Some advantage for the present system is believed to result from more accurate reports on sales prices which are used by the land administration for estimating land values. Since landowners are not taxed on actual market values it is claimed that they are less inhibited in reporting sales prices. Another advantage is the avoidance of investigative work that would be involved in checking the validity of reported prices and the litigation that might arise over contested values. One serious problem is the allocation of sales value between land and improvements.

In the absence of reliable data on the size of the differences between present announced values and sales prices, it is not possible to hold an opinion on the preferability of either approach. The present valuation system undoubtedly is losing revenue, but whether the convenience of administration warrants this loss depends largely on the amounts involved. It would appear to be extremely doubtful that this is the case. A policy decision on this matter can be based only on a survey of the differentials between the realized price and the announced value of lands sold.

III. COORDINATION OF LAND TAX POLICY

The effectiveness of land tax policy depends heavily on the relationship of urban land taxes not only to the rural land tax but also to the so-called house tax — a local tax on improvements.

1. Relationship to rural land tax

As was noted above, the LVT and LVIT are now limited to designated city planning areas, but it is the declared policy of the Government to extend the LVT eventually to the entire country. All land not included within the enforcement area of the LVT is subject to the rural land tax (RLT). This is the traditional Chinese tax based on the productivity of land that was continued under the Japanese occupation. All registered lands are classified into 11 categories (e.g., paddy, dry land, pasture land, forest land) and standard outputs were assessed periodically by inspection at harvest season. Each category of land is further graded by its productivity, and uniform cost allowances are made in determining the standards for each class; each grade of each category is then assigned a unit standard tax. Paddy land, for example, is classified into 26 grades, and bracket rates ranging from 2.0 percent to 3.6 percent are assessed on the notional output. This system was retained following the return of Taiwan to the Republic of China, but payment of the tax on paddy land was required to be made in rice. Payments on other categories of land could be made in cash. Assessments continue to be based on the last cadaster completed by the Japanese, in 1944. Since then, however, the conversion rate for collection in kind was raised from 8.85 kg. per unit standard tax to a maximum of 27 kg. in 1966, but since 1972 the Government has reduced it to 22 kg. in order to encourage rural development. [17] Tax revenue in the fiscal year 1975 amounted to NT$2,179.7 million, 2.2 percent of total tax revenue.

Of the total land area of Taiwan, 1,665,560 hectares, or 47 percent, are registered for land tax purposes. Of this area only 161,448 hectares, or about 10 percent, are designated as city planning areas covered by the Act for Equalization of Urban Land Rights, 16 percent of which is in Taipei municipality. But only 16.1 percent of this area — 26,065 hectares — is within the LVT enforcement area, the balance (68.4 percent) is taxed under the RLT or is exempted (15.5 percent). [18]

The rapid growth of cities that has accompanied the industrialization of Taiwan since 1950 has encroached on the bordering agricultural land at a faster rate than the extension of the LVT enforcement area, with the result that sharp tax differentials are created. Between 1964 and 1975 the LVT enforcement area has more than doubled, from 11.2 million hectares to 26.1 million hectares, but this lies substantially within the boundaries of urban and suburban development. Since the non-enforced area is subject to the generally lower rural land tax and escapes the LVIT, speculative activity in fringe areas of the city is stimulated and serious tax inequities arise.

Notwithstanding these differentials, a basic question remains about the wisdom of the Government's objective of extending the area for equalization of land rights, step-by-step, until the rural land tax is replaced by the LVT. The rural land tax has much to commend it, and there is considerable precedent throughout the world for different approaches to the taxation of urban land and rural land in a country. [19] Being based on notional yields that generally are less than actual production, the RLT has an incentive effect in stimulating additional output. Although a fixed land tax has similar incentive effects, the present system probably is better understood in its relationship to farm incomes. Farmers are not as well aware of the value of their land, except for development purposes; indeed, it might be difficult to establish accurate land values if there is little or no turnover, and it might be necessary to capitalize current yields. Perhaps the greatest virtue of the present RLT is that it permits greater flexibility in varying the tax rates with changes in the price of rice and other major farm crops, as has been the case; tax revenue is therefore potentially more elastic with respect to changes in farm income than a land value tax would be.

The discriminatory effects of the RLT system could be mitigated by two different measures: first, the present cadaster based on 1944 yields should be updated to reflect the revolutionary improvements in the culture of paddy and other major crops since then. This administrative measure would permit farm taxes to be greatly increased to reflect improved incomes, without intensifying the discriminatory effects that have resulted from the differential improvements in productivity. Second, amendment of the Land Law to tax increments in value on the sale of all land, whether or not covered by the LVT, would remove the major tax differential between the two classes of land.

2. Taxation of improvements — the house tax

The Land Law provided for a tax on improvements to land other than agricultural improvements (Chapter V), exclusively for local government revenue. What is known as the house tax was enacted by Presidential decree April 11, 1967 and made effective from January 1, 1968. Tax rates now in effect are 1.38 percent on residential housing and 3.0 percent on business structures.

House tax revenue has risen sharply; by fiscal 1971 it overtook LVT revenue and by fiscal 1975 it had risen to slightly less than combined LVT and RLT revenue. Data for fiscal 1972 indicate an average tax rate of 1.6 percent on taxable property, only slightly below the average LVT rate. As in the case of the LVT, assessed values have lagged behind market values.

It seems paradoxical that the tax on improvements to land has emerged to almost equal importance with the tax on land values that had been a basic doctrine of the Republic of China. It is not uncommon, of course, to

17. Wei-hsin King, "Land Taxes of the Republic of China", p. 5
18. The enforcement area is that part of the city planning area lying within municipal limits where the LVT has been put into effect, the remaining city area being subject to the LVT or exempted. Agricultural land lying within the enforcement area is taxed on its value at a rate of 1.5 percent.
19. See George E. Lent: "The Taxation of Agricultural Income in Developing Countries", *Bulletin for International Fiscal Documentation*, August 1973; "The Urban Property Tax in Developing Countries" *Finanzarchiv*, Band 33, Heft 1, 1974.

levy property taxes on the capital value of land and improvements, and a number of countries employ differential rates on land and improvements to land (e.g., Malawi, South Africa, Zambia). But the coexistence of two different property taxes — one on land and the other on improvements to land — administered by two different levels of government raises a question of administrative efficiency. The feasibility of their consolidation would perhaps be complicated by the fact that the house tax is imposed in both rural and urban areas subject to different land taxes, and raises possible issues of reallocation of government revenue sources.

IV. CONCLUSIONS

Perhaps no country has employed Georgian principles of land taxation more consciously as an instrument of land policy than the Republic of China. This doctrine was first enuntiated by Dr. Sun Yat-sen, the founder of the Republic, in his Principles of Equalization of Land Ownership. While their implementation in Taiwan varied somewhat from the structure he envisaged, his principles are embodied in the urban land value tax and the land value increment tax that have been in force in this country since the early 1950s.

1. The Land Value Tax

A unique feature of the LVT is the graduation of rates based on multiples of the average value of seven ares of land in each *hsien* or municipality (PSV). Progressivity can be justified by its purpose of limiting urban land ownership, despite the fact that no recognition is given to indebtedness incurred to purchase the land. The fact that higher graduated rates are paid mostly by private and quasi-public corporations does not invalidate this principle. Moreover, the replacement of graduated rates by a fixed rate — advocated by some — would increase the taxes paid by the great majority of landowners and result in windfall gains to the wealthier. The particular form of progressivity used, however, results in serious discrimination among land holders in different *hsien* owning property of the same value. In principle, progressivity should be based on the cumulative holdings of each person in Taiwan rather than in each *hsien* or municipality. But the adoption of a single standard PSV for the country would result in a serious redistribution of tax revenue among the different jurisdictions that would benefit the wealthier areas and penalize the poorer.

Another questionable policy is the taxation of homeowners and industrial sites at preferential rates. Because land taxes probably play a minor role in the decision to own a home or to build a factory, the cost in revenue greatly exceeds any benefit that may be gained.

The surtax on vacant and underdeveloped land can be justified, in principle, as a means of achieving more effective land use. Partly because of low assessed values and adoption of surtax rates at the lower end of the authorized scale, it is doubtful if it achieved its purpose. The relatively small area exposed to the surtax also suggests that it was not vigorously applied.

Because of lags in assessments in the face of rapidly rising urban land values, and the underassessment bias in the law and its administration, land tax rates probably have not averaged more than 0.5 percent of the market value of the land. Tax rates of this level could have only negligible effects on land use decisions and would therefore fail to achieve the objectives originally envisaged.

2. The Land Value Increment Tax

The LVIT represents a unique approach to the recapture of increments in land value arising from urbanization and economic growth. Its most questionable feature is the graduation of tax rates with the rate of increase of increments in land values. The rationale of this structure is unclear. If it was designed to catch speculative gains, it has failed this objective because the largest rates of increase, in general, are realized on property held for long periods of time. Restructuring of the rate schedule so as to graduate it with the absolute size of gains realized would be more consistent with principles of ability to pay and equity of the tax system. It is also difficult to defend the preferential rate for gains on the sale of a home and the failure to assess tax on transfers at death.

3. Coordination of land tax policy

In limiting the LVIT to designated urban areas subject to the LVT, substantial gains on suburban lands escape tax. Although the LVT area has been greatly expanded since the introduction of the tax, its boundaries tend to lag behind areas ripe for development. There would, therefore, be considerable merit in extending the scope of the LVIT to include all land, whether or not subject to the LVT.

While it still appears to be the policy of the Government to replace the rural land tax, step-by-step, with the LVT, much can be said for retaining the RLT which is based on presumptive yields of different crops in different areas. It has the advantages of familiarity and correlation with farm incomes, as well as greater potential elasticity because of the flexibility with which taxes, paid in kind, can be adjusted to changes in farm prices.

The recently enacted house tax on value of improvements has overtaken all land taxes in revenue importance. While it is not uncommon to levy separate property taxes on land and improvements, their imposition by different jurisdictions in Taiwan raises a serious question of administrative efficiency.

TAXES ON OIL PRODUCTS IN THE E.E.C.

On 22 December, 1976 Mr. Lagorce addressed the following questions to the E.E.C. Commission:

Can the Commission give specific details of the size of the tax component, in each of the Community countries, in the market price of oil products?

Is taxation policy likely to hinder the implementation of a common oil policy?

(Written Question No. 735/76)

On 17 February, 1977 the Commission answered as follows:

1. Taxes on petroleum products generally comprise excise duty and value added tax (VAT). Excise duties are normally fixed as an absolute sum, whereas VAT is calculated as a percentage of prices before tax but including excise duties.

To give an idea of the order of magnitude of taxes on the main categories of petroleum products, excise duties have also been expressed in percentages. In order to do this, since for any given product it is practically impossible to state one single price for each Member State having exactly the same connotations, excise duties on petroleum products have been put at reference levels which reflect average market conditions in Member States as of November 1976.

2. When taxes on petroleum products are different from those on other forms of energy, they can affect the consumer's choice. They can also affect the level of consumption by encouraging energy savings.

The Council has included the problem of the price of energy in its programme of work for the coming year, and this would involve a study of the effects of taxation on energy policy.

EFFECT OF TAXES ON THE MAIN PETROLEUM PRODUCTS IN THE MEMBER STATES

A. FUELS AND GAS OIL USED FOR HEATING

Country	High-grade petrol			Regular petrol		
	VAT	Excise duties (% of pump price)	Total price	VAT	Excise duties (% of pump price)	Total price
B	5.6	50.2	55.8	5.7	51.8	57.5
DK	13.0	44.7	57.7	13.1	46.0	59.1
D	9.9	45.9	55.8	9.9	48.4	58.3
F	15.0	43.5	59.8 (1)	15.0	44.3	60.7 (1)

GB	11.1	39.4	50.5	11.1	40.5	51.6

(1) Including certain charges paid into specific funds.

Country	Gas oil used as engine fuel (1 000 l)			Gas oil used for heating (1 000 l)		
	VAT	Excise duties (% of pump price)	Total price	VAT	Excise duties (% of pump price)	Total price
B	12.3	30.6	42.9	5.7	8.8	14.5
DK	13.1	zero	13.1	13.1	zero	13.1
D	9.9	55.8	65.7			(1)
F	15.0	33.9	48.9	15.0	2.5	17.5
IRL	9.1	29.5	38.6	zero	6.2	6.2
I	10.7	16.6	27.3	10.7	4.8	15.5
L	4.8	16.7	21.5	4.8	4.8	9.6
NL	3.8	32.7	36.5	3.8	9.9	13.7
GB	7.4	42.2	49.6	zero	3.2	3.2

(1) This type of fuel is not used for domestic purposes.

B. FUEL OILS

Country	Light fuel oil/kerosene (1 000 l)			Heavy fuel oil (t)		
	VAT	Excise duties (% of consumer price)	Total price	VAT	Excise duties (% of consumer price)	Total price
B	5.7	9.0	14.7	5.6	2.9	8.5
DK	13.0	zero	13.0	13.0	zero	13.0
D	9.9	2.6	12.5	9.9	7.1	17.0
F			(1)	14.9	zero	14.9
IRL	zero	7.0	7.0	zero	7.9	7.9
I			(1)	10.7	1.1	11.8
L			(1)	4.8	2.8	7.6
NL	3.8	6.0	9.8	3.8	6.4	10.2
GB	zero	3.2	3.2	zero	4.9	4.9

(1) This type of fuel is not used for domestic purposes.

NB: Because of differences in national systems, discounts and regional and quality variations it is practically impossible to state one single price for any given product and for each Member State which would have exactly the same connotations. For the percentage calculation of the proportion of taxes in the consumer price of each product, therefore, the excise duties and VAT values have been put at reference levels which reflect average market conditions in the Member States as of November 1976.

Recent Developments in Taxation in Latin America and the Caribbean

1. EFFORTS TOWARDS TAX HARMONISATION

Even though the achievement of such a global goal of structuring a Latin-American common market, proposed as far back as in the early 1950s, still remains on a rather idealistic plane, and even though the progresses attained thus far through the four partial schemes existing in the Western Hemisphere towards some type of subregional economic integration have been very slow and uneven among those four schemes, one of the areas in which they have been elaborated to what could be regarded as a good conceptual framework is related to taxation.

As it will be explained in each one of the four cases, the pace and the means of the works undertaken have been different. However, it must be admitted that they by and large have shown quite clear understanding of the basic ideas underlying any attempt for reaching tax harmonisation among member countries involved in each one of the aforementioned schemes.

a) Latin-American Free Trade Association (LAFTA)

In spite of the fact that the Treaty of Montevideo establishing the Association, signed in February 1960, in strictly technical terms specifically called only for a "free trade zone", it did not rule out the intention of eventually converting it into a common market and even into a broader and more complete form of economic integration.

Thus, taking into consideration the limited scope given by the Treaty to the immediate objectives of the Association, it must be recognized that these objectives have been to a great extent accomplished; the free trade zone has greatly contributed, since its inception, to the increase in the volume of trade among the eleven member countries. Notwithstanding the importance of that factor, it did not actually help to encourage the evolution of the free trade zone into much more advanced stages of economic integration.

Given the special and obvious significance of customs practices to better serve the functioning of the free trade zone, the Association sponsored a programme of annual technical meetings of directors and high officials of customs administrations — including heads of customs training schools — to deal with the entire set of problems connected with their activities [1]. Those meetings have been one of the best instrumental ways to promote among member countries the adoption of the Brussels customs system, as far as customs valuation, nomenclature and techniques are concerned. Special meetings of experts to discuss in depth specific subjects, such as the adoption of a subregional customs nomenclature known as NABALALC (in accordance with the Spanish spelling), adapted from the Brussels nomenclature, have been organized to that end.

On the internal taxes side, the Association has supported the idea of sponsoring similar types of annual meetings among tax administration directors (quite often the meetings have been also attended by officials involved in the tax policy decision-making process). This step has been taken as a means to prepare the conceptual grounds for future developments towards tax harmonisation.

Even though the participants in those meetings are tax officials of their respective countries, they do not commit their own governments to any decision out of the comments made or recommendations approved during the meetings. The discussions on technical matters are held strictly on conceptual terms, trying obviously to reach coincidental conclusions.

---

* Doctor in the economic sciences (Buenos Aires).

1. The basic need of adjusting customs tariffs of the Association member countries, to foster intra-subregional trade, has been implemented under separate mechanisms placed at higher political levels.

The far-reaching importance that those meetings have had so far cannot be denied in explaining (a) the convienience for undertaking already the fundamental groundwork to achieve a future tax harmonisation; (b) the technical content of the tax devices which can better serve such an objective and which sometimes differ from the tax provisions presently in force in the member countries.

Thus far six of these meetings of directors of internal taxes' administrations have been held; the seventh will be held before the end of 1977. The agenda of those meetings have usually included subjects as follows:

1) a proposal for studies to set the grounds for the harmonisation of tax policies;
2) the adoption of a model tax code, aimed at regulating substantive and procedural aspects of the relationships between taxpayers and tax authorities; such a code would not contain any provision related to the taxable base or the tax rates of any tax in particular, yet it would be applicable in handling the administration of every tax, as to the relationships between the tax authorities vis-á-vis the taxpayer [2];
3) a common classification of taxes and para-taxes, along with a proposal for an efficient setup to gather and analyse tax statistics within the tax administration;
4) taxation on goods and services;
5) taxation on profits of enterprises, regardless of their juridical form;
6) international double taxation;
7) training programmes for tax officials of the member countries' tax administrations.

Furthermore, and specifically with regard to subjects above-mentioned under numbers 4, 5 and 6, meetings of experts were also organized. Thus, in connection with taxation on goods and services two meetings of experts took place and they dealt with the drafting of a model tax on value-added on the one hand, and of another model tax on selective consumptions, on the other, the latter to introduce a certain degree of progressivity to the area of taxation on goods and services, as well as to get a better allocation of resources. Both models of tax laws were approved at the technical level and it must be recognized that in one way or another they have been taken into account by those member countries which have introduced in their tax legislation either one or both of those types of taxes.

As far as taxation on profits of enterprises is concerned, there has also been a meeting of experts which analysed the possibility of defining certain criteria in connection with the fundamental technical principles on which that kind of taxation should be based in order to achieve its harmonisation in the subregion.

On international double taxation three meetings of experts have been held and the fourth is forthcoming (August, 1977). They discussed the subject, in general and particular terms, in so far as it affects tax relations among member countries of the Association, as well as their tax relations with third countries, outside the Association. The experts have also debated the measures to take better advantage of the unilateral tax treatment given to foreign income by capital exporting countries. In their discussions the experts took into consideration the existing models of tax conventions contained in the Decision 40 approved by the Commission of the Cartagena Agreement in 1971 [3]. In a rather detailed analysis the experts dealt specially with the principle of source, its proper application to taxation on profits of enterprises, on net wealth, on investment income and on income from rendering personal services. The allocation of income and expenses between related enterprises was also among the topics discussed.

b) Andean Group

In establishing this subregional body, the Cartagena Agreement signed in May 1969 is one of the most detailed documents in force, aiming emphatically at the far-reaching objective of economic integration.

At the beginning it encompassed five countries — Bolivia, Chile, Colombia, Ecuador and Peru; later in 1973, Venezuela joined the Group. However, presently Chile is no longer a member country; the Chilean Government's decrees numbers 1641 and 1642, enacted on 30 December 1976, provided for, and ratified, the withdrawal of Chile from the Andean Group [4].

Chapter III of the Cartagena Agreement sets forth the provisions related to the harmonisation of economic policies and co-ordination of development planning between member countries. Specifically article 26, section d), of the Agreement calls for the harmonisation, among others, of fiscal policies in the subregion. However, no principles, guidelines or priorities are provided by the Agreement on how to proceed in order to advance towards such an harmonisation.

The highest political body of the Agreement, the Commission, has been empowered by article 29 to determine the necessary procedures and mechanisms to achieve the aforementioned harmonisation and co-ordination. Accordingly, together with other councils, the Commission has created the Fiscal Policy Council.

On the other hand, as article 27 of the Agreement established a deadline, 31 December 1970, for the approval of a common régime of treatment of foreign capital and of trademarks, patents, licenses, and royalties, the Commission has enacted on those matters the Decision 24, sometimes known as the Investment Code of the Andean Group. Article 47 of this Decision 24 says that the Commission "shall approve, at the latest, on 30 No-

---

2. Among the member countries of the Association, Argentina, Bolivia, Brazil, Chile, Ecuador, Mexico, Peru and Uruguay have in force laws or codes of this kind.
3. See a detailed study on Decision 40 in the article published in the *Bulletin for International Fiscal Documentation*, August 1974.
4. At the subregional level the Commission of the Cartagena Agreement, on 5 October 1976, had approved an Additional Protocol to the Agreement in order to seek the adoption of a special régime which would keep Chile within the Group; should the efforts to reach that conclusion fail, the Additional Protocol provided that Chile would withdraw as a member of the Andean Group.

vember 1971" a convention related to double taxation between member countries and other countries outside the subregion.

Since the last sentence of article 47, in Decision 24, imposed on the member countries the obligation to refrain themselves from negotiating in the meantime any tax treaty with third parties outside the subregion (and they did comply with this obligation), it implied a clear attempt to build up in the specific area of international double taxation a sort of tax harmonisation.

In that regard, as well as with respect to incentives for the promotion of foreign investment, Decision 24 tries to neutralize any legislative action, on the part of the member countries, that could create new discrepancies and difficulties to the existing ones in the road towards economic policy harmonisation.

On November 1971 Decision 40 was approved, containing both types of model tax conventions above-cited [5].

As a matter of fact no further action has been taken to actually harmonise existing policies or legislation in any other aspect of taxation in the subregion. Nevertheless, several surveys have been undertaken, at the technical level, as a background for eventual political decisions, and discussions have been held on that regard during the first meeting of the aforesaid Fiscal Policy Council, which took place on 24 November 1975.

During such a meeting the analysis was mostly related to the purpose of designing general orientations on fiscal policy harmonisation; some attention was also given to the problem of taxation on goods and services, as well as to tax incentives the member countries have in force, in order to get some progress in their harmonisation.

A second meeting of the Fiscal Policy Council was held on 5 and 6 June 1976, which basically analyzed further the topics initially discussed at the first meeting of the Council.

It was also agreed that there would be an eventual need to provide preferential treatment in fiscal harmonisation matters to the relatively less developed countries of the subregion, that is to say, Bolivia and Ecuador.

The Council further recommended to the Board, the permanent body established by the Cartagena Agreement, the following work programme:

(1) Adoption of common jurisdictional principles applicable in the subregion to taxation on goods and services. In this connection, the Council requested the preparation of a proposal in accordance with the principle of the country of destiny.
(2) Examination of tax aspects contained in the Decisions of the Commission, related to the harmonisation process.
(3) Comparative study of legislation referring to internal taxes on goods and services in the member countries, in order to make them compatible.
(4) Basis for the harmonisation of taxes on motor vehicles and preparation of proposals in accordance with the progress in the Programme of Industrial Development pertaining to that sector.
(5) Basis and orientation for the harmonisation of the following aspects of fiscal policy:
  (a) fiscal incentives and subsidies;
  (b) taxation on enterprises' profits; and
  (c) taxes on income and net wealth of individuals.

During the same second meeting of the Fiscal Policy Council, it was also pointed out that the above-mentioned Decision 40 is not in force in the subregion, because two of the countries still did not complete the procedures required by their legislation to make that Decision effective.

c) Central American Common Market (CACM)

As a result of the Treaty on which this subregional scheme is based and to which in the early 1960s have adhered the five Central American countries — Costa Rica, El Salvador, Guatemala, Honduras and Nicaragua — the only effective internal tax measures based on subregional considerations have been adopted in connection with article VI of the Treaty, whereby the member countries are bound to comply with certain obligations in the area of internal taxes on consumption. Additionally, a protocol was signed on tax incentives, with the purpose to harmonise them in the subregion.

The conflict which in 1969 arose between El Salvador and Honduras has created a crisis still not completely solved in the context of the common market; presently, because of that, Honduras is not a totally active member of the subregional setup.

In the meantime substantive efforts have been made to overcome such a situation, including the adoption of new fundamentals for the structure and the functioning of the common market. In that sense a new treaty has been drafted, which provides for the creation and establishment of the Central American Community; it contains detailed clauses on the different aspects of tax harmonisation of internal taxes, as well as on customs tariffs. As far as the latter is concerned, the General Secretariat of the Central American Common Market has prepared technically sound proposals for the member countries to base their tariffs on the concept of effective protection; however, no concrete steps have been for the time being taken in this regard, apart from broad and profound discussions held in several subregional and national fora.

With respect to taxes on income and on goods and services the existing legislations in the five member countries still differ considerably. This does not mean a lack of consciousness on the convenience for tax harmonisation in the subregion. Thus, as a part of an exhaustive survey of the entire situation of the common market, asked for by its General Secretariat and supported, either financially or technically, by several international agencies,

5. It has to be pointed out that the Additional Protocol mentioned in the previous footnote contemplates that even in the case of its withdrawal from the Group, Chile will still have the rights and the obligations resulting from several Decisions adopted by the Commission; among those Decisions the number 40 is expressly indicated. By means of the Decree 1641, of 30 December 1976, the Chilean Government has ratified this Additional Protocol with no reservations.

a thorough analysis on tax harmonisation for the subregion, with concrete recommendations for actions, was performed during 1972 and 1973.

d) Caribbean Community

This Community was established by a Treaty approved in 1973, its objectives being the achievement of:

(a) the economic integration of the Member States by the establishment of a common market régime;
(b) the co-ordination of the foreign policies of Member States; and
(c) functional co-operation among them.

The Annex to the Treaty deals specially with the establishment of the Caribbean Common Market. Membership of the common market shall be open, article 2 of the Annex says, to: Antigua, Barbados, Belize, Dominica, Grenada, Guyana, Jamaica, Montserrat, St. Kitts-Nevis-Anguila, St. Lucia, St. Vincent, Trinidad and Tobago, and any other state of the Caribbean Region that is, in the opinion of the Conference of Heads of Government, able and willing to exercise the rights and assume the obligations of membership.

Among the countries and territories above listed, article 3 of the Treaty designates Barbados, Guyana, Jamaica and Trinidad and Tobago as More Developed Countries, whereas the others are regarded as Less Developed Countries.

In adopting a "common protective policy", Chapter IV of the Annex provides for the establishment of a Common External Tariff "in respect of all commodities imported from third countries", as article 31 states. On 1 January 1976 such a Common External Tariff entered into effect in the Caribbean Common Market with a new rate structure.

In turn, Chapter VI of the Annex to the Treaty deals with co-ordination of economic policies and development planning. In that Chapter, article 40 provides that Member States:

(1) shall seek to harmonise such legislation and practices as directly affect fiscal incentives to industry;
(2) shall seek also the harmonisation of fiscal incentives to agriculture and tourism with appropriate differentials in favour of the Less Developed Countries; and
(3) agree to study the possibility of approximating income tax systems and rates with respect to companies and individuals.

Finally, Chapter VII of the Annex to the Treaty, in contemplating a "special régime for the Less Developed Countries" provides in articles 54 and 55 that the special needs of those countries shall be taken into consideration for both, the harmonisation of fiscal incentives to industry and the common external tariff, respectively dealt with in articles 40 and 31 of the Annex.

Whereas an agreement on fiscal incentives has been approved, and also ratified by some Member States, no action has been taken with regard to income taxation towards its approximation in the subregion.

Another tax aspect contemplated by the Annex to the Treaty is on intra-regional and extra-regional double taxation agreements; on this article 41 provides:

"1. Member States shall approach their negotiations for agreements for the avoidance of double taxation with countries outside the Common Market on the basis of a set of mutually agreed principles.
"2. With a view to encouraging the regulated movement of capital within the Common Market, particularly to the Less Developed Countries, Member States agree to adopt among themselves agreements for the avoidance of double taxation."

As an instrument for the implementation of section 2 of article 41 just quoted, a draft agreement between the More Developed and the Less Developed Countries of the subregion was prepared; its purpose is the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income and for the encouragement of international trade and investment. The final approval of this agreement by the Member States is pending.

2. SOME RELEVANT TAX FEATURES AT THE NATIONAL LEVEL

a) Tax policy as a tool for economic development

At the national level it seems justified to draw as a general conclusion that the goal for more progressive taxation, or a better distribution of the tax burden, which was a distinctive preoccupation in the 1960s and even early 1970s, presently has receded to some extent.

Perhaps the most striking feature as the conceptual background on taxation evolved in governmental circles of developing countries of the Western Hemisphere in the current decade, has been the greater emphasis on the tax policy as a tool for economic development. Scholars in the public finance field have been elaborating on this approach for many years; however the usual analysis was related to each particular type of tax and its effects on development, without paying too much attention to the global consideration of the tax system's effects in general terms.

The trend that is advancing in developing countries of the Western Hemisphere shows, on the one hand, that tax policy-makers with official responsibilities take very much into account such an approach, and attention is given to the tax system as a whole, with its combined effects, so as to design it in a coherent, integrated and co-ordinated manner for developmental purposes, or the other.

As a consequence, the focus on equity aspects of the tax systems, which was prevailing during the 1960s, as we said before, seems somehow lessened as a socio-economic goal, or are not necessarily contained in the proposals for changes in the tax legislation.

It is fair to say that the III Inter-American Conference on Taxation, held in Mexico City (September, 1972), co-sponsored by the Organization of American States and the Inter-American Development Bank, and hosted by the Government of Mexico, has had a certain degree of influence in such a trend. However, it was not intended by the Conference to suggest that growth and development objectives should be served, through taxation, at the expense of equity considerations; on the contrary, the Conference actually proposed the convenience of keeping the adequate balance between both dimensions.

The basic idea maintained by the Conference was that tax policy is one of the many tools of economic policy which is available to serve the attainment of the goals set in a global strategy for the development of each country in a given time; the underlying implication is that the tax system is not an end in itself, that it has to perform an instumental role aimed at co-operating for the achievement of the objectives set forth in accordance with the economic policy adopted for developmental purposes.

During the years following the Conference several seminars and symposia took place in several countries — Ecuador, Guatemala, Costa Rica, El Salvador, Honduras, Dominican Republic — in order to verify the validity of the general and particular tax proposals and recommendations made during the Conference. It would be valid to extract, as general conclusions of those events, that still the Latin-American tax systems have many inconsistencies among the taxes which are parts of them, as well as taxes technically ill-structured in the sense that they have inconvenient or undesirable economic effects; at the same time the proliferation of many and meaningless taxes makes the systems unnecessarily complicated and hard to manage. Furthermore, the tax systems, generally speaking, are not conceived and do not operate in accordance with the action of other instruments of economic policy.

It seems again fair to say, in broad terms, that the conceptual framework of the Conference has been found useful to analyse the tax systems in effect in the developing countries of the Western Hemisphere, in order to assist in the rationalization of their entire structure, evaluate their overall economic effects, with the simultaneous and evident intention of suggesting their simplification. To make the scope of the effort even broader, the analysis undertaken as well as the policy measures recommended for implementing its conclusions, included internal and external taxes as well.

While the attitudes of tax policy decision-makers tended to pay special attention to all of these ideas, the supervening fact of the economic crisis widespread since 1974 for non-oil producing developing countries, made it inevitable to look for rapid and abundant revenue to alleviate the situation.

In that kind of circumstances, as it is very well known, the easy solution, revenue-wise, comes from taxes on consumption, above all on goods and services for which demand is wide and inelastic to the changes in their prices.

Therefore, because of those conjunctural and immediate needs, the scrutiny of each tax system, in order to determine its economic performance and its contribution for the achievement of developmental objectives defined in accordance with a global strategy, seems for the moment as being put aside.

b) Taxation on goods and services: adoption of the value-added taxation

The share of the revenues from taxes on goods and services with respect to the total tax revenues, in most of the Latin-American countries, is still very high. In the relatively more developed countries of the region the predominant tax of this type, in the last decade, has been the sales tax, adopted under different characteristics.

Whenever a situation of fiscal deficit has arisen, the governments have had these taxes in mind to increase revenues. Nevertheless, it must be admitted that lately the recourse has not been merely to augment the rates of existing excise or sales taxes, but rather try to get higher amounts of revenue together with the improvement of the technical structure of those taxes, nothing to say, on the other hand, about the permanent preoccupation for achieving higher standards of efficiency in the tax administration's performance, so as to reduce as much as possible the still sizable levels of tax evasion [6].

It is in that context that the adoption of schemes of taxation on value-added can be explained. In reality, proposals of this type had been formulated in several fora in the Hemisphere, including the above-cited Conference on Taxation in Mexico City.

Among the developing countries in the Hemisphere only four do not have in force a general sales tax, in whatever technical form of implementation; they are: Dominican Republic, Haiti, Trinidad and Tobago and Venezuela.

Another four countries (Barbados, Jamaica, Nicaragua and Paraguay) have a sales tax applied on one stage, meanwhile fourteen countries have in effect a sales tax on multiple stages (Argentina, Bolivia, Brazil, Colombia, Chile, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Panama, Peru and Uruguay).

Within the latter group, in three countries (El Salvador, Guatemala and Mexico) the tax has cumulative effects, since it is applied in cascade. On the other hand, ten countries have in force a value-added tax in a variety of

---

6. With regard to changes in the tax administrations, the recent trend has been characterized by the already existing emphasis on the unification, under one single directorate, of the previously divided administration of taxes, usually along the lines of their direct or indirect character, or keeping a special agency for the income tax administration and a separate one for administering all the other internal taxes.
Guatemala and Uruguay have been the latest countries which took this step of erecting one single directorate for the administration of all their internal taxes, in lieu of the two or three independent tax offices formerly in existence.
As far as the joint administration of internal and external taxes is concerned, one must mention the cases of Panama and Venezuela, where such an approach has started to be in effect quite a long time ago.

modalities but in general with no, or very little, cumulative effect; they are: Argentina, Bolivia, Brazil, Colombia, Costa Rica, Ecuador, Honduras, Panama and Uruguay [7]. As far as Peru is concerned, its tax on goods and services is not precisely or typically on one stage, nor in cascade, but it rather resembles the former; in order to avoid or reduce the cumulative effect, it also provides for a credit with respect to the amount of the tax that the manufacturers pay on inputs they buy.

The prevailing technical pattern of the existing legislations on the value-added tax in those countries is based on the credit method, and tending towards the provision of only one tax rate; the usual recommendation of not granting exemptions is not followed, since at least staple commodities specifically listed by each law are tax exempt in every country. It is also generally provided that exports are entitled to bear no value-added tax.

As another way of mitigating the regressiveness inherent in the value-added tax, some countries (such as Bolivia, Brazil, Costa Rica) have in effect a tax on selective consumptions, usually at rates higher than the general rate applied for the value-added tax.

It should be kept in mind that the tax on selective consumptions is preferably implemented according to the value-added technique, in only one stage of the economic process of production and distribution, generally at the level of the manufacturer or importer of those goods which by law are imposable.

It is worthwhile to mention that a proposal to introduce a tax on selective consumptions was also made at the Conference on Taxation in Mexico City, under the following terms: the rates for the tax have to be structured so as to absorb the non-protective portion of the customs tariff, as far as imported goods are concerned, and implemented equally rated on similar domestic goods, with the obvious purpose of not stimulating the local production of goods regarded non-essential for developmental objectives. In other words, no discrimination would have to be made between domestic and imported goods, as to their tax treatment in this type of taxation.

Aside from the tax described in the preceding paragraph, several of the countries which do not have it in force, use to apply the traditional form, so to speak, of an excise tax, also under a selective criteria. This is the case, at the present time, of Argentina, El Salvador, Nicaragua, among other countries.

Argentina had such a tax for many years, and in 1976 has enlarged the list of imposable goods and services, and converted all the rates into ad-valorem; the rampant Argentinean inflation had made meaningless the tax and meager the revenues collected according to the fixed rates which formerly were in force with respect to some of the taxable goods and services.

El Salvador approved a selective excise tax in 1974, at different rates, ranging from 10 to 30 percent, on imports and on the first domestic sale of certain goods.

The Nicaraguan law was also approved in 1974 and the tax rates vary from 5 to 35 percent on the imports and on sales made by manufacturers of a list of taxable goods.

c) Monetary corrections for tax purposes

Since the wave of high rates of inflation has become a recurrent phenomenon in some Latin-American countries, particularly of the Southern part of the Hemisphere, they have redesigned old devices or incorporated new ones to permit, for tax purposes, realistic determinations of the tax base, and hence of the tax liability, in monetary terms [8].

In that regard, Brazil [9] and Chile [10] and to a lesser extent Argentina [11], Bolivia [12], Colombia [13], Ecuador [14], Paraguay [15], Peru [16], and Uruguay [17] have in effect specific tax provisions which contemplate methods of monetary corrections to avoid the imposition of a tax on amounts of taxable matter affected by inflationary factors. Furthermore, legal provisions have been also approved and are in effect, with respect to the indexation of tax liabilities not paid by the taxpayers in due time; the same adjustment goes for the refund of taxes in favour of the taxpayer.

3. LATIN-AMERICAN AND CARIBBEAN TAXATION IN PERSPECTIVE

As the rise in the public expenditures level is felt, a parallel rise in revenues appears inevitable. Thus every government seeks, consequently, to get additional tax revenues to cope with the ever increasing demand of

7. Chile abolished the exemption in Decree Law 1,606 of December 12, 1976.

Lent, "Adjustment of Taxable Profits for Inflation" in *Staff Papers* (published by the International Monetary Fund) Vol. XXII, number 3, November 1975, pp. 641-679.
9. Decree 76.186/75, income tax regulations (arts. 239 to 255, 511 and 512).
10. Decree Law 824/74, income tax (arts. 20, 31, 32, 41, for enterprises; arts. 43, 44, 45, 52, 53, 54, 55, 56, 57, for individuals; arts. 17, 18, 62, 72, 95, 96 and 97 applicable for both); Decree Law 830/74, tax code (art. 52); Decree Law 1244/75; Decree Law 1350/75.
11. Law 20.628, income tax (arts. 25, 54, 57, 90, 96 and 110) as amended by laws 21.286 and 21.481; Law 21.281, indexation of tax liabilities and refunds; Law 21.282, tax on net wealth (art. 15); Law 21.284, tax on capital gains (art. 12); Law 21.287, tax on capital of enterprises (art. 17).
12. Decree Law 11.154, tax on business profits (art. 46), as amended by Decree Law 12.853/75; Decree Law 12.852/75 income tax on individuals (art. 3).
13. Decree 2.247/74, taxes on income, on net wealth and on inheritance (arts. 50 to 59).
14. Supreme Decree 1.283/71, contains the income tax law ordinated (art. 39); Supreme Decree 1.410/71, regulations of the tax on business profits (arts. 63 to 66).
15. Decree Law 9.240/49, income tax (art. 100), as amended by Law 672/60.
16. Supreme Decree 314-68-HC, income tax (arts. 1 to 9); Law 18.815/71; Decree Law 21383/76.
17. Decree 114/75, tax on income from industry and commerce (arts. 10, 11, 14 and 16); regulations, Decree 52/75 (arts. 10, 11, 14 and 16). The same decree 114/75 for tax on net wealth (arts. 15, 16, 21, 22, 33, 34, 39, and 43).

public goods, in order to minimize the risks of falling into fiscal deficit situations and eventual inflationary pressures which can be generated in that way.

The developing countries in the Western Hemisphere are no exception to that picture. As in every other part of the world, economically developed and developing as well, Latin-American and Caribbean countries have been always constrained by the political factors in determining what type of taxes they would choose to finance their expenditures.

The existing structures of the tax systems in the region differ considerably one from the other. As far as the presence of the income tax is concerned, for instance, the English-speaking Caribbean countries are the ones in which their income tax legislation makes the respective burden quite high, if due consideration is given to their stage of economic development; among them, in Barbados, Jamaica and Trinidad and Tobago the income tax collection amounted to, in 1973, at least 45 percent of their total tax revenues. Meanwhile, in all the other developing countries in the Hemisphere the traditional structure of the tax systems has consisted of predominant participation of taxes on goods and services, including customs tariffs, and only tending towards increasing share of the revenues from the income tax as the pace of economic development permitted; only in two Latin-American countries have the income tax collection percentages with respect to total tax revenues been, in 1973, higher than thirty percent: Panama, 38.1 percent, and Colombia, 49.5 percent [18].

The fact already insinuated above, in connection with tax systems which include anachronistic or irrational forms of taxation — with earmarked taxes sometimes —, remains still significantly valid in some countries. Fortunately, years ago in several countries the governments decided the abrogation of many taxes of that type.

It seems that this trend is getting increasing attention, so as to have fewer number of taxes, keep those truly important, susceptible of being manipulated effectively as instruments serving objectives of economic development, or as suppliers of abundant revenues. Needless to say that the fewer the taxes the better their administration can be.

From the tax policy point of view that process of simplification of the tax systems would be the most obvious need to fulfil in the purely technical sense, but in the political sense it would have still much more appeal.

What about the remaining parts of the tax systems? We have previously mentioned, among the major areas of taxation, the existing trend with regard to taxes on goods and services; generally speaking those trends are going in the right direction in most of the countries.

Paying now our attention to the income tax area, there would be ample room for changes and improvements in the technical content of the legislations. For example, with respect to tax rates some Central American countries still have in effect progressive rates for taxing business profits — sometimes with no difference from the rates applied to taxable income from individuals —, or very high marginal rates for brackets of income in respect of which actually there is not a single taxpayer. This type of question, among others, should be dealt with so as to enhance the rationality of the income tax legislation and hence the tax system as a whole.

However, the most pressing need, the paramount task to be performed in the Latin-American context is related to the improvement of the tax administrations. There are no definite results of the inquiries about the level of tax evasion in many of those countries; nevertheless, with respect to some of them surveys have been undertaken which revealed that income tax evasion ranges between forty and fifty percent. At any rate, the evasion evidently is there, and in order to realize that fact it would be enough to take into consideration that whenever a tax amnesty or other kind of tax condonation is granted there is a very important amount of collection: it shows somehow the magnitude of the current tax evasion phenomenon.

For some time, in Bolivia it was a sort of tax evaders' "bonus" to have at the end of every year a tax amnesty; the taxpayers were accustomed to that legislation. Presently, Argentina is having another broad pardon of tax evaders, similar to those it has conceded almost every four or five years since 1956; and official estimates of the revenues to be collected from that source every time fall short of the reality, and for the forthcoming case — which is expected to be the last pardon of this kind — the estimates run around 300 million dollars.

To properly tackle this problem a recent quite uniform and vigorous trend is developing, aimed at building up on modern basis a supportive system for the tax administrations, consisting of a good network of information about the taxpayers and their tax behavior. This effort is attempted through the combined and closely co-ordinated actions of sub-systems dealing with tax statistics, automatic data processing and taxpayers registration. An adequate and efficient, really dynamic, setup of this sort must be able to provide the whole picture of economic circumstances that matter with respect to every taxpayer's obligation in connection with any tax which might be applicable to him.

The effective operation of these supportive systems should contribute to greatly reduce the sizable gap between what the tax laws say that taxpayers must pay and what they actually pay.

In other words, even without any change in the existing tax legislation, those improvements in the tax administration would accomplish what in theory the tax laws imply in terms of the distribution of the tax burden among taxpayers, a distribution pattern which so often is frustrated in reality because of the tax evasion factor. Presently that would be the dimension in which can be expected the most significant and far-reaching tax reform in Latin-America.

---

18. This excludes the case of Venezuela, where such a percentage was around sixty percent in the same year; it was basically as a result of the taxation on the oil industry, before its nationalization. Individuals and businesses in Venezuela have a low income tax burden.

CONFERENCE DIARY

OCTOBER 1977

31st Annual Congress of I.F.A.: I. Inflation and Taxation; II. Determination of the Taxable Profit of Corporations. Vienna (Austria) October 3-8 (English, French, German, Spanish).

Hawaii Tax Institute: The 14th Annual Tax Meeting (including Tax Shelter Review, Doing Business Abroad — Tax Implications etc.). Waikiki (Hawaii) October 23-28 (English).

NOVEMBER 1977

U.S. Branch of I.F.A.: National Meeting. New York (U.S.A.) November 3-4 (tentatively) (English).

JANUARY 1978

Associated Business Programmes Ltd.: Tax Planning and International Trade; Taxation of Personal Wealth of individuals; Sales Taxes, Value Added Taxes and Double Taxation Conventions. Honolulu (Hawaii) January 22-27 (English).

SEPTEMBER 1978

32nd Annual Congress of I.F.A.: I. The Taxation of Extractive Industries; II. The Differences in the Tax Treatment between Local and Foreign Investors and the Effects of International Treaties. Sydney (Australia) September 17-23 (English, French, German, Spanish).

COMMUNIQUE

L'UNION DES INGENIEURS COMMERCIAUX organisera au cours de l'année académique 1977-1978, un séminaire institulé:

FISCALITE & GESTION DE L'ENTREPRISE

Les exposés se donneront le samedi matin, à l'Université Libre de Bruxelles, entre le 3 décembre 1977 et le 2 avril 1978.

Le programme provisoire des sujets exposés au cours des dix matinées est le suivant:

1. La taxation des particuliers.
2. La taxation de l'entreprise. (2 matinées)
3. Fiscalité et comptabilité.
4. Impact de la fiscalité sur la politique de financement de l'entreprise.
5. Restructuration des entreprises et fiscalité.
6. Fiscalité et para-fiscalité — redistribution des revenus.
7. Fiscalité internationale et paradis fiscaux.
8. Ethique et fraude fiscale.
9. Perspectives de réformes fiscales.

Avec la participation de Messieurs les Professeurs:

E. BOURS	G. VAN FRAYENHOVEN	J. WILMART
I. CLAEYS-BOUUAERT	H. LEVY MORELLE	J. GHYSBRECHT
J. BAERT	J. LAGAE	H. BIRON
L.R. MINGUET	E. WUILLEAUME	P. BERGER
P. SCOHIER	R. HENRION	R. ZONDERVAN
P. SIBILLE	Max FRANK	Ern. KRINGS

Toutes demandes de renseignements et programme définitif sont à adresser à

L'UNION DES INGENIEURS COMMERCIAUX
C.P. 145.
ECOLE DE COMMERCE SOLVAY,
avenue Fr. Roosevelt, 50,
1050 - Bruxelles.

COUNTRY BY COUNTRY SURVEY OF LOOSE-LEAF PUBLICATIONS . . .

THE NETHERLANDS

DE ALGEMENE WET INZAKE RIJKSBELASTINGEN

By J.P. Scheltens.
Gouda Quint, P.O. Box 1148, Arnhem.
Supplemented: irregularly.

Loose-leaf publication containing text and comment on the General Tax Code, which aims at the codification of the general provisions applying to all taxes in so far as they concern formal law and penal law.

BELASTINGBERICHTEN

Editors: J.G. Detiger, J.P. van Franeker and H. Baron van Lawick.
Samsom, Wilhelminalaan 1, Alphen a.d. Rijn.
Supplemented: weekly.

Loose-leaf publication service entitled "Belastingberichten" or "Tax News" consisting of eight publications of several volumes each dealing with a specific part of Dutch tax law. The eight publications are designated under the following headings: (1) Wage Tax; (2) Turnover Tax (Value Added Tax; (3) Corporation and Dividend Tax; (4) Income Tax; (5) Death Duties, Land Tax, Capital Transfer Tax, etc.; (6) Net Wealth Tax; (7) International Tax Affairs; (8) General Tax Code, Tax Appeal and Local Taxes. Each publication contains the full text of the tax law involved and implementing provisions thereto, press releases, case law, lower and higher court decisions including cases before the Court of Justice of the European Communities, and answers to questions raised in the Cabinet.

DE BELASTINGGIDS

Gids voor studie en praktijk.
Edited by: C.J. Sleddering, L.G. Schedler, D.B. Bijl, H. van Dijk, R. Hendriks, a.o.
Gouda Quint, P.O. Box 1148, Arnhem.
Supplemented: twice per year.

Loose-leaf publication designed to provide explanation of the Netherlands tax system. The substance and performance of each tax law is dealt with for purposes of study and practice.

DE BELASTINGWETGEVING

Edited by J.H. Christiaanse.
Noorduijn, P.O. Box 1148, Arnhem.

Vol. 1. Algemene wet inzake rijksbelastingen/Wet administratieve rechtspraak belastingzaken.
By W.P. van Sikkelerus.
Supplemented: twice of three times per year.

Loose-leaf publication containing text and comment per article of the Dutch General Tax Code, which is intended to codify the general provisions applicable to all taxes in so far as they concern formal law and penal law. The text of and comment on the law concerning administrative procedure in tax affairs are included.

Vol. 2. Wet op de inkomstenbelasting 1964.
By T. Blokland and G.J. Zuurmond.
Supplemented: five times per year or more if necessary.

Loose-leaf publication providing text of and comment on the individual income tax law of 1964. References to case law and important literature are appended.

Vol. 3. Wet op de vermogensbelasting 1964.
By H.S. Jansma.
Supplemented: once per year.

Loose-leaf publication providing text of and comment on the net wealth tax law of 1964. References to case law and important literature are appended.

Vol. 4. Wet op de loonbelasting 1964.
By J.A. Rouwenhorst and J. Meulenbeld.
Supplemented: six times per year.

Loose-leaf publication providing text of and comment on the wage tax law of 1964. References to case law and important literature are appended.

Vol. 5. Wet op de vennootschapsbelasting 1969.
By J.F.M. Giele and A.K.P. Jongsma.
Supplemented: once or twice per year.

Loose-leaf publication providing text of and comment on the corporate income tax law of 1969. References to case law and important literature are appended.

Vol. 6. Wet op de omzetbelasting 1968.
By R.C. Tuk.
Supplemented: three times per year.

Loose-leaf publication providing text of and comment on the turnover tax law of 1968 (value added tax). References to case law and important literature are appended.

Vol. 7. Successiewet 1956.
By G. Laeijendecker.
Supplemented: once per year.

Loose-leaf publication providing text of and comment on the death duty law of 1956. References to case law and important literature are appended.

BELASTINGWETGEVING

(Inkomsten-, Vermogens-, en Vennootschapsbelasting).

Kluwer, P.O. Box 23, Deventer.
Supplemented: nearly monthly.

Loose-leaf publication in four volumes of a textbook designed for study and practice with respect to legal and taxation aspects of entity forms, i.e. corporations, associations and foundations. The EEC-directives on European company law as well as common rules for merger have been considered from legal and taxation points of view.

To meet the future information needs of the international businessman and his financial and legal advisers, the International Bureau of Fiscal Documentation announces the MAJOR e-x-p-a-n-s-i-o-n of its key loose-leaf management information service –

THE TAXATION OF COMPANIES IN EUROPE

Vol. 2 of 'Guides to European Taxation'

• each chapter follows a common outline • loose-leaf in 4 binders • updated quarterly by air

A practical information guide, in clear management terms, to the practical aspects of ALL taxes encountered at the different stages in the life of a company – in the NINE Member States of the EEC; and e-x-p-a-n-d-e-d to cover also MAJOR non-EEC Countries:

AUSTRIA	**NORWAY**	**SWEDEN**
GREECE	**SPAIN**	**SWITZERLAND**

The Taxation of Companies in Europe:

– provides you with reliable up-to-date background data at a fraction of the normal cost of gathering the information yourself
– although the continued importance of seeking local professional advice before making major corporate decisions is emphasized, it enables you to reduce the cost of those "first steps".

It not only answers many of your questions, it also helps you to ask the right questions!

Further details freely available upon request

DFL. 850 including up-to-date basic volume in four binders PLUS AN AIRMAIL SUBSCRIPTION TO THE QUARTERLY UPDATING SUPPLEMENTS FROM NOW THROUGH THE END OF 1977.

For residents of The Netherlands price is exclusive of VAT (BTW)

U.S.A.: Treasury Model Income Tax Treaty

of 18 May 1976 as amended

The U.S. Treasury's normal policy is to announce its plans to conclude a tax treaty with a particular country thus giving interested parties the opportunity to send in their comments. However, obstacles for a smooth functioning of this policy are twofold:

1. Treaty negotiations are often scheduled at a very short notice which makes notifying the public impractical, and
2. In many cases such negotiations are extended over a long period of time, sometimes several years, so that earlier comments do not reflect current problems.

In order to give better guidance the Treasury released a Model Income Tax Treaty which will be used as a basis for future negotiations.

CONVENTION BETWEEN THE GOVERNMENT OF THE UNITED STATES OF AMERICA AND THE GOVERNMENT OF . . . . . FOR THE AVOIDANCE OF DOUBLE TAXATION AND THE PREVENTION OF FISCAL EVASION WITH RESPECT TO TAXES ON INCOME AND CAPITAL

The Government of the United States of America and the Government of . . . . . , desiring to conclude a convention for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income and capital, have agreed as follows:

Article 1
PERSONAL SCOPE

1. Except as otherwise provided in this Convention, this Convention shall apply to persons who are residents of one or both of the Contracting States.

2. This Convention shall not restrict in any manner any exclusion, exemption, deduction, credit, or other allowance now or hereafter accorded—
a) by the laws of either Contracting State, or
b) by any other agreement between the Contracting States.

3. Notwithstanding any provision of this Convention except paragraph 4 of this Article, a Contracting State may tax its residents (as determined under Article 4 (Fiscal Domicile)), and by reason of citizenship may tax its citizens, as if this Convention had not come into effect. For this purpose the term "citizen" shall include a former citizen whose loss of citizenship had as one of its principal purposes the avoidance of income tax, but only for a period of 10 years following such loss.

4. The provisions of paragraph 3 shall not affect:
a) the benefits conferred by a Contracting State under paragraphs 1 b) and 4 of Article 18 (Pensions, etc.), Articles 23 (Relief From Double Taxation), 24 (Non-Discrimination), and 25 (Mutual Agreement Procedure); and
b) the benefits conferred by a Contracting State under Articles 19 (Government Service), 20 (Students and Trainees) and 27 (Effect of Convention on Diplomatic Agents and Consular Officers, Domestic Laws, and Other Treaties), upon individuals who are neither citizens of, nor have immigrant status in, that State.

Comment:

This contains several variations from the OECD Model, the most important being the provision allowing the United States to tax a citizen — or former citizen who renounced his citizenship for tax avoidance purposes within the prior ten years — as if no tax treaty existed. Thus, a U.S. citizen resident in a treaty country could not claim any benefits provided to residents of that country.

Article 2
TAXES COVERED

1. This Convention shall apply to taxes on income and on capital imposed on behalf of a Contracting State.

2. The existing taxes to which this Convention shall apply are:
a) In the United States: the Federal income taxes imposed by the Internal Revenue Code and the excise taxes imposed on insurance premiums paid to foreign insurers and with respect to private foundations, but excluding the accumulated earnings tax and the personal holding company tax.
b) In . . . . . : . . . . . .
. . . . . .

3. The Convention shall apply also to any identical or substantially similar taxes which are imposed by a Contracting State after the date of signature of this Convention in addition to, or in place of, the existing taxes. The competent authorities of the Contracting States shall notify each other of any changes which have been made in their respective taxation laws and shall notify each other of any official published material concerning the application of this Convention, including explanations, regulations, rulings, or judicial decisions.

4. For the purpose of Article 24 (Non-Discrimination), this Convention shall also apply to taxes of every kind and description imposed by a Contracting State or a political subdivision or local authority thereof. For the purpose of Article 26 (Exchange of Information and Administrative Assistance), this Convention shall also apply to taxes of every kind imposed by a Contracting State.

Article 3
GENERAL DEFINITIONS

1. For the purpose of this Convention, unless the context otherwise requires:
a) the term "person" includes an individual, a partnership, a company, an estate, a trust, and any other body of persons;
b) the term "company" means any body corporate or any entity which is treated as a body corporate for tax purposes;
c) the terms "enterprise of a Contracting State" and "enterprise of the other Contracting State" mean respectively an enterprise carried on by a reident of a Contracting State and an enterprise carried on by a resident of the other Contracting State;
d) the term "international traffic" means any transport by a ship or aircraft, except where such transport is solely between places in the other Contracting State.
e) the term "competent authority" means:
(i) in the United States: the Secretary of the Treasury or his delegate, and
(ii) In .....:
.....
f) the term "United States" means the United States of America, but does not include Puerto Rico, the Virgin Islands, Guam or any other United States possession or territory.
g) the term ..... means
.....

2. As regards the application of this Convention by a Contracting State any term not defined therein shall, unless the context otherwise requires and subject to the provisions of Article 25 (Mutual Agreement Procedure), have the meaning which it has under the laws of that State concerning the taxes to which this Convention applies.

Article 4
RESIDENT

1. For purposes of this Convention, the term "resident of a Contracting State" means any person who, under the laws of that State, is liable to tax therein by reason of his domicile, residence, citizenship, place of management, place of incorporation, or any other criterion of a similar nature, provided, however, that:
a) this term does not include any person who is liable to tax in that State in respect only of income from sources in that State or capital situated therein; and
b) in the case of income derived or paid by a partnership, estate, or trust, this term applies only to the extent that the income derived by such partnership, estate, or trust is subject to tax as the income of a resident of that State, either in its hands or in the hands of its partners or beneficiaries.

2. Where by reason of the provisions of paragraph 1 an individual is a resident of both Contracting States, then his or her status shall be determined as follows:
a) The individual shall be deemed to be a resident of the State in which he or she has a permanent home available; if such individual has a permanent home available in both States, or in neither State, he or she shall be deemed to be a resident of the State with which his or her personal and economic relations are closer (center of vital interests);
b) If the State in which the individual's center of vital interests cannot be determined, he or she shall be deemed to be a resident of the State in which he or she has an habitual abode;
c) If the individual has an habitual abode in both States or in neither of them, he or she is a national;
d) If the individual is a national of both States or of neither of them, the competent authorities of the Contracting States shall settle the question by mutual agreement.

3. Where by reason of the provisions of paragraph 1 a company is a resident of both Contracting States, then if it is created or organized under the laws of a Contracting State or a political subdivision thereof, it shall be treated as a resident of that State.

4. Where by reason of the provisions of paragraph 1 a person other than an individual or a company is a resident of both Contracting States, the competent authorities of the Contracting States shall by mutual agreement endeavor to settle the question and to determine the mode of application of the Convention to such person.

5. For purposes of this Convention, an individual who is a national of a Contracting State shall also be deemed to be a resident of that State if (a) the individual is an employee of that State or an instrumentality thereof in the other Contracting State or in a third State; (b) the individual is engaged in the performance of governmental functions for the first-mentioned State; and (c) the individual is subjected in the first-mentioned State to the same obligations in respect of taxes on income as are residents of the first-mentioned State. The spouse and minor children residing with the employee and subject to the requirements of (c) above shall also be deemed to be residents of the first-mentioned State.

6. Where under any provision of this Convention income arising in one of the Contracting States is relieved from tax in that Contracting State and, under the law in force in the other Contracting State a person, in respect of the said income, is subject to tax by reference to the amount thereof which is remitted to or received in that other Contracting State and not by reference to the full amount thereof, then the relief to be allowed under this Convention in the first-mentioned Contracting State shall apply only to so much of the income as is remitted to or received in the other Contracting State during the year such income accrues.

Comment:

Unlike the OECD Model, the U.S. Model provides no residency for a partnership, estate or trust separate from that of the persons receiving income from the entity. Also, the U.S. Model would allow a person to be considered a resident of a country if that country taxed him on his world-wide income. Since the United States taxes all citizens on world-wide income, this provision would greatly increase the coverage of the treaty.

Article 5
PERMANENT ESTABLISHMENT

1. For the purposes of this Convention the term "permanent establishment" means a fixed place of business through which the business of an enterprise is wholly or partly carried on.

2. The term "permanent establishment" shall include especially:
a) a branch;
b) an office;
c) a factory;
d) a workshop; and
e) a mine, an oil or gas well, a quarry, or any other place of extraction of natural resources.

3. A building site or construction or installation project, or an installation or drilling rig or ship used for the exploration or development of natural resources, const

tutes a permanent establishment only if it lasts more than 24 months.

4. Notwithstanding the preceding provisions of this Article, the term "permanent establishment" shall be deemed not to include:
a) the use of facilities solely for the purpose of storage, display, or delivery of goods or merchandise belonging to the enterprise;
b) the maintenance of a stock of goods or merchandise belonging to the enterprise solely for the purpose of storage, display or delivery;
c) the maintenance of a stock of goods or merchandise belonging to the enterprise solely for the purpose of processing by another enterprise;
d) the maintenance of a fixed place of business solely for the purpose of purchasing goods or merchandise, or of collecting information, for the enterprise;
e) the maintenance of a fixed place of business solely for the purpose of carrying on, for the enterprise, any other activity of a preparatory or auxiliary character;
f) the maintenance of a fixed place of business solely for any combination of the activities mentioned in sub-paragraphs a) to e) of this paragraph.

5. Notwithstanding the provisions of paragraphs 1 and 2, where a person — other than an agent of an independent status to whom paragraph 6 applies — is acting on behalf of an enterprise and has and habitually exercises in a Contracting State an authority to conclude contracts in the name of the enterprise, that enterprise shall be deemed to have a permanent establishment in that State in respect of any activities which that person undertakes for the enterprise, unless the activities of such person are limited to those mentioned in paragraph 4 which, if exercised through a fixed place of business, would not make this fixed place of business a permanent establishment under the provisions of that paragraph.

6. An enterprise shall not be deemed to have a permanent establishment in a Contracting State merely because it carries on business in that State through a broker, general commission agent or any other agent of an independent status, provided that such persons are acting in the ordinary course of their business.

7. The fact that a company which is a resident of a Contracting State controls or is controlled by a company which is a resident of the other Contracting State, or which carries on business in that other State (whether through a permanent establishment or otherwise), shall not of itself constitute either company a permanent establishment of the other.

Comment:

This Model requires a construction project to last more than 24 months before it constitutes a permanent establishment; the OECD Model sets the time limit at 12 months and many third world countries favor a period of 6 months.

Article 6
INCOME FROM IMMOVABLE PROPERTY (REAL PROPERTY)

1. Income derived by a resident of a Contracting State from immovable (real) property (including income from agriculture or forestry) situated in the other Contracting State may be taxed in that other State.

2. The term "immovable property" shall have the meaning which it has under the law of the Contracting State in which the property in question is situated. The term shall in any case include property accessory to immovable property, livestock and equipment used in agriculture and forestry, rights to which the provisions of general law respecting landed property apply, usufruct of immovable property and rights to variable or fixed payments as consideration for the working of, or the right to work, mineral deposits, sources and other natural resources; ships, boats and aircraft shall not be regarded as immovable property.

3. The provisions of paragraph 1 shall apply to income derived from the direct use, letting, or use in any form of immovable property.

4. The provisions of paragraphs 1 and 3 shall also apply to the income from immovable property of an enterprise and to income from immovable property used for the performance of independent personal services.

5. A resident of a Contracting State who is subject to tax in the other Contracting State on income from immovable property situated in the other Contracting State may elect for any taxable year to compute the tax on such income on a net basis as if such income were attributable to a permanent establishment in such other State. Any such election shall be binding for the taxable year of the election and all subsequent taxable years unless the competent authorities of the two Contracting States, pursuant to a request by the taxpayer made to the competent authority of the Contracting State in which the taxpayer is a resident, agree to terminate the election.

Comment:

The U.S. Model provides the option, not contained in the OECD Model, of having this income taxed on a net basis as if it were earned through a permanent establishment.

Article 7
BUSINESS PROFITS

1. The business profits of an enterprise of a Contracting State shall be taxable only in that State unless the enterprise carries on business in the other Contracting State through a permanent establishment situated therein. If the enterprise carries on business as aforesaid, the business profits of the enterprise may be taxed in the other State but only so much of them as is attributable to that permanent establishment.

2. Subject to the provisions of paragraph 3, where an enterprise of a Contracting State carries on business in the other Contracting State through a permanent establishment situated therein, there shall in each Contracting State be attributed to that permanent establishment the business profits which it might be expected to make if it were a distinct and independent enterprise engaged in the same or similar activities under the same or similar conditions.

3. In determining the business profits of a permanent establishment, there shall be allowed as deductions expenses which are incurred for the purposes of the permanent establishment, including a reasonable allocation of executive and general administrative expenses, research and development expenses, interest, and other expenses incurred for the purposes of the enterprise as a whole (or the part thereof which includes the permanent establishment), whether incurred in the State in which the permanent establishment is situated or elsewhere.

4. No business profits shall be attributed to a permanent establishment by reason of the mere purchase by that permanent establishment of goods or merchandise for the enterprise.

5. For the purposes of the preceding paragraphs, the business profits to be attributed to the permanent establishment shall be determined by the same method year by year unless there is good and sufficient reason to the contrary.

6. Where business profits include items of income which are dealt with separately in other Articles of this Convention, then the provisions of those Articles shall not be affected by the provisions of this Article.

7. For the purposes of this Convention, "business profits" means income derived from any trade or business whether carried on by an individual, company or any other person, or group of persons, including the rental of tangible personal (movable) property, and the rental or licensing of cinema-

tograph films or films or tapes used for radio or television broadcasting.

Comment:

The U.S Model adds research and development expenses and interest to the named expenses which can be allocated to a permanent establishment.

Article 8
SHIPPING AND AIR TRANSPORT

1. Profits of an enterprise of a Contracting State from the operation in international traffic of ships or aircraft shall be taxable only in that State.

2. For purposes of this Article, profits from the operation in international traffic of ships or aircraft include profits derived from the rental on a full or bareboat basis of ships or aircraft if operated in international traffic by the lessee or if such rental profits are incidental to other profits described in paragraph 1.

3. Profits of an enterprise of a Contracting State from the use, maintenance or rental of containers (including trailers, barges and related equipment for the transport of containers) used for the transport in international traffic of goods or merchandise shall be taxable only in that State.

4. The provisions of paragraphs 1 and 3 shall also apply to profits from the participation in a pool, a joint business or an international operating agency.

Article 9
ASSOCIATED ENTERPRISES

1. Where
(a) an enterprise of a Contracting State participates directly or indirectly in the management, control or capital of an enterprise of the other Contracting State, or
(b) the same persons participate directly or indirectly in the management, control or capital of an enterprise of a Contracting State and an enterprise of the other Contracting State,
and in either case conditions are made or imposed between the two enterprises in their commercial or financial relations which differ from those which would be made between independent enterprises, then any profits which would, but for those conditions, have accrued to one of the enterprises, but, by reason of those conditions, have not so accrued, may be included in the profits of that enterprise and taxed accordingly.

2. Where a Contracting State includes in the profits of an enterprise of that State, and taxes accordingly, profits on which an enterprise of the other Contracting State has been charged to tax in that other State, and the profits so included are profits which would have accrued to the enterprise of the first-mentioned State if the conditions made between the two enterprises had been those which would have been made between independent enterprises, then that other State shall make an appropriate adjustment to the amount of the tax charged therein on those profits. In determining such adjustment, due regard shall be had to the other provisions of this Convention and the competent authorities of the Contracting States shall if necessary consult each other.

3. The provisions of paragraph 1 shall not limit any provisions of the law of either Contracting State which permit the distribution, apportionment or allocation of income, deductions, credits, or allowances between persons owned or controlled directly or indirectly by the same interests when necessary in order to prevent evasion of taxes or clearly to reflect the income of any of such persons.

Article 10
DIVIDENDS

1. Dividends paid by a company which is a resident of a Contracting State to a resident of the other Contracting State may be taxed in that other State.

2. However, such dividends may also be taxed in the Contracting State of which the company paying the dividends is a resident, and according to the laws of that State, but if the beneficial owner of the dividends is a resident of the other Contracting State, the tax so charged shall not exceed:
a) 5 percent of the gross amount of the dividends if the beneficial owner is a company (other than a partnership) which owns, directly or indirectly, 10 percent of the voting stock of the company paying the dividends;
b) 15 percent of the gross amount of the dividends in all other cases.
This paragraph shall not affect the taxation of the company in respect of the profits out of which the dividends are paid.

3. The term "dividends" as used in this Article means income from shares or other rights, not being debt-claims, participating in profits, as well as income from other corporate rights which is subjected to the same taxation treatment as income from shares by the laws of the State of which the company making the distribution is a resident.

4. The provisions of paragraphs 1 and 2 shall not apply if the recipient of the dividends, being a resident of a Contracting State, carries on business in the other Contracting State, of which the company paying the dividends is a resident, through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the holding in respect of which the dividends are paid is effectively connected with such permanent establishment or fixed base. In such a case, the provisions of Article 7 (Business Profits) or Article 14 (Independent Personal Services), as the case may be, shall apply.

5. Where a company is a resident of a Contracting State, the other Contracting State may not impose any tax on the dividends paid by the company, except insofar as
a) such dividends are paid to a resident of that other State,
b) the holding in respect of which the dividends are paid is effectively connected with a permanent establishment or a fixed base situated in that other State, or
c) such dividends are paid out of profits attributable to one or more permanent establishments which such company had in that other State, provided that such profits constituted at least 50 percent of such company's gross income from all sources.

Where subparagraph c) applies and subparagraphs a) and b) do not apply, any such tax shall be subject to the limitations of paragraph 2.

Comment:

The OECD Model requires a 25 percent holding before the 5 percent withholding rate applies; this model requires only a 10 percent holding.

Article 11
INTEREST

1. Interest derived and beneficially owned by a resident of a Contracting State shall be taxable only in that State.

2. The term "interest" as used in this Convention means income from debt claims of every kind, whether or not secured by mortgage, and whether or not carrying a right to participate in the debtor's profits, and in particular, income from government securities and income from bonds or debentures, including premiums or prizes attaching to such securities, bonds or debentures. Penalty charges for late payment shall not be regarded as interest for the purpose of this Convention.

3. The provisions of paragraph 1 shall not apply if the beneficial owner of the interest, being a resident of a Contracting State

carries on business in the other Contracting State in which the interest arises, through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the debt-claim in respect of which the interest is paid is effectively connected with such permanent establishment or fixed base. In such case the provisions of Article 7 (Business Profits) or Article 14 (Independent Personal Services), as the case may be, shall apply.

4. Interest shall be deemed to arise in a Contracting State when the payer is that State itself, a political subdivision, a local authority or a resident of that State. Where, however, the person paying the interest, whether he is a resident of a Contracting State or not, has in a Contracting State a permanent establishment or a fixed base in connection with which the indebtedness on which the interest is paid was incurred, and such interest is borne by such permanent establishment or fixed base, then such interest shall be deemed to arise in the State in which the permanent establishment or fixed base is situated.

5. Where, by reason of a special relationship between the payer and the beneficial owner or between both of them and some other person, the amount of the interest, having regard to the debt-claim for which it is paid, exceeds the amount which would have been agreed upon by the payer and the beneficial owner in the absence of such relationship, the provisions of this Article shall apply only to the last-mentioned amount. In such case, the excess part of the payments shall remain taxable according to the laws of each Contracting State, due regard being had to the other provisions of this Convention.

6. A Contracting State may not impose any tax on interest paid by a resident of the other Contracting State, except insofar as

a) such interest is paid to a resident of the first-mentioned State,

b) the debt-claim in respect of which the interest is paid is effectively connected with a permanent establishment or a fixed base situated in the first-mentioned State, or

c) such interest arises in the first-mentioned State and is not paid to a resident of such other State.

Comment:

The OECD Model allows a State to impose a tax up to ten percent on interest arising in that State and paid to a resident of the other State; under the U.S. Model only the State in which the recipient of the interest resides may tax the interest payments.

Article 12
ROYALTIES

1. Royalties derived and beneficially owned by a resident of a Contracting State shall be taxable only in that State.

2. The term "royalties" as used in this Article means payments of any kind received as a consideration for the use of, or the right to use, any copyright of literary, artistic or scientific work (but not including cinematograph films or films or tapes used for radio or television broadcasting), any patent, trade mark, design or model, plan, secret formula or process, or other like right or property, or for information concerning industrial, commercial or scientific experience. The term "royalties" also includes gains derived from the alienation of any such right or property which are contingent on the productivity, use, or disposition thereof.

3. The provisions of paragraph 1 shall not apply if the beneficial owner of the royalties, being a resident of a Contracting State, carries on business in the other Contracting State in which the royalties arise through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the right or property in respect of which the royalties are paid is effectively connected with such permanent establishment or fixed base.

In such case the provisions of Article 7 (Business Profits) or Article 14 (Independent Personal Services), as the case may be, shall apply.

4. Where, by reason of a special relationship between the payer and the beneficial owner or between both of them and some other person, the amount of the royalties, having regard to the use, right or information for which they are paid, exceeds the amount which would have been agreed upon by the payer and the person deriving the royalties in the absence of such relationship, the provisions of this Article shall apply only to the last-mentioned amount. In such case, the excess part of the payments shall remain taxable according to the law of each Contracting State, due regard being had to the other provisions of this Convention.

Article 13
CAPITAL GAINS

1. Gains derived by a resident of a Contracting State from the alienation of immovable property referred to in Article 6 (Income From Immovable Property) and situated in the other Contracting State may be taxed in that other State.

2. Gains from the alienation of movable property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contracting State or of movable property pertaining to a fixed base available to a resident of a Contracting State in the other Contracting State for the purpose of performing independent personal services, including such gains from the alienation of such a permanent establishment (alone or with the whole enterprise) or of such fixed base, may be taxed in that other State.

3. Gains derived by an enterprise of a Contracting State from the alienation of ships, aircraft or containers operated by such enterprise in international traffic shall be taxable only in that State, and gains described in Article 12 (Royalties) shall be taxable only in accordance with the provisions of Article 12.

4. Gains from the alienation of any property other than that referred to in paragraphs 1, 2 and 3, shall be taxable only in the Contracting State of which the alienator is a resident.

Article 14
INDEPENDENT PERSONAL SERVICES

Income derived by an individual who is a resident of a Contracting State from the performance of personal services in an independent capacity shall be taxable only in that State unless such services are performed in the other Contracting State and,

a) the individual is present in that other State for a period or periods aggregating more than 183 days in the taxable year concerned, or

b) the individual has a fixed base regularly available to him in that other State for the purpose of performing his activities, but only so much of the income as is attributable to that fixed base may be taxed in such other State.

Article 15
DEPENDENT PERSONAL SERVICES

1. Subject to the provisions of Articles 18 (Pensions, Etc.) and 19 (Government Service), salaries, wages and other similar remuneration derived by a resident of a Contracting State in respect of an employment shall be taxable only in that State unless the employment is exercised in the other Contracting State. If the employment is so exercised, such remuneration as is derived therefrom may be taxed in that other State.

2. Notwithstanding the provisions of paragraph 1, remuneration derived by a resident of a Contracting State in respect of an employment exercised in the other Contracting State shall be taxable only in the first-mentioned State if:

a) the recipient is present in the other State for a period or periods not exceeding

in the aggregate 183 days in the taxable year concerned,
b) the remuneration is paid by, or on behalf of, an employer who is not a resident of the other State, and
c) the remuneration is not borne by a permanent establishment or a fixed base which the employer has in the other State.

3. Notwithstanding the preceding provisions of this Article, remuneration derived in respect of an employment as a member of the regular complement of a ship or aircraft operated by an enterprise of a Contracting State in international traffic may be taxed only in that Contracting State.

Article 16
INVESTMENT OR HOLDING COMPANIES

If 25 percent or more of the capital of a company which is a resident of a Contracting State is owned directly or indirectly by individuals who are not residents of that State, and if by reason of special measures the tax imposed by that State on that company with respect to dividends, interest or royalties arising in the other Contracting State is substantially less than the tax generally imposed by the first-mentioned State on corporate business profits, then, notwithstanding the provisions of Articles 10 (Dividends), 11 (Interest), or 12 (Royalties) that other State may tax such dividends, interest or royalties.

For the purposes of this Article, the source of dividends, interest or royalties shall be determined in accordance with paragraph 3 a), b), or c) of Article 23 (Relief from Double Taxation).

Comment:

No such provision exists in the OECD Model to prevent non-resident individuals from establishing a company resident in a Contracting State to take advantage of reduced withholding rates. Such a provision, however, has been included in most recent U.S. treaties.

Article 17
ARTISTES AND ATHLETES

1. Notwithstanding the provisions of Articles 14 (Independent Personal Services) and 15 (Dependent Personal Services), income derived by a resident of a Contracting State as an entertainer, such as a theatre, motion picture, radio or television artiste, or a musician, or as an athlete, from his or her personal activities as such exercised in the other Contracting State, may be taxed in that other State, except where the amount of the gross receipts derived by such entertainer or athlete, including expenses reimbursed to him or her or borne on his or her behalf, from such activities do not exceed fifteen thousand United States dollars ($15,000) or its equivalent in ..... for the taxable year concerned.

2. Where income in respect of activities exercised by an entertainer or an athlete in his or her capacity as such accrues not to that entertainer or athlete but to another person, that income may, notwithstanding the provisions of Articles 7 (Business Profits), 14 (Independent Personal Services), and 15 (Dependent Personal Services), be taxed in the Contracting State in which the activities of the entertainer or athlete are exercised.

For purposes of the preceding sentence, income of an entertainer or athlete shall be deemed not to accrue to another person if it is established that neither the entertainer or athlete, nor persons related thereto, participate directly or indirectly in the profits of such other person in any manner, including the receipt of deferred remuneration, bonuses, fees, dividends, partnership distributions or other distributions.

Comment:

Under the OECD Model artistes and athletes may be taxed by a State if they earn any income for performances within that State; no exemption is provided for gross revenues not exceeding $15,000.

Article 18
PENSIONS, ETC.

1. Subject to the provisions of paragraph 1 of Article 19 (Government Service),
a) pensions and other similar remuneration beneficially derived by a resident of a Contracting State in consideration of past employment shall be taxable only in that State, and
b) social security payments and other public pensions paid by a Contracting State to an individual who is a resident of the other Contracting State or a citizen of the United States shall be taxable only in the first-mentioned Contracting State.

2. Annuities beneficially derived by a resident of a Contracting State shall be taxable only in that State. The term "annuities" as used in this paragraph means a stated sum paid periodically at stated times during life or during a specified number of years, under an obligation to make the payments in return for adequate and full consideration (other than services rendered).

3. Alimony paid to a resident of a Contracting State by a resident of the other Contracting State shall be exempt from tax in the other Contracting State. The term "alimony" as used in this paragraph means periodic payments made pursuant to a written separation agreement or a decree of divorce, separate maintenance, or compulsory support, which payments are taxable to the recipient under the laws of the State of which he is a resident.

4. Periodic payments for the support of a minor child made pursuant to a written separation agreement or a decree of divorce, separate maintenance, or compulsory support, paid by a resident of one of the Contracting States to a resident of the other Contracting State, shall be exempt from tax in both Contracting States.

Article 19
GOVERNMENT SERVICE

1. a) Remuneration, other than a pension, paid by a Contracting State or a political subdivision or a local authority thereof to an individual in respect of services rendered to that State or subdivision or authority shall be taxable only in that State.
b) However, such remuneration shall be taxable only in the other Contracting State if the services are rendered in that State and the individual is a resident of that State who:
(i) is a national of that State; or
(ii) did not become a resident of that State solely for the purpose of rendering the services;
provided that the provisions of clause (ii) shall not apply to the spouse or dependent children of an individual who is receiving remuneration to which the provisions of subparagraph (a) apply and who does not come within the terms of clause (i) or (ii).

2. a) Any pension paid by, or out of funds created by, a Contracting State or a political subdivision or a local authority thereof to an individual in respect of services rendered to that State or subdivision or authority shall be taxable only in that State.
b) However, such pension shall be taxable only in the other Contracting State if the individual is a resident of, and a national of, that State.

3. The provisions of Articles 14 (Independent Personal Services), 15 (Dependent Personal Services), 17 (Artistes and Athletes), and 18 (Pensions, etc.) shall apply to remuneration and pensions in respect of services rendered in connection with a business carried on by a Contracting State or a political subdivision or a local authority thereof.

Article 20
STUDENTS AND TRAINEES

1. Payments which a student, apprentice or business trainee who is or was immediately before visiting a Contracting State a resident of the other Contracting State and who is present in the first-mentioned State for the purpose of his or her full-time education or training receives for the purpose of his or her maintenance, education or training shall not be taxed in that State provided that such payments arise from sources outside that State.

2. An individual to whom paragraph 1 applies may elect to be treated for tax purposes as a resident of the first-mentioned State. The election shall apply to all periods during the taxable year of the election and subsequent taxable years during which the individual qualifies under paragraph 1, and may not be revoked except with the consent of the competent authority of that State.

Comment:

Paragraph 2 of this Article is without an equivalent provision in the OECD Model or in any U.S. treaty.

Article 21
OTHER INCOME

1. Items of income of a resident of a Contracting State, wherever arising, not dealt with in the foregoing Articles of this Convention shall be taxable only in that State.

2. The provisions of paragraph 1 shall not apply to income other than income from immovable property as defined in paragraph 2 of Article 6 (Income From Immovable Property), if the person deriving the income, being a resident of a Contracting State, carries on business in the other Contracting State through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the right or property in respect of which the income is paid is effectively connected with such permanent establishment or fixed base. In such case the provisions of Article 7 (Business Profits), Article 14 (Independent Personal Services), or Article 17 (Artistes and Athletes) as the case may be, shall apply.

Article 22
CAPITAL

1. Capital represented by immovable property referred to in Article 6 (Income From Immovable Property), owned by a resident of a Contracting State and situated in the other Contracting State, may be taxed in that other State.

2. Capital represented by movable property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contracting State or by movable property pertaining to a fixed base available to a resident of a Contracting State in the other Contracting State for the purpose of performing independent personal services may be taxed in that other State.

3. Capital represented by ships and aircraft operated by a resident of a Contracting State in international traffic and movable property pertaining to the operation of such ships and aircraft shall be taxable only in that State.

4. All other elements of capital of a resident of a Contracting State shall be taxable only in that State.

Article 23
RELIEF FROM DOUBLE TAXATION

1. In the case of the United States, double taxation shall be avoided as follows: In accordance with the provisions and subject to the limitations of the law of the United States (as it may be amended from time to time without changing the general principle hereof), the United States shall allow to a resident or citizen of the United States as a credit against the United States tax on income or capital the appropriate amount of tax paid to . . . . . ; and, in the case of a United States company owning at least 10 percent of the voting stock of a company which is a resident of . . . . . from which it receives dividends in any taxable year, the United States shall allow as a credit against the United States tax on income the appropriate amount of tax paid to . . . . . by that company with respect to the profits out of which such dividends are paid. Such appropriate amount shall be based upon the amount of tax paid to . . . . . , but the credit shall not exceed the limitations (for the purpose of limiting the credit to the United States tax on income from sources outside of the United States) provided by United States law for the taxable year. For purposes of applying the United States credit in relation to tax paid to . . . . . the taxes referred to in paragraphs 2 b) and 3 of Article 2 (Taxes Covered) shall be considered to be income taxes.

2. In the case of . . . . . , double taxation shall be avoided as follows: In accordance with the provisions and subject to the limiations of the law of . . . . . (as it may be amended from time to time without changing the general principle hereof), the . . . . . shall allow to a resident or citizen of . . . . . as a credit against the . . . . . tax on income or capital the appropriate amount of tax paid to the United States; and in the case of a . . . . . company owning at least 10 percent of the voting stock of a company which is a resident of the United States from which it receives dividends in any taxable year, ... shall allow as a credit against the United States tax on income the appropriate amount of tax paid to the United States by that company with respect to the profits out of which such dividends are paid. Such appropriate amount shall be based upon the amount of tax paid to the United States, but the credit shall not exceed the limitations (for the purpose of limiting the credit to the
tax on income from sources outside of . . . . . provided by law for the taxable year. For purposes of applying the credit in relation to tax paid to the United States the taxes
referred to in paragraphs 2 a) and 3 of Article 2 (Taxes Covered) shall be considered to be income taxes.

3. For the purposes of the preceding paragraphs of this Article, the source of income or profits shall be determined in accordance with the following rules:
a) Dividends, as defined in paragraph 3 of Article 10 (Dividends), shall be deemed to arise in a Contracting State if paid by a company which is a resident of that State or if paragraph 5 c) of Article 10 (Dividends) applies.
b) Interest, as defined in paragraph 2 of Article 11 (Interest), shall be deemed to arise in the State specified in paragraph 4 of Article 11.
c) Royalties, as defined in paragraph 2 of Article 12 (Royalties), shall be deemed to arise in a Contracting State to the extent that such royalties are with respect to the use of, or the right to use, rights or property within that State.
d) Except for income or profits referred to in subparagraphs a), b), or c), and except for income or profits taxed by the United States solely by reason of citizenship in accordance with paragraph 2 of Article 1 (Personal Scope): income or profits derived by a resident of a Contracting State which may be taxed in the other Contracting State in accordance with this Convention shall be deemed to arise in that other Contracting State.

Article 24
NON-DISCRIMINATION

1. Nationals of a Contracting State shall not be subjected in the other State to any taxation or any requirement connected therewith, which is other or more burdensome than the taxation and connected requirements to which nationals of that other State in the same circumstances are or may be subjected. For purposes of the preceding sentence, nationals who are subject to tax by a Contracting State on world-wide income are not in the same circumstances as nationals who are not so subject. This provision shall, notwithstanding the provisions of Article 1 (Personal Scope), also apply to persons who are not residents of one or both of the Contracting States.

2. The term "nationals" means:
a) in relation to . . . . . ,
. . . . . .
. . . . . ;

b) in relation to the United States, United States citizens.

3. The taxation on a permanent establishment which an enterprise of a Contracting State has in the other Contracting State shall not be less favorably levied in that other State than the taxation levied on enterprises of that other State carrying on the same activities. This provision shall not be construed as obliging a Contracting State to grant to residents of the other Contracting State any personal allowances, reliefs and reductions for taxation purposes on account of civil status or family responsibilities which it grants to its own residents.

4. Except where the provisions of paragraph 1 of Article 9 (Associated Enterprises), paragraph 5 of Article 11 (Interest), or paragraph 4 of Article 12 (Royalties) apply, interest, royalties and other disbursements paid by an enterprise of a Contracting State to a resident of the other Contracting State shall, for the purpose of determining the taxable profits of such enterprise, be deductible under the same condition as if they had been paid to a resident of the first-mentioned State. For purposes of this paragraph, the term "other disbursements" shall include charges (for amounts expended by such residents for purposes of such enterprise, including a reasonable allocation of executive and general administrative expenses (except to the extent representing the expenses of a type of activity which is not for the benefit of such enterprise, but constitute "stewardship" or "overseeing" functions undertaken for such resident's own benefit as an investor in the enterprise), research and development, and other expenses incurred by such resident for the benefit of a group of related enterprises including such enterprise. Similarly, any debts of an enterprise of a Contracting State to a resident of the other Contracting State shall, for the purpose of determining the taxable capital of such enterprise, be deductible under the same conditions as if they had been contracted to a resident of the first-mentioned State.

5. Enterprises of a Contracting State, the capital of which is wholly or partly owned or controlled, directly or indirectly, by one or more residents of the other Contracting State, shall not be subjected in the first-mentioned State to any taxation or any requirement connected therewith which is other or more burdensome than the taxation and connected requirements to which other similar enterprises of the first-mentioned State are or may be subjected.

6. The provisions of this Article shall, in accordance with the provisions of paragraph 4 of Article 2 (Taxes Covered), apply to taxes of every kind and description imposed by a Contracting State or a political subdivision or local authority thereof.

Article 25
MUTUAL AGREEMENT PROCEDURE

1. Where a person considers that the actions of one or both of the Contracting States result or will result for him or her in taxation not in accordance with the provisions of this Convention, he or she may, irrespective of the remedies provided by the domestic law of those States, present his or her case to the competent authority of the Contracting State of which he or she is a resident or national.

2. The competent authority shall endeavor, if the objection appears to it to be justified and if it is not itself able to arrive at a satisfactory solution, to resolve the case by mutual agreement with the competent authority of the other Contracting State, with a view to the avoidance of taxation which is not in accordance with the Convention.

Any agreement reached shall be implemented notwithstanding any time limits in the domestic law of the Contracting States.

3. The competent authorities of the Contracting States shall endeavor to resolve by mutual agreement any difficulties or doubts arising as to the interpretation or application of the Convention. In particular the competent authorities of the Contracting States may agree:
a) to the same attribution of income, deductions, credits or allowances of an enterprise of a Contracting State to its permanent establishment situated in the other Contracting State;
b) to the same allocation of income, deductions, credits, or allowances between persons, including a uniform position on the application of the requirements of paragraph 3 of Article 24 (Non-discrimination);
c) to the same characterization of particular items of income;
d) to the same application of source rules with respect to particular items of income; and
e) to a common meaning of a term.
They may also consult together for the elimination of double taxation in cases not provided for in the Convention.

4. The competent authorities of the Contracting States may communicate with each other directly for the purpose of reaching an agreement in the sense of the preceding paragraphs.

5. The competent authorities of the Contracting States may prescribe regulations to carry out the purposes of this Convention.

Article 26
EXCHANGE OF INFORMATION AND ADMINISTRATIVE ASSISTANCE

1. The competent authorities of the Contracting States shall exchange such information as is necessary for carrying out the provisions of this Convention or of the domestic laws of the Contracting States concerning taxes covered by the Convention insofar as the taxation thereunder is not contrary to the Convention. The exchange of information is not restricted by Article 1 (Personal Scope). Any information received by a Contracting State shall be treated as secret in the same manner as information obtained under the domestic laws of that State and shall be disclosed only to persons or authorities (including courts and administrative bodies) involved in the assessment or collection of, the enforcement or prosecution in respect of, or the determination of appeals in relation to, the taxes covered by the Convention. Such persons or authorities shall use the information only for such purposes. They may disclose the information in public court proceedings or in judicial decisions.

2. In no case shall the provisions of paragraph 1 be construed so as to impose on a Contracting State the obligation:
a) to carry out administrative measures at variance with the laws and administrative practice of that or of the other Contracting State;
b) to supply information which is not obtainable under the laws or in the normal course of the administration of that or of the other Contracting State;
c) to supply information which would disclose any trade, business, industrial, commercial or professional secret or trade process, or information, the disclosure of which would be contrary to public policy (ordre public).

3. If information is requested by a Contracting State in accordance with this Article, the other Contracting State shall obtain the information to which the request relates in the same manner and to the same extents as if the tax of the first-mentioned

State were the tax of that other State and were being imposed by that other State. If specifically requested by the competent authority of a Contracting State, the competent authority of the other Contracting State shall provide information under this Article in the form of depositions of witnesses and authenticated copies of unedited original documents (including books, papers, statements, records, accounts, or writings), to the same extent such depositions and documents can be obtained under the laws and administrative practices of such other State with respect to its own taxes.

4. Each of the Contracting States shall endeavor to collect on behalf of the other Contracting State such amounts as may be necessary to ensure that relief granted by the present Convention from taxation imposed by such other Contracting State does not enure to the benefit of persons not entitled thereto.

5. Paragraph 4 of this Article shall not impose upon either of the Contracting States the obligation to carry out administrative measures which are of a different nature from those used in the collection of its own tax, or which would be contrary to its sovereignty, security, or public policy.

6. For the purpose of this Article, this Convention shall apply to taxes of every kind imposed by a Contracting State.

Comment:

This Article contains an "assistance in collection" provision which is not contained in the OECD Model.

Article 27
DIPLOMATIC AGENTS AND CONSULAR OFFICERS

Nothing in this Convention shall affect the fiscal privileges of diplomatic agents or consular officers under the general rules of international law or under the provisions of special agreements.

Article 28
ENTRY INTO FORCE

1. This Convention shall be subject to ratification in accordance with the applicable procedures of each Contracting State and instruments of ratification shal be exchanged at . . . . . as soon as possible.

2. The Convention shall enter into force upon the exchange of instruments of ratification and its provisions shall have effect:
a) In respect of tax withheld at the source, to amounts paid or credited on or after the first day of the second month next following the date on which this Convention enters into force,
b) In respect of other taxes, to taxable periods beginning on or after the first day of January next following the date on which this Convention enters into force.

Article 29
TERMINATION

1. In this Convention shall remain in force until terminated by a Contracting State. Either Contracting State may terminate the Convention at any time after 5 years from the date on which this Convention enters into force provided that at least 6 months' prior notice of termination has been given through diplomatic channels. In such event, the Convention shall cease to have effect:
a) In respect of tax withheld at the source, to amounts paid or credited on or after the first day of January next following the expiration of the 6 months' period;
b) In respect of other taxes, to taxable periods beginning on or after the first day of January next following the expiration of the 6 months' period.

Vol. 3 of 'Guides to European Taxation'

✱ the taxation of private investment income

loose-leaf
each chapter follows a common outline
covers 17 European countries + U.S.A.
updated by air

PRICE: Dfl. 350 / US$ 140
including up-to-date basic volume plus airmail supplements through the end of 1977

For residents of the Netherlands: price is exclusive of BTW (value added tax)

Further details freely available upon request

Surveys the provisions under the laws and double taxation treaties of 17 major West European countries AND the U.S.A. (fully illustrated with charts and tables).

Examines the effect on dividends and interest, and also on capital gains realized on the sale of shares and bonds.

Analyses the EFFECTIVE total burden on dividends and interest and includes comparative charts strikingly illustrating –

- the net dividends received on a corporate pre-tax income of 100 units
- the income a corporation must earn for an individual resident in each of the countries to receive a dividend of 100 units (before personal tax)

The New O.E.C.D. Report on Government Revenue Statistics*

The O.E.C.D. published a new edition of standardized government revenue statistics. The report is in English and French and is the fifth volume of the annual report of data recording government revenues, including compulsory social security contributions for Member countries of the O.E.C.D. during the years 1965-1974.

This report represents the most comprehensive compilation of national tax revenues so far issued on an internationally comparable basis. It lists receipts from all taxes in O.E.C.D. Member countries according to a standardized O.E.C.D. classification, with a commentary defining the scope of each heading in the classification and a general guide for users of the classification system. In addition to 66 tables giving details of tax revenues on a country-by-country basis, the report contains 28 comparative tables illustrating differences in tax weight, structures and trends as between countries during the ten years up to 1974, and these form the basis of the commentary that is presented in part I of the publication.

A table shows comparisons of total taxes in O.E.C.D. Member countries (including social security contributions) as a ratio of GNP in 1974 and a graph indicates how this ratio has changed since 1965. See tables 1 and 2.

The current edition includes also the updating to 1973 and 1974 of 1972 data on international comparisons of the amount of income taxes and social security contributions paid and family cash benefits received, by a typical worker in various family circumstances in the different O.E.C.D. Member countries. Although international data comparisons of this kind have to be treated with caution, and the limitations to the study are set out in the report, they do provide some insights into governments' varying treatment of different family units — from the single man to the two child family — both in terms of the average and marginal rate of tax imposed and the policy instruments used, whether

Paris, Organisation for Economic Co-operation and Development, 1976. 291 pages.

tax allowances or cash transfers or both. Certain trends are noted, such as the frequency during this period with which allowances against taxable income are replaced by cash transfers as a means of support for dependent children and the fact that high income tax payments are usually accompanied by low social security contributions, and conversely.

Table 3 brings out how the disposable income left to the typical worker has varied during these three inflationary years, while table 4 shows that in most countries, gross earnings have risen more quickly than disposable income, though countries are almost equally divided as between those where a single man's disposable income has risen more quickly than that of a married man with two children and those where the reverse has happened. The tables in the report also indicate that while the relative positions of countries as regards percentage of disposable income retained, have not greatly changed during the period, there are differences in trend as between countries. On average government's tax take has increased by around 1 percent of the worker's disposable income. An earlier version of this report, covering the year 1972 only, was published in the 1974 edition of this report.

Note:

This table takes account of income taxes and social security contributions paid and cash transfers received. The figures represent nominal, and not real changes in earnings. Readers may refer to table 16 for a description of the changes that have taken place in income tax, social security and cash transfer systems between 1972-74,

Ce tableau tient compte d'une part des impôts sur le revenu des personnes physiques, des cotisations de sécurité sociale et des prestations en espèces reçues des administrations. Les chiffres représentent les variations réelles non nominales, des revenus. Le lecteur trouvera dans le tableau 16 une description des changements intervenus dans les systèmes d'impôt sur le revenu, de sécurité sociale et de prestations en espèces entre 1972 et 1974.

TAX GLOSSARY

by H.W.T. PEPPER *

ANTI-EVASION MEASURES — Measures to combat evasion of tax include both statutory provisions and administrative action. The tax law may provide for deductions or withholding of tax at aource, for the estimation of tax liability in the absence of declaration or returns from the taxpayer, and may require third parties to provide information regarding payments to taxpayers and place the onus of proof on a taxpayer to dislodge or reduce assessments that have had to be made in the absence of information required from the taxpayer. Administrative action will include comparison of capital growth with declared income (see ACCRETION, NET) and the critical examination of information, provided by the taxpayer himself and from other sources, to determine whether the income declared fairly represents taxable income.

ANTI-POLLUTION TAX — Taxes levied on the act of polluting the atmosphere, rivers, etc., or upon substances or articles likely to cause 'pollution'. A recent example of such taxation is the proposal made by the U.S. President on 8th February 1972 for an anti-pollution tax on sulphur dioxide emissions, the tax to be proportionate to the sulphur content in the materials consumed which cause such omissions. A further proposal has been made by the City of New York to tax non-returnable containers with emphasis on plastic containers. The proposal is currently being protested by manufacturers of plastics who argue that other substances used to make containers are equally to blame for 'pollution'. Norway also has a special tax on non-returnable containers which constitute potential pollution material.

APPEALS — Part of the process of determining the tax liability. Where a tax declaration has not been rendered, or there is a dispute on some point of fact or law which cannot be resolved by the taxpayer and tax department, an assessment may be made by the department in the figures it considers tax may be due. The taxpayer then normally has an opportunity to appeal against the assessment to an independent tribunal set up to determine tax disputes, or to the Courts. Sometimes there is a preliminary stage known as an 'objection' which may be handled less formally than an appeal and provide a means of settling more summarily the less difficult disputes.

APPOINTED DAY — Sometimes a tax provision is introduced in legislation in advance of its coming into legal force. This may apply particularly to some non-controversial matter such as the reconstruction of the provisions governing depreciation, where it is intended to give taxpayers ample time to study the new provisions and adjust to them before they come into force. In such cases the law may contain a provision also to cover the date of its coming into force, or may leave the matter open by saying this will happen on an 'appointed day' to be announced later by Government.

APPORTIONMENT OF INCOME — The term may refer to cases where the settlement of income by a parent upon a minor child is set aside by the tax law as a 'tax avoidance' device, in which case the income in question will be apportioned to the parent for the purpose of determining his personal tax liability. The term also refers to the allocation of the income of an accounting period in cases where there is some change in taxation on a date which falls within the accounting period so that income before that date and income after the date have to be dealt with differently for tax purposes.

APPRECIATION — Appreciation of capital is the increase in value of personal or real property. In general, this increase is not subject to income tax, unless the relevant asset is alienated, but e.g. in Italy immovable property companies are subject to tax on appreciation of real property after each ten years of ownership. Another example of a tax on the appreciation of property through development, before realisation takes place is the FIRST LETTING TAX (q.v.) imposed in Britain on the first letting of new property where the developer obtains his reward by securing for himself an income instead of a realisation gain.

APPRENTICESHIP TAX — Not a very common type of tax; it has been used as a payroll tax on employers, usually of small amount, where the government has set up apprenticeship schemes at its own expense in order to raise the quality of new employee entrants to the new industries it is encouraging. A tax of this kind was introduced in France in 1925 and is now levied at 1 percent. The revenue is not hypothecated but the government spends at least as much as the sum yielded on training and technical schools. Certain employers, e.g., private schools, farmers and artisans, are exempt and other employers are given credit for their own expenditure on technical training, apprenticeship etc.

APPROVED SCHEME — Sometimes where tax relief is provided for certain types of payment in principle, e.g., share incentive schemes for executive employees, pension schemes for the self-employed, the Administration retains control by restricting relief to payments to 'approved' schemes. In the course of approving the schemes the administration may ensure that they are not used for tax avoidance.

ARBITRAGE — This term is applied to the process of buying and selling the same commodity, which may include money, or securities, in different markets where a gap has been opened between the respective prices for the commodity in the markets greater than the difference justified by the cost of freight, transfer costs etc. The person undertaking the arbitrage dealing is normally taxable in his country of residence.

ARMORIAL BEARINGS TAX — A levy in Britain, imposed in 1798, which survived well into the 20th century, whereby an annual tax was charged on the use or display of a coat-of-arms by persons entitled to do so, e.g., on carriages or other vehicles.

---

* With the assistance of the staff of the International Bureau of Fiscal Documentation.

ARM'S LENGTH PRICE — Where transactions are entered into by two persons one of whom controls the other or both of whom are controlled by a third, the price and terms at which the transaction is undertaken may differ from the ordinary commercial terms which would prevail if the parties were strangers to each other. The price in the latter circumstances would normally be the 'arm's length price' or open market price and is a concept of importance in anti-avoidance provisions in tax laws, double taxation treaties etc. (see also ANTI-AVOIDANCE MEASURES).

ARRANGEMENT "B" — The system whereby BUILDING SOCIETIES (q.v.) in Britain pay a compounded tax rate for their depositors' tax liability on interest. The society pays tax at a composite rate computed by reference to the depositors' average marginal rates. The interest received by the depositors is not charged to any further income tax at the standard rate. If the depositor is chargeable to tax at the higher personal rates, his interest is grossed-up to a figure taking into account standard rate tax (35 percent for 1976-77) and charged to the higher rate of tax, with, however, a deduction of the 35 percent tax already 'compounded'. No refund is due to taxpayers who are liable to personal tax at less than the collective rate. The system is embodied in an arrangement with the British Board of Inland Revenue.

ARTIFICIAL TRANSACTIONS — In efforts to reduce tax liability by 'legal avoidance' some taxpayers enter into complicated and tortuous arrangements which have a certain 'artificiality' about them, i.e., they are not the ordinary way of doing business. Accordingly some states enact laws to set aside 'artificial transactions' the main purpose of which is to avoid tax. The concept is a difficult one, however, since the transactions entered into are usually quite 'real' and legally effective, so that Courts of Law may not accept a plea of artificiality by the Tax Department.

ARTISAN'S TAX — A term sometimes used to denote a tax on the services provided by artisans working on their own account as entrepreneurs, e.g. plumbers, carpenters, electricians; and distinguished from other professionals such as doctors, lawyers, architects, and accountants, who are members of the 'liberal' professions and often exempted from taxes on services.

ASPREY COMMITTEE — Committee set up in 1972 to review the Australian Federal tax system.

ASSESSED TAXES — Taxes which existed in Britain in the 18th and 19th centuries and broadly were chargeable on expenditure measured by the value of residence, number of servants, carriages and horses, and the sum spent on hair-powder, etc. of interest historically as a crude fore-runner of Expenditure Tax (q.v.). (See also EXTERNAL EVIDENCE OF MEANS.)

ASSESSED VALUE — The value upon which tax is charged, and this applies particularly to property taxes and rating systems, may not be the market value or annual value, but that figure reduced by various allowances such as for maintenance, management, depreciation. Moreover, since re-valuations commonly take place only at 5-yearly or some such intervals, values are generally out-of-date (i.e. too low). It is also customary for the assessed value of a property built some years after the last revaluation year to be made, not on current value, but in accordance with values prevailing in the revaluation year. In this way values of property of different ages within the same taxation area will be consistent with each other; this of course makes for equity in tax burdens. (See also TONE OF THE LIST.)

ASSESSEE — The person assessed to a tax.

ASSESSMENT — The term applied to the act of computing the tax due and also to the document or record in which the details of the calculation and tax are noted. The term is sometimes related to estimation of tax made in the absence of a return or declaration by the taxpayer, the assessment being made so that the process of collection will not be delayed because of the taxpayer's non-co-operation or delinquency.

ASSESSMENT, BASIS OF — The basis for calculating tax, e.g., for income tax, the sum due for the tax or fiscal year may be computed on the income of the previous or current year, or for the trader's accounting year.

ASSESSMENT, SELF- — 'Self-assessment' is the term usually applied to tax regimes under which the taxpayer is expected to submit a calculation of the tax due from him and, usually, to accompany his calculation with payment of the account he regards as due. The system is normally adopted for all types of sales tax but only in a proportion of countries in respect of income tax.

ASSESSOR — The person assessing taxation upon taxpayers. In Britain the term had also a specific reference to an official who was responsible for determining the income of a taxpayer by personal observation, and whatever other information was available to him, on request by the Inspector of Taxes.

ASSET DEPRECIATION RANGE — A system used in the U.S.A. allowing the taxpayer an annual option in respect of qualifying assets required in the year to decide the useful life of each asset for depreciation purposes. The 'life' chosen may be 20 percent below or above the 'guideline' life fixed by the tax department. The system offers some degree of flexibility although falling short of 'free depreciation' (q.v.).

ASSETS, REPLACEMENT OF — Where business assets are not subject to allowances for depreciation, perhaps because they are too small to warrant relatively complicated treatment, they may be dealt with on a 'replacement basis', i.e., the cost each year of replacing worn-out items will be allowed as a deduction from profits. The procedure will usually be very informal and the trader may merely be asked to confirm that his total stock of replaceable items has not increased over that of the previous year (since a 'replacement' allowance could not extend to additional assets). (See also STOCK BASIS.)

ASSETS, USE OF — Among FRINGE BENEFITS (q.v.) and PERQUISITES (q.v.) which may be granted to a director or employee by the employer, may be the free use (or use at a nominal charge) of assets, e.g., a colour TV set or other domestic equipment, a motor car not required for business use, etc. Some states levy tax on the value of such 'benefits in kind', for example, in Britain a charge of 10 percent per annum of the value of such assets is made on the person who benefits.

ASSOCIATED COMPANY — An associated company is similar to an AFFILIATE COMPANY (q.v.), the criterion varying from one country to another and from one purpose to another, i.e. in some circumstances a 51 percent stockholding majority is sufficient, in others 80 percent or even 100 percent is needed. The concept is sometimes used in anti-avoidance measures t

group together the trading results of what are essentially a single enterprise, sometimes to benefit the taxpayer so that he may obtain relief when one part of the total enterprise is making losses while the rest is in profit.

ASSURANCE, LIFE — It ais fairly common for deductions to be provided in tax codes in respect of premiums paid on life assurance policies. The practice in the U.K. was approved by the Royal Commission on Taxation of 1920. The grounds of approval were that life assurance was the only method by which a taxpayer could provide immediate security such that his widow and children would become entitled to a lump sum of money, which was substantial in relation to the annual premium, in the event of his premature death. The relief for life assurance premiums is often comparatively generous because it is not usual to tax the capital sum which becomes payable when the policy matures whether at death or, in the case of an endowment policy, at the end of the period of time during which the premiums are payable.

ATTENDANCE FEES — Remuneration paid to those persons (e.g. members of the Board of Directors of a company) present at a meeting. In France attendance fees (jetons de présence) are the normal remuneration of company directors and may even be granted to directors which have not attended meetings. For French tax purposes they are treated as income from movable property (like dividends).

AUDIT OFFICE ('DESK') — The term is used in connection with tax enforcement in the U.S.A.; 'audit' refers to the investigation of the taxpayers' books and accounts and/or the general accuracy of their returns and declarations either as a routine operation, or where evasion is suspected. Where this work is done in the tax office, it is known as a 'desk' or office audit.

AUDIT OUTDOOR ('FIELD') — An audit carried out on the taxpayer's premises, or elsewhere in the 'field' outside the tax office.

AUDIT REQUIREMENTS — It is fairly usual for the tax administration to demand a certain standard of audit, e.g. by a qualified independent auditor, to certify that accounts rendered by a taxpayer in support of his declaration of profits or income are correct. The requirement may be embodied in the tax law but more often is not and it is usual to expect a higher standard for the larger businesses than for small ones, and to exercise discretion as to what may reasonably be sought from the smaller traders. An element of 'compulsion' may, however, be attained by establishing a practice within the tax department, which is likely to be upheld by the tax appeal tribunal as to what standards of accounting and audit may be expected of taxpayers when rendering their tax declarations

AUSGLEICHSTEUER — A compensating or equalising tax formerly imposed in Federal Germany during the existence of the cascade tax (Umsatzsteuer) and applied to imports which would otherwise have escaped some of the stages of taxation to which local products would be subject. Now only of historical interest as a fore-runner of the 'border adjustments' necessary under V.A.T. (q.v.) or single stage sales.

AUSSCHÜTTUNGSBELASTUNG — Tax, levied at a rate of 36 percent, on dividends and other distributions to individual and corporate shareholders, as introduced by the new German Corporate Income Tax Reform Law, which entered into force on January 1, 1977. The tax is effected by a 20 percent refund in the case that the original tax burden amounted to 56 percent (normal tax rate under the new law) or by an increase up to 36 percent in the case that the distribution originated from exempt income or income taxed at a lower rate

AUSSENSTEUERGESETZ — German law enacted in 1972 containing provisions as regarding the fight against tax evasion and the change of residence to low tax countries.

AUTHOR'S COPYRIGHT AND ROYALTIES — See COPYRIGHT AND ROYALTIES.

AUXILIARY — Term sometimes applied to materials such as fuels, lubricants, catalysts, used in production but not physically embodied in the product. V.A.T. systems allow an 'automatic' credit for most of such elements and other sales tax systems sometimes provide export rebates (q.v.) to compensate the producer who exports.

AVERAGING — Because income and expenditures may fluctuate from year to year, such that more taxation may be payable by a taxpayer over a period of years if his net income were level rather than subject to peaks and troughs, provisions for averaging income for tax purposes are occasionally encountered. Examples in the U.K. include the provisions (which were terminated by the 1925 Budget) whereby trading profits were taxable on the basis of the 3-year average of previous profits. Taxpayers were also charged (under schedule A) in respect of national income from the owner-occupation of residential property and relief was due on the basis of a five-year average of previous maintenance expenditure (in statistical terms the foregoing relief was calculated respectively on the bases of three-point and five-point moving averages). Where certain individuals have become entitled to very large sums over a short period which would be unlikely to recur (e.g. a successful boxer, author, or playwright) some countries have adopted provisions enabling income to be averaged over a period of years so as to avoid the inequity of charging tax at very high marginal rates on income arising in a short period which would in practice represent lifetime earnings. In the case of authors a successful book might represent the fruits of many year's research when income was nil or minimal and the success might not be repeated in subsequent endeavors. The boxer might remain champion only for a limited period and in each case the argument for spreading is clearly a strong one.

AVOIDANCE — The term used, in contrast to 'evasion', to denote the reduction of tax liability by legal means, e.g. by arranging business or personal affairs to take advantage of reliefs or anomalies or loopholes in the tax law. Among the best-known examples are — (a) vertical integration in business or industry to reduce reliability to a cascade tax, (b) transfer of business or investment income from individuals to limited companies when the highest rate of tax applicable to individuals is higher than the rate applied to companies; and (c) gifts inter vivos to reduce liability to wealth or capital taxes including death duties. (See also ANTI-AVOIDANCE MEASURES.)

AVOIR FISCAL — A term used in France to describe for example the relief to the shareholder on his dividends in respect of tax paid by the company on the income out of which the dividends have been paid.

Bibliography

Books.

The publications listed in this bibliography have recently been acquired by the Bureau's library which will gladly supply further information upon request (please quote the reference numbers). They should, however, be ordered through a bookseller or direct from the publisher indicated, and not through the Bureau.

AFRICA

AFRICA GUIDE 1977

A comprehensive appraisal of the continent with up-to-date political and economic analysis and essential information. London, Africa Guide Company, 1976. 311 pp. (B. 10.815)

AUSTRALIA

AUSTRALIAN INCOME TAX GUIDE

Being the twenty-second edition of Gunn's Guide to Commonwealth Income Tax. By E.F. Mannix and D.W. Harris. Sydney, Butterworths, 1977. 755 pp.
Explanation of the Australian income tax (individual and companies) as of December 31, 1976. (B. 100.369)

AUSTRIA

FÜHRUNG UND FÖRDERUNG VON KLEIN- UND MITTELBETRIEBEN BEI KONJUNKTURSCHWANKUNGEN

By Erich Hruschka and Anton Schmoll. Vienna, Wirtschaftsverlag Dr. Anton Orac, 1977. 128 pp. ÖS. 270.-.
Collection of essays on the management and promotion of small and medium sized enterprises in the case of market fluctuations. The following topics, inter alia, are discussed: the effects of recession, the cooperation with big enterprises, economic efficiency within the scope of research and development, personal planning etc. (B 100.374)

WIRTSCHAFTSSTATISTIK

By Paul Harff and Manfred Stöckmann. Vienna, Wirtschaftsverlag Dr. Anton Orac, Bielefeld, Gieseking Wirtschaftsverlag, 1977. 262 pp., ÖS. 190.-.
Reference book to statistics and its applications to the economy and economic life. The following subjects are discussed: basic principles of statistics, descriptive statistics and determining statistics. (B. 100.375)

DENMARK

OECD ECONOMIC SURVEYS: DENMARK

Paris, Organisation for Economic Co-operation and Development, 1977. 68 pp., Fr.Frs. 10.-. (B. 100.380)

EUROPE

TAX PLANNING FOR BUSINESSES IN EUROPE

By M. Roy Saunders. London, Butterworths, 1977. 334 pp., £ 12.-.
Study on tax planning affecting international trade in Europe. Each chapter is a separate study of a country's tax legislation, the major countries involved being the United Kingdom, France, Germany, Belgium, Luxembourg, Switzerland and the Netherlands. Three other tax regimes are also dealt with (the Channel Islands, Liechtenstein and the Netherlands Antilles) since they are closely affiliated to one of the above countries situated in Europe. (B. 100.397)

FRANCE

MEMENTO PRATIQUE FRANCIS LEFEBVRE: FISCAL 1977

Paris, Editions Francis Lefebvre, 1977. 1025 pp.
Annual guide for 1977 containing short explanation of the French tax laws as of April 15, 1977. (B. 100.429)

GERMAN FEDERAL REPUBLIC

ZUR BESTEUERUNG DES UMSATZES GEBRAUCHTER KRAFTFAHRZEUGE

Unter Berücksichtigung des Richtlinien-Vorschlags der EG-Kommission zur Umsatzsteuer-Harmonisierung. Bonn, Institut Finanzen und Steuern, 1977. "Finanzen und Steuern", Heft 114, 4 pp., DM 11.-.
Brochure on the turnover taxation of secondhand motor vehicles in the light of the proposal for a directive of the EEC-Commission with respect to the harmonization of the turnover tax. A comparison of the situation in this respect in a number of European countries is included. (B. 100.378)

DIE ERTRAGSTEUERLICHE BEHANDLUNG AUSLÄNDISCHER NIEDERLASSUNGEN IN GROSSBRITANNIEN UNTER BESONDERER BERÜCKSICHTIGUNG DES DEUTSCH-ENGLISCHEN DOPPELBESTEUERUNGSABKOMMENS

By Jürgen Strobel. Nürnberg, Universitätsbibliothek Erlangen Nürnberg, Wirtschafts- u. Sozialwissenschaften, 1973. 170 pp.
Thesis on the treatment of taxation of income with respect to a place of business established in the United Kingdom with emphasis on the position under the double taxation treaty betwee

the German Federal Republic and the United Kingdom. (B. 100.301)

INDIA

KISHORE ON COMPANY LAW AND PRACTICE

By K. Kishore. Calcutta, Eastern Law House, 1977. 772 pp., Rs. 50.-.
Textbook designed to disseminate knowledge of the company law and its practice. (B. 50.772)

INDONESIA

HIMPUNAN PERATURAN PERPAJAKAN 1972-1973

Jakarta, Berita Pajak, 1974. 177 pp.
Collection of regulations with respect to taxes issued in 1972 and 1973 prepared by Mr. L. Soemadi and Mr. K. Subroto. The taxes are organized by kind of tax in chronological order of the issued date by the tax authorities (i.e. the President, the Minister of Finance). (B. 50.769)

INTERNATIONAL

CONVENTIONS FISCALES ENTRE PAYS DEVELOPPES ET PAYS EN DEVELOPPEMENT

Sixième rapport. New York, United Nations, 1977. 191 pp.
Sixth report on tax treaties between developed and developing countries in the French language. An English version is available. (B. 100.311)

THE EUROPA YEAR BOOK 1977

A world survey. Volume II: Africa, the Americas, Asia, Australia. London, Europa Publications, Ltd., 1977. 1894 pp., £ 40.-. the set.
Revised edition of Volume II of reference source book in two volumes containing surveys of informations about countries in Asia, Africa, the Americas and Australia, including recent history, economic and statistical surveys, political parties, religions, publishers, newspapers, etc. (B. 100.379)

THE FINANCIAL TIMES INTERNATIONAL BUSINESS YEAR BOOK

1977-78 Edition. London, Financial Times, Ltd., 10 Bolt Court, Fleet Street, London EC4A-3HL, 1977. 700 pp., $ 37.50 via surface mail, $ 52.50 via airmail.
The main section of the book presents details of nearly 800 of the world's top companies. Other sections provide vital statistics for over 50 major countries, explain the aims of major economic groups and trading agreements, and survey the leading markets of the world. A company index listing over 4,000 names and a French/German/English business vocabulary complete this reference book.

ISRAEL

NETHERLANDS ANTILLES

THE NETHERLANDS ANTILLES PROFITS TAX ORDINANCE 1940

Amsterdam, Algemene Bank Nederland, 1975. 48 pp.
English translation of the Profits Tax Ordinance 1940, as last amended by State Ordinance of February 18, 1975. (B. 100.407)

NORDIC COUNTRIES

PERSONSBESKATTNINGEN I HÖGSKATTESAMHALLET

Rapporter och inlägg vid Nordiska skattevetenskapliga forskningsrådets seminarium i Röros i oktober 1976. Vällingby, LiberFörlag, 1977. Nordiska skattevetenskapliga forskningsrådets skriftserie, No. 4. 122 pp.
Report of tax seminar held in Röros, Norway, October 1976 convened by the Nordic Council for Tax Research on the individual income taxation in the Nordic countries (Denmark, Finland, Norway and Sweden). The contributions by various contributors of the Nordic countries are printed in the Danish, Norwegian and Swedish languages. (B. 100.339)

POLAND

GESETZGEBUNG ÜBER AUSLÄNDISCHE INVESTITIONEN

Cologne, BfA Rechts-Information, Bundesstelle für Aussenhandelsinformation, 1976. Berichte und Dokumente zum ausländischen Wirtschafts- und Steuerrecht, Nr. 88. October 1976. 23 pp.
German translation of the new Polish legislation on foreign investment and joint ventures. A short explanation precedes the texts of the new laws.

SAUDI ARABIA

PERMANENT-ENCYCLOPEDIA FOR REGULATIONS, LAWS & LEGISLATIONS

Kingdom of Saudi Arabia. Prepared by Ahmed Saied Abd-El Khalek, Mahmoud Hamed Al-Naqib, Lawyers. Kuwait, Mahmoud Hamed Al-Naqib, 1977. ± 1200 pp., SR. 2000.
Compendium containing English translation of Arabic text of the laws and regulations of the Kingdom of Saudi Arabia in four bound volumes. A separate index is appended. The main subjects of Vol. 1 are: the labor and workmen law, social insurance law, council of ministers' decisions issued for implementing the law; of Vol. 2 are: regulations for companies, residence regulations, foreign regulations for the protection and encouragement of national industries, the Saudi Credit Bank; of Vol. 3 are: customs tariff, mining code, the commercial register system, banking control law, the law of income tax and Zakat Amendment; of Vol. 4 are: agreements of the Saudi Arab Government with the Arabian Oil Company, and with the Japan Trading Company, the convention between the Government and Trans-Arabian Pipe-Line Company and related documents. (B. 50.773)

SOUTH AFRICA

OLD MUTUAL INCOME TAX GUIDE 1976/77

By A.S. Silke. Cape Town, Old Mutual, 1976. 135 pp.
Revised quick reference guide explaining the working of the income tax, undistributed profits tax, donations tax and estate duty in South Africa. (B. 10.832)

SWITZERLAND

SCHWEIZERISCHES STEUER-LEXIKON

Band 2, Bund, Kantone, Gemeinden, Interkantonales Doppelbesteuerungsrecht. By Eduard Gygax. Zürich, Verlag Organisator AG, 1977. 318 pp.

Tenth edition of Volume 2 of Tax Lexicon describing federal, cantonal and municipal taxes in connection with intercantonal double taxation law as revised as of January 1, 1977. (B.100.396)

UNITED KINGDOM

TAXATION OF COMPANIES

By Richard Bramwell. London, Sweet & Maxwell, 1977. 40 pp. (B. 100.355)

UK TAXATION OF OFFSHORE OIL AND GAS

By R.F. Hayllar and R.T. Pleasance. London, Butterworths, 1977. 211 pp., £16.50.
Monograph on United Kingdom taxation of offshore oil and gas as it stood as of October 31, 1976. (B. 100.395)

U.S.A.

CORPORATION, PARTNERSHIP AND FIDUCIARY FEDERAL INCOME TAX SPECIMEN RETURNS

Completely worked out for filing in 1977. Englewood Cliffs, Prentice-Hall, 1977. 64 pp. (B. 100.348)

FEDERAL TAX HANDBOOK 1977

Including 1976 Tax Reform Act changes. Englewood Cliffs, Prentice-Hall, 1977. 630 pp., $ 7.50.
Quick reference handbook to specific tax problems. (B. 100.373)

INFLATION AND THE INCOME TAX

Edited by Henry J. Aaron. A report of a conference sponsored by the Fund for Public Policy Research and the Brookings Institution. Washington, The Brookings Institution, 1976. 340 pp. (United Kingdom, Brasil Blackwell, 5, Alfred St., Oxford OX4 1HB), £ 10.10.
Compilation of essays by various contributors on aspects of inflation and income taxation. The editor introduces the issues and summarizes the conclusions of the contributors, who analyze the tax treatment of business profits under inflationary conditions; adjusting the individual income tax for inflation; the experience of other nations with adjusting taxable profits and the personal income tax for inflation, inflationary distortions and taxes, etc. (B. 100.337)

NATIONAL TOBACCO TAX ASSOCIATION

Atlanta, Georgia, September 19-22, 1976. Proceedings of the fiftieth annual meeting. Chicago, Federation of Tax Administrators, 1976. 125 pp. (B. 100.392)

REVENUE ADMINISTRATION, 1976

Proceedings of the forty-fourth annual meeting National Association of Tax Administrators, Atlanta, Georgia, June 13-17, 1976. Chicago, Federation of Tax Administrators, 1976. 186 pp.
(B. 100.394)

STOCK AND BOND MARKET VALUES

As of December 31, 1976. (For income tax basis of inherited property). Englewood Cliffs, Prentice-Hall. 140 pp., $ 3.-.
(B. 100.345)

TAX REFORM ACT OF 1976

Inlcuding the New Estate and Gift Tax Provisions; complete explanation; code sections as amended; committee reports; index. Englewood Cliffs, Prentice-Hall, 1976. 1000 pp., $ 8.50.
This publication reflects the provisions of the Tax Reform Act of 1976 as passed by Congress and sent to the President.
(B. 100.372)

From Prentice Hall

An indispensable aid for American businessmen, investors and corporations engaged in or planning foreign operations and for those in foreign countries planning or doing business in the United States —

TAX TREATIES

This definitive guide is indispensable for any businessman or corporation that sells, buys, manufactures, or invests in the United States — as well as for any American businessman or corporation that does business in foreign countries. It tells you:

- o How and where to handle your investments while eliminating the chance of double taxation.
- o How much of your investment income will be protected by tax treaty exemptions.
- o How much business Americans can carry on in a foreign country and vice versa without becoming taxable as a "permanent establishment."
- o How to protect your employees who are temporarily at work abroad from a double tax burden.

In Tax Treaties, you'll also find:

1. The full official text of every existing treaty, supplementary treaty, or protocol relating to income taxes and estate and gift taxes between the United States and each of its tax-treaty countries, including model treaties showing the latest trends.
2. Annotated editorial text arranged in a Uniform Paragraph Plan . . . makes for easy direct comparison of provisions of one tax treaty country with another . . . permits a single unified index which works hand in hand with this unique setup. You'll make sure, speedy decisions at the flip of a wrist.
3. Official reports on each treaty giving you the background behind the provisions; why particular treaty articles were included; and what each provision means to you.
4. A Special Finding List at the beginning of the editorial summary for each country . . . speeds you quickly to explanatory and official material that affects you.
5. Monthly REPORT BULLETINS, analyzing the latest treaties, decisions and rulings, keep you right on top of today's fast breaking tax treaty developments . . . (plus Current Matter containing the most recent U.S. court decisions and IRS rulings giving you the latest judicial and official word on tax treaties.)

In today's constantly expanding international commerce, expert tax-managing or tax-counseling of business activities between the United States and each of its treaty countries is a must — so keep up to date with Prentice-Hall's TAX TREATIES.

To order a one-year introductory subscription to this unique publication at the low rate of only $ 120, address Department S-TT-103.

SOME BOOKS ON TAXATION IN AUSTRIA

MAYR, O.

Die Körperschaftsteuer nach dem Stande vom 1.1.1973. 2. Auflage.
Eisenstadt, Prugg Verlag, 1973. 128 pp.
Booklet, discussing the most important provisions of the Australian corporate income tax law, effective as of January 1, 1973. (13 F 46)

SCHUBERT, A., W. POKORNY, W. SCHUCH.

Einkommensteuergesetz, Stand 1. Jänner 1975. Ergänzungsband zum Einkommensteuerhandbuch.
Vienna, Wirtschaftsverlag Dr. Anton Orac, 1974. 157 pp.
Consolidated text of the Austrian Individual Income Tax Law in the version which is effective as of January 1, 1975, inclusive a number of short annotations. (13 F 49a)

HELBICH, F., F. ECKERT.

Umgründungen auf der Grundlage des Strukturverbesserungsgesetzes; 3rd ed. Vienna, Wirtschaftsverlag Dr. Anton Orac, 1975. 618 pp. Band 1.
Third and revised edition of monograph discussing the Austrian Company Law and Tax Law on mergers, contributions of assets and form transformation under the Structural Improvement Law 1969 with references to literature. The text of the statutes and decrees related thereto and a bibliography are appended. (13 F 34)

REEGER, F., G. STOLL.

Die Bundesabgabenordnung mit eingehenden erläuternden Anmerkungen, Verweisungen auf zusammenhängende Bestimmungen und Hinweisen auf höchstrichterliche Entscheidungen.
5. überarbeitete und neuerlich erweiterte Auflage. Vienna, Wirtschaftsverlag Dr. Anton Orac, 1975. 562 pp.
Fifth revised edition on the textbook providing comment in the Federal Fiscal Code, with reference to Austria (and, as far as applicable, German) case law. (13 F 48)

WEILER, F.

Die Einkommensteuerrichtlinien 1975.
Vienna, Peter Linde, 1976. 160 pp.
Schriftenreihe der Oesterreichischen Steuer- und Wirtschaftskartei, No. 36.
Annotated text of the 1975 individual income tax regulation as implemented by the Federal Ministry of Finance for the assessment year 1975.
(13 F 42)

DOLLAK, K., E. BAUER, E. SIMON.

Das Einkommensteuergesetz, nach dem Stande vom Jänner 1977.
Vienna, Im Selbstverlag der Verfasser, 1977. 463 pp.
9th edition of a book containing the text of and comments on the Austrian individual income tax as it was effective on January 1, 1977. The texts of a number of other relevant laws and extensive index are appended.
(13 F 56)

DOLLAK, K., J. JODL, R. KALLINA.

Das Umsatzsteuergesetz. Nach dem Stande vom 1. März 1977.
Sechste Auflage. Vienna, Peter Linde, 1977. 342 pp.
6th revised edition of a textbook on the Austrian Turnover Tax Law. An introductory comment, the texts of Regulatory Ordinances and Ministerial Rulings are included as well. The book is updated as per March 1, 1977
(13 F 59)

WESTERMAYER, H.

ABC des Oesterreichischen Steuerrechts; eine gemeinverständliche Darstellung der Steuern. 7. Auflage.
Vienna, Peter Linde, 1977. 244 pp.
Seventh revised edition of general tax guide explaining the tax laws as they were effective on January 1, 1977. Numerous examples clarify the impact of the laws. A tax glossary is included. (13 F 54)

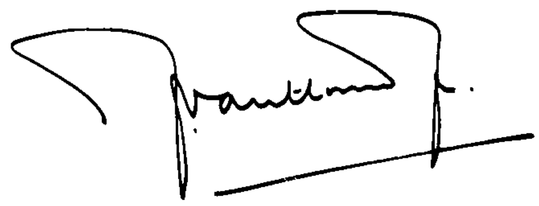
For loose-leaf publications, see issue No. 3, 1977, pages 127 and 128.

Editorial

Problems and perspectives

Government policies reflect the philosophies regarding current socio-economic problems arising from unemployment and inflation. Taxation is one of the principal tools used in the struggle to counteract these forces which threaten to disrupt society. Whereas tax policy is essentially restricted to national levels, recession is an international phenomenon resulting to a large extent from a reduction in trade between countries and the resulting decrease in investment activities.

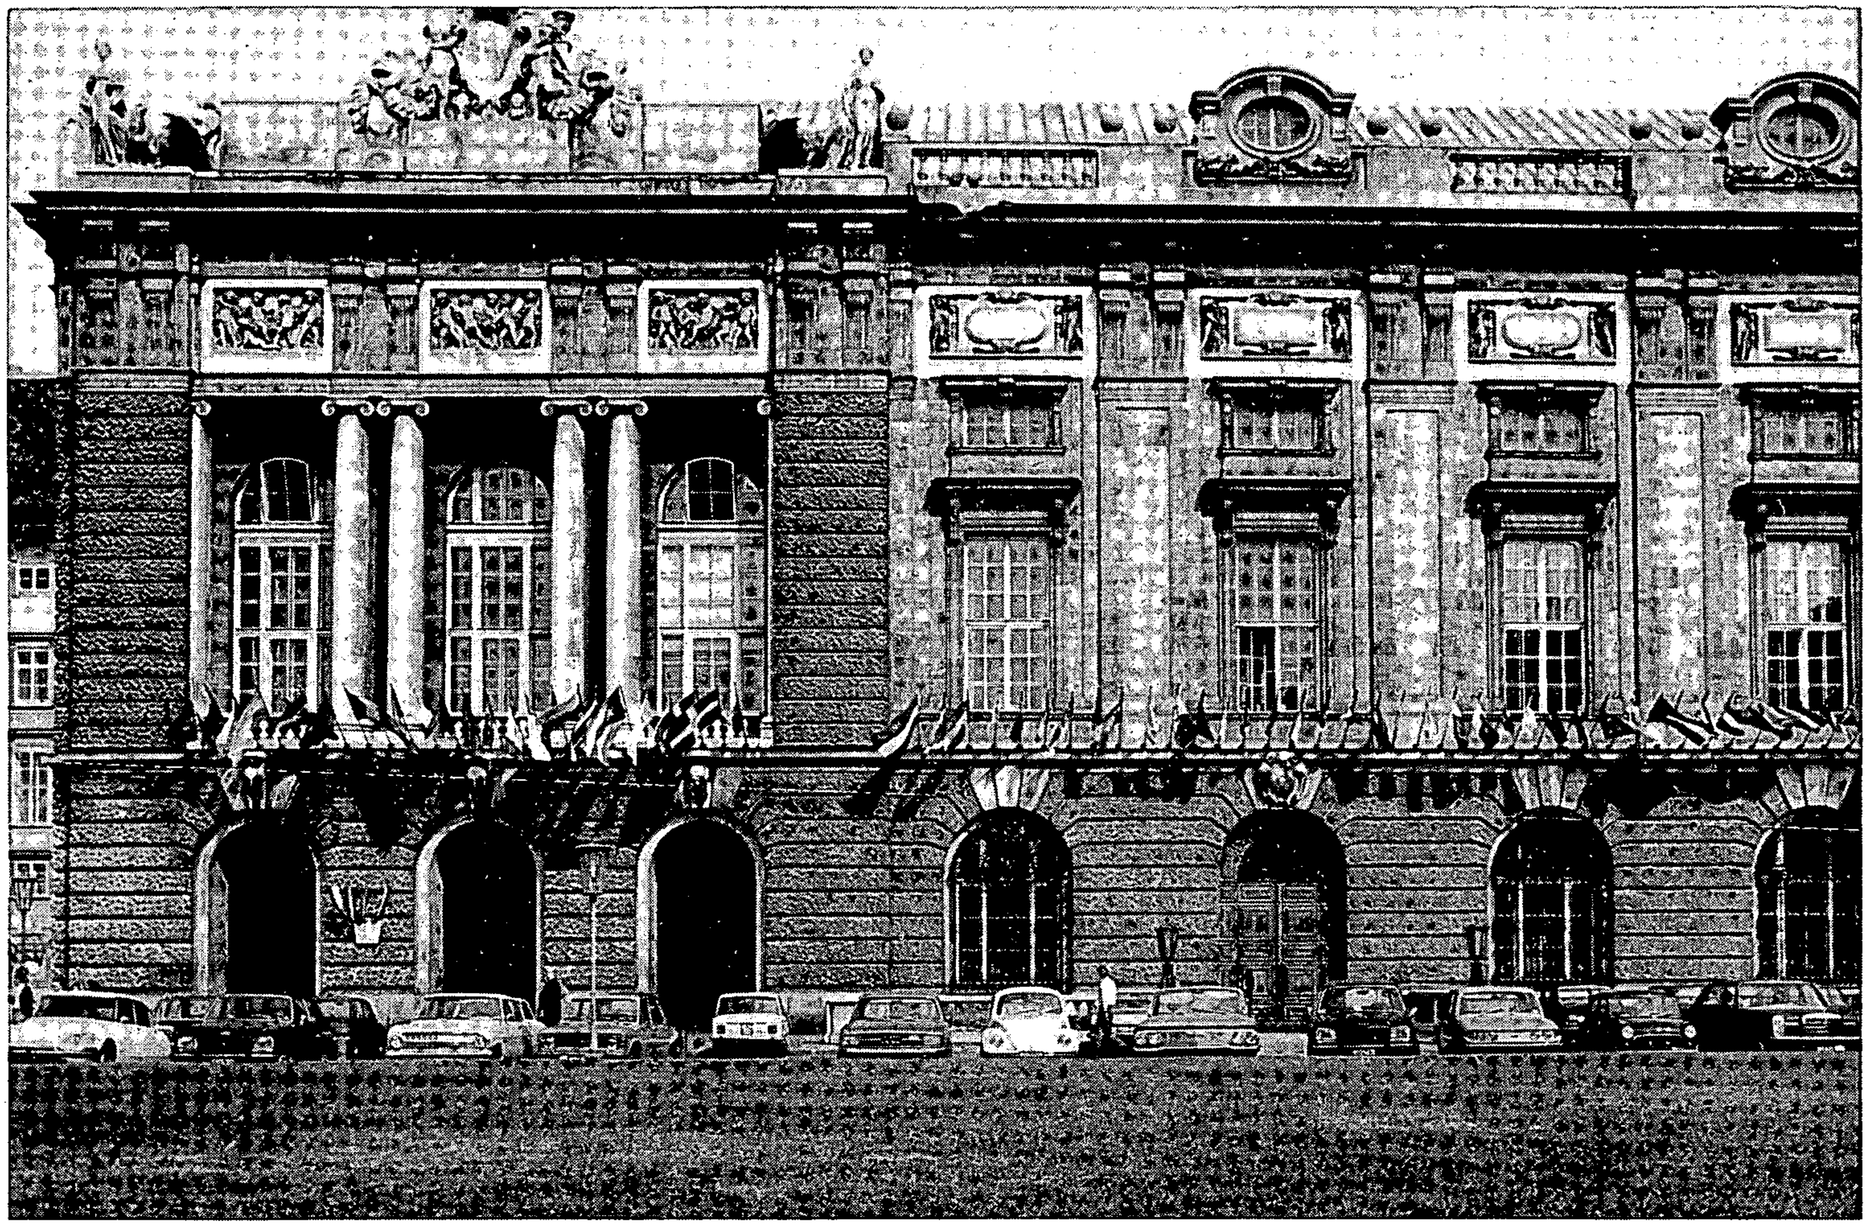
What is being done, domestically and internationally, to improve the situation? In the area of taxation there are certain positive indicators worth mentioning in this special issue of the *Bulletin*.



The 31st Congress of the International Fiscal Association (I.F.A.), to be held in Vienna from October 3rd to 8th, 1977, will discuss *Inflation and Taxation* as one of the two main subjects. The discussion will be based on a detailed General Report and on National Reports from 24 countries. These reports focus mainly on the adjustments of the tax provisions to mitigate the consequences of inflation although the Belgian, French and German reports also discuss measures combating inflation. The very least one may expect from this gathering of tax experts from all over the world is a thorough comparative analysis of the problems and of the possible contribution of taxation to help solve them.

Austria being I.F.A.'s host country it was deemed appropriate to publish in this issue certain basic and factual information on Austrian taxation. Austria's young and energetic Vice-Chancellor and Minister of Finance describes the essence of the Government's tax policy. Certain fundamental legal principles are discussed by Professor Dr. Gerold Stoll who shows, inter alia, the relationship between his country's domestic tax law and the basic rules of international tax law as they have developed in recent years. Together with some illustrative material provided by the Bureau, these two contributions are important in acquainting those who attend the Congress with these crucial elements of Austrian taxation. It is, therefore, with warm feelings of gratitude that the editors of the *Bulletin* publish these articles.

International trade and investment are being activated in various parts of the world. The Socialist countries of Eastern Europe recently introduced several types of tax measures aiming at facilitating business dealings with the rest of the world. Joint ventures, business representations, the provision of loans and the transfer of technology will benefit from special tax measures and from the numerous double taxation agreements on which this special issue reports in the form of a succinct survey.



The *Bulletin* has already reported on developments in other parts of the world and will continue to do so. The countries of the Middle East offer enormous opportunities for business in the context of their policies for structural development. A new loose-leaf publication of the *International Bureau of Fiscal Documentation* on "Taxes and Investment in the Middle East" will be published just before the Congress. In this issue of the *Bulletin* a note on tax reform in Egypt shows what the leanings are. In the Far East interesting things are happening as appears from brief reports on India and Singapore submitted by the Bulletin's correspondents. In Latin America the Interamerican Centre of Tax Administrators (C.I.A.T., with headquarters in Panama City) is very active as is shown in a brief report from Professor Valdés Costa.

The nature of the many things that are happening in the area of taxation and on which one issue of a monthly magazine cannot report comprehensively, is such that — despite all problems with which countries and peoples are faced — there is room for some optimism. Many of the developments are more than just a reaction: they often open up perspectives which are worth noting and pursuing.

Welche Bedeutung spielt das Steuerwesen in der österreichischen Wirtschaft?

Dkfm. Dr. HANNES ANDROSCH ~ Vize Kanzler ~ Bundesminister für Finanzen

Die Einhebung von Steuern und die Ausgestaltung des Steuertarifs waren seit jeher ein heftig umstrittenes Thema der gesellschaftlichen Diskussion.

Der Mensch des Mittelalters befasste sich insbesondere mit der Frage, ob es überhaupt moralisch sei, Steuern einzuheben. So überschreibt Thomas von Aquin in seiner "*Summa theologiae*" des Kapitel über die Steuereinhebung mit "*Kann Raub ohne Sünde geschehen?*". Die Frage wird unter Hinweis auf die gemeinnützigen Aufgaben des Herrschers und der Beschränkung auf das durch die Beachtung der "Gerechtigkeit" abgesteckte Gebiet bejaht.

Im absolutistischen Staat rechtfertigt das Ideal des starken Staates die Besteuerung.

"*Ein Fürst, welcher keinen schatz im kasten hat, sondern sich auf die gutwilligkeit seiner unterthanen und länders verlassen will, der gehet auf steltzen: Denn der unterthanen gemüther seynd hinckende hunde, mit welchen man keine gewisse hasen fangen kann.*"
(Welhelm Freyherr von Schröder: Fürstliche Schatz- und Rent-Cammer).

Heute hat sich die Haltung der Finanzpolitik insofern geändert, als der Staatsbürger nicht mehr nur als Einnahmequelle oder als Wirtschaftsubjekt, dessen Entscheidungen zu respektieren sind, betrachtet wird, sondern als "potentieller Träger staatspolitisch erwünschter Verhaltensweisen" (G.B. Schmölders).

Aus dieser Sicht ist auch die heutige Betrachtung der Steuern und der Steuerpolitik zu verstehen.

Steuern haben viele Funktionen zu erfüllen.

Neben der Finanzwirtschaftlichen, also der Funktion, Einnahmen zur Deckung der Ausgaben zu beschaffen, haben sie auch die Funktion, die Einkommensverteilung zu beeinflussen. Dazu eignet sich vor allem die progressive Gestaltung des Tarifs oder auch die Einführung von Absetzbeträgen, Freibeträgen, Freigrenzen usw., die an bestimmte soziale Indikatoren gebunden sind. Aufgrund der immer vorhandenen Steuerlücken, aber auch, um das Steuersystem nicht allzu kasuistisch zu gestalten, ist die Umverteilung über Abgaben nur begrenzt möglich. Steuerpolitik und Ausgabenpolitik sind hier komplementär zu sehen, da auch über die Struktur der Ausgaben die Einkommensverteilung stark beeinflusst

English version — page 345 Version française — page 347

Hannes Androsch wurde am 18. April 1938 in Wien geboren. Nach Besuch der Hochschule für Welthandel erwarb er mit einer Arbeit über Fragen der Steuerbilanz und der Bilanztheorien das Diplom und mit einer Dissertationsarbeit über Investitionsplanung das Doktorat.

Dkfm. Dr. Androsch war von 1956 bis 1966 als Revisionsassistent und nachher in freiberuflicher Tätigkeit als beeideter Buchprüfer und Steuerberater tätig. Im SPÖ Parlamentsklub war Androsch von 1963 bis 1966 als Sekretär für Wirtschaftsfragen und anschliessend als Konsulent des sozialistischen Abgeordnetenklubs tätig. Der sozialistischen Bewegung gehört Dkfm. Dr. Androsch seit seiner Jugend an. 1967 wurde er als Abgeordneter in den Nationalrat gewählt. Er ist verheiratet und Vater von zwei Kindern.

Am 21. April 1970 wurde Dkfm. Dr. Androsch als Finanzminister in die Bundesregierung berufen. Mit 32 Jahren war er damit der jüngste Finanzminister Österreichs.

Während seiner bisherigen Amtszeit hat Finanzminister Androsch wesentliche Akzente in der Entwicklung der österreichischen Wirtschaft gesetzt. Seit dem Jahre 1970 war er wie noch kein anderer Finanzminister vor ihm mit dem Problem einer instabilen Währungswelt konfrontiert, wobei er den Schilling zu einer der stabilsten Währungen der Welt machen konnte. 1972 wurde die Integration Österreichs in den europäischen Markt durch das Arrangement mit den Europäischen Gemeinschaften vollzogen. Neben der Umstellung des alten Umsatzsteuersystems auf die europakonforme "Mehrwertsteuer" im Jahre 1973 erfolgte noch eine Reihe von Einkommens- und Lohnsteuerreformen, darunter die grundlegende Neufassung des Einkommensteuergesetzes im Jahre 1972 und das Inkrafttreten eines neuen Finanzausgleiches mit Beginn 1973. Durch einen auf Arbeitsplatzsicherung und Stabilität ausgerichteten Wirtschaftskurs gelang es Finanzminister Androsch, dass die Folgen des schwersten konjunkturellen Rückschlages, dem die westlichen Industriestaaten sich seit dem Zweitem Weltkrieg gegenübersahen, die Österreichische Wirtschaft nur in einem abgeschwächten Masse berührten. Die mit 1. Oktober 1976 wirksam gewordene Ernennung zum Vizekanzler ist die Bestätigung für den Erfolg dieses wirtschaftspolitischen Kurses.

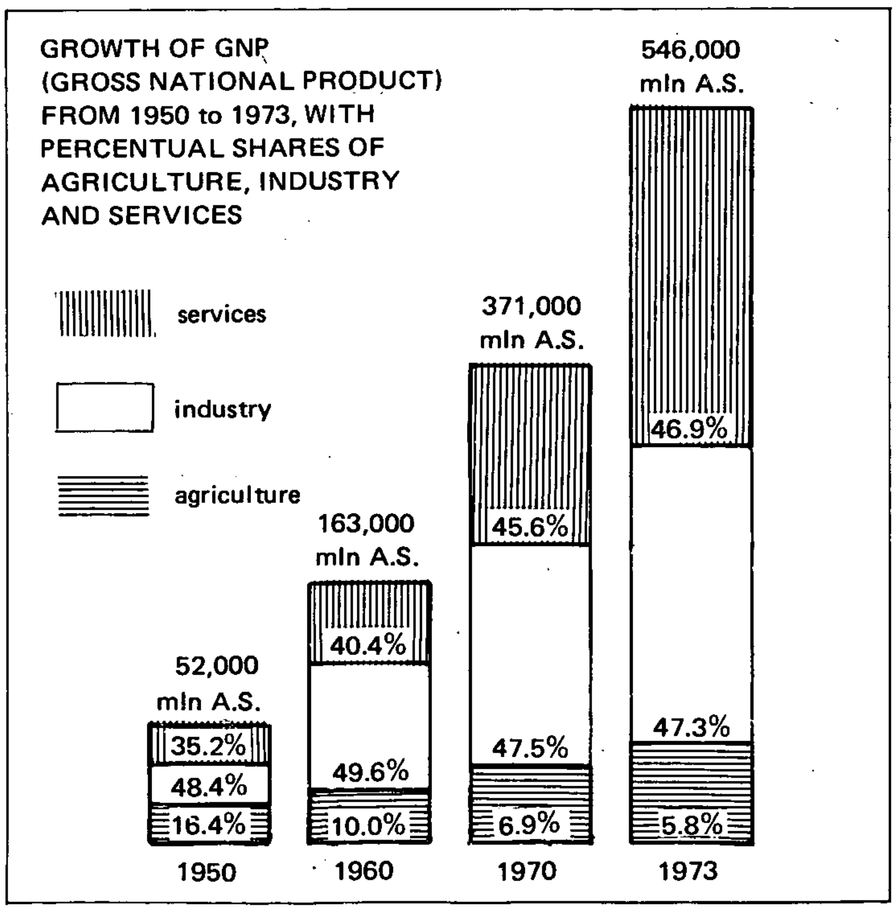
werden kann. Die Steuern und die Ausgestaltung des Steuersystems können auch allgemeinen wirtschaftspolitischen oder gesellschaftspolitischen Zielvorstellungen angepasst werden. So können z.B. zur Erhöhung der Investitionsneigung (Abschreibungsvorschriften, Steuerrabatte etc.) oder zur Konsumbeeinflussung sowohl hinsichtlich des Niveaus des Konsums (Sparförderung) als auch in bezug auf die Konsumstruktur (gestaffelte Steuersätze bei Verbrauchssteuern, zusätzliche oder ausschliessliche Besteuerung bestimmter Verbrauchsgüter) steuerliche Anreize gegeben werden.

Steuerliche Regelungen können auch zur Verhinderung von Umweltschäden und zur Forcierung des Rohstoffsparens beitragen.

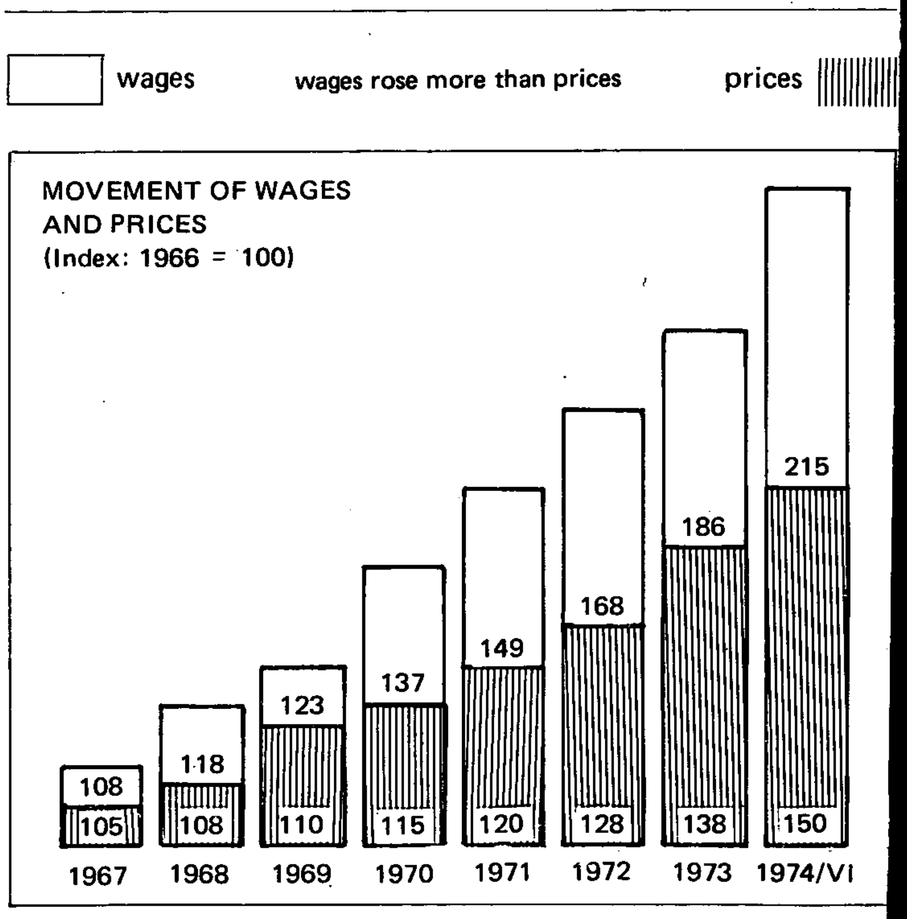
Eine Funktion der Steuer, aber auch anderer Einnahmen, die leider meistens übersehen wird, ist die Informationsfunktion. Einerseits bilden die verschiedenen Steuerstatistiken eine wichtige Grundlage für die Erstellung der volkswirtschaftlichen Gesamtrechnung vergangener Jahre (ex post-Information), andererseits können gewisse Steuern und Einnahmen als Konjunkturindikatoren herangezogen werden. Wichtig für eine "ex ante-Information" sind relativ schnell reagierende Grössen wie Lohnsteuer, Beiträge zum Familienlastenausgleich, Lohnsummensteuer und zum Teil auch einige Verbrauchssteuern. Aus diesem Grunde ist darauf zu achten, den Informationsgehalt von (Steuer)Einnahmen nicht durch zu viele Sonderregelungen innerhalb der Steuergesetzgebung zu verwässern.

Derzeit liegt der Anteil der Steuern und Steuerähnlichen Einnahmen am Bruttonationalprodukt bei rund 39%. Vor 10 Jahren hat er noch 35% betragen. Die Kluft zwischen politischer Verantwortung und wirtschaftlichem Nutzen führte dazu, dass diese Steigerung vor allem dem Bund angelastet wird. Zwar hebt der Bund rund 70% der Steuern ein, der Anteil am Bruttonationalprodukt ihm verbleibender Steuereinnahmen ist jedoch von 14,8% im Jahr 1970 auf 14,1% im Jahr 1976 gesunken. Die Erhöhung der Steuerquote ist vor allem den Sozialversicherungsträgern, aber auch anderen Gebietskörperschaften zugute gekommen.

Im Jahre 1976 betrug der Anteil der Steuern an den Gesamteinnahmen des Bundes lediglich 57,8%, und nur 46,3% der Gesamtausgaben waren durch das dem Bund verbleibende Steueraufkommen gedeckt.

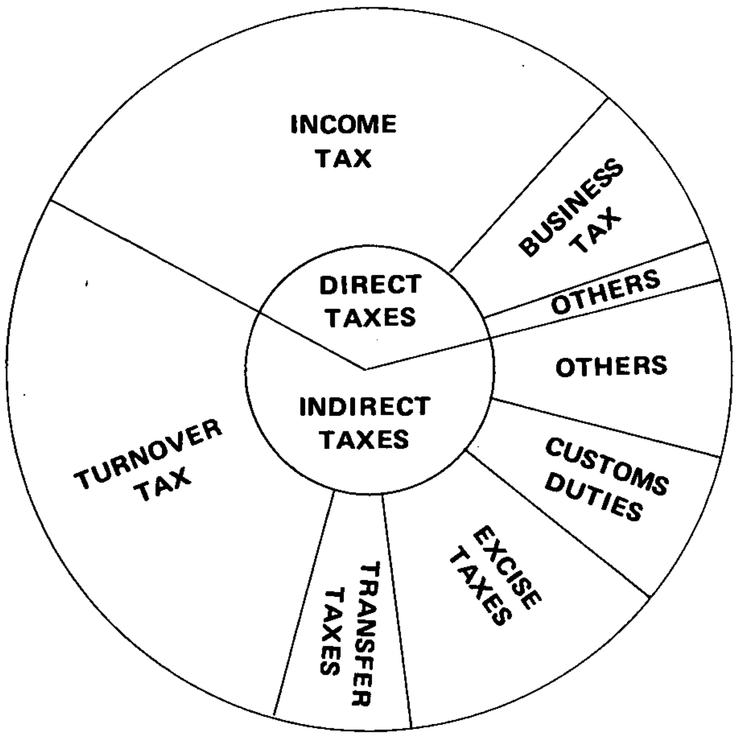


Als Folge der antizyklischen Budgetpolitik zur Bekämpfung von Rezession und Arbeitslosigkeit erhöhte sich der Anteil des Bruttodefizits auf 42,8% der Nettosteuereinnahmen, die Finanzschuld ist auf 60,3% der Gesamtausgaben angewachsen.



Das bedeutet aber, dass von der budgetären Lage her kein Spielraum für unzeitgemässe und übergrosse Steuersenkungen gegeben ist.

Andererseits ist die Gefahr gegeben, dass durch die Besteuerung Grenzen erreicht werden, die selbst in Ländern mit hoher Steuermoral zu Reaktionen der Verweigerung und Abstinenz geführt haben. Wie bei allen psychologischen Grenzen gibt es keine Möglichkeit, ihre genaue Lage auszuloten. Hat man sie einmal erkannt, dann hat man sie auch bereits überschritten.



Eine Wiederherstellung des konjunkturpolitischen Spielraums der Budgetpolitik hat daher vorrangig bei den Ausgaben anzusetzen. Die entsprechenden Schritte dazu wurden bereits eingeleitet.

The illustrations in this Section on Austria are taken from: HANDBUCH FÜR INVESTORENINFORMATION (Handbook for investor's information), published by "Bundesministerium für Handel, Gewerbe und Industrie" (Federal Ministry for Trade, Business and Industry), 2nd ed., Vienna, 1976.

FEDERAL TAXES IN AUSTRIA

DIRECT TAXES	45%	**INDIRECT TAXES**	55%
		Turnover tax	26%
Income tax	33%	Excise taxes	12%
Business tax	7%	Customs duties	5%
Others (inter alia net worth tax)	5%	Transfer taxes	4%
		Others	8%

Das österreichische Steuerinstrumentarium ist stark differenziert. Es reicht von den Monopolabgaben, die noch aus der Zeit des Absolutismus stammen, bis zur Mehrwertsteuer, die 1973 eingeführt wurde.

Finanzwirtschaftliche und verteilungspolitische Zielsetzungen stehen vor allem bei den gewinnabhängigen Steuern, also bei veranlagter Einkommensteuer, Körperschaftssteuer und Gewerbesteuer im Vordergrund.

Kernstück ordnungspolitischer Zielsetzungen auf dem Gebiet der Einkommen- und Körperschaftsbesteuerung stellt das auch im internationalen Vergleich als reichhaltig zu bezeichnende Instrumentarium an Investitionsbegünstigungen dar. So ist für Unternehmen mit kontinuierlichem Investitionsvolumen die Begünstigung der vorzeitigen Abschreibung besonders bedeutsam. Die vorzeitige Abschreibung ist grundzätzlich mit 50 v.H. der jeweiligen Anschaffungs- oder Herstellungskosten von abnutzbaren Anlagegütern begrenzt, ihre Inanspruchnahme bewirkt einen kräftigen Steuerstundungseffekt. Aufgrund der vorhandenen statistischen Unterlagen kann das Ausmass der von den Unternehmen 1977 in Anspruch genommenen vorzeitigen Abschreibung auf etwa 16 Mrd S geschätzt werden.

Die vorzeitige Abschreibung wurde in letzter Zeit verstärkt als Instrument für struktur- und konjunkturpolitische Massnahmen eingesetzt. So wurde durch die Einkommensteuergesetznovelle 1974, mit der vor allem konjunkturstabilisierende Massnahmen gesetzt werden sollten, die vorzeitige Abschreibung für unbewegliche Wirtschaftsgüter grundsätzlich abgeschafft. Für bestimmte Massnahmen war sie aber weiterhin zulässig, so etwa für Investitionen im Interesse des Umweltschutzes und für strukturverbessernde Investitionen im Rahmen der Frendenverkehrswirtschaft. Als flankierende Massnahme zur Abschaffung der vorzeitigen Abschreibung wurde andererseits die Abschreibungsdauer für Betriebsgebäude wesentlich — und zwar in der Regel auf 20 Jahre — verkürzt.

Die kritische Situation der Bauwirtschaft zu Beginn des Jahres 1976 veranlasste die Bundesregierung, expansive Massnahmen speziell für diesen Sektor zu treffen. Für Bauvorhaben, mit deren Ausführung ab Beginn des Kalenderjahres 1976 begonnen wurde, wurde eine befristete 50%ige vorzeitige Abschreibung der Herstellungskosten für die Kalenderjahre 1976 und 1977 eingeführt. Zusammen mit weiteren Massnahmen wurde dadurch eine nicht unwesentliche Erhöhung des Gesamtbauvolumens für das Jahr 1976 bewirkt. Für die Jahre 1978 und 1979 ist eine Verlängerung der vorzeitigen Abschreibungsmöglichkeit für Gebäude mit reduzierten Sätzen (30% bzw. 25%) vorgesehen.

Wahlweise zur vorzeitigen Abschreibung kann auch der sogenannte Investitionsfreibetrag in Anspruch genommen werden, der im Effekt einer Abschreibung vom Wiederbeschaffungswert gleichkommt. Auch dieses Instrument differenziert hinsichtlich seines Ausmasses nicht nach beweglichen und unbeweglichen Wirtschaftsgütern und verringert dadurch den Anreiz zu rein steuerlich motivierten Anschaffungen, die aber in Wahrheit Fehlinvestitionen darstellen.

Für Unternehmen, die zwar kontinuierlich investieren, deren Investitionen aber eine äusserst lange Bauzeit erfordern (z.B. Kraftwerksbauten), können die Investitionsbegünstigungen der vorzeitigen Abschreibung bzw. des Investitionsfreibetrags bereits von den auf die einzelnen Herstellungsjahre entfallenden Teilbeträgen der Herstellungskosten vorgenommen werden.

Unternehmen ohne kontinuierlichen Investitionsbedarf steht die Möglichkeit des steuerfreien Ansparens der Mittel für künftige Investitionen in Form einer sogenannten Investitionsrücklage offen, die mit einem bestimmten Prozentsatz des Gewinns begrenzt ist.

Bei Unternehmen, die betriebsbedingt nur über ein relativ kleines Investitionsvolumen verfügen, soll durch die Begünstigung des nichtentnommenen Gewinns eine Stärkung der Eigenkapitalbasis bewirkt werden.

Bei der Veräusserung von Gütern werden als Folge von Unterbewertungen, aber auch zum Teil als Folge des Nominalwertprinzips stille Reserven frei. Ohne steuerliche Vorkehrungen würde die Anpassung des Kapitalstocks behindert werden. Daher können solche stille Rücklagen, falls eine bestimmte Mindestbetriebszugehörigkeit gegeben ist, begünstigt aufgelöst werden. (Übertragung der aufgedeckten stillen Rücklagen auf die Anschaffungskosten anderer Wirtschaftsgüter, zum Teil auch ermässigte Steuersätze).

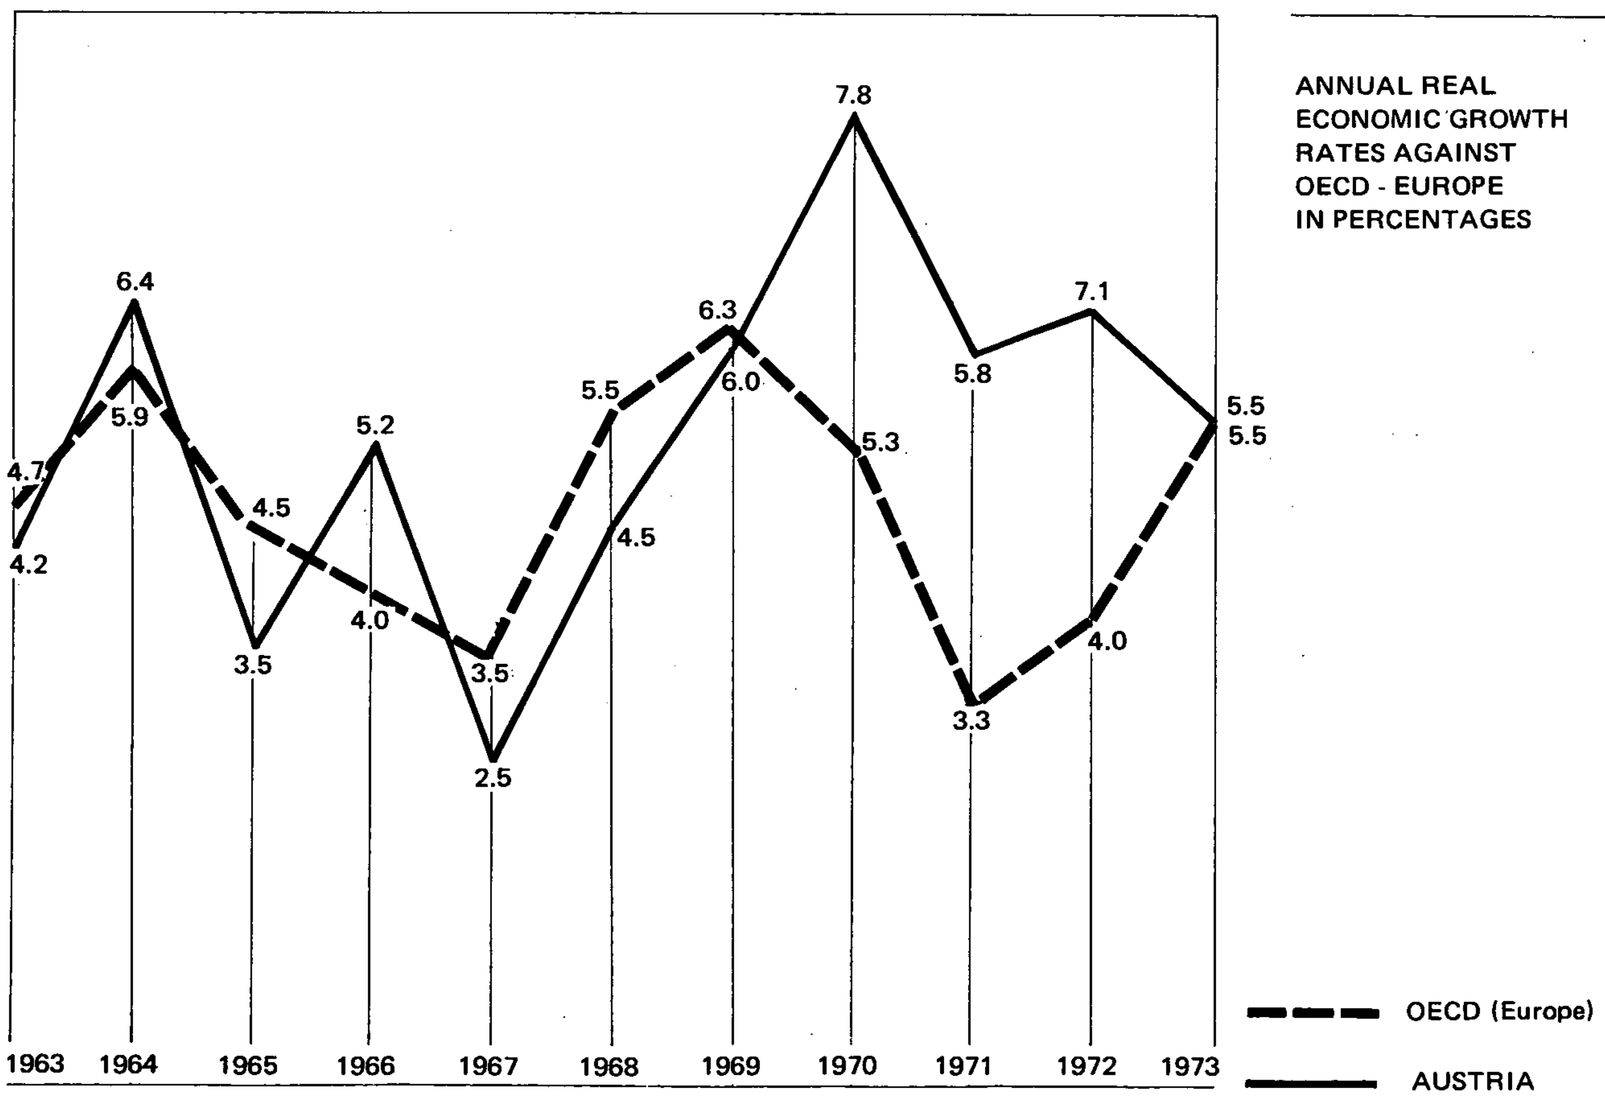
Währen diese Massnahme primär der Förderung der Mobilität des Kapitals dient, haben strukturpolitische Erwägungen zur Schaffung des "Strukturverbesserungsgesetzes" geführt, das für die verschiedensten Abgaben

von den allgemeinen steuerlichen Bestimmungen abweichende Regelungen trifft. Dadurch soll den Unternehmen die erforderliche Strukturanpassung ermöglicht bzw. erleichtert werden. Das ursprünglich auf zwei Jahre befristete Gesetz wurde — mit Ausnahme eines Artikels — bereits mehrfach verlängert und ist derzeit bereits in Kraft. Eine weitere Verlängerung nach Ablauf dieses Jahres ist vorgesehen.

Durch Massnahmen auf steuerlichem Sektor wird auch die Exportwirtschaft gefördert. So ist etwa eine pauschale Wertberichtigung von Exportforderungen als Ausgleich für allfällige Finanzierungsengpässe aufgrund der langen Zahlungsziele im Export vorgesehen. Entsprechend der zunehmenden Multilaterisierung im Aussenhandel ist für bestimmte Beteiligungsinvestitionen österreichischer Unternehmer im Ausland eine entsprechende steuerliche Begünstigung vorgesehen.

Steuerliche Massnahmen beeinflussen auch den Kapitalmarkt. So hebt die steuerliche Förderung für die Anschaffung von festverzinslichen Wertpapieren die Nachfrage am Anleihemarkt; Auswirkungen auf den Kapitalmarkt gehen auch von der begünstigten Ausgabe von Aktien bei Kapitalerhöhungen aus. Als mittelbare Förderung kommen noch verschiedene Steuerbefreiungen von Zinsen aus begünstigt angeschafften Wertpapieren hinzu.

Verbrauchssteuern werden üblicherweise den indirekten Steuern zugezählt, die als überwälzbar angesehen werden, im Gegensatz zu den direkten Steuern, die als nicht überwälzbar betrachtet werden.



Diese Unterscheidung ist insofern problematisch, als sie erstens fliessend ist und zweitens die Überwälzbarkeit auch von der jeweiligen wirtschaflichen Situation abhängt. So können in Boomzeiten Einkommens- und Vermögenssteuern relativ leicht auf die Preise aufgerechnet werden, während Erhöhungen von indirekten Steuern in Rezessionszeiten meist nicht voll weitergegeben werden können. In Österreich ist der Anteil von direkten und indirekten Steuern am gesamten Steueraufkommen in den letzten Jahren praktisch konstant geblieben.

Stark zurückgegangen ist die fiskalische Bedeutung der Zölle. Seit dem Jahr 1967 sind die Zölle für industrielle Fertigwaren aus den Mitgliedsstaaten der Europäischen Freihandelsassosiation (EFTA) beseitigt. Mit dem 1. Juli 1977 haben die Zollsenkungen für industrielle Erzeugnisse aus der Europäischen Gemeinschaft (EG) ihre letzte Etappe erreicht. Damit werden rund 73% der österreichischen Importe und rund 60% der österreichischen Exporte im "grossen europäischen Freihandelsraum" abgewickelt.

Allein der Zollabbau gegenüber der EG verursacht heuer einen Einnahmenausfall im Vergleich zum Zollniveau von 1970 von etwa 9 Mrd S.

Allerdings ist der Verzicht auf Zolleinnahmen längerfristig gesehen kein "Verlustgeschäft". Die Erfahrung hat gezeigt, dass die Beseitigung von tariflichen und nicht-tariflichen Handelshindernissen zu einer wesentlichen Belebung des Aussenhandels führt.

Selbst dort, wo der Verzicht auf Eingangsabgaben einseitig, z.B. als unilaterale Massnahme zugunsten der

Exporte der Entwicklungsländer erfolgte, kann eine Zunahme des Warenaustauschs registriert werden. Während noch im Jahr 1974 der Anteil der österreichischen Exporte in Entwicklungsländer 8,5 Prozent betrug, erhöhte er sich im Folgejahr bereits auf 11,5 Prozent. Auch 1976 war eine deutlich steigende Tendenz zu verzeichnen.

Der materielle Wohlstand, das eng geknüpfte soziale Netz einerseits, das in vielen Bereichen unterentwickelte Bewusstsein für die Kosten öffentlicher Einrichtungen andererseits, legen es nahe, für die Erstellung öffentlicher Leistungen in Zukunft vermehrt den Benützern die Kosten zuzurechnen, wobei sozial differenziert werden soll.

Die Steuerpolitik und das Steuerwesen haben in Österreich, wie in allen modernen Industriestaaten, eine grosse Bedeutung. Ihre kontinuierliche, zweckgerichtete Anpassung an die sich ändernden wirtschaftlichen Verhältnisse, seien sie national oder international verursacht, ist notwendig.

Ziel ist ein harmonisches Zusammenspiel aller Bereiche der Wirtschaftspolitik zur Erreichung der Gesamtstabilität.

The role of taxation in the Austrian economy

VICE CHANCELLOR
FEDERAL MINISTER OF FINANCE
DR. HANNES ANDROSCH

Hannes Androsch was born in Vienna on April 18, 1938. He studied at the School for World Trade and received his diploma from that institution with a paper on questions of the fiscal balance sheet and theory of balance sheets and his doctorate with a thesis on investment planning.

From 1956 to 1966 Dr. Androsch worked as an auditor, and thereafter as a chartered accountant and tax consultant. In the Austrian Socialist Party he was the Secretary with responsibility for economic matters and latterly consultant to The Socialist Members of Parliament Group from 1963 to 1966. He has belonged to the socialist movement from his youth and in 1967 was elected as a member of parliament. He is married with two children.

On April 21, 1970 at the age of 32, he was appointed Federal Finance Minister, the youngest Finance Minister which Austria has ever had.

During his term of office as Finance Minister, Dr. Androsch placed considerable emphasis on the development of the Austrian economy. Since 1970 he was, unlike any other finance minister before him, confronted with the problem of an unstable currency situation and succeeded in making the Austrian schilling one of the most stable currencies in the world. In 1972 the integration of Austria into the European Market was completed by virtue of the Arrangement with the E.E.C. Besides bringing Austria into line with the European system of value added tax by changing to that system from the old turnover tax system in 1973, a number of income and wage tax reforms took place including a basic revision of the income tax law in 1972 and the introduction of a new interstate financial adjustment at the beginning of 1973. By steering an economic course aimed at security of employment and stability Dr. Androsch succeeded in greatly restricting the effects on the Austrian economy of the worst economic recession facing Western industrial states since the Second World War. His appointment as Vice Chancellor on October 1, 1976 is the acknowledgement of the success of this economic course.

The levying of taxes and the structure of the rate schedule have from time immemorial been a highly controversial topic of general discussion.

In the Middle Ages the question which people asked themselves in particular was whether from a moral point of view, taxes could be levied at all. In his "*Summa theologiae*" Thomas Aquinas entitles the chapter on taxation "*Can robbery take place without sin?*" The question is answered in the affirmative with references to the obligation of the ruler to care for the common good, subject to the principle of justice being observed.

In a state governed by an absolute ruler taxation is justified by the ideal of the powerful state.

"*A monarch who has no treasure in his coffers but relies on the goodwill of his subjects and lands is in a perilous position; for the minds of subjects are like faulty tools with which one cannot produce good work.*"
(Wilhelm Freyherr von Schröder: Fürstliche Schatz und Rent-Cammer)

At the present day finance policy has changed to the extent that the citizen is no longer merely regarded as a source of income or an economic entity whose decisions should be respected but as the "potential implementer of politically desirable goals".
(G.B. Schmölders)

It is from this angle that taxes and tax policy should be considered and understood.

Taxes fulfil many functions:

As well as fulfilling a financial function, i.e. providing revenue to cover expenditure, they also have the function of influencing the distribution of income. The progressivity of the tax schedule as well as the introduction of deductions, amounts exempt from tax, exemption limits etc., which are linked to certain social indications, are particularly useful in this respect. Because of ever-present tax loopholes, but also in order to avoid creating an all too casuistic tax system, a redistribution of income through means of taxes is only possible to a limited extent. Tax policy and expenditure policy must be looked at together here since redistribution of income can be strongly influenced by means of state expenditure. Taxes and the form which the tax system takes can also be adapted to conform to the general objectives of economic and social policy. Thus, for example, tax incentives may be given in order to encourage investment (provisions relating to depreciation, reduced rates of tax etc.) or in order to influence consumption, both as regards the level of consumption (encouragements to save) and the pattern of consumption (differential rates of consumption taxes, additional or exclusive taxation of particular consumer goods).

Tax provisions can also help in preventing damage to the environment and in enforcing the saving of raw materials.

One function of tax, but also of other forms of revenue, which is unfortunately generally overlooked, is its function in relation to the provision of information. On the other hand the various tax statistics form an important basis in drawing up the economic balance sheet for previous years (ex post-information) and on the other hand certain kinds of taxes and revenue can be referred to as economic indicators. Amounts which respond relatively quickly such as wages tax, social security payments, payroll tax and also to a certain extent certain consumption taxes are important for purposes of "ex ante-information". For this reason care should be taken not to water down the information content of (tax) revenue by including too many special rules in the tax legislation.

At the moment, taxes and assimilated revenue account for around 39 percent of the gross national product. Only ten years ago this amounted to 35 percent. The gap between political responsibility and economic benefit has meant, moreover, that this increase was principally laid at the door of the Federation. While it is true that around 70 percent of taxes are levied by the Federation, the tax revenue attributable to the Federation expressed as a proportion of the gross national product dropped from 14,8 percent in 1970 to 14.1 percent in 1976. It is the social security bodies and also other territorial administrative bodies which have in the main benefited from the increase in the tax quota.

In 1976 taxes accounted for only 57.8 percent of total Federal revenue and only 46.3 percent of total expenditure was covered by tax revenue attributable to the Federation.

As a result of the anti-cyclical Budget policy used to combat the recession and unemployment, the gross budget deficit increased to 42.8 percent of net tax revenue, while the financial debt has increased to 60.3 percent of total expenditure.

This means, however, that no leeway is allowed in the budgetary situation for inopportune and excessive reductions in taxation.

On the other hand, the danger exists that taxation will reach such limits, that even in countries with a high tax morality people will refuse or abstain from paying taxes. As is the case with all psychological limits there is no possibility of fixing them exactly for once one recognises that they exist then they have already been overstepped.

A reintroduction of the economic policy margin in matters of budget policy must in the first place be linked to expenditure. The necessary steps to achieve this have already been initiated.

There is a wide-ranging variety of tax tools available to the Austrian authorities. These range from the monopoly taxes dating from the time of absolute government to the value added tax introduced in 1973.

Objectives of economic and income redistribution policy are of major importance, particularly where the profit related taxes, i.e. assessed income tax, corporation tax and trade tax, are concerned.

With respect to income and corporate taxation the focal point in achieving regulatory objectives is the range of investment incentives which, even in an international context, can be described as comprehensive. Thus, the advantage of accelerated depreciation is of particular importance to enterprises which invest continuously. In principle, accelerated depreciation is limited to 50 percent of the original cost price or production cost of depreciable capital goods and by taking advantage of it enterprises may enjoy significant deferral of their taxes. On the basis of available statistical data the extent to which enterprises took advantage of the possibility of accelerated depreciation in 1977 is estimated at around 16 milliard Austrian schillings.

Recently, accelerated depreciation has been used more intensively as a tool for carrying out measures of structural or cyclical policy. Thus, as part of the measures aimed in particular at stabilising the economy introduced in the 1974 amendment to the income tax law, accelerated depreciation for immovable business assets was basically abolished. In certain cases, however, it was still allowed as, for instance, in the case of investment in projects for the protection of the environment and investment aimed at improving the structure of the tourist industry. On the other hand a measure accompanying the abolition of accelerated depreciation shortened the depreciation period for industrial buildings and that to 20 years, in general.

The critical situation in the building industry at the beginning of 1976 caused the Federal government to introduce measures designed to encourage expansion specially for this sector. For building projects started after the beginning of the 1976 calendar year a 50 percent accelerated depreciation of production costs was introduced limited to the calendar years 1976 and 1977. This, together with further measures, led to a not inconsiderable increase in the total amount of building carried out in the year 1976. An extension of the possibility for accelerated depreciation for buildings has been provided for the years 1978 and 1979, but at reduced rates (30 percent and 25 percent, respectively).

As an alternative to accelerated depreciation the so-called investment exemption may also be claimed; this, in effect, is equivalent to depreciating the replacement value. The amount of this exemption does not vary for movable and immovable business assets and as a result reduces the incentive to acquire assets purely for tax reasons — assets which, in truth, represent a non-investment.

Enterprises which invest continuously but the construction of whose investments takes an extremely long time to complete (e.g. power station works) may apply the investment incentives of accelerated depreciation and the investment exemption to that part of the construction costs relating to individual years of construction.

Enterprises which do not require continuity of investment have the possibility open to them of making tax-free savings of funds for future investment in the form of so-called investment reserves; this is limited to a certain percentage of profits, however.

In the case of enterprises which because of the size of their business only have a relatively small amount of investment resources at their disposal, a strengthening of their equity should result from the favourable tax treatment of non-distributed profits.

As a result of undervaluations and also to a certain extent of the nominal value principle, hidden reserves will be released on the alienation of assets. Whithout the existence of special tax measures adjustments to avoid capital erosion would be impeded. Thus, where there is a certain minimum relationship with the business such hidden reserves can be favourably dissolved (debiting undisclosed hidden reserves to acquisition costs of other business assets, to a certain extent, also, reduced tax rates).

While this measure serves primarily to encourage the mobility of capital, considerations of economic policy relating to reconstructions led to the passing of the Structural Improvement Law (Strukturverbesserungsgesetz); this Law contains rules for the various taxes which differ from the general provisions of taxation. As a result, this should enable the required reconstruction to take place or facilitate it. While the Law originally applied for a period of two years it has — with the exception of one article — already been extended more than once and is at the present time in force. A further extension is expected after the end of this year.

The export industry is also stimulated as a result of measures relating to taxation. Thus, a rough adjustment of value is provided for claims in connection with export transactions as compensation for possible financial bottlenecks resulting from long terms of payments in the export industry. As a result of the increase in multilateral foreign trade favourable tax treatment is provided fo

certain capital participations by Austrian enterprises abroad.

Tax measures also influence the capital market. Thus, the tax incentive given for the acquisition of fixed interest securities increases demand on the bond market; issues of shares on capital increases which benefit from incentives also have consequences on the capital market. In addition there are also various indirect incentives in the form of tax exemptions for interest from securities acquired under this incentive.

Consumption taxes are usually considered as indirect taxes, which are deemed to be capable of being shifted, in contrast to direct taxes which are not regarded as such.

This distinction is problematic to the extent that it is in the first place fluid and in the second place, whether the tax can be passed on depends on the economic situation at the time. Thus, in boom situations income and net worth taxes can relatively easily be shifted in prices, while in times of recession increases in indirect taxes cannot generally be passed on completely. In Austria, the proportion of direct and indirect taxes in total tax revenue has remained virtually constant over the last few years.

The significance, from a fiscal point of view, of customs duties has decreased greatly. Since 1967 customs duties on manufactured products from the Member States of the European Free Trade Association (EFTA) have been abolished. On July 1, 1977 reductions of customs duties on industrial products from the European Community (EEC) reached their final stage. Therewith, around 73 percent of Austrian imports and 60 percent of Austrian exports will be effected within the framework of the "European free trade area" in its widest context.

The reduction in customs duties vis-a-vis the EEC alone will cause a drop in revenue this year of around 9 milliard schillings as compared to revenue from customs duties in 1970.

To be sure, the waiving of revenue from customs duties cannot, from a long term point of view, be seen as a "loss transaction". Experience has shown that removal of tariff and non-tariff restrictions on trade lead to a considerable invigoration of the foreign trade situation.

Even where the waiving of import duties was unilateral e.g. when a unilateral measure resulted in benefits for exports of developing countries, an increase in trade can be noted. While in 1974 Austrian exports accounted for 8.5 percent of exports to developing countries, this had already increased in the following year to 11.5 percent. In 1976, too, a clear upward tendency was to be observed.

Material prosperity and the tightly knit social structure on the one hand, and an underdeveloped consciousness in many areas as to the cost of public institutions on the other make it clear that when public services are set up in the future the costs will have to be charged to a greater extent to the users of such services, but at the same time, for social reasons, differentiations will have to be made.

In Austria, as in all modern industrial states, tax policy and taxation are of great significance. Their continual and appropriate adjustment to changes in economic relationships, whether on the national or international level, is vital.

A harmonious co-operation between all areas of economic policy is aimed at in order to achieve all-round stability.

Importance de la fiscalité dans l'économie autrichienne

DR. HANNES ANDROSCH
VICE-CHANCELIER
MINISTRE FEDERAL DES FINANCES

L'imposition de contributions et la structure des taux a toujours été un sujet de discussions très contreversé dans la Société.

Au moyen-âge on se préoccupait surtout de la question de savoir si d'un point de vue moral, l'imposition de contributions était même admissible. C'est ainsi que le chapitre traitant de la fiscalité dans l'ouvrage de Thomas d'Aquin "*Summa theologiae*" est intitulé: "*Peut-il y avoir brigandage sans péché?*" L'auteur y répond par l'affirmative en renvoyant à l'obligation qu'avait le souverain de tenir compte du bien commun tout en respectant le principe d'équité.

Dans un Etat de régime absolu l'imposition est justifiée par l'idéal d'Etat puissant.

"*Un monarque sans trésor qui s'appuie sur la bonne volonté de ses sujets et sur ses provinces est comme un homme qui marche sur des échasses, car les esprits des sujets ressemblent à des chiens boîteux incapables de rattrapper le lièvre pourchassé*" (Wilhelm Freyherr Von Schröder: Fürstliche Schatz- und Rent-Cammer).

De nos jours la politique financière a évolué dans la mesure où le citoyen n'est plus considéré comme source de revenu ou entité économique, dont les décisions doivent être respectées, mais

Hannes Androsch est né le 18 avril 1938 à Vienne. Etudiant de "la Hochschule für Welthandel", il obtient son diplôme en faisant une étude sur la question des bilans fiscaux et des théories des bilans, son doctorat porte sur la planification des investissements.

Dr. Androsch est réviseur de 1956 à 1966 et travaille ensuite indépendamment comme expert comptable et conseiller fiscal. Dans le groupe parlementaire du SPÖ (Parti socialiste autrichien) Hannes Androsch occupe successivement de 1963 à 1966 le poste de secrétaire aux questions économiques puis de conseiller du groupe de députés socialistes; le Dr. Androsch appartient depuis sa jeunesse au mouvement socialiste. Il est élu député au Conseil National en 1967. Il est marié et père de deux enfants.

Le 21 avril 1970 Dr. Androsch est appelé au poste de Ministre des Finances du Gouvernement Fédéral; à 32 ans il est le plus jeune Ministre des Finances autrichien.

Le Ministre des Finances Hannes Androsch a mis essentiellement l'accent sur le développement de l'économie autrichienne. A partir de 1970 il est confronté comme aucun autre ministre des finances avant lui au problème de l'instabilité du monde monétaire où il a pu faire du Schilling l'une des monnaies les plus stables du monde. L'intégration de l'Autriche dans le Marché Européen est réalisé en 1972 par l'accord avec la Communauté Européenne. A côté de la réforme de l'ancien système de l'impôt sur le chiffre d'affaires en 1973, necessaire pour s'adapter au système européen de la TVA, a lieu une série de réformes de l'impôt sur le revenu et de l'impôt sur les salaires. On notera parmi elles en 1972 transformation complète de la loi de l'impôt sur le revenu et au début de 1973 l'entrée en vigueur d'un nouveau système de péréquation financière entre les différents états de la Fédération. Le ministre des Finances Androsch réussit, par une politique économique fondée sur la sécurité de l'emploi et la stabilité, à ce que l'économie autrichienne ne soit touchée que faiblement par les conséquences de la crise économique la plus grave que les Etats industriels de l'Europe de l'Ouest ont connu depuis la deuxième guerre mondiale. La consécration du succès de la voie suivie par la politique économique est la nomination de Hannes Androsch au poste de Vice Chancelier de 1er octobre 1976.

"comme quelqu'un qui pourrait assumer une attitude politique exemplaire" (G.B. Schmölders).

C'est dans cette optique qu'il fait ajourd'hui examiner la fiscalité et la politique fiscale.

Les impôts remplissent de nombreuses fonctions.

A côté du rôle qu'ils tiennent dans le régime financier, à savoir créer des recettes pour couvrir les dépenses, ils ont aussi pour mission d'influencer la répartition des revenus. C'est avant tout la progressivité des taux ou l'application, en relation avec certains facteurs sociaux, de déductions, d'abattements, d'exemptions etc. qui jouent un rôle prépondérant à cet égard. En raison des lacunes d'imposition toujours inévitables, mais aussi pour éviter un système d'imposition pas trop casuistique, la possibilité de redistribution des revenus par l'intermédiaire de l'impôt est limitée. La politique fiscale et la politique des dépenses doivent être considérées ici comme complémentaires, la répartition des revenus pouvant être fortement influencée par la structure des dépenses. Les impôts et la forme que revêt le système fiscal peuvent également être adaptés aux buts poursuivis par la politique économique ou sociale. Ainsi par exemple des facilités fiscales pourront être accordées pour encourager la tendance aux investissements (des dispositions concernant les amortissements, des réductions d'impôt etc.) ou pour influencer la consommation aussi bien en ce qui concerne son niveau (encouragement à l'épargne) que sa structure (tarifs progressifs applicables aux impôts de consommation, imposition complémentaire ou unique de certains biens de consommation).

Des dispositions fiscales peuvent aussi jouer un rôle dans la prévention de la pollution et autres dégradations de l'environnement et contribuer à la sauvegarde des matières premières.

L'impôt a également une autre fonction (valable aussi pour d'autres recettes) malheureusement souvent négligée, celle de fournir des informations. Les différentes statisques fiscales constituent d'une part une base importante pour le redressement du bilan économique national des années passées ("information ex-post") et d'autre part certains impôts et autres recettes peuvent être considérés comme des indicateurs conjoncturels. Des montants qui se modifient relativement vite comme ceux provenant des différents impôts et taxes perçus sur les salaires, des contributions de sécurité sociale, et dans une certaine mesure quelques impôts de consommation sont importants pour une "information ex-ante". C'est pourquoi on doit éviter de noyer l'information provenant des recettes fiscales par de trop nombreuses règles d'exceptions à l'intérieur de la législation fiscale.

Actuellement les impôts et les recettes para-fiscales correspondent à 39 pour cent du produit national brut. Il y a 10 ans ils ne correspondaient qu'à 35 pour cent. En raison du fossé qui sépare la responsabilité politique des bénéfices économiques cette augmentation s'est trouvée essentiellement à la charge de la Fédération. Bien que la Fédération perçoive environ 70 pour cent des impôts, la part des recettes fiscales lui revenant finalement et correspondant au produit national brut est tombé de 14,8 pour cent en 1970 à 14,1 pour cent en 1976. Non seulement les organisations de sécurité sociale mais également d'autres institutions administratives régionales sont les principales bénéficiaires de l'augmentation de la charge fiscale.

En 1976 le montant des impôts ne représentaient que 57,8 pour cent des cettes publiques alors que seulement 46,3 pour cent des dépenses publiques étaient couvertes par les recettes fiscales revenant à la Fédération.

En raison de la politique budgétaire anti-cyclique menée pour lutter contre la récession et le chômage, le déficit brut s'est élevé à 42,8 pour cent des recettes fiscales nettes et la dette financière s'est élevée à 60,3 pour cent des dépenses publiques.

Ceci signifie qu'en matière budgétaire, aucune marge n'est laissée pour une réduction d'impôts inopportune et excessive.

D'autre part il existe le danger que la fiscalité atteigne des limites, qui, même dans des pays à haute moralité fiscale, ont donné lieu à des réactions entraînant le refus ou l'abstention de paiement d'impôts.

Comme toutes les limites psychologiques il n'est pas possible de les déterminer exactement. Au moment où on les reconnaît, elles ont déjà été dépassées.

Afin de rétablir la marge politico-conjoncturelle de la polique budgétaire il y a lieu de prendre des mesures dans le cadre des dépenses; une amorce a déjà en lieu en ce sens.

L'appareil fiscal autrichien est très différencié. Cela va des taxes de monopole, qui datent de la période de l'absolutisme, à la taxe sur la valeur ajoutée qui a été introduite en 1973.

Des objectifs financiers et de politique de redistribution des revenus se poursuivent surtout par rapport aux impôts portant sur les bénéfices, à savoir l'impôt direct sur le revenu, l'impôt sur les sociétés et la patente.

L'éventail des mesures d'encouragements aux investissements, qui même au niveau international est considéré comme étant abondant, représente, en matière d'imposition sur le revenu et les sociétés, l'essentiel des objectifs politiques. Par exemple, la mesure d'encouragement que constitue l'amortissement accéléré est d'une importance particulière pour les entreprises qui effectuent des investissements de façon continue. En principe l'amortissement accéléré est limité à 50 pour cent du prix d'achat original ou des coûts de production des biens d'investissements amortissables et son emploi permet un report d'imposition important. Sur la base de données statistiques, on peut estimer à environ 16 milliards de Schillings le montant des amortissements accélérés dont ont pu bénéficier les entreprises en 1977.

Ces derniers temps l'amortissement accéléré a été plus fréquemment utilisé comme instrument de mesures structurelles et conjoncturelles. Ainsi la loi modifiant, en 1974, la loi des impôts sur le revenu qui avait surtout pour but d'introduire des mesures de stabilisation conjoncturelle a supprimé en principe l'application de l'amortissement accéléré pour les biens d'exploitation immobiliers. Mais il restait néanmoins applicable dans certains cas, ainsi par exemple pour les investissements pour la protection de l'environnement et ceux d'amélioration des structures dans le domaine de l'industrie touristique. D'un autre côté, comme mesure complémentaire à la suppression de l'amortissement accéléré, la durée d'amortissement pour les bâtiments d'entreprises a été considérablement raccourcie; elle est en général de 20 ans.

La situation critique dans le domaine de la construction au début de l'année 1976 a amené le gouvernement fédéral à prendre des mesures expansionnistes dans ce secteur. Pour les projets de construction commencés au début de l'année civile 1976, un amortissement accéléré de 50 pour cent été introduit pour les coûts de production; son application est limitée aux années 1976 et 1977. Ceci a permis, en combinaison avec d'autres mesures, une augmentation considérable de la construction pour l'année 1976. Une prolongation de la possibilité d'amortissement accéléré applicable aux bâtiments est prévue pour les années 1978 et 1979, mais à des taux respectivement à 30 pour cent et 25 pour cent.

Il est également possible au lieu de l'application de l'amortissement accéléré, de demander ce qui l'on appelle une "exemption d'investissement" qui produit le même effet qu'un amortissement sur la base de la valeur de remplacement. Le montant de cette exemption ne varie pas selon qu'il s'agit de biens mobiliers ou immobiliers et réduit par la-même une incitation aux acquisitions de biens pour des raisons purement fiscales, qui ne sont en réalité que des investissements fallacieux.

Pour les entreprises qui effectuent en permanence des investissements nécessitant une très longue période d'exécution (par exemple des constructions de stations d'électricité), les encouragements aux investissements par l'intermédiaire d'amortissements

accélérés ou d'exemptions d'investissements pourront déjà être appliqués aux montants des frais de production correspondants à chaque année de production.

Les entreprises qui n'ont pas à effectuer en permanence des investissements ont la possibilité de constituer une forme de provision non imposable destinée aux investissements futurs sous la forme d'une "provision pour investissement", toutefois limitée à un certain pourcentage du bénéfice.

Pour les entreprises qui ne disposent, relativement, que d'un faible volume d'investissements l'avantage des bénéfices non-distribués permettra la consolidation du capital propre.

Lors de la cession de biens des réserves occultes sont révélées par suite de sous-estimations et, dans une certaine mesure, par suite de l'application du principe de la valeur nominale. Le redressement du capital ne serait pas possible sans l'existence de dispositions fiscales appropriées. C'est pourquoi lorsqu'il existe un certain rattachement à l'entreprise, il sera possible de liquider favorablement ces réserves occultes. (Transfert des réserves occultes révélées sur les prix d'acquisition d'autres biens de l'entreprise, dans une certaine mesure réductions de taux d'imposition.)

Alors que cette mesure a surtout pour but d'encourager la mobilité du capital, des considérations politico-structurelles ont conduit au vote d'une "loi d'amélioration des structures" (Strukturverbesserungsgesetz), loi contenant des mesures pour différents impôts qui s'écartent des dispositions fiscales générales. Ceci devra rendre possible, voire faciliter l'adaption des structures des entreprises. Alors que cette loi ne devait être à l'origine applicable que pendant deux ans, elle a déjà été prolongée plusieurs fois (à l'exception d'un article) et est encore actuellement en vigueur. Une autre prolongation est prévue l'année prochaine.

L'industrie d'exportation est, elle aussi, encouragée par des mesures à caractère fiscal. Ainsi une réévaluation forfaitaire des créances d'exportation est prévue comme compensation à des "bouchons" financiers éventuels dus aux longs délais de paiements dans le domaine d'exportations. En raison d'une augmentation croissante du commerce avec l'extérieur, un encouragement fiscal approprié est prévu pour certains investissements en participations réalisés par les entrepreneurs autrichiens à l'étranger.

Les mesures fiscales influencent également le marché des capitaux. Ainsi l'encouragement fiscal applicable à l'acquisition de valeurs mobilières à intérêts fixes stimule la demande sur le marché des emprunts; l'émission d'actions correspondante à l'augmentation de capital et bénéficiant d'un régime de faveur a également des conséquences sur le marché des capitaux. Différentes exonérations fiscales applicables aux intérêts sur les valeurs mobilières acquises sous un régime de faveur viennent s'ajouter indirectement aux mesures d'encouragement.

Les impôts de consommation sont généralement classés dans la catégorie des impôts indirects qui sont considérés comme pouvant être répercutés, à la différence des impôts directs qui ne le sont pas.

Cette distinction est dans une certaine mesure source de problèmes; elle est tout d'abord instable, la possibilité de transfert dépend en outre de la situation économique du moment. Ainsi dans les périodes d'expansion les impôts sur le revenu et le capital peuvent être plus ou moins facilement répercutés sur les prix, tandis que dans les périodes de récession les augmentations des impôts indirects ne peuvent généralement pas être complètement transférées. En Autriche la proportion des impôts directs et indirects à la recette fiscale totale est pratiquement restée constante au cours de ces dernières années.

L'importance fiscale des droits de douane s'est considérablement réduite. A partir de 1967 les droits de douane portant sur les produits finis industriels en provenance des Etats membres de l'Association Européenne de Libre Echange (AELE) ont été supprimés. A partir du 1er juillet 1977 les réductions des droits de douane pour les produits industriels en provenance de la Communauté Européenne (C.E.) sont entrées dans leur dernière étape. Environ 73 pour cent des importations autrichiennes et environ 60 pour cent des exportations autrichiennes seront ainsi réalisées dans la zone européenne de libre échange prise au sens large.

La réduction des droits de douane vis-à-vis de la C.E. est à l'origine actuellement d'une chute des recettes d'environ 9 milliards de Schillings par rapport au niveau des droits de douane perçus en 1970.

A long terme, le renonciation aux recettes tirées de la perception des droits de douane n'est d'ailleurs pas une opération à pertes. L'expérience a montré que la suppression de restrictions commerciales tarifaires et non-tarifaires stimule considérablement le commerce extérieur.

Même lorsque la renonciation aux droits d'entrée est unilatérale, par example comme mesure en faveur des exportations des pays en voie de développement, on peut constater un accroissement des échanges commerciaux. Alors qu'en 1974 la part des exportations autrichiennes vers les pays en voie de développement était de 8,5 pour cent, l'année suivante elle était déjà de 11,5 pour cent. En 1976 également on pouvait noter une tendance très nette à l'augmentation.

Le bien-être matériel, une structure sociale aux mailles serrées d'une part, une conscience peu développé dans de nombreux domaines quant aux coûts des institutions publiques d'autre part, révèlent la nécessité, lors de la création de services publics ultérieurs, de mettre une plus grande partie des frais à la charge des usagers sans oublier de tenir compte des différences sociales.

La politique fiscale et la fiscalité tiennent en Autriche une place importante comme dans tous les pays industriels modernes. Leur adaptation permanent et adéquate aux modifications des relations économiques, qu'elles soient d'origine nationale ou internationale, est nécessaire.

Une coopération harmonieuse de tous les domaines de la politique économique est le but qu'il faut se donner pour tendre vers une stabilité générale.

Grundbelange der österreichischen Steuerrechtsordnung insbesondere in ihrem Verhältnis zum internationalen Steuervertragsrecht*

Univ. Professor
Dr. Gerold Stoll
Wien

Dr. Gerold Stoll: *geboren 1925 zu Wien, Studium für Rechtswissenschaften an der Universität Wien, nach Promotion (1948) Eintritt in die österreichische Abgabenverwaltung des Bundes, ab 1949 in der Mittelinstanz, ab 1958 im Bundesministerium für Finanzen tätig, zuletzt als Abteilungsleiter (Sektionsrat) für Abgabenverfahrensrecht einschliesslich Legistik verantwortlich. 1967 Habilitation an der rechts- und staatswissenschaftlichen Fakultät der Universität Graz für Finanzrecht, Ende 1968 Berufung an die Rechtswissenschaftliche Fakultät der Universität Wien als Ordinarius für Finanzrecht, Vorstand am Institut für Staats- und Verwaltungsrecht; hier u.a. Präses der staatswissenschaftlichen Staatsprüfungskommission.*
1973 zum korrespondierenden, 1974 zum wirklichen Mitglied der österreichischen Akademie der Wissenschaften gewählt.
Herausgeber der Reihe "Schriften zum österreichischen Abgabenrecht" (Wirtschaftsverlag ORAC, Wien). Bisher 13 Bände erschienen.

Es entspricht den Regeln der Gastfreundschaft, gerne gesehene Gäste in ihre neue ungewohnte Umgebung einzuführen, um ihnen hier ein Zurechtfinden zu erleichtern.
Ich habe nun den ehrenvollen Auftrag angenommen, den sehr willkommenen Teilnehmern des XXXI. IFA-Kongresses eine vergleichsweise ähnliche Führung anzubieten. Mit ihrer Hilfe soll ein Einblick in die Grundbelange der österreichischen Steuerrechtsordnung, vor allem der österreichischen Finanzverfassung, des Verhältnisses der Abkommen zur Vermeidung der Doppelbesteuerung (also des Völkerrechtes) zum innerstaatlichen Recht, des österreichischen Abgabenverwaltungsverfahrens- und Organisationsrechtes, sowie des administrativen und gerichtlichen Rechtsschutzes in Steuersachen verschafft werden.
Dass diese Einführung nur in groben Grundzügen und skizzenhaft erfolgen kann, liegt an den mir von den Veranstaltern aus verständlichen redaktionellen Gründen gesetzten engen Grenzen.

I. Doppelbesteuerungsabkommen und das innerstaatliche Recht Österreichs

Doppelbesteuerungsabkommen stellen primär eine Rechtsquelle des Völkerrechtes dar. Die von den Vertragstaaten eingegangenen völkerrechtlichen Verpflichtungen müssen jedoch in ihrem Staatsgebiet vollzogen werden; das Doppelbesteuerungsabkommen muss daher in der innerstaatlichen Rechtsordnung der Vertragstaaten zur Geltung gebracht werden. Diese Eingliederung eines zwischenstaatlichen Vertrages in den innerstaatlichen Normenbereich ist im Völkerrecht nicht besonders geregelt; es handelt sich hiebei sonach um ein allgemeines staatsrechtliches Problem, das in der Folge am Beispiel Österreichs behandelt wird.
Neben dieser allgemeinen Frage der Aufnahme eines zwischenstaatlichen Vertrages in die innerstaatliche Rechtsordnung, ergeben sich bei der Anwendung von Doppelbesteuerungsabkommen noch zahlreiche andere Berührungspunkte mit dem innerstaatlichen Abgabenrecht, die teilweise im internationalen Steuervertragsrecht selbst und teilweise durch die nationale Auslegungspraxis einer Klärung zugeführt worden sind.

* See for English version 368 — Version française, voir page 381

A. DIE AUFNAHME DES DOPPELBESTEURUNGS-ABKOMMENS IN DIE INNERSTAATLICHE RECHTSORDNUNG

Wie bereits ausgeführt ist es Sache des nationalen Rechtes zu bestimmen, in welcher Weise einem zwischenstaatlichen Vertrag innerstaatlich Geltung verschafft wird. In Österreich sind die hiefür massgebenden Rechtsregeln im Bundes-Verfassungsgesetz (B-VG) in der Fassung von 1929 [1] enthalten; sie wurden zuletzt durch eine Novelle im Jahr 1964 (BGBl. Nr. 59/1964) in einzelnen Punkten ergänzt und verbessert.

Im Zusammenhang mit einer verfassungsgemässen Einordnung eines Doppelbesteuerungsabkommens in die innerstaatliche Rechtsordnung stellen sich mehrere Fragen:

1. *Welches staatliche Organ ist befugt, ein Doppelbesteuerungsabkommen abzuschliessen?*
2. *Kann der Vertragsabschluss uno actu erfolgen, oder ist ein Ratifikationsverfahren erforderlich?*
3. *Nach welcher Methode erfolgt die Aufnahme in die innerstaatliche Rechtsordnung (generelle oder spezielle Transformationsmethode)?*
4. *Welchen Rang besitzt ein Doppelbesteuerungsabkommen im Stufenbau der innerstaatlichen Rechtsordnung?*
5. *Welche Rechtsfolgen treffen ein Doppelbesteuerungsabkommen, das unter Verletzung des innerstaatlichen Rechts zustandegekommen ist?*
6. *Welche Auswirkungen ergeben sich aus dem föderalistischen Aufbau Österreichs auf den Abschluss eines Doppelbesteuerungsabkommens?*

1. Das zum Abschluss eines Doppelbesteuerungsabkommens berufene Staatsorgan

Nach der österreichischen Bundesverfassung steht das Recht zum Abschluss von Staatsverträgen grundsätzlich nur dem Bundespräsidenten zu (Art. 65 Abs. 1). Die Bundesverfassung räumt allerdings dem Bundespräsidenten die Befugnis ein, auch die Bundesregierung und die einzelnen Bundesminister zum Abschluss solcher Staatsverträge zu ermächtigen, die weder gesetzändernder noch gesetzesergänzender noch politischer Art sind. Von dieser Befugnis hat der Bundespräsident bereits bei Inkrafttreten der Bundesverfassung im Jahr 1920 Gebrauch gemacht und hat zum Abschluss von "Regierungsübereinkommen" die Bundesregierung, zum Abschluss von "Ressortübereinkommen" den sachlich zuständigen Bundesminister im Einvernehmen mit dem Bundesminister für Auswärtige Angelegenheiten und zum Abschluss von "Verwaltungsübereinkommen" den sachlich zuständigen Bundesminister ermächtigt (Art. 66 Abs. 2 B-VG. und die darauf fussende Entschliessung des Bundespräsidenten vom 31. Dezember 1920, BGBl. Nr. 49/1921).

Die innerstaatliche Abschlussberechtigung für einen Staatsvertrag hängt sonach in erster Linie davon ab, ob es sich um einen gesetzändernden (oder gesetzesergänzenden oder politischen) Staatsvertrag handelt. Hinsichtlich der österreichischen Doppelbesteuerungsabkommen wurde diese Frage bisher stets bejaht. Es existiert wohl eine Bestimmung des innerstaatlichen Abgabenrechtes (§ 48 der Bundesabgabenordnung) [2] die den Bundesminister für Finanzen ermächtigt, Doppelbesteuerungen zu beseitigen; und zwar nicht nur im Einzelfall durch Erlassung eines Bescheides sondern auch in genereller Form durch Setzung von auf Verordnungsstufe stehenden Rechtsakten. Es ist allerdings bisher noch nie der Versuch unternommen worden, den Abschluss eines Doppelbesteuerungsabkommens als Vollziehung dieser dem Bundesminister für Finanzen eingeräumten Ermächtigung anzusehen und demgemäss das Doppelbesteuerungsabkommen in der Form eines nicht gesetzändernden Ressortübereinkommens abzuschliessen (die zitierte Bestimmung des § 48 der Bundesabgabenordnung würde vor allem keine hinreichende gesetzliche Deckung für die Aufnahme bestimmter Nebenbestimmungen eines Doppelbesteuerungsabkommens bieten, wie z.B. der Bestimmung über den Nachrichtenaustausch oder des Diskriminierungsverbotes). Lediglich in Fällen von Doppelbesteuerungsvereinbarungen in speziellen Bereichen (z.B. der Luftfahrt) wird § 48 der Bundesabgabenordnung als gesetzliche Grundlage für den Abschluss von Ressortübereinkommen herangezogen.

Die allgemeinen Doppelbesteuerungsabkommen stellen somit einen gesetzändernden Staatsvertrag dar der verfassungsgemäss nur vom Bundespräsidenten abgeschlossen werden kann.

  1. Administratives Rechtsmittelverfahren
  2. Gerichtlicher Rechtsschutz
     a) Die Verwaltungsgerichtshofbeschwerde
     b) Die Verfassungsgerichtshofbeschwerde
  3. Verfassungsgerichtliche Normenprüfung

Im Vertragsabschlussverfahren eines Doppelbesteuerungsabkommens können — wie bei allen anderen Gesetzändernden Staatsverträgen — drei Hauptphasen unterschieden werden:

1. die Phase der Vertragsverhandlungen und der Unterzeichnung (Vorverfahren);
2. die parlamentarische Genehmigung;
3. die Ratifikation (endgültiger Vertragsabschluss).

Es wird in Österreich die Auffassung vertreten, [3] dass das *gesamte* Vertragsabschlussverfahren, also einschliesslich sämtlicher Handlungen im blossen Vorverfahren, dem Bundespräsidenten obliegt. Da der Bundespräsident naturgemäss nicht in der Lage ist, alle gesetzändernden Staatsvertragsverhandlungen persönlich zu führen und alle Staatsverträgen persönlich zu unterzeichnen, muss er sich hiezu jeweils eines Bevollmächtigten bedienen.

Im Zusammenhang mit der Auswahl eines geeigneten Verhandlungsbevollmächtigten ergibt sich nach der österreichischen staatsrechtlichen Kompetenzstruktur eine weitere Frage. Da die Aushandlung eines Doppelbesteuerungsabkommens zweifellos eine "auswärtige Angelegenheit" darstellt, wäre der Verhandlungsbevollmächtigte an sich aus dem Ressort des Bundesministers für Auswärtige Angelegenheiten auszuwählen. Seit jeher wurden aber mit Rücksicht auf die besonders enge Verflechtung eines Doppelbesteuerungsabkommens mit dem innerstaatlichen Steuerrecht die Vertragsverhandlungen von einem Vertreter des Bundesministers für Finanzen geleitet. Dieses interne Kompetenzproblem ist mittlerweile auf Gesetzesebene gelöst worden (Bundesministeriengesetz 1973, BGBl. Nr. 389/1973). Nunmehr fällt wohl den allgemeinen Grundsätzen entsprechend auch die Verhandlung von Doppelbesteuerungsabkommen in den Zuständigkeitsbereich des Bundesministers für Auswärtige Angelegenheiten; doch kann dieser die Kompetenz hiefür an den Bundesminister für Finanzen übertragen. Dies ist auch tatsächlich mit Verordnung des Bundesministers für Auswärtige Angelegenheiten vom 3. Juli 1974, BGBl. Nr. 388/1974, geschehen, sodass heute Doppelbesteuerungsverhandlungen nach wie vor — nach gehöriger Bevollmächtigung durch den Bundespräsidenten — von einem Vertreter des Bundesministers für Finanzen geführt werden.

Werden mit einem anderen Staat Vereinbarungen über die blosse Durchführung eines bereits bestehenden Doppelbesteuerungsabkommens getroffen, so wird einer solchen staatsvertraglichen Vereinbarung kein gesetzändernder (oder gesetzesergänzender oder politischer) Inhalt beigemessen. Solche Durchführungsvereinbarungen werden daher als Ressortübereinkommen abgeschlossen und können demzufolge auf österreichischer Seite gemäss der vorzitierten Entschliessung des Bundespräsidenten vom Bundesminister für Finanzen (oder einem von ihm bevollmächtigten Beamten seines Ressorts) im Einvernehmen mit dem Bundesminister für Auswärtige Angelegenheiten abgeschlossen werden.

In einzelnen Fällen werden mit dem Finanzressort des anderen Staates die Modalitäten der Durchführung eines Doppelbesteuerungsabkommens im Korrespondenzweg ausgehandelt, ohne dass das Ergebnis dieser brieflichen Verhandlungen in einer formellen Staatsvertragsurkunde zusammengefasst wird. Es wird lediglich vorgesehen, dass das vereinbarte Durchführungsverfahren durch korrespondierende Durchführungsverordnungen in den beiden Staaten in Rechtswirksamkeit gesetzt wird. Auch in solchen Fällen muss wohl angenommen werden, dass die im Briefwechsel stehenden Finanzbehörden der beiden Staaten als Organe ihres Staates handeln und demzufolge nicht nur eine an die Finanzverwaltungen adressierte sondern eine die beiden Staaten als solche bindende Willenseinigung herbeigeführt haben, die als Staatsvertrag (im weiteren Sinn) anzusehen ist. Derartige im formlosen Korrespondenzverkehr erzielte Vereinbarungen erzeugen aber keine unmittelbaren Rechtswirkungen für den einzelnen Steuerpflichtigen und sind daher aus österreichischer Sicht der Gruppe der "Verwaltungsübereinkommen" zuzuordnen; gemäss der vorzitierten Entschliessung des Bundespräsidenten ist für deren Abschluss allein der Bundesminister für Finanzen — ohne Mitbefassung des Bundesministers für Auswärtige Angelegenheiten — zuständig.

2. Das Abschlussverfahren

Das Völkerrecht unterscheidet beim Abschluss von Staatsverträgen zwischen zwei Verfahren. In dem einen Fall führt bereits die Unterzeichnung des Vertrages durch das vertragschliessende Organ eines Vertragstaates die Bindung dieses Staates an den Vertragsinhalt herbei. Im anderen Fall gibt das vertragsunterzeichnende Organ seine Willenserklärung mit der Massgabe ab, dass erst eine nachfolgende Genehmigung (Ratifikation), verbunden mit dem Austausch oder der Hinterlegung der Ratifikationsurkunden die Bindung des von ihm vertretenen Staates herbeiführen soll.

Nach der österreichischen Bundesverfassung bedürfen gesetzändernde (gesetzesergänzende und politische) Staatsverträge der Parlamentarischen Genehmigung (Art. 50 Abs. 2 B-VG.) und können demnach nur im letztgenannten Verfahren (ratifikationsgebundenes Verfahren) abgeschlossen werden. Da auch Doppelbesteuerungsabkommen zu den gesetzändernden Staatsverträgen zählen, kommt sonach auch hiefür nur eine Unterzeichnung unter Ratifikationsvorbehalt in Frage.

Nach positivem Abschluss des parlamentarischen Genehmigungsverfahrens ist wie im innerstaatlichen Gesetzgebungsverfahren noch die Setzung eines Abschlussaktes durch den Bundespräsidenten erforderlich; durch seine Unterschrift billigt er das verfassungsgemässe Zustandekommen des Staatsvertrages. Dieser Rechtsakt des Bundespräsidenten bedarf sodann zu seiner Gültigkeit — ebenfalls wie im innerstaatlichen Gesetzgebungsverfahren — noch der Gegenzeichnung durch den Bundeskanzler oder den zuständigen Bundesminister.

Diese Erteilung der innerstaatlichen verfassungsgemässen Genehmigung des Abkommens muss dem anderen Vertragstaat bekanntgegeben werden. Es geschieht dies im Zuge des traditionell-feierlichen Austausches der Ratifikationsurkunden; erst damit ist der zwischenstaatliche Vertrag zustandegekommen.

Von diesem Zeitpunkt des Vertragsabschlusses ist der Zeitpunkt des Inkrafttretens, also der Zeitpunkt der erstmaligen Anwendung des Vertrages, zu underscheiden. Die in den österreichischen Doppelbesteuerungsabkommen enthaltenen Inkrafttretensklauseln sehen hiefür regelmässig eine bestimmte Frist vor, die eine vorherige

3. Z.B. *Öhlinger*, Der völkerrechtliche Vertrag im staatlichen Recht, 249.

Erfüllung der innerstaatlichen Inkrafttretensvoraussetzung — die Kundmachung im Bundesgesetzblatt — ermöglichen soll. Die österreichischen Finanzämter dürfen erst bei Veranlagungen, die sie nach der Kundmachung des Doppelbesteuerungsabkommens durchführen, die Bestimmungen des neuen Doppelbesteuerungsabkommen anwenden. Fehlt eine derartige Inkrafttretensfrist — einzelne wenige Doppelbesteuerungsabkommen sehen ein Inkrafttreten mit dem Austausch der Ratifikationsurkunden, also noch vor Vertragskundmachung im Bundesgesetzblatt, vor — so kommt es zu einer Inkrafttretensdiskrepanz zwischen Völkerrecht und innerstaatlichem Recht. Est könnte hier der eigenartige Fall eintreten, dass ein Doppelbesteuerungsabkommen, an das Österreich gemäss dem Völkerrecht bereits gebunden is, von den Finanzämtern noch nicht angewendet werden dürfte. Eine solche Diskrepanz zwischen völkerrechtlichem und innerstaatlichem Inkrafttretenszeitpunkt ist jedoch nur von theoretischer Bedeutung, da sämtliche Doppelbesteuerungsabkommen neben dem Zeitpunkt des Inkrafttretens noch einen weiteren Zeitpunkt bestimmen; nämlich den des Beginnes jenes Zeitraumes, für den erstmals das Abkommen anzuwenden ist. Dieser Wirksamkeitsbeginn, der regelmässig mit Beginn eines Steuerjahres festgelegt wird, lässt die oben aufgezeigte Problematik bedeutungslos erscheinen. Denn das Finanzamt wird mit der Durchführung der Steuerveranlagung jenes Jahres, das vom Wirksamkeitsbeginn des Abkommens erfasst ist, solange zuwarten, bis das Doppelbesteuerungsabkommen im Bundesgesetzblatt erschienen ist.

Staatsverträge, die keiner parlamentarischen Genehmigung unterliegen (nicht gesetzändernde, gesetzesergänzende, politische Verträge) können entweder im einfachen Verfahren (*uno actu*) oder im ratifikationsgebundenen Verfahren abgeschlossen werden. Soweit im Bereich des zwischenstaatlichen Steuerrechts solche staatsvertragliche Vereinbarungen abgeschlossen werden (Durchführungsvereinbarungen zu Doppelbesteuerungsabkommen), geschieht dies schon aus verwaltungsökonomischen Gründen stets im einfachen Verfahren. Es gibt indessen Fälle, in denen solche Vereinbarungen nach dem internen Recht des anderen Vertragstaates nur im ratifikationsgebundenen Verfahren zustandekommen dürfen; diesfalls würde auch auf österreichischer Seite dieses Verfahren gewählt. So wurde beispielsweise das österreichisch-deutsche Abkommen über eine gegenseitige Kraftfahrzeugsteuerbefreiung im grenzüberschreitenden Strassenverkehr,[4] das auf österreichischer Seite auf Grund einer bereits im Kraftfahrzeugsteuergesetz[5] vorgesehenen Steuerbefreiung keinen gesetzändernden Charakter hatte und sonach in der Form eines Ressortübereinkommens hätte abgeschlossen werden können, mit Rücksicht auf die Wünsche des deutschen Vertragspartners im zusammengesetzen Verfahren abgeschlossen.

3. Methode der Transformation

Staatsverträge begründen als völkerrechtliche Rechtsquellen unmittelbar nur zwischen Staaten beziehungsweise zwischen anderen Völkerrechtssubjekten Rechte und Pflichten. Demnach sind die unmittelbaren Normadressaten von Staatsverträgen in der Regel die Staaten. Die Staaten sind jedoch verpflichtet, in ihrem räumlichen Geltungsbereich die vertraglich geschaffenen Völkerrechtsnormen zu vollziehen. Das Völkerrecht überlässt es dabei dem nationalen Recht, die Methode zu bezeichnen, mit der das Völkerrecht im innerstaatlichen Recht durchgesetzt werden soll. In der Praxis bieten sich als Weg für die Eingliederung eines Staatsvertrages in die innerstaatliche Rechtsordnung zwei Methoden an. Die Transformation völkerrechtlicher Normen in Landesrecht ohne ein besonderes Verfahren (generelle Transformation) und die Umwandlung von Völkerrecht in innerstaatliches Recht durch spezielle legistische Massnahmen (spezielle Transformation).

Die österreichische Bundesverfassung hat sich so wie der Grossteil der kontinentaleuropäischen Rechtsordnungen zur Methode der generellen Transformation entschlossen. Die von Österreich abgeschlossenen Doppelbesteuerungsabkommen und die hiezu unterzeichneten Durchführungsvereinbarungen erzeugen daher als solche unmittelbare Rechtswirkungen in der innerstaatlichen Rechtsordnung, ohne dass ihre innerstaatliche Geltung von der Erlassung spezieller Rechtsvorschriften abhängt.

Die Bekennung der österreichischen Rechtsordnung zum Prinzip der generellen Transformation bringt allerdings den Nachteil mit sich, dass infolge der unveränderten und direkten Übernahme staatsvertraglicher Normen das unkontrollierte Einfliessen von der österreichischen Rechtsordnung artfremden Rechtes in Österreich nur schwer abgewendet werden kann. Durch die immer stärker werdende zwischenstaatliche Verflechtung sowie durch die oft gegebene Notwendigkeit, Vereinbarungen beizutreten oder international anerkannte Vertragsformulierungen zu übernehmen, ist es selbstverständlich unmöglich, nur Staatsverträge abzuschliessen, die der Rechtsauffassung aller Vertragstaaten gerecht werden.

Der österreichische Verfassungsgesetzgeber hat daher anlässlich einer Novellierung der Bundesverfassung im Jahr 1964 erstmals auch die Möglichkeit einer speziellen Transformation wahlweise zugelassen. Artikel 50 Absatz 2 B-VG. sieht in seiner nunmehr geänderten Fassung vor, dass der Nationalrat im Zuge des parlamentarischen Genehmigungsverfahrens eines gesetzändernden (gesetzesergänzenden oder politischen) Staatsvertrages die Erfüllung dieses Vertrages durch Erlassung von Gesetzen beschliessen kann. Bei Staatsverträgen, die keiner parlamentarischen Genehmigung bedürfen, obliegt die Anordnung der speziellen Transformation dem Bundespräsidenten oder dem sonst zum Vertragsabschluss berechtigten staatlichen Organ (Art. 65 Abs. 1 in Verbindung mit Art. 66 Abs. 2 B-VG.).

Auf dem Gebiet des Doppelbesteuerungsrechtes wurde bisher noch keine Notwendigkeit erblickt, die Erfüllung der völkerrechtlich übernommenen Verpflichtungen durch besondere Erfüllungsgesetze oder Erfüllungsverordnungen sicherzustellen; Doppelbesteuerungsabkommen und Durchführungsvereinbarungen werden daher auch nach der Verfassungsreform des Jahres 1964 ausschliesslich im Wege der generellen Transformation in die innerstaatliche Rechtsordnung aufgenommen. Dass auf ein spezielles Transformationsverfahren bei Doppelbesteuerungsabkommen verzichtet werden kann ist sicherlich zu einem erheblichen Teil darauf zurückzuführen, dass die jüngeren österreichischen Doppelbesteuerungsabkommen durchwegs auf dem Muster-

4. Der Rang der Doppelbesteuerungsabkommen in der innerstaatlichen Rechtsordnung

Die innerstaatliche Rechtsordnung Österreichs wird in der Gliederung eines Stufenbaues gesehen, an dessen Spitze die Verfassungsgesetze stehen; die zweite Stufe wird aus den einfachen Gesetzen gebildet; die dritte Stufe nehmen die Verordnungen ein. Die Rechtsnormen der jeweils höheren Stufe müssen für die Normen der niedrigeren Stufe volle Deckung bieten.

Bei der Aufnahme eines Doppelbesteuerungsabkommens in dieses Gefüge der innerstaatlichen Rechtsordnung stellt sich die Frage, in welcher Weise der zwischenstaatliche Vertrag in dieses Gliederungsschema eingepasst werden soll.

Einst war die Auffassung vertreten worden, dass Staatsverträge nur den Rang von Verfassungsrecht einnehmen könnten; diese Auffassung stützte sich auf den Grundsatz des *pacta sunt servanda*, dem im Völkerrecht allgemeine Anerkennung beschieden ist [6] Nach der heute herrschenden Auffassung kann der Staatsvertrag auf jeder der drei Stufen des österreichischen Stufenbaumodells stehen. Staatsvertragliche Bestimmungen, denen Verfassungsrang zukommen soll, müssten als "verfassungsändernd" bezeichnet sein und jene qualifizierte parlamentarische Zustimmung erhalten, die für innerstaatliche verfassungsrechtliche Bestimmungen erforderlich ist; alle anderen Staatsverträge, denen die parlamentarische Genehmigung erteilt wurde, erhalten den Rang einfacher Bundesgesetze; alle übrigen Staatsverträge stehen auf der Rangstufe von Verordnungen.

Die von Österreich abgeschlossenen Doppelbesteuerungsabkommen wurden bisher stets als nicht verfassungsändernd oder verfassungsergänzend behandelt und geniessen daher in der innerstaatlichen Rechtsordnung den Rang einfacher Bundesgesetze.

Diese Auffassung bringt aber zwei Probleme mit sich. Einerseits bedingt diese Rangzuordnung, dass das Doppelbesteuerungsabkommen mit sämtlichen Bestimmungen durch die bestehende Verfassungsrechtslage gedeckt sein muss. Fehlt es an einer solchen Deckung, so zieht dies die Gefahr einer Staatsvertragsprüfung durch den Verfassungsgerichtshof nach sich, die in der weiteren Folge zur Aufhebung des Abkommens führen könnte. Die Frage der Verfassungskonformität eines Staatsvertrages ist aber im Einzelfall oft nich sehr einfach zu beantworten. So wurde beispielsweise bereits bezweifelt ob der "Studentenartikel" (Artikel 20 des OECD Musterabkommens) mit dem Artikel 18 B-VG. in volle Übereinstimmung stehe. Nach dieser Verfassungsbestimmung darf die gesamte staatliche Verwaltung nu auf Grund der Gesetze ausgeübt werden. Dies wird unte anderem dahingehend verstanden, dass die verwendete gesetzlichen Begriffe so bestimmt sein müssen, dass si einen der Vollziehung fähigen Inhalt umschreiben Gesetze, die diesem Erfordernis nicht entsprechen, sin verfassungswidrig. Es wurde nun behauptet, dass der in "Studentenartikel" eines Doppelbesteuerungsabkom

6. Vgl. *Kunz*, Völkerrechtliche Bemerkungen zur österreichischen Bundesverfassung, S. 320.

mens verwendete Begriff "Student" viel zu unbestimmt sei; es sei z.B. nicht erkennbar, ob dieser Begriff nur Hochschulstudenten umfasse oder auch Mittelschüler einschliese.

Ein zweites Problem besteht im Bereich der Derogationswirkung. Mit der Transformation eines Doppelbesteuerungsabkommens in die innerstaatliche Rechtsordnung derogiert dieser Vertrag allen entgegenstehenden Bestimmungen des nationalen Abgabenrechts; diese Derogationswirkung beruht auf dem Grundsatz, dass das spätere einfache Bundesgesetz das frühere einfache Bundesgesetz aufhebt (*lex posterior derogat legi priori*). Diese Derogationswirkung eines Doppelbesteuerungsabkommens kann wohl als unbestritten angesehen werden. Weniger Klarheit herrscht über die Frage, ob auch einem Doppelbesteuerungsabkommen durch nachfolgende Änderungen im innerstaatlichen Abgabenrecht derogiert werden kann. Im Grunde wird diese Wirkung als möglich angesehen. [7] Damit wird aber das Problem aktuell, ob beispielsweise der 1973 neu eingeführte Einkommensteuerabzug für Nichtansässige für Vergütungen auf Grund von Arbeitergestellungsverträgen den entgegenstehenden Bestimmungen früherer Doppelbesteuerungsabkommen (Betriebstättenregel) derogieren könne.

Die österreichische Finanzverwaltung hat versucht, dieses Problem auf dem Boden der Rechtsprechung des österreichischen Verwaltungsgerichtshofes zu lösen, der in den Bestimmungen der Doppelbesteuerungsabkommen im Verhältnis zum innerstaatlichen Abgabenrecht eine *lex specialis* erblickt (bgl. Erkenntnis des Verwaltungsgerichtshofes vom 28. Juni 1963, Zl. 2312/61). In Verfolgung dieser Auffassung geht die Meinung der Finanzverwaltung dahin, dass nach dem Grundsatz *lex specialis derogat legi generali* auch eine spätere innerstaatliche Norm dem gleichrangingen Doppelbesteuerungsabkommen in seinem speziellen Anwendungsbereich nicht derogieren könne. Bezogen auf den obgenannten Fall bedeutet dies, dass Arbeitergestellungsvergütungen an ausländische Unternehmen auch nach Einführung des neuen Steuerabzuges in Anwendung des Betriebstättenartikels der bestehenden Doppelbesteuerungsabkommen steuerfrei ausbezahlt werden können.

Die zur Durchführung eines Doppelbesteuerungsabkommens abgeschlossenen Durchführungsvereinbarungen stehen als parlamentarisch nicht genehmigungspflichtige Staatsverträge auf der Rangstufe von Verordnungen.

5. Rechtsfolgen eines rechtswidrigen Vertragsabschlusses

Wird ein internationaler Vertrag abgeschlossen, der gemessen an der innerstaatlichen Rechtsordnung mit Fehlern behaftet ist, so stellt sich heute wohl kaum mehr die Frage, ob dadurch die völkerrechtliche Gültigkeit des Vertrages gefährdet sein könnte. Derartige Meinungen wurde noch von den Redaktoren der österreichischen Bundesverfassung vertreten, [8] haben sich jedoch nicht durchzusetzen vermocht. Nach Völkerrecht kann jeder Staat darauf vertrauen, dass ein Staat, der mit einem anderen Staat einen Vertrag abschliesst, seine einschlägigen Verfassungsbestimmungen ordnungsgemäss auslegt und anwendet. Ein Staat, der bona fide mit einem anderen Staat einen Vertrag abschliesst, ohne die Beschränkung der "treaty making power" des für diesen Staat auftretenden Organs zu kennen, hat Anspruch auf Schadenersatz, wenn dieser Staat die Verbindlichkeit des Vertrages nicht nachträglich anerkennt. [9]

Erfüllt vom Gedanken der Rechtssicherheit kennt die österreichische Rechtsordnung aber auch im innerstaatlichen Bereich keine ungültigen, d.h. absolut nichtigen, Akte sondern kennt nur vernichtbare Akte. Daraus folgt, dass ein rechtswidrig abgeschlossenes Doppelbesteuerungsabkommen im innerstaatlichen Bereich zunächst voll rechtsgültig ist. Es macht dabei keinen Unterschied, ob die Rechtswidrigkeit auf verfahrensrechtlichem Gebiet liegt (z.B. ein gesetzänderndes Abkommen wurde nicht der parlamentarischen Genehmigung zugeführt) oder inhaltlich verursacht ist (z.B. eine Bestimmung des Doppelbesteuerungsabkommens steht mit der Verfassungsrechtslage nicht im Einklang).

Die Bundesverfassung sieht seit der Verfassungsreform des Jahres 1964 allerdings die Möglichkeit eines Prüfungsverfahrens vor dem österreichischen Verfassungsgerichtshof vor.

Wird vom Verfassungsgerichtshof einem Aufhebungsantrag stattgegeben und die Rechtswidrigkeit des Abkommens festgestellt, so ist der Vertrag im innerstaatlichen Rechtsbereich nach der Kundmachung dieser Entscheidung unanwendbar. Der Verfassungsgerichtshof kann für den Eintritt dieser innerstaatlichen Unanwendbarkeit eine Frist setzen, die bei gesetzändernden (gesetzesergänzenden und politischen) Staatsverträgen zwei Jahre, in allen übrigen Fällen ein Jahr nicht überschreiten darf.

Diese Verfassungsrechtslage erklärt, warum die österreichischen Verhandlungsdelegationen bei Verhandlungen über Doppelbesteuerungsabkommen stets bemüht sind, Kündigungsbeschränkungen (z.B. "der Vertrag kann frühestens vor Ablauf von fünf Jahren gekündigt werden") von den Doppelbesteuerungsabkommen fernzuhalten. Denn sollte tatsächlich einmal eine Rechtswidrigkeit eines österreichischen Doppelbesteuerungsabkommens festgestellt werden, so soll der österreichischen Regierung nicht die Möglichkeit genommen werden, notfalls im Wege einer Vertragskündigung einen mit der innerstaatlichen Rechtslage übereinstimmenden völkerrechtlichen Rechtszustand herbeizuführen.

6. Doppelbesteuerungsabkommen und der bundesstaatliche Aufbau Österreichs

Österreich ist ein Bundesstaat, in dem sowohl die Gesetzgebung als auch die Verwaltung zwischen dem Bund und den Ländern aufgeteilt ist. Diese Aufteilung umfasst

---

7. Vgl. *Öhlinger*, Der völkerrechtliche Vertrag im staatlichen Recht, S. 225.
8. *Kelsen-Merkl-Fröhlich*, Die Bundesverfassung vom 1. Oktober 1920, Bemerkungen zu Art. 50.
9. Vgl. *Verdross*, Völkerrecht [4], S. 105.

auch das Abgabenwesen; hier ist allerdings zu beachten, dass der Hauptanteil des Gesamtabgabenaufkommens in Österreich (rund 95%) aus den "Bundessteuern" stammt. Die Bundessteuern werden durch die Bundesgesetzgebung geregelt und werden in der Regel auch durch Bundesbehörden (die Bundesfinanzverwaltung) erhoben. Der Abgabenertrag der wichtigsten Bundessteuern (insb. Umsatzsteuer und Einkommensteuer) muss allerdings mit den anderen Gebietskörperschaften (Bundesländer und Gemeinden) geteilt werden.

Da sich der sachliche Anwendungsbereich der Doppelbesteuerungsabkommen in der Hauptsache nur auf die Bundessteuern bezieht, ergeben sich aus dem föderalistischen Aufbau Österreichs im allgemeinen keine nennenswerten Probleme.

Nur in drei Fällen beziehen sich Doppelbesteuerungsabkommen auf die Steuern der anderen Gebietskörperschaften: im Fall der Gewerbesteuer (soweit diese für die Gemeinden erhoben wird), im Fall der Lohnsummensteuer und im Fall der Grundsteuer.

Obwohl diese drei Abgaben formal der Gruppe der "Gemeindeabgaben" zuzurechnen sind (da daran den Gemeinden die Ertragshoheit zusteht), ist — abweichend vom Regelfall — die Gesetzgebungskompetenz daran nicht den Bundesländern sondern dem Bund übertragen, sodass sich auch hier für den Abschluss von Doppelbesteuerungsabkommen keine besonderen Probleme ergeben. Hinzukommt, dass hinsichtlich der Landes- und Gemeindeabgaben durch eine Bestimmung des Finanzverfassungsgesetzes 1948, BGBl. Nr. 45, (§ 7 Abs. 4) dem Bund die Zuständigkeit eingeräumt wird, für die Verhinderung von Doppelbesteuerungen, für die Anpassung solcher Abgaben an die Bestimmungen des zwischenstaatlichen Steuerrechts und für die Verhinderung von Erschwerungen des Verkehrs oder der wirtschaftlichen Beziehungen im Verhältnis zum Ausland zu sorgen.

Die einzige praktische Auswirkung des bundesstaatlichen Aufbaues Österreichs auf den Abschluss von Doppelbesteuerungsabkommen ergibt sich aus der Verpflichtung des Bundes, den Ertrag seiner Bundessteuern mit den Bundesländern und den Gemeinden zu teilen. Wenn daher durch den Abschluss eines Doppelbesteuerungsabkommen oder durch irgend eine andere Massnahme des Bundes eine Verringerung der Ertragsanteile der Bundesländer oder der Gemeinden eintreten könnte, so muss zeitgerecht hierüber mit den betroffenen Gebietskörperschaften verhandelt werden (§ 5 des Finanzausgleichsgesetzes 1973, BGBl. Nr. 445/1972).

B. BESONDERE BEZIEHUNGEN DES DOPPELBESTEUERUNGSABKOMMENS ZUR INNERSTAATLICHEN STEUERRECHTSORDNUNG

Neben der zunächst besprochenen allgemeinen Frage der Eingliederung eines zwischenstaatlichen Vertrages in die innerstaatliche Rechtsordnung ergeben sich bei Doppelbesteuerungsabkommen noch einige andere Berührungspunkte mit der innerstaatlichen Steuerrechtsordnung, die einer besonderen Abklärung bedürfen. Von der österreichischen Anwendungspraxis der Doppelbesteuerungsabkommen her betrachtet, lassen sich diese Fragen wie folgt zusammenfassen:

1. *Können durch ein Doppelbesteuerungsabkommen Besteuerungsrechte geschaffen werden, die im innerstaatlichen Steuerrecht nicht vorgesehen sind?*
2. *Nimmt das Doppelbesteuerungsabkommen darauf Einfluss, in welcher Art und Weise die vertraglich zugewiesenen Besteuerungsrechte geltend gemacht werden?*
3. *Kann innerstaatliches Recht für die Auslegung von Doppelbesteuerungsabkommen herangezogen werden?*
4. *Können die Bestimmungen der Doppelbesteuerungsabkommen für die Auslegung von innerstaatlichem Steuerrecht herangezogen werden?*

1. Keine Schaffung neuer Steuerquellen

Es kommt vor, dass ein Doppelbesteuerungsabkommen Österreich ein Besteuerungsrecht zuteilt, dessen Erfassung in der innerstaatlichen Steuerrechtsordnung nicht vorgesehen ist. So wird beispielsweise durch Artikel 11 Abs. 2 des österreichisch-schweizerischen Doppelbesteuerungsabkommens, BGBl Nr. 63/1975, dem Quellenstaat von Zinsen ein 5%iges Besteuerungsrecht zugeteilt. Wird daher von einem in der Schweiz ansässigen Geldgeber einem österreichischen Unternehmen ein Kredit eingeräumt, so wäre Österreich gemäss dem Doppelbesteuerungsabkommen berechtigt, die gezahlten Zinsen mit einer 5%igen Steuer zu erfassen. Nach innerstaatlichem Steuerrecht (vgl. § 98 des Einkommensteuergesetzes 1972, BGBl. Nr. 440/1972) können indessen an Nichtansässige gezahlte Zinsen nur dann einer Besteuerung unterzogen werden, wenn sie im Inland hypothekarisch sichergestellt sind. Wenn dies nicht der Fall ist, so stellt sich die Frage, ob nun die österreichischen Abgabenbehörden zur Erhebung einer 5%igen Steuer berechtigt sind, wie dies im Doppelbesteuerungsabkommen — das wie oben erwähnt mit dem österreichischen Einkommensteuergesetz ranggleich ist — vorgesehen ist.

Diese Frage wurde bisher in Österreich stets verneint. Es hatte sich mit dieser Problematik bereits auch der österreichische Verfassungsgerichtshof befasst, der in seiner diesbezüglichen Entscheidung (vgl. Erkenntnis vom 11. März 1965, B 210, 211/1964) hiezu im wesentlichen ausführt, dass die primäre Aufgabe eines Doppelbesteuerungsabkommens in der Aufteilung der Besteuerungsrechte besteht und dass die Wirkung eines Doppelbesteuerungsabkommens sonach über eine blosse Einschränkung des bestehenden nationalen Steuerrechtes nicht hinausgehen kann. Der Verfassungsgerichtshof folgert daraus, dass das einem Vertragstaat zugewiesene Steuergut von diesem nur dann besteuert werden kann, wenn dies sein innerstaatliches Steuerrecht zulässt.

Diese Einstellung über die Wirkung eines Doppelbesteuerungsabkommens auf das innerstaatliche Steuerrecht, die auf eine Judikatur des ehemaligen Deutschen Reiches zurückgeht, blieb allerdings nicht völlig frei von Kritik. [10] Zweifel über ihre Rechtfertigung werden vor allem dann auftreten, wenn sie zur Ursache von Doppel*nicht*besteuerungen wird.

10. Vgl. *Kruse* in der Österreichischen Steuerzeitung 1975 S. 200, Anm. 70.

Wenn beipielsweise ein deutsches Unternehmen in Österreich aus reinen Anlagegründen Liegenschaftsbesitz erwirbt und diesen nicht für eigengewerbliche Zwecke nutzt (wenn dieser Liegenschaftsbesitz sonach kein Betriebsvermögen einer inländischen Betriebstätte des deutschen Unternehmens bildet) und wenn dieser Liegenschaftsbesitz nach 6 Jahren veräussert wird, so teilt Artikel 3 des österreichisch-deutschen Doppelbesteuerungsabkommens (BGBl. Nr. 221/1955), Österreich das Recht zu, den hiebei realisierten Veräusserungsgewinn zu besteuern. Nach innerstaatlichem Einkommensteuerrecht dürfen die von einem ausländischen Unternehmen erzielten Gewinne nur insoweit besteuert werden, als sie einer inländischen Betriebstätte des ausländischen Unternehmens zuzurechnen sind, oder soweit sie aus der Veräusserung von inländischem Grundvermögen vor Ablauf einer fünfjährigen Frist (Spekulationsfrist) stammen; einzelne andere Fälle der Besteuerung von Gewinnen ausländischer Unternehmen, die in § 98 des Einkommensteuergesetzes taxativ aufgezählt sind, sind im vorliegenden Fall ohne Bedeuting. Unter den gegebenen Umständen ist Österreich sonach auf Grund des Doppelbesteuerungsabkommens berechtigt, die aus der Veräusserung des Liegenschaftsbesitzes stammenden Gewinne zu besteuern, wird daran aber durch sein innerstaatliches Recht gehindert; umgekehrt, hätte wohl die Bundesrepublik Deutschland nach innerstaatlichem Recht eine Besteuerungsmöglichkeit (unbeschränkte Steuerpflicht), wird aber an der Ausübung dieses Rechtes durch die Bestimmungen des Doppelbesteuerungsabkommens gehindert.

2. Massgeblichkeit des innerstaatlichen Rechts bei der Geltendmachung der vertraglich zugewiesenen Besteuerungsansprüche

Gemäss dem vorbesprochenen Grundsatz, dass ein Doppelbesteuerungsabkommen innerstaatliche Besteuerungsrechte nur einschränken nicht aber schaffen kann, lässt sich die Frage, *ob* in einem internationalen Besteuerungsfall Österreich einen Besteuerungsanspruch hat, immer nur in gemeinsamer Anwendung sowohl des zwischenstaatlichen als auch des innerstaatlichen Rechtes lösen. Die weitere Frage, *wie* ein vertraglich und innerstaatlich bestehender Besteuerungsanspruch realisiert wird, ist jedoch ausschliesslich auf der Grundlage des innerstaatlichen Rechts zu entscheiden.

Dieser Grundsatz erlangte beispielsweise in folgendem Fall praktische Bedeutung: Gemäss Artikel VII des österreichisch-amerikanischen Doppelbesteuerungsabkommens (BGBl. Nr. 232/1957) dürfen aus amerikanischen Quellen stammende Zinsen in Österreich besteuert werden. Ein in Österreich ansässiger Steuerpflichtiger, der Zinsen aus amerikanischen Staats- und Kommunalobligationen bezog, bestritt die Steuerberechtigung Österreichs mit dem Hinweis, dass diese Zinsen nach amerikanischem Recht Steuerfreiheit geniessen und dass dieser Umstand gemäss dem österreichisch-amerikanischen Doppelbesteuerungsabkommen auch bei der Besteuerung in Österreich zu beachten sei. Auf der Grundlage des oberwähnten Grundsatzes vertrat die österreichische Finanzverwaltung die Auffassung, dass das Doppelbesteuerungsabkommen Österreich das Recht zur Besteuerung der amerikanischen Zinsen zugeteilt habe, dass es aber in keiner Weise darauf Einfluss nehme, in welcher Höhe der steuerpflichtige Betrag der Auslandseinkünfte von den österreichischen Steuerbehörden ermittelt wird. Die im amerikanischen Einkommensteuerrecht vorgesehenen steuerlichen Begünstigungen können daher keine Auswirkungen auf die Ermittlung des steuerpflichtigen Einkommens in Österreich haben. In diesem Besteuerungsfall war der österreichische Verwaltungsgerichtshof zur Lösung des Rechtsstreites angerufen worden, der jedoch mit seinem Erkenntnis vom 7. Mai 1966, Zl. 417/1966, die Auffassung der österreichischen Finanzverwaltung bestätigt hat.

Der hier erörterte Grundsatz erlangt auch im Zusammenhang mit der Erfassung ausländischer Einkünfte für Zwecke des Progressionsvorbehaltes einige Bedeutung. Es ist häufig zu beobachten, dass bei der Einreichung der Einkommensteuererklärungen die im Ausland erzielten und für Zwecke des Progressionsvorbehaltes in Österreich zu erfassenden Auslandseinkünfte mit jenem Betrag angegeben werden, der im ausländischen Steuerbescheid festgestellt wurde. Auch hier wird zu beachten sein, dass diese Vorgangsweise nur solange akzeptabel ist, als in den Einkommensermittlungsvorschriften der beiden Länder keine erheblichen Unterschiede bestehen. Denn der hier besprochene Grundsatz verlangt, dass Auslandseinkünfte immer nach österreichischem Recht ermittelt werden müssen.

Ein Anwendungsbereich dieses Grundsatzes liegt auch in den Fällen des Doppelwohnsitzes. Ein Steuerpflichtiger mit Wohnsitz in der BRD verfügt in Österreich über einen Zweitwohnsitz (der Mittelpunkt seiner Lebensinteressen liegt in der BRD); seine einzigen Einkünfte aus österreichischen Quellen bestehen aus Einkünften aus der Vermietung von inländischen Wohnungen. Da der Steuerpflichtige in Österreich einen steuerlichen Wohnsitz hat, ist er nach innerstaatlichem Recht hier unbeschränkt steuerpflichtig; dies hat zur Folge, dass auch seine aus der BRD sowie aus anderen Staaten stammenden Einkünfte der österreichischen Einkommensteuer unterliegen. Diese unbeschränkte Steuerpflicht verschafft dem Steuerpflichtigen hingegen auch gewisse steuerliche Vorteile (z.B. die Abzugsfähigkeit von Lebensversicherungsprämien, die Abzugsfähigkeit von bestimmten aussergewöhnlichen Belastungen wie Krankenhauskosten, die Anwendung bestimmter Steuerabsetzbeträge), die für die nur mit bestimmten Inlandseinkünften besteuerten Nichtansässigen (beschränkt Steuerpflichtigen) nicht gewährt werden. Das österreichisch-deutsche Doppelbesteuerungsabkommen erteilt Österreich die Berechtigung, die inländischen Mieteinkünfte zu besteuern; es schliesst Österreich aber davon aus, auch die deutschen und die anderen ausländischen Einkünfte steuerlich zu erfassen. Es könnte nun sehr wohl die Meinung vertreten werden, dass durch eine zwischenstaatliche Reduzierung der Steuerpflicht auf jenes Mass der Nichtansässigen auch die steuerlichen Vorteile auf jenes Mass verringert werden müssten. Die Anwendung des hier besprochenen Grundsatzes führt indessen zum gegenteiligen Ergebnis, dass nämlich das Doppelbesteuerungsabkommen in keiner Weise bei der Lösung der Frage eingreift, *wie* die inländischen Mieteinkünfte in Österreich zu besteuern sind; diese Frage kann einzig und allein nur durch Anwendung des innerstaatlichen Rechts gelöst werden. Und da das innerstaatliche Einkommensteuerrecht die mit der unbeschränkten Steuerpflicht verknüpften steuerlichen Vorteile unabhängig davon zugesteht, ob diese unbeschränkte Steuerpflicht durch einen Hauptwohnsitz oder durch einen Zweitwohnsitz entstanden ist, besteht keine rechtliche Möglichkeit, die genannten steuerlichen Vorteile dem Steuerpflichtigen vorzuenthalten.

Ergänzend wäre aber zu bemerken, dass Österreich auf dem innerstaatlichen Gesetzgebungsweg bereits einen ersten Schritt zur Beseitigung dieses unerfreulichen Zustandes unternommen hat: auf dem Gebiet der Ver-

mögensbesteuerung wurden erst jüngst die ebenfalls mit der unbeschränkten Steuerpflicht verknüpften Vermögensteuerfreibeträge in allen Fällen gestrichen, in denen ein in Österreich wohnhafter Steuerpflichtiger auf Grund eines Doppelbesteuerungsabkommens als in einem anderen Staat ansässig behandelt wird (vgl. Vermögensteuergesetznovelle 1976, BGBl. Nr. 665/1976, Z. 1).

3. Massgeblichkeit des innerstaatlichen Rechts für die Auslegung von Doppelbesteuerungsabkommen

Dieser Grundsatz wird von der österreichischen Finanzverwaltung aus Artikel 3 Abs. 2 des OECD-Musterabkommens zur Vermeidung der Doppelbesteuerung des Einkommens und des Vermögens abgeleitet. Diese Bestimmung lautet:

"Bei Anwendung des Abkommens durch einen Vertragstaat hat, wenn der Zusammenhang nichts anderes erfordert, jeder nicht anders definierte Ausdruck die Bedeutung, die ihm nach dem Recht dieses Staates über die Steuern zukommt, welche Gegenstand des Abkommens sind."

Die Bedeutung dieses Grundsatzes erweist sich in folgendem Fall: Ein schweizerisches Unternehmen errichtet in Österreich ein Gebäude, das in der Folge an ein deutsches Unternehmen vermietet wird. Das deutsche Unternehmen vermietet die Räumlichkeiten an österreichische Unternehmen weiter. Eine inländische Betriebstätte wird dadurch für das deutsche Unternehmen in Österreich nicht begründet. Dass die vom deutschen Unternehmen an das schweizerische Unternehmen gezahlten Mietentgelte gemäss der Zuteilungsregel für Einkünfte aus unbeweglichem Vermögen in Österreich besteuert werden dürfen, unterliegt keinem Zweifel. Schwieriger ist aber die Frage zu beantworten, ob auch die vom deutschen Unternehmen in Österreich vereinnahmten Mietentgelte in Österreich steuerlich erfasst werden dürfen. Durch Artikel 3 des österreichisch-deutschen Doppelbesteuerungsabkommens werden die Einkünfte aus in Österreich gelegenem unbeweglichem Vermögen der österreichischen Besteuerung überlassen. Es ist daher zu entscheiden, ob ein Untermietvertrag als Vermietung eines — als bewegliches Wirtschaftsgut anzusehenden — Bestandrechtes gilt oder steuerlich als Mietvertrag über unbewegliches Vermögen anzusehen ist. Das österreichisch-deutsche Doppelbesteuerungsabkommen enthält hiezu keine besonderen Bestimmungen. Österreich wird bei der Beurteilung dieser Frage von seinem innerstaatlichen Recht auszugehen haben, das diese Frage im letztgenannten Sinn entscheidet. [11]

Es versteht sich von selbst, dass dieser Auslegungsgrundsatz dort eine Schranke finden muss, wo das Abkommen selbst ausdrücklich etwas anderes vorsieht. Es wäre daher unzulässig, die "Dividendenregel" eines Doppelbesteuerungsabkommens in Österreich nicht auf die Gewinnausschüttungen von Gesellschaften mit beschränkter Haftung anzuwenden, weil nach österreichischer Rechtsprache nur die Gewinnausschüttungen von Aktiengesellschaften als "Dividenden" bezeichnet werden. Denn in diesem Fall bestimmt das Doppelbesteuerungsabkommen selbst, dass der Dividendenbegriff auf die Gewinnausschüttungen aller Kapitalgesellschaften Anwendung findet.

4. Unmassgeblichkeit des zwischenstaatlichen Steuerrechts für die Auslegung des innerstaatlichen Steuerrechts

Aus dem vorbesprochenen Grundsatz, dass innerstaatliches Recht für die Auslegung des zwischenstaatlichen Steuerrechts heranzuziehen ist, kann nicht geschlossen werden, dass auch eine Beeinflussung in umgekehrter Richtung möglich wäre.

Wenn daher ein schweizerisches Unternehmen in Österreich ein blosses Informationsbüro unterhält, das nach den Bestimmungen des österreichisch-schweizerischen Doppelbesteuerungsabkommens (Art. 5 lit. e) nicht als Betriebstätte zu qualifizieren ist, so liegt die einzige Auswirkung dieser Begriffsdefinition im Bereich des zwischenstaatlichen Steuerrechts, das Österreich unter Heranziehung dieser Definition die Einkommens- und Vermögensbesteuerungsrechte an dieser inländischen Einrichtung des schweizerischen Unternehmens entzieht. Es wäre unrichtig zu argumentieren, dass dieser Informationsstelle auch im Bereich der Umsatzsteuer keine Betriebstätteneigenschaft zukomme. § 12 Umsatzsteuergesetz, BGBl. Nr. 223/1972, knüpft die Berechtigung eines ausländischen Unternehmens zum Vorsteuerabzug unter anderem an die Voraussetzung, dass das ausländische Unternehmen in Österreich über eine Betriebstätte verfügt. Bei der Auslegung dieses im Umsatzsteuerrecht verwendeten Betriebstättenbegriffes muss auf innerstaatliches Recht (vgl. § 29 BAO.) zurückgegriffen werden; nach innerstaatlichem Recht bilden zweifellos auch derartige Informationsstellen eine Betriebstätte. Es wäre daher unzulässig, dem schweizerischen Unternehmen unter Hinweis auf die Begriffsbestimmungen des österreichisch-schweizerischen Doppelbesteuerungsabkommens den Vorsteuerabzug zu versagen.

Aber auch für die Frage, ob die Einkommenssteuerpflicht der in der Informationsstelle tätigen Dienstnehmer im Veranlagungsverfahren oder im Lohnsteuerabzugsverfahren zu erfolgen hat, bleibt die Regelung des Doppelbesteuerungsabkommens ohne Auswirkung. Wohl sieht das inländische Einkommensteuergesetz die Möglichkeit eines Lohnsteuerabzuges nur in jenen Fällen vor, in denen der Arbeitgeber in Österreich über eine Betriebstätte (§ 81) verfügt; die Beurteilung ob die Informationsstelle eine Betriebstätte für Zwecke des Lohnsteuerabzugsverfahrens darstellt, ist aber wieder nicht nach den Bestimmungen des Doppelbesteuerungsabkommens sondern ausschliesslich nach den Bestimmungen des innerstaatlichen Rechts vorzunehmen.

C. ZUSAMMENFASSUNG

Ohne hier eine Aussage über das Verhältnis von Völkerrecht zum innerstaatlichen Recht im Sinne einer monistischen oder dualistischen Theorie abgeben zu wollen, muss doch festgestellt werden, dass es sich hiebei um zwei verschiedene Normenbereiche handelt, die allerdings zahlreiche Berührungspunkte haben. Über dies

11. Vgl. *Schubert-Pokorny-Schuch*, Einkommensteuerhandbuch, Anm. 22 zu § 98 und Erkenntnis des Verwaltungsgerichtshofes vom 16. März 1971, Zl. 1357/1970.

Berührungspunkte am Beispiel Österreichs zu sprechen, war das Ziel der vorliegenden Arbeit.

Doppelbesteuerungsabkommen sind primär ein Bestandteil der Völkerrechtsordnung. Einer der wichtigsten Bezugspunkte zur innerstaatlichen Rechtsordnung ergibt sich aus der Tatsache, dass der zwischenstaatlichen Vereinbarung im Bereich des innerstaatlichen Rechts Geltung verschafft werden muss; dies führt zum Problem der Eingliederung eines Doppelbesteuerungsabkommens in die innerstaatliche Rechtsordnung. In Österreich geschieht diese Eingliederung im Falle von Doppelbesteuerungsabkommen im Wege der generellen Transformation; die spezielle Transformationsmethode wäre wahlweise möglich, doch wurde davon im Bereich des Doppelbesteuerungsvertragsrechtes noch kein Gebrauch gemacht. Eine ordnungsgemässe Transformation erfordert die Beachtung mehrerer verfassungsmässiger Voraussetzungen: Doppelbesteuerungsabkommen dürfen nur vom Bundespräsidenten abgeschlossen werden; sie bedürfen als gesetzändernde Staatsverträge der parlamentarischen Genehmigung und dürfen daher nicht *una actu* sondern nur unter Ratifikationsvorbehalt unterzeichnet werden. Doppelbesteuerungsabkommen nehmen im Stufenbau der österreichischen Rechtsordnung den Rang einfacher Bundesgesetze ein und müssen daher inhaltlich verfassungskonform sein. Rechtswidrigkeiten beim Abschluss oder im Inhalt eines Doppelbesteuerungsabkommens führen nicht zu dessen Nichtigkeit; rechtswidrige Doppelbesteuerungsabkommen können aber vom Verfassungsgerichtshof (mit Wirkung *ex nunc*) aufgehoben werden; die Aufhebung beziehlt sich aber nur auf den innerstaatlichen Rechtsbereich und berührt in keiner Weise die völkerrechtliche Verbindlichkeit des Vertrages.

Einzelne weitere Berührungspunkte, die in der Praxis der Anwendung der Doppelbesteuerungsabkommen einer Lösung zugeführt werden mussten, können wie folgt zusammengefasst werden: das Doppelbesteuerungsabkommen kann keine Besteuerungsrechte schaffen, die im innerstaatlichen Recht nich vorgesehen sind; die Art und Weise, wie die vertraglich zugeteilten Besteuerungsrechte geltend gemacht werden, richtet sich ausschliesslich nach innerstaatlichem Recht; Doppelbesteuerungsabkommen sind unter Heranziehung des innerstaatlichen Rechts auszulegen; für die Auslegung der innerstaatlichen Abgabenvorschriften kann indessen nicht auf das Doppelbesteuerungsabkommen zurückgegriffen werden.

OVERVIEW OF THE MAIN FEDERAL TAXES IN AUSTRIA

					Rates
FEDERAL TAXES	DIRECT TAXES	INCOME TAX	– Individual income tax		23 - 62 percent
			– Withholding tax on wages		
			– Corporate income tax		30 - 55 percent (reduced by one-half in the case of distributed profits)
			– Withholding tax on capital income (dividends, certain types of interest)		20 percent
		BUSINESS TAX	– On business income		5 percent (multiplicator: 3.31 - 3.47)
			– On business capital		0.1 percent (multiplicator: 3.31 - 3.47)
			– On payroll		0.2 percent (multiplicator: approx. 10)
		NET WORTH TAX			1 percent
			– Substitute inheritance tax		0.5 percent
	INDIRECT TAXES	TURNOVER TAX (V.A.T.)			Normal rate: 18 percent Reduced rate: 8 percent
		TRANSFER TAXES	– Real property acquisition tax		2 - 8 percent
			– Motor vehicles tax		
			– Inheritance and gift tax		2 - 60 percent
			– Capital transfer taxes:		
				– Capital tax	2 percent
				– Securities tax	0.5 - 2 percent
				– Stock exchange turnover tax	0.02 - 0.5 percent
		EXCISE TAXES			
		CUSTOMS DUTIES			

II. Die Durchsetzung der Abgabenansprüche und der Rechtsschutz im österreichischen Abgabenverfahren

(unter besonderer Berücksichtigung der sich aus zwischenstaatlichen Regelungen ergebenden Konfliktsmöglichkeiten)

A. ABGABENVERWALTUNGSORGANISATION

Ein leitender und beherrschender Grundsatz der österreichischen Verfassung ist das bundesstaatliche Prinzip. [12] In seiner Verwirklichung finden sich Gesetzgebung und Vollziehung auf Bund und Länder verteilt (die Gerichtsbarkeit ist allerdings allein dem Bund vorbehalten) und die Länder sind berechtigt, an der Bundesgesetzgebung mitzuwirken (suspensives Einspruchsrecht in der zweiten, der Länder-Kammer). Die Aufgaben der Verwaltung des Bundes werden nur zum Teil durch eigene Bundesbehörden — in unmittelbarer Bundesverwaltung — besorgt (z.B. Abgaben-, Monopol-, Patent-, Post-, Militär-Wesen). Die meisten Verwaltungsangelegenheiten des Bundes werden in mittelbarer Bundesverwaltung, durch die Behörden der Länder (Landeshauptmann und die ihm unterstellten Landesbehörden, Bezirksverwaltungsbehörden) besorgt; diese sind in diesem Bereich ihrer Tätigkeit funktionell Bundesbehörden und daher insoweit den Organen (Zentralstellen) des Bundes gegenüber weisungsgebunden.

Auf unterster territorialer Organisationsstufe stehen die Gemeinden; diese sind (ebenso wie Bund und Länder) Gebietskörperschaften mit dem Recht auf Selbstverwaltung und zugleich Verwaltungssprengel. Ähnlich wie den Ländern verfassungsrechtlich Aufgaben zugewiesen werden, die sie in Unabhängigkeit von Organen des Bundes besorgen, werden auch den Gemeinden Verwaltungsagenden übertragen, die sie frei von Weisungen des Bundes und des Landes zu erfüllen haben (autonomer, eigener Wirkungsbereich). Ebenso aber wie den Ländern und ihren Behörden ein Verwaltungshandeln für den Bund aufgetragen werden kann (mittelbare Bundesverwaltung), kann auch den Gemeinden die Besorgung von staatlichen Aufgaben überantwortet werden, die sie nicht in ihrer Stellung als Selbstverwaltungskörper, sondern in ihrer Eigenschaft als staatlicher Verwaltungssprengel (übertragener Wirkungsbereich) zu erfüllen haben.

Es zeigt sich sohin, dass in Österreich die Gesetzgebung allein vom Bund und den Ländern, die Verwaltung hingegen vom Bund, den Ländern und auch von den Gemeinden zu besorgen ist, wobei die Länder und Gemeinden in bestimmten Angelegenheiten hingegen als Auftragsverwaltung, nämlich im übertragenen Wirkungsbereich und damit weisungsgebunden (funktionell als Behörden der übergeordneten Gebietskörperschaften) ihre Tätigkeiten entfalten.

Wenn auch in vielen Angelegenheiten Verwaltungsaufgaben der höherrangigen Gebietskörperschaften auf Behörden der untergeordneten Gebietskörperschaften übertragen werden können (eine gegenläufige Übertragung ist mit Zustimmung der belasteten Gebietskörperschaft möglich, jedoch selten) so zeigt sich doch — abgesehen von der Verleihung der Gesetzgebungsbefugnisse — auch von der Organisation der behördlichen Tätigkeit gesehen, das föderalistische Prinzip verwirklicht. Dieser Befund lässt nun erwarten, dass es dem Bund, dan Ländern und den Gemeinden, also den Gebietskörperschaften für sich obliegt, für die Deckung der mit ihren Aufgaben verbundenen Kosten insbesondere durch Erhebung eigener Abgaben zu sorgen. Diese systemgerechte idealtypische Lösung (Trennsystem) ist verfassungsrechtlich vorgezeichnet, [13] sie findet sich jedoch nicht verwirklicht. Der Grund hiefür ist historisch zu erklären: Lediglich der Bund verfügt über eine bestens eingespielte und schlagkräftige Abgaben-Verwaltungsbehördenorganisation mist einem fachlich auf hoher Stufe stehenden Beamtenkorps. Es erschiene nun unzweckmässig neben einer traditionell gut funktionierenden Verwaltung eine Parellelorganisationen der Länder und Gemeinden aufzubauen. Aus diesem Grund wurde die Erhebung der gewichtigeren und bedeutenderen Abgaben den Abgabenbehörden des Bundes zugewiesen. [14] Ungeachtet der potentiellen Abgabenhoheit der Länder und der Gemeinden verwalten diese ihren beschränkten Erhebungsmöglichkeiten entsprechend nur kleinere weniger ergiebige Abgaben. Das Gesamtabgabenaufkommen Österreichs wird im Ausmass von etwa 95% von den Abgabenbehörden des Bundes erzielt. Dem bundesstaatlichen Prinzip und der verfassungsgesetzlichen Bestandsgarantie aller Gebietskörperschaften [15] Rechnung tragend erfolgt die materielle Absicherung der Länder und Gemeinden durch Einräumung angemessener Beteiligungen am Erfolg des Abgabenaufkommens des Bundes (also Verbundsystem) sowie durch besondere Finanzzuweisungen und Zuschüsse.

Wenn es also um die klassischen Steuern vom Einkommen, Ertrag, Umsatz und Vermögen sowie um die üblichen Verkehrsteuern wie auch um die Verbrauchsteuern, Monopole und Zölle geht, werden nur die Abgabenbehörden des Bundes tätig.

12. Art. 2 B-VG.; bzgl. Begriffsdarstellung und weiterführender Literaturhinweise s. *Ermacora*, Österreichische Verfassungslehre Wien 1970, 251; *Walter*, Österreichisches Bundesverfassungsrecht, Wien 1972, 107; *Walter-Mayer*, Grundriss des österreichischen Bundesverfassungsrechts, Wien 1976, 45.

13. § 2 Finanz-Verfassungsgesetz (F-VG.) 1948, BGBl. Nr. 45/1948.

14. Gem. § 3 F-VG. obliegt die Verteilung der Besteuerungsrechte und der Abgabenerträge der Bundesgesetzgebung (es ergehen sogenannte Finanzausgleichsgesetze, zuletzt BGBl. Nr. 445/1973); s. *Melichar*, Die österreichische Finanzverfassung, und *Wissgott*, Der Finanzausgleich in Österreich, in Handbuch der österreichischen Finanzwirtschaft hrsg. v. Andreae, Innsbruck 1970, 13 bzw. 59.

15. § 4 F-VG. 1948.

Der Aufbau und die organisatorische Gestaltung der Abgabenverwaltung des Bundes sind im BG. v. 13.12. 1974 BGBl. Nr 18/1975 (Abgabenverwaltungsorganisationsgesetz — AVOG) in Verbindung mit dem Bundesministeriengesetz 1973 BGBl. Nr. 389/1973 umschrieben. Demnach nehmen von ausdrücklichen gesetzlichen Ausnahmen abgesehen die zur Realisierung der Abgabenansprüche erforderlichen Amtshandlungen durchwegs die *Finanzämter* wahr, das sich die im wesentlichen auf Bezirksebene errichteten Behörden erster Instanz. Die Aufgaben des Zollwesens nehmen in unterster Stufe *Zollämter* wahr.

Als Behörden der Mittelinstanz sind (im wesentlichen auf Landesebene) die *Finanzlandesdirektionen* eingerichtet; sie sind weisungsberechtigte Oberbehörden gegenüber den Finanz- und Zollämtern. Die Finanzlandesdirektionen sind auch Rechtsmittelbehörden. Funktionell erstinstanzliche Entscheidungen obliegen diesen Behörden nur in Ausnahmsfällen (insbesonders etwa in Verbrauchsteuer- und Zollangelegenheiten).

Die Besorgung der Geschäfte der obersten Abgabenverwaltung des Bundes obliegt dem *Bundesministerium für Finanzen* (BMF.). Auf abgabenrechtlichem Gebiet hat es insbesondere die Angelegenheiten der Finanzverfassung, des Finanzausgleiches, des Bundeshaushaltes und der Legislative zu betreuen, also auch für die Erstellung von Gesetzesentwürfen zu diesen Materien zu sorgen. Das BMF. hat nur in den seltensten (gesetzlich ausdrücklich vorgesehenen) Fällen mit Bescheid zu erledigende verwaltungsbehördliche Aufgaben zu erfüllen; ihm kommt vornehmlich Organisations- und Weisungsgewalt zu.

Funktionell erstinstanzlich entscheidet das BMF. in hier interessierenden Angelegenheiten des zwischenstaatlichen Steuerrechtes etwa über Antrag mit einer (individuellen) Anordnung bestimmte Steuergegenstände ganz oder teilweise aus der Abgabepflicht auszuscheiden oder ausländische, auf solche Gegenstände entfallende Abgaben ganz oder teilweise auf inländische Abgaben anzurechnen (§ 48 BAO) unter der Voraussetzung, dass Doppelbesteuerungsabkommen nicht bestehen oder diese der Doppelbesteuerung im Einzelfall nicht wirksam zu begegnen vermögen. Auch für die Genehmigung der Anrechnung ausländischer auf im Ausland gelegene Sachen entfallende Erbschaftsteuern des Belegenheitsstaates auf die österreichische Erbschafts- und Schenkungsteuer [16] ist das BMF. zuständig. Schliesslich werden auch "Zuzugsbegünstigungen" vom BMF. bescheidmässig auf den Gebieten der Einkommen- und Vermögensteuer gewährt, [17] und zwar wenn Personen ihren Wohnsitz in das Inland verlegen ohne hier erwerbstätig zu werden (diese Begünstigung läuft auf eine Beschränkung der unbeschränkten Steuerpflicht hinaus, die durch die Wohnsitznahme in Österreich begründet wird). Dem BMF. als oberster Finanzbehörde obliegt auch die Einleitung und Abführung eines Verständigungsverfahrens mit Vertragsstaaten (vgl. Art. 25 des OECD-Musterabkommens und Verträge).

Da der abgabenbehördliche Instanzenzug bei den Finanzlandesdirektionen endet, kommt dem BMF. nicht die Funktion einer Rechtsmittelbehörde zu. Ein administrativer Instanzenzug besteht also nur, wenn Finanzoder Zollämter entscheiden; er reicht nur bis zur Finanzlandesdirektion. Entscheidet diese — sei es als Rechtsmittelbehörde oder kraft eigener Zuständigkeit funktionell erstinstanzlich — ist ein verwaltungsbehördliches Rechtsmittelverfahren ebensowenig vorgesehen, wie wenn das BMF. eine Entscheidung trifft.

Da die in Form von Abkommen zur Vermeidung der Doppelbesteuerung in Erscheinung tretenden Vorschriften nach ihrer parlamentarischen Behandlung innerstaatliches Recht bilden, macht es für die Behördenzuständigkeit keinen Unterschied, ob sie autonomes Steuerrecht oder auf Verträge zurückzuführende Vorschriften anzuwenden haben. Die vorstehend skizzierten Zuständigkeitsregelungen gelten daher ohne Rücksicht auf die Quellen des materiellen Steuerrechtes. Für Besteuerungsfälle mit über die Grenzen Österreichs hinausgehenden Wirkungen, also insbesondere für Doppelbesteuerungsfälle oder für Angelegenheiten, in denen zwischenstaatliches (bilaterales oder multilaterales Vertragsrecht) zur Anwendung kommt, sind weder besondere Behörden noch generell besondere Zuständigkeiten vorgesehen.

B. VERWALTUNGSBEHÖRDLICHE DURCHSETZUNG ABGABENRECHTLICHER ANSPRÜCHE, VERFAHRENSGRUNDSÄTZE

Im österreichischen Abgabenrecht entsteht (ebenso wie beispielsweise nach deutschem Recht) der Abgabenanspruch als Forderung aus dem öffentlich-rechtlichen Abgabenschuldverhältnis (ebenso korrespondierend die Abgabenschuld des Abgabepflichtigen) mit Verwirklichung des Abgabentatbestandes. Wenn also im Seinsbereich eine konkrete Handlung gesetzt wird, die dem abstrakten Steuertatbestand entspricht, ist die normativ vorgesehene mit dem Steuertatbestand verbundene Steuerrechtsfolge verwirklicht. [18] Damit ist nicht nur dem Gebot der Tatbestandsmässigkeit der Besteuerung Rechnung getragen und der Grundsatz der Gesetzmässigkeit der Verwaltung [19] im Steuerrecht ausdrücklich festgehalten, sondern gleichzeitig zum Ausdruck gebracht, dass das öffentlichrechtliche Schuldverhältnis mit der vermögensrechtlichen Wirkung der Entstehung einer Forderung auf der Seite des Abgabengläubigers und einer entsprechenden Verpflichtung des Abgabenschuldners nicht erst mit der behördlichen Festsetzung, sondern allein und schon aus einem einer abstrakt generellen Umschreibung im Steuertatbestand entsprechenden Verhalten entsteht. Die abgabenbehördlichen Schritte, die die bescheidmässige Festsetzung [20] zum Ziele haben, münden aus dieser Sicht gesehen in einen

16. § 6 Abs. 3 Erbschafts- und SchenkungssteuerG. 1955 BGBl. Nr. 141/1955.
17. § 103 EinkommensteuerG. 1972 und § 10 VermögensteuerG. 1954.
18. § 4 Abs. 1 BAO; *Stoll*, Steuerschuldverhältnis, Wien 1972, 13.
19. Art. 18 B-VG, § 5 F-VG.
20. Die meisten und zwar die Hauptsteuern werden bescheidmässig festgesetzt. Daneben gibt es auch Abzugs- und Selbstberechnungsabgaben, bei denen die Abgabenbehörden nur im Falle von Berechnungs- und Entrichtungsmängeln einschreiten.

Verwaltungsakt deklarativer Natur, denn nicht der Abgabenbescheid begründet das Steuerschuldverhältnis, sondern er ist das Instrument der Realisierung der bereits entstandenen Abgabenschuld und damit die den Grundsätzen eines rechtsstaatlichen Verfahrens Rechnungtragende Bedingung für die Durchsetzung der Leistungsverpflichtung (Leistungsgebot, Titelbescheid für die Abgabenexekution).

Der öffentlich-rechtlichen Natur des Abgabenanspruches und dem Gebot der Tatbestandsmässigkeit der Besteuerung sowie dem in der österreichischen Verfassung verankerten Gebot der Abführung eines rechtsstaatlichen Grundsätzen entsprechenden Verwaltungsverfahrens muss das Abgabenverfahren [21] diesen Grundprinzipien Rechnung tragend abgewickelt werden. Folgende tragende Verfahrensgrundsätze sollen im folgenden eine skizzenhafte Andeutung erfahren:

Im Vordergrund steht der *Grundsatz der Amtswegigkeit*, die Offizialmaxime; dies bedeutet, dass das Abgabenverfahren — von auf dem Antragsprinzip beruhenden Verfahrensarten (zB bestimmte Zollangelegenheiten) abgesehen — von Amtswegen einzuleiten, abzuwickeln und zu beenden ist, dass es also Aufgabe der Behörde ist, die für die Besteuerung entscheidenden Sachverhalte festzustellen, wobei für die Partei eine korrespondierende Mitwirkungspflicht besteht; sie ist unter Strafsanktion verhalten, ihre für die Besteuerung relevanten Verhältnisse uneingeschränkt und wahrheitsgemäss offenzulegen. Zufolge der gesetzlichen Verankerung des Amtswegigkeits- und auch des Untersuchungsgrundsatzes ist also der Behörde die gesamte Sachverhaltsermittlung (Sachverhaltsbehauptung und Beweisführung) zur Pflicht gemacht, was bedeutet, dass die Abgabenbehörde nicht nur das Vorliegen von anspruchsbegründenden sondern auch anspruchsverneinende oder anspruchsmindernde Tatumständen festzustellen und von Amtswegen zu berücksichtigen hat. Da nach allgemeinen Prozessgrundsätzen Unmögliches, Unzumutbares und Unnötiges nicht verlangt werden kann, findet die Verpflichtung der Abgabenbehörde, einen Sachverhalt von Amtswegen zu ermitteln, der nur im Zusammenwirken mit der Partei geklärt werden kann, Grenzen, wenn die Partei zur Mitwirkung der Wahrheitsfindung nicht bereit ist. Einen nach dem Gesamtbild aussergewöhnlichen und daher von vornherein nicht zu vermutenden Sachverhalt wird jedenfalls die Partei nachzuweisen haben. Insbesondere wenn es sich um Sachverhaltselemente handelt, die im Ausland ihre Wurzeln haben oder dort verwirklicht wurden, ist die Mitwirkungspflicht der Partei in dem Masse höher als die Pflicht der Behörde zur amtswegigen Erforschung des Sachverhaltes wegen Fehlens der ihr sonst zu Gebote stehenden Ermittlungsmöglichkeiten geringer wird. Wenn also der Abgabepflichtige seine Mitwirkungspflicht nicht erfüllt, kann die Abgabenbehörde auf die ihr zur Verfügung stehenden Unterlagen und naheliegenden Anhaltspunkte greifen, ohne dass sie verpflichtet wäre, auf alle erdenklichen Möglichkeiten der Sachverhaltsgestaltungen bedacht zu nehmen und die nur irgendwie möglicherweise in Betracht kommenden Tatumstände zu beweisen.

Damit ist der *Grundsatz der freien Beweiswürdigung* berührt, dessen Wesen wie in jedem modernen Verfahrensbereich darin zu sehen ist, dass die Behörde unter sorgfältiger Berücksichtigung der Ergebnisse des Ermittlungsverfahrens nach freier Überzeugung zu beurteilen hat, ob eine Tatsache als erwiesen anzunehmen ist oder nicht. Freie Beweiswürdigung verschafft nicht Freiheit von den Regeln der Erkenntnisgewinnung. Die Schlussfolgerungen, die von gegebenen zweifelsfrei anzunehmenden Tatsachen auf das Bestehen oder Nichtbestehen eines Sachverhaltes gezogen werden, müssen den Denkgesetzen entsprechen. Es ist eine logische gedankliche Verknüpfung von einer Erkenntnisstufe zur anderen erforderlich, die angestellten Erwägungen und Folgerungen (Denkvorgänge) müssen schlüssig sein, sie sind den Parteien gegenüber offenzulegen und damit der Nachprüfung zugänglich zu machen, wie überhaupt vor Abschluss jedes Ermittlungsverfahrens den Parteien Gelegenheit zu geben is, zur Wahrung ihrer Interessen zu den Sachverhaltsannahmen der Behörde Stellung zu nehmen, um durch Gegenvorstellungen, Einwendungen, begründete Hinweise usw zur Wahrheitsfindung beizutragen (*Grundsatz der Gewährung des Parteigehörs*). Dem Interesse der rechtzeitigen Geltendmachung und Verteidigung berechtigter Interessen wie aber auch dem Interesse der richtigen Ermittlung des tatsächlichen Sachverhaltes dient die *Akteneinsicht*, die den Parteien (mit Rechtsanpruch) insoweit gewährt wird, als hiedurch dritte Personen nicht Schaden erleiden (interne Behördenschriftstücke sind ebenfalls ausgenommen).

Dem Verfahrensziel entsprechend, das auf die Erfassung des öffentlich-rechtlichen Schuldverhältnisses und seine bescheidmässige Feststellung gerichtet ist, sind die den Anspruch berührenden Sachverhalte in ihren tatsächlichen Dimensionen auszuforschen. Nicht die von den Parteien herangetragenen, allenfalls einvernehmlich ausser Streit gestellte Sachverhaltsannahmen sind entscheidend (konventionelle Wahrheit), sondern allein die *materielle Wahrheit* ist auszuforschen und der Besteuerung zugrundezulegen.

Im Abgabenverfahren herrscht weitgehend das *Prinzip der Schriftlichkeit*. Anbringen der Parteien und Behördenerledigungen sind grundsätzlich schriftlich auszufertigen, mündliche Parteianträge aber auch mündliche Erledigungen sind vorgesehen, sie bilden aber die Ausnahme. Das Abgabenverfahren ist *nicht öffentlich*. Die der Behörde bekanntgegebenen oder von ihr ermittelten Verhältnisse unterliegen besonders strengen (strafrechtlich sanktionierten) *Geheimhaltungsverpflichtungen*.

Soweit die materiellen Abgabengesetze nicht ausdrücklich besondere Fristen normieren, mit deren Verstreichen Ansprüche erlöschen, hat die Abgabenbehörde bis zur Rechtskraft (also auch noch im Rechtsmittelverfahren) auf Parteienanträge, Vorbringen tatsächlicher und rechtlicher Art usw einzugehen, dies selbst dann, wenn diese Vorstellungen verschuldetermassen bis dahin nicht erhoben wurden (*kein Novenverbot*, keine Kontumazierung; sohin kein Rechtsverlust etwa bei Versäumung der Erklärungsfristen u.ä.).

Die Parteien sind berechtigt, nicht hingegen in der Art eines Anwaltszwanges verpflichtet, sich im Abgabenverfahren vertreten zu lassen (*Vertretungsbefugnis*). Zur geschäftsmässigen Vertretung vor österreichischen Abgabenbehörden sind aber nu

21. Zum österreichischen Abgabenverfahren s. insbes. *Reeger/Stoll*, Kommentar zur Bundesabgabenordnung, Wien 1966 und Die Bundesabgabenordnung [5] (Handbuch) Wien 1975; sowie *Lager*, Bundesabgabenordnung, Wien 1975.

hiezu "befugte" Personen berechtigt. Das sind vor allem die nach österreichischen berufsrechtlichen Vorschriften tätigen Rechtsanwälte, Patentanwälte und Notare sowie die nach inländischem Recht (Wirtschaftstreuhänderberufsordnung BGBl. Nr. 125/1955) zugelassenen Wirtschaftstreuhänder (Steuerberater, Beeidete Buchprüfer, Wirtschaftsprüfer). Eine im Ausland erworbene Befugnis dieser Art berechtigt nicht zur Parteienvertretung in Österreich, weil dies das österreichische Recht nicht vorsieht, diesbezüglich zwischenstaatliche Abkommen aber nicht bestehen.

Festgesetzte Abgaben, die nicht spätestens am Fälligkeitstag (in der Regel mit Ablauf eines Monates nach Bescheidzustellung) entrichtet werden, sind vollstreckbar. Ein gegen den Abgabenbescheid eingebrachtes Rechtsmittel hat keine aufschiebende Wirkung, die zwangsweise Einbringung kann also durch Beschreitung des Rechtsmittelweges nicht verhindert werden. Wäre aber die termingerechte Entrichtung der Abgabe für den Abgabepflichtigen mit erheblichen Härten verbunden, kann die Abgabenbehörde mit Bescheid (Ermessen) den Zeitpunkt der Abgabenentrichtung hinausschieben (Stundung) oder die Entrichtung in Raten bewilligen, dies aber nur unter der Voraussetzung, dass durch die Zufristung die Einbringlichkeit der Abgaben nicht gefährdet wird.

Ebenso wie die Kosten für die Tätigkeit der Abgabenbehörden von Amtswegen zu tragen sind (gilt auch für das Rechtsmittelverfahren) haben auch die Parteien die ihnen im Abgabenverfahren erwachsenen Kosten selbst zu bestreiten (Prinzip der Selbsttragung, wechselseitige Kosten-Ersatzansprüche gewährt das Gesetz nicht). Kostenpflicht besteht in Ausnahmsfällen, uzw im Zoll-, Verbrauchsteuer-, Monopol- und Exekutionsverfahren.

C. RECHTSSCHUTZ IN ABGABENANGELEGENHEITEN

1. Administratives Rechtsmittelverfahren

Gegen Bescheide der Abgabenbehörden erster Instanz (Finanzämter, Zollämter) ist (von geringfügigen unbedeutenden Ausnahmen abgesehen) das Rechtsmittel der Berufung gegeben. Die Berufungsfrist beträgt einen Monat; die Berufungsfrist kann aus berücksichtigungswürdigen Gründen, erforderlichenfalls auch wiederholt verlängert werden. (Bei Postaufgabe innerhalb der Frist gilt diese als gewahrt, auch wenn die Berufung erst später bei der Behörde einlangt.) Die Berufung kann bei der Abgabenbehörde, die den angefochtenen Bescheid erlassen hat, oder auch bei der zur Entscheidung über die Berufung zuständigen Finanzlandesdirektion eingebracht werden.

Ist die Berufung unzulässig erfolgt eine *Zurückweisung*, ohne dass die Behörde in die Sache einzugehen hat. Eine aus formellen Gründen gebotene Zurückweisung wird verfügt, wenn die Berufung nicht fristgerecht eingebracht wurde, oder wenn sie nicht zulässig ist, weil etwa ein Rechtsmittel ausdrücklich ausgeschlossen ist, bei einer *res judicata*, wenn auf Einbringung einer Berufung wirksam verzichtet wurde oder weil der Berufungswerber nicht aktiv legitimiert ist.

Formgebrechen der Berufung (zB fehlende Unterschrift, keine Bevollmächtigung) sowie bestimmte inhaltliche Mängel (Fehlen der Erklärung inwieweit der Bescheid angefochten wird und welche Änderungen beantragt werden, Fehlen einer Begründung) berechtigen nicht zur Zurückweisung; die Abgabenbehörde hat vielmehr dem Berufungswerber die Behebung dieser Mängel mit dem Hinweis aufzutragen, dass das Unterlassen der Sanierung mit Ablauf einer angemessenen Frist mit der Fiktion der Zurücknahme der Berufung verbunden ist.

Ist die Berufung sonach fristgerecht, zulässig und mängelfrei, hat in ihrer Erledigung eine Sachentscheidung zu ergehen. Diese meritorische Entscheidung tritt an die Stelle des angefochtenen Bescheides und kann gegenüber dem Erstbescheid in jeder Richtung abweichen (kein Verbot einer *reformatio in peius*). In der Sache unbegründete Berufungen werden abgewiesen.

Die Behörde, die den angefochtenen Bescheid erlassen hat, also die Behörde erster Instanz, kann zunächst selbst über das Rechtsmittel entscheiden. Eine solche *Berufungsvorentscheidung* dient der Verwaltungsvereinfachung. Insbesondere dann, wenn die Bescheidbehörde die Fehlerhaftigkeit ihres eigenen Bescheides erkennt, kann sie dem berechtigten Berufungsbegehren stattgeben, ohne dass die Oberbehörde befasst und damit belastet werden muss. Eine Berufungsvorentscheidung ist nicht obligatorisch. Die Behörde erster Instanz kann — ohne eine Vorentscheidung zu fällen — die Berufung der Rechtsmittelbehörde (Finanzlandesdirektion) zur unmittelbaren Entscheidung vorlegen. Ist hingegen eine Berufungsvorentscheidung ergangen und stellt der — nicht zufrieden gestellte — Berufungswerber innerhalb einer Frist von einem Monat den Antrag auf Entscheidung der Oberbehörde, so wird die Berufungsvorentscheidung wirkungslos. Beantragt der Berufungswerber die Entscheidung der Finanzlandesdirektion nicht, wirkt die Berufungsvorentscheidung wie eine endgültige Erledigung über die Berufung, allein diese Entscheidung (nicht auch der angefochtene Bescheid) gehören künftig dem Rechtsbestand an.

Wenn das Finanzamt eine Berufungsvorentscheidung nicht erlassen hat oder wenn dies wohl geschehen ist, diese durch einen diesbezüglichen Antrag der Partei aber ausser Wirksamkeit getreten ist, hat die *Finanzlandesdirektion* [22] über die Berufung abzusprechen. Auch diese Entscheidung ist eine meritorische. Die Finanzlandesdirektion hat unter neuer, eigener Verantwortung einen Sachbescheid zu erlassen, der an die Stelle des angefochtenen Bescheides tritt. Die Rechtsmittelbehörde hat im Berufungsverfahren die verfahrensrechtlichen Obliegenheiten und Befugnisse der Abgabenbehörde erster Instanz.

Sie hat daher erforderlichenfalls ein Ermittlungsverfahren neu durchzuführen oder das erstinstanzliche Ermittlungsverfahren zu ergänzen und hat selbst Beweise aufzunehmen. Sie ist an den Inhalt der erstinstanzlichen Bescheides nicht gebunden. Sie kann also den Bescheid in jeder Richtung abändern (sohin auch verbösern), sie ist in ihrer Entscheidungsbefugnis auch nicht an die Berufungspunkte gebunden und kann in ihrer Entscheidung den Anfechtungsbereich der Berufung überschrei-

22. In bestimmten Fällen, insbes. in Angelegenheiten der Einkommen-, Körperschaft-, Gewerbe-, Umsatz- und Vermögensteuer entscheidet die Finanzlandesdirektion durch Senate. Diese Berufungssenate sind nicht selbständige Behörden oder (zufolge verfassungsrechtlicher Weisungsfreistellung des Laienelementes) gar Gerichte oder gerichtsähnliche Behörden, sondern bloss Organe der Abgabenbehörde zweiter Instanz, also der Finanzlandesdirektionen.

ten. Die Rechtsmittelentscheidung des österreichischen Abgabenverfahrens ist also eine durch formelle Schranken oder durch Vorentscheidungen nicht begrenzbare Vollentscheidung, sie ist in tatsächlichen und rechtlichen Belangen so zu treffen, als erginge in der Angelegenheit eine erste Entscheidung.

Die Berufungsentscheidung ersetzt denn auch den ursprünglichen angefochtenen Bescheid, sie allein gehört künftighin dem Rechtsbestand an.

Erwähnt sei, dass es verfahrensrechtlich und zuständigkeitstechnisch keinen Unterschied macht, ob Angelegenheiten des innerstaatlichen oder des zwischenstaatlichen (internationalen) Abgabenrechtes in Verhandlung stehen. Es macht auch — sowohl im erstinstanzlichen, als auch im zweitinstanzlichen (Rechtsmittel-)Verfahren — keinen Unterschied, ob Österreicher oder Ausländer, im Inland oder im Ausland Ansässige Parteien des Verfahrens sind.

2. Gerichtlicher Rechtsschutz [23]

In Österreich obliegt der gerichtliche Rechtsschutz des Einzelnen gegenüber der behördlichen Verwaltungstätigkeit des Staates nicht den ordentlichen Gerichten, er ist im wesentlichen im *Verwaltungsgerichtshof* konzentriert. [24] Diese Konzentration ist mehrdimensional. Der Verwaltungsgerichtshof ist zur Kontrolle der verwaltungsbehördlichen Tätigkeit des Bundes, der Länder und Gemeinden berufen (keine Länder- Verwaltungsgerichte), er ist in seiner gerichtsorganisatorischen Monopolstellung für Beschwerden gegen Verwaltungen aller Art zuständig (es sind also keine Sonderverwaltungsgerichte etwa in Sozial- oder Finanzangelegenheiten eingerichtet) und schliesslich ist die Verwaltungsgerichtsbarkeit einstufig, d.h. der Verwaltungsgerichtshof entscheidet als einzige Instanz.

Im Interesse der Garantie der Verfassung ist ein weiterer Gerichtshof des öffentlichen Rechtes eingerichtet und dem Verwaltungsgerichtshof an die Seite gestellt (keine Über- oder Unterordnung); es ist dies der *Verfassungsgerichtshof*. Dieser hat neben vielfältigen verfassungsgesetzlich vorgesehenen Agenden auch die Aufgabe eines Sonderverwaltungsgerichtes zu erfüllen. Demnach hat der Verfassungsgerichtshof auch über Beschwerden gegen letztinstanzliche Bescheide der Verwaltungsbehörden zu entscheiden, ist jedoch hiezu nur insoweit befugt (und damit seine Zuständigkeit abgegrenzt), als der Beschwerdeführer in einem verfassungsgesetzlich gewährleisteten Recht verletzt zu sein behauptet [25], (etwa bei Verletzung der Grund- und Freiheitsrechte) wird hingegen die Verletzung sonstiger subjektiver Rechte behauptet, ist die Beschwerde an den Verwaltungsgerichtshof zu richten (bei Gesetzwidrigkeit, Verordnungswidrigkeit eines Bescheides). Auch die Stellung des Verfassungsgerichtshofes ist — auf seinen Zuständigkeitsbereich bezogen — gleich der des Verwaltungsgerichtshofes, monopolartig und zentralisiert.

Sowohl der Verfassungsgerichtshof wie auch der Verwaltungsgerichtshof sind Gerichte im technischen Sinn, die Gerichtsbarkeit wird durch (unabsetzbare, unversetzbare und weisungsfreie) Richter ausgeübt. Im Bescheidprüfungsverfahren sind Beschwerdeführer und belangte Behörde (Behörde, die in letzter Instanz den angefochtenen Bescheid erlassen hat) gleichberechtigte Parteien.

Die Gerichtsbarkeit der geschilderten Art kann erst nach abschliessender Befassung der Verwaltungsbehörden mit der Angelegenheit, also nach Erschöpfung des administrativen Instanzenzuges, in Anspruch genommen werden. Es handelt sich also um eine *a posteriori* - Gerichtsbarkeit. Die Aufgaben der beiden Gerichtshöfe des öffentlichen Rechts bestehen nun nicht etwa darin, dass sie den Verwaltungsbehörden nachgeschaltet, eine letzte, endgültige Sachentscheidung zu fällen hätten. Sie haben vielmehr lediglich Kontrollfunktionen gegenüber den Verwaltungsbehörden wahrzunehmen. Diese Aufgabe erfüllen die Gerechtshöfe in der Weise, dass sie dann, wenn der in Beschwerde gezogene Bescheid Vorschriften — des von den Gerichtshöfen ihrer Zuständigkeit nach wahrzunehmenden Ranges — verletzen, auf Aufhebung (Kassation) erkennen oder im Falle der Verneinung einer Rechtsverletzung die Beschwerde abweisen. Dringt die Beschwerde durch, ergeht also nicht eine neue meritorische Entscheidung des Gerichtes mit der Wirkung, dass sie an die Stelle des angefochtenen Bescheides tritt. Die stattgebende, in der Sache ergehende Erledigung des Gerichtshofes erschöpft sich vielmehr in der Aufhebung des angefochtenen Bescheides. Es obliegt sodann der belangten Verwaltungsbehörde, also der Behörde deren Entscheidung aufgehoben wurde, die neuerliche Sachentscheidung (Ersatzbescheid) zu fällen, wobei eine Bindung an die im aufhebenden Erkenntnis zum Ausdruck gebrachte Rechtsauffassung des Höchstgerichtes besteht.

Zu erwähnen ist auch an dieser Stelle, dass die angedeutete Zuständigkeit der Gerichte gegeben ist, gleichgültig ob innerstaatliches autonomes oder internationales Abgabenrecht zur Anwendung kommt. Es ist auch im allgemeinen gleichgültig, ob die den Rechtsschutz der Gerichtshöfe in Anspruch nehmenden Parteien Inländer oder Ausländer, im Inland oder im Ausland ansässige physische oder juristische Personen sind.

Die Beschwerde ist innerhalb einer (unerstreckbaren) Frist von 6 Wochen, die ab Zustellung des letztinstanzlichen Bescheides läuft, unmittelbar beim Gerichtshof einzubringen. Die Beschwerde hat keine aufschiebende Wirkung; diese kann aber über besonderen Antrag vom Gerichtshof zuerkannt werden, wenn durch die ansonsten zu erwartende Vollstreckung ein nicht mehr gutzumachender Schaden eintreten würde und öffentliche Rücksichten die sofortige Vollstreckung des Bescheides nicht gebieten.

a) Die Verwaltungsgerichtshofbeschwerde [26]

Zu den Erfordernissen, die die Beschwerde an den Verwaltungsgerichtshof aufzuweisen hat, damit der Gerichtshof ein konkretes Verfahren einleiten kann, gehören neben der Bezeichnung des angefochtenen Ver-

25. Art. 144 B-VG; Verfassungsgerichtshofgesetz 1953 BGBl. Nr. 85; *Ermacora*, Verfassungslehre 183, 229, 327, 388; *Walter*, Bundesverfassungsrecht 710, 736, 788; *Walter-Mayer*, Grundriss 254.

26. *Ringhofer*, Der Verwaltungsgerichtshof, Graz-Wien-Köln 1955.

waltungsaktes und der Behörde, die den Bescheid erlassen hat, sowie neben einer Sachverhaltsdarstellung, einem bestimmten Anfechtungsbegehren und einer Begründung auch die Bezeichnung des subjektiven) Rechtes, in dem der Beschwerdeführer verletzt zu sein behauptet (Beschwerdepunkte). Damit ist der Prozessgegenstand festgelegt, nur über die hievon berührten Fragen ist in der Sachentscheidung des Gerichtshofes abzusprechen, der Gerichtshof kann über den von der Partei hiedurch abgegrenzten Anfechtungsbereich nicht hinausgehen.

Die Beschwerdeschrift bedarf der Unterschrift eines (inländischen) Rechtsanwaltes; [27] ansonst besteht relativer Anwaltszwang: Die Parteien können im Verfahren ihre Sache selbst führen, wenn sie sich aber vertreten lassen wollen, können sie ihr Mandat nur einem inländischen Anwalt (nicht etwa auch einem Wirtschaftstreuhänder) geben.

Es entspricht den Aufgaben des Verwaltungsgerichtshofes als Kontrollinstanz, dass er den Bescheid auf Grund des von der belangten Behörde angenommenen Sachverhaltes zu prüfen hat. Diese Sachverhaltsbindung besteht nur dann nicht, wenn der von der Behörde angenommene Sachverhalt in sich widersprüchlich ist, mit den Erfahrungen des Lebens nicht in Einklang zu bringen ist, die Schlussfolgerungen der Behörde, die zur Sachverhaltsannahme führten, den Denkgesetzen widersprechen oder das Verfahren, das der Sachverhaltsermittlung diente, mangelhaft war; auch diesfalls ermittelt aber der Gerichtshof den Sachverhalt nicht selbst, sondern hebt den Bescheid auf. Es obliegt sodann der belangten Behörde das Sachverhaltsermittlungsverfahren zu ergänzen und einen neuerlichen Bescheid zu erlassen. Besteht kein Aufhebungsgrund der angeführten Art so ergibt sich aus der Sachverhaltsbindung des Gerichtshofes auch für die Partei das Verbot, im Verwaltungsgerichtshofverfahren Neuerungen in Bezug auf die tatsächlichen Verhältnisse vorzubringen (Novenverbot), also das Verbot, im vorangegangenn Verwaltungsverfahren unberücksichtigt gebliebene Tatsachen zum Gegenstand des Gerichtsverfahrens zu machen.

Hat sich der Bescheidinhalt mit Rechtsvorschriften in Widerspruch gesetzt, wird der in Beschwerde gezogene Bescheid aufgehoben. Eine solche mit der Aufhebung bedrohte Rechtswidrigkeit liegt nicht vor, soweit der Bescheid auf einer Ermessensbestimmung beruht und die Behörde im Sinne des Gesetzes ihre Entscheidung getroffen hat. Erweisen sich somit mehrere Entscheidungen mit dem vom Gesetz erklärten oder aus ihm ableitbaren Sinn vereinbar und hat die Behörde aus sachlich vertretbaren Gründen eine dieser Entscheidungsmöglichkeiten ausgewählt, greift der Gerichtshof nicht ein, mag auch eine andere Lösung zweckmässiger sein (seine Aufgabe steht in der Rechtskontrolle, nicht in einer Zweckmässigkeitsprüfung).

Wurde ein angefochtener Bescheid von einer unzuständigen Behörde erlassen, so ist der Bescheid der Aufhebung verfallen (auch wenn dieser Mangel nicht geltend gemacht wird); im Bescheidmangel der Unzuständigkeit liegt nämlich auch eine Grundrechtsverletzung (Entzug des gesetzlichen Richters im weitesten Sinn verstanden), weshalb die Aufhebung jedenfalls, und zwar auch dann erfolgt, wenn der Bescheid ansonsten inhaltlich nicht rechtswidrig erscheint (was diesfalls nicht mehr zu prüfen ist).

Die Verletzung anderer Verfahrensvorschriften als solcher über die Zuständigkeit führt (abgesehen vom Mangel der Aktenwidrigkeit oder Ergänzungsbedürftigkeit des Sachverhaltes) nur dann zur Aufhebung, wenn die Einhaltung der verletzten Verfahrensvorschriften zu einem anderen Bescheid hätte führen können (Erfordernis der Wesentlichkeit des Verfahrensmangels).

Die im Verfahren obsiegende Partei hat Anspruch auf Kostenersatz durch die unterliegende Partei (durch Verordnung ist eine Kostenpauschalierung vorgesehen).

b. Die Verfassungsgerichtshofbeschwerde [28]

Über in letzter Instanz ergangene bescheidmässige Massnahmen einer Verwaltungsbehörde (so auch einer Abgabenbehörde) hat der Verfassungsgerichtshof zu erkennen, wenn der Beschwerdeführer behauptet, durch den Bescheid in einem verfassungsgesetzlich gewährleisteten Recht verletzt zu sein, oder wenn er behauptet, dass der Bescheid durch Anwendung einer gesetzwidrigen Verordnung, eines verfassungswidrigen Gesetzes oder eines rechtswidrigen Staatsvertrages seine subjektiven Rechte verletzt habe.

Die Beschwerden haben den Sachverhalt anzugeben und die Behauptung der die Zuständigkeit des Gerichtshofes begründenden Rechtsverletzung zu enthalten (für den Verfassungsgerichtshof bedeuten im Gegensatz zum Verwaltungsgerichtshof diese Punkte nicht den Prozessrahmen, sind einmal die Prozessvoraussetzungen erfüllt, prüft der Verfassungsgerichtshof, ob irgendein verfassungsgesetzlich gewährleistetes Recht des Beschwerdeführers verletzt worden ist). Die Beschwerden sind durch einen bevollmächtigten (inländischen) Rechtsanwalt einzubringen; die Partei kann sich im Verfahren durch ihn (nicht auch durch andere Personen) vertreten lassen (absoluter Anwaltszwang).

Der Verfassungsgerichtshof prüft also, ob der bekämpfte Verwaltungsakt den Einzelnen in einem verfassungsgesetzlich gewährleisteten (also in einem von der Verfassung eingeräumten subjektiven) Recht verletzt hat; hiezu gehören in Österreich insbesondere die in Verfassungsrang stehenden Grund- und Freiheitsrechte. [29]

Ein Abgabenbescheid kann den Abgabenpflichtigen vor allem in seinem Recht auf *Gleichheit vor dem Gesetz* verletzen. Die Verletzung des Gleichheitsrechtes (Art. 2 Staatsgrundgesetz v. 21.12.1867 RGBl. Nr. 142 und Art. 7 B-VG.) [30] kann immer nur durch Vergleich mit Massnahmen gegenüber anderen beurteilt und festgestellt werden. Durch die Vollzugstätigkeit kann eine Verletzung des verfassungsgesetzlichen Rechtes auf Gleichheit vor dem Gesetz praktisch nur erfolgen, wenn die Behörde aus unsachlichen Gründen, die nur in der Person der Partei liegen, diese anders behandelt als andere Personen, wenn die Behörde also willkürlich handelt (die Behörde setzt sich bewusst oder leichtfertig über gesetzliche Bestimmungen hinweg um die Partei zu benachteiligen, dies kann durch qualifizierte Verletzung

30. Hiezu s. insbes. *Kneuker*, Die Bindung des Steuergesetzgebers an den Gleichheitssatz der Bundesverfassung, ÖStZ 1966, 217 und *Gassner*, Gleichheitssatz und Steuerrecht, Veröffentlichungen des Instituts für Finanzwissenschaft u. Steuerrecht, Wien 1970, Mr. 69.

materiell- oder verfahrensrechtlicher Vorschriften geschehen) oder schliesslich, wenn die Behörde der anzuwendenden Norm einen Inhalt unterstellt, der, wenn ihn die Norm tatsächlich hätte, diese mit Gleichheitssatzwidrigkeit belasten würde. Der Gleichheitsgrundsatz gewährt grundsätzlich nur österreichischen Staatsbürgern und inländischen juristischen Personen ein subjektives (und damit in dem hier besprochenen Sinn verfolgbares) Recht.

Im gegebenen Zusammenhang ist auch auf das Grundrecht der *Unverletzlichkeit des Eigentums* [31] hinzuweisen (Art. 5 Staatsgrundgesetz und Art. 1 des Zusatzprotokolles zur Menschenrechtskonvention BGBl. Nr. 210/1958). Diese verfassungsgesetzliche Garantie steht allerdings unter Gesetzesvorbehalt. Beeinträchtigungen privater Vermögensrechte sind sohin durch die einfache Gesetzgebung zulässig, soweit dadurch der Wesenskern des Grundrechtes nicht verletzt wird (das bedeutet, dass das Privateigentum als Institution des objektiven Rechtes jedenfalls unantastbar ist). Abgabenvorschreibungen führen nun immer zu einem Eigentumseingriff. Ist die anzuwendende Norm aus dem Gesichtswinkel des verfassungsrechtlich garantierten Eigentumsschutzes unbedenklich, könnte ein verfassungswidriger Eigentumseingriff durch einen Bescheid dann vorliegen, wenn dieser so fehlerhalt ist, dass er auf der Stufe der Gesetzlosigkeit oder im Wege einer Gesetzesauslegung zustandegekommen ist, die ausserhalb des Rahmens üblicher tolerierbarer Fehlerkalküle liegt, die Gesetzesauslegung sich also geradezu als denkunmöglich darstellt. Blosse Unrichtigkeiten üblicher Art, Fehlerhaftigkeiten, die nicht den Anschein der Gesetzlosigkeit oder Scheinanwendung erwecken und die Rechtsfindung nicht als denkunmöglich erscheinen lasses, führen nicht zur Verfassungswidrigkeit wohl aber zur "Rechtswidrigkeit" des Bescheides, die Wahrnehmung solcher Gründe fällt aber in die Zuständigkeit des Verwaltungsgerichtshofes.

Der verfassungsrechtliche Schutz des Eigentums kommt auch Ausländern sowie ausländischen juristischen Personen zu.

In Österreich versteht man das verfassungsgesetzlich geschützte *Recht auf den gesetzlichen Richter* (Art. 83 Abs. 2 B-VG.) auch als Recht auf den Schutz und die Wahrung der gesetzlich begründeten Zuständigkeiten der Verwaltungsbehörden. Das Einschreiten unzuständiger Behörden wie auch das Ablehnen einer gesetzlich vorgesehenen Entscheidung einer zuständigen Behörde (rechtswidrige Zurückweisung eines begründeten Sachbegehrens) kann sohin (auch) vor dem Verfassungsgerichtshof geltend gemacht werden.

Erkennt der Verfassungsgerichtshof auf Verletzung verfassungsgesetzlich gewährleisteter Rechte wird der Bescheid aufgehoben; die Verwaltungssache wird in die Lage zurückversetzt, in der sie sich vor Erlassung des Bescheides befunden hat. Die Verwaltungsbehörden sind verpflichtet unverzüglich den der Rechtsanschauung des Gerichtshofes entsprechenden Rechtszustand herzustellen.

Der unterliegenden Partei kann der Ersatz der Prozesskosten auferlegt werden.

3. Verfassungsgerichtliche Normenprüfung [32]

Der Verfassungsgerichtshof hat auch unter bestimmten Voraussetzungen Normen dahin zu überprüfen, ob sie mit Vorschriften höherer Stufe in Einklang stehen (Art. 139, 140, 140a B-VG.). Stehen sohin Verordnungen in Widerspruch mit Gesetzen oder mit Verfassungsbestimmungen oder widersprechen einfache Gesetze der Verfassungsordnung, so hat der Verfassungsgerichtshof die aus dem Stufenbaugedanken heraus (Merkl) fehlerhafte — weil mit der höherrangigen Norm unvereinbare — Regelung aufzuheben. Der Verfassungsgerichtshof hat diese Aufgabe im allgemeinen nicht von Amtswegen wahrzunehmen. Es bedarf entsprechender (verfassungsgesetzlich vorgesehener) Anträge.

Da im Abgabenrecht generelle Normen durch Bescheide konkretisiert werden, erübrigt sich der Hinweis auf die durch die Novelle 1975 BGBl. Nr. 302/1975 eingeführte Befugnis von Individuen, eine Normenprüfung zu beantragen, wenn sie unmittelbar durch fehlerhafte Normen in ihren Rechten verletzt zu sein behaupten. Es sollen hier lediglich die in Abgabensachen möglichen Hauptanwendungsfälle in gebotener Kürze geschildert werden.

Demnach leitet der Verfassungsgerichtshof ein Normenprüfungsverfahren ein, wenn er selbst in einem Bescheidprüfungsverfahren eine Vorschrift anzuwenden hätte, von der er vermutet, dass sie mit Normen höherer Stufe in Widerspruch steht (einzige Ausnahme vom vorstehend angedeuteten Antragsprinzip) oder wenn der Verwaltungsgerichtshof gegen eine von ihm anzuwendende Regel Bedenken der Rechtsverletzung der soeben geschilderten Art hat und einen Antrag auf Normenprüfung an den Verfassungsgerichtshof stellt. Die Partei hat kein formelles auf Normenkontrolle gerichtetes Antragsrecht. Es bleibt ihr aber (im Verwaltungs- oder Verfassungsgerichtshof-Verfahren) unbenommen, auf Verfassungswidrigkeiten der anzuwendenden Vorschriften hinzuweisen und damit den Verwaltungsgerichtshof zur entsprechenden Antragstellung bzw den Verfassungsgerichtshof zur amtswegigen Einleitung des Normenprüfungsverfahrens zu motivieren.

Das Prüfungsverfahren setzt also die Präjudizialität der in Frage gestellten Norm für den Bescheid voraus (Inzidentalprinzip). Die Prüfung des Verfassungsgerichtshofes und auch die allfällige Aufhebung erstreckt sich denn auch nur auf die Normenteile, die in der anhängigen Rechtssache anzuwenden wären. Nur bei festgestellter Unzuständigkeit des Normensetzungsorganes und bei Kundmachungsmängeln kann die Norm insgesamt aufgehoben werden; dies gilt auch, wenn eine Verordnung zur Gänze einer gesetzlichen Grundlage entbehrt (also bei extrem schwerwiegenden Mängeln der Rechtserzeugung).

Die Aufhebung der für den Bescheid präjudiziellen Vorschrift bedeutet für den Anlassfall, dass dem Bescheid nunmehr die Rechtsgrundlage mangelt und dass sohin

auch der Bescheid der Aufhebung verfallen ist. Der von der Verwaltungsbehörde zu erlassende (Ersatz-)Bescheid ist so zu gestalten, als hätte die aufgehobene Norm niemals bestanden (*ex tunc* Wirkung). Auf alle übrigen von der aufgehobenen Vorschrift berührten Fälle, die noch nicht rechtskräftig sind (die Rechtskraft wird durch normaufhebende Erkenntnisse von vornherein nicht berührt, keine Nichtigkeitsfeststellung, sondern rechtsgestaltende Aufhebung), sind, soweit sie Sachverhalte zum Gegenstand haben, die sich vor Aufhebungswirksamkeit ereignet haben, die aufgehobenen Vorschriften weiterhin anzuwenden (der Gerichtshof kann hievon eine Ausnahme vorsehen); die Wirksamkeit der Aufhebung tritt mit Kundmachung des aufhebenden Erkenntnisses des Verfassungsgerichtshofes oder mit Ablauf einer von ihm (bei Verordnungen höchstens mit sechs Monaten, bei Gesetzen höchstens mit einem Jahr) gesetzten Frist ein (Vermeidung einer Legisvakanz, der zuständigen Gesetzgeber kann durch Erlassung neuer Vorschriften die Rechtskontinuität wahren). Abgesehen vom Anlassfall kommt sohin erst den nach Aufhebungswirsamkeit entstandenen Sachverhalten das Ausserkrafttreten der aufgehobenen Norm zugute.

Gründe, die zur Aufhebung von generellen Normen führen, sind hauptsächlich Fehler im Rechtserzeugungsverfahren, aber auch Verletzungen des Gleichheitsgrundsatzes werden immer wieder festgestellt und entsprechend sanktioniert. Eine Überprüfung von Abgabenvorschriften aus dem Blickwinkel des *Grundrechtes der Unverletzlichkeit des Eigentums* wird vom Verfassungsgerichtshof regelmässig abgelehnt. Dieser unter Gesetzesvorbehalt stehende Grundsatz wird im historischen Sinn verstanden; der Gerichtshof geht davon aus, dass ein Abgaben*gesetz* in das Grundrecht nicht eingreifen kann, es sei denn, es liege ein Missbrauch der Abgabenformen vor. Es wird aber versucht Unzukömmlichkeiten durch eine dynamische Interpretation des *Gleichheitssatzes* zu begegnen. Dies ist für Abgabenvorschriften der am meisten beanspruchte Gesetzesprüfungsmasstab. Demnach besteht für die Gesetzgebung die Verpflichtung, andere als objektive Unterscheidungsmerkmale bei einer rechtlichen Behandlung der Staatsbürger beiseite zu lassen. Differenzierungen sind natürlich zulässig, diese müssen aber mit tatsächlichen Unterschieden der zu regelnden Materie in einen vernünftigen Zusammenhang zu bringen sein. Unterschiedliche Regelungen, Grenzziehungen aber auch Gleichschaltungen müssen im Prinzipiellen einer vernünftigen Erfahrung gerecht werden, sind sie sachfremd, sind sie sachlich nicht zu rechtfertigen, dann verstösst der Gesetzgeber gegen den Gleichheitssatz. Der Verfassungsgerichtshof überprüft hiebei nicht, ob die Unterschiede bewirkende Regelung tatsächlich sachgerecht ist, sondern nur, ob sie abstrakt gerechtfertigt werden kann. Daher machen nicht schon jedes Versehen des Gesetzgebers, jede Unstimmigkeit, Ungereimtheit, Unvollkommenheit oder Widersprüchlichkeit sowie rechtspolitische Fehlleistungen ein Gesetz verfassungswidrig; dem Gleichheitssatz widerspricht es nur dann, wenn die Regelungen auf unsachlichen, einem Exzess gleichkommende Entscheidungen des Gesetzgebers beruhen.

In Österreich ist — anders als etwa in der Bundesrepublik Deutschland — die Sachlichkeit einer Vorschrift nicht daran zu messen, ob und welchem Grade sie der Ordnungsstruktur des privaten Rechtes entspricht. Dem Gesetzgeber ist es nach der Rechtsprechung nicht verwehrt im Bereich des Steuerrechtes ein eigenes Anknüpfungs- und Ordnungssystem zu errichten und sogar innerhalb dieses von ihm geschaffenen Ordnungssystems einzelne Tatbestände auf eine nicht systemgemässe Art zu regeln, wenn sachliche Gründe dies rechtfertigen. Der Grundsatz der *Steuergerechtigkeit* hat keinen Verfassungsrang, doch müssen die gesetzlichen Regelungen das Bestreben des Gesetzgebers erkennen lassen, dem allgemeinen Gleichheitssatz Rechnung zu tragen (gemessen am positiven Verfassungsrecht wird sohin Steuergerechtigkeit als Steuergleichmässigkeit verstanden).

Da in Österreich in den hier interessierenden Belangen *Staatsverträge* aus verfassungsrechtlicher Sicht (je nach ihrem Regelungsinhalt und ihrer derogatorischen Kraft) auf der Stufe von Verordnungen oder Gesetzen stehend gesehen werden (Abkommen zur Vermeidung der Doppelbesteuerung [33] werden innerstaatlich wie Gesetze in Kraft gesetzt und entfalten dieselbe Wirkung), erkennt der Verfassungsgerichtshof über die Rechtswidrigkeit von Staatsverträgen im Wesentlichen nach den gleichen Regeln, wie über die Fehlerhaftigkeit autonomer Normen (Art. 140a B-VG.). Steht nun ein in das innerstaatliche Recht auf Verordnungs- oder Gesetzesstufe eingeordneter Staatsvertrag mit Vorschriften höheren Ranges in Widerspruch, wird die Rechtswidrigkeit des Staatsvertrages festgestellt (keine Aufhebung, da ansonsten Beeinträchtigung der völkerrechtlichen Normativwirkung, diese soll nicht beeinträchtigt werden). Die Wirkungen eines solchen Prüfungs- und Aufhebungsverfahrens sind innerstaatlich im wesentlichen dieselben, wie die, die im Falle der Aufhebung autonomer österreichischer Vorschriften eintreten.

Der Feststellung der Rechtswidrigkeit des Staatsvertrages durch den Verfassungsgerichtshof und damit der mit Kundmachung einsetzenden Unanwendbarkeit im österreichischen Rechtsbereich wird eine entsprechende (auf völkerrechtlicher Basis zu gewinnende) Änderung des Vertrages nachzufolgen haben, damit ein dem österreichischen Verfassungsrecht entsprechender Vertragsinhalt der Transformation in den innerstaatlichen Rechtsbestand zugeführt werden kann.

Basic features of the Austrian tax law and their relationship to international tax treaty law

Professor Dr. Gerold Stoll
University of Vienna

The rules of good hospitality call for familiarizing welcomed guests with their new and unknown surroundings in order to facilitate their comfortable adjustment.

In that sense I have the honor and privilege to give guidance to the very welcome participants of the XXXIst IFA-Congress and to explain to them the basic features of the Austrian tax law, in particular those of the Austrian Fiscal Constitution, the relationship between double taxation conventions (i.e. international law) and internal law, the rules of the Austrian tax proceedings and the organization of the tax administration as well as the basic features of the administrative and judicial protection of taxpayers.

It is obvious that for editorial reasons this outline has to be a brief and very rough one on that subject.

I. DOUBLE TAXATION CONVENTIONS AND THE INTERNAL LAW OF AUSTRIA

Double taxation conventions are primarily a source of international law; but the obligations incurred by the Contracting States on the international level have to be fulfilled in their respective territories. This requires an appropriate incorporation of the double taxation convention into the internal system of law. That subject is not specifically regulated by international law; it is therefore a general problem of the internal state law. This problem will be discussed below in the case of Austria.

Apart from that general question of incorporating an international treaty into an internal legislation system, there can be found some more specific connections between a double taxation convention and national tax law; such specific relations are partly regulated by the international tax law itself and are partly clarified through national interpretation practices.

A. THE INCORPORATION OF A DOUBLE TAXATION CONVENTION INTO INTERNAL LAW

As already pointed out, it is the task of internal state law to provide the rules which are necessary for a proper transformation of an international convention into internal law. In Austria the respective regulations are embodied in the Federal Constitution, as amended in 1929;[1] they have been completed and improved as to some specific points by an amendment made in 1964 (Bundesgesetzblatt No. 59/1964).

When looking at the problem of incorporating a double taxation convention into the internal state law system several particular questions will arise:

1. *Who has the treaty making power with respect to double taxation conventions?*
2. *Can the convention be concluded* uno actu *or must a ratification procedure be applied?*
3. *Which method is used for the incorporation into internal law (general or special method of transformation)?*
4. *What is the rank of a double taxation convention within that scheme of internal legislation?*
5. *What are the legal consequences when a double taxation convention has not been concluded in accordance with internal law?*
6. *What are the effects of the federal structure of Austria on double taxation conventions?*

1. The treaty making power with respect to double taxation conventions

According to the Austrian Constitution the treaty making power is in principle vested in the Federal President (Article 65 para. 1); the Federal President may, however delegate his treaty making power to the Federal Government and to the competent Federal Ministers but only in the case of treaties which neither involve any changes or supplement to internal legislation nor are of a political character. This delegation right has been used by the Federal President since the Austrian Constitution went into effect in 1920; he has delegated his treaty making power to the Federal Government with respect to inter-governmental agreements ("Re

1. Bundesgesetzblatt (Federal Gazette) No. 1/1930.

gierungsübereinkommen"), to the competent Federal Minister in agreement with the Federal Minister of Foreign Affairs with respect to inter-departmental agreements ("Ressortübereinkommen"), and to the competent Federal Minister with respect to inter-agency agreements ("Verwaltungsübereinkommen") (cf. the Resolution of the Federal President of December 31, 1920, Bundesgesetzblatt No. 49/1921, based on Article 66 para. 2 of the Constitution).

The internal authority to conclude an international convention depends therefore in the first instance on whether the convention will change internal legislation (or will supplement it or has a political character) or not. Regarding the Austrian double taxation conventions this question has always been answered in the affirmative. It is true that there exists a provision in the internal tax law (§ 48 of the Federal Procedure Act) [2] which authorizes the Federal Minister of Finance to avoid double taxation; this authorization is not restricted to individual tax cases but might also be taken as a basis for the issuance of general ordinances. However until now no attempt has been made to classify the conclusion of a double taxation convention as a mere executory act of that authorization thereby grouping a double taxation convention with the non-law changing treaties (in fact, the rule of § 48 of the Federal Procedure Act would probably not constitute a sufficient basis for some secondary provisions of a double taxation convention, such as the exchange of information article or the non-discrimination article). Only in the case of double taxation agreements in particular areas (e.g. air transport) would § 48 of the Federal Procedure Act be taken as the legal basis for the conclusion of a non law-changing inter-departmental agreement ("Ressortübereinkommen").

The comprehensive double taxation conventions are therefore considered as law-changing treaties which can only be concluded by the Federal President according to the Constitution.

As with all other law-changing treaties one can distinguish between three main stages in the procedure of concluding a double taxation convention:

1. the stage of negotiations and signature (preliminary proceedings);
2. the approval by parliament;
3. the ratification (the definite conclusion of the convention).

It is the prevailing opinion in Austria [3], that the *whole* procedure, including all activities at the preliminary stage, has to be carried out by the Federal President. This being physically impossible, the Federal President will have to appoint plenipotentiaries to negotiate and sign.

A further problem has been raised by the Austrian governmental structure regarding the nomination of the negotiator of double taxation conventions. International negotiations begun with the aim of concluding a double taxation convention are certainly part of the external affairs of the Republic of Austria, therefore it seems quite reasonable that the negotiator should be a representative of the Federal Minister of Foreign Affairs. Traditionally, however, due to the particularly close relationship of double taxation conventions to internal tax law, double taxation convention negotiations had always been led by a representative of the Minister of Finance. That internal problem of competence has meanwhile been solved by legislation (cf. the Federal Act distributing the competences between the ministerial departments, Bundesgesetzblatt No. 389/1973). The competence for double taxation conventions according to general principles belongs to the Federal Minister of Foreign Affairs who is, however, entitled to transfer that competence to the Federal Minister of Finance. Such transfer of competence in double taxation matters has actually been effectuated by the ordinance of the Federal Minister of Foreign Affairs of July 3, 1974, Bundesgesetzblatt No. 388/1974. Thus, I present once again a representative of the Federal Minister of Finance has the responsibility for the conduct of international double taxation negotiations, after being duly so authorized by the Federal President.

If a treaty is concluded with a foreign country merely on the application of an existing double taxation convention, then such an international agreement would usually not involve any changes in the internal law (nor does it supplement internal laws nor is it of a political nature). Such agreements are therefore considered as inter-departmental agreements ("Ressortübereinkommen") which

Dr. Gerold Stoll:
Born in Vienna in 1925, the author studied law at the University of the same city. After his graduation in 1948 he joined the Austrian Tax Administration where in 1949 he worked at the district level. In 1958 he entered the Federal Ministry of Finance as Chief of the Department (Sektionsrat) which dealt with procedural law including drafting of laws. In 1967 the Faculty of Law and Political Sciences of the University of Graz conferred upon him the right to teach as university professor (Habilitation) in finance law. By the end of 1968 he was appointed Full Professor for finance law at the Law Faculty of the University of Vienna. He was also nominated Director of the Institute for State and Administrative Law where he is, inter alia, Head of the State Examination Commission for political sciences.

In 1973 he was chosen as a corresponding member of the Academy of Sciences of Austria and in 1974 was elected a permanent member of this organization.

Prof. Stoll is the Editor of "Schriften zum österreichischen Abgabenrecht" (Austrian Tax Law Handbooks), 13 volumes of which have been published up to now (Publishers: Wirtschaftsverlag ORAC, Vienna).

Major publications (in addition to articles on special subjects):

If a treaty is concluded with a foreign country merely on the application of an existing double taxation convention, then such an international agreement would usually not involve any changes in the internal law (nor does it supplement internal laws nor is it of a political nature). Such agreements are therefore considered as inter-departmental agreements ("Ressortübereinkommen") which

2. Bundesgesetzblatt No. 194/1961.
3. Cf. *Ohlinger*, Der völkerrechtliche Vertrag im staatlichen Recht, 249.

can be concluded according to the above-cited Resolution of the Federal President by the Federal Minister of Finance (or a representative authorized by him) in agreement with the Federal Minister of Foreign Affairs.

It occurs that an agreement on the mode of application of an existing double taxation convention is reached with the finance administration of the other Contracting State by informal correspondence; the results of such negotiations are not embodied in a formal signed document; it is merely envisaged that the agreed mode of application should enter into force in the two States by the issuance of parallel internal ordinances. The finance administrations are thereby obviously acting on behalf of the two States and the agreement reached by them will not only be of relevance to the tax authorities but will have a binding force on the two States as such, i.e. their agreement will have to be considered as an international treaty (in its broadest sense). Such international arrangements have no immediate effect on the legal position of the individual taxpayer (this effect will be created by the envisaged internal ordinances); they address themselves only to agencies of the two States; under the Austrian legal structure they are therefore grouped with the non law-changing interagency agreements ("Verwaltungsübereinkommen"). By virtue of the above cited Resolution of the Federal President such agreements may be concluded by the Federal Minister of Finance without his being obliged to consult with the Federal Minister of Foreign Affairs.

2. The treaty-making procedure

International law distinguishes between two different types of procedure. In one case the signature alone constitutes the binding force of the treaty for the Contracting States. In the other case the duly authorized signing agent declares his willingness to conclude the treaty only under the reservation that the State on behalf of which he is acting shall be bound by a subsequent ratification (in connection with the exchange or the deposit of the instruments of ratification).

Under the Austrian Constitution the class of law-changing, law-supplementing and political treaties requires an approval by Parliament (Art. 50 para. 2 of the Constitution) and may therefore only be concluded under the last-mentioned procedure (ratification procedure). Since double taxation conventions belong to that class, they can also only be signed under the reservation of a subsequent ratification.

After having obtained the necessary approval from Parliament, the Constitution requires — similar to the internal legislative procedure — a final act of the Federal President: he has to certify by his signature that the convention now fulfills all constitutional requirements. Again as in the internal legislative procedure this act of the Federal President will only be valid if it is countersigned by the Federal Chancellor or by the competent Federal Minister.

The other Contracting State must then be notified of the national ratification of the convention. This is done in historic solemnity by the exchange of the instruments of ratification; only now is the convention definitely concluded.

The date of entry into force has to be distringuished from that date of ratification. Between those two dates a certain delay is usually provided for in the double taxation conventions to allow the fulfillment of the national requirements for the entry into force on the level of internal law (promulgation in the Bundesgesetzblatt). Under internal law the tax authorities would not be entitled to apply the provisions of the new convention in their assessments made before the date of internal promulgation. The absence of such delay between those two dates might produce a discrepancy between international and national law with respect to the date of entry into force; in fact, there exist some Austrian conventions which entered into force on the international level of law exactly on the day of the exchange of the instruments of ratification. Under such circumstances there might be created the strange situation where a double taxation convention which already has a binding force on the international level of law can not yet be applied by the Austrian tax authorities. Such discrepancies are, however, of a rather limited practical importance since all double taxation conventions set out a further relevant date, i.e. the beginning of the period *for* which the convention has to be applied. This beginning date of the effectiveness of the convention corresponds usually to the beginning of the fiscal year and renders the problem of differing dates of entry into force a very harmless one. The tax office will simply have to postpone a little the assessment of those years which are covered by the Convention until the convention has been published in the Bundesgesetzblatt.

Conventions which are not subject to parliamentary approval (treaties not being law-changing, law-supplementing or political) may be concluded both ways, either *uno actu* or under the ratification procedure. Such treaties in the area of international tax law (especially agreements on the mode of application of double taxation conventions) are for reasons of administrative efficiency always concluded by using the simpler *uno actu* method. It might, however occur that such agreements need a ratification procedure under the internal law of the other contracting State. This happened e.g. with the Austro-German convention on the vehicle's taxation in international traffic. [4] This treaty had on the Austrian side no law-changing effect (due to an appropriate tax exemption provision in the Austrian Vehicle's Tax Act [5]) and could have been concluded *uno actu* in the form of a "Ressortübereinkommen"; because of the German position the ratification procedure had been adopted also by the Austrians.

3. The method of transformation

International treaties are a source of international law and as such they establish rights and obligations only between States and other subjects of international law. Principally they address themselves to States. The States, however, are obligated to execute the contractual commitments in their territories. International law does not contain any regulations concerning the method to be used by the States for such internal execution of treaty law. In practice there are two methods available for the incorporation of treaty law into the national legal structure: an unconditional and general transformation into internal law without any specific legal disposition (general transformation) and a transformation into internal law by special legal action (special transformation).

Like most continental European systems of law the Austrian Constitution has adopted the method of general transformation. The Austrian double taxation conventions and their application agreements are therefore valid as such on the level of internal law; their applicability does not depend on the issue of any legal regulation.

One of the disadvantages of the general transformation method can be seen in the fact that this method makes it very difficult to keep the internal law free from provisions which do not fit well with the internal system of law. Due to increasing international cooperation and due to the frequently arising necessity to accede to existing conventions or to adopt internationally accepted treaty provisions, it is obviously impossible to negotiate only with regard to conventions which are entirely in harmony with the legal philosophy of all contracting States.

The Austrian constitutional legislature has therefore introduced the possibility of using alternatively the method of special transformation by means of the 1964 amendment to the Federal Constitution. Article 50 para. 2 of the Federal Constitution sets out in its amended version that Parliament may in the course of the approval procedure of law-changing, law-supplementing or political treaties decide that the treaty has to be fulfilled by the issu

4. Bundesgesetzblatt No. 128/1971.
5. Bundesgesetzblatt No. 110/1952.

ence of a special law. In the case of other treaties which are not subject to parliamentary control the decision to use the method of special transformation has to be made by the Federal President or by any other agent having the treaty-making power (Article 65 para. 1 and Article 66 para. 2 of the Federal Constitution).

In the area of the avoidance of international double taxation it has not been necessary to protect the international commitments by passing special laws or special ordinances; therefore double taxation conventions and agreements on the mode of application of tax treaties are transformed into internal law by using only the general transformation method since the said amendment of the Constitution. This fortunate situation is certainly to some extent due to the fact that the later Austrian double taxation conventions are all based on the OECD Model Convention; the Austrian finance administration had the opportunity to take part in the elaboration of that Model Convention in the Fiscal Affairs Committee of OECD and to attempt there to omit or redraft provisions which could not have been brought in accordance with the national system of law.

4. The rank of double taxation conventions in internal law

The Austrian internal hierarchic system of law is seen as a graduated scale of legal provisions; the top grade is composed of constitutional law; the second grade is formed by ordinary law and the third grade is composed of ordinances. The legal provisions of the higher grade have to supply full authority for the issue of the provisions of the lower grades.

In the context of the transformation of a double taxation convention into internal law the question arises which rank should be attributed to the convention within the hierarchic framework of that internal scheme of law.

The former opinion was that international treaties must rank with constitutional law; this theory was based on the fact that all international agreements are anchored in the maxim "*pacta sunt servanda*", which is one of the generally accepted rules of international law. [6] The prevailing interpretation of today is that in Austria international agreements may rank on each of the three levels of law. Treaty provisions of constitutional rank must be expressly identified as changing constitutional law and must meet with the approval by Parliament necessary for internal constitutional law. Other treaty provisions which are submitted for parliamentary approval enjoy the rank of ordinary federal law; the remaining treaties have the rank of ordinances.

The Austrian double taxation conventions are not regarded as involving any changes on the level of constitutional law and are therefore allocated to the rank of ordinary law.

This position brings up two problems. First, this rank implies that all provisions of the double taxation convention must be covered by the Constitution; that is to say, they must find a sufficient legal basis in constitutional law. A lack of such conformity with constitutional law could lead to a review of the convention before the Constitutional Court which might finally result in a cancellation of the unconstitutional treaty provisions. This question of conformity with the Constitution is sometimes not very easy to answer. It has already been argued that, e.g. the "students article" of a double taxation convention (Art. 20 of the OECD Model Convention) possibly conflicts with Article 18 of the Constitution. This constitutional provision states that governmental administration can only be exercised by virtue of law; the interpretation of that rule says — inter alia — that the provisions of ordinary law must be exactly determined so that a proper execution is possible; legal provisions which do not meet such a requirement are in conflict with the Constitution. As far as the students article is concerned, it was claimed that the term student is much too uncertain since it is not sufficiently clear whether that term comprises only, e.g., academic scholars of universities, or also of lower grades.

The second problem concerns the derogative effect of law. Double taxation conventions cancel the applicability of opposing provisions of internal tax law within their field of application and in accordance with the principle "*lex posterior derogat legi priori*". It appears that this derogative effect of double taxation conventions meets general consent. But some doubts may arise whether subsequently issued national tax law has the legal power to alter preceding treaty provisions. [7] Such possibility is not denied. Under those circumstances the question has to be resolved whether e.g. the new income tax deduction introduced in 1973 for non-residents on remuneration for the supply of manpower, which is in conflict with the permanent establishment rule of double taxation conventions, could have a derogative effect on the contrary provisions of previously concluded double taxation conventions.

The Austrian tax administration has tried to find a solution for that issue on the grounds of the jurisdiction of the Administrative Court which regards double taxation conventions in relation to national tax law as a "*lex specialis*" (cf. dec. of June 28, 1963, Zl. 2312/61). Pursuant to that opinion the Austrian tax administration argues that with reference to the principle of "*lex specialis derogat legi generali*" a subsequently issued tax law can not exercise a derogative authority on preceding treaty provisions in their special field of application. That means for the above described case that remuneration for the supply of manpower can — due to the permanent establishment rule of the existing double taxation conventions — be paid tax free to foreign enterprises.

Agreements concluded for the mode of application of double taxation conventions are put as to rank on the level of ordinances since they are not submitted to Parliament for approval.

5. Legal consequences of illegal conventions

If an international treaty has failed to fulfill all necessary requirements established by national law, then it would hardly be claimed today that this might affect the international validity of the treaty. Such opinion had once been favoured by the framers of the Austrian Constitution [8] but had not found general support later on. According to international law any State may trust in the principle that a treaty concluding country is correctly applying and interpreting its internal constitution. A country which concludes bona fide a treaty with another State without knowledge of the limitation of the treaty making power of the agents acting for that other State may claim indemnity if such other State does not accept the commitments of the treaty. [9]

For the sake of juridical security also the Austrian internal system of law does not have legal acts which are nul and void but only acts which can be annulled. Consequently, an unlawful international convention will first be valid also on the internal level of law, regardless of whether the unlawfulness is due to a failure in procedure (e.g. a law-changing treaty had not been submitted to parliament) or is due to illegal treaty regulations (e.g. a treaty provision is not covered by the Constitution).

Since the amendment of the Austrian Constitution in 1964 there exists the possibility of judicial review of the constitutionality of an international convention before the Constitutional Court.

---

6. Cf. *Kunz*, Völkerrechtliche Bemerkungen zur österreichischen Bundesverfassung, 320.
7. Cf. *Ohlinger*, Der völkerrechtliche Vertrag im staatlichen Recht, 225.
8. Cf. *Kelsen-Fröhlich-Merkl*, Die Bundesverfassung vom 1. Oktober 1920, Bemerkungen zu Art. 50.
9. Cf. *Verdross*, Völkerrecht [4], 105.

If the Constitutional Court grants a request for annulment and declares the treaty to be illegal, then the treaty will cease to be applicable on the internal level of law from the date of promulgation of such decision; the Court might also state a delay for the entry of inapplicability. This delay must not exceed two years in the case of law-changing (law-supplementing or political) treaties and one year in all other cases.

This legal situation explains why Austrian delegations are always anxious to avoid any limitations of denouncement clauses like "the convention may not be denounced before the expiry of a period of five years. . ." in their double taxation negotiations. Because once a provision of a double taxation convention is annulled by the Constitutional Court the Austrian Government must have the opportunity to make such treaty provisions compatible with internal law; if necessary this may be done by way of denunciation.

6. Double taxation conventions and the federal structure of Austria

Austria is a federal State whose legislative as well as administrative power is divided between the Central (Federal) State and the Federal Länder. This applies also for tax matters. However, attention must be drawn to the fact that by far the main part of the total Austrian tax receipts (95 percent) is derived from "Federal Taxes" ("Bundessteuern"). Federal Taxes are regulated by federal law and are usually collected through federal agencies (the Federal Tax Administration). The yield of the most important Federal taxes (especially value added tax and income tax) does not go entirely to the federal budget but has to be shared with the other political subdivisions (Federal Länder and Communities).

The scope of double taxation conventions in general comprises only Federal Taxes; therefore there are no significant problems due to the federal structure of Austria.

There are only three cases where a double taxation convention applies to taxes which are not federal: in the case of the tax on commercial and industrial enterprises (Gewerbesteuer), but only for that part which is levied for the Communities (Gemeinden); in the case of the tax on the sum of wages (Lohnsummensteuer); and in the case of the land tax (Grundsteuer).

Although those three taxes are formally taxes of the Communities (Gemeindeabgaben) (because the Communities have an unconditional claim on the tax proceeds), the legislative power for those taxes is, deviating from the general principle, not attributed to the Federal Länder but to the Central State. The conclusion of a double taxation convention by the Central State therefore does not create any difficulties even for those three taxes. In addition, as regards the taxes of the political subdivisions a specific provision of the Austrian Fiscal Constitution, Bundesgesetzblatt No. 45/1948 (§ 7 para. 4), has transferred to the Central State the competence to act for the avoidance of double taxation, to harmonize such taxes with the rules of international tax law and to avoid impediments in relation to foreign countries.

The only practical effect of the federal structure of Austria on double taxation conventions results from the obligation of the Central State to share the yield of its most important Federal Taxes with its political subdivisions. If the conclusion of a double taxation convention or any other action on the central level might reduce the political subdivisions' share in the yield of Federal Taxes, then negotiations have to be opened in due course with the subdivisions concerned (§ 5 of the Finanzausgleichsgesetz 1973, Bundesgesetzblatt No. 445/1972).

B. SPECIAL RELATIONS BETWEEN DOUBLE TAXATION CONVENTIONS AND INTERNAL TAX LAW

Besides the rather general question of incorporation of double taxation conventions into domestic legislation which has already been discussed, there are to be found some more specific relations between double taxation law and internal tax law which also require appropriate clarification. Seen from the Austrian practice of application of double taxation conventions, those issues could be summarized as follows:

1. *Are double taxation conventions a source of taxation rights which have not been established by the internal tax law?*
2. *Does a double taxation convention influence the manner of execution of taxation rights attributed to Austria?*
3. *Is internal tax law of any relevance for the interpretation of double taxation conventions?*
4. *Are double taxation conventions of any relevance for the interpretation of internal tax law?*

1. The double taxation conventions are not creating new taxation rights

It sometimes happens that a double taxation convention attributes taxation rights to Austria which are not known under internal tax law. To explain that by an example, Article 11 para. 2 of the Austro-Swiss double taxation convention (Bundesgesetzblatt No. 63/1975) provides a 5 percent taxation right on interest payments to the source country. If a creditor resident in Switzerland has granted a loan to an Austrian enterprise, then the double taxation convention gives Austria the right to levy a 5 percent tax on the interest paid for such loan. Under internal law (cf. § 98 of the Income Tax Act 1972, Bundesgesetzblatt No. 440/1972) such interest paid to a non-resident would only be taxable, if it was secured by a mortgage in Austria. If this is not the case then the question arises whether the Austrian tax authorities are entitled to collect the 5 percent tax as provided in the double taxation convention which, as explained above, has equal rank with the Income Tax Act.

In Austria this question has always been answered in a negative sense. That interpretation problem has also been discussed before the Constitutional Court (decision of March 11, 1965, B 210, 211/1964). It is said in that decision that the principal task of a double taxation convention consists of the division of the taxation rights between the two Contracting States; therefore the only effect of a double taxation convention is restricted to a cut down of national taxation rights. The Constitutional Court concludes that a taxable item, the taxation of which is allocated by the convention to a contracting State, may only be taxed in that State if this is permitted by its internal law.

This theory about the effects of double taxation conventions on internal tax law had already been developed by the judiciary in the former German Reich (cf. judgement of the German Reichsfinanzhof of October 3, 1935 III A 267/34, Reichssteuerblatt 1935, page 199); yet it is not without criticism. [10] Doubts about its justification will arise especially in those cases where it leads to a double- *non*-taxation.

If, for example, a German enterprise has acquired real estate in Austria which is not used for the industrial or commercial activities of that enterprise (and which therefore does not constitute a permanent establishment of that enterprise) and if such real estate is sold after 6 years, then article 3 of the Austro-German double taxation convention, Bundesgesetzblatt No. 221/1955, gives Austria the taxation right on the capital gains realized by that transaction. Under domestic law, gains realized by a foreign enterprise in Austria are only taxable if they are attributable to a permanent establishment of that foreign enterprise in Austria or if they result from the disposal of Austrian real estate within five years after acquisition (speculative gains period); some other very specified cases of taxation of a foreign enterprise, as established in § 98 of the Income Tax Act, are of no interest for the present case. Under those circumstances Austria would be entitled to tax the gains derived from the alienation of the Austrian immovable

10. Cf. *Kruse* in Österreichische Steuerzeitung 1975, 200, Anm. 70.

property by virtue of the Convention but is not allowed to do so by its internal law; on the other side, Germany does have the taxation right under its internal law (unlimited tax liability) but would not be allowed to exercise that right because of the rules of the double taxation convention.

2. The relevance of national law for the execution of taxation rights attributed by the convention

According to the principle that a double taxation convention can only restrict national taxation rights but has not the legal power to create new taxation rights, the question of *whether* a taxation right can be exercised by Austria in a given international taxation case has to be resolved by application of international *and* national law; the further question of *how* such taxation may be realised has to be answered by the sole application of national law.

This rule had for instance some importance in the following case: interest derived from sources in the United States of America are taxable in Austria by virtue of Article VII of the Austro-American double taxation convention, Bundesgesetzblatt No. 232/1957. A taxpayer resident in Austria, who received interest income from US state bonds and municipal bonds contested his Austrian tax liability with the argument that such interest income is tax free under US income tax law; he claimed that according to the double taxation convention the Austrian tax authorities were bound to respect that tax exemption. The position of the Austrian tax administration was governed by the above rule and it was argued that the double taxation convention allocated the taxation right to Austria but in no way prescribes how the taxable amount of foreign income has to be ascertained by the Austrian tax authorities. Therefore the tax concessions granted by the US income tax law can be of no importance for the determination of taxable income in Austria. This case was brought before the Austrian Administrative Court but the Court's decision (decision of May 27, 1977, Zl. 417/1966) was in favour of the arguments of the tax administration.

The present rule shows some significance also in connection with the calculation of exempt foreign income for purposes of the computation of the progressive Austrian income tax on non-exempt income. One can frequently observe that taxpayers declare their exempt foreign income as the amount stated in the tax notice of the foreign tax office. This practice seems, however, only acceptable if the provisions for the determination of taxable income are similar in the two countries; strictly speaking, the present interpretation rule would require that in all cases foreign income has to be recomputed on the basis of Austrian income tax law.

Another area for an application of that rule may be found in cases of double residence. If, for example, a taxpayer is resident in Germany and has a secondary residence in Austria (the center of vital interests being in Germany) and his sole income from Austrian sources consists of rental income from the lease of Austrian dwelling houses, then he has a fiscal domicile in Austria and is consequently subject to "unlimited tax liability" under internal law, which means that his German income and income from other countries also would be liable to Austrian income tax. On the other hand, unlimited tax liability also grants to the taxpayer certain tax advantages (e.g. deductibility of life insurance premiums, of certain extraordinary burdens like hospital expenses, the application of certain tax credit amounts etc.) which are not available for non-resident taxpayers as those tax subjects are only liable to Austrian tax as to their income from Austrian sources (limited tax liability). Now, the Austro-German tax convention gives Austria the right to tax the domestic rental income but excludes Austria from a taxation of German and other foreign income. It could therefore very well be argued that if the taxpayer's tax liability is reduced by the convention to the small tax liability of non-residents then there should similarly be a reduction of those tax advantages which are granted to non-residents. The application of the present interpretation rule instead produces the converse result stating that the convention does not interfere with the question of *how* the rental income of the German taxpayer is taxed in Austria; this question has to be settled by internal law. Under internal Austrian law the tax advantages connected with unlimited tax liability are the same regardless of whether the tax liability is based on principal residence or is based on secondary residence. Therefore there would be no valid argument to refuse the said tax advantages to the taxpayer.

It should be noted that Austria has already taken a first step to eliminate that undesirable situation on the level of its internal legislation. In the field of capital taxation the tax exempt amounts which are equally related to unlimited tax liability have been cancelled in all cases where a taxpayer domiciled in Austria is treated as a resident of a foreign country by a double taxation convention (cf. Amendment of the Capital Tax Act in 1976, Bundesgesetzblatt No. 665/1976, fig. 1).

3. The relevance of internal law for the interpretation of double taxation conventions

The principle that national law has to be applied for the interpretation of double taxation convention is arrived at from Article 3 para. 2 of the OECD Model Convention by the Austrian tax administration. This provision says:

> *"As regards the application of the Convention by a Contracting State any term not otherwise defined shall, unless the context otherwise requires, have the meaning which it has under the laws of that Contracting State relating to the taxes which are the subject of the Convention."*

The practical importance of that rule shall be demonstrated in the following case: a Swiss enterprise constructed an apartment building in Austria which is leased to a German enterprise. The German enterprise subleases the flats to Austrians. This does not create as such a permanent establishment for the German enterprise. Under those circumstances there is obviously no doubt that the rents paid by the German enterprise to the Swiss enterprise are taxable in Austria in accordance with the immovable property rule of the Austro-Swiss double taxation convention. It becomes, however, a bit ambiguous whether the German enterprise also may be taxed with respect to the rentals received from the Austrian sublessees. Article 3 of the Austro-German double taxation convention provides that income derived from immovable property situated in Austria may be taxed in Austria. So the question arises whether a sublease-contract should be regarded as the lease of the rights of a leasing contract — which would mean the lease of intangible *movable* property — or if it should be regarded as a lease of immovable property; this question is not specifically dealt with in the Austro-German convention. The Austrian tax authorities are bound to decide that question solely on the basis of internal law which settles this question in the last-mentioned sense. [11]

Naturally, this interpretation rule is not applicable where the convention has expressly stated otherwise. It would therefore not be permitted to refuse the application of the "dividend-rule" of double taxation conventions for profit distributions of companies with limited liability because under Austrian law only profit distributions of joint stock companies are called "dividends". In that case the convention itself has defined the term "dividends" as including the distributions of profits of all "Kapitalgesellschaften".

4. International tax law has no relevance to the interpretation of national tax law

It would certainly be wrong to conclude from the afore-mentioned rule stating the relevance of internal law for the interpreta-

11. Cf. *Schubert-Pokorny-Schuch*, Einkommensteuerhandbuch Anm. 22 to § 98; and decision of the Administrative Court of March 16, 1971, Zl. 1357/1970).

tion of double taxation conventions that there is also an influence exerted in the opposite direction from international law upon national tax law.

If a Swiss enterprise has established an agency solely for the supply of information in Austria, then this agency would not be considered to be a permanent establishment under the definitions of the Austro-Swiss double taxation convention (Art. 5 lit. e). But this definition can only be valid on the international law level; which precludes Austria from any income or capital taxation of that agency. It would not seem to be justified to draw the conclusion that this agency does not constitute a permanent establishment for the purpose of the Value Added Tax either. Under the Austrian Value Added Tax Act 1972, Bundesgesetzblatt No. 223/1972 (§ 12) foreign enterprises are entitled to claim a deduction or refund from "input tax" ("Vorsteuer") under the condition (inter alia) that they have a permanent establishment in Austria. For the interpretation of the term "permanent establishment", as used in the VAT-Act, only internal law can be employed; according to internal law (§ 29 of the Federal Procedure Act, Bundesgesetzblatt No. 194/1961) such agencies are also treated as permanent establishments; it would therefore not be permitted to refuse a deduction of "input tax" to the Swiss enterprise by reference to the definitions of the Austro-Swiss double taxation convention.

The permanent establishment definition of the double taxation convention must also remain without relevance for the question of whether the employees of that agency have to pay their income tax by assessment or by deduction at the source. The Income Tax Act provides a deduction system only if the employer has a permanent establishment (§ 81 of the Income Tax Act) in Austria. Again the determination of whether the agency constitutes a permanent establishment for wage tax purposes can not be based on treaty definitions but solely on the definitions of internal law.

C. SUMMARY

Without touching the problems of the relations between international law and national law in the sense of a monistic or dualistic theory, it seems to be a matter of fact that these are two different areas of law which, however, have some connections. It was the purpose of this article to outline such connecting relations in the field of international avoidance of double taxation in the case of Austria.

Double taxation conventions are primarily a source of international law. One of the most important relations between treaty law and national law is due to the fact that treaty law has to be enforced in the territories of the Contracting States which requires an incorporation of treaty law into the national system of law. In the case of Austria, treaty law is incorporated by using the method of general transformation; the method of special transformation could be employed alternatively but has not yet been applied with regard to double taxation conventions. For a proper transformation into national law certain requirements established by the Constitution have to be observed: double taxation conventions may only be concluded by the Federal President; they are changing internal law and therefore need an approval by parliament; this implied that they cannot be concluded *uno acto* but need a ratification clause. Double taxation conventions have the rank of ordinary federal law; their regulations must therefore be in full agreement with the Austrian constitutional law. Any illegality in the concluding procedure or in the substance of treaty regulations does not make the convention nul and void but could lead to a repeal (having effect *ex nunc*) by the Constitutional Court; such annullment refers only to the national validity of the convention and does not affect the binding force on the level of international law.

Some further links between international tax treaty law and national law which have to be clarified for a proper application of double taxation conventions can be summarized as follows: double taxation conventions do not create taxation rights which are not established by national law; the manner in which taxation rights attributed by the convention have to be exercised can only be decided by the national law; double taxation conventions have to be interpreted along the lines of internal law, but double taxation conventions are not used for the interpretation of national law.

II. THE ENFORCEMENT OF PUBLIC TAX CLAIMS AND THE LEGAL PROTECTION OF AUSTRIAN TAXPAYERS (UNDER SPECIAL CONSIDERATION OF POSSIBLE INTERFERENCE WITH INTERNATIONAL TAX LAW)

A. THE ORGANISATION OF THE TAX ADMINISTRATION

Federalism[12] is a guiding and predominant principle of the Austrian Constitution. Federalism in that sense means that the legislative power as well as the executive power are divided between the Central State ("Bund") and the Federal Länder ("Bundesländer") — the judicial power, however, being exclusively reserved to the Central State; further, the Federal Länder are entitled to cooperation in the framing of federal legislation (they have a suspending veto in the second — Federal — Chamber of Parliament). The administration of the Central State is only in part exercised directly through federal agencies (this applies e.g. to matters of taxation, state monopolies, patent affairs, and to post and military administration). The main part of the governmental affairs of the Central State is, however, administered by using the "indirect federal administration system" ("mittelbare Bundesverwaltung"), according to which agencies of the Federal Länder (the Governors of the Federal Länder and their subordinate offices and district offices) are charged with the execution of the administrative power of the Central State; in that particular function the agencies of the Federal Länder are acting on behalf of the Central State and are therefore, in that respect, subject to orders and instructions of the central administrative bodies of the federal government.

The lowest level of the administrative organisation of Austria is constituted by the Communities ("Gemeinden"); they are, like the Central State and Federal Länder, territorial entities ("Gebietskörperschaften"); they are given jurisdiction over their local affairs but they are also units of state administration. Just as certain areas of jurisdiction have been accorded to the Federal Länder by the Constitution (which may be exercised fully independently from agencies of the Central State), certain powers have also been assigned to the Communities which may be exercised

12. Art. 2 of the Federal Constitution; definition of the term and references to further literature cf. *Ermacora*, Österreichische Verfassungslehre, Wien 1970, 251; *Walter*, Österreichisches Bundesverfassungsrecht, Wien 1972, 107; *Walter-Mayer*, Grundriss des österreichischen Bundesverfassungsrechts, Wien 1976, 45.

equally without intervention of the Central State or of the Federal Länder (autonomous jurisdiction). But as the Federal Länder are to a certain extent held to act also on behalf of the Central State ("indirect federal administration system") also the Communities are charged with some duties which are not related to their autonomous jurisdiction but result from their function as an administrative unit of the State (deferred jurisdiction).

Along these lines, in Austria the legislative power is divided only between the Central State and the Federal Länder, whereas the administrative power is attributed to all three levels of government, to the Central State, the Federal Länder and the Communities; activities of the Federal Länder and of the Communities performed within the scope of deferred jurisdiction are subject to orders and instructions of the superior government.

In spite of the fact that inferior territorial entities of the State ("Gebietskörperschaften") might be charged with administrative duties on behalf of the superior territorial entity (an upwards transfer of duties from the inferior entity to the superior entity would be permitted if the entity so charged agrees; but this occurs very rarely) it appears that the principle of federalism has been successfully accomplished not only with regard to the distribution of the legislative powers but also with respect to the organisation of the administration. Following that concept of federalism, one is inclined to assume that it is the responsibility of the territorial entities of Austria to raise their own revenue necessary to cover the cost of their administrative activities; especially by means of collecting their own taxes. Such solution, which corresponds to the federal system, is outlined in the Constitution[13] but has not been adopted in practice. This may be explained historically: only the Central State has always had a very effective administrative body at its disposal for raising tax revenue, which is well organized and staffed with well trained personnel. It has not been found feasible to establish another similar organisation on the level of the Federal Länder and the Communities. This is the simple reason why the tax administration of the Central State has always collected the more important and significant taxes[14]. In spite of their virtual sovereignty in tax matters, as provided by the Constitution, the Federal Länder and the Communities administer only some minor taxes; this is due to their restricted tax collecting machinery. From the total tax revenue of Austria approximately 95 percent is levied by the tax administration of the Central State. In pursuance of the principle of federalism and according to the constitutional obligation to maintain all territorial entities[15] the financial maintenance is secured by granting to the Federal Länder and to the Communities an appropriate share of the yield of the taxes levied by the Central State and by according to them certain financial transfers and contributions.

The classic taxes on income, turnover, capital, and taxes on certain transactions as well as the taxes on consumption, state monopolies' duties and customs duties, are all levied through the tax authorities of the Central State.

The statutory regulations of the organisation of the tax administration of the Central State are set out in the Federal Tax Act of December 13, 1974 Bundesgesetzblatt No. 18/1975 (Abgabenverwaltungsorganisationsgesetz — AVOG) and partly in the Federal Act dividing jurisdiction among the Federal Ministries of 1973 (Bundesministeriengesetz 1973), Bundesgesetzblatt No. 389/1973. If certain exceptional cases, as specified by law, are admitted the enforcement of the public tax claims is on the local level ("first instance") conducted by *tax offices* ("Finanzämter"). Customs are on the local level collected by *customs offices* ("Zollämter").

The intermediate instance, basically on the level of the Federal Länder, is composed of the *Regional Finance Directorates* ("Finanzlandesdirektionen"); in relation to the finance offices and to the customs offices they are superior and have directing authority; they are, further, the appellate authority. Activities of a mere "first instance character" are assigned only in very rare cases to the Regional Finance Directorates (in particular in consumption tax affairs and with respect to customs duties).

The supreme administrative authority in tax matters is vested in the *Federal Ministry of Finance* ("Bundesministerium für Finanzen"). As regards financial affairs it is in particular responsible for matters concerning the Fiscal Constitution, concerning the fiscal equalisation between the Central State and its political subdivisions ("Finanzausgleich"), concerning the Federal Budget and concerning legislative measures like the preparation of government bills with respect to such matters. Only very exceptionally (if explicitly prescribed by law) would the Federal Ministry make a decision in an individual tax case because its predominant function is its supreme organising and directing power.

"First instance decisions", which are of interest here, are rendered by the Federal Ministry of Finance in international tax affairs; in the absence of double taxation conventions or if such conventions fail to eliminate international double taxation the Ministry of Finance may grant upon request of the taxpayer an exclusion from taxation of certain elements of the tax base or that foreign taxes charged on such elements be credited wholly or partly against Austrian tax (§ 48 of the Federal Procedure Act); further, it falls under the jurisdiction of the Ministry of Finance to allow credit for foreign inheritance or gift taxes[16] to Austrian tax with respect to assets situated abroad. Finally, the Ministry of Finance may issue "immigration tax privileges" ("Zuzugsbegünstigungen") in the field of income and capital taxation[17] if taxpayers have moved their domicile from a foreign country to Austria and are not gainfully employed in Austria (roughly speaking, this tax privilege tends to mitigate the effects of unlimited tax liability created by taking up residence in Austria). Due to its capacity as the supreme administrative body of the Austrian tax administration the Ministry of Finance has to act in mutual agreement procedures under double taxation conventions (cf. art. 25 of the OECD Draft Convention and the respective bilateral conventions).

The "Land" Finance Directorates are the last instance for taxpayer appeals; the Federal Ministry of Finance is not organised as an appellate authority. Therefore, in Austria, redress to higher administrative instance may only be sought as to decisions of Finance Offices or of Customs Offices; the remedy of an ordinary administrative appeal would not be available as to decisions of the "Land" Finance Directorates or of the Federal Ministry of Finance; regardless of whether such decisions are rendered on appealed cases or have a mere "first instance character".

Tax provisions of double taxation conventions form part of the internal tax law system after approval by Parliament; the source of tax law (national or international) therefore does not affect the jurisdiction of the tax authorities. Neither any special agencies are established nor do any special rules of competency exist with regard to international tax cases, i.e. especially cases of international double taxation conventions or other cases where international bilateral or multilateral treaties have to be applied.

B. THE ADMINISTRATIVE ENFORCEMENT OF PUBLIC TAX CLAIMS; BASIC RULES OF PROCEDURE

Under Austrian tax law — as e.g. under German law — the tax claim is a claim of public law inherent in the State against the taxpayer (who incurs a corresponding tax liability) which comes into being upon the fulfillment of all respective conditions as set out in the tax law. This means that it is the factual action of the taxpayer which for itself constitutes the tax claim of the State if such action conforms with the abstract rule of a provision of tax law[18]. This concept is based on the idea of a pure "law-bound-taxation" ("Gebot der Tatbestandmässigkeit der Besteuerung") and on the fundamental principle that the whole administration must be exercised only by virtue of law;[19] it is therefore not the delivery of the tax notice but only the action of the taxpayer covered by a rule of tax law which constitutes both the tax claim of the government and the tax liability of the taxpayer. From that view the activities of the tax authority which end up in the delivery of the tax notice[20] are only of a declarative nature and do not create any tax liability as such; the tax notice for itself does not create the public tax claim but is only an administrative vehicle to enforce an already existing tax claim and it is a prerequisite for possible subsequent compelling actions against the taxpayer (a call to pay and the basis for an execution order).

The rules of tax procedure[21] had to be shaped with a view to the specific character of tax claims as being claims of public law; they have to respond to the principle of a "law-bound-taxation" (Tatbestandmässigkeit der Besteuerung) and should meet the requirements of an administrative procedure which in its entirety is prescribed by statutory law. In that sense the following basic procedural rules can be outlined:

A predominant feature of the Austrian tax procedure can be seen in the principle that the tax authorities are acting *ex officio*, which means that — omitting certain proceedings which are only opened upon request (e.g. certain customs proceedings) — it is the tax authority which opens, directs and closes the tax proceedings and it is the responsibility of the tax authority to find out all the facts relevant to a proper determination of the tax; the taxpayer is obliged to cooperate; he is bound to disclose in full the truth and, without any restriction the facts which are material for taxation purposes; failures to meet such obligations would be sanctioned by penalties. Due to the legally provided *ex officio* principle the tax authority is concerned with the entire fact finding process (statement of the relevant facts and production of appropriate proof); accordingly, the tax authority has to consider not only facts in favour of the public tax claim but also circumstances which reduce or might even deny the tax liability. In line with the general procedural rule that nobody shall demand unrealizable or irrelevant action the obligation assigned to the tax authority to ascertain *ex officio* the relevant state of facts will be limited where a taxpayer is not willing to render appropriate cooperation. If the taxpayer refers to extraordinary and therefore unusual facts the burden of proof will rest upon him. The taxpayer's obligation to cooperate increases in international tax cases while the corresponding obligation of the tax authority to inquisitorial fact finding decreases; here the tax authority does not possess such manifold administrative remedies for the ascertainment of the facts as in domestic taxation cases. If the taxpayer fails to meet his obligation for cooperation, the tax authority would be entitled to determine the tax claim upon the material at hand as well as upon reasonable assumptions without taking into consideration all possible eventualities and without being obliged to prove all facts of reference.

This leads to the principle of the *free appreciation of evidence* ("freie Beweiswürdigung") which — like in any other modern procedural system — means in its core that the authority autonomously decides after careful examination of the outcome of its investigations whether the fact in question has been proved or not. Free appreciation of evidence does, however, not mean liberation from the rules of logic. If the existence or nonexistence of the fact at issue is inferred from some other properly proved collateral facts, then such inference must follow the rules of logic. There must remain a correct and rational relationship between the individual steps of reasoning, the respective considerations and assumptions must be conclusive and the taxpayer must be notified in order to enable a verification of the arguments of the tax authority. Before the closing of any tax proceedings the taxpayer must be given the opportunity to comment on the fact findings of the tax authority and to present his own views on the facts and to lodge objections, so that a most accurate ascertainment of the truth is secured *(Principle of hearing the taxpayer)*. To enable a proper defence of the taxpayer's rights but also for the sake of a most correct fact finding the taxpayer has been accorded the *right to consult the official files*; this right is granted so long as it would not be to the detriment of third persons (internal pleadings of the authority are also excluded from consultation).

The ultimate goal of tax proceedings is a lawful determination of the public tax claim; this requires that all circumstances which are of relevance have to be properly cleared up. Hence, neither assumptions brought forward by the taxpayer nor facts being agreed upon (conventional truth) will have final importance; it is only the *actual truth* (materielle Wahrheit) which has to be discovered and has to be the basis of the taxation.

Tax procedure is largely governed by the *principle of writing*. Accordingly, requests of the taxpayer have to submitted and decisions and other closing actions of the tax authority have to be delivered in writing; oral requests and oral decisions are admitted only in very exceptional cases. The proceedings are *not open to the public*. The facts disclosed to or ascertained by the tax authorities are subject to a very strict *confidential treatment* (infringements would be sanctioned under criminal law).

As far as the tax law does not set out time limits the disregard of which would cancel certain rights of the taxpayer, the tax authorities have to take cognizance of requests and statements of the taxpayer with regard to questions of fact and of law until the tax decision has become final (this applies also for appealed cases); it does not matter whether or not it was the fault of the taxpayer that such requests and statements had not been submitted earlier (no prohibition for references to new facts; contumacy does not affect tax liability; thus e.g. no waiver of rights by late submissions of tax returns).

Taxpayers have the right to appoint a representative for the tax proceedings but they are not obliged to do so in the sense of a compulsory system of lawyer representation (*right to be represented*). Not everybody is allowed to act on behalf of a taxpayer before the tax authorities on a professional basis; lawfully admitted thereto are only attorneys at law, patent lawyers, notaries acting within their professional charter and chartered accountants (chartered according to the Wirtschaftstreuhänderberufsordnung BGBl. No. 125/1955: Steuerberater, Beeidete Buchprüfer, Wirtschaftsprüfer). If such qualifications have been acquired abroad then this would not be an entitlement to represent taxpayers in Austria, since this is neither provided in internal law nor in international agreements.

Tax claims which have been decreed by tax notice and which are not paid in time (one month after the tax notice has been served upon the taxpayer) are ready for execution. Appealing against the tax notice would not postpone execution. However, if a due pay

18. § 4 para. 1 of the Federal Procedure Act; *Stoll*, Steuerschuldverhältnis Wien, 1972, 13;
19. Art. 18 of the Federal Constitution, § 5 of the Fiscal Constitution
20. Most taxes, in particular the principal taxes, are assessed by servin a tax notice; in addition, also the system of tax withholding and self assess ment is known by the Austrian tax law; here the tax authorities woul only intervene in case of deficiencies in computation or payment.
21. With regard to the Austrian tax proceedings reference is made t *Reeger-Stoll*, Kommentar zur Bundesabgabenordnung, Wien 1966 an Die Bundesabgabenordnung (Manual) Wien 1975 and *Lager*, Bunde abgabenordnung, Wien 1975.

ment would invoke substantial hardship for the taxpayer then the tax authority may decide (at its free discretion) that the date of payment be postponed (tax respite) or that the tax due might be paid by installments, provided that those concessions would not jeopardize the final collection of tax.

All costs of the activities of the tax authorities (including costs incurred in appealed cases) are borne by the tax administration whereas costs incurred by the taxpayer during the tax proceedings are borne by the taxpayer (principle of self-payment, damages for the cost of proceedings are unknown with regard to both the tax administration and the taxpayer). Only in certain exceptional cases (customs and consumption tax proceedings, proceedings in matters of the State Monopolies and executionary proceedings) would a refund of cost from the taxpayer to the tax administration take place.

C. LEGAL PROTECTION OF THE TAXPAYER

1. Administrative appeals

The ordinary legal remedy against administrative orders ("Bescheide") of local tax authorities (tax authorities in the first instance: Finance Offices and Customs Offices) is called appeal ("Berufung"), the use of which would be disallowed only in very rare cases. The time limit for filing an appeal is one month; if reasonably justified it can be extended and even re-extended. If an appeal is submitted in due course by mail, then it is deemed to have been lodged in time even if it was received by the tax authority at a later date. The appeal may be filed with the tax authority which has rendered the contested order or may be submitted to the competent "Land" Finance Directorate.

If a taxpayer has filed an impermissible appeal the tax authority would *reject* it ("zurückweisen") without going into the substance of the matter. A rejection would be spelled out, for example if the appeal was not filed in time or if it was disallowed because a remedy had been excluded by law or if the case has been already adjudicated ("*res judicata*") or if the taxpayer has made a lawful waiver of his right of appeal or because the taxpayer is not the person who is entitled to lodge the appeal.

If an appeal fails to meet all formal requirements (e.g. omission of the signature or of a due authorization of the preparer of the appeal) or if there are some other defects (no statement in which points of the tax notice are contested or in which modifications are wanted, lack of reasoning) the tax authority would not be allowed to reject but would instead be obliged to call the taxpayer for appropriate amendments stating that the appeal would be deemed to have been withdrawn if the amendments are not submitted within a reasonably fixed period of time.

If the appellant has a valid right for appeal and if his appeal has been filed in time and if it corresponds to the required formalities, then the authority will have to decide on the issue. Such decision on the merits would replace completely the appealed order and could modify the former ruling without any restraints (no prohibition of a "*reformatio in peius*"). Unfounded appeals would be refused ("Abweisung").

The authority which has passed the complainted order (i.e. the local district office) has the opportunity to render first its own decision on the submitted appeal. Such "*pre-decision*" ("Berufungsvorentscheidung") on the appeal helps to economize tax administration. Especially where the authority for its part recognizes a fault in its own order it will make use of such possibility in order to satisfy the taxpayer without being obliged to refer to the higher authority. But in lieu of this the local district office would be free to refer the appeal immediately to the appellate authority ("Land" Finance Directorate) without passing a pre-decision. If a taxpayer is dissatisfied with a pre-decision rendered by the local district office he may apply within one month to the superior authority ("Land" Finance Directorate) for a decision in his tax case; such action of the taxpayer would remove the pre-decision. If the taxpayer does not file such application, then the pre-decision would become final and would furthermore replace the complainted order.

If the local district office has not rendered a pre-decision, or if this has been done but upon due application of the taxpayer to the appellate authority the pre-decision has been removed, then the Land Finance Directorate[22] will have to settle the dispute. The decision of the "Land" Finance Directorate will be on the merits. It has to deliver a new decision on the facts which replace the appealed order. During the proceedings of appeal the "Land" Finance Directorate exercises the rights and bears the procedural obligations of a first instance authority. It may, if necessary, reopen a new fact finding procedure or may solely supplement the facts ascertained by the local district office and it has on its part to find evidence. The "Land" Finance Directorate is in no way affected by the ruling of the appealed order and it may therefore modify it in any regard even to the detriment of the appellant. The appellate authority is, further, not required to restrain itself to the disputed points of the case and can therefore reconsider issues already agreed upon. Under the Austrian tax procedure the decision of the appellate authority is therefore neither barred by formal restrictions nor affected by previous rulings in the case; broadly speaking it has to be rendered with regard to points of fact and of law as if it was the very first decision in the tax case; it replaces completely the complainted order.

It is worth noting that it is immaterial for jurisdiction and proceedings in appealed cases whether the case is purely domestic or international; further it does not matter, neither before the local district office nor before the appellate instance whether the appellant is an Austrian citizen or not, resident in Austria or not.

2. Judicial protection[23]

Under Austrian law the judicial protection of the individual against actions of the administration has not been put in the hands of ordinary courts but has been centralized in the *Administrative Court*[24]. This centralization is multiple. First, the Administrative Court has to deal with complaints against the activities of administrative authorities of the Central State, of the Federal Länder and of the Communities (there have not been established similar courts on the level of the political subdivisions); second, it is the central institution for redresses against administrative orders of all branches of governmental administration (there do not exist special courts e.g. in social welfare or in fiscal matters); third, the jurisdiction of the Court is final, there is no further appeal available to superior courts.

For the sake of a most effective guarantee of constitutional rights a further Court of public law has been established beside the Administrative Court; the *Constitutional Court* (being neither inferior nor superior to the Administrative Court). In addition to

---

22. Appeals in specific matters, especially matters of income tax, corporation tax, tax on commercial and industrial enterprises, value added tax and capital tax are decided before Senates of Appeal established at the "Land" Finance Directorate. Such Senates of Appeal are not separate authorities (though they are not subject to directions and some members of the Senate are not officers of the finance administration) nor are they courts or like institutions; they are simply a very specialized department of the "Land" Finance Directorate.

24. Art. 129-136 of the Federal Constitution; Verwaltungsgerichtshofgesetz 1965, BGBl. No. 2; *Ermacora*, Verfassungslehre, 186, 392; *Walter*, Bundesverfassungsrecht 661, *Walter-Mayer*, Grundriss des österr. Bundesverfassungsrechts, 236.

the many functions assigned to it by the Constitution the Constitutional Court operates also as a special administrative court. In the discharge of that function the Constitutional Court has to deal with complaints against final administrative orders after all administrative remedies have been exhausted; but its jurisdiction is limited to issues of alleged violation of constitutional rights[25] (violation of Civil Rights); if the complainant seeks redress against infringements of other rights (if administrative orders are in conflict with ordinary law or with ordinances) then he has to apply to the Administrative Court. The Constitutional Court has a centralized position which is comparable with that of the Administrative Court.

Both, the Constitutional Court as well as the Administrative Court are "courts" in its proper sense; jurisdiction is exercised by judges which may neither be dismissed or removed nor are subject to any directions. In the proceedings before the Courts the complainant and the sued authority (the authority which has passed the final complainted order) are parties with equal procedural rights.

Redress may be sought before the Courts only after the whole appellate machinery of the administration has been run through and only after the administrative decision has become final. Jurisdiction is thus exercised "*a posteriori*". It is not the purpose of the two supreme Courts of public law to act in lieu of the administration and to pass a decision on the facts itself; their function is solely a supervising one and in the discharge of that function they simply quash the complainted order if it is found to be unlawful, or they reject the appeal if a violation of law could not be proven. Accordingly, the Courts' decision would not be rendered on the merits, and would therefore only annul the complainted order but could not replace it. Instead, it would be rendered to the authority which lost the dispute which would render a new decision; in doing this, it is bound by the ruling of the supreme Court.

It should be noted here that it is immaterial for the jurisdiction of the two Courts whether the case requires the application of domestic law or of international tax law; it is, further, in general not important whether the appellant is an Austrian citizen, a legal entity or an individual resident in Austria or not.

The complaint has to be lodged before the Court within a time period of 6 weeks (which cannot be extended) after the final administrative order has been served. The enforcement of the complainted order would not be suspended by filing a complaint, except the Court itself would grant a suspending effect upon special request of the complainant if the enforcement of the administrative order would cause irrevocable damage and if public interest would not require immediate execution.

a) Complaints to the Administrative Court[26]

To enable the Administrative Court to open judicial proceedings, complaints (Beschwerden) to the Court have to meet certain requirements: a proper specification of the complainted administrative order and of the authority which has delivered that order, a description of the state of facts, a certain demand, a statement of the grounds on which the complaint is founded and a reference to the right which the complainant asserts to have been deprived of. The review of the taxation case would then be limited to those points which have been brought to the attention of the Court; the Court would not be in the position to take up questions which have not been contested in the complaint.

Complaints to the Court must be signed by an Austrian attorney at law;[27] but the obligation to be represented by a lawyer is, with regard to further procedural steps, not strict; the appellant may very well defend his case in person before the Court; but if he wnats to be represented this is only permitted through an Austrian attorney at law (even chartered accountants would be excluded from representation).

According to its mere supervising jurisdiction the Administrative Court has to reconsider the legality of the complainted order upon the facts as ascertained by the administrative authority. This obligation to accept the facts reported by the sued authority would be removed only if the stated facts are inconsistent or repugnant, or if they do not correspond to human experience of every day life or if inferences of facts have been made contrary to the basic rules of logic or if the conduct of the fact-finding procedure has been wrongful. But even in such cases the Court would not make the necessary investigations on its part but would only quash the defective order of the administrative authority. The sued authority would then be in charge to reopen the fact-finding procedure and to deliver a new decision. In the absence of such deficiencies in the previous fact-finding proceedings the Court would be obliged to adhere to the facts as stated; this would imply for the parties involved in the litigation the corresponding prohibition to refer to new points of fact which had not been considered in the former administrative proceedings.

If the Court holds that the appealed order has violated a provision of law then it would quash the unlawful order. However, it does not constitute a violation of law if the complainted order has been rendered by virtue of discretionary powers specifically accorded by law. The Court would not intervene if the authority has chosen in the lawful discharge of is discretionary powers and for equitable reasons one particular solution out of several ones which would have been in line with the law; this would even be true if the adoption of another solution would have been more feasible; that position is due to the fact that the Court is charged with the supervision of administrative actions with regard to lawfulness but not to efficiency.

If the appealed order has been rendered by an authority without jurisdiction then this would in any case lead to its cancellation, even if such default had not been raised by the appellant, because incompetency of the authority would be considered as a failure which is like a deprivation of the individual's Civil Right to the due judge. Therefore, in cases of incompetency a cancellation is inevitable, even if the appealed order had otherwise been in full accordance with the law.

A violation of procedural rules, other than rules of competency, would (omitting repugnant fact-findings of the sued authority or fact-findings which require supplementary investigations) only give rise to an annulment of the appealed order if a proper application of such procedural provisions would have caused a different decision of the sued authority (principle of the substantiality of deficiencies in procedure).

The successful party is entitled to claim a refund of the cost of the proceedings from the losing party (costs are fixed by ordinance).

b) Complaints to the Constitutional Court[28]

Final orders which have been rendered by the administration after the whole administrative machinery has been run through may be tried before the Constitutional Court if the appellant avers that such order has deprived him of rights secured by the Constitution or if an allegation is made that the order is based on illegal ordinances or unconstitutional law or on illegal international treaties.

Any complaint so filed has to be accompanied by a statement of the relevant facts and by a specification of the rights which the complainant asserts to have been deprived of in order to constitute the jurisdiction of the Court. In contrast to the Administrative Court proceedings pleadings of the complainant would not restrict Court jurisdiction; if once the prerequisites for Court jurisdiction are given, the Constitutional Court will on its part give thought to any violation of constitutional law in the com

plainted case. Complaints have to be filed by a duly authorized Austrian attorney at law; a representation in court proceedings is only permissible through that attorney.

The Constitutional Court considers whether the appealed order has touched on the constitutional rights of the complainant; under Austrian law thereto belong in particular the Civil Rights having constitutional rank[29].

A tax notice may especially violate the taxpayer's right for *equality under law*. An infringement of that right (Art. 2 Staatsgrundgesetz of Dec. 21, 1867 RGB1. No. 142 and Art. 7 of the Federal Constitution)[30] can be ascertained only by means of comparisons with administrative actions against others. A violation of the right of equality under law by government action will in practice only be recognized if the authority is acting against an individual differently than against others without having fair and equitable reasons to do so, that is to say, if the authority is acting in an arbitrary way (the authority disregards deliberately or by negligence substantive or procedural provisions of law to the detriment of the individual); such violation would also be assumed if the authority interprets a provision of law in a sense that if such statutory provision would actually have that meaning the provision would on its part be in conflict with the rule of equality under law. The rule of equality under law is applicable only with regard to Austrian citizens and to domestic legal entities.

In that context reference should also be made to the basic right that *nobody shall be deprived of his property*[31] except in cases provided by ordinary law (art. 5 of the Staatsgrundgesetz and Art. 1 of the Protocol to the Convention for the Protection of Human Rights and Fundamental Freedoms, BGB1. No. 210/1958). The right of private ownership may therefore very well be restricted by ordinary law, provided that such limitations do not destroy this right in its very substance. (This means that private ownership has to be maintained as an institution of law.) A tax notice will always affect private ownership. If the statutory provision by virtue of which the tax notice was rendered is kept in line with the principle of private ownership as guaranteed by the Constitution, then an infringement of the basic right of private ownership could only be assumed if a decision was rendered which contained such important deficiencies that it can only be compared with an administrative action outside the legal order or be compared with actions rendered upon wrongful interpretation of law, the wrongfulness exceeding minor defaults and being already contrary to logic. Minor faults which do not go as far as lawlessness and which would not be considered an application of law contrary to the rules of logic would themselves not render the tax notice unconstitutional but only unlawful (contrary to ordinary law). This would invoke the jurisdiction of the Administrative Court.

The Constitution guarantees the right of ownership also to aliens and to legal entities incorporated abroad.

A further constitutional right, the *right to a "due" judge* (Recht auf den gesetzlichen Richter) (Art. 83 para. 2 of the Federal Constitution) is understood in Austria also as a constitutional protection of the legal competences of the administrative authorities. Actions of incompetent authorities and illegal refusals of competent authorities to pass a requested decision may therefore equally be contested before the Constitutional Court.

If the Constitutional Court discovers an infringement of rights guaranteed by the Constitution then it will quash the complainted order; by that the complainted case will be put back on the procedural stage which it had before the complainted order has been delivered by the authority. The sued authority is obliged to take immediately the necessary steps to establish a legal situation which responds to the ruling of the Constitutional Court.

The losing party may be called on to refund the cost of proceedings.

3. Judicial review of law before the Constitutional Court[32]

Under certain conditions the Constitutional Court has to verify whether provisions of law of an inferior rank correspond to higher ranking provisions (Art. 139, 140, 140a of the Federal Constitution). Ordinances conflicting with ordinary law or with the Constitution and ordinary laws conflicting with the Constitution may be annulled by the Constitutional Court; this concept is based on the theory of the hierarchic organisation of law in Austria (Stufenbaugedanke; Merkl). In the discharge of that function the Constitutional Court is not acting *ex officio* but needs an appropriate initial demand, as provided by the Constitution.

By an amendment of the Constitution in 1975, Bundesgesetzblatt No. 302/1975, individuals have been entitled to file an application before the Constitutional Court in order to obtain a review of provisions of law if immediate infringement by such provisions is alleged. But as tax law is executed solely by means of issuing administrative orders this amendment is of rare interest with regard to tax matters. The following outline will only refer briefly to the main aspects of the Court's judicial review of law.

A reviewing procedure would be opened by the Constitutional Court if it discovers during the reconsideration of a complainted case that a provision of law has been applied therein which might be in conflict with higher ranking law (this is the sole exception from the earlier mentioned rule that judicial review is opened upon demand); judicial review may further be obtained upon demand of the Administrative Court if doubts arise about the constitutionality of a provision of law which has to be applied in a case brought before that Court. The individual complainant has no formal right to invoke judicial review of law; but he is of course free (both in Administrative Court proceedings and in Constitutional Court proceedings) to draw the attention of the Court to any unconstitutionality of law and thus to suggest indirectly judicial review.

As indicated above, judicial review requires the application of the suspect provision of law in a complainted case. Judicial review will therefore only regard those parts of the law which are of relevance for the complainted case. Solely in the event of extreme deficiencies, in the case of incompetency of the law making institution, in cases of defects of promulgation or if an ordinance has been issued without legal authority the wrongful law might be annulled as a whole.

If a provision of law on which the complainted order is based had been annulled then the complainted order has lost its legal base and has to be quashed too. The fresh order which has to be rendered by the authority has to be drafted as if the annulled law had never existed (effect of the annulment *ex tunc*). However, the annulled law will enjoy further applicability with regard to all other cases on which no final decision has yet been rendered by the administration (as concerns cases already decided upon finally, the annulment of the respective provision of law would have no effect since the annulment of law does not mean that the law has been null and void but that it is annulled for the future) and which occurred before the annulment becomes effective (the Court may grant exceptions); the annulment becomes effective by its promulgation or after the expiry of a cer-

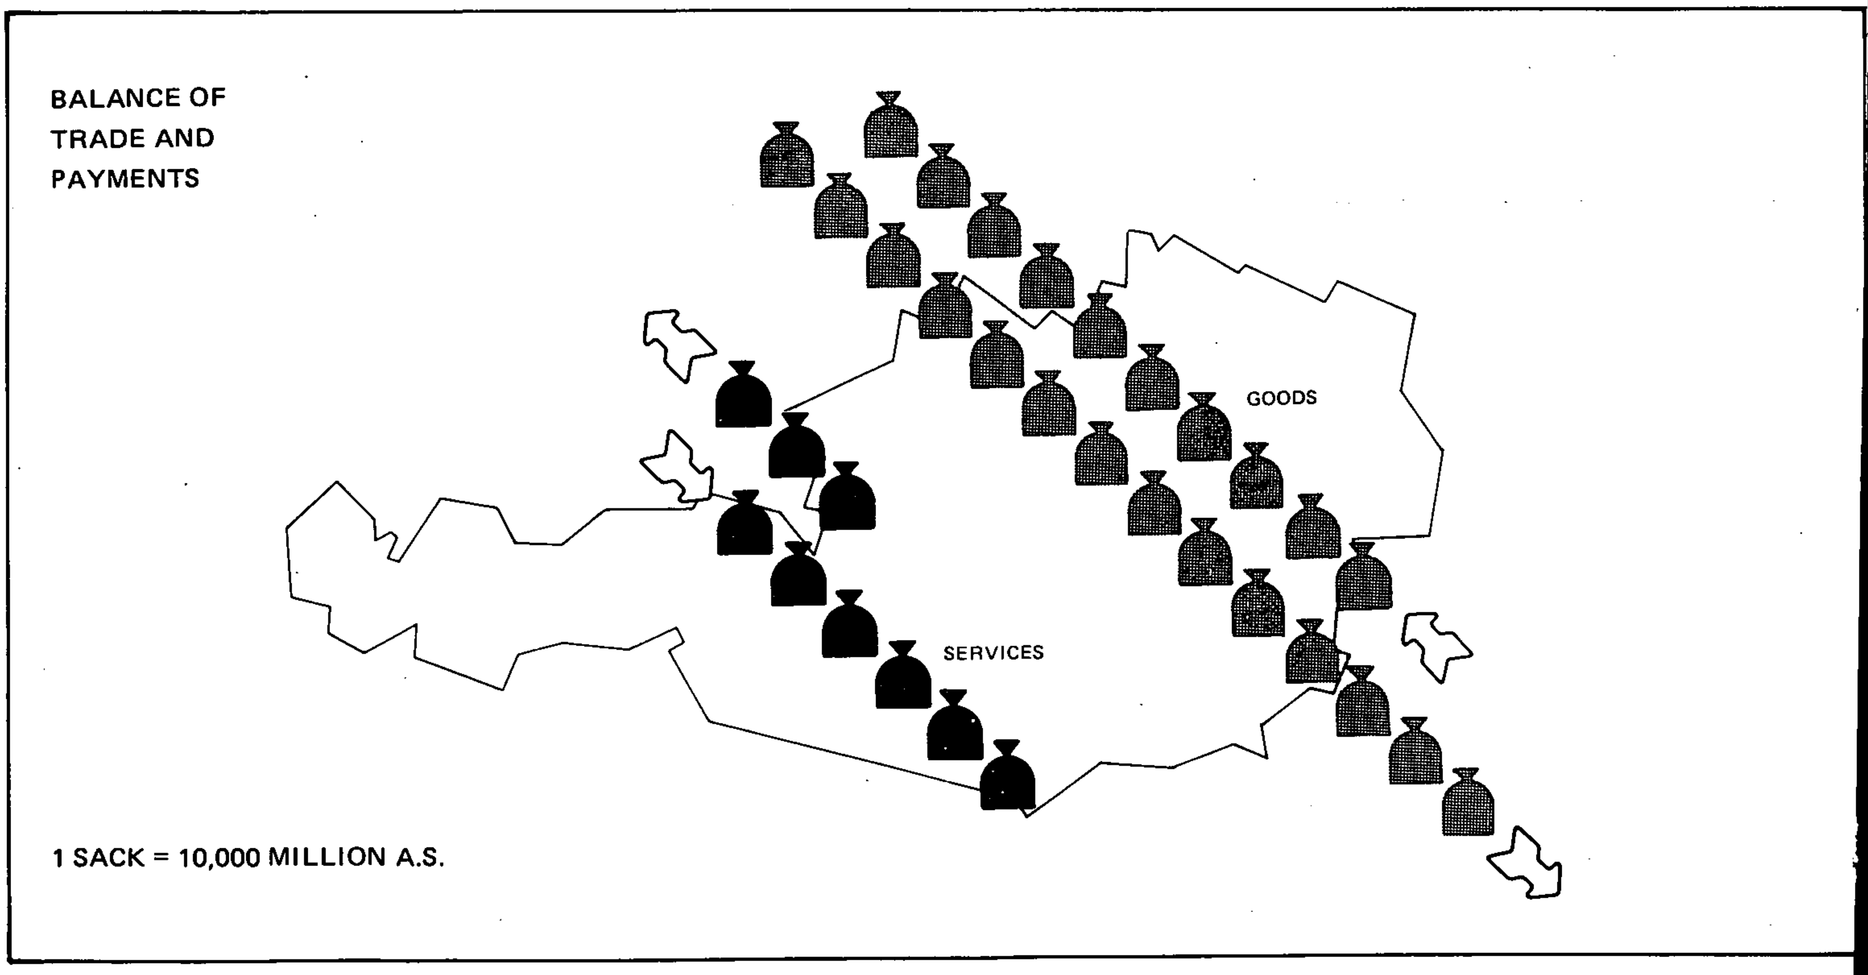
tain time period as prescribed by the Court (6 months with regard to ordinances and 1 year with regard to statutory law at the maximum; this concept prevents a void in the law and the competent legislative power has the opportunity to pass new provisions in due course for the sake of a continuous ruling of law). The annulment of law is therefore only of relevance for the initial case of the annulment; other cases will benefit only if they occur after the annulment has become effective.



The main reasons for annulments of law are deficiencies in the law making procedure; but also infringements of the principle of equality before law are frequently observed and sanctioned by an annulment of the law. The Constitutional Court regularly refuses to review tax law with respect to the *basic right of private ownership*. As pointed out earlier, that basic right may, in accordance with the Constitution, be limited by ordinary law; therefore the Court holds that *statutory* provisions in tax matters will not interfere with that constitutional right, except in the event of abusive taxation. Deficiencies of statutory provisions in that area are therefore rather sanctioned by using a very dynamic interpretation of the principle of *equality under law*. This principle is certainly used most frequently to judge the constitutionality of tax law. This principle compels the legislative power to abstain from the adoption of regulations which provide different treatment between citizens on other than impartial grounds. Different treatment is certainly allowed if this can be explained by actual references in the regulated matter. Therefore regualtions providing differentiations, rules on borderline cases but even provisions stating equal treatment must all be based on fair and equitable experience; otherwise, if they cannot be justified on equitable grounds they would conflict with the principle of equality. The Constitutional Court does not consider whether the statutory provision responds to the equality principle in the individual case but only whether the provision is equitable *in abstractu*. Therefore not any mistake of the legislator and not any contradiction in law or other deficiency does render the provision of law unconstitutional. Only if the statutory provision is based on partial considerations of the legislative power approaching an excessive ruling would the equality principle be affected.

In contrast to the German practice, in Austria equality questions of statutory law are not decided by reference to equality principles of civil law. Pursuant to the jurisdiction of the Constitutional Court the legislator is in the area of tax law not barred to establish a separate system of law and it would not be disallowed to set out regulations which deviate from principles of that system, provided that this is done by reasons of equity. The principle of *equity in taxation* is not guaranteed by the Constitution; however, statutory provisions of tax law must reflect the efforts of the legislator to conform with the general principle of equality before law (in terms of the Constitution: equity in taxation is understood as equality in taxation).

It should be remembered here, that under Austrian law *international treaties* may rank (according to the regulated matter and to their derogative effect) with ordinances or with ordinary law (double taxation conventions[33] become effective in internal law in the same way as internal statutory provisions and they have equal juridical quality); consequently they are equally subject to judicial review before the Constitutional Court as is national law (Art. 140a of the Federal Constitution). If an international treaty ranking with the ordinances or with ordinary law does not conform with higher ranking law, then the Court would declare its illegality (strictly spoken, the treaty is not "annulled" to avoid repercussions on the international level of law). The effects of such declaration are basically the same as if internal provisions of law were annulled.

The declaration of illegality renders the international treaty inapplicable on the level of internal law; this becomes effective upon the promulgation of that declaration; a subsequent modification of the treaty on the international level will be required in order to allow a proper transformation of the international regulations into internal law in full accordance with the Austrian Constitution.

33. Regarding double taxation conventions cf. *Philipp-Pollak*, Internationales Steuerrecht, Wien 1976, *Loukota*, Über das Verhältnis zwischen Internationalem und nationalem Steuerrecht, FJ 1976, 105.

Les principes de la fiscalité autrichienne par rapport au droit fiscal international

Prof. Dr. Gerold Stoll ~ Université de Vienne

Les bonnes règles de l'hospitalité demandent de familiariser des hôtes avec leur nouvel entourage pour leur permettre de mieux s'y retrouver.

J'ai donc accepté le mandat honorable de servir en quelque sorte de guide aux très chers participants au XXXIème Congrès de l'IFA pour leur donner une idée des principes de l'ordre juridique de la fiscalité autrichienne, surtout de la Constitution fiscale autrichienne, des rapports existants entre les Conventions tendant à éviter les doubles impositions (donc du droit international) et le droit interne, du droit autrichien de la procédure et de l'organisation, de même que de la protection juridique administrative et judiciaire en matière fiscale.

Cette introduction au droit autrichien ne se limitera qu'aux grandes lignes du système en raison des limites qui me sont posées par les organisateurs pour des raisons d'ordre rédactionnel bien compréhensibles.

Dr. Gerold Stoll:
Né à Vienne en 1925, l'auteur a entrepris ses études de Droit à Vienne. Après l'obtention de son diplôme (1948) il entra dans l'Administration des Contributions autrichiennes où, en 1949, il travailla ou niveau régional (Mittelinstanz). A partir de 1958 il entra au Ministère National des Finances comme chef de département (Sektionsrat) dans le secteur du Droit de la procédure fiscale responsable de l'élaboration des lois.

En 1967, il obtint l'agrégation en Droit des Finances à la Faculté de Droit et des Sciences Politiques de l'Université de Graz.

A la fin de l'année 1968, il fut nommé Professeur ordinaire à la Faculté de Droit de l'Université de Vienne avec la charge d'enseigner le Droit des Finances. Il fut également désigné Président de l'Institut De Droit Public et Administratif où il a été entre-autre à la tête de la commission d'examen de l'Etat pour les Sciences politiques.

En 1973, l'auteur fut élu membre correspondant de l'Académie des Sciences d'Autriche et, en 1974, en fut désigné membre effectif.

Il est aussi l'éditeur de la Collection "Cahiers de Droit fiscal autrichien" (Editeurs ORAC, Wien), dans laquelle jusqu' ici 13 ouvrages ont paru.

I. LES CONVENTIONS TENDANT A EVITER LES DOUBLES IMPOSITIONS ET LE DROIT INTERNE DE L'AUTRICHE

Les Conventions tendant à éviter les doubles impositions constituent tout d'abord une source juridique du droit international. Toutefois, les engagements pris par les Etats contractants doivent être exécutés à l'intérieur de leurs territoires nationaux; les Conventions tendant à éviter les doubles impositions doivent donc être introduites dans l'ordre juridique national des Etats contractants. Cette intégration d'un accord international à l'ordre interne d'un Etat n'est pas particulièrement réglée par le droit international. Il s'agit là d'un problème général du droit public interne qui sera exposé par la suite en prenant pour exemple l'Autriche.

En dehors de cette question générale de l'intégration d'une Convention tendant à éviter les doubles impositions à l'ordre juridique interne d'un Etat, l'application d'une telle Convention qui vient se superposer au droit fiscal interne pose un certain nombre de problèmes réglés d'une part par le droit international fiscal et d'autre part par l'interprétation nationale.

A. L'INTEGRATION DE LA CONVENTION TENDANT A EVITER LES DOUBLES IMPOSITIONS A L'ORDRE JURIDIQUE INTERNE D'UN ETAT

Comme on l'a déjà vu, c'est au droit national de déterminer de quelle manière un accord international doit être introduit dans l'ordre juridique interne d'un Etat. Pour l'Autriche les règles juridiques s'y rapportant se trouvent dans la Constitution Fédérale, amendée en 1929; [1] l'amendement de l'année 1964 (Bundesgesetzblatt No. 59/1964) a modifié et amélioré quelques points en la matière.

L'intégration d'une Convention tendant à éviter les doubles impositions à l'ordre juridique interne d'un Etat pose plusieurs problèmes, à savoir:

1. *Quel organe d'Etat est autorisé à conclure une Convention tendant à éviter les doubles impositions?*
2. *La conclusion de la convention peut-elle être réalisée uno actu ou par une procédure de ratification?*
3. *Quelle est la méthode appliquée pour l'intégration à l'ordre juridique interne d'un Etat (méthode de transformation générale ou spéciale)?*
4. *Quel rang occupe une Convention tendant à éviter les doubles impositions dans l'ordre juridique interne d'un Etat?*
5. *Quelles sont les conséquences de la conclusion d'une Convention tendant à éviter les doubles impositions violant le droit interne d'un Etat?*
6. *Quelles sont les conséquences résultant de la structure fédérale de l'Autriche sur la conclusion d'une Convention tendant à éviter les doubles impositions?*

1. L'organe d'Etat autorisé à conclure une Convention tendant à éviter les doubles impositions

D'après la Constitution Fédérale de l'Autriche, seul le Président Fédéral a en principle le droit de conclure un traité international (Article 65 alinéa 1). Toutefois la Constitution Fédérale autorise le Président Fédéral à déléguer au Gouvernement Fédéral et aux différents Ministres Fédéraux le pouvoir de conclure de tels traités, à condition que ces traités n'entraînent ni modifications ni compléments à la législation interne et qu'ils ne soient pas de caractère politique. Le Président Fédéral a déjà utilisé cette possibilité lors de l'entrée en vigueur de la Constitution Fédérale en 1920 et a délégué le "treaty-making-power" pour les accords gouvernementaux (Regierungsübereinkommen) au Gouvernement Fédéral; pour les accords ministériels (Ressortübereinkommen) au Ministre Fédéral compétent avec le consentement du Ministre Fédéral des Affaires Etrangères; et pour les accords administratifs (Verwaltungsübereinkommen) au Ministre Fédéral compétent (voir la résolution du Président Fédéral du 31 décembre 1920, Bundesgesetzblatt No. 49/1921, fondée sur l'article 66 alinéa 2 de la Constitution Fédérale).

Conformément au droit interne, le pouvoir de conclure un traité dépend donc en premier lieu de la question de savoir s'il s'agit d'un traité portant modification de la loi (ou d'un traité complétant la loi ou de caractère politique). Pour les conventions autrichiennes tendant à éviter les doubles impositions, cette question a toujours reçu une réponse afirmative. Il est vrai, qu'il existe une disposition en droit fiscal interne (§ 48 de la Loi Fédérale portant sur la procédure fiscale), [2] autorisant le Ministre Fédéral des Finances à supprimer la double imposition; et ceci non seulement par décret pour des cas individuels, mais également sous forme générale par ordonnance. Pourtant, jusqu'à maintenant on n'a encore jamais considéré que la conclusion d'une convention tendant à éviter les doubles impositions pouvait être réalisée par le Ministre Fédéral des Finances; en application de la compétence qui lui a été déléguée et par conséquent, une convention tendant à éviter les doubles impositions, n'a jamais été conclue sous forme d'un accord ministériel (Ressortübereinkommen) ne modifiant pas la loi (la disposition citée au § 48 de la Loi Fédérale portant sur la procédure fiscale ne suffirait absolument pas pour servir de base légale à l'insertion de certaines dispositions secondaires à une convention tendant à éviter les doubles impositions, comme par exemple l'article portant sur l'échange de renseignements ou sur la non-discrimination). C'est seulement dans le cas de traités tendant à éviter les doubles impositions dans des domaines particuliers (p.e. aviation) que le § 48 de la Loi Fédérale portant sur la procédure fiscale sert de base à la conclusion d'un accord ministériel (Ressortübereinkommen).

Les conventions générales tendant à éviter les doubles impositions constituent donc des traités portant modification de la loi, qui, conformément à la Constitution, ne peuvent être conclus que par le Président Fédéral.

Dans la procédure de conclusion d'une convention tendant à éviter les doubles impositions comme pour tout autre traité portant modification de la loi, on peut distinguer trois phases principales:

1. La phase des négociations et de la signature (procédure préliminaire);
2. L'approbation par le Parlement;
3. La ratification (conclusion définitive du traité).

Selon l'opinion dominante en Autriche [3] *l'ensemble* de la procédure portant sur la conclusion d'un traité, c'est à dire également tous les actes entrepris pendant la procédure préliminaire, incomberait au Président Fédéral. Etant donné que le Président Fédéral n'est pas en mesure de mener personnellement toutes les négociations pour les traités modifiant la loi, ni de les signer personnellement, il est obligé de se servir à cette fin d'un plénipotentiaire.

En vertu de la structure des compétences gouvernementales en vigueur en Autriche, le choix d'un plénipotentiaire capable de mener les négociations pose un autre problème. Etant donné que les pourparlers portant sur la conclusion d'une Convention tendant à éviter les doubles impositions ressortent sans aucun doute du domaine des affaires étrangères, il faudrait choisir le plénipotentiaire au sein du Ministère Fédéral des Affaires Etrangères

Pourtant, en raison des rapports étroits existant entre les Conventions tendant à éviter les doubles impositions et le droit fiscal interne, les négociations dans ce domaine ont toujours été menées par un représentant du Ministre Fédéral des Finances. Ce problème interne de compétence à trouvé entretemps une solution grâce à la législation (Loi portant sur les compétences entre les Ministères Féderaux 1973, Bundesgesetzblatt No. 389/1973). Dès maintenant, conformément aux principes généraux, il relève uniquement de la compétence du Ministre des Affaires Etrangères de négocier des conventions tendant à éviter les doubles impositions; celui-ci pourra néanmoins déléguer cette compétence au Ministre des Finances. Cette délégation a effectivement eu lieu par l'ordonnance du Ministre Fédéral des Affaires Etrangères datant du 3 juillet 1974, Bundesgesetzblatt No. 388/1974, de sorte que des négociations dans le domaine de la double imposition sont menées par un représentant du Ministre Fédéral des Finances dûment autorisé par le Président Fédéral.

Lorsqu'il y a des accords qui ne portent que sur l'application d'une Convention tendant à éviter les doubles impositions déjà existante, ceux-ci ne sont pas considérés comme modifiant la loi (ou complétant la loi ou de caractère politique). Ils ont donc le caractère d'accords ministériels (Ressortübereinkommen) et peuvent être conclus par le Ministre Fédéral des Finances (ou par un de ses représentants y habilité) en accord avec le Ministre des Affaires Etrangères conformément à la résolution du Président Fédéral précitée.

Dans certains cas les modalités d'application d'une Convention tendant à éviter les doubles impositions sont négociées entre les administrations fiscales par voie de correspondance, sans que les résultats de cet échange de lettres soient repris sous forme d'un instrument formel de traité. Il est seulement prévu que l'accord sur l'application de la convention entrera en vigueur dans les deux Etats par des ordonnances appropriées. Egalement dans de tels cas il faudrait partir du principe que les autorités financières effectuant des échanges de lettres agissent en tant qu'organes de leur Etat, et ont par conséquent réalisé un accord de volonté non seulement adressé aux administrations financières mais engageant comme tel les deux Etats. Il s'agit donc — au sens large du terme — d'un traité d'Etat. De tels accords effectués par échange de lettres n'ont pas de conséquences juridiques immédiates pour le contribuable et doivent donc être regroupés, du côté autrichien, parmi les accords administratifs (Verwaltungsübereinkommen). Selon la résolution du Président Fédéral précitée seul le Ministre Fédéral des Finances est habilité à les conclure, sans être obligé de faire appel au Ministre Fédéral des Affaires Etrangères.

2. La procédure de conclusion

En ce qui concerne la conclusion d'un traité le droit international distingue entre deux procédures. Dans le premier cas la simple signature du traité par l'organe de l'Etat chargé de sa conclusion entraîne l'engagement de cet Etat à le respecter. Dans l'autre cas l'organe donnant sa signature au traité déclare que seule l'approbation ultérieure (ratification) allant de pair avec l'échange ou la déposition des instruments de ratification permettra d'établir l'engagement de l'Etat en cause.

D'après la Constitution Fédérale de l'Autriche des traités modifiant ou complétant la loi, ou de caractère politique doivent être approuvés par le Parlement (Article 50 alinéa 2 de la Constitution Fédérale); par conséquent ils ne pourraient être conclus que par la procédure liée à la ratification. Quant aux Conventions tendant à éviter les doubles impositions, elles comptent parmi les traités modifiant la loi, la signature de celles-ci ne saurait se faire également que sous réserve de ratification.

Après avoir obtenu l'approbation par le Parlement, il est nécessaire, comme pour la procédure de législation interne, que le Président Fédéral pose un acte final; par sa propre signature il confirme que l'établissement du traité est conforme à la Constitution. Par voie analogue à la procédure législative interne cet acte juridique du Président Fédéral a besoin pour être valide d'être contresigné par le Chancellier Fédéral ou le Ministre Fédéral compétent.

L'autre Etat Contractant doit être informé que le traité a reçu l'autorisation constitutionnelle. Ceci se fait par l'échange traditionnel des instruments de ratification; c'est seulement à partir de ce moment que le traité international est établi.

Le moment de la conclusion du traité se distingue du moment de son entrée en vigueur, c'est à dire de sa première application. En principe, les clauses portant sur l'entrée en vigueur des conventions autrichiennes tendant à éviter les doubles impositions prévoient à cet égard un certain délai permettant de remplir les conditions nécessaires à l'entrée en vigueur dans l'Etat (publication au Journal Officiel). Les bureaux de finances autrichiens ne doivent appliquer les dispositions de la Convention nouvelle de double imposition qu'après cette publication. En l'absence d'un tel délai d'entrée en vigueur — quelques Conventions tendant à éviter les doubles impositions prévoient l'entrée en vigueur après échange des instruments de ratification, donc avant la publication au Journal Officiel — il y a divergence entre le droit international et le droit national. Ceci pourrait avoir pour conséquence qu'une Convention tendant à éviter les doubles impositions à laquelle l'Autriche est déjà liée conformément au droit international n'est pas encore applicable par les administrations. Une telle divergence est plutôt d'importance théorique étant donné que toutes les conventions tendant à éviter les doubles impositions prévoient, en dehors du moment de l'entrée en vigueur, un autre moment; il s'agit du début de la période au cours de laquelle la convention est appliquée pour la première fois. Cette date d'efficacité de la convention qui correspond en règle générale au début d'une année fiscale supprime ce problème de divergence; car l'administration attendra pour la première application de la convention que celle-ci soit publiée au Journal Officiel.

Des traités ne nécessitant pas l'approbation par le Parlement (des traités ne modifiant ni complétant la loi, ou ceux de caractère non-politique) peuvent être conclus soit par voie simple (*uno actu*) ou par voie de ratification. Dans le cas où, en matière de droit fiscal international, de tels traités sont conclus (accords d'application des Conventions tendant à éviter les doubles impositions) ceci se fait toujours, pour des raisons d'ordre économique, par simple procédure. Dans les cas où, conformément au droit interne de l'autre Etat contractant de tels accords ne peuvent être réalisés que par la procédure de ratification, l'Autriche adoptera également cette procédure. C'est ainsi que par exemple, en tenant compte de la situation juridique du partenaire allemand, la Convention austro-allemande concernant une exonération bilatérale dans le domaine de la taxation des véhicules en matière de trafic international routier [4] a été conclue suivant la procédure de ratification; bien qu'en vertu d'une exemption déjà prévue par la loi portant sur la taxe sur les véhicules, [5] elle ne soit pas de caractère à modifier la loi du côté autrichien, et aurait pu par conséquent être conclue sous forme d'accord ministériel (Ressortübereinkommen).

3. La méthode de transformation

Des traités en tant que sources juridiques du droit international ne créent des droits et des obligations qu'entre des Etats ou entre d'autres sujets du droit international. Donc les traités s'adressent immédiatement aux Etats eux-mêmes. Pourtant, les Etats sont tenus d'exécuter les normes du droit international, créées par les traités, à l'intérieur de leurs propres territoires. Selon le droit international il revient au droit national de déterminer la méthode, par laquelle le droit international pourra être appliqué en droit interne. Généralement il y a deux méthodes d'intégration d'un traité dans l'ordre juridique interne d'un Etat. La transformation des normes du droit international au niveau du droit national sans procédure particulière (transformation générale) ou bien par des mesures législatives speciales (transformation spéciale).

4. Bundesgesetzblatt No. 128/1971.
5. Bundesgesetzblatt No. 110/1952.

Comme la plupart des ordres juridiques des pays européens, la Constitution Fédérale autrichienne a choisi la méthode de la transformation générale. Par conséquent, les Conventions tendant à éviter les doubles impositions conclues par l'Autriche et les accord relatifs à leur application sont applicables comme tels dans l'ordre juridique national sans que leur validité interne dépende de prescriptions spéciales.

La méthode de transformation générale a pour inconvénient que l'acceptation immédiate des dispositions du traité entraîne l'entrée de normes juridiques ne s'harmonisant pas avec l'ordre interne et ceci peut difficilement être évitée par l'Autriche. Vu le développement des relations internationales et la nécessité d'accepter des formules de traité généralement reconnues, il est évidemment impossible de se limiter à la conclusion de traités répondant au système juridique de tous les Etats Contractants.

L'amendement de la Constitution Fédérale de l'année 1964 a admis pour la première fois la possibilité d'une option pour la transformation spéciale. L'article 50, alinéa 2 prévoit dans sa version amendée qu'au cours de l'approbation d'un traité modifiant ou complétant la loi, ou de caractère politique, par le Parlement, le "Nationalrat" (l'Assemblée Nationale) peut prendre la décision que ce traité soit exécuté en vertu d'une loi à éditer. En cas d'un traité ne nécessitant pas l'approbation par le Parlement, la transformation spéciale peut être choisie par le Président Fédéral ou par les autres organes habilités à conclure des traité (Article 65, alinéa 1 et article 66 alinéa 2 de la Constitution Fédérale).

Dans le domaine du droit relatif à la double imposition on n'a pas encore trouvé nécessaire de garantir l'exécution des engagements émanant du droit international par des lois et ordonnances spéciales. C'est pourquoi même après la réforme constitutionnelle de l'année 1964 des Conventions tendant à éviter les doubles impositions et les accords quant à leur application sont intégrés à l'ordre juridique interne uniquement par voie de transformation générale. Le fait que l'Autriche puisse renoncer à utiliser la procédure de transformation spéciale pour les Conventions tendant à éviter les doubles impositions peut être attribué, pour une grande partie, au fait que les Conventions autrichiennes récentes en la matière se fondent sur le projet de Convention tendant à éviter les doubles impositions de l'OCDE; l'administration autrichienne avait eu l'occasion au cours des délibérations au sein du Comité des Affaires Fiscales de l'OCDE d'éviter dans la mesure du possible l'insertion de formules ne se trouvant pas en accord avec l'ordre juridique autrichien.

4. Le rang occupé par la Convention tendant à éviter les doubles impositions dans l'ordre juridique interne

L'ordre juridique interne de l'Autriche peut être comparé à une échelle dont l'échelon le plus élevé forme la loi constitutionnelle; le deuxième échelon est constitué par les loi ordinaires, le troisième échelon par les ordonnances. Les normes juridiques de l'échelon supérieur doivent garantir une couverture totale des normes de l'échelon inférieur.

L'intégration d'une Convention tendant à éviter les doubles impositions à l'ensemble de l'ordre juridique interne pose le problème de savoir de quelle manière le traité international peut s'intégrer à ce schéma.

Autrefois on considérait que des traités ne peuvent se ranger qu'au niveau du droit constitutionnel; cet interprétation est fondée sur le principe "*pacta sunt servanda*" qui est reconnu d'une manière générale par le droit international. [6] D'après l'interprétation actuelle le traité peut être attribué à chacun des trois échelons du droit autrichien. Des dispositions contenues dans le traité devant occuper un rang constitutionnel devraient être marquées expressément comme modifiant la loi constitutionnelle et devraient subir la même approbation par le Parlement que celle requise pour les dispositions du droit constitutionnel interne; tous les autres traités approuvés par le Parlement sont qualifiés de lois fédérales ordinaires; tous les autres traités occupent l'échelon d'ordonnances.

Jusqu'à maintenant les Conventions tendant à éviter les doubles impositions conclues par l'Autriche n'ont pas été considérées comme modifiant ou complétant la Constitution et occupent donc au sein de l'ordre juridique interne le rang de lois fédérales ordinaires.

Cette interprétation pose deux problèmes. D'une part l'attribution à ce niveau a pour condition que toutes les dispositions de la Convention tendant à éviter les doubles impositions sont couvertes par la situation juridique de la Constitution existante. L'absence d'une telle courverture peut avoir comme conséquence l'examen du traité par la Cour Constitutionnelle ce qui, par la suite, pourrait aboutir à la suppression de la Convention. Mais dans les cas individuels il n'est pas toujours simple de répondre à la question de savoir si un traité est conforme à la Constitution. C'est ainsi que les experts en droit constitutionnel ont par exemple déjà mis en doute "l'article sur les étudiants" (art. 20 de la Convention-modèle de l'OCDE): est-il ou non en plein accord avec l'art. 18 de la loi constitutionnelle fédérale. D'après ces dispositions constitutionnelles l'ensemble de l'administration publique doit se fonder sur les lois. Ceci signifie entre autre que les termes juridiques employés doivent être de nature à définir un acte d'une manière suffisamment précise; des lois ne répondant pas à cette nécessité sont contraires à la Constitution (voir par ex. la décision de la Cour Constitutionnelle du 14 mars 1969, G 30/68).

Dans cet ordre d'idées on a affirmé que le terme d'"étudiant" employé à "l'article sur les étudiants" est beaucoup trop vague; il est difficile de savoir si ce terme se refère uniquement aux étudiants des Universités ou comprend également les élèves des lycées.

Un deuxième problème se pose dans le domaine de l'effet de dérogation. Par la transformation d'une Convention tendant à éviter les doubles impositions dans l'ordre juridique interne, le traité abroge toutes les dispositions contraires du droit fiscal national; cet effet d'abrogation se fonde sur le principe selon lequel la loi fédérale ordinaire postérieure abroge la loi fédérale ordinaire antérieure (*lex posterior derogat legi priori*). Cet effet d'abrogation d'une Convention tendant à éviter les doubles impositions ne peut être contesté. Il existe moins d'unanimité sur la question de savoir si les dispositions d'une convention peuvent être supprimées par des modifications du droit fiscal national survenus ultérieurement. En principe des spécialistes en droit public admettent l'existence d'une telle possibilité. [7] Ceci pose le problème de savoir si par exemple la retenue de l'impôt sur le revenu nouvellement introduite en 1973 pour les non-résidents, prélevée sur les rémunérations payées en vertu des contrats relatifs à la fourniture de main-d'oeuvre, peut abroger les dispositions contraires contenues dans des Conventions antérieures tendant à éviter les doubles impositions.

L'administration financière a essayé de résoudre ce problème en se fondant sur la juridiction de la Cour d'Administration de l'Autriche qui considère les dispositions contenues dans les Conventions tendant à eviter les doubles impositions par rapport au droit fiscal interne comme "*lex specialis*" (voir décision de la Cour d'Administration du 28 juin 1963, chiffre 2312/61). Conformément à cette interprétation l'administration financière tend à adhérer à l'opinion qui conformément au principe "*lex special*

6. Voir *Kunz*, Völkerrechtliche Bemerkungen zur österreichischen Bundesverfassung, 320.
7. Voir *Ohlinger*, Der völkerrechtliche Vertrag im staatlichen Recht, 22

derogat legi generali" une loi postérieure ne peut abroger une Convention tendant à éviter les doubles impositions dans son propre champ d'application. Quant au cas précité ceci signifie que des rémunérations payées à des entreprises étrangères en vertu de contrats sur la fourniture de main-d'oeuvre peuvent continuer à être exemptes d'impôts, même après l'introduction de la nouvelle retenue à la source.

Les accords portant sur l'application des Conventions tendant à éviter les doubles impositions ont le rang d'ordonnances en tant que traités ne nécissitant pas l'autorisation par le Parlement.

5. Les conséquences juridiques de la conclusion illégale d'une Convention

En cas de conclusion d'un accord international qui ne s'avère pas conforme à l'ordre juridique interne, la question de sa validité au niveau du droit international n'est certainement pas mise en cause à l'heure actuelle. Les auteurs de la Constitution Fédérale autrichienne ont encore été partisans de cette opinion [8] mais n'ont pas su l'imposer. Conformément au droit international chaque Etat peut considérer qu'un Etat concluant un traité avec un autre Etat interprète et applique ses dispositions constitutionnelles en bonne règle. Un Etat qui conclut bona fide un traité avec un autre Etat sans avoir connaissance de la limitation du "treaty making power" de l'organe représentant cet autre Etat peut réclamer une indemnisation dans le cas où ce dernier ne reconnait pas les engagements résultant du traité. [9]

Inspiré par l'idée de la sécurité juridique l'ordre juridique autrichien connait également dans le domaine interne non pas des actes nuls mais des actes à annuler. Par conséquent, une Convention tendant à éviter les doubles impositions conclue en opposition à la loi acquiert force de loi à l'intérieur du pays, peu importe si la violation de la loi provient de la procédure (par exemple un accord modifiant la loi n'a pas été soumis au Parlement) ou provient de ses termes (par exemple une disposition de la Convention n'est pas conforme à la Constitution).

Pourtant depuis la réforme constitutionnelle de l'année 1964 la Constitution Fédérale prévoit la possibilité d'une procédure de vérification effectuée par la Cour Constitutionnelle.

Mais ce n'est pas le contribuable qui a le droit de faire appel à cette Cour pour contester une Convention tendant à éviter les doubles impositions mais une telle procédure de vérification ne pourrait être mise en route que sur la demande d'un gouvernement provincial ou d'une des trois Cours suprèmes responsables de l'application d'un Traité d'Etat.

Si la Cour Constitutionnelle donne suite à la demande d'annulation et que l'illégalité de la Convention soit constatée, la Convention devient inapplicable dans le domaine du droit interne après la publication de cette décision. La Cour Constitutionnelle peut fixer un délai à cet effet qui ne doit pas dépasser deux ans en cas de traités modifiant ou complétant la loi, ou de caractère politique; pour tous les autres cas il est de l'ordre d'un an.

Cette situation provenant de la Constitution Autrichienne est la raison pour laquelle les délégations autrichiennes s'efforcent toujours au cours des négociations sur les Conventions tendant à éviter les doubles impositions d'éviter des restrictions dans les clauses de dénonciations (p.e. "le présent traité pourra être dénoncé à l'expiration d'une période de cinq ans après son entrée en vigueur"). Car dans le cas où une Convention s'avère contraire à la loi, le Gouvernement autrichien doit avoir la possibilité de créer une situation juridique au niveau du droit international qui sera conforme au droit public interne; même au prix d'une dénonciation de la Convention.

6. Les Conventions tendant à éviter les doubles impositions et la structure fédérale de l'Autriche
