IFA NEWS

DUTCH BRANCH

On 23 October 1982 the Dutch Branch of IFA held its Annual Meeting. After the normal proceedings – Prof. J. van Hoorn was reelected as honorary treasurer – the reports for the 1983 IFA Congress in Venice were discussed. The reporter on Subject I (Tax avoidance/tax evasion) is Prof. A. Nooteboom and the reporter on Subject II (International problems in the field of turnover taxation) is Mr. A.C. Simons. The time available for the discussion proved to be too short as a result of the overwhelming interest shown for the subjects, in particular the first one. The possibility of organizing a second meeting will be investigated.

HONG KONG BRANCH

The Hong Kong Branch of IFA reports that during 1982 a number of meetings were held during which topics of special interest were discussed.
On 8 March members were invited for an evening meeting dedicated to a discussion of income taxation in the People's Republic of China. Three subjects were presented: (i) the special zones, (ii) joint ventures and (iii) ordinary offices in the People's Republic.
On 3 May a meeting was dedicated to the current tax treatment of financial institutions (speaker Mr. David Flux).
The subject of the meeting of 5 July was the taxation aspects of overseas investment in Canada.
The Third Annual General Meeting was held on 18 October 1982 during which, among other things, the Accounts were considered and the Executive Committee was elected. After the proceedings, Mr. Rufus von Thulen Roades, Member of the California and New York Bars, spoke on certain aspects of U.S. taxation.

SWISS BRANCH

The Swiss Branch of IFA announces that it will held a special meeting on 5 November 1982 at which the 1982 IFA Congress in Montreal will be discussed. Dr. A.R. Schmid will report on the first subject (The tax treatment of interest in international economic transactions) and Maître J.M. Rivier on the second (Taxation of payments to non-residents for independent personal services).
The meeting will further be devoted to a discussion of the reports prepared for the 1983 Congress in Venice, i.e. Tax avoidance/tax evasion (Prof. Dr. F. Zuppinger) and International problems in the field of turnover taxation (Dr. W. Haring).
Maître J. Béguelin will speak on some recent developments in French-Swiss relations with respect to international double taxation.

PRENTICE~HALL,INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

Prentice Hall Announces:

The most strikingly different new tax guide ever published for taxpayers with income from foreign sources.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Continuously Supplemented. . . . . Always Up - to - Date

This outstanding new Service is created specifically to help save money for:

U.S. INDIVIDUALS
with investments and/or earned income from a foreign source

U.S. CORPORATIONS
with income from foreign sources

FOREIGN CORPORATIONS
with income earned or taxable in the U.S.

NONRESIDENT ALIENS
receiving income from, or taxable in the U.S.

If you fit any of these categories — or if you counsel, advise, or in any way service any of these categories — U.S. TAXATION OF INTERNATIONAL OPERATIONS will be an invaluable new tool for you.

It will deliver management benefits — operations benefits — tax benefits.

In clear, direct language, backed up by practical, tested practices of acknowledged experts in international business operations, the new work speels out how the taxpayer can best take full advantage of every popular, every sophisticated, and every little-known tax-saving device.

Authoritative, specific guidance from one source devoted exclusively to this kind of vital help has been non-existent — until now.
With the first 1972 publication of the innovative U.S. TAXATION OF INTERNATIONAL OPERATIONS this important need is now fulfilled. And bi-weekly "Report Bulletins" will keep the guide as new and up to the minute as the day you receive it.

Personal response to this new publication has been even more enthusiastic than our most optimistic projections. Subscriptions are now being accepted by mail for $ 231 a year.

Address your request to Dept. S-RR-103, Prentice-Hall Inc., Englewood Cliffs, N.J. 07632 and specify U.S. TAXATION OF INTERNATIONAL OPERATIONS, 1-year introductory charter subscription.

Annual payment is not due until 20 days after receipt of the new, ready-for-reference volume.

SINGAPORE

Asian Pacific Tax and Investment Research Centre

A significant event has taken place in Singapore which will contribute to a balanced development in South-East Asia and the Australian and Pacific region.

On 12 November 1982,the *Asian Pacific Tax and Investment Research Centre* was incorporated as a legal charity under the laws of the Republic of Singapore, with headquarters at No. 2, Nassim Road, Singapore 1025, opposite the end of Orchard Road.

The concept emanated from the four seminars on Foreign Investment and Tax Administration held in Manila (1974), Tokyo (1976), Sydney (1978) and Bangalore, India (1980), which were hosted by the countries where they were held and chaired by the Bureau's Chief Executive. They were attended by the heads of Tax Departments and Investment Boards from the countries in the region.

There were two important recommendations at the seminars. As a result of the first, the International Bureau at Amsterdam launched a major effort on behalf of the region by producing an eight-volume loose-leaf publication entitled *Taxes and Investment in Asia and the Pacific,* which is now available commercially and is regularly updated. It is the only service of its kind covering all taxation in the area of Asia and the Pacific.

The second recommendation was for the formation, within the region of Asia and the Pacific, of an institution similar to the International Bureau of Fiscal Documentation at Amsterdam. The centre should be an entirely independent charity modelled after the Bureau in Amsterdam, and sponsored and assisted by it so as to benefit from the Bureau's 45 years' experience. The centre should, in particular, deal with the tax aspects of economic development in the Asian-Pacific countries.

The first discussions were held as early as 1978 with representatives of governments and the business and professional communities in the region. These discussions resulted in a well-defined project which was submitted to the Bureau's Board of Trustees for their approval of the Bureau's sponsorship. In its annual meeting held on 7 May 1981, the Board approved the project and agreed to give any assistance necessary in setting up the Centre in Singapore and to help it in its formative period by providing technical and professional assistance.

A founding committee met in Singapore during the week of 16 November 1981 to work out the details. Members of this committee were:

(1) Professor J. van Hoorn, Jr., Chief Executive, International Bureau of Fiscal Documentation, Chairman;
(2) S. Ambalavaner**, Attorney-at-law, Colombo;
(3) Alun G. Davies*, CBE, Trustee of the Bureau, London;
(4) Graeme L. Herring**, FCA, of Peat, Marwick, Mitchell & Co., Sydney;
(5) N.M. Qureshi**, Executive Director, Asian Development Bank, Manila;
(6) Sidney C. Rolt**, Financial Consultant, Singapore; and
(7) Angel Q. Yoingco**, Executive Director, National Tax Research Center, Manila.

* Trustee of the Bureau.
** Member of the Bureau's Advisory Council.

Objects of the Centre

According to the Memorandum and Articles of Association, the objects of the Centre are:

- to carry on and promote systematic studies relating to tax and investment particularly in the countries of the Asian and Pacific Region;
- to provide training programmes in tax law and administration and tax and investment policies;
- to carry out surveys, provide information, and submit reports and recommendations to governments and the private sector on tax and investment matters which are relevant to the socio-economic development of countries in the Asian and Pacific Region;
- to sponsor and conduct conferences, seminars, group studies, public lectures and courses on tax and investment matters of particular interest for countries of the Asian and Pacific Region;
- to carry on any other activity which may seem to the Centre capable of being usefully and conveniently pursued for the purpose of promoting the above objects.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

How the Centre operates, and for whom

The Centre will be equipped to collect, analyse and publish up to date information on taxation and investment matters relating primarily to the countries of the region and, where necessary, to other parts of the world. This will be of assistance and importance to:

- governments,
- business firms,
- banks and financial institutions,
- firms interested in investment in the Asian and Pacific Region, and
- professional firms of lawyers, accountants, tax and investment consultants.

The Centre will have a specialised team of researchers and correspondents and keep members informed of developments on important current problems of tax, fiscal policy and investment pertaining to international trade and investment.

A register of experts will be maintained at the Centre.

Persons interested in helping the Centre as correspondents, researchers and experts are invited to send their names, addresses and bio-data.

Seminars and training programmes

Seminars and training programmes will be organised in the region where government and business representatives are given the opportunity to discuss crucial problems with oustanding experts. Suggestions for topics of discussion from members will be particularly considered.

Research programmes

Research programmes will focus on those aspects of taxation and investment that are of particular interest to the countries in the region and to those engaged in international trade and investment involving these countries and the region as a whole. Special attention will be given to such areas as:

- tax incentive rules and policies in relation to investment flows and the transfer of technology; through its publications – see below – these will be made known to all members
- the research will continuously focus on the effect of measures in developed countries on tax and investment policies in the Asian and Pacific region
- special attention will be given to the question of tax compliance and the effect of high effective tax burdens resulting from high rates or broad tax bases
- aspects of harmonisation of tax legislation and procedures which will ease international trade and investment, particularly in the area of transfer pricing
- the role of tax treaties in encouraging investment flows to the Asian-Pacific region
- the crucial problem of alieviating double taxation and double economic tax burdens in the case of cross-border transactions

Information service

There will be a tax and investment information service to supply members with specific information needed. This information will be made available by the professional staff at the Centre. Where necessary, this service will be rendered in close cooperation with the International Bureau of Fiscal Documentation in Amsterdam. Personal discussion at the Centre will also be possible by prior appointment. Questions may be asked by letter, telephone or telex.

Library

The Centre's library will be open to all members at no extra cost. Members are entitled to request the library staff for information and assistance in tracing materials relating to taxation and investment.

Publications

Apart from other publications the Centre will publish:
(a) The Asian Pacific Tax & Investment News Service
(b) Asian Pacific Tax & Investment Bulletin
These will be sent free to all members.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Board of Governors

The Centre's first Board of Governors is composed of:

Chairman
Prof. J. van Hoorn Jr.,

Honorary Treasurer
Sidney C. Rolt

Chief Executive
S. Ambalavaner

Members
Graeme L. Herring
N.M. Qureshi
Angel Q. Yoingco

and will shortly be joined by
Alun G. Davies, C.B.E.
Raymond E. Moore, Solicitor and Notary Public, Director of Jardine, Matheson & Co., Hong Kong.
Sutadi Sukarya, Chairman of the Capital Market Executive Agency, Jakarta, Indonesia.

Subscribers – Constitutional Members

The following have subscribed to the Centre's Memorandum and Articles of Association:

J. van Hoorn Jr.	Amsterdam
S. Ambalavaner	Sri Lanka
Alun G. Davies	United Kingdom
Graeme L. Herring	Australia
N.M. Qureshi	Philippines
Sidney C. Rolt	Singapore
Angel Q. Yoingco	Philippines
Adiya Vikram Birla	India
Arvind N. Lalbhai	India
Sutadi Sukarya	Indonesia
Benjamin Abela	Philippines
Raymond E. Moore	Hong Kong

It is intended to increase the Constitutional Members to fifty, and to include amongst them members of the judiciary, the tax administrations, major industrial and commercial organisations, and the universities in the region.

Contributions

The Centre will be glad to receive donations of books, journals and other material on tax, fiscal policy and investment. Authors and publishers of books, periodicals and journals on the above subjects are invited to send one copy of each publication to the library and for indexing and review in the Bulletin.

The Government of Singapore has already assisted the Centre by making available premises at No. 2, Nassim Road, Singapore for a nominal rent. Several Governments, as well as professional firms and corporations in the area of banking, industry and commerce, both in the region and elsewhere, have already contributed considerable sums to the Centre in order to enable it to commence its operations as soon as possible.

Subscriptions – Membership

The subscriptions for the Centre for its publications and other facilities are as follows:

(a) FOUNDING-PATRON MEMBERS – US$ 30,000 payable in instalments of US$ 10,000 in the years 1983, 1984 and 1985, the first payment to be made forthwith. Founding-Patron Members will be entitled to one copy each of all publications of the Centre, and the right to information and answers to questions. An additional set of publications will be supplied on request without charge. This facility will be available for the year 1983 and all subsequent years.

(b) FOUNDING MEMBERS – subscription of US$ 15,000 to be paid now. Members will be entitled to one copy each of all publications of the Centre for 25 years and the right to information and answers to questions. An additional set of publications will be supplied on request without charge. At the end of 25 years the Governors may continue these facilities taking into account the then current costs.

(c) ASSOCIATE MEMBERS – subscription of US$ 7,500 to be paid now. Members will be entitled to one copy of the Centre's publications and the right to information and answers to questions for a period of 15 years. At the end of 15 years the Board of Governors may extend these facilities taking into account the then current costs.

(d) CORPORATE MEMBERS – membership will be US$ 250 per year. This membership will be open to corporations, institutions and firms. Corporate Members will be entitled to a copy of each of the publications for the year.

(e) INDIVIDUAL MEMBERS – membership will be US$ 60 per year. Such members are entitled to one copy of the publications of the year.

THE CENTRE SEEKS FINANCIAL AND OTHER ASSISTANCE FROM GOVERNMENTS, INSTITUTIONS, CORPORATIONS AND INDIVIDUALS TO ESTABLISH AND MAINTAIN THE CENTRE.

Personal Income Taxation and Equity in India

by P.K. Bhargava and A.K. Jain *

Progressivity is an essential feature of a modern tax system. It is essential for two reasons: to reduce inequalities in the distribution of wealth and income and to ensure built-in-flexibility in the tax structure. There are two aspects of progressivity: equal treatment of equals (horizontal equity) and unequal treatment of unequals (vertical equity). The object of this paper is to examine the extent to which personal income tax in India fulfills the criteria of horizontal and vertical equity.

HORIZONTAL EQUITY

There is equal treatment of equals with respect to personal income tax in India in so far as a system of "global" tax rates and not "schedular" tax rates is followed. However, there are some important features of the personal income tax structure where this criterion is violated. Exemption of casual and non-recurring income from the tax base is a glaring example of such an anomaly. Prior to the amendment made in 1972, receipts which were of a casual and non-recurring nature were exempt from tax except where the receipts constituted capital gains or arose from a business or the exercise of a profession, vocation or occupation or were by way of additions to the remuneration of an employee. Consequently, a number of receipts which resulted in increased wealth of the taxpayer were excluded from the tax net. The tax base also did not embrace receipts like punitive damages (though not amounting to recovery of capital), found property or accidental receipts, amounts received by way of lottery, crossword puzzles, races, or of embezzlement, blackmail, extortion and other criminal activity.[1] Winnings from State or other lotteries in the case of non-corporate taxpayers were subjected to tax by the Finance Act, 1972. However, casual and non-recurring receipts up to 1000 Rs. were exempt from the tax base and this provision continues to date. There appears to be no justification for such an exemption. Equity considerations demand that all accretions to personal income or wealth should be included in the tax base.[2] It may also be emphasized that the inclusion of recurring receipts in the tax base is not only wrong in principle but also leaves much to the discretion of tax administration and law courts to decide which receipts are occasional and which are regular.[3] In this context, a number of conflict decisions can be seen in India. "Thus, where the taxpayer received an annual allowance payable solely in the discretion of the taxpayer, the receipt was held to be non-recurring even though paid regularly over the period of a number of years. . . On the other hand, where a retired judge agreed to arbitrate a dispute for a fixed fee, the fee was held to be taxable."[4]

The criterion of horizontal equity is also violated in view of the fact that agricultural income is not taxed at all under the Central income tax. The anomaly has been partly rectified by the scheme of "partial integration" introduced by the Finance Act, 1973. Under this scheme, the agricultural income of a taxpayer is considered only to determine the rate of tax on his non-agricultural income and agricultural income still goes untaxed. The only advantage of this reform is that if a taxpayer has both agricultural and non-agricultural income, the latter attracts a higher rate of tax. However, it would still be advantageous for non-agriculturists to show a part of their income originating in the agricultural sector because it is only at the margin that assessees with similar aggregate income are taxed similarly.[5] Further, agricultural income is considered only to determine the rate on non-agricultural income if non-agricultural income exceeds the exemption limit. It may be emphasized here that under the Indian Constitution the State Governments are empowered to levy agricultural income tax. However, all the State Governments, even the richer States like Punjab and Haryana, have not exercised this power.[6] Also, in States where agricultural income is taxed, the tax rates are so varied that one is included to conclude that income taxation in general and agricultural income tax in particular do not fulfill the equity criterion.

VERTICAL EQUITY

Capital accumulation is a growing necessity of developing economies like India. With increasing capital accumulation, marked inequalities in the distribution of wealth and income also develop. However, in a welfare state inequalities in the distribution of wealth and income are neither desirable nor can they be tolerated for long. It is, therefore, necessary that people with higher incomes should not only pay more tax but they should also pay tax at a higher rate so that vertical equity is achieved. This necessitates a progressive rate structure on a "slab system" basis.

India always had the distinction of having a schedule of progressive income tax rates. However, from an equity point of view what is important is the effective tax rate and not the statutory tax rate. With the increase in schedular progressivity, the average income tax burden for all income tax payers should have shown a consistent increase but the available data clearly indicate that the average burden has generally shown a decline.

TABLE 1

Tax demanded under personal taxation *

Year	Total assessed income	Total tax demanded	Average tax rate (3 as % of 2)
(1)	(2)	(3)	(4)
1951-52	582.9	103.9	17.8
1956-57	647.8	106.5	16.4
1961-62	1024.3	136.5	13.3
1966-67	1605.6	226.0	14.1
1971-72	2567.2	432.7	16.8
1972-73	2220.8	357.6	16.1
1974-75	2534.4	405.0	16.0
1975-76	2742.8	426.3	15.5
1976-77	3066.0	507.0	16.6
1977-78	3405.4	540.1	15.9
1978-79	2930.6	499.5	17.0

* Personal taxation includes tax on individuals, Hindu undivided families, unregistered firms, associations of persons and others and thus excludes tax on registered firms and companies. 1 crore = 10,000,000.

It is clear from Table 1 that the average income tax rate (ratio of total tax demanded to total income assessed) declined from 17.8% in 1951-52 to 13.3% in 1961-62. Thereafter, it increased to 16.8% in 1971-72 but declined again to 16.0% in 1974-75 which was still lower than the average rate of tax for 1951-52. These findings are in sharp contrast to the fact that there has been a tendency to increase the statutory marginal tax rates over the period: the highest marginal tax rate (including surcharge) during the assessment year 1974-75 was as high as 97.7% on slabs of income exceeding 200,000 Rs. whereas in 1951-52 it was 82.3% on incomes exceeding 150,000 Rs. On recommendation of the Wanchoo Committee, the highest rate of income tax (including surcharge) was reduced to 77% by the Finance Act, 1975 and further to 66% by the Finance Act, 1976. In subsequent years, the marginal rate of income tax continues to be 60% but there have been changes in the surcharge on income tax which was reduced from 20% to 10% by the Finance (No. 2) Act, 1980. It may also be noted that the increase in the average tax rate to 17% in 1978-79 is indicative of the fact that more income was taxed in the higher income slabs.

That vertical equity among different income tax payers is not achieved is also clear from the fact that the effective income tax rates for different income groups are much lower than the corresponding statutory tax rates. Table 2 presents the available data on the effective rates of income tax for each income class for selected years. It is clear from the table that the effective tax rate for income tax payers with taxable income exceeding 70,000 Rs. declined during the period 1951-52 to 1978-79. For the income slab of 70,001-100,000 Rs., it declined from 46.0% to 44.4% and for taxable income of 100,001-200,000 Rs., the corresponding rate declined from 59.0% to 54.7% during the same period. For incomes exceeding 200,000 Rs., there has been a greater decline from 73.4% to 69.0%. The existence of very high rates on the statutes over a considerable period can possibly be explained in terms of increasing tax evasion and avoidance, increase in the number of tax incentives which benefit mostly the people in relatively higher income brackets and inefficient tax administration. The advantages of tax evasion in India have been enormous. For example, when the highest marginal tax rate was 97.7% during the assessment year 1974-1975, the net profit on concealment was as high as 4,300% of after-tax income.

TABLE 2

Income assessed and tax demand in different income ranges for individuals
(Crores of Rs.)

	1951-52			1961-62			1971-72			1978-79		
Grades of income	Income assessed	Total tax	3 as % of 2	Income assessed	Total tax	6 as % of 5	Income assessed	Total tax	9 as % of 8	Income assessed	Total tax	12 as % of 11

15,001 – 25,000	56.7	8.0	14.1	133.3	13.5	10.1	465.8	54.4	8.6	766.4	84.6	11.0
25,001 – 50,000	57.4	15.2	26.5	127.4	28.3	22.2	357.9	88.0	24.6	578.1	125.4	21.7
50,001 – 70,000	18.8	6.3	33.5	36.6	13.2	36.1	96.3	36.4	37.8	122.5	41.0	33.5
70,001 – 100,000	15.2	7.0	46.0	26.8	12.1	45.1	68.8	31.3	45.5	81.6	36.2	44.4
100,001 – 200,000	18.8	11.1	59.0	28.3	16.1	56.9	71.0	39.5	55.6	68.6	37.5	54.7
Over 200,000	25.6	18.8	73.4	20.1	13.9	69.1	69.5	45.7	65.7	70.7	48.8	69.0

The variation between the statutory tax rates and the effective tax rates can also be partially explained by the increasingly larger tax reliefs which have been provided in the Indian Income-tax Act. With the passage of time, the number of incentives, and the number of taxpayers taking advantage of those incentives, has increased. This is clearly borne out by the fact that total deductions as also the ratio of total deductions to total income assessed

© 1982 International Bureau of Fiscal Documentation – BULLETIN

have increased over the period as is clear from Table 3.

TABLE 3

Ratio of total deductions * to total income assessed
(Crores of Rs.)

Year	*Total deductions*	*Total income assessed*	*2 as % of 3*
(1)	(2)	(3)	(4)
1953-54	36.8	781.0	4.7
1956-57	48.8	936.7	5.2
1961-62	132.6	1575.4	8.4
1966-67	160.3	2532.2	6.3
1971-72	252.5	4389.8	5.7
1972-73	216.6	3611.8	6.0
1974-75	257.5	4120.6	6.2
1975-76	288.3	4706.2	6.1
1976-77	376.6	5266.1	7.1
1977-78	424.0	5862.8	7.2

* Includes rebates and double income tax relief, as well.

Table 3 shows that there has been a phenomenal increase in the quantum of total deductions during the period 1953-54 (Rs. 36.8 crores) to 1977-78 (Rs. 424.0 crores). During the same period, the ratio of total deductions to total income assessed also increased from 4.7% to 7.2%, except for the year 1961-62 when the corresponding percentage was 8.4. This is perhaps because of the fact that the total assessed income increased at a relatively slower rate as compared to the increase in the rate of total deductions during the period 1956-57 to 1961-62. The Indian income tax incorporates a number of tax incentives to encourage savings, investment, exports, etc. Two forms of incentives have been offered. Certain types of income and investments have been totally excluded from the purview of taxation such as interest received on deposits in the post-office savings bank, interest on post office National Savings Certificates, National Defence Certificates, etc. On the other hand, certain types of income on specified investments are either exempt to a certain extent or they are deducted from taxable income while computing total income, such as contributions towards provident funds, life insurance premia, public provident funds, 10 or 15-year Cumulative Time Deposit Schemes, Unit linked insurance plans, etc. Similarly, 50% of the investment in the shares of new companies may also be deducted. Income from certain categories of investments such as dividends from companies, interest on bank deposits, etc. is exempt up to 3,000 Rs. per annum (increased to 4,000 Rs. in the Union Budget for 1982-83). Further, income from Units of the Unit Trust of India is exclusively exempted up to 2,000 Rs. (raised to 3,000 Rs. in the Union Budget for 1982-83). Incentives have also been granted to promote agriculture, exports, particular industries or areas.[7] Prior to the assessment year 1968-69, these incentives were generally granted in the form of rebates from income tax but from the assessment year 1968-69 most of them have taken the form of deductions from total income. These incentives have reduced the tax burden to a great extent, and have mostly benefitted the high income group people as their capacity to save is greater and the tax advantage to them is also greater. As we have a progressive rate structure in India and incentives take the form of deductions from total income, the taxpayer gests the benefit at the rate of tax applicable to the highest slab of income. The gross rate of return depends upon the slab of income in which an assessee falls. The gross rate of return is as high as 37.1% for Units, 38.7% for 6-year National Savings Certificates and 32.3% for fixed deposits with banks. Even in the case of savings deposits with post offices where the rate of interest is only 5.5% per annum, the gross rate of return is as high as 17.7% for incomes above 100,000 Rs. and it is profitable for a taxpayer with an annual income of more than 30,000 Rs. to keep his money in the post office savings bank rather than to deposit it in banks and earn 10% interest.[8] These tax concessions have made the effective tax rates much different from the statutory rates and the pity is that "the differential operates regressively in favour of the high income groups as against low income groups".[9]

Finally, a word must be said about the changes in the rate and quantum of the standard deduction available to salaried taxpayers and the exemption limit. The provision of the standard deduction at the rate of 20% of the salary up to 10,000 Rs. and 10% of the salary in excess thereof, subject to a maximum deduction of 3,500 Rs., was introduced by the Finance Act, 1974. The Finance Act, 1981 made the rate of standard deduction uniform at 20% and also raised the monetary limit to 5,000 Rs. The Union Budget for 1982-83 has increased the rate to 25% without a change in the maximum monetary limit for standard deduction. There has also been a tendency to increase the exemption limit of income tax: from 4,000 Rs. to 5,000 Rs. from the assessment year 1971-72, to 6,000 Rs. by the Finance Act, 1974, to 8,000 Rs. by the Finance (Amendment) Act, 1975, to 10,000 Rs. by the Finance Act, 1977, to 12,000 Rs. by the Finance Act, 1980 and to 15,000 Rs. by the Finance Act, 1981. The successive increases in the exemption limit have increased the operative limit which at present ranges from 25,000 Rs. to 30,000 Rs. This has not only reduced the effective rate of income tax but also the number of income tax assessees.

CONCLUSION

The above discussion amply demonstrates that the personal income tax structure in India has been designed to achieve both horizontal and vertical equity. In practice, it does not fully achieve either of the two, although horizontal equity is achieved to a relatively larger extent. There are mainly two grounds on which the criterion of

7. For details see, Anil Kumar Jain, *Taxation of Income in India,* 1975, Chapter 6.
8. Provided the income from bank deposits, dividends, etc. exceeds 3,000 Rs. in a year.
9. I.S. Gulati, "Growth Oriented Budget: An Analysis of Major Suggestions", *Economic and Political Weekly,* March 1976, p. 419.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

horizontal equity falls: firstly, favourable treatment is accorded to causal and non-recurring incomes, and secondly, agricultural incomes are excluded from the Central income tax base.

The personal income tax structure also does not adequately satisfy the effective requirements of unequal treatment of unequals mainly due to four reasons: firstly, the discrepancy between the effective tax rates and statutory marginal tax rates has been found to be increasing with increased levels of income. Secondly, tax evasion has increased as the income tax rates have gone up. Thirdly, relatively richer persons have been taking more and more advantage of various tax concessions and incentives, thus bringing down the effective tax rate. Fourthly, a number of administrative problems such as arrears of assessment and collection, pendency of appeals, delays in granting refunds and strained public relations, etc. have further reduced the effectiveness of income tax as an equity measure.

IFA NEWS

Montreal Congress 1982

Results of the Discussions

At the end of the Montreal Congress of IFA (12-17 September 1982) the following resolutions were adopted. Note that they were originally drafted in the German and French languages, respectively. We reproduce here the approved English translations.

SUBJECT I:

The tax treatment of interest in international economic transactions

RESOLUTION (German original)

Whereas:

a) The avoidance of double taxation in the international flow of capital is in the interest of all countries and their taxpayers.
b) Both the debtor's and the creditor's country of residence should make a reasonable contribution towards the avoidance of double taxation and the reduction of the total burden of taxes.
c) There should be no discrimination between international and national movement of capital.
d) The rules on interest in the OECD model agreement of 1977 have not yet been incorporated into all double taxation agreements and that these solutions should be further developed.

Now IFA proposes:

1. Arm's length interest paid to non-resident creditors should be a deductible expense in the same way as domestic interest paid in the debtor's country.
2. Insofar as the debtor's country wishes to assess tax, this should not be effected by way of disallowing the interest expense, but instead by levying a non-resident withholding tax.
3. The deduction of interest to non arm's length persons should only be disallowed to the extent that the conditions and the rate of interest are obviously in excess of the going market rate or normal market conditions. Individual cases should be decided on a case by case basis after taking all circumstances into consideration. Fixed ratios of debt to capital and the incidental normal interest rates should not be laid down, but should only have the character of a "safe havens" clause.
   The double taxation agreements ("DTC") should contain a clause which provides that interest disallowed as being in excess of normal market conditions, and therefore treated as a dividend in the debtor's country, should also be treated as a dividend in the creditor's country. It should be ensured that the creditor will be entitled to the same tax relief as would be applicable to intercorporate dividends under domestic legislation or the respective DTC.
4. Insofar as the payor or debtor country assesses non-resident tax on the interest paid abroad, it should be considered that the creditor has usually considerable refinancing and other expenses. This should be effected by unilaterally providing for a low rate of non-resident withholding tax.
   In the case of interest received from a foreign country the double taxation should be avoided in the creditor's country through unilateral measures providing tax credits or exemptions. The mere deduction of the foreign tax from income does not give sufficient relief. In cases where the tax credit method is used for foreign non-resident withholding tax, full credit for the taxes deducted should be allowed. This requires that if the creditor country grants credit on the net income basis only the expenses directly connected with the interest are taken into account and that the overall limitation is applied. Furthermore, the excess of foreign non-resident tax levied over the applicable tax in the creditor's country (excess credits) should be allowed to be carried forward or back to prior periods or should be allowed in some other way.
5. In cases where the contracting states of DTC are not prepared to allow for the total exemption from non-resident withholding tax, both the debtor's and creditor's country should make a reasonable contribution towards the avoidance of double taxation and the total incidence of taxation.
   On the one hand, the debtor's country should provide for a low rate of non-resident withholding tax, on the other hand the creditor's country should allow the credit of the remaining non-resident withholding tax against its own tax liability or exempt the interest from taxation. As to the measures to fully avoid double taxation in the creditor's country see paragraph 4 above.
   It could be in the interest of the contracting states and their taxpayers in order to encourage investments in

© 1982 International Bureau of Fiscal Documentation – BULLETIN

the developing countries that the creditor's country allows a tax sparing credit.

6. Where a double taxation agreement provides for a reduction of the withholding tax on interest, this reduction should be effective on payment immediately and should not only be granted in a subsequent refund procedure.
   Where a permanent establishment is subject to tax in a country which has a double taxation agreement, the agreement should provide that such permanent establishment can claim the limitation of non-resident withholding tax and the tax credit provided in the agreement between the source country and the country in which the permanent establishment is located.
7. The problem of the taxation of interest income which contains to a considerable extent a compensation for losses caused by inflation should become the subject of a special study.

SUBJECT II:

Taxation of payments to non-residents for independent personal services

RESOLUTION (original version: French)

1. Considering:

1.1. That the free flow of, and access to, professional, technical, cultural, and athletic skills and information is conducive to the promotion of the social and economic well-being of all people, particularly in the context of the rendering of independent personal services by non-residents;

1.2. That in today's world trade and business environment it is becoming more and more difficult to distinguish between income from the sale of goods and information and income from the rendering of independent personal services, especially since such income may be derived both by individuals and by companies;

1.3. That conflicting rules determining the source of income from independent personal services exist among countries, and that furthermore it is increasingly difficult to determine where the services giving rise to the income are performed or utilised;

1.4. That taxation by a country of the income of a non-resident person from such services without a clear and sufficiently strong economic connection with that country entails a serious risk of double taxation; and

1.5. That taxation of the income from such services on a gross basis is in conflict with the generally accepted principles of income taxation and may result in an arbitrary and excessive tax burden;

2. Recommends:

2.1. That domestic legislation adopt a rule subjecting non-residents performing independent personal services to taxation only if such services are performed in that country in spite of difficulties of practical application;

2.2. That bilateral double taxation conventions be concluded in order to further promote the free flow of, and access to, professional, technical, cultural, and athletic skills and information and that to that end such conventions limit wherever possible the right to tax of the country where the services are performed by a non-resident in cases where
   (i) there is a fixed base in that country; or
   (ii) the person performing the services stays in that country for more than a minimum period of time;
   (iii) the income derived from such services exceeds a minimum threshold;
   it being understood that said period of time and/or threshold shall be fixed in each convention by negotiation and mutual agreement between the signatories of the convention;

2.3. That, if a withholding tax is levied on the gross income of a non-resident from independent personal services, the rate of such tax or the determination of the taxable base should recognize that usually substantial direct and indirect expenses have been incurred in producing such income;

2.4. That in double taxation conventions, the non-resident who is subject to tax on income from independent personal services should be given the right to be taxed on the basis of net income by filing a return and establishing evidence of deductible expenses in a manner at least as favourable as that which would apply under the convention to non-resident persons earning business profits;

2.5. That if, in the negotiation of a double taxation convention, it becomes apparent that the two countries have a different understanding of the term "income from independent activities", the convention or a protocol thereto should attempt to define that term and distinguish it from other terms used in the convention that may overlap it, such as "profits of an enterprise", "remuneration from employment", "royalties", etc.
   In particular, the contracting states should make it clear whether they intend the article dealing with income from independent activities to apply to companies;

2.6. That the article in the double taxation convention dealing with the income from independent personal services should contain provisions to indicate the priority of application in cases where an item of income is also covered by another article;

2.7. That, although in double taxation conventions the inclusion of separate rules dealing with artists and athletes is justified, the recommendations outlined above should be made equally applicable to artists and athletes;

2.8. That in domestic law and in double taxation conventions, consideration be given to applying to non-resident artists and athletes measures mitigating the unduly harsh effects of progressive tax rates in cases of very irregular income, if similar measures apply to residents; and

2.9. That in double taxation conventions, the application of articles giving the countries the right to tax the income derived by a non-resident person other than the performer, from the performance of personal services by an artist or athlete, be restricted to situations where the performer and the other person are not dealing at arm's length.

NEW ZEALAND BUDGET 1982:

Tax Proposals

By Dr. M.P. Dominic

The Budget presented by the Minister of Finance, the Rt. Hon. R.D. Muldoon, on 5 August 1982 contains a number of proposals relating to personal income tax, tax avoidance, life assurance, superannuation, and building societies.

The scope of the tax proposals is limited by the overriding priority of reducing inflation. These proposals incorporate some of the changes proposed by the Task Force on Tax Reform which was established after the last Budget to examine the system of Central Government taxation, both direct and indirect. In the time available, the Task Force identified the areas of most immediate concern and suggested options for reform. Further study was proposed for other areas such as inflation adjustment of business income and taxation cooperation. The areas suggested for immediate reform include personal income tax and indirect consumption taxes.

Personal income tax

The objectives of the proposed changes are:

- first, to lessen substantially the fiscal drag in the present scale. Fiscal drag is the phenomenon by which, under a progressive tax scale and rising nominal incomes, tax paid rises faster than the growth in those incomes. Its effect is to erode disposable incomes and destabilise the economy;
- the second objective is to minimise the disincentive impact of high marginal tax rates on work, savings, and investment decisions;
- the third objective is to minimise the incentive for tax evasion and avoidance caused by high marginal tax rates;
- the fourth objective is to reduce the imbalance between the tax paid by single-income families and two-income families with the same total income;
- the fifth objective is to reduce the difference in the tax burden between taxpayers with steady incomes and those with fluctuating incomes.

(a) Housekeeper rebate

The present housekeeper rebate will be retained and increased, from 1 October 1982, in recognition of the additonal costs of child care incurred by two-income families, especially those with pre-school children. The maximum rebate will be increased from $156 to $310 a year, at a rate of 31 cents in the dollar on qualifying expenditure up to a maximum of $1,000 a year. This rebate will be available only on an end-of-year basis.

(b) Child rebate

The present rebate is $78. From 1 October 1982, it will be increased to $156. Assuming the marginal tax rate is 20%, the increased rebate will be equivalent to tax-free savings of $780 in a full year, compared with $538 at present. This rebate was introduced in 1978 to avoid the need for pre-school and school children to pay tax on small amounts of income.

(c) The overtime, shiftwork and back pay rebates

These rebates will be abolished from 1 October 1982 as a consequence of introducing a reduced income tax scale structure. They were originally introduced to minimise the effect of the present steeply progressive tax scale.

(d) First-home mortgage interest rebate

The rebate rate will be reduced from 1 October 1982 from 50% to 31% of qualifying interest, reflecting the new standard marginal tax rate of 31% for most taxpayers. This would mean that the maximum amount of qualifying interest will be increased from $2,000 to $3,225 in a full year.

The maximum level of the rebate will continue to be $1,000 a year.

(e) Dependent relative rebate

The rate of rebate will be, with effect from 1 October 1982, 31% rather than 40%. The maximum level of this rebate will remain $60 a year. The rebate may be claimed only in respect of two dependent relatives.

(f) Charitable donations and school fees rebate

The rate of rebate will be 31% rather than the present 50% of eligible donations and fees, reflecting the new standard tax rate of 31% for most taxpayers. The maximum level of rebate will be increased to $200 a year. This would mean the maximum qualifying expenditure will increase from the present $350 to $645 in a full year.

(g) Home vendor mortgage rebate

This rebate, which was introduced in 1978, will be abolished. Only a small number of taxpayers have claimed this rebate. The rebate will continue to be available to taxpayers holding approvals before 6 August 1982.

(h) Family rebate

A family rebate of $1,404 a year will be given from 1 October 1982 to all families with dependent children and an annual threshhold income of up to $9,800. Where the threshhold income ranges between $9,800 and $19,160 a year, the rebate will abate at the rate of 15 cents in the dollar. This will replace the present low-income family, young family and spouse rebates.

(i) Use of private dwelling in connection with employment

The deduction allowed in the Fourth Schedule to the Income Tax Act for expenditure or losses incurred in the use of a private dwelling in connection with the employment of a taxpayer will be restricted to the additional ex-

© 1982 International Bureau of Fiscal Documentation – BULLETIN

penditure incurred in the use of the specified room or defined area for purposes relating to the taxpayer's employment.

(j) Family rebate and principal income earner rebates for persons entering or leaving New Zealand during a year

Where a person enters or leaves New Zealand, the income of that person during that part of the year in which he is resident in New Zealand will be grossed up to its full-year equivalent in order to determine the appropriate level of family and principal income earner rebates.

(k) Superannuation schemes for individuals

In future, superannuation schemes for individuals under Part II of the Superannuation Schemes Act will be approved by the Government Actuary only if at least one of the following criteria is met:

- they provide at least 75% of their benefits in pension form;
- the trustees and contributors are arm's length parties.

Existing schemes not meeting one of the above criteria will be given the option of converting to a pension scheme or winding up without additional tax liability. Alternatively, they may continue without the present tax advantages.

In addition, changes will be announced shortly to reduce the tax advantages arising from the present tax treatment of superannuation schemes for individuals. The Government considers that at present individuals are able to transfer large amounts of cash and capital assets, often the business assets of the contributor, to these schemes but at the same time maintaining effective control of these assets.

(l) Tax rates

From 1 October 1982, the personal income tax rates will be:

Taxable income	Rates
up to $6,000	20%
$ 6,000 – $24,000	31%
$24,000 – $30,000	41%
$30,000 – $38,000	51%
above $38,000	60%

As a result of these changes, the marginal tax rate for approximately 90% of all taxpayers will be 31% or less. The 31% marginal tax rate will apply to over 60% of all taxpayers. At present, they are subject to marginal tax rates ranging up to 60%.

(m) Transitional measures

There will be some transitional problems with the introduction of the new scale, both at the lower and upper ends of the income range. At the lower end, some people who do not qualify for the family rebate would pay more tax as a result of the change in the scale. At the upper end, a small number of taxpayers would receive very large tax cuts. This latter effect is justified to a large extent, given that in recent years the higher tax rate thresholds have been less effectively adjusted for inflation than the lower thresholds.

To minimise these problems and to ensure that virtually all principal income earners receive a tax cut from 1 October 1982, the following two transitional measures will be introduced from 1 October 1982:

(1) Temporary surtax

A temporary surtax of 10% of the marginal tax rates applying to all income above $24,000 will be imposed.

The effect of this temporary surtax on the marginal tax rates will be as follows:

income	*rate*
up to 6,000	20 (unchanged)
6,000 – 24,000	31 (unchanged)
24,000 – 30,000	45.1
30,000 – 38,000	56.1
above 38,000	66

These rates will be reflected in new PAYE tax tables applying to pay periods ending on or after 1 October 1982, and will become the annual rates in respect of income from 1 April 1983. The combined effect of the present and the new tax rates will be taken into account in determining the annual tax rate scale on income earned during the year ending 31 March 1983.

(2) Rebate

A rebate of 5.5% of taxable income, up to a maximum of $312 a year, will be given to all taxpayers – other than children, spouses of principal income earners, national superannuitants – and principal income earners eligible for the new family rebate. The full rebate of $312 will be given to all eligible taxpayers earning between $5,673 and $12,000 a year and it will abate against principal income at 12 cents in the dollar over the income range $12,000 to $14,600 a year.

Leasing

New provisions apply to financial leases entered into after 5 August 1982 placing financial leasing on the same footing for tax purposes as other forms of financing the acquisition of assets. The new provisions are:

- financial institutions will no longer be able to treat financial leases in the same manner as short-term hire contracts for income tax purposes. Instead, they will be required to follow generally accepted accounting practice and record their leasing transactions on the same basis as if they were loans;
- the lessor will be excluded from claiming depreciation allowances on assets subject to financial leases;
- the lessor will be permitted to deduct an amount equivalent to tax depreciation allowances for the particular leased asset, including first-year depreciation allowances if applicable, together with an amount equal to the interest content of lease payments.

No change is made to the existing tax treatment of leases of land and buildings and short-term hire contracts.

Film industry

A new tax regime incorporating the main features of the present tax treatment but without the tax shelters arising

© 1982 International Bureau of Fiscal Documentation – BULLETIN

from the use of non-recourse loans and other leveraging arrangements will be introduced. But, in recognition of the effect of the change in the tax treatment, the Government will give $1.75 million in 1982-83 to the Film Commission and this grant will be reduced progressively to zero over a period of 5 years.

Farming and property investment

The following anti-avoidance measures were announced and will be implemented in respect of the income year beginning 1 April 1982 or equivalent accounting year:

- under the present provisions, where a farm or fish farm is sold at a profit within 5 years of purchase and deductions have been allowed for development expenditure on the farm, that profit is treated as assessable income up to the extent of the deductions allowed. In order to discourage the purchase and development of farms for capital gain rather than for productive use, the period of farm or fish farm ownership necessary to avoid recovery of the development expenditure deductions will be extended from 5 years to 10 years;
- interest deducted in respect of any land used in the production of income will become assessable for income tax to the extent of profits made on the sale of that land within 10 years of its acquisition;
- new farmers and those purchasing additional land will be required to write down the value of livestock purchased from cost to standard or nil values progressively over a period of 3 years;
- losses created by the writing down of livestock to standard or nil values may in future be written off against farming income, but not against income from other sources;
- the period for determining basic livestock numbers under the nil or standard value scheme will be extended from 2 to 4 years, or such shorter period as the Commissioner of Inland Revenue may determine;
- partnerships and syndicates of more than 6 persons engaged in farming, fish farming, horticultural and property owning ventures will be treated as companies for income tax purposes.

The provisions relating to the recovery of prior year expenditure apply to property sold after 5 August 1982.

Investment allowances

After a comprehensive review of investment allowances granted in New Zealand, the Government is of the view that:

> Experience with these schemes indicates that they are not effective in achieving their original goals, and waste money in subsidising activities that are not intended targets. Frequently their purpose has been fulfilled by broader policy moves or other events. Research, both in New Zealand and overseas, indicates that these incentives have had little impact on firms' investment decisions.

The Government has decided not to extend the following investment allowances after the current expiry date of 31 March 1983:

- the regional investment allowance;
- the export investment allowance;
- the fishing investment allowance.

High priority investment allowance

The high priority activity scheme under the high priority investment allowance will be terminated on 28 October 1983, but no further applications for new approvals or for extensions of high priority status will be accepted after 5 August 1982. The existing approvals will be allowed to run their course.

Industrial development plan investment allowance

The terminating date will be extended to 31 March 1986 to allow the existing commitments to the wine and plastics industries and the New Zealand Steel expansion to be met.

Farming and agricultural investment allowance

It will be extended for a further year to 31 March 1984. Its future will be considered in the next year's budget in the context of overall assistance to farming.

CNG (Compressed natural gas) and LPG conversions

Previously, depreciation could be claimed on the expenditure of CNG or LPG conversions carried out subsequent to the assembly of a motor car acquired by a business but not if such expenditure was incurred in respect of a car converted during assembly or if the cost of the car itself was more than $11,000. With effect from 1 April 1982, depreciation may be claimed on the cost of the assembly-line conversion of a business motor car. The depreciable cost will, however, be limited to the following:

- $1,200 for a one-cylinder CNG conversion;
- $1,600 for a two-cylinder CNG conversion;
- $1,400 for an LPG conversion.

Tax-free dividends

With effect from 1 April 1982, dividends from capital gains will qualify as tax free in the hands of the shareholders only if such gains have been realised through arm's length transactions outside any particular group of companies. "The aim of this measure is to prevent revenue losses arising from artificial arrangements to establish capital profits but which do not generate the cash to fund the resulting tax-free distributions to shareholders."

Charitable companies

From 1 April 1983, business income of charities will be exempt only if the business is directly related to the principal function of the charity concerned, or where the business employs that category of people for whose benefit the charity was originally established.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Life assurance and superannuation funds

From 1 April 1983, the following changes will be made in the tax treatment of life assurance companies and superannuation funds:

- life assurance companies will be taxed on net investment income at a rate of 31% instead of the present 30% of allotted bonuses and dividends;
- lump-sum superannuation funds, which are tax exempt at present, will also be taxed at 31% on net investment income;
- superannuation funds which provide at least 75% of benefits in pension form will remain tax exempt;
- the personal tax exemption limits for life assurance premiums and contributions to superannuation schemes will be increased from $800 to $1,200 for members of employer-subsidised superannuation schemes, and from $1,000 to $1,400 for persons who are not members of subsidised schemes.

Building societies

Commencing with the 1983-84 income year, income of building societies will be taxed at the company rate of 45%. Dividends paid on withdrawable shares will be deductible in arriving at a society's assessable income.

Estate duty

For estates of persons dying on or after 1 April 1983, the exemption will be increased to $350,000.

Bonus issue tax

The bonus issue tax will be abolished. But, with effect from 1 April 1982, where there is a return or reduction of capital within 10 years of bonus issue, that part of the return or reduction which is applicable to the bonus issue will be taxed in the hands of the shareholder. Any return or reduction of capital will be deemed first to be attributed to bonus issues during the preceding 10 years.

Other taxes

Changes have also been announced in respect of stamp duty, taxes on alcoholic beverages and tobacco products, petroleum fuel taxation, international departure tax, and sales tax.

NEW ZEALAND:

Budget 1982

Extracts from the Financial Statement submitted by Mr. R.D. Muldoon, C.H., Prime Minister, to the House of Representatives on 5 August 1982.

See for a detailed discussion of the New Zealand tax system the Bureau's publication: TAXES AND INVESTMENT IN ASIA AND THE PACIFIC.

TAX REFORM

Following last year's Budget, I announced the establishment of a task force to examine the system of central government taxation, both direct and indirect, currently operating in New Zealand. In the time available, the Task Force on Tax Reform were not able to make firm recommendations on all aspects of taxation. Rather, they identified the areas of most immediate concern and suggested options for reform. These areas included personal income tax and indirect consumption taxes. In other areas they recommended further work.

As I said in last year's Budget, it is not possible to achieve overnight major changes in a tax system which has evolved over more than 100 years. Tax reform is a matter of identifying priorities and moving as circumstances and resources permit. The scope this year is limited by the overriding priority of reducing inflation. In this Budget, the Government is introducing major reforms in the area which it believes is of most widespread concern, namely personal income tax, and moving to eliminate some of the principal avenues for tax avoidance. Changes in the tax treatment of life assurance, superannuation, and building societies will also be announced. Other complex areas, such as the inflation adjustment of business income and the taxation of cooperatives, will require further study as the Task Force recommended.

PERSONAL INCOME TAX

In considering the options for changes to the income tax scale, the Government has placed major emphasis on five objectives. These are:

- first, to lessen substantially the fiscal drag in the present scale. Fiscal drag is the phenomenon by which, under a progressive tax scale and rising nominal incomes, tax paid rises faster than the growth in those incomes. Its effect is to erode disposable incomes and destabilise the economy;
- the second objective is to minimise the disincentive impact of high marginal tax rates on work, savings, and investment decisions;
- the third objective is to minimise the incentive for tax evasion and avoidance caused by high marginal tax rates;
- the fourth objective is to reduce the imbalance between the tax paid by single-income families and two-income families with the same total income;
- the fifth objective is to reduce the difference in tax burden between taxpayers with steady incomes and those with fluctuating incomes.

Clearly, the best way to achieve these objectives is to have a flatter tax scale, including a standard marginal rate covering the bulk of taxpayers and taxable income. At the same time, the Government wishes to reduce the average tax rate of most taxpayers, and to ensure that the degree of support provided to families with relatively low incomes is at least maintained. Naturally, compromises have had to be made. Nevertheless, I believe that the following decisions represent very substantial progress towards achieving all of these objectives.

The tax scale

From 1 October this year a new personal income tax scale will apply. Its main features will be:

- all taxable income up to $ 6,000 a year will be taxed at 20 cents in the dollar;
- taxable income between $ 6,000 and $ 24,000 a year will be taxed at the standard rate of 31 cents in the dollar;
- taxable income between $ 24,000 and $ 30,000 a year will be taxed at 41 cents in the dollar, and that between $ 30,000 and $ 38,000 a year at 51 cents in the dollar;
- the maximum tax rate of 60 cents in the dollar will apply to taxable income exceeding $ 38,000 a year.

One major benefit of the new tax scale is that, for approximately 90 percent of all taxpayers, the marginal tax rate will be 31 cents or less.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

The 31 cent marginal tax rate itself will apply to over 60 percent of all taxpayers, a group which faces marginal tax rates ranging up to 60 cents under the present scale. The new scale will ensure that, as incomes rise, the vast bulk of taxpayers will not face higher marginal tax rates or sharply rising average tax rates as they do now. As a result, after-tax margins for skill and responsibility will be increased.

Family assistance

A major feature of personal income tax over the last 6 years has been the development of a system of rebates related to family circumstances and income. This approach is both taken further and simplified in the new system. In particular, the Government is continuing its policy of targeting family assistance rebates to those families with children where household income is relatively low. Accordingly, a family rebate of $ 1,404 a year will be introduced from 1 October to replace the present low-income family, young family, and spouse rebates. This new rebate will be available in full to all families with a dependent child and an annual household income of up to $ 9,800. It will then abate at the rate of 15 cents in the dollar over the household income range $ 9,800 to $ 19,160 a year. New tax codes to be introduced from 1 October will enable most eligible taxpayers to have the benefit of the family rebate in their pay packets.

Transitional measures

There will be some transitional problems with the introduction of the new tax scale, both at the lower and upper ends of the income range. At the lower end, some people who do not qualify for the family rebate would pay more tax as a result of the change in the scale. At the upper end, a small number of taxpayers would receive very large tax cuts. This latter effect is justified to a large extent, given that in recent years this higher tax rate thresholds have been less effectively adjusted for inflation than the lower thresholds. Nevertheless, to ease the transition to the new scale and to ensure that virtually all principal income earners receive a tax cut from 1 October this year, two transitional measures have been adopted:

- a rebate for principal income earners of 5.5% of taxable income, up to a maximum rebate of $ 312 a year, will be introduced. This rebate will be available to all taxpayers except children, spouses of principal income earners, national superannuitants, and principal income earners eligible for the new family rebate. Eligible taxpayers earning between $5,673 and $ 12,000 a year will receive the full $ 312 rebate. The rebate will abate against principal income at 12 cents in the dollar over the income range $ 12,000 to $ 14,600 a year;
- a temporary surtax of 10% of the marginal tax rates applying to all income above $ 24,000 a year will be levied.

The new income tax scale, rebates and surtax will be incorporated in the PAYE tables applying from 1 October this year. Because a totally new set of PAYE tax codes has been developed to accommodate the new rebate structure, most taxpayers will need to complete a new tax code declaration by 1 October.

The effect of the new income tax scale will also be incorporated in the calculation of the net national superannuation rates applicable from September 1982. Because national superannuation in calculated on an after-tax basis, national superannuitants will effectively gain the benefit of the new tax scale from that date.

The benefits of the new tax regime

To illustrate the effects of the tax changes on a full-year basis, a single taxpayer on $ 300 a week, which is about the average weekly earnings, will gain $ 10.34 a week, or $ 537 a year. This amounts to a cut in income tax of 11.4%.

For the single-income family on the same income, the gain will be $ 13.02 a week, or $ 677 per annum, where there is a child under 5. This is equivalent to a 15.8% tax cut. If the children are all over 5, the gain will amount to $ 17.76 a week, or $ 923 a year. This represents a tax cut of 20.3%.

Further examples of the effects of the tax changes for individuals at various income levels and in different family situations are set out in the Appendices to the Budget.

The estimated net full-year cost of this package of measures is $ 915 million. The cost in 1982–83 will be around $ 400 million.

Housekeeper rebate

One of the major advantages of the new income tax regime will be to reduce substantially the difference between the income tax payable by a single-income family and that paid by a two-income family on the same level of total income. On the other hand, to recognise the additional costs of child care incurred by two-income families, especially those with pre-school children, the present housekeeper rebate will be retained and increased. The rebate will also continue to apply to solo parents who are employed, and disabled spouses. From 1 October this year, the maximum rebate will be increased from $ 156 to $ 310 a year, at a rate of 31 cents in the dollar on qualifying expenditure up to a maximum of $ 1,000 a year. This rebate will not be incorporated in the PAYE tables and will be available only on an end-of-years basis.

Child rebate

In 1978 a special rebate of $ 78 was introduced to avoid the need for pre-school and school children to pay tax on small amounts of income. This rebate will be increased from $ 78 to $ 156 a year with effect from 1 October this year. At a marginal tax rate of 20 cents in the dollar, the new maximum rebate will be equivalent to tax-free earnings of $780 in a full year, compared with $ 538 at present. In the year in which a child leaves school and commences work, he or she may claim either the child rebate or the new principal income earner rebate, whichever provides the greater benefit.

Consequential changes

A number of changes and simplifications to the income tax system have been made possible by the introduction of the new income tax scale and rebate structure.

The overtime, shift work, and back-pays rebates were originally introduced to offset some of the effects of a steeply progressive tax scale. This reason no longer applies, and the rebates will be abolished from 1 October 1982.

The following rebates will be altered as from 1 October this year to reflect the new standard marginal tax rate of 31 cents for most taxpayers:

- first-home mortgage interest rebate: the maximum level of this rebate will remain at $ 1,000 a year, and the rate of rebate will be reduced from 50% to 31% of qualifying interest. This means that the maximum amount of qualifying interest will be raised from $ 2,000 to $ 3,225 in a full year;
- dependent relative rebate: the maximum level of this rebate will remain at $ 60 a year, and the rate of rebate will be 31% rather than 40%. The maximum amount of qualifying expenditure will rise from $ 150 to $ 194 a year. The number of dependent relatives in respect of whom a claim may be made will be limited to a maximum of two;
- charitable donations and school fees rebate: the maximum level of rebate will be increased to $ 200 a year, and the rate of rebate will be 31% rather than 50% of eligible donations and fees. The combined effects of these changes will be to raise the maximum amount of qualifying expenditure from $ 350 to $ 645 in a full year.

In order that the new family rebate can be administered effectively, it will be necessary for all salary and wage earners claiming it to furnish an annual tax return, even if their income is below $ 11,500. Their spouses will also be required to furnish returns if they derive income. This change will apply to returns in respect of the 1982–83 income year.

The rate of tax to be deducted by employers from secondary employment income and extra emoluments will be reduced from 35 cents to 31 cents as from 1 October 1982.

Home vendor mortgage rebate

Because of the small number of taxpayers who have claimed the home vendor mortgage rebate since its introduction in 1977, this rebate will be abolished. Only taxpayers hold-

© 1982 International Bureau of Fiscal Documentation – BULLETIN

ing approvals issued before tonight will continue to be able to claim the rebate.

TAX AVOIDANCE

The Task Force on Tax Reform highlighted the increasingly widespread avoidance and evasion of income tax. They believed that the reasons for this lay mainly in the high tax rates faced by many taxpayers and the availability of a variety of ways to divert income from taxed to untaxed sources. The Government accepts this view.

The new income tax scale announced tonight will reduce substantially the incentive to avoid and evade income tax. In addition, action is being taken on certain practices which are largely aimed at tax avoidance.

Leasing

The legislation regarding the tax treatment of lease payments in the hands of both the lessor and the lessee is to be amended. In respect of all financial leases entered into after tonight, the following tax provisions will apply:

- financial institutions will no longer be able to treat financial leases in the same manner as short-term hire contracts for income tax purposes. Instead, they will be required to follow generally accepted accounting practice and record their leasing transactions on the same basis as if they were loans;
- the lessor will be excluded from claiming depreciation allowances on assets subject to financial leases;
- the lessee will be permitted to deduct an amount equivalent to tax depreciation allowances for the particular leased asset, including first-year depreciation allowances if applicable, together with an amount equal to the interest content of lease payments.

These measures will place financial leasing on the same footing for tax purposes as other forms of financing the acquisition of assets, and will remove a significant avenue for tax avoidance. The existing tax treatment of leases of land and buildings and short-term hire contracts will not be changed.

Tax-free dividends

As from 1 April 1982 distributions of capital profits will qualify as tax free in shareholders' hands only when those profits have been realised outside any particular group of companies by way of armslength transactions. The aim of this measure is to prevent revenue losses arising from artificial arrangements to establish capital profits but which do not generate the cash to fund the resulting tax-free distributions to shareholders.

Farming and property investment

Under the existing income tax legislation, it is possible to deduct certain types of expenditure which are essentially of a capital nature. In the case of enterprises involving substantial interests in land, one of the few assets whose value is at least maintained in real terms, these provisions provide major avenues for tax avoidance. The concessions under which farming and fish farming development expenditure may be deducted, and livestock written down to standard or nil values, are the most obvious sources of this problem. Under inflationary conditions, however, it also has to be recognised that interest largely represents a repayment of capital. The fact that interest is deductible for income tax thus adds to both the incentives and the opportunities for avoiding income tax through the conversion of taxable income into non-taxable capital gain. Accordingly, a numer of measures are being taken to restrict these avenues for tax avoidance:

- under the present provisions, where a farm or fish farm is sold at a profit within 5 years of purchase and deductions have been allowed for development expenditure on the farm, that profit is treated as assessable income up to the extent of the deductions allowed. In order to deter the purchase and development of farms for capital gain rather than for productive use, the period of farm or fish farm ownership necessary to avoid recovery of the development expenditure deductions will be extended from 5 years to 10 years;
- interest deducted in respect of any land used in the production of income will become asssessable for income tax to the extent of profits made on the sale of that land within 10 years of its acquisition;
- new farmers and those purchasing additional land will be required to write down the value of livestock purchased from cost to standard or nil values progressively over a period of 3 years;
- losses created by the writing down of livestock to standard or nil values may in future be written off against farming income, but not against income from other sources;
- the period for determining basic livestock numbers under the nil standard value scheme will be extended from 2 to 4 years, or such shorter period as the Commissioner of Inland Revenue may determine;
- partnerships and syndicates of more than 6 persons engaged in farming, fish farming, horticultural and property owning ventures will be treated as companies for income tax purposes;

All of these measures will be implemented in respect of the income year beginning 1 April 1982, or equivalent accounting year. The provisions for the recovery of prior year expenditure will apply to property sold after tonight.

Film industry

The New Zealand film industry has grown rapidly in recent years. Part of this growth has been due to some tax shelter aspects arising from the use of so-called non-resource loans and other leveraging arrangements. In line with other moves to reduce tax avoidance practices, the Government is introducing a new tax regime which incorporates the main features of the tax treatment which applied to films in the past, but removes these tax shelter aspects.

The removal of the tax shelter will still leave the industry with substantial assistance from the Lottery Board, export incentives, and exemption from the film hire tax, which represents an appropriate level of support in the longer run. However, in line with its normal industry assistance approach of providing adequate time for adjustment, the Government has decided to give the Film Commission a grant of $ 1.75 million in 1982–83 in recognition of the effect that the change in tax treatment will have on the industry. This grant will be reduced progressively to zero over a period of 5 years.

Superannuation schemes for individuals

The last few years have seen rapid growth in the use of superannuation schemes for individuals to provide tax-free accumulation of income. Individuals are able to transfer large amounts of cash and capital assets, often the business assets of the contributor, to these schemes but at the same time maintain effective control of those assets. Such schemes are not superannuation schemes in the true sense.

I shall shortly be announcing changes in the taxation of all lumpsum superannuation schemes which will reduce these tax advantages, but additional measures are necessary. Accordingly, the rules under which superannuation schemes for individuals are approved will be tightened to stop their abuse.

In future, the Government Actuary will approve superannuation schemes for individuals under Part II of the Superannuation Schemes Act only if they meet at least one of the following criteria:

- they provide at last 75% of their benefits in pension form;
- the trustees and contributors are armslength parties.

Existing schemes which do not meet the new conditions will be given the option of converting to a pension scheme or winding up without additional tax liability. Alternatively, they may continue without the present tax advantages.

The necessary legislation will be introduced tonight.

Charitable companies

Some businesses carried on by charities enjoy an artificially advantageous position in the market through their exemption from income tax. Moreover, there has been a recent trend for individual business taxpayers to embark on schemes to secure the tax exemption for charities. A typical scheme involves the creation of a company, whose ostensible object is

© 1982 International Bureau of Fiscal Documentation – BULLETIN

charitable, to conduct the business of a self-employed person. The company's net income, after payment of substantial remuneration to that person, is then tax exempt.

It is proposed to introduce legislation, which will be effective from 1 April 1983, to ensure that the business activities of charities will continue to be tax exempt only where the activity is directly related to the principal function of the charity concerned, or where the business employs that category of people for whose benefit the charity was originally established.

Personal tax

The legislation regarding personal tax concessions and rebates will be tightened with effect in the current income year:

- the Fourth Schedule to the Income Tax Act provides for the deduction of expenditure or losses incurred in the use of a private dwelling in connection with the employment of a taxpayer. Because of abuse of this provision, claims will be restricted to the additional expenditure incurred in the use of the specified room or defined area for purposes relating to the taxpayer's employment;
- the family rebate and the principal income earner rebate are designed to provide assistance to taxpayers whose annual income is below certain specified levels. Where a person enters or leaves New Zealand, the income derived during that part of the year he or she is resident in New Zealand is not an appropriate basis on which to calculate these rebates. Consequently, the income of a person in this situation will be grossed up to its full-year equivalent in order to determine the appropriate level of rebate. This will ensure that claims by such taxpayers are fully consistent with objectives of the rebates concerned.

Stamp duty

To prevent avoidance of stamp duty by transferring a property by way of a number of partial interests, the Stamp and Cheque Duties Act 1971 will be amended to ensure that such transfers are treated as one for the purposes of computing conveyance duty. This change will apply from tonight.

Administrative measures

The use of Inland Revenue code numbers in the tax system will be made compulsory. A tax intelligence unit has also been established to detect and police cases of tax avoidance and evasion.

The general tax avoidance provisions in section 99 of the Income Tax Act have not yet been tested before the courts, although some cases are in train. The Government will be watching the outcome very closely. If necessary, steps will be taken to give the legislation the force required to counter undesirable tax avoidance arrangements.

OTHER DIRECT TAX MEASURES

Bonus issue tax

The Task Force on Tax Reform concluded that the present bonus issue tax, while serving as an anti-avoidance measure, operates to inhibit the capital market. The Government broadly accepts the Task Force's view. Accordingly, bonus issue tax will be abolished.

To avert the potential tax avoidance problem identified by the Task Force, a new provision will be introduced. The objective will be to ensure that, when there is a return or reduction of capital within 10 years of a bonus issue being made from the capitalisation of revenue reserves, that part of the return or reduction which is applicable to the bonus issue will be taxable in the hands of the shareholder. Any reduction of capital will be deemed firstly to apply to such bonus issues made during the preceding 10 years.

The new legislation will apply to bonus issues made on or after 1 April this year. Any bonus issue tax paid in respect of bonus issues made subsequent to that date will be refunded.

Life assurance and superannuation

Following recommmendations of the Task Force on Tax Reform, the Government has reviewed the taxation of life assurance and superannuation.

The Government has decided that the overall tax relief given to these forms of long-term contractual saving and protection should continue. The balance is to be shifted, however, to reduce some of the present undue advantages of lump-sum superannuation, and to a lesser extent of life assurance, relative to pension arrangements. In addition, greater relief will be given at the point of initial saving or contribution rather than at the point where benefits are ultimately received.

As from the income year commencing 1 April 1982, the following specific changes are to be effective:

- life assurance companies will be taxed on net investment income at a rate of 31% instead of the present 30% of allotted bonuses and dividends;
- lump-sum superannuation funds, which are tax exempt at present, will also be taxed at 31% on net investment income;
- superannuation funds which provide at least 75% of benefits in pension form will remain tax exempt;
- the personal tax exemption limits for life assurance premiums and contributions to superannuation schemes will be increased from $ 800 to $ 1,200 for members of employer-subsidised superannuation schemes, and from $ 1,000 to $ 1,400 for persons who are not members of subsidised schemes.

Building societies

The Government has decided to implement the Task Force's proposal to tax the income of building societies at the company rate of 45%, commencing with the 1982–84 income year. Dividends paid on withdrawable shares will be deductible in arriving at a society's assessable income. Terminating group ballots will remain tax free in the hands of the recipient.

Investment allowances

A number of investment allowances for new plant and machinery are due to expire on 31 March 1983. Experience with these schemes indicates that they are not effective in achieving their original goals, and waste money in subsiding activities that are not the intended targets. Frequently their purpose has been fulfilled by broader policy moves or other events. Research, both in New Zealand and overseas, indicates that these incentives have had little impact on firms' investment decisions. Following a comprehensive review of investment allowance, the Government has decided not to extend the following schemes beyond their current expiry date of 31 March next year:

- the regional investment allowance;
- the export investment allowance;
- the fishing investment allowance.

The high priority activity investment allowance is to be terminated by allowing the high priority activity scheme, which was introduced with a specific lifespan of 5 years, to expire on 28 October this year. No applications for new approvals or extensions of high priority status will be accepted after tonight, but existing approvals will be allowed to run their course. The terminating date of the related investment allowance will be extended accordingly.

The terminating date of the industrial development plan investment allowance will be extended to 31 March 1986 in order to allow existing commitments to the wine and plastic industries and the New Zealand Steel expansion to be met.

As announced earlier, the farming and agricultural investment allowance is to be extended for a further year to 31 March 1984. This will allow time to consider its future in the context of overall assistance to farming in next year's Budget.

CNG and LPG conversions

At present, depreciation may be claimed for income tax purposes on the cost of CNG or LPG conversions carried out subsequent to the assembly of a motorcar purchased by a business. Depreciation on the cost of a conversion cannot, however, be claimed in respect of a car which has been converted during assembly and where the cost of the car itself is more than $ 11,000. To correct this anomaly, the Income Tax Act will be amended to permit depreciation to be claimed on the cost of the assembly-line conversion of a business motor car to CNG or LPG. The depreciable cost for this purpose will be limited to the following:

© 1982 International Bureau of Fiscal Documentation – BULLETIN

- $ 1,200 for a one-cylinder CNG conversion;
- $ 1,600 for a two-cylinder CNG conversion;
- $ 1,400 for an LPG conversion.

This new provision will take effect from the income year which commenced on 1 April 1982.

Estate and stamp duties

In recognition of the effect of rising property prices:

- the exemption from estate duty will be increased to $ 350,000 in respect of the estates of people dying on or after 1 April 1983;
- the monetary limit in the definition of a "substantial interest" in a first farm will be increased from $ 100,000 to $ 150,000 as from tonight for the purposes of the stamp duty exemption.

The Minister in Charge of the Inland Revenue Department will, where necessary, announce further details of these tax measures.

INDIRECT TAXATION

Taxes on alcoholic beverages and tobacco products

The Government has reviewed the form and level of indirect taxes on alcoholic beverages and tobacco products. Because most of the taxes imposed in this area are levied at specific rates, regular updating is required to maintain both the real value of the revenue collected and the proportion of taxation in the price. It has been decided to increase the taxes on these goods by an average of over 30%.

Alcoholic beverages

The present ad valorem rates of sales tax on beer and spirits will be converted to specific rates. This measure has been undertaken at the request of the industry and so that the tax on each product can be more closely related to its alcoholic strength. One effect will be to alter the price relationships between higher- and lower-priced products.

Beer duty will be increased and amalgamated with the previous 30% sales tax on beer. As from midnight tonight, the rates of beer duty, which now incorporate sales tax, will be increased as follows:

- on beer with an alcoholic content of between 1.7 and 3 percent by volume, the rate of duty will be increased from 16 cent per litre to 21.5 cents per litre. On draught beer (in containers of not less than 8 litres capacity) the incorporation of the former sales tax will add 18 cents per litre to make the combined duty 39.5 cents per litre. On packaged beer the duty equivalent of sales tax will be 22 cents per litre, making a total beer duty of 43.5 cents per litre;
- on standard-strength beer (between 3 and 4.35% alcohol by volume), the rate of duty will rise from 20.5 cents per litre to 27.5 cents per litre. The incorporation of the former sales tax will bring the new combined rate of duty to 45.5 cents per litre on draught beer and 53.5 cents per litre on packaged beer;
- on beer with an alcoholic content of between 4.35 and 5% by volume, the rate of duty will increase from 31 cents per litre to 41.4 cents per litre, with sales tax adding a further 35 cents per litre to bring to combined beer duty rate to 76.5 cents per litre;
- on high-strength beer (in excess of 5% alcohol by volume), the rate of duty will increase from 41 cents per litre to 55 cents per litre. Adding in the former sales tax will bring the new beer duty to 99 cents per litre.

Corresponding adjustments will also be made to the customs duties on imported beer.

These changes will add 9 cents to the public bar price of a l-litre jug of standard-strength beer.

The existing sales tax of 50 cent per litre on table wines will be increased to 67 cents per litre. The tax on fortified wine will be increased from 60 cents to $ 1.06 per litre in order to bring the rate more closely into line with the taxes on other beverages on the basis of alcoholic strength. These changes will take effect from midnight tonight and will increase the price of a 750-ml bottle of table wine by around 13 cents and a similarly sized bottle of fortified wine by around 35 cents.

The domestic excise duty on spirits other than whisky will be increased from $ 9.07 to $ 12.10 per litre of alcohol, with commensurate increase in the customs duties on imported spirits. The excise duty on New Zealand whisky will remain at $ 8.77 per litre of alcohol. In addition, the present 40% ad valorem sales tax on spirits will be converted to three specific rates of sales tax as follows:

- on bitters and spirits containing not more than 23% alcohol by volume, the rate will be $ 2.15 per litre;
- on white spirits (gin, geneva, schnapps, and vodka), the rate will be $ 3.90 per litre;
- on all other spirits the rate will be $ 5.55 per litre

The new sales tax rate of $ 5.55 will raise substantially the tax on New Zealand whisky relative to that on higher-priced imported products. Because the rate of excise duty has not been raised, however, the net effect will be to preserve the competitive position of New Zealand whisky.

These changes to the taxation of spirits will take effect from midnight tonight and should add between 2 and 4 cents to the price of a nip in a public bar.

Tobacco products

The customs and excise duties on tobacco products will increase by 16% and the ad valorem sales tax will be raised from 25% to 40%, both with effect from midnight tonight. These changes will add approximately 20 cents to the price of 20 cigarettes and 35 cents to a 50-gramme packet of tobacco.

The 40% sales tax will also apply to cigarette papers (previously taxed at 20%) and to filter tips (previously exempt from sales tax).

The changes in the taxation of alcoholic beverages and tobacco products which I have announced tonight are expected to yield $ 115 million in a full year. While they will all take effect from midnight tonight, the operation of the Price Freeze Regulations will ensure that retail prices are not affected until existing stocks have been cleared.

The conversion of the present ad valorem sales taxes on alcoholic beverages to specific rates means that the industry will have to face up to regular adjustments of these taxes to ensure that their real value is at least maintained.

Petroleum fuels taxation

The Government has decided to adopt a more uniform taxation policy with respect to liquid fuels. This policy is designed to encourage greater efficiency in the use of imported fuels, and to encourage the development and use of indigenous substitutes.

In brief, the policy is that the relative prices of liquid fuels should reflect the relative costs of supply. Within this framework, taxes should not discriminate between fuels for similar uses. The taxes applying to oil products in the future will comprise three elements:

- first, an element of tax for the use of roads by those vehicles not levied under the road user charges system. This is made up of the existing sales tax on CNG and the National Roads Fund portion of motor spirits duty;
- secondly, an element of tax to encourage the development and use of indigenous alternatives to imported fuels. It has been decided to set this element, in the interim, at a specific rate equivalent to a 15% ad valorem tax at the wholesale level;
- thirdly, an element of general revenue or sales tax equivalent to a 5% ad valorem rate.

National roads fund contribution

To meet the light vehicles' share of the National Roads Board budget for the 1982–83 financial year, this element of motor spirits duty on petrol will be raised by 0.4 cents per litre to 6.4 cents per litre, and the sales tax on CNG will increase by 12 cents per gigajoule to $ 1.86 per gigajoule, both with effect from 1 October 1982.

From the same date, a sales tax at the equivalent rate of 4.93 cents per litre will be applied to LPG used in vehicles of 3.5 tonnes and under. This will replace the road user charges at present applied to such vehicles.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

Consolidated account taxes

The existing specific Consolidated Account taxes and duties on petroleum fuels will be adjusted to the equivalent of a general 15% wholesale level tax. In addition, the specific equivalent of a 5% ad valorem wholesale sales tax will be levied on petrol. As from midnight tonight the new rates of Consolidated Account tax will be as follows:

- motor spirits duty on petrol will rise from 6.7 cents per litre to 9.8 cents per litre premium grade and 9.3 cents per litre on regular grade. This means that from 1 October 1982 the total duty on petrol, including the National Roads Fund contribution, will rise to 16.2 cents per litre on premium grade and 15.7 cents per litre for standard grade;
- aviation gasoline, currently taxed at 9.36 cents per litre, will be taxed at 11.2 cents per litre;
- the present 0.5. cents per liter sales tax on diesel fuel other than marine diesel will be increased to 7.2 cents per liter;
- the sales tax of 1.5 cents per litre on marine diesel will be raised to 5.8 cents per litre;
- home heating oil and kerosene, both at present subject to sales tax at 4 cents per litre, will be taxed at 8 cents per litre;
- the sales tax of 5 cents per litre on jet fuel will increase to 7.2 cents per litre;
- the rate of tax on fuel oils will rise from 1.5 cents per litre to 5 cents per litre.

Rebates

The present policy of rebating the National Roads Fund portion of motor spirits duty for off-road use of petrol or where vehicles are levied under the road user charges system will continue. Consolidated Account rebates will continue to apply to the currently approved categories but will be restricted to 2.5 cents per litre for both grades of petrol. This is the specific equivalent of the 5 percent general revenue tax.

As most use of other petroleum products is in commercial applications, which would qualify for rebates of a general revenue tax, it has been decided not to impose the additional 5 percent tax on these products. Similarly, the additional 5% tax is not levied on aviation gasoline and refunds of motor spirits duty on this fuel will be eliminated. The tax to encourage the development of indigenous fuel substitutes will not be eligible for rebates, since this would effectively negate the desired effect of the tax.

The changes to fuels taxation which I have announced tonight are estimated to raise $ 140 million in a full year. They represent a major step towards a comprehensive taxation and pricing policy that will provide a sound and economic basis for future energy development, and help lessen New Zealand's dependence on imported fuels.

International departure tax

The rates of international departure tax are to be increased from $ 35 to $ 40 for each adult and from $ 7 to $ 8 for each child under 12. These new rates will apply to al tickets supplied after midnight tonight.

Sales tax

A number of changes are to be made to the sales tax legislation to reduce the scope for avoidance and simplify administration.

Sale value

Legislation will be introduced tonight to amend the sale value provisions of the Sales Tax Act. The proposed reforms principally include:

- clarification of the provisions for determining the fair market value of taxable goods;
- clarification of the treatment of advertising, warranty, and other service charges;
- the inclusion of the freight and insurance costs incurred in bringing goods to New Zealand in the sale value of goods on which tax is paid on importation;
- the provision of an uplift of 15% of the sale value of goods sold directly by a manufacturer to a retailer. The intention of this uplift is to place such direct sales on a more equitable basis with sales made by traditional wholesalers.

These measures are aimed at combating a rising trend in tax avoidance and are intended to reduce variations in the impact on prices of an ad valorem sales tax on goods distributed by different methods. They are expected to raise an additional $ 60 million of revenue in a full year.

Farm motorcycles

The concession under which sales tax may be refunded on motorcycles for farm use is to be abolished from midnight tonight. Given that the use of farm motorcycles is now firmly established in the farming community, and in the light of continuing policing difficulties, this concession is no longer serving a useful purpose.

Administrative changes

The following changes are being made to streamline the administration of the present wholesale sales tax:

- refunds of sales tax will no longer be allowed on taxable goods used in the repair of exempt goods;
- the turnover limit for exemption of traders from licensing is to be increased from $ 1,000 to $ 5,000. The exemption for contractors will be increased from $ 500 to $ 2,500;
- provision will be made in the Sales Tax Act 1974 to license and tax Government agencies which perform manufacturing or wholesaling functions within the meaning of the Act;
- with effect from 1 January 1983, the present flat 10% penal tax on default of payment of sales tax will be replaced by a new penalty of 10%, increasing cumulatively by 2% each succesive month that the tax remains unpaid. The new penalty will operate on the day following the date on which the sales tax return is due and will also be applied to the collection of domestic air travel tax, international departure tax, and motor spirits duty.

With the exception of the new cumulative penalty provision, these measures will take effect from midnight tonight. Introduction of the new cumulative penalty provision will be delayed until 1 January 1983 to allow taxpayers in default, and those who normally pay after the expiry of the discount period, an transitional period in which either to wipe off their debts or to arrange finance for the faster payment of tax without penalty. The shortening of the period for payment without penalty will increase sales tax collections by about $ 45 million for this year only.

The Minister of Customs will announce details of these changes to indirect taxes later tonight.

PUBLIC ACCOUNTS

The Public Accounts for 1981–82 were tabled in the House recently. The main features of the Consolidated Account, the major operating account, were:

- ordinary payments, which comprise annual and permanent appropriations, totalled $ 10,899 million, an increase of $ 1,913 million or 21% over 1980–81;
- ordinary receipts, comprising taxation, interest, dividends, profits, and departmental receipts, totalled $ 9,843 million, an increase of $ 1,891 million or 24% over 1980–81.

After transferring $ 100 million from the Consolidated Account to the Reserve Account to cover the balance of the commitment due at 31 March 1982 in respect of supplementary minimum prices, a transfer of $ 1,281 million was made from the Loans Account to the Consolidated Account. This latter transfer was well within the $ 1,950 million allowed for this purpose in the 1981 Appropriation Acts.

CONCLUSION

Tonight's Budget has implemented the income tax reductions which I said would be the counterpart to the prices and incomes freeze. For most wage and salary earners, the reductions will be substantial.

Within the constraints imposed by the need to reduce inflation, the first stage of the Government's strategy for tax reform has been introduced tonight. The new income tax scale will substantially lessen both fiscal drag and the imbalance in the tax treatment of single- and two-income families. It will also reduce the incentive to evade and avoid income tax. The

© 1982 International Bureau of Fiscal Documentation – BULLETIN

scope for tax avoidance has been further reduced by a range of specific measures.

These changes will be achieved within firm and consistent fiscal and monetary policies. The Government is determined that the freeze will work, and that inflation and inflationary expectations will be reduced substantially.

In the medium term, the Government will continue to pursue its goal of making the economy more flexible. A substantial reduction in inflation will greatly assist the realisation of the growth strategy, just as a more flexible economy will support the counter-inflationary measures.

The success of these policies will depend upon the support of the people. I am convinced that our people will respond to the challenge.

APPENDIX I
New income tax rate scale for individuals

	The rate of tax for every dollar is (%)
On so much of the taxable income as:	
Does not exceed $ 6,000	20.0
Exceeds $ 6,000 but does not exceed $ 24,000	31.0
Exceeds $ 24,000 but does not exceed $ 30,000	41.0
Exceeds $ 30,000 but does not exceed $ 38,000	51.0
Exceeds $ 38,000	60.0

A 10% temporary surtax on the marginal tax rates applying to taxable income in excess of $ 24,000 will also apply in conjunction with the above scale. The marginal tax rates that will then apply are:

	The rate of tax for every dollar is (%)
On so much of the taxable income as:	
Does not exceed $ 6,000	20.0
Exceeds $ 6,000 but does not exceed $ 24,000	31.0
Exceeds $ 24,000 but does not exceed $ 30,000	45.1
Exceeds $ 30,000 but does not exceed $ 38,000	56.1
Exceeds $ 38,000	66.0

Note: These rates will be reflected in new PAYE tax tables applying to pay periods ending on or after 1 October 1982, and become the annual rates in respect of income from 1 April 1983. The annual tax rate scale for the year ending 31 March 1983 will take into account the combined effect of the present and new scales on income earned during the year.

BANGLADESH:

The Finance Ordinance, 1982

By K.A. Gofran*

Some important amendments have been made this year in the different fiscal statutes by the Finance Ordinance, 1982. This article summarizes a number of changes which are of particular interest.[1]

INCOME-TAX ACT, 1922

1. Exemption of income from property [Section 4(3)(xii)(ff)]

The income from newly constructed buildings having a plinth area of not more than 1,000 square feet was exempt from income tax for a period of 5 years from the date of completion, provided erection of the building was begun and completed at any time between 1 July 1980 and 30 June 1985 (both days inclusive). This restriction on the date of commencement of construction during the above period has been withdrawn with retrospective effect from 1 July 1980. The income of such a property is now eligible for exemption even if construction of the building commenced before July 1980 and was completed at any time between 1 July 1980 and 30 June 1985.

2. Exemption on account of conveyance [Section 7(1)]

Previously a salaried person enjoyed exemption for 4,200 Tk. if he owned and maintained at his own expense a car registered in his own name and did not receive any conveyance allowance or any other benefit or perquisite in lieu of such allowance from the employer. Similarly the exemption was for 2,400 Tk. if the conveyance was any other power-driven vehicle and 1,800 Tk. if he maintained no vehicle. The limits of the above exemptions have been raised to 6,000 Tk., 3,200 Tk. and 2,400 Tk. respectively.

3. Determination of notional income from self-occupied house [Section 9(2)(b)]

In order to simplify the calculation of the annual value of a self-occupied building of an assessee, an amendment has been made in clause (b) of sub-section (2) of Section 9. No tax is payable if the annual value of such property does not exceed 6,000 Tk. Under the previous wording, if it exceeded 6,000 Tk., a deduction of 6,000 Tk. was made and the balance so arrived at or a sum equal to 10% of the total income of the owner, whichever was less, was taken as the annual value. The position after amendment is that either the balance after deduction of 6,000 Tk or a sum equal to *10% of all other income excluding the notional income* from the residential house, whichever is less, is the annual value of the self-occupied house for the purpose of assessment.

4. Availability of accelerated depreciation [Section 10(2)(vi)(b)]

The date up to which accelerated depreciation was available in respect of any machinery or plant (other than office appliances and road transport vehicles) expired on 30 June 1982. The time limit has been extended to 30 June 1987.

5. Admissibility of festival bonus as business expenditure [Section 10(2)(x)]

A bonus paid to an employe is an admissible expenditure if it is a reasonable amount with reference to the pay of the employee, profit of the business and general practice in similar businesses. In other words, it is an admissible expenditure under certain conditions. These conditions have been waived in the case of admissibility of festival bonus as a business expenditure.

6. Exemption of capital gains invested in new industrial undertaking [Section 12B (7)]

Capital gains arising from the sale, exchange or transfer of lands or buildings have been made exempt from tax if they are invested for setting up a new industrial undertaking within the 2-year period immediately following the date on which the sale, exchange or transfer took place.

7. Furnishing of certificate by private limited company [Section 13A(1)]

Previously every private company whose paid-up capital on the last day of any previous year was 2,000,000 Tk. or more was required to furnish to the Deputy Commissioner of Taxes a copy of the balance sheet and profit and loss account duly certified by a chartered accountant. This limit of the paid-up capital has been reduced to 1,000,000 Tk.

8. Enhancement of exemption limit for investment by cottage industries [Section 14(3)(b)(ii)]

For the purpose of exemption of cottage industries the maximum investment limit has been raised from 10,000 Tk. to 50,000 Tk.

9. Withdrawal of earned income relief [Section 2(6AA) and (15A)]

The distinction between earned income and unearned income has been done away with this year by omitting the definition of "earned income" in Section 2(6AA). Consequently the earned income relief previously granted to an assessee other than a company has been withdrawn by omitting Section 15A. However, the National Board of Revenue has issued instructions to tax officials to allow the earned income allowance to salaried persons whose salary is liable to be charged to tax according to the rates as per the Finance Act, 1981 for the assessment year 1982-83 (see N.B.R. Circular No. 10 (I.T.) of 1982).

* Editor of *Bangladesh Tax Decisions*.

1. *Editor's note:* The November 1982 issue of the *Bulletin* contains extracts from the Budget Speech for 1982-83.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

10. Withdrawal of restriction on investment allowance [Section 15(3A)]

The restriction imposed by the Finance Act, 1980 on the availability of the full benefit for investment in the purchase of Savings Certificates, etc. has been withdrawn. Henceforth the investment allowance will be available to an assessee for his full investment subject to the maximum of 30% of his total income or 35,000 Tk., whichever is less.

11. Exemption of contribution to Zakat Fund, etc. [Section 15DD]

A new Section 15DD has been inserted which provides an exemption in respect of any sums paid by an assessee as Zakat to the Zakat Fund or as a donation or contribution to a charitable fund established by or under the Zakat Fund Ordinance, 1982.

12. Withdrawal of exemption for educational expenses of children [Section 15E]

An assessee whose total income was not more than 50,000 Tk. previously enjoyed exemption of a portion of his income on account of the educational expenses of his children or children wholly dependent on him. This exemption has been withdrawn by omitting Section 15E. However, the National Board of Revenue has issued instructions to allow the exemption to salaried persons (if eligible) for the assessment year 1982-83 as in the case of the earned income allowance (see N.B.R. circular No. 10 (I.T.) of 1982 dated 31 July 1982).

13. Tax credit on investment of shares by a company [Section 15G(3)]

A company is entitled to a credit equal to 50% of the amount it invests in the purchase of shares or debentures issued by the Equity Participation Fund against the tax payable by it. Sub-section (3) of Section 15, which replaces the old sub-section (3), provides that where no tax is payable by a company in respect of the year in which the company makes such investment or where the amount of tax payable is less than the amount of credit, the amount of the credit or so much of it as has not been deducted, as the case may be, shall be carried forward and deducted from the tax payable by the company in the following year and so on.

14. Withdrawal of personal allowance [Section 15H]

Previously an assessee, whether an individual, Hindu undivided family, unregistered firm or association of persons, enjoyed exemption for 3,000 Tk. on account of personal allowance. This exemption has been withdrawn by omitting Section 15H. However, the National Board of Revenue has issued instructions to allow this allowance to a salaried person for the assessment year 1982-83 as in the case of earned income allowance (see N.B.R. Circular No. 10 (I.T.) of 1982 dated 31 July 1982).

15. Tax on non-residents [Section 17(1)(a)]

Provision has been made this year to charge income tax only at the maximum rate on the total income of a non-resident assessee other than a company. The other alternative – to charge tax at the rate applicable to a resident in such a case – has been abolished. The maximum rate of income tax has been fixed at 30% of the total income of a non-resident assessee according to the Finance Ordinance, 1982.

16. Reduction in the rates of tax on capital gains [Section 17(5)(b)(ii)]

The rates of tax on capital gains in the case of an assessee other than a company or a registered firm have been reduced and fixed as follows:

(i) Where the capital gains arise as a result of disposal by an assessee of his capital assets after 2 years but within 5 years from the date of their acquisition, the income tax is payable on the said gains at the rate applicable to total income including the said capital gains, or income tax at the rate of 25% on the amount of capital gains, whichever is lower.

(ii) Where the capital gains arise after 5 years but within 15 years from the date of acquisition of the capital assets, income tax payable on such gains is at the rate applicable to total income including the said capital gains, or income tax at the rate of 20% on the amount of capital gains, whichever is lower.

(iii) Where the capital gains arise after 15 years from the date of acquisition of the capital assets, the income tax payable on the capital gains is at the rate applicable to total income including the said capital gains, or income tax at 15% on the amount of capital gains, whichever is lower.

17. Withdrawal of exemption of capital gains [Proviso to Section 17(5)]

The provision of exemption of capital gains arising as a result of disposal of assets acquired before 14 August 1947 has been withdrawn by omitting the proviso to Section 17(5).

18. Enhancement of limit of income for liability to pay advance tax [Section 18A(1)]

The limit of total income for liability to payment of advance tax under Section 18A has been raised from 25,000 Tk. to 50,000 Tk.

19. Enhancement of the rate of interest on delayed refund of excess advance tax [Section 18A (5)]

The rate of interest for delayed refund of advance tax paid in excess under Section 18A has been raised from 10% to 13.5%.

20. Raising of limit of income for liability to furnish statement of assets and liabilities [Section 22(4A)]

Previously, an individual whose total income exceeded 25,000 Tk. was required to furnish along with the return a statement of assets and liabilities of himself, his wife or wives and his minor children. This limit of income has been raised to 50,000 Tk.

21. Abolition of provision for presumptive assessment [Section 23(3A)]

The provision of presumptive assessment introduced by

© 1982 International Bureau of Fiscal Documentation – BULLETIN

the Finance Act, 1980 has been abolished by omitting sub-section (3A) of Section 23.

22. Requirement of obtaining clearance certificate for registration of documents [Section 47A(1)]

Clearance certificates previously had to be obtained from the Deputy Commissioner of Taxes in connection with the registration of any document purporting to transfer, assign, limit or extinguish the right, title or interest of any person in any property valued at more than 50,000 Tk. This limit has now been raised to 100,000 Tk. A clearance certificate is, therefore, not necessary for registering a document of a property valued at up to 100,000 Tk.

23. Taxable limit

The maximum taxable limit has been raised from 15,000 Tk. to 20,000 Tk.

24. Self-assessment

The scope of the scheme of self-assessment has been widened this year by raising the maximum limit from 25,000 Tk. to 50,000 Tk. Moreover, the salaried directors of limited companies have also been made eligible for self-assessment. The National Board of Revenue has issued Notification No. S.R.O. 276-L/82 dated 30 July 1982 in this regard.

25. Exemption of gratuity

Gratuity paid to a retired employee has now been totally exempted from the payment of tax (see N.B.R. Notification No. S.R.O. 226-L/82 dated 30 June 1982).

26. Exemption of royalty and technical know-how fees

Royalty and technical know-how fees have been exempted from payment of tax (see N.B.R. Notification No. S.R.O. 227-L/82 dated 30 June 1982).

27. The Sales-tax Act, 1951 (III of 1951)

The Sales-tax Act, 1951 (III of 1951) has been repealed and the sales tax law has been completely recast. A new Ordinance called the "Sales-tax Ordinance 1982" has been promulgated.

This Ordinance came into force on 1 July 1982. Sales tax will henceforth be levied at the import and export stages. Therefore, there will no longer be any sales tax on locally manufactured or produced goods. However, according to the provisions of the new Ordinance all pending sales tax assessments for the period up to 30 June 1982 will be made as before. The provisions of the Sales-tax Act, 1951, rules made and Notifications issued thereunder will remain in force for the purpose of pending sales tax assessments.

The administration of the Sales-tax Ordinance, 1982 will be the responsibility of the Customs Authorities.

28. The Urban Immovable Property Tax Act, 1957 (E.P. Act XI of 1957)

The rates of urban immovable property tax have been rationalised and reduced this year. The rates of this tax are as below after the amendment:

	Rates of tax
(a) in all cases of holdings within the limits of the Dacca Metropolitan Area the annual value of which does not exceed 18,000 Tk.	Nil
(b) in all cases of holdings other than holdings within the limits of the Dacca Metropolitan area the annual value of which does not exceed 12,000 Tk.	Nil
In other cases –	
(a) Not being self-occupied holdings	3% of the annual value
(b) Self-occupied holdings	1.5% of the annual value

In case the holding (not being a self-occupied holding) remains vacant for at least 60 days, the assessee is entitled to a remission to the extent of ¾ of the amount of such period. The above rates are effective from 1 July 1982.

29. The Gift Tax Act, 1963 (XIV of 1963)

(a) *Exemption from gift tax* [Section 5(1)]

Gifts to father, mother, real sons and daughters up to 300,000 Tk. and to spouse up to 100,000 Tk. were previously exempt from tax. These two exemptions have been merged into one and the maximum limit of a tax-free gift has been fixed at 400,000 Tk. This means that gift tax is not payable on gifts made by an assessee to his real sons, daughters, father and mother or to his or her spouse for an amount up to a maximum of 400,000 Tk. in value in the aggregate in one or more previous years.

(b) *General exemption from gift tax* [Section 5(2)]

There was a general exemption from gift tax for an amount of 20,000 Tk. per year. This limit has been raised to 25,000 Tk.

(c) *Rates of gift tax*

Previously there were 6 slabs of rates of gift tax. The number of slabs has been reduced to 4 this year with a modification in the rates of tax in each slab. The rate of tax varies from 5% to 20% of the value of all taxable gifts.

30. The Wealth Tax Act, 1963 (XV of 1963)

(a) *Enhancement of exemption limit for self-occupied residential house* [Section 5(1)(xiii)]

The value of a house owned and occupied by an assessee for the purpose of his own residence was exempt up to 1,500,000 Tk. The exemption limit has been raised to 2,500,000 Tk.

(b) *Withdrawal of restriction on the aggregate amount of income tax and wealth tax*

Previously the aggregate of income tax and wealth tax could not exceed 60% of the total income of an assessee if his taxable income exceeded 150,000 Tk. This restrictive provision has been withdrawn.

UNITED STATES:

The International Banking Facility

by David A. Taran*

On 3 December 1981, U.S. Federal Reserve Board amendments authorizing U.S. depository institutions, Edge Act Corporations, Agreement Corporations and U.S. branches and agencies of foreign banks to establish international banking facilities in the United States became effective.[1] The amendments were necessary to permit banks within the United States to enjoy some of the competitive advantages available to offshore shell branches. Many states have already adopted enabling legislation and have favorably amended their state income tax laws.

Generally, an international banking facility, while based in the United States, enjoys the advantage of having its business activities treated as if conducted outside the United States.

An international banking facility is not a separately licensed bank or office of a bank, but, rather, a segregated portion, or division, of the business of such bank or office in the United States. This segregated portion is to be reflected in separate accounts segregated on the books and records of that bank or office, to be treated for regulatory and, generally, for state income tax purposes as being conducted outside of the United States.[2]

This article will first provide some vital background discussion on the international banking facility. Focus will then be directed to the state and local income tax relief afforded international banking facilities by the states of New York and California.[3] International banking facilities do not enjoy federal income tax relief.

1. BACKGROUND

International banking facilities may be maintained at any one or more of the U.S. agencies or branches of a foreign bank. Transfers of assets and liabilities between the international banking facility and the branch or agency of which it is a division or other domestic offices of the foreign bank would be subject to Eurocurrency reserve requirements as if the international banking facility were an offshore office of that bank.[4] Operations of the international banking facility can be conducted side by side with, and under the same management as, the domestic operations of the branch or agency, in the same manner as operations of offshore shell branches are conducted in tandem with domestic operations of U.S. banking offices.

International banking facilities are permitted to accept time deposits only from foreign offices of other U.S. depository institutions, or foreign banks, foreign residents, other international banking facilities and the foreign or domestic operations of the foreign bank in question.[5] This includes foreign affiliates of U.S. corporations, provided that funds received on deposit are not derived from the U.S. operations of the depositor and the size of such deposit is $ 100,000 or more.[6]

Time deposits may be held by the division in the form of deposits, borrowing, placements or equivalent instruments. To prevent purchase of such deposits by U.S. residents, no negotiable certificates of deposit, banker's acceptances, or other such negotiable instruments can be issued by an international banking facility.[7] Furthermore, international banking facilities do not have the authority to accept demand deposits.[8] Funds may be borrowed from foreign offices of other depository institutions, from other international banking facilities, and from foreign or domestic offices of the bank establishing the international banking facility.[9] Time deposits of qualified depository banks will not be subject to any minimum transaction amount. Any funds raised by an international banking facility, whether through deposits or borrowings, are exempt not only from federal reserve requirements but also from interest rate restrictions.[10]

On the loan side, international banking facilities can extend credit to foreign residents, other international banking facilities and, subject to Eurocurrency reserve requirements, to the U.S. offices of their parent banking institutions. However, loans made to a foreign resident cannot be repatriated to finance the U.S. operations of the borrower.[11] The effect of this is to permit the repatriation of Eurodollars, which can be held and exchanged in the United States through a network of international banking facilities. However, because of the limitations of lending and borrowing imposed on international banking facilities, Eurodollars held by international banking facilities cannot be integrated into the U.S. banking system, except through the "screen" of reserve requirements imposed on domestic borrowings of Eurodollars.

Mr. Taran is an attorney with the law firm of Graham & James in Los Angeles, and a member of the Editorial Advisory Board of the *International Tax Journal*. He is currently enrolled in the LL.M. (Taxation) program at New York University.

1. These amendments were made to Regulation D, 12 C.F.R. § 204.8 and Regulation Q, 12 C.F.R. 217.3(g).
2. See Regulation D. 12 C.F.R. § 204.8(a)(1).
3. As a result of the U.S. federal system of government, foreign banks are generally subject to U.S. income taxation on their U.S. operations at two levels, both the federal level and the state level. Federal income tax laws are normally of greater concern to a foreign bank operating in the United States. However, state income taxes can be substantial in amount and are not subject to the many tax treaties which the United States has negotiated with various foreign governments to mitigate the effect of double taxation.

2. STATE TAXATION

Since the purpose behind the international banking facility concept is to provide United States-based banking operations of foreign and domestic banks with many of the advantages of operating an offshore shell branch, a crucial element in this scheme is the availability of state and local tax relief. Many states have, therefore, enacted legislation granting an exemption, from state and local taxation, of the income of banking institutions which is derived from an international banking facility. This article will focus solely on the states of New York and California, both of which play a major role in international banking.

A. New York

Both New York and New York City enacted tax legislation on 19 June 1978, the effective date of which was deferred until 3 December 1981, which generally exempts net income derived by international banking facilities from state and local income tax by the mechanism of allowing the deduction of adjusted eligible net income (eligible gross income less attributable expenses, the ineligible funding amount, and the floor amount) from income subject to state and city tax.[12]

Gross income which is eligible for this relief includes income earned, by an international banking facility, from making, arranging for, placing, or servicing loans to foreign persons, making or placing deposits with foreign banks or foreign branches of banks (including foreign subsidiaries or foreign branches of the bank that has organized the international banking facility) or with other international banking facilities, and entering into foreign exchange trading or hedging transactions related to any of the above transactions.[13] In addition, where an international banking facility makes a loan to an individual who is a non-resident of the United States, to a foreign branch of a U.S. corporation, or to a foreign corporation or foreign partnership which is owned or controlled, directly or indirectly, 80% or more, by one or more non-bank U.S. corporations, U.S. partnerships or resident aliens, substantially all of the proceeds of the loan must be for use outside the United States if the gross income derived from that loan is to be eligible for the deduction.[14]

Although an international banking facility is limited to transacting business with foreign persons, the term foreign person has been given an expansive definition under the New York tax law. In determining whether an individual is a foreign person, citizenship is not the determining factor. Any individual who is not a resident of the United States should qualify as a foreign person, as should a foreign corporation, foreign partnership, or foreign trust, subject to the qualification that a U.S. branch of any of those entities will be a U.S. person.[15] Conversely, a foreign branch of a U.S. corporation, including the bank which organized the international banking facility, will constitute a foreign person.[16] An international banking facility, a foreign government, and international organization or any agency of either, will also qualify as foreign persons.[17]

Expenses and deductions attributable, directly or indirectly, to gross income which is eligible for the special international banking facility deduction must then be subtracted from eligible gross income to get a net income figure eligible for the special international banking facility deduction.[18] This net income figure is then subject to further downward adjustment where the international banking facility is partly or wholly funded from U.S. sources, as opposed to funded wholly from foreign sources.[19] This specific downward adjustment, by the ineligible funding amount, is computed separately each year and is equal to a fractional share – equal to the amount of liabilities of the international banking facility from domestic sources over the world-wide liability of the international banking facility – of the eligible net income.[20]

In addition to the downward adjustment to eligible net income for funding from U.S. sources (the ineligible funding amount), a further reduction of eligible net income by the floor amount may be required. Since the intent of the New York legislation is to grant the international banking facility tax benefit only to the extent that banks have increased their permissible activities in New York over the same activity conducted in New York during a base period, where a bank engaged in permissible activities during those base years, a downward adjustment is made based on the average of the annual aggregate amounts for the three base years, subject to a phase-out percentage based on a 10-year phase-out period.[21] This specific downward adjustment is computed separately each year and is equal to a fractional share – equal to the quotient of the product of the bank's loans and deposits during the base period, recorded in the financial books of its New York branch, agency, or office, which would have qualified as international banking facility qualified loans and deposits ("qualified loans and deposits") multiplied by the applicable phase-out percentage, all less the qualified loans and deposits for the current taxable year, other than those recorded in the financial books of the international banking facility divided by the qualified loans and deposits for the current taxable year, recorded in the financial books of the international banking facility – of the eligible net income less the ineligible funding amount.[22]

The base period selected for comparison, in determining this last downward adjustment to eligible net income, is 1975 through 1977. The phase-out percentage based on a 10-year phase-out period is:[23]

B. California

California tax law employs the unitary method of taxation based on world-wide combined reporting. Under the California unitary method of taxation, a three factor formula – based on real and tangible property, payroll, and sales –[24] is used in apportioning the income of a unitary[25] multi-state or multi-national business.

By comparing the size of a foreign bank's operations in California to the size of its world-wide operations, a fractional share – equal to the average of its California payroll over world-wide payroll, California sales over world-wide sales, and California property over world-wide property – is applied against its world-wide income to determine the amount of the bank's income subject to California state income tax.

The unitary method of taxation based on world-wide combined reporting can have an adverse effect on the taxation of foreign banks and, in general, has been vehemently opposed, because, it is claimed, it can inequitably and improperly allocate the tax burden of foreign banks and result in double taxation. Among some of the inequities and problems cited are the difficulties involved in the translation of foreign currency base financial statements into dollar base financial statements. Identical transactions, and loans by the foreign bank and its agency, branch, or domestic subsidiary or affiliate, will earn different amounts of income dependent on fluctuations in foreign currency exchange rates.

The unitary method of taxation, it is claimed, can be seen as a fee for doing business in California, and not an income tax. Since the amount of the tax imposed depends on a comparison of the size of the bank's operations in California to the size of its world-wide operations and not on the basis of its profitability in California, tax liability determined under the world-wide combined reporting method has taken on the appearance of a fee for engaging in business in California, a fee which is substantially out of proportion to the income earned in California.

The situation may be exacerbated by the existence of minority shareholders holding stock in a domestic bank which is combined with its foreign parent bank. Here the fair market value of the minority shareholder's stock will be decreased by the California tax liability.

While there have been continuing efforts to abandon the method of unitary taxation based on world-wide combined reporting, both in the California state legislature and the United States Congress, and continuing attacks on the constitutionality of the world-wide combined reporting method in the courts,[26] to date, all these efforts have failed. Limited relief, however, is available under the California tax law for international banking facilities.

Legislation was passed by the California legislature and signed into law on 25 September 1981 which provides that, in determining the income of an international banking facility subject to California taxation, an international banking facility maintained by a bank in California shall be considered located without the state, and the property, payroll, and sales recognized as attributable to the international banking facility shall be attributed to the international banking facility in determining the proporty, payroll, and sales factors of the bank.[27] In effect, this will exempt income attributable to an international banking facility maintained in California from California taxation. The income attributable to an international banking facility will be determined in accordance with the usual California apportionment rules, including world-wide combined reporting for a unitary business; however, it may not be the same as the income shown on the books of the international banking facility as having been earned by the international banking facility.

3. FEDERAL INCOME TAXATION

The international banking facility is not a separately licensed bank or office, but simply a division of a bank, branch or agency. For federal income tax purposes, the international banking facility is taxed as a part of the bank, branch, or agency of which it is a division and not as a separate entity. It will be taxed under the normal federal income tax rules which, unless subject to a favorable treaty, will generally subject its income to taxation under the code rules regarding taxation of foreign and U.S.-source income effectively connected with a U.S. trade or business.[28]

Conclusion

The international banking facility is the newest of the banking vehicles available to a foreign bank operating or choosing to operate in the United States. It enjoys the advantage of having its business activities treated as if conducted outside the United States for both regulatory and state income tax purposes. However, because the international banking facility is not a separately licensed bank or office, but simply a division of a bank, branch, or agency, the international banking facility is taxed for federal income tax purposes as part of the bank, branch, or agency of which it is a division and not as a separate entity.

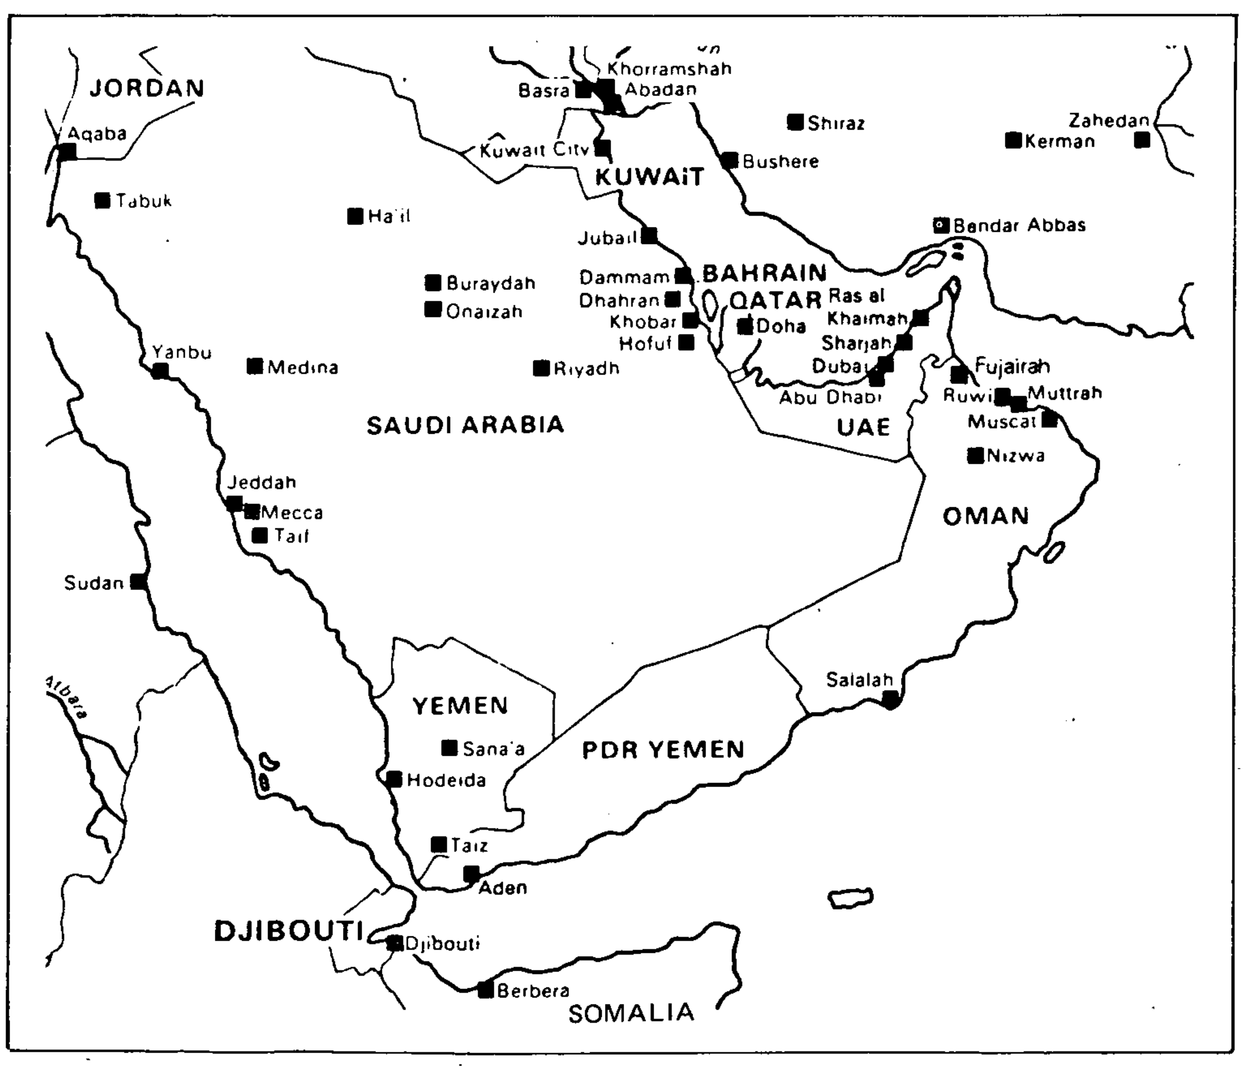
Fiscal Policies of the Middle East States with respect to Foreign Investment

Ahmed Abdullah Al-kadi *



In trying to attract foreign investments, the Middle East States have created a good fiscal climate by enacting a number of investment laws which provide for numerous tax incentives and tax holidays. This article examines in particular the policies on inward investment of 3 States: the People's Democratic Republic of Yemen, the Yemen Arab Republic and Saudi Arabia.[1] The most favorable tax concessions are given to foreign investments in industrial and agricultural development schemes.

Examples are:

(1) The Law on the "Encouragement of Investment", No. 25 of 1981,[2] of the People's Democratic Repubic of Yemen provides for the following incentives: (a) exemption from customs duties on importation of machinery and construction materials necessary for the establishment or expansion of the project, on condition that such machinery and construction materials are not available in local production; (b) exemption from customs duties on the importation of spare parts for 2 years as of the date of the beginning of actual production for the market on condition that such spare parts are not available in the local market; (c) exemption or reduction of customs duties on importation of basic and raw material necessary for local production for 3 years as of the date of commencement of actual production for the market; (d) licensed projects are exempted from income tax for a period not exceeding 5 years as of the date of commencement of actual production for the market; (e) the project is allowed to carry over its losses according to Income Tax Ordinance 8 of 1961; (f) the investor and the participant are exempt from income tax on 30% of their profits derived from investing and participating in the project.[3]

(2) In the Yemen Arab Republic (North Yemen) under Law 18 of 1975, in connection with Promotion and Organization of Investment, a development project in which foreign capital may be invested is one which operates mainly in the fields of industry, agriculture, and tourism. Tax incentives are: (a) exemption from commercial, industrial and business taxes for 5 years as of the date of production. If the turnover of profits in the fifth year exceeds 2,000,000 Yemeni Rials, then for an additional 5 years tax will be charged at only half the normal rates; (b) exemption from the payment of all kinds of import and customs duties on equipment, spare parts, and building materials for 5 years, which may be extended for an additional 3 years.

(3) The most illustrative law is that of Saudi Arabia. The Foreign Capital Investment Code of 1964 (Royal Decree 35 of February 1964) provides

* Research associate at the Faculty of Law and Political Sciences, Department of Financial Law, Budapest University.

1. Examples of policies of other States of the region, for the sake of comparison, are also indicated.
2. Law 25 of 1981 entered into force on 22 October 1981. It repealed the previous Law for Regulation and Promotion of Investment of 1969, No. 23 of 1971.
3. In addition to tax incentives, the Law provides for a number of financial facilities. For instance, projects with special importance to the domestic economy and whose products are not destined for export are allowed to transfer the entire amount of annual profits abroad. Foreign employees of the project are allowed to transfer abroad up to 75% of their income, after paying the income tax due.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

for tax exemptions for licensed industrial and agricultural projects on net profits for 10 years, and 5 years for other projects.

Requirements for doing business

As a rule, participation of national capital in development projects is required. In the People's Democratic Republic of Yemen, under the above-mentioned investment law, the share of national capital, whether private or public, in an approved project is not defined. However, the Law establishes a Standing Committee which advises the Council of Ministers on almost all aspects of investment, including the proportion of foreign participation in an approved project. Under the Investment Law of the Yemen Arab Republic, there are three categories of enterprises: national, where the Yemeni capital is at least 90%; mixed, where the foreign capital is more than 10%; and finally foreign enterprises, where the foreign capital is at least 90%.[4] In Saudi Arabia, foreign capital may be invested without Saudi participation, but in this case it will not benefit from the provisions of the above-mentioned Foreign Investment Code. In Kuwait, under Section 26 of the Commercial Law of 1961, Kuwaiti participation in a joint business must not be less than 51%. The State of Qatar follows the example of Kuwait, except that non-Qataris wishing to invest in industry, agriculture, mining, and the tourism business may be exempted from the above rule by the Minister of Finance. In addition to this requirement, there are a number of other requirements which a foreign investor should fulfill before commencing business, including the license and registration requirements. In Democratic Yemen licenses are granted by a Standing Committee after the approval of the Council of Ministers.

When a license is granted, the enterprise is registered at the Civil Registrar. In the Yemen Arab Republic, the license is given by the Ministry of Economy. The project is registered in the Commercial Register within 30 days after granting the license. In Saudi Arabia, application must be made to the Foreign Capital Investment Bureau of the Ministry of Industry and Electricity to obtain a license to invest. Once the license is granted,[5] the project must be implemented within 6 months, otherwise the Minister may cancel it.[6] The project is registered in the Commercial Register at the Ministry of Commerce.[7] The date of granting the license is important for the foreign investor from the viewpoint of Saudi taxation. If the company signs a business contract before the license was granted to it, then it does not enjoy the tax holiday provided for in the Investment Code. In this case, the company is liable to Saudi income tax on all its income from the project including that part which accrued after the license was granted.

Forms of business and company taxation

Several forms of business where foreign capital may participate are known in the Middle East countries. In Democratic Yemen, no distinct legislation applies to corporate bodies, with the exception of State corporations. Private business is carried out by sole proprietorships, general and limited partnerships, and by private mixed or foreign companies. Private companies are taxed on the same basis as partnerships, at the rate of 37.5% of their annual net profits. The taxable income of a company is the gross income less deductible expenses which should be exclusively incurred by the taxpayer in the production of the chargeable income.[8] In the Yemen Arab Republic, the law regulating companies is Presidential Act 106 of 1976. Beside general and limited partnerships, joint stock and limited liability companies are known. The tax is levied on the net profits of a foreign company derived from industrial or commercial activities regularly carried on in the Republic. The annual taxable profits are charged at rates ranging from 7% on the first 7,500 Yemeni Rials (approximately 5 to 6 Rials equal US$ 1) rising to 25% on any profits in excess of 30,000 YR.[9] In Saudi Arabia, the most acceptable form of business for foreigners is the joint stock[10] or limited liability company. Companies are taxed on their net profits at rates ranging from 25% on the first 100,000 Saudi Rials, rising to 45% on any amount in excess of 1,000,000 SR[11] (parity for the Saudi Rial is maintained with the International Monetary Fund, so that 4.28 SR equal 1 Special Drawing Right – SDR). The Saudi tax system consists primarily of income tax and Zakat (an Islamic wealth tax on income and property). The Saudi portion of taxable income in a joint business is subject to the Zakat. Zakat rates are 2.5% on profits of a joint stock company, and 1.25% on profits of other legal entities. Zakat is levied on the total of the taxpayer's capital resources. Zakat and income taxes are collected by the Zakat and Income Tax Department. Generally, foreigners are subject to income tax,[12] while Saudis are subject to Zakat. Nationals of Kuwait, Bahrain and Qatar are con-

4. Basically, non-residents may participate without limit in the capital of any kind of company incorporated in the Yemen Arab Republic.
5. A license is not required in connection with work done for the Government; the contract with the Government is enough. Licenses must be granted to those operating in the private sector.
6. When the project is incorporated, the corporation acquires Saudi nationality, and its headquarters should be in the Kingdom.
7. All persons carrying on business in Saudi Arabia must record certain information in the Commercial Register. An enterprise located in several Saudi provinces must register in each province.
8. The law regulating company taxation is Income Tax Ordinance 8 of 1961, which regulates taxes imposed on individuals. This Ordinance, enacted before independence, remains in its amended form the governing legislation for income tax purposes. State corporations, which are regulated by Law 13 of 1979, are also obliged to pay tax under the Income tax Ordinance (as amended).
9. The law regulating taxes on commercial and industrial profits is Law 11 of 1972. Individual taxpayers falling under this category of taxpayer have an exempt minimum amount of 7,500 YR.
10. Members of a joint stock company should number not less than 5, and are liable for company debts only to the extent of the value of their shares. The share capital of this form of company may not be less than 200,000 SR, but if such a company offers its shares to the public for subscription then the share capital may not be less than 1,000,000 SR.
11. Company tax rates apply to the following:
(a) net profits of a foreign company operating inside the Kingdom, or inside and outside the Kingdom simultaneously;
(b) the total share of the net profits of a Saudi company attributed to non-Saudi shareholders;
(c) the total share of the net profits of a partnership attributed to non-Saudi sleeping partners.

The tax is imposed on both companies on those non-Saudi individuals investing in a Saudi company (sleeping partners) at the company level rate.
12. An income tax law was introduced in 1950 (Royal Decree 17/2/28/3321). Since then it has undergone several amendments by Royal Decrees and Circulars. The income charged is the income derived within the Kingdom.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

sidered Saudis for tax purposes. Joint stock and limited liability companies are also the most favorable forms of business for foreigners in the Gulf States.

In each of the United Arab Emirates,[13] different laws prevail with respect to the establishment of a business. In an attempt to harmonize these laws, particularly in establishing industrial projects, the Organization of Industrial Affairs Act (Federal Act 1 of 1979) was enacted which applies to all industrial projects in the Federation. The Act requires registration and licensing of all industrial projects by the Industrial Advisory Committee in the Ministry of Finance and Industry. Under Section 8 of the Act, no license will be granted to any project unless it is established by U.A.E. citizens or by a company 51% of which is owned by U.A.E. citizens. Foreign companies must comply with this requirement or wind up their business within 2 years as of the date of the Act. Projects meeting the requirements of the Act are granted several privileges, e.g. supply of land, electricity and water at nominal prices, an unlimited period of exemption from customs duties on import of machinery, equipment, raw materials, and an exemption of the profits from all taxes for a period of 5 years. Tax Decrees in the Emirates are almost the same. Taxes are generally very low. The first 1,000,000 Dirhams of taxable profits are practically not chargeable, 10% is charged on the next 1,000,000 Dirhams, rising to 50% on the amount in excess of 5,000,000 Dirhams. The Ruler has wide tax authority. He may exempt any enterprise, for any period of time, from taxes due and may even exempt any foreign project from the local participation requirement set by law.

Conclusion

Middle East countries fall under the category of developing states. However, unlike other developing countries, many possess huge monetary resources from which they are able to finance their development projects and schemes. For this reason, the interest of foreign businessmen and investors is more and more focused on this region.

The general attitude towards foreign investment is positive. Nevertheless, it is guided by two basic trends: the first is restrictive towards foreign individuals wishing to do business, particularly engaging in trade; the second is the waiving of restrictions and the offering of incentives for foreign investors desiring to do business in the form of companies where local capital is a partner. Therefore, it is more suitable for foreigners to invest their capital in joint stock and limited liability companies. In this case, the most preferential treatment is obtained by those foreigners who engage in projects defined by the local authorities as development projects. Such projects are in the first place industrial projects, promoting the production of local goods. Another notable trend now prevailing is that the governments of the Middle East countries are more and more engaged in mixed projects with foreign participation. Foreign partners in mixed governmental enterprises are exempt from fulfilling a series of requirements demanded by domestic laws, for instance, the license and registration requirements. The contract with the Government is enough to commence business, and in many cases will not render the foreign company liable to taxes.

13. The United Arab Emirates is a Federation of 7 Emirates, formerly known as the Trucial States. They are: Abu Dhabi, Ajman, Dubai, Fujairah, Ras al Khaimah, Sharjah and Umm al Quwain. Every Emirate has its own ruler. The President of the Federation is the Ruler of Abu Dhabi.

IFA NEWS

continued from page 539

USA BRANCH

The USA Branch of IFA will hold its annual meeting on 10–11 February 1983 in the Beverly Wilshire Hotel, Beverly Hills, California. The program features a number of "updates" during which speakers will discuss developments in specific fields. The subjects are:

Subject	*Speaker*
Technical update	D. Brockway
Treaty update	P. Lerner
Singapore update	D. Hong
Australia update	J. Kirkwood
Hong Kong and People's Republic of China update	P. Paul
Japan update	H. Olsen
FIRPTA	J. Forry

A panel consisting of Messrs. Hong, Kirkwood, Paul, Olsen, Tillinghast and Abrutyn will discuss Pacific Basin problems.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

MALAYSIA:

The 1983 Budget

Extracts from the speech pronounced by the Minister of Finance, Y.B.M. Tengku Razaleigh Hamzah, introducing the Supply (1983) Bill in the House of Representatives on 22 October 1982.

. . .

Sales tax

As a revenue measure, I propose to increase the rate of sales tax from 5% to 10%. This tax presently affects only about 25% of the goods imported and produced in the country. Thus, about 75% of all these goods are exempted and these include food items, pharmaceuticals, raw materials and machinery, construction equipment and building materials. I want to make it clear that these items will continue to be exempted.

Service tax

I also propose to increase the scope and rate of the service tax as follows:

(a) the current rate of 5% will be increased to 10%; and
(b) the service tax will now be extended to include all restaurants, bars and coffee houses located outside hotels and also private clubs. However, this change will only apply to these establishments if their annual sales turnover is $ 500,000 and above, and this will be made effective from 1st January, 1983.

. . .

Export incentives

In order to strengthen the Balance of Payments I propose to improve certain export incentives. Currently, the export allowance and the double deduction on expenses for export promotion are only limited to manufacturers who export. These incentives will now be extended to traders who export locally manufactured goods. Further, it is proposed that:

(a) the present export allowance of 2% on ex-factory value of exports and 10% on the increase in value of exports, will be replaced by a new flat rate of 5%;
(b) the export allowance will now be calculated on the basis of f.o.b. value of exports; and
(c) the maximum allowable double deduction for overseas accommodation and subsistence expenses will be increased from the present $ 100/- per day to $ 200/- per day.

Liberalisation of exports

The Government will also liberalise the export of a number of products by removing the present export licensing and export duty of 5%. Thus, export licensing will no longer be required for the export of various products such as sugar confectionery, chocolate, meehoon, mee and similar products, fruit juices, aerated waters, PVC resin and compounds, glass bottles and wire ropes.

The export duty on cement and clinker, round and flat bars of iron and steel as well as mosaic, wall and roofing tiles will be abolished. However, since these items are classified as essential materials that are required by the housing and construction industry, they will continue to remain under export licensing.

In line with the proposals to liberalise exports, I also propose to abolish the 15% export duty on coconuts and copra. Coconut prices in the country have declined sharply in recent months and are much lower than the prices obtained in the export market. With the lifting of the export duty on coconuts and copra, this will help to facilitate export and improve the incomes of coconut producers and smallholders in the rural areas.

. . .

Liberalisation of import procedures

Hon'ble Members will recall that one of the measures introduced last year concerned the liberalisation of import duty procedures on a wide range of raw materials. As a continuation of this effort to improve the system of duty exemptions, I propose to expand further on the list of raw materials which are eligible for consideration under this new procedure. The procedure will be simplified by integrating the reduced surtax into the import duty, to enable manufacturers to obtain the reduced surtax on the raw materials automatically, without having to apply for it.

The Reinvestment Allowance amounting to 25% of the expenditure on plant, machinery and industrial buildings was first introduced in the 1979 Budget and will end in the year of assessment 1983. This incentive is aimed at encouraging manufacturing industries to undertake expansion of their plants. As this incentive has been found to be attractive to the private sector, I propose to extend the Reinvestment Allowance up to the year of assessment 1986.

Hon'ble Members will recall that in last year's Budget Speech, I also extended the Accelerated Depreciation Allowance to assessment year 1986 and at the same time, made this incentive available to all industries.

Import duty on motor vehicles for private use

Hon'ble Members will agree that we import a large quantity of conspicuous consumption and luxury items, which do not contribute to the productive capacity of the economy. For instance, in 1981 the import value of motor vehicles for private use amounted to $ 800 million, an increase of 12% over that of 1980.

I therefore propose to increase the import duty on completely-built-up (CBU) passenger cars for private use and to introduce for the first time, an import duty on completely-knocked-down (CKD) motor vehicles.

Thus, the import duty on CBU passsenger cars for private use will be increased:

For cars valued less than $ 20,000, from 60% to 90%;
For every Ringgit of the next $ 5,000, 110%;
For every Ringgit of the next $ 5,000, 135%;
For every Ringgit of the next $ 5,000, 160%; and
For every Ringgit of the balance, 200%.

For CKD passenger cars, I propose to introduce an import duty of 15%. This measure is designed to encourage a higher level of local content and import substitution in the motor vehicle industry. Commercial vehicles will not be affected by this new duty.

In addition, I propose that locally assembled passenger cars intended for use as taxis be given full exemption from excise duty.

Import and excise duties on liquor

From cars I move to liquor. I propose that the current import duty on beer and liquor be increased between a range of 10% to 40% and that the excise duty for locally produced beer and stout, be also increased by 60% from $ 1.25 per litre to $ 2.00 per litre.

Import and excise duties on tobacco

Similarly, I propose to increase the import duty on unmanufactured tobacco by 54% from $ 32.54 per kg. to $ 50 per kg. The import duty for cigarettes and other items will be raised within a range of 3% to 137%. Besides providing additional revenue to the Government for development purposes, these tax measures will also encourage the greater use of locally grown tobacco, and help increase the incomes of about 53,000 farm families. Consequent to the increase in import duty on tobacco, I also propose to increase the excise duty on locally manufactured cigarettes from $ 4.37 per kg. to $ 9.00 per kg.

. . .

Computers

I would add that consistent with Government's wide ranging policies to encourage the private sector to modernise more rapidly and become more competitive internationally, I also propose to abolish the 25% import duty on computers.

Research and development

At present companies undertaking research are allowed single deductions for tax purposes in respect of expenditure incurred on research provided that the research is scientific in nature and is related to their business. It is now proposed to improve this incentive by removing these conditions so as to encourage more companies to undertake research. The improved incentives will be made available only if the companies undertake research that has been approved. The improved incentive is as follows:

(a) 1⅓ deduction for revenue expenditure for R and D;

© 1982 International Bureau of Fiscal Documentation – BULLETIN

(b) such research may be carried out by the taxpayer himself or on his behalf by any scientific association, university or college or research institution;
(c) buildings for R and D be deemed to be industrial buildings and be entitled for industrial building allowance.

As Hon'ble Members will agree, there is already a wide range of incentives for the private sector. These investment incentives are very liberal and include exemptions and allowances on income tax, import duties and sales tax. Further, the incentives cover not only the manufacturing sector but also other industries such as the hotel and shipping industries.

The main concern of the Government now is to allow time for these incentives to be fully absorbed into the economic system and to ensure that the various incentives are implemented effectively rather than offering new incentives. We want to be sure that the private sector is able to realise the full benefits of these extensive tax concessions and incentives before new incentives are provided. To this end, the Government will continue to improve the present system of incentives.

. . .

Rubber smallholders

The rubber smallholders, rubber estates and tin producers have continued to be hit by both rising costs and lower income and profits at the same time.

I therefore propose to help alleviate the problems of our rubber and tin producers by taking the following actions:

(a) in the case of rubber, the export duty will now apply only when prices exceed 170 cents per kg. whereas before this, it was imposed when prices exceeded 154 cents per kg.;
(b) in the case of tin, the export duty will now apply only when prices exceed $ 26.40 per kg., whereas before this, it was imposed when prices exceeded $ 23.15 per kg.

Road tax

The Government has spent large sums of money to build new roads and bridges and to improve the existing network of roads. It is only fair that road users should pay more to assist in their maintenance. Furthermore, the rate structure should be made more progressive by injecting greater equity in the sharing of the burden in road taxes. I therefore propose to revise the road tax rates for cars for private use.

The proposal will not, however, affect owners of passenger cars with engine capacities of 1,200 cc. and below. Cars with engine capacities of more than 1,200 cc. will now be subject to higher road tax ranging from 20 cents per cc. to $ 3.60 per cc. for cars above 3,000 cc. Thus, owners of expensive cars, especially those in the 3,000 cc. category will pay more road tax. And owners of private diesel vehicles will pay five times more but at these new rates.

I must stress, however, that these revisions will not affect buses, taxis, hired cars and commercial vehicles.

Motor vehicles owned by companies

Company owned passenger cars however are in a different category. Since they are used for business purposes, they should be charged different rates. Consequently, I propose that the road tax on cars owned by companies, should be four times the road tax on cars for private use. However, taxis, hired cars and commercial vehicles owned by companies will not be affected by this proposal.

Appendices Concerning Taxation

APPENDIX I

Proposal to review the rate of sales tax

Presently, all essential items are exempted from sales tax. However all other items attract a sales tax of 5% except for a few luxury items which attract a sales tax of 10%. The 5% general rate of sales tax has been effective since 1972 when the sales tax was first introduced. There is therefore justification to raise this rate of tax to a higher level in order to increase the contribution of the sales tax to government revenue. It is proposed that the sales tax be increased to 10%. This increase will not affect essential items which will continue to be exempted from sales tax.

APPENDIX II

Proposal to introduce the "credit system" in the sales tax administration

Sales tax is a single stage tax which is imposed either at the importer's level or at the manufacturer's level. To avoid the multiple imposition of the sales tax, manufacturers are allowed to import or buy raw materials free from sales tax by using sales tax form No. 5. Some manufactures, however, are not able to utilise this facility to obtain tax exempt raw materials because of the size of their operations. They are therefore subject to sales tax on both the imports (raw materials) as well as the final products. To overcome this problem, it is proposed that the small manufacturers who for some reason or other are unable to utilise the facility under the present system be given "credit" for the sales tax paid by them on the purchase of the raw materials and this credit be utilised to offset the sales tax that is payable on their final products.
This proposal will take effect from 1st January, 1983.

APPENDIX III

Proposal to increase the rate of service tax

The current rate of service tax is 5% on taxable goods and services provided or sold in prescribed establishments. This rate of 5% was first imposed in March 1975 and has not been revised since then. It is proposed that the rate of service tax be increased from 5% to 10% in order to enhance the contribution of service tax to revenue.

APPENDIX IV

Service tax

Presently, the establishments covered by service tax are hotels, night-clubs, dance-halls, cabarets, health centres and massage parlours. The present coverage of the service tax is very narrow. It is therefore proposed that this base be widened and that the service tax be extended to the following:
(i) all restaurants, bars, snack-bars and coffee houses located outside hotels and having an annual sales turnover of $ 500,000 and above of prescribed goods and services;
(ii) all private clubs having an annual sales turnover of $ 500,000 and above of prescribed goods and services.
This proposal will take effect from 1st January 1983.

APPENDIX V

Proposal to abolish all duties from cine-cameras, sound recorders etc. for film of less than 16mm width, perfurmes, cosmetics, transistor radios and ball point pens (other than plastic)

In the last Budget all duties from cameras, watches, fountain pens and lighters were abolished with the aim of promoting tourism and the growth of related industries. It is now proposed that all duties on perfumes, certain types of cosmetics, cine-cameras, projectors, sound recorders, transistor radios and transistor radios with sound recorders and ball point pens (other than plastic) be abolished. These items are not produced locally and with the abolition of these duties it is envisaged that the retail trade in these items will further expand throughout the country. The full list of these items is in Attachment I.[1]

APPENDIX VI

Proposal to remove certain selected items from export licensing

To further encourage the export of certain selected products, it is necessary that these products be allowed to be exported freely. It is therefore proposed that the following products be no longer subject to export licensing:
(i) Sugar confectionery not containing cocoa
(ii) Chocolate, chocolate candies and other chocolate confectionery
(iii) Macaroni, spaghetti similar products like meehoon, kowy teow, mee and noodles
(iv) Fruit juices requiring dilution before use and packed for retail sale, including fruit cordials, fruit syrup, rose syrup etc.
(v) Aerated waters
(vi) PVC resin and compounds
(vii) Glass bottles
(viii) Rubber drying plant
(ix) Diamonds and precious stone set or unset
(x) Carbon black
(xi) Explosives
(xii) Wire ropes.

1. The Attachments are not reproduced here.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

APPENDIX VII

Proposal to abolish the export duty on certain selected items

In order to encourage exports it is essential that they should be competitive in the world markets. Export-duty is a factor which inhibits the penetration of these markets because it increases the price of the product exported. It is proposed that the export duty of 5% on the following items be abolished.

(a) Cement & clinker under Tariff Code		(b) Round bars of iron and steel under Tariff Code	
25.23	100	73.10	210
	200		290
	300		299
	900		

(c) Flat bars of iron and steel under Tariff Code		(d) Mosaic tiles under Tariff Code	
73.10	910	69.07	900
	930	69.08	900
	990		

(e) Roofing tiles under Tariff Code		(f) Frozen prawns under Tariff Code	
69.05	100	03.03	111 to 299
	900		

However to ensure adequate local supply, the export of these items wil continue to be subject to export licensing.

APPENDIX VIII

Proposal to abolish the export duty on copra and fresh coconuts

In the 1979 Budget the export duty on copra and fresh coconut was increased to 15% in order to discourage exports and ensure sufficient supply to domestic oil mills. This situation has however since changed. There has been a reduction of local demand for these products. The reduction in the demand for coconut and copra is due to an increase in the processing of palm oil and the production of edible oils from it on a larger scale. The depressed prices of coconut and copra have been further aggravated by the export duty and this has in turn affected the livelihood of coconut growers. In view of the above it is proposed that the export duty on fresh coconut and copra be abolished so that coconut growers will be able to get more competitive prices for their produce.

APPENDIX IX

Proposal to include raw materials in the Second Schedule of the Customs Duties Order, 1976

In the 1982 Budget the surtax on the imports of a wide range of raw materials which were not available locally was abolished. Instead, the reduced rate of surtax at 2% or 3% as the case may be, which was payable under the existing exemption was integrated into the import duty. The advantage of this proposal to manufacturers is that they can obtain the reduced duty of 2% or 3% for importing their raw materials without having to apply for it. As a continuation of this exercise additional items of raw materials have been identified and it is proposed that the surtax on these items likewise be integrated into the import duty structure. (A list of the raw materials is in Attachment II).

APPENDIX X

Reinvestment allowance

The reinvestment allowance amounting to 25% of the expenditure on plant, machinery and industrial buildings and first introduced in the 1979 Budget ends in the year of assessment 1983. This incentive is aimed at encouraging manufacturing industries to undertake expansion of their plants. This incentive has been found to be attractive to the private sector and is open to all industries which are not enjoying incentives under the Investment Incentives Act 1968. It is therefore proposed that the reinvestment allowance be extended up to the year of assessment 1986.

APPENDIX XI

Proposal to increase the import duty on passenger motor vehicles

In view of the large increase in imports of motor vehicles (CBU and CKD) it is proposed that as a revenue raising measure the import duty on the completely-built-up (CBU) motor vehicles be increased and that an import duty on completely-knocked-down (CKD) motor vehicles be imposed for the first time. This high duty will also encourage greater use of locally made parts. The new rates are as follows:

	Present rate	Proposed rate
(i) Import duty on CBU motor vehicles		
On value of less than $ 20,000	60%	90%
Next $ 5,000	70%	110%
Next $ 5,000	80%	135%
Next $ 5,000	90%	160%
On the balance	100%	200%
(ii) Import duty on CKD motor vehicles	Nil	15%

With a view to offset the increased cost of passenger cars to taxi operators due to the higher import duty, it is proposed that locally assembled cars intended for use as taxis be wholly exempted from excise duty.

APPENDIX XII

Proposal to increase the import duty and excise duty on liquor

The current rates of import duty and excise duty on liquor were imposed in 1980. From the health point of view, liquor is an item whose consumption should be discouraged. In view of this, it is proposed that the import duty on liquor be increased within a range of 10% to 40%. Further since some types of liquor are produced locally, it is proposed that the excise duty on beer and stout be accordingly increased by 60% from $ 1.25 per litre to $ 2.00 per litre. Details of the proposed changes are in the Attachment III.

APPENDIX XIII

Proposal to increase the import duty and excise duty on tobacco

Tobacco is another item whose consumption should be discouraged. The current rates of import duty and excise duty were imposed in 1980. In view of this, it is proposed that the import duty on unmanufactured tobacco be increased by 54% from $ 32.54 per kg. to $ 50 per kg. Similarly, it is proposed that the import duty on cigarettes and other items of manufactured tobacco be increased within a range of 3% to 137%. In keeping with the above increases it is proposed that the excise duty on locally manufactured cigarettes be increased by 105% from $ 4.37 per kg. to $ 9.00 per kg. Details of the proposed changes are in Attachment IV.

APPENDIX XIV

Revision of export incentive

In view of the strategy to stimulate exports of manufactured goods, the tax incentives for exports have to be reviewed in order to encourage the manufacturing industries to sustain and improve that export performance. It is therefore proposed that:

(a) the maximum allowable double deduction for overseas accommodation and subsistence expenses be increased from the present $ 100 to $ 200;
(b) the existing export allowance:
  (i) be made available to all exporters, including traders;
  (ii) the basis of calculating the allowance be based on f.o.b. value of export instead of the ex-factory value; and
  (iii) the existing rate of 2% for value of export and 10% for increase in performance be replaced by a flat rate of 5%.

It is also proposed that Masterbatch be included in the list of products not eligible for export allowance.
This proposal will be effective from the basis year 1983.

APPENDIX XV

Proposal to abolish the import duty on computers

The current import duty on computers is 25%. It is felt that the private sector should be encouraged to make greater use of computers in order to increase its efficiency and performance. In view of this, it is proposed that the import duty on computers be abolished. However such imports will continue to be subjected to sales tax and surtax.

APPENDIX XVI

Promotion of local research and development (R&D)

At present companies undertaking research are allowed single deductions for tax purposes in respect of expenditure incurred on research provided that the research is scientific in nature and is related to their business. It is now proposed to improve these incentives by removing these conditions so as to encourage more companies to undertake research. These improved incentives will be made available only if the companies undertake research that has been approved. The improved incentives are as follows:

© 1982 International Bureau of Fiscal Documentation – BULLETIN

(a) 1⅓ deduction for revenue expenditure for R and D;
(b) such research may be carried out by the taxpayer himself or on his behalf by any scientific association, university or college or research institution;
(c) buildings for R and D be deemed to be industrial buildings and be entitled for industrial building allowance.

The proposal will be effective from the year of assessment 1984.

APPENDIX XVII

Proposal to review the present method of calculating the export duty of rubber based on the gazetted value of rubber

Since August 1981 the Government has been collecting export duty on rubber based on the gazetted value of RSS1, RSS3 and SMR20. Though this system is a simplification over the previous system whereby 9 different grades of rubber (3 RSS and 6 SMR) were used in determining the gazetted value of rubber, however it has been found that the present system is still not satisfactory in that it causes disputes on the grades of rubber to be exported especially those in the RSS1 and RSS2 categories because under the existing system though RSS2 is a lower grade of rubber as compared to RSS1 yet exports of RSS2 attract the same amount of duty as that of RSS1. This has resulted in much inconvenience and dissatisfaction amongst exporters. In view of this, it is proposed that the export duty on rubber be collected on the gazetted value of RSS2, RSS3 and SMR20 so as to minimise disputes pertaining to the grades of rubber that are exported and facilitate the clearance of shipments of rubber at the various points of export.

APPENDIX XVIII

Proposed changes to the threshold price of rubber and tin

The cost of production of rubber and tin has increased since the threshold price was last revised in December 1981. In view of the above, it is proposed that the threshold price of rubber be revised from 154 cents per kg. to 170 cents per kg. and that for tin be revised from $ 23.15 per kg. to $ 26.40 per kg.

APPENDIX XIX

Feedmill

Presently the import duty on wheat pollard and wheat bran attract an import duty of 13%. These are ingredients for the animal feed industry. As the present local supply of these products is insufficient to meet the needs of the feedmill industry, it is felt that a reduction in the import duty of these products will assist the feedmill industry and the poultry farmers in reducing cost of producing food. It is therefore proposed that the import duty on wheat pollard and wheat bran be reduced from 13% to 5%.

APPENDIX XX

Proposal to increase the road tax on private passenger cars

The road tax on motor vehicles for private use was last revised in 1980. In view of the current recession, it is proposed that the road tax be increased and that the existing road tax structure be made more progressive. The higher road tax will apply to both petrol and diesel powered cars.
The proposed road tax structure for petrol powered cars is as follows:

	Rate (cts. per cc.)		Road tax payable ($)		% increase in rate of
Engine capacity	Present	Proposed	Present	Proposed	road tax
First 1000 cc.	13	13	130	130	(Nil)
Next 200 cc.	15	15	160	160	(Nil)
Next 300 cc.	15	20	205	220 (60)	(33.3)
Next 500 cc.	30	35	335	395 (175)	(16.7)
Next 500 cc.	50	80	605	795 (400)	(60.7)
Next 500 cc.	80	200	1005	1,795 (1000)	(150.0)
On the balance	120	360	1605	3,595 (1800)	(200)

With regard to diesel powered cars, the road tax payable will remain at 5 times that of the road tax payable on petrol powered cars.

APPENDIX XXI

Proposal to increase the road tax on private passenger motor vehicles owned by companies

Presently there is no difference in the rate of road tax that is payable on a company owned car and that owned by an individual. As the maintance of cars owned by companies (inclusive of road tax) is treated as an expense item for purposes of income tax whereas no such allowance is given to cars owned by individuals, it is proposed that the road tax on motor vehicles owned by companies be payable at four times the road tax payable on motor vehicles owned by individuals.

APPENDIX XXII

Withholding tax on non-resident contractors and professionals

In order to resolve problems of taxing non-residents and at the same time to protect government's revenue, it is proposed that:
(i) All persons making payments to a non-resident person who is a contractor, consultant or professional shall upon paying or crediting such payments, deduct therefrom tax at the rate of 15% of the contract payment pertaining to the service portion of the contract.
(ii) All persons making payments to a non-resident person who is a contractor shall upon paying or crediting such payments, deduct therefrom a further 5% of the contract payment pertaining to the service portion of the contract to cover the tax obligation of the employees.

The taxes se deducted in (i) and (ii) above are to be accounted to the Revenue Department within 30 days of such payments. These deductions, however, are not a final tax. The final liability of tax will be computed when the taxpayer files in his income tax returns.

APPENDIX XXIII

Review of stamp duty

The last review made on stamp duties was in 1967. Therefore some of the duties are outdated and rates are low, having been eroded over the years by inflation.

Proposals

With a view to rationalising the existing rates and to deleting duties on instruments which are outdated, it is proposed that the First Schedule to the Stamp Duty Ordinance be reviewed:
(i) Duties which originally were at $ 1, $ 3 and $ 5 are recommended to be increased to $ 3, $ 5 and $ 10 respectively to suit current needs. Nevertheless, where appropriate, to lessen the tax burden on the lower income groups the current level of exemption for some instruments is increased or otherwise new exemption provisions are introduced e.g. for affidavits, although duty is increased from $ 2 to $ 5, an exemption provision is introduced for situations where the statutory declaration is required to conform with government regulations.
(ii) Duties on cheque to be increased from 10 cents to 15 cents and the existing $ 10/- duty each of article and memorandum of association for companies is to be increased to $ 100 each. The new rates do not apply to sole proprietorships and partnerships.
(iii) Duty on the transfer of shares, stocks or marketable securities which at present attract 2 separate duties of 15 cents ad valorem (i.e. where the name of transferee was filled prior to execution of transfer) and 30 cents ad valorem (i.e. for any other case) is recommended to be standardised to 30 cents ad valorem.
(iv) Duties imposed on instruments which are considered archaic such as charter party and notarial act are to be deleted.

APPENDIX XXIV

Tax exemption of pension and gratuity

With a view to retaining the benefits to the pensioners prior to the introduction of Cabinet Committee Report and to alleviate hardship for those who are retired due to ill-health it is proposed that:
(i) All gratuity received by Government employers, whose retirement is approved on or after the 22nd October 1982, be exempted from income tax.
(ii) Pensions received by persons retiring after reaching 55 or upon reaching any compulsory age of retirement under any written law, who are retired on grounds of ill-health also be exempted from tax. This proposal will take effect from year of assessment 1983.

APPENDIX XXV

Tax exemption for house owners on transfer

In the 1981 Budget, tax exemption on rental income from houses has been granted to persons who are being transferred beyond 20 miles of the original place of residence. This exemption however is limited to transfers within Malaysia. Persons on overseas transfers are not eligible.
With a view to giving equal treatment to such persons, it is proposed that this exemption be amended to include persons who are transferred overseas. The condition that such persons must first be in occupation of their houses before their transfers is retained.

© 1982 International Bureau of Fiscal Documentation – BULLETIN

SOLOMON ISLANDS:

New Income Tax Incentives for Investors

New incentives to encourage investment in Solomon Islands were introduced by the Minister of Finance, the Hon. B Ulufa'alu, in two orders signed on 6 August. The orders, which amend the Second Schedule to the Income Tax Act, are the Income Tax (Deduction of Capital Expenditure on Re-afforestation) Order 1982 and the Income Tax (Deduction of Capital Expenditure on Special Development Assets) Order 1982.

The purpose of the re-afforestation order is to encourage the timber industry to invest in re-afforestation by providing immediate tax relief for the cost of clearing and preparing land, purchasing, planting and maintaining trees and the costs of rents, rates, insurance and interest related to re-afforestation. Under the new law investors will be able to offset these costs against taxable profits in the year the re-afforestation expenses are incurred. There is also the option to spread the relief over 15 years.

The special development asset order provides a similar tax concession. The order permits the Minister in the national interest to declare the activity of any investor to be a special development activity for a period of up to 5 years. During this period the investor will be able to offset the cost of development activity assets against taxable profits in the year the asset is purchased or to spread the relief forward by claiming standard depreciation.

This concession is aimed at encouraging and promoting new forms of investment activity which will help to develop the Solomon Islands economy. Factors which the Minister will take into account in considering applications for special development activity status include the contribution the new investment activity will make towards increased exports, import substitution, employment opportunities and the development of rural areas.

A comprehensive description of the tax system of Solomon Islands is contained in our publication: *Taxes and Investment in Asia and the Pacific.*

SOME HIGHLIGHTS OF BUSINESS TAXATION

COMPANY TAX RATE – 35% for companies incorporated in Solomon Islands and 50% for other companies.

DIVIDEND WITHHOLDING TAX – Resident companies are required to deduct withholding tax from dividends at the rate of 35% from dividends paid to non-residents and at the rate of 20% in the case of dividends paid to residents. The gross dividends are a deductible expense of the paying company.

NON-RESIDENT WITHHOLDING TAX – Certain gross income payments to non-residents are liable to withholding tax in lieu of individual and company taxes. The rates of deduction are:

Interest	15 %
Know-how payments	15 %
Royalties	15 %
Income from contracting	6 %
Outward income from ships and aircraft	2.5%
Insurance premiums	15 %
Film rental	5 %

BONUS ISSUE TAX – Bonus issues are not subject to tax until the amount capitalised is distributed. The rate of tax on such a distribution is 20%.

BUSINESS LOSSES – A deficit for any year may be set off against the profits of a future year if the shareholders are substantially the same (51%). There are no time restrictions.

CAPITAL ALLOWANCES IN LIEU OF DEPRECIATION

Buildings, building fixtures and fittings, bridges, wharves, slipways, boilers and oil storage tanks	5% d.v.
Plant, machinery, ships, vehicles and aircraft	25% d.v.
Assets used by a timber concessionnaire for cutting, extracting and processing timber from a timber concession and low cost housing for employees	35% d.v.
Cost of purchasing and planting coconuts, oil palms and cocoa; provision of yards, fences and water supplies for livestock; prevention of soil erosion; experimentation, scientific or other research expenditure	100%
Capital expenditure on mining	20% p.a.

TAX HOLIDAYS – There is provision for the granting of tax holidays to pioneer companies where the investment is likely to provide significant benefits to the economy such as export contribution, net import substitution, increased employment and development of rural areas.

FOREIGN INVESTMENT – Foreign investment is governed by the Foreign Investment Act which can be obtained from the Government Printer, P.O. Box G. 14, Honiara.

PROVINCIAL TAXATION

Provinces have a wide range of rating powers including basic rates and rates on possessions and property. Basic rates vary between $1 and $90 a year and are generally at a uniform amount per capita, although some provinces have introduced graduated rates according to the occupation or assessed income of the ratepayer. Basic rates are payable by all persons of or above the age of 18 and resident within the area of a province's authority unless generally or specifically exempted. Only the Honiara Municipal Authority has introduced general property rates based on the unimproved value of rateable land in the town. The current property rate is 3.25%.

Business licence fees paid to provinces are treated as prepayments of income tax.

Prof. L. Hart Wright, Professor of Law, University of Michigan, Ann Arbor, Michigan.

Uruguay
Prof. Dr. Ramón Valdes Costa, Montevideo.

PURPOSE

The International Bureau of Fiscal Documentation was founded in 1938. For reasons of organizing character this Bureau is established as a separate foundation according to Netherlands law. The Bureau is a scientific, independent, non-profit making, non-political foundation of which the purpose is defined in the articles as follows:

(Art. 2) The Foundation, International Bureau of Fiscal Documentation, established as a foundation of the International Fiscal Association (hereinafter referred to as I.F.A.) shall strive towards a fruitful cooperation with the I.F.A.

The objectives of the Foundation are to set up and maintain an international documentation bureau for the purpose of disseminating information concerning tax legislation and the application of taxation law, as well as for furthering the pursuit of knowledge about taxation.

L'OBJET DU BUREAU

Le Bureau International de Documentation Fiscale fut fondé en 1938. Pour des raisons d'organisation, ce Bureau est établi comme une fondation séparée conformément au droit civil néerlandais. Le Bureau est une institution scientifique, indépendante, sans but lucratif et sans objet politique, dont le but est défini dans les statuts comme suit:

(Art. 2) La Fondation, Bureau International de Documentation Fiscale, instituée comme fondation de l'Association Fiscale Internationale (ci-après désignée I.F.A.) s'efforcera d'établir une coopération fructueuse avec l'I.F.A.

Les objectifs de la Fondation sont d'établir et assurer le fonctionnement d'un bureau de documentation international dans le but de diffuser des informations concernant la législation fiscale et l'application des lois fiscales, et de faire progresser la recherche en matière d'imposition.

(Art. 3) The Foundation shall endeavour to achieve these objectives:
a. by setting up a library of tax legislation, together with relevant books, journals and other publications;
b. by supplying detailed and general information;
c. by allowing the inspection of works acquired by the library, with the permission of the director and subject to the conditions imposed by him (which may also be of a financial nature);
d. by producing publications;
e. by cooperating with the publications of others;
f. by all other lawful means.

In close cooperation with the I.F.A., and with the aid of expert correspondents throughout the world, the Bureau acquires as much information as possible in the field of international and comparative tax law. The Bureau is thus able to supply data (but not advice) on specific tax problems. A fee, necessary for the maintenance and extension of the Bureau, is charged on a time/cost basis. The Bureau has published several series of monographs including "Selected Monographs on Taxation" (a joint venture with Harvard Law School, International Tax Program).

The Bureau also publishes *European Taxation*, a monthly journal on the tax systems of Europe. *Tax News Service*, published twice per month, provides rapid information on world-wide tax developments. *Supplementary Service to European Taxation* is a loose-leaf reference work.

The loose-leaf series, *Guides to European Taxation* comprises "The Taxation of Patent Royalties, Dividends, Interest, in Europe", "The Taxation of Companies in Europe", "The Taxation of Private Investment Income" and "Value Added Taxation in Europe".

The loose-leaf series, *Tax Treaty Guides* comprises "Handbook on the U.S.—German Tax Convention" and "Handbook on the Dutch—German Tax Convention" (in German). The Bureau has also published four loose-leaf reference works, *Corporate Taxation in Latin America, African Tax Systems, Taxes and Investment in the Middle East* and *Taxes and Investment in Asia and the Pacific.*

(Art. 3) La Fondation s'efforcera de réaliser ces objectifs:
a. en constituant une bibliothèque de législation fiscale, ensemble avec les livres s'y rapportant, des revues et autres publications;
b. en communiquant des informations détaillées et générales;
c. en permettant l'étude des travaux acquis par la bibliothèque, avec la permission du directeur et sous les conditions imposées par lui (qui peuvent être de nature financière);
d. en éditant des publications;
e. en coopérant à la publication des autres;
f. par tout autre moyen légal.

Par une coopération étroite avec l'IFA et avec l'aide de correspondants à travers le monde, le Bureau rassemble toutes les données possibles en matière de droit fiscal international et comparé. De cette façon, le Bureau est à même de fournir des renseignements, mais non des avis, concernant des problèmes fiscaux spéciaux. Des honoraires, nécessaires au maintien et à l'expansion du Bureau, sont demandés en fonction du temps nécessaire et du coût. Le Bureau a publié un certain nombre de monographies dont des monographies sur la fiscalité (études réalisées en association avec Harvard Law School, International Tax Program).

Le Bureau publie aussi *European Taxation*, revue mensuelle sur les systèmes fiscaux européens. *Tax News Service*, publié deux fois par mois, donne une information rapide, à l'échelle mondiale, de tout ce qui touche à la fiscalité. *Supplementary Service to European Taxation* est un ouvrage de référence présentée sous feuilles mobiles.
Guides to European Taxation, également une publication sous feuilles mobiles, comprend "L'imposition de Redevances, Dividendes et Intérêts en Europe", "L'imposition des Sociétés de capitaux en Europe", "L'imposition de revenu des investissements privés" et "La Taxe sur la Valeur Ajoutée en Europe".

Tax Treaty Guides, une autre publication sous feuilles mobiles, comprend le "Manuel relatif à la Convention fiscale Allemagne — Etats Unis" et le "Manuel relatif à la Convention fiscale Pays-Bas —Allemagne" (en langue allemande). Le Bureau a également publié, *Corporate Taxation in Latin America, African Tax Systems, Taxes and Investment in the Middle East* et *Taxes and Investment in Asia and the Pacific*, ouvrages d'information sous feuilles mobiles.

Dr. A. Toffoli Tavolaro (Brazil)

The I.F.A. was founded on the 12th of February 1938 by tax experts of a number of countries. Purpose and working-method are defined as follows in the Articles:

Aim — Article 2
The aim of the Association is the study and advancement of international and comparative law in regard to public finance and especially international and comparative fiscal law and the financial and economic aspects of taxation.

Plan of Action — Article 3
The Association shall endeavour by all legal means to realise this aim: a) by scientific research; b) by holding congresses and conferences; c) by publications; d) by cooperation with all data collecting organisations, especially the International Bureau of Fiscal Documentation in Amterdam; e) by all other appropriate methods.

I.F.A. has branches in 31 countries. Residents in any of these countries (I.F.A. members or candidates for membership) can approach the secretary of the local Branch.

Members who live in countries where I.F.A. has no Branch are registered as direct members of the Association. They can get in touch with the General Secretariat of I.F.A. (this also applies to candidates for membership).
Conditions of direct membership of I.F.A. for 1981 are: individuals US$ 40.— p.a.; corporations US$ 90.— p.a.

PRENTICE~HALL,INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

Prentice Hall Announces:

The most strikingly different new tax guide ever published for taxpayers with income from foreign sources.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Continuously Supplemented. . . . . Always Up - to - Date

This outstanding new Service is created specifically to help save money for:

U.S. INDIVIDUALS
with investments and/or earned income from a foreign source

U.S. CORPORATIONS
with income from foreign sources

FOREIGN CORPORATIONS
with income earned or taxable in the U.S.

NONRESIDENT ALIENS
receiving income from, or taxable in the U.S.

If you fit any of these categories — or if you counsel, advise, or in any way service any of these categories — U.S. TAXATION OF INTERNATIONAL OPERATIONS will be an invaluable new tool for you.

It will deliver management benefits — operations benefits — tax benefits.

In clear, direct language, backed up by practical, tested practices of acknowledged experts in international business operations, the new work spells out how the taxpayer can best take full advantage of every popular, every sophisticated, and every little-known tax-saving device.

Authoritative, specific guidance from one source devoted exclusively to this kind of vital help has been non-existent — until now.
With the first 1972 publication of the innovative U.S. TAXATION OF INTERNATIONAL OPERATIONS this important need is now fulfilled. And bi-weekly "Report Bulletins" will keep the guide as new and up to the minute as the day you receive it.

Personal response to this new publication has been even more enthusiastic than our most optimistic projections. Subscriptions are now being accepted by mail for $ 186 a year.

Address your request to Dept. S-RR-103, Prentice-Hall Inc., Englewood Cliffs, N.J. 07632 and specify U.S. TAXATION OF INTERNATIONAL OPERATIONS, 1-year introductory charter subscription.

Annual payment is not due until 20 days after receipt of the new, ready-for-reference volume.

A SHORT REVIEW OF THE ETHIOPIAN INCOME TAX SYSTEM 4

The author discusses the recent upheaval in Ethiopia's economic and social structure and the resulting changes of its legislation. This article is an attempt to determine the present status of its rapidly changing tax legislation

REVUE RAPIDE DU SYSTEME DE L'IMPOT SUR LE REVENU ETHIOPIEN

L'auteur rappelle les bouleversements récents en matière économique et sociale en Ethiopie et les modifications qu'ils ont entraînées dans la législation. Cet article cherche à déterminer l'état actuel de la loi sur l'impôt sur le revenu en pleine modification.

EIN KURZER ÜBERBLICK ÜBER DAS EINKOMMENSTEUERSYSTEM ÄTHIOPIENS

Der Verfasser untersucht die jüngsten Umwälzungen im Wirtschafts- und Sozialsystem Äthiopiens und die daraus resultierenden Veränderungen in der Gesetzgebung. Dieser Artikel stellt den Versuch dar, den augenblicklichen Stand der sich rasch änderenden Einkommensteuer-Gesetzgebung festzuhalten.

Paulo Kantor

BRAZIL: THE SUPPLEMENTARY INCOME TAX (IMPOSTO SUPLEMENTAR DE RENDA) ON DIVIDEND DISTRIBUTIONS 17

The Brazilian supplementary income tax is essentially an excess distributions tax which also applies to remittances of Brazilian branches to their foreign head offices. The complexities of this tax are studied in this article.

BRESIL: L'IMPOT COMPLEMENTAIRE SUR LE REVENU (IMPOSTO SUPLEMENTAR DE RENDA) APPLICABLE AUX DISTRIBUTIONS DE DIVIDENDES

L'impôt complémentaire brésilien sur le revenu frappe essentiellement les distributions excédentaires, il s'applique également aux transferts de fonds par les succursales à leurs sièges sociaux à l'étranger. Cet article étudie la complexité de cette taxe.

BRASILIEN: DIE ERGÄNZUNGSABGABE (IMPOSTO SUPLEMENTAR DE RENDA) AUF DIVIDENDENAUSSCHÜTTUNGEN

Die brasilianische Ergänzungsabgabe ist ihrem Wesen nach eine Steuer auf überhöhte Ausschüttungen, die auch bezüglich der Überweisungen brasilianischer Betriebstätten an ihre ausländischen Hauptverwaltungen anzuwenden ist.
In diesem Artikel werden die schwierigsten Punkte einer eingehenden Untersuchung unterzogen.

SRI LANKA: BUDGET 1980 19

Extract from the Budget Speech 1980 presented in November 1979 by the Finance Minister, Mr. Ronnie de Mel.

SRI LANKA: BUDGET 1980

Extrait de la présentation du "Budget" de 1980 faite par le Ministre des Finances M. Ronnie de Mel en novembre 1979.

SRI LANKA: DER HAUSHALT 1980

Auszüge aus der im November 1979 von Finanzminister Ronnie de Mel gehaltenen Rede zum Haushalt 1980.

M.P. Dominic

SRI LANKA: 1980 BUDGET PROPOSALS 23

A new "simplified" and restructured Income Tax Act was brought into effect in May 1979. However, the new Budget proposes to amend this Act with a view to providing further incentives and relief "to trigger off productive investment which is the surest foundation for increasing employment and raising the living standards of the people".

SRI LANKA: PROPOSITION DU BUDGET 1980

Une nouvelle loi de l'impôt sur le revenu "simplifiée" et restructurée est entrée en vigueur en mai 1979. Le nouveau "Budget" propose toutefois de la modifier afin d'accorder un plus grand nombre de mesures d'encouragements et de dégrèvements pour "déclencher des investissements productifs qui constitue la base la plus solide pour une augmentation de l'emploi et l'élevation du niveau de vie de la population".

SRI LANKA: ANMERKUNGEN ZUM HAUSHALT 1980

In Mai 1979 trat ein "vereinfachtes" und umstrukturiertes Einkommensteuergesetz in Kraft. Im Haushalt 1980 wird nun allerdings vorgeschlagen, dieses Gesetz zwecks Gewährung weiterer Anreize und Erleichterungen insoweit zu ändern, dass dadurch "produktive Investitionen getätigt werden, die die sicherste Grundlage für eine bessere Beschäftigungslage und eine Erhöhung des Lebensstandarts des Volkes sind".

CONFERENCE DIARY 27

CARNET DES CONVENTIONS

VERANSTALTUNGSKALENDER

UNITED STATES: VAT BEFORE CONGRESS 28

On October 22, 1979 Mr. Ullman, Chairman of the Committee on Ways and Means, introduced the "Tax Restructuring Act of 1979" which would provide for a massive reduction of income and social security taxes. This reduction would be funded by the simultaneous introduction of a European type of value added

tax. The proposed text of the new VAT legislation and the explanation thereto have been reproduced in this issue.

ETATS UNIS: LA TVA DEVANT LE CONGRES

Le 22 octobre 1979 M. Ullman, Président du Comité "Ways and Means" introduit la "Tax Restructuring Act 1979", prévoyant une réduction massive des impôts sur le revenu et de sécurité sociale. Cette réduction sera compensée par l'introduction simultanée d'une taxe sur la valeur ajoutée de type européen. Le texte proposé de la nouvelle législation sur la TVA et les explications s'y rapportant sont réproduits dans ce numéro.

U.S.A.: DIE MEHRWERTSTEUER IM KONGRESS

Am 22. Oktober 1979 hat Herr Ullman, der Vorsitzende des "Ways and Means" - Ausschusses, das Steueränderungsgesetz 1979 (Tax Restructuring Act of 1979) eingebracht, das, würde es angenommen, zu einer erheblichen Ermässigung bei der Einkommensteuer und bei den Sozialversicherungsbeiträgen führte.
Die Steuerausfälle würden durch die gleichzeitige Einführung einer Mehrwertsteuer nach europäischem Vorbild aufgefangen. Der Text des Gesetzesverschlages sowie die entsprechenden Erläuterungen sind in dieser Ausgabe abgedruckt.

A Short Review of the Ethiopian Income Tax System

by M. Fisseha-Tsion *

INTRODUCTION

Ethiopia is currently undergoing tremendous changes in the very fabric of its existence. Political, economic and legal changes have taken place at such a swift pace that a major transformation has occurred in daily life. Numerous laws have been enacted legitimizing the restructuring of the socio-economical and political organizations which administer the new reforms. A metamorphosis too has taken place in the fiscal laws resulting in the entire restructuring of the tax system bringing about confusion and incomprehension.

Readers therefore interested in the Ethiopian legal system in general and the economic and fiscal laws in particular are advised to update their information in this area. However, as a practical matter this process might prove to be difficult as information on the new developments is hard if not impossible to obtain.

Because of this situation the author would like to emphasize that any errors in information contained in this article are due to the rapidly changing situation in Ethiopia. However, he will take sole responsibility for any inaccuracy contained herein.

I. A BIRD'S EYE VIEW OF SOME OF THE SOCIO-ECONOMIC CONDITIONS OF ETHIOPIA

A. Climatic conditions

Ethiopia has an ideal climate. It is partly temperate and partly tropical. Because of its altitude, the humidity is low and the average annual temperature is 13°C (55°F) except in certain places along the Rift valley areas.

It has abundant rainfall and large under-utilized rivers. In short, due to its size and variety of climatic conditions it is capable of growing all types of temperate and tropical agricultural products [1] and yet the country has not been able to feed itself. Its people still suffer from hunger, malnutrition and the lack of the basic necessities of life.

B. Government

1. Current situation

The country is now run by a Military Government which calls itself "Provisional" and the state a "Socialist State". It is officially called "The Provisional Military Government of Socialist Ethiopia". The Provisional Military Administrative Council (PMAC) is the executive as well as the legislative body of the State. Despite this appellation, there has been little or no political socialization of the State. The Military as an organized institution has assumed for itself the role of a democratic regime in absence of any other viable civilian alternative.

2. Political parties, organizations and national fronts

There are over a dozen political organizations and fronts organized legally and illegally under vaguely defined objectives and causes. They include right wing elements who aspire to restore the old order and national fronts seeking secession and full sovereign independence from Addis Ababa Government. There are also self-styled Marxist-Leninist organizations which in theory recognize, inter alia, the right of nations to self-determination but who nonetheless do not have the political will and desire to translate their slogans into deeds. However, there is no broadly based communist or socialist or capitalist oriented party at the regional and national levels which can command the respect and confidence of the overwhelming majority of the population. The on-going civil war between and among the bulk of the population is instigated by such political organizations and fronts. Whether the bulk of the population has a clear idea of why they are fighting among and between themselves is a perplexing question raised by all concerned about the anti-developmental perpetual state of war.

C. Components of the economy

Despite its agricultural, mineral, and oil potential and its capability of producing exportable livestock, Ethiopia is categorized as one of the world's half-dozen poorest and most backward countries which during Haile Selassie's reign was ravaged by famine, disease and malnutrition. Even today starvation and poverty are still prevalent. Ethiopia has a predominantly agricultural and pastoral economy that exists on a subsistence level.

1. Rural economy

The rural economy consists basically of small individual farms whose farmers account for 95 percent of the total agricultural production of the country but who have little or no say in the marketing of their produce. Although 80 to 90 percent of Ethiopia's exports consists of agricultural goods, because the state owned farms are more mechanized they produce most of the cash crops for exports. Coffee accounts for a substantial 70 percent of Ethiopia's export bill.

Land ownership is primarily vested in the government. At present all privately owned rural holdings of more than 20 hectares and urban lands and buildings in addition to most major industries, banks, insurance companies and other financial institutions have been nationalized.

Land is usually held by families (in a broad sense), village communities, private persons and the Government. Ethiopia had one of the most intricate land tenure systems in the world; however, after 1974 land was declared to be the "property of the whole people", and not to be used for speculation and profit.

The farming population is being organized into "Peasant Associations" [2] in order to increase production and improve farming methods. There are more than 27,000 peasant associations with about 8 million members, 500,000 of whom have joined peasants' defence squads. [3]

---

1. Some of the crops grown include coffee, wheat, barley, maize, oats, millet sorghum, sugar cane, potatoes as well as other roots and tubers, beans, peas, broad beans, chick peas, lentils and other pulses, ground nuts, castor beans, rapeseed, linseed, sesame seed, cotton seed, cotton (lint), sunflower seed, vegetables and fruits of various kinds and descriptions.

2. "Peasant Associations" are legal associations composed of individuals who at the time of the Rural Lands Proclamation of March 4, 1975 and thereafter were tenants, landless persons, agricultural labourers or landowners with less than ten hectares of land. Such associations are empowered to establish judicial tribunals to hear land disputes arising within each locality and control travelling of persons from one locality to another.
Organizations of the peasantry (constituting no less than 85 percent of the population) include:
(a) Peasant Associations at local levels;
(b) All Ethiopian Peasant Associations at the national level.
Sources: — Public ownership of Rural Lands Proclamation No. 31, 1975.
— Peasant Associations Organization and Consolidation Proclamation No. 71, 1975.
— All Ethiopia Peasant Association Proclamation No. 130, 1977.

3. "Peasants' defence squads" are sub-divisions of peasant associations designed to recruit militiamen and women to form the People's Militia to safeguard and protect the programme of the Government and to defend the country's territorial integrity.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Moreover, Revolutionary Administrative and Development Committees [4] have also been set up.

2. Urban economy

Urban areas are centers of Ethiopia's industrial, commercial, diplomatic, administrative and business communities. One third of all the health facilities are located in Addis Ababa, Asmara and Harar. The entire urban population has been organized, irrespective of their profession but based on the locality in which they live, into Urban Dwellers Associations. [5] These associations (almost 1200) have substantial control and power within their respective neighborhoods, [6] with a membership of about 3 million.

D. Industry

The principal industrial activities in Ethiopia include the manufacturing and processing of tinned meat, vegetable oils, wheat flour, macaroni, refined sugar, liqueurs, wine, beer, lemonade, mineral waters, cigarettes, cotton yarn, woven cotton fabrics, woollen blankets, woollen carpets, nylon fabrics, leather footwear, canvas and rubber footwear, plastic footwear, plywood, particle board, soap, ethyl alcohol, refining of some petroleum products, clay building bricks, quicklime, cement, nails.

E. Mining

There is substantial evidence to suggest that Ethiopia may have oil and gas around the Dahlak islands in the area 75 miles north of Massawa and the southern part of the Red Sea as well as in the south eastern part of the country. There are also vast potential resources of geothermal power along the Rift valley.

Other considerable mineral deposits include agate, asbestos, bentontic clay, barite, copper, diatomite, feldspar, gold, gypsum, iron, kaolin, lignite, limestone, magesium, marble, mica, nickel, platinum, potash, pumice, salt, silica, sulphur, talc and zinc. [7]

To date Tenneco, General American Oil company and Shell have concessions to exploit the oil and gas, [8] with the terms of the concessions granted during the Haile Selassie Government still in force.

F. Labour

The number of industrial workers is approximately 500,000. The minimum salary for unskilled persons is 2 birr per day. Labour legislation was enacted which claimed to advance the interests of the Ethiopian workers and to improve the working conditions over the pre-1974 period. [9]

G. Imports

The main imported products include mineral fuels, lubricants, etc., including crude petroleum and petroleum products, chemicals, medical and pharmaceutical products, manufactured rubber products including tyres and tubes, textile yarn and thread, textile fibres, iron and steel, machinery in general including agricultural machinery and implements, textile and leather machinery, electrical machinery applicances, telecommunications apparatus and transport equipment including motor vehicles and parts, aircraft and clothing.

H. Exports

Exported products include food and live animals, meat and meat preparations, fruit and vegetables, coffee (green or roasted), hides and skins (undressed), oilseeds, oil nuts and oil kernels, sesame seeds.

I. Foreign investment

The nationalization of financial institutions, insurance companies, large industries, rural and urban private land and buildings and schools on one hand and the formation of peasant and urban dwellers' associations to control rural and urban activities as well as the encouragement of the formation of cooperatives and industrial workers' councils, inter alia, imply that in post-1974 Ethiopia, there is little room for companies to do business in real estate. This means that a foreign company is not allowed to engage in the trading of land and buildings, except as an integral part of its factory. Foreign companies are, however, entitled to have a right of possession in the land for which they have to pay a rent or use fee as the case may be. It is therefore not possible to acquire land for resale or trade.

Large scale development of land either for agriculture, dairy or forestry or otherwise is mainly carried out at the initiative of the State through its own specialized bodies and State economic organizations. Foreign com-

---

4. "Revolutionary Administrative and Development Committees" are committees set up to consolidate and implement the National Democratic Revolution Programme issued by the Government.

5. "Co-operative Societies of Urban Dwellers" are neighbourhood societies having juridical personality of which any urban (i.e. within the boundaries of the municipality or a town) dweller may become a member subject to restrictions provided by law (see Government Ownership of Urban Lands and Extra Houses Proclamation No. 47/1975).

6. Organizations of neighbourhoods include:
(a) Co-operative societies of urban dwellers in each unit of urban areas.
(b) Higher co-operative societies of urban dwellers at intermediate level.
(c) Central co-operative societies of urban dwellers at the highest level depending on the size and population of the urban area.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

panies have little or no opportunity to own land but may be allowed to get long term leases from the State to perform some of the approved activities.

Foreign investors do not have the freedom to invest in all activities. The areas in which foreign investors are allowed to do business are provided in the Government's economic policy declaration and in the Government ownership and control of the Means of Production Proclamation No. 26 of 1975. [10]

In order to systematically organize and implement the economic and development policy of the Government, a Central Planning Supreme Council has been established by virtue of Proclamation No. 156/1978. This implies that individual private industrial enterprises, privately owned banks etc., have little scope to invest in any activity they think fit. The Haile Selassie Government's policy of "you are welcome to invest in what you like" has been replaced by a policy of "you are welcome to invest in accordance with our national plan".

1. Activities where foreign collaboration is needed

Areas in which there is co-operation with foreign investors include the following:

a) *Financing* of Government approved industrial and agricultural projects.
b) *Technological assistance* and foreign technical and managerial collaboration with or without foreign loans or credits to finance the capital expenditures and in some cases ordinary expenditures of such projects.
c) *Direct foreign investment* enabling the foreign investor to own 49 percent of the equity interest in Ethiopia's industrial enterprises.
d) *Joint ventures* in Government approved activities.

2. Exchange transactions

All transactions in foreign exchange must be carried out through an authorized bank under the control of the National Bank. [11]
Foreign investors are permitted to transfer their earnings abroad subject to the approval by the Government.
Foreign employees of the private sector may remit a maximum ranging between 40 and 50 percent of their net earnings during the period of service and upon final departure. Other expatriate employees may on final departure take out the same maximum amount but not more than 20,000 birr in any one year. [12]

J. Tax structure

The existing fiscal structure of Ethiopia is schedular, primarily designed to raise revenue for the Government, although there is no substantial proof that the fiscal system has achieved the objective for which it was intended. The low yield of revenue of the fiscal system is evidenced by the figures indicated below.

Total Revenue Yield (million birr)					
Year	1973/74	1974/75	1975/76	1976/77	1977/78
Total revenue	754.4	804.7	615.5	659.0	932.9

Source: Ministry of Finance (unpublished notes)

However, the external loans for accounting year 1978-1979 are as follows:

Donor	*Activity/project*	*Amount*
IDA (International Development Agency)	Agricultural development projects	52,973,000
IDA	Washed coffee project	2,569,600
IDA, PRC (People's Republic of China), UK	Water supply	4,129,800
IDA, PRC, EEC, FRG (Federal Republic of Germany), UK, ADA	Road construction	105,172,400
IDA	Fifth Telecommunication programme	20,000,000
IDA	General education and other community services	27,897,300
IDA	Higher education	5,260,000
USSR	Mining	513,400
ADB, PRC, FRG	Electricity supply	22,148,700
GDR (German Democratic Republic)	Port expansion	4,000,000
		244,664,500

II. THE TAXATION OF INCOME

A. Introduction

Income tax is imposed on taxable income, i.e. on gross income less allowable deductions. However, what is considered to be "income" itself is not clear. It is defined as "every sort of revenue from whatever source . . . which has its origin within Ethiopia". [13] There is no distinction made between "income" and "capital". To be subject to income tax the *origin* of the taxable income must be *within* Ethiopia, i.e. income originating outside Ethiopia is not subject to tax under Ethiopian law.

10. Note that the following foreign investment laws are also still in force:
— Notice No. 10 of 1950;
— Investment Decree 1963 which has been renumbered Investment Proclamation No. 242 of 1966.
11. For detailed information see, *Annual Report Exchange Arrangements and Exchange Restrictions 1979 International Monetary Fund*, pp. 150-152.
12. Id., p. 150.
13. Income Tax Proclamation 1961, Art. 4 cum Art. 3(3).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

1. Pre-1974 income tax structure

Before the political changes of September 12, 1974 there were four schedules under which income tax was payable:

- *Schedule A.* Employment income; income tax at progressive rates is due within the month following the period of payment of the income; [14]
- *Schedule B.* Income from rent of land and buildings (irrespective of the purposes for which the land and buildings were to be used), including income from crop-sharing arrangements made between owners of the lands and tenants. The tax is paid annually on a *preceding year basis*; [15]
- *Schedule C.* Income from any trade, business, profession or vocation [16] and from:
  - (i) the exploitation of woods and forests for lumbering purposes; [17]
  - (ii) the processing or transforming of agricultural products; [18]
  - (iii) other activities relating to agriculture, forestry, breeding cattle or maintaining pasture land, provided the said activities are considered as being pursued by traders or by business organizations of a commercial nature according to the commercial code of Ethiopia; [19]
  - (iv) cattle breeding activities for trade. [20]
- *Schedule D.* Income from agricultural activities, i.e. the cultivation and/or development of land and/or the harvesting of any crop from land including the raising and breeding of livestock on such land (but excluding items (i), (ii) and (iv) above). [21]

Taxes were calculated on the amount of income within each category subject to income tax. There was no aggregation of the income of the Schedules and each Schedule had its own tax rates. This situation has remained unchanged. [22]

2. The post 1974 tax reform and the effects of land reform on Schedule B

The income disparity between the lowest income earning groups and the highest was wide. [23] However, it is the issue of land ownership where everything which is connected with the underdevelopment of the country culminates. As Robert S. McNamara, President of the World Bank, stated at the IMF-World Bank Meeting in 1972:

"When the highly privileged are few and the desperately poor are many . . . and when the gap between them is worsening rather than improving . . . it is only a question of time before decisive choice must be made between the political costs of reform and the political costs of rebellion." [24]

The above statement was true in Ethiopia prior to 1974. There were millions without land but there were individual landlords whose aggregate land holding was half of, for instance, the Netherlands. Land was concentrated in the hands of the royal family, the church, the nobility and their associates, i.e. the same group which exercised the political power. Thus the owners of real estate were also the most important rental recipients. However, either because of the lack of political will or of the lack of compliance of tax laws, the amount of revenue derived by the State from Schedule B was insignificant. If the Haile Selassie Government had enforced its tax legislation, this would have increased the total tax revenue considerably. About 40 percent of the income of the landlords would have been transferred to the Treasury by virtue of Schedule B alone. [25]

The land reform that took place in Ethiopia was something quite different in its depth and magnitude from any other that has so far occurred in Africa. It is believed to be comparable to the agrarian program of the Russian Bolshevik Party of 1917, [26] although the issue of implementation is, however, the crucial test. The land reform law did not merely limit the size of landholdings to 20 hectares, but it did away with the private ownership of land by absentee landlords and to a great extent with the system of tenancy in areas where absentee landlordism was chronic, especially in the southern part of Ethiopia. In addition, no private farmer is now allowed to hire a laborer and the Government has recently issued a collectivization program which in principle abolishes private ownership of land. There is, however, great skepticism and caution about the implementation thereof.

Due to the land reform and nationalization of urban land and buildings, the government has become the most important landowner. As a result, the tax structure related to Schedules B and D has been drastically changed. The principal tax proclamations which amended the tax law are the following:

a) Rural Land Use Fee and Agricultural Activities Income Tax Proclamation No. 77/1976;
b) Rural Land Use Fee and Agricultural Activities Income Tax Amendment Proclamation No. 152/1978, and

---

14. Income Tax Proclamation 1961, Art. 7(a) cum Art. 4(a).
15. Id., Art. 4(b) and Art. 10(a) as amended by Proclamation 255/1967, Art. 2(B)(b).
16. Id., Art. 4(c) and Art. 12(a) Income Tax (Amendment).
17. Id., Art. 3(d) as amended by Income Tax Amendment Proclamation 1967, Art. 2(i).
18. Id., Art. 2(a)(ii).
19. Id., Art. 2(a)(iii).
20. Id., Art. 2(a)(iv).
21. Income Tax Proclamation 1963, Art. 3(d) as amended by Proclamation No. 255/1967, Art. 2A.
22. Income Tax Proclamation 1963, Art. 5.
23. This disparity can best be illustrated from the following facts. While the lowest wage was about 18.2 birr per month, the range of basic salaries within the senior management ranged between 4,000 birr to 7,000 birr (exclusive of other allowances) for Ethiopians and about 10,000 birr for skilled expatriates. One way of distributing income often suggested by many persons is to use the fiscal instrument for imposing higher taxes at progressive rates against the high income groups. See Y. Mekbib, *The Impact of Volitional and Institutional Factors on Income Taxation in Ethiopia*, M. Phil. thesis (unpublished), University of East Anglia, June 1979.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ORGANIZATION OF THE ECONOMY

Economic organizations operating in rural areas (i.e. outside the boundaries of a municipality or a town)

Agriculture:	Agricultural cooperatives in peasant state enterprises to farm state-owned farms.
Industry:	Handicraft cooperatives engaged in small scale cottage crafts and industrial activities.
Mining:	State and foreign cooperation enterprises to develop the mineral and oil potential of the country.

Urban based or resident economic organizations engaged in predominantly economic activities in rural and urban areas.

Private:	Co-operatives. Partnerships. Joint ventures. Private limited organizations.
Mixed:	Joint venture enterprises to facilitate international industrial cooperation between state and foreign private or state investors.
Wholly state owned enterprises:	State enterprises to engage in key industrial, mining, agricultural, commercial, trading and other economic activities.

c) Income Tax Amendment Proclamation No. 155/1978.

The new laws do not, however, expressly state that Schedule B is to be omitted and that Schedule D is to be replaced by a new Schedule D. Under the new laws, income derived from the following sources is subject to tax:

a) Income or benefits in kind from employment, [27] (Schedule A);
b) Income from any trade, business, profession or vocation and from all other sources not specifically mentioned [28] (Schedule C);
c) Income from dividends distributed to shareholders; [29]
d) Income from chance winnings; [30]
e) Income from royalties; [31]
f) Income from services rendered to persons or organizations in Ethiopia by persons or organizations from abroad. [32]

3. Taxable persons

Prior to 1978, income tax was paid by all persons, i.e. individuals and all forms of associations, [33] including partnerships but excluding entities with limited liability like joint stock companies. [34]

Now, in the post-1978 legislation, the taxable entity is the "*organization*". The "*organization*" is defined as "any government or privately owned juridical person or association that carries out business activities excluding a cooperative society". [35] However, the types and legal aspects of such organizations are not spelled out in any law, but it may be assumed that joint venture and state enterprises (companies) are now included.

The following provides a brief description of the Ethiopian tax structure on income from various taxable sources.

B. Income from employment (Schedule A)

1. Taxable source

Tax under Schedule A is payable on income in cash or in kind from employment including salaries, wages, allowances, pensions, directors' fees and other personal emoluments etc., [36] unless exempted by the Minister of Finance. The tax is therefore imposed on payments in cash and benefits in kind arising from a contract of employment.

Wages and other employment income received by a person *not* working in Ethiopia are considered to have their origin *outside* Ethiopia and are thus not subject to tax. [37] Persons who remain in Ethiopia for more than an aggregate of 183 days in any twelve-month period are liable for taxes due under Schedule A from the beginning of their stay. [38]

Pensions and other personal emoluments are without exception subject to tax under Schedule A. [39]

Benefits in kind are included in taxable income. There is no guideline for computing the value of benefits in kind, so that valuation of such benefits has to be approved by the Income Tax Authority.

2. Tax rates

The tax on income from employment over 50 birr shall be levied and collected monthly according to Schedule A at the following rates:

---

27. Income Tax Amendment Proclamation No. 155/1978, Art. 2 (a) cum Income Tax Proclamation 1963, Art. 4(a).
28. Id., Art. 2(b) cum Income Tax Proclamation 1963, Art. 4(c).
29. Id., Art. 2(c).
30. Id., Art. 2(d).
31. Id., Art. 2(e).
32. Id., Art. 2(f).
33. Which according to Art. 404 of the Ethiopian Civil Code is defined as a group formed between two or more persons with a view to obtaining a result other than the securing of profit sharing.
34. Income Tax Proclamation 1961, Art. 3(b).
35. Income Tax Amendment Proclamation No. 155/1978, Art. 2(1) cum Income Tax Proclamation 1961, Art 3(a) as amended.
36. Id., Art. 4(a) cum Arts. 6 and 8.
37. See also R.C. Means, Materials for Public Law (Faculty of Law, H.S.I.U., Addis Ababa, 1966), p. 24.
38. Income Tax Regulations 1962, op. cit., Art. 11.
39. Income Tax Proclamation No. 173 of 1961, op. cit., Art. 4(a).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Taxable income per month (in birr)	*Tax rate on every additional slice of income (%)*
50 - 250	10
250 - 500	13
500 - 750	19
750 - 1,000	24
1,000 - 1,250	29
1,250 - 1,500	34
1,500 - 1,750	39
1,750 - 2,000	44
2,000 - 2,250	49
2,250 - 2,500	54
2,500 - 2,750	59
2,750 - 3,000	64
3,000 - 3,250	69
3,250 - 3,500	74
3,500 - 3,750	79
3,750 and over	85

Compared to the pre-1974 situation the tax rate has almost doubled for persons deriving income of about 1,000 birr a month and it is more than three times that of the previous rate at the highest income bracket. It is not, however, clear why the Government has preferred the progressive rate method of taxing higher income groups when it has in fact put a ceiling on wages by administrative decision. Whether this policy of imposing high tax rates is desirable when there are neither employees earning the taxable amount nor even the possibility of earning such an amount is an arguable point. [40]

3. Deductions

The family circumstances of the taxpayer are not given any consideration under Schedule A. Contributions to provident, savings or pension funds as well as payments made at the termination of a contract of employment are deductible.

The following categories of payments are excluded from computation of income taxable under Schedule A:

(i) actual cost of medical treatment of employees provided by the employer; [41]
(ii) allowances in lieu of means of transportation granted to employees in accordance with Government regulations or under the contract of employment; [42]
(iii) travelling expenses incurred while on duty paid to employees by the employer; [43]
(iv) compensation for reasonable amounts of travelling expenses incurred by employees recruited from other than the place of employment on joining or terminating employment or in connection with their leave. [44]

4. Exemptions

The following are exempt from Schedule A tax:

(a) the first 50 birr of income from employment; [45]
(b) employment income received from abroad by persons present in Ethiopia representing foreign business or other persons not doing business in Ethiopia, who are not employed or retained by any employer in Ethiopia, remaining in Ethiopia less than an aggregate of 183 days in any one year. [46]

C. Rural land use fee (formerly Schedule B)

1. Rural land use fee rates

Rural land, i.e. land outside the boundaries of municipalities and towns [47] which has been declared to be under public ownership, is subject to a land use fee payable at the following rates:

(a) Every farmer [48] who is a member of an agricultural producers' cooperative is obliged to pay 5 birr; [49]
(b) A farmer who is not a member of an agricultural producers' cooperative is charged 10 birr; [50]
(c) Every Government agricultural organization pays 2 birr per hectare on the total of its holdings. [51]

The above implies that the effective ownership of rural land is with the Government and a use fee or rent, as the case may be, is paid for the right to possess or use the land. The land use fee payable by individual farmers whose annual agricultural income is below 1,200 birr and who are members of an agricultural producers' cooperative is collected by the local tax collector [52] (i.e. by a farmers' association or any person authorized by the Inland Revenue Agency (IRA) [53]) every year between the first of Tahsas (December) and 30th of Miazia (April). [54] Farmers' associations or any persons authorized by the Inland Revenue Agency are paid two percent of the amount of the collection they make. [55]

However, rural land use fees from Government agricultural organizations and farmers whose annual agricultural income exceeds 1,200 birr are collected by the tax office, [56] i.e. the Inland Revenue Agency of the Ministry of Finance, and any Provincial, "Awraja" or "Woreda" income tax office, as well as any other office which the IRA may authorize in writing to implement the Proclamation. [57]

---

40. The same argument can be made for the taxing of agricultural land or income in a predominantly peasant society.

57. Id., Art. 2(7).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

2. Rural land use fee and rural development

The overall concepts of rural development, regional autonomy, etc. cannot be separated from the financial, political, economic, legal and administrative relationships between the central authority and institutions of local government and rural development.

The municipalities and local authorities or the rural organizations do not have substantial financial autonomy to perform the duties which they have been delegated to undertake. The central government collects income earned from land and other sources located in rural areas. However, the country's funds are not fairly distributed.

If ownership of land is primarily in the hands of the State, it has the special responsibility of redistributing the national wealth more equitably. [58]

D. Income from business profits (Schedule C)

1. Taxable source and taxable subjects

Income from business profits is subject to a tax if derived by individuals, associations or incorporated bodies. The tax is imposed on gains accrued from economic activities except [59] those derived from humanitarian, cultural, religious and social activities.

Schedule C is also intended to apply to all sources of income not covered by the other Schedules including income from occasional rental of property. [60]

It is worth emphasizing that for tax purposes no distinction is made between a branch and subsidiary. However, non-residents trading in Ethiopia through an agent are jointly responsible with the local agent for the filing of returns and for the payment of income tax which may be due by such non-resident. [61] Moreover, no payment of any kind made by an Ethiopian branch to its foreign head office or by an Ethiopian company to its foreign parent or to another affiliated foreign company is accepted as a deduction from gross income unless it is a payment for services actually rendered [62] and this service was necessary for the business and could not be performed by other persons or bodies or by the business itself at a lower cost. [63]

BASIC INFORMATION

Area: 1,211,900 square kilometers
Population: 30 million (approximately) with more than 82 different nationalities
Religion: predominantly Christian and Muslim
Population growth rate: 2.5% per annum
Average rate of agricultural production: 2%
Population distribution: 11.8% urban, 88.2% rural
Annual growth rate of urban population: 6.6%
Per capita income: U.S.$ 80
Illiteracy rate: about 85%
Currency: 1 Eth. birr. = U.S.$ 2.071 (August 1979)
Communication and transport system: About 80 percent of the people live about a day's walk from an all-weather road.

2. Individual income tax rates

Individuals who derive income under Schedule C are subject to the following rates of tax:

Annual amount of income (in birr)		*Rate*
Under	300	10 birr
300 -	500	18 birr
500 -	700	24 birr
700 -	900	40 birr
900 -	1,200	70 birr
		plus a percentage of each additional slice [64]
1,200 -	3,000	11
3,000 -	6,000	14
6,000 -	9,000	20
9,000 -	12,000	26
12,000 -	15,000	33
15,000 -	18,000	40
18,000 -	21,000	47
21,000 -	24,000	54
24,000 -	27,000	61
27,000 -	30,000	68
30,000 -	33,000	75
33,000 -	36,000	82
Over	36,000	89

One of the main reasons for doubling and tripling the tax rate payable by persons in high income brackets might have been to narrow the gap of income inequality. But this objective has theoretically been achieved by the nationalization of land, buildings and industries and by putting a maximum ceiling on wages and property holdings.

3. Taxable legal entities: "organizations"

As was explained in the Introduction to this section, "organizations" are subject to income tax.

Art. 4(c) of the 1961 Proclamation provides:
"... [E]very ... body [65] having an income as defined herein [i.e. in Art. 3(c)] is liable to pay income tax thereon ... on income from any trade, business, profession or vocation and from any activity mentioned in subparagraphs (i), (ii) and (iii) of Art. 3 (d) hereof and from any interest and from *all other sources not specifically mentioned* in paragraphs (a), (b) and (d) of this Article 4."

58. The writer is of the opinion that the Ethiopian fiscal system is not designed to promote rural development. It encourages centralization rather than decentralization. Moreover, it is an impediment to the basic principles of regional autonomy or self-rule. There can be no autonomy without a granting of power to the administrative agencies of the region to raise revenues from regional sources.
59. Income Tax Proclamation No. 173/1961, Art. 4(c).
60. Income Tax Amendment Proclamation No. 155/1978, Art. 5(b) cum Income Tax Proclamation No. 173/1961, Art. 12(d).
61. Income Tax Proclamation 1961, Art. 36(b).
62. Id., Art. 18(a).
63. Id., Art. 18(b).
64. Income Tax Amendment Proclamation No. 155/1978, Art. 5(a)(b)(ii) cum Income Tax Proclamation 1961, Art. 12(b).
65. "Body" means any incorporated body with limited liability. This generally refers to public and private companies with limited liabilities. See Income Tax Proclamation No. 173/1961, Art. 3(a).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

However, Art. 3(a) of Proclamation 173/1961 is deleted and replaced by Art. 2(i) of Tax Proclamation No. 155/1978 which provides:

"Organization shall mean any government or privately owned juridical person or association that carries out business activities excluding a cooperative society."

Any corporate body which carries out business activities therefore is considered to be an organization. It is not clear, however, whether such organizations are legally different from the business organizations formed under the 1960 Commercial Code or whether this change is merely a cosmetic one, replacing "company" by "organization". It appears that this change may be intended to pave the way for the imposition of tax on state enterprises, joint ventures, or farmers' organizations that are separate legal entities.

a. Tax rates

The tax rate payable by organizations as defined above is fifty percent. [66]

b. Deductions

(i) Ordinary expenses

The general rule is that all expenses paid or incurred wholly, necessarily and exclusively for the purposes of creating income are deductible. No expenditure not wholly and exclusively incurred for the purpose of producing the income is allowed as a deduction. [67]

The following expenses are deductible from gross income in calculating taxable income under Schedule C:

- the direct cost of producing the income, such as the direct cost of manufacturing and trading operations, of professional and vocational occupations, of exploitation of woods and forestry and so on; [68]
- general and administrative expenses connected therewith; [69]
- depreciation, allowed under Articles 22 through 24 of the Income Tax Regulation; [70]
- premiums payable on insurance directly connected with the activity chargeable under Schedule C; [71]
- commissions paid for services rendered to businesses or to persons or bodies engaged in a professional or vocational occupation, provided that:
  (a) said services were in fact rendered; [72] and
  (b) the amount paid as commission for said services correspond to the normal rates paid by other businesses or persons or bodies similarly situated for similar services rendered in similar circumstances; [73]
- bad debts, [74] but not losses unconnected with or not arising out of the activity of the enterprise [75] or losses recoverable by insurance or contract of indemnity. [76]

(ii) Depreciation allowance for "capital" expenses

The annual rates of depreciation for capital expenditure are as follows:

- buildings: five percent;
- machinery: sixteen percent for the first year and twelve percent thereafter;
- furniture: ten percent;
- motor vehicles: twenty percent.

In certain cases higher allowances may be approved by the Income Tax Authorities if they are justified in respect to the probable life of the asset. [77]

Unless otherwise specifically prohibited by law or otherwise rejected by the Internal Revenue Agency, the deduction and depreciation method which applies to legal entities also applies to individual and small businesses.

4. Investment exemptions

In order to encourage foreign investment in Ethiopia the Haile Selassie Government issued various laws. These were the following:

(i) Notice No. 10 of 1950;
(ii) Investment Decree, 1963; and
(iii) Investment Proclamation 1966.

The above laws are still in force.

a. Exemptions from profits tax

The foreign investment laws of Ethiopia currently in force, inter alia, provide a five year tax exemption period for newly established agricultural, industrial, mining, transport and tourist enterprises which invest about two hundred thousand birr in Ethiopia prior to the commencement of their operation.

An enterprise which invests an additional 200,000 birr in an extension or expansion of an existing enterprise may be exempted by the Minister of Finance from the tax on income derived from the additional investment for an additional period of five years from the date of the commencement of such operations, provided, however, that the new extended or the expanded facility is operated as a separate technical unit with separate accounts and is earning a separate income. [78]

b. Exemption from customs and import duties of raw materials and machinery

Moreover, agricultural and industrial machines, implements appliances, or parts thereof, which are imported by a person or enterprise having juridical personality for exclusive use in agricultural and industrial enterprises, are exempt from the payment of customs import duties, transaction taxes on imports, municipal taxes and all

other taxes and duties levied on imports: *provided, however that similar goods are not being produced within* Ethiopia. The Minister of Finance is authorized to issue regulations designating, by reference to items of the Customs Tariff, all goods which are subject to exemption and specifying declaration forms which shall be submitted to the Customs Administration by persons claiming the exemption. [79]

c. Exemption for construction material for industrial enterprise

Furthermore, upon the proposal of the Investment Committee, the Minister of Finance is authorized to grant exemption from payment of customs import duties, transaction taxes on imports, municipal taxes and all other taxes and duties levied on imports, with *respect to buildings, structural and other construction material* provided that such building, structural and other construction material is being imported for direct and exclusive use in construction *destined to house industrial enterprises* but not for office or living quarters; and provided, further, that similar materials are not being produced within Ethiopia. [80]

d. Exemption for packaging materials

Packaging materials and containers imported and used for the export of any goods manufactured locally are also exempt. [81]

e. Export duty relief

Goods manufactured locally destined for export are exempt from export duties and transaction taxes on exports for a reasonable period of time if such exemption is found necessary to assure the competitive position of these goods in export markets. [82]

The investment laws authorize the National Bank of Ethiopia to make available foreign exchange necessary to assure:

(i) The remittance of the profits of foreign investors to their countries of origin; [83]
(ii) The repatriation of the net proceeds belonging to a foreign investor upon partial or total sale or liquidation of his investment; [84]
(iii) The payment of the interest and the repayment of approved foreign loans contracted by enterprises; [85]
(iv) The remittance of the savings of foreign personnel employed in Ethiopia by investors; [86]
(v) The purchase of replacement, spare parts and other materials and goods required in connection with their investment operations. [87]

f. Other exemptions

The following categories of income are, inter alia, exempt from income tax:

(i) income from interest received by persons on bank accounts; [88]
(ii) income paid to foreign re-insurers. [89]

E. Income from agricultural activities (Schedule D)

1. Taxable source

Under the new laws, "agricultural activities" mean: the cultivation or development of rural land by any means and with the aid of any implement, regardless of whether or not the farmer processes it further by industrial means, the harvesting of crops as well as the breeding of livestock on such land, but excluding the following:

(i) the exploitation of woods and forests for wood lumbering purposes; [90]
(ii) the processing of agricultural crops by a natural or juridical person other than the farmer who produces such crops; [91]
(iii) other activities relating to agricultural forestry, breeding of cattle or maintaining pasture land in cases where said activities shall be deemed to be registered as commercial activities and pursued or conducted by a trader or a business organization, in accordance with the provisions of the Commercial Code of Ethiopia, and where the same is the principal activity; [92] and
(iv) notwithstanding the Cattle Tax Proclamation No. 142 of 1954, breeding animals for domestic use. [93]

2. Taxable subjects

a. Individuals: farmers

(i) Declaration of income

Each farmer has the duty to declare on the form issued by the Internal Revenue Agency, the amount of gross annual income he realized. The tax due thereon is payable to the nearest tax collector or tax office between the 1st of Tahsas (December) and the 30th of Miazia (April) or 30 days from the date of the realization of the income. [94]

Taxpayers are registered according to their annual declaration. Every tax collector has the duty to register individual farmers as well as those members of agricultural producers' cooperatives in the following categories:

— annual gross income up to 600 birr; [95]
— over 600 but not exceeding 900 birr; [96]
— over 900 but not exceeding 1,200 birr; [97]
— over 1,200 [98] but not exceeding 6,000 birr.

(ii) Assessment

The above taxpayers are assessed by estimation of the potential crop yield which estimation is valid for a period of three consecutive years but such tax must be paid annually. [99] Loss of a harvest due to difficulties in connection with or damage to the agricultural activity therefore is subject to relief that may be granted by the Ministry of Finance. [100]

The tax office has the responsibility of assessing and collecting taxes on income over 600 birr but not exceeding 6,000 birr. [101]

A farmer who has an income of over 6,000 birr is required to keep books of account and supporting documents in accordance with the directives issued by the tax office. [102] In such cases taxes are assessed on the basis of the taxpayer's annual return unless they are either unacceptable for the tax office in which case they will be assessed by estimation which is often arbitrary. [103]

The tax is assessed on the aggregate of the income realized or deemed to be realized from two or more agricultural activities, subject to tax under the new tax. [104]

(iii) Tax rates

Any farmer whose annual income from agricultural activities does not exceed 600 birr pays 10 birr. [105]

Moreover, an additional tax on income exceeding 600 birr is levied at the following rates:

Annual taxable income in birr	*Tax rate on every additional slice of income (%)*
600 - 1,200	10
1,200 - 3,000	11
3,000 - 6,000	14
6,000 - 9,000	20
9,000 - 12,000	26
12,000 - 15,000	33
15,000 - 18,000	40
18,000 - 21,000	47
21,000 - 24,000	54
24,000 - 27,000	61
27,000 - 30,000	68
30,000 - 33,000	75
33,000 - 36,000	82
36,000 and over	89

(iv) Deductions

No deductions are allowed for taxpayers deriving income below 1,200 birr. However, taxpayers earning above this figure may on request deduct in whole or in part:

(a) any fee [106] which includes the rural land use fee;
(b) all expenses which are necessary and have been incurred especially and directly for the realization of the annual income; [107] and
(c) depreciation of movable and immovable fixed assets used in the agricultural activity to be deducted in accordance with the Income Tax Regulations 152/1962 or Regulations to be issued by the Minister. [108]

However, the tax office may refuse to accept the declaration as well as expenses demanded to be deducted from the gross income unless they are supported by satisfactory evidence. [109]

It is not clear why 1,200 birr is the figure chosen to serve as the line of demarcation. It would appear to be better to have either an estimated deduction system for those taxpayers whose tax liability is assessed by estimation or not to allow any deductions for those who are required by law to keep books but are assessed by estimation on the grounds stated under Art. 21(2) and Art. 22.

(v) Collection

Income tax arising from Schedule E is collected by (a) local tax collectors, or (b) the tax office. The former are mass organizations like peasant associations and presumably cooperatives. The tax office is a local branch of the Ministry of Finance and the government administration. The farmers' associations are allowed to collect only income tax accrued from agricultural activities from a category of farmers whose annual gross income is less than six hundred birr. Whether farmers in such a category should be taxed at all is debatable. The writer believes that it is anti-developmental, unjust and unequitable to tax farmers who are below the poverty line and exist at subsistence level. A better policy would be for the government to provide them with all that they need and impose tax thereon only after they manage to attain a sufficient level of income. Neither the former nor the present government have seriously attempted to use taxation of agricultural income for rural development. While the predominant sources of wealth of the country at present are the land and the rural population, the latter is still suffering from the lack of basic needs and a resulting unequal distribution of resources between the rural and the urban population.

b. Organizations

Every organization defined above having income is liable for the payment of income tax. The tax rate for Government agricultural farms or corporate body or organizations is fifty percent of their taxable income. [110]

For purposes of deductions, the tax office has the right to determine whether expenses submitted in accordance with Art. 24 of the Proclamation stated above are to be deducted. [111]

111. Ibid.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

F. Withholding taxes on income from specific sources

In addition to the above, the following new income taxes are withheld at the rates specified below irrespective of whether it is paid to individuals or organizations:

Income from:	Withholding tax
(i) dividends	25% [112]
(ii) chance winnings and tote	10% [113]
(iii) royalties	40% [114]
(iv) service rendered to any person or organization or cooperative society in Ethiopia by any person or organization from abroad.	10% [115]

In addition to the payment of taxes on income payable under the relevant Schedules foreign investors are also subject to an additional withholding tax at above rates.

1. Dividends

Under prior law, dividends received by shareholders from bodies incorporated in Ethiopia were exempt provided that amounts paid as dividends were included in the taxable income of the bodies making such payments. [116]

However, as indicated above, dividends are taxed at the rate of 25 percent in the post-1974 tax reform.

2. Royalties

Royalties are taxed at the rate of 40 percent in the post-1974 tax reform. However, there is no definition of the term. This is perhaps one manifestation of the fiscal crisis of the state. The tax authorities seek to impose a tax on income derived from undefined activity. This is bound to encourage tax litigation. There is not even an indication of whether the tax is imposed on a gross or net basis. [117]

3. Tax on payments for services

Income derived from services rendered to any person or organization or cooperative society in Ethiopia by any person or organization from abroad is subject to a 10 percent income tax. [118]

Whether the introduction of the new law is an anti-avoidance measure for commissions paid for services rendered to business stipulated in Art. 16(e) of Income Tax Regulations, 1962 or whether it is a tax imposed on technical assistance services or other categories of services is not clear.

G. Tax treaties and the avoidance of double taxation

Ethiopia has not as yet concluded any tax treaty for avoidance of "double taxation" on income or capital with any country with the exception of income arising from shipping and air transport. From the viewpoint of foreign investors, therefore, the usual "double taxation" argument applies. It is worth emphasizing to note that in the Ethiopian tax system a tax is imposed on the income derived from activities where the Ethiopian State exercises sovereign territorial including offshore jurisdiction.

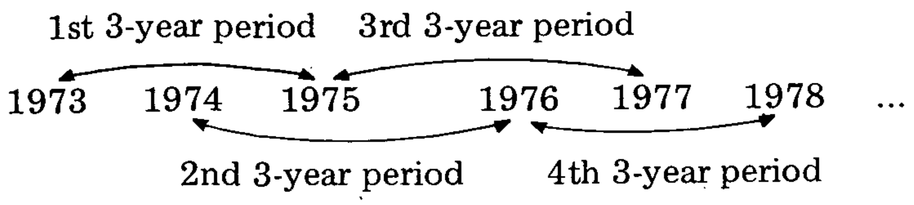
BRAZIL: The Supplementary Income Tax (Imposto Suplementar de Renda) on Dividend Distributions

by Paulo Kantor*

1. The supplementary income tax (Imposto Suplementar de Renda) (ISR) was instituted by Law No. 4,131, of September 3, 1962, and amended by Law No. 4,390, of August 29, 1964, and is presently regulated by the supplementary provisions of Normative Ruling No. 2, of September 12, 1969 (IN 2/69), as amended by Normative Ruling No. 17, of April 30, 1971 (IN 17/71), both issued by the Secretariat of Federal Revenue, and article 348 of the Income Tax Regulations (RIR) approved by Decree No. 76,186, of September 2, 1975.



2. Generally speaking, the profits and dividends which Brazilian companies remit to individuals or entities resident or domiciled abroad are subject to the withholding of income tax at source at the rate of 25 percent, in accordance with articles 344-1 and 343(a) of the RIR.

3. Regardless of the above form of taxation, when the average of profits or dividends remitted during a three-year period exceeds 12 percent of the capital and reinvestments capitalized and registered by the Central Bank of Brazil (Central Bank), ISR will be levied *on the excess*, at the following rates:

- remittances over 12 percent and up to 15 percent of the capital and reinvestments: ISR — 40 percent on the excess;
- remittances over 15 percent and up to 25 percent of the capital and reinvestments: ISR — 50 percent on the excess; and
- remittances over 25 percent of the capital and reinvestments: ISR — 60 percent on the excess.

4. Thus, two factors must be considered in ascertaining the existence of excess remittances and of possible ISR to be paid: (i) the average capital of the foreign investor in the Brazilian investment recipient, and (ii) the remittances of profits or dividends abroad, both relating to a specific period of time, i.e. the three-year period.

5. It is worthy of mention that, in spite of the fact that the period of time determining the taxation of ISR is a three-year period, ascertainment of the excess remittances must be made annually, since each year will represent the end of a new three-year period, as shown below:

The Editors of the Bulletin for International Fiscal Documentation are proud to publish this article on the Brazilian Supplementary Income Tax by Mr. Paulo Kantor. However, this tax is only part of the Brazilian corporate income tax system which consists of the following taxes:

Corporate income tax on the income of legal entities: normal rate, 30 percent, but for corporations which have opted for consolidated returns, 32 percent.

Profit distributions tax at a rate of 5 percent on all profit distributions of legal entities including remittances by Brazilian branch offices to their foreign head offices.

Tax on excess reserves at a rate of 25 percent on any increase of a corporation's reserve funds above a sum equal to its paid-in capital (as adjusted for inflation). A number of reserve funds are not considered in computing the tax.

Supplementary income tax, which is the subject of this article. Note that this tax also applies to branch profits of foreign corporations.

See for more detailed information our loose-leaf publication, *Corporate Taxation in Latin America.*

When due, ISR must be paid within 30 days from the end of the three-year period in which the excess remittance abroad has been verified.

6. The average capital of the three-year period must be computed in accordance with the number of days in which the capital and capitalized reinvestments of the foreign investor have actually remained in the Brazilian company within the three-year period, in accordance with the registrations effected by the Central Bank.

The investments pending registration at the Central Bank may be included in the calculation of the average capital of the three-year period, from the accounting entry of the Brazilian company which received the

---

* Member of Pinheiro Neto & Cia. — Advogados, graduated in 1976 from the Law School of Faculdades Metropolitanas Unidas, in São Paulo, SP, Brazil.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

investment. A later readjustment, if necessary, will have to be made after the respective registration by the Central Bank.

Example I

1st year

foreign capital registered at the Central Bank 75

2nd year

foreign capital registered at the Central Bank 75

3rd year

foreign capital registered at the Central Bank 150

(1st year) (2nd year) (3rd year)

$$\text{Average capital of the 3-year period} = \frac{(75 \times 365 \text{ days}) + (75 \times 365 \text{ days}) + (150 \times 365 \text{ days})}{3 \text{ years } (365 \text{ days} \times 3)}$$

$$= \frac{27{,}375 + 27{,}375 + 54{,}750}{1{,}095 \text{ days}} = \frac{109{,}500}{1{,}095} = 100$$

7. For effects of ISR taxation, the average amount of the profits or dividends remitted abroad in the three-year period may not exceed 12 percent of the average capital of the same period. Thus, in Example I, for an average capital of *100*, the average of the remittances may reach up to 12 (12 percent) at the end of the three-year period, without ISR being due *(the average of 12 percent* corresponds, of course, to amounts *that total 36 percent* of the average capital in the three years computed).

Example II

	Capital	Remittances permitted
1st year	75 x 12%	9
2nd year	75 x 12%	9
3rd year	150 x 12%	18
	300	36
Three-year period (average amounts)	100 (see Example I)	12 $\frac{(9+9+18)}{3 \text{ years}} = \frac{36}{3}$

As verification of whether or not there are excess remittances is made at the end of the three-year period, the 12 percent limit will not have to be observed for each year, since it is admissable to compensate the shortfall of one year with the excess of another, as follows:

Example III

	Capital	Remittances permitted	Remittances effected	Shortfall	Excess
1st year	75	9	0	9	0
2nd year	75	9	11	0	2
3rd year	150	18	25	0	7
		36	36	9	9
Three-year period (average amounts)	100	12	12	0	0

As may be seen, in the above example the annual excesses were absorbed by the shortfalls, without any excess of remittances being verified at the end of the period. A reservation must be made, however, for the fact that compensation is admitted only *between the years of one and the same three-year period.* Shortfalls verified in one three-year period may not be compensated (in case the remittances abroad corresponded to 34 percent of the average capital, for example), by remitting profits or dividends with an excess of 2 percent in the following three-year period, without ISR taxation.

8. The diagram appearing in paragraph 5 shows that the last two years of a three-year period will be the first two years of the following three-year period. Article 41 of IN 2/69, as amended by IN 17/71, specifies that *the remittances of the last two years of a three-year period* will be considered, *in the first two years of the following three-year period,* in the following manner: (i) *if there was no* excess in the previous three-year period, *in the amounts actually remitted,* and (ii) *if there was* an excess of remittances in the previous period, *in the amount corresponding to 12 percent of the average capital of each one of said years.*

9. The practical result of this rule is to make it recommendable, at times, to remit profits or dividends abroad with an excess, in order not to overburden the limit of the following three-year period.

Example IV, *without excess remittances:*

	1st 3-year period			2nd 3-year period		
	1975	*1976*	*1977*	*1976*	*1977*	1978
remittances effected	0	0	36%	0	36%	0*

* (any remittance in 1978 will be an excess and incur ISR taxation)

Example V, *with excess remittances:*

	1st 3-year period			2nd 3-year period		
	1975	*1976*	*1977*	*1976*	*1977*	1978
remittances effected	0	0 (1% excess)	37%	12%	12%	(12%)*

* (availability for remittance in the year 1978, without constituting an excess).

10. Even though it is not adopted by the federal tax authorities, which follow the criterion indicated in alternative (II) below (as per Normative Opinion No. 77/78, of the Coordination of the Taxation System), there is another interpretation of article 41 of IN 2/69, in the sense that only the remittances that exceed 12 percent of the average capital will be reduced to 12 percent in the three-year period following that in which an excess has occurred, the remittances below the same 12 percent being maintained in the amounts actually remitted.

Sri Lanka: Budget 1980

Reproduced below is an extract from the Budget Speech for 1980 presented in November 1979 by Mr. Ronnie de Mel, the Minister of Finance and Planning of the Democratic Socialist Republic of Sri Lanka. The extract only covers the proposed tax changes.

Mr. Speaker, I now come to my tax proposals. A favourable climate for savings, investment and growth has been established by the exchange, monetary and fiscal policies of this Government. A simplified and restructured tax system has been brought into existence with the passage of the Inland Revenue Act No. 28 of 1979. I hope in the near future to present a new and revamped Estate Duty Act and a new Stamp Act. However, there still remain certain areas, where further incentives and relief are required to trigger off productive investment which is the surest foundation for increasing employment and raising the living standards of the people. While we concentrate on investment and growth, the Government is equally conscious of the need to ensure that the fruits of this increased prosperity are shared by as large a number of people as possible. It is with these objectives in view that I now unfold my proposals relating to taxes.

(A) Taxation of companies

Mr. Speaker, in order to encourage company formation I reduced the non-refundable tax on companies from 60 percent to 50 percent last year. Even with this reduction, from the point of view of the local investor, the current rate of return on investment in equity capital of limited liability companies, is not attractive when compared to the alternative options available to him. The company form of business organisation should be actively encouraged to attract the small investor into its fold. To achieve this end, not only should investment in equity capital be made more attractive through the prospect of better yields, but the tax concessions to companies should be geared to induce corporate business to become more broad-based. Fiscal policy should be designed to reactivate the capital market which is a valuable adjunct of the financial system in ensuring the flow of funds for investment. There is also the need to attract foreign capital not merely into the Investment Promotion Zone where enterprises are geared to the export market, but outside the Zone as well. If joint investment outside Zone between local entrepreneurs and foreign investors is to be encouraged, then the relevant tax rates should be comparable with those in other developing countries in our region.

(i) Resident companies

Mr. Speaker, you will, therefore appreciate that there is a strong case for consideration being given to lowering of the rate of tax on companies, particularly companies which are truly broad-based where even the small investor gets a chance to participate in the investment. We already have a concessionary rate of tax of 40 percent in respect of People's Companies in contrast to the rate of 50 percent applicable to other resident companies. Unfortunately, however, the People's Company concept with its restrictive conditions, has not proved to be popular in this country. Mr. Speaker, with the primary objective of broad-basing limited liability companies. I wish to offer a package of incentives. Firstly, I propose to extend the concessionary rate of tax of 40 percent to cover all public limited liability companies, whose shares are quoted and who make available for purchase by the general public a stipulated minimum percentage of shares. I expect such companies to be public in true sense of the word. Secondly, I also propose to do away with the $33^1/3$ percent withholding tax on the dividends declared by such companies. Dividends will, however, be taxable in the hands of the shareholders. Thirdly, I propose to exempt completely from tax, the capital gains that arise from the transfer of ownership of shares in such companies. At present capital gains on the transfer of shares in GCEC enterprises enjoy this exemption. Finally, I also propose to exempt from tax, capital gains which arise on the conversion of a proprietary concern or a partnership to a public company that is broad-based. However, this concession will be available only where the assets are transferred to the new company at the valuation of 31st March, 1977, for Wealth Tax purposes. Such a restriction is necessary to prevent attempts at tax avoidance. With the prospect of higher dividends due to the reduction of the rate of tax and the removal of the withholding and capital gains tax. I expect the small saver to participate in the economic progress of the country. I also hope that these measures will help to reactivate the Colombo Share Market and lead to the creation of more broad-based public companies and a full fledged Stock Exchange in due course.

(ii) Withholding tax on dividends

Mr. Speaker, I have already announced that the withholding tax of $33^1/3$ percent deducted at source on dividends will not apply to broad-based companies whose shares are quoted. As regards the withholding tax on all other companies, I propose to reduce the rate to 20 percent.

(iii) Exemption of dividends

Mr. Speaker, there is also an anomaly that exists at present in regard to the exemption of dividends from tax. Dividends declared by a company carrying on an exempt undertaking are exempt in the hands of the shareholders in so far as the dividends are declared out of exempt profits during the period of the tax holiday or the year immediately succeeding. This exemption is presently available to every shareholder irrespective of whether such shareholder is an individual, a company or any other person. However, in the case of a company which receives exempt dividends, and pays it out in the form of dividends to its shareholders, such dividends become liable to tax in the hands of the shareholders. This is clearly an anomalous situation. Mr. Speaker, I, therefore, propose to amend the Inland Revenue Act to exempt from tax, dividends which are declared out of exempt dividends received by a company so long as they are paid out as dividends in the year in which the exempt dividends were received or in the year immediately succeeding.

(B) Taxation of individuals

Mr. Speaker, the present maximum marginal rate of tax for individuals is 70 percent. High marginal rates induce a greater degree of evasion and compel governments to have recourse to periodic tax amnesties. Amnesties by and large discriminate against the honest taxpayer. Greater compliance with tax laws and less evasion can be induced by reasonable rates of tax. Moreover, high marginal rates can also exert an adverse effect on incentives to work, save and invest. They hamper growth. Mr. Speaker, I, therefore, propose to reduce the maximum marginal rate of tax on individuals to 55 percent. A differential of 5 percent and 15 percent respectively between this rate and 50 percent on

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ordinary resident companies and 40 percent on broad-based companies, is intended to encourage company formation and growth. I do not expect any significant loss in revenue as a result of this measure, as loss evasion is likely to take place.

(C) Taxation of terminal benefits of private sector employees

Mr. Speaker, all public sector employees were exempted from income taxes both on their employment income as well as on their superannuation benefits, with effect from the year of assessment 1979/80. This was done particularly in view of the highly rigid salary structure in the public service, particularly in the management grades, where salaries are well below the level of their counterparts in the private sector. It is my intention now to provide some relief to private sector employees too. This relief will apply to terminal benefits of these employees especially those in the lower ranks who are nearing retirement. Terminal benefits often represent the only saving of their lifetime, the real value of which has unhappily been eroded with inflation over the years.

Mr. Speaker, the terminal benefits which private sector employees receive are now liable at a single rate of tax determined by the average rates for the last three years of assessment, subject to a maximum of 15 percent. I intend adopting a more straightforward and rational system while affording substantial relief to lower rank employees by exempting the first Rs. 50,000 of such benefits from tax altogether. The rates of tax on all terminal benefits, which I propose to levy will be as follows:

On the first	Rs. 50,000	. . . . Nil
On the next	Rs. 25,000	. . . . 5%
On the next	Rs. 25,000	. . . . 10%
On the balance	—	. . . . 15%

This concession will be made available only if the benefit paid by an employer is on the basis of a scheme under which payments are made to all employees of the enterprise under a common set of rules.

(D) Charitable institutions

Mr. Speaker, in the last Budget I reduced the tax rate on religious and charitable institutions from 23 percent to 20 percent. The present position is that a charitable institution is not liable to tax if its assessable income for a year does not exceed Rs. 12,000 whereas if it exceeds this figure the entirety of its income is liable. I propose to grant a measure of relief to these institutions by giving a tax free allowance up to Rs. 12,000 for all charitable institutions in future.

(E) Wealth tax

Mr. Speaker, representations have been made to me regarding the hardships caused by the general escalation of property values. Consequently taxpayers, if they are to declare the current true market values of property, will be confronted with substantially increased liability on capital taxes. This increased tax liability is not sufficiently compensated by the increase in incomes from such properties if true market values were to be declared by taxpayers. Wealth Tax has in these circumstances become a highly confiscatory tax, even if the asset were to be put to its optimum use. This is particularly true of immovable properties like houses. I, therefore, propose to provide for the freezing of values of immovable property at their values as on 31st March, 1977 for Wealth Tax purposes. A similar provision will also be made in respect of Estate Duty and Gifts.

(F) Capital allowances

Mr. Speaker, last year, I announced my intention to do away with the scheme of lump sum capital allowances for plant, machinery, fixtures and buildings and to replace it with effect from 1st April, 1980 with a new scheme of capital allowances based on a fixed percentage of the cost of acquisition or construction as the case may be, to be written off over a period of years. I allowed the scheme of capital allowances then in existence to continue for a year till 31st March, 1980. This was because I felt that industries starved of machinery and equipment during the last regime should be able to take advantage of the liberalisation policy and modernise and expand their production capacity without undue liquidity problems. Representations have been made to me that the grace period of one year that was granted was inadequate for investors to get down machinery and equipment. I am firmly convinced that in the long term interests of the economy, the lump sum capital allowances should be replaced as proposed last year. Nevertheless, I admit that the time given to take full advantage of the old scheme is insufficient. I, therefore, propose to continue the scheme of capital allowances which was to have ended on 31st March, 1980 for another 2 years only.

(G) Incentives to employers for the construction of houses

Mr. Speaker, I wish to provide incentives to employers who contribute towards the easing of the currently acute problem of housing. I propose to make them eligible to claim the monies expended on housing for their employees as "qualifying payments" and hence deductible from their assessable incomes. Employers who construct houses for occupation by employees with a floor area not exceeding 1500 sq. ft. could claim expenditure incurred on the construction of such residential houses as "qualifying payments". In the event of the houses being sold to employees however, such sale proceeds will be taxable as capital gains, since the cost of construction would have been allowed as a deduction.

(H) Penalties for non-payment of tax in default

Mr. Speaker, Section 125 (2) of the Inland Revenue Act stipulates the following penalties where any tax due whether under the self-assessment scheme or on an assessment issued by the Department, is not paid by the due date:

1. An automatic penalty of 5 percent of the amount of tax due, if the tax is not paid on or before the due date;
2. Where the tax is not paid before the expiry of 30 days after the tax has begun to be in default, an additional penalty of 5 percent in respect of each further period of 3 months or part thereof during which tax is in default.

The maximum amount leviable as a penalty on tax in arrears is 25 percent per annum of the tax outstanding.

I am of the view that the penalties levied should bear some relation to the prevalent rates of interest. Otherwise as it happens now, even taxpayers who can well afford to pay the tax due, will postpone tax payments and utilise such funds for further investment. Non-compliance has to be taken more seriously, once compliance has been made less burdensome, as I have done, by moderating its incidence. I, therefore, propose to increase the ceiling on the amount of the penalty payable from 25 percent to 50 percent, the penalties increasing by 5 percent for each quarter that tax is in default.

(I) Tax incentives

(1) Property development projects approved by the Urban Development Authority, contract work for Mahaweli Development, import substitution industries of a pioneering nature

Mr. Speaker, in order to enable high priority national projects such as the Mahaweli and Urban Development to be completed within the target dates, I propose to extend certain tax concessions to new companies as an incentive towards the quick implementation of these projects. Whilst we have already extended every possible concession to GCEC enterprises and export-oriented ventures outside the Free Trade Zone, there is still some need to also consider certain import substitution industries and industries of a pioneering nature for the grant of similar tax concessions. This is necessary if our industrial development is to be more widely and securely based. It is for these reasons that I propose to offer tax concessions to new companies engaged solely in

(a) contracts in respect of irrigation works, clearing of lands etc., with the Mahaweli Development Board;

© 1980 International Bureau of Fiscal Documentation – BULLETIN

(b) import substitution industries and industries of a pioneering nature;

and approved by the Minister of Finance and Planning.

These companies will be granted a five year tax holiday. Dividends declared out of exempt profits will also be exempt and investment in shares of such companies will be treated as "qualifying payments" enabling the investor to claim relief from his assessable income. To qualify for these concessions, the companies should be broad-based public companies whose shares are quoted in the market.

Tax concessions will also be granted to new companies engaged solely in property development projects recommended by the Urban Development Authority and approved by me. They will be entitled to the same concessions except that the tax holiday on profits and dividends will be for 10 years in their case. Such companies will have to become public companies and get their shares quoted in the share market within two years of commencement of business.

(2) Foreign Currency Banking Units

The Central Bank has recently launched Foreign Currency Banking Unit Scheme, with the objective of establishing a full fledged off-shore banking centre in Sri Lanka and making available financial facilities at competitive rates of interest to GCEC enterprises. It is necessary to give every possible incentive to these banking units and I propose to offer the following concessions to them —

(a) Depositors of foreign currency with Foreign Currency Banking Units (FCBU) will be exempted from income tax on their interest income;

(b) Foreign Currency Banking Units will be granted tax exemption on their profits from off-shore transactions and on certain designated on-shore foreign currency transactions.

(3) A package deal for the gem industry

Mr. Speaker, smuggling of gems has always been a problem in this country and in every country where gems are found. Exporters of gems through legal channels are offten in a disadvantageous position vis-a-vis the smugglers who offer higher price for gems in the local market. It is also a trade where the primary producer, the miner, has been always forgotten. He is often at the mercy of exploitative middlemen. No scheme evolved for the gem industry up-to-date has given sufficient consideration to the small man — the actual miner and the gem worker. I propose to do what I can to help these categories who really produce the gem wealth of the country. I also feel that there is a great potential for jewellery exports if only the required incentives could be provided. This will provide an opportunity for our traditional craftmen to enjoy some part of the handsome benefits that acucre to the trade.

Mr. Speaker, I, therefore, intend offering the gem and jewellery industry a package deal which will benefit all those in the industry from the miner to the eventual exporter.

It will

(i) ensure a better price to the gem miner;

(ii) channel gem exports through official channels as far as possible; and

(iii) promote the export trade in jewellery.

The policy package will embody the following:

(a) Weekly gem auctions to be conducted by the Chamber of Commerce at chosen locations to encourage miners and dealers to sell their stones, rough as well as cut, in the open market. The Gem Corporation too will be a buyer at these auctions. These auctions will initially be held at Colombo, Ratnapura and Matale.

(b) As an encouragement to miners and dealers to sell through auctions, exemptions from income tax of profits from the sale of stones sold at the auction will be granted. These sales will also be exempt from Business Turnover Tax;

(c) Exemption from income tax will be granted on profits from all gem exports as well. At present, only profits from the sale of gems to the Gem Corporation and from exports made through the Corporation are exempt. Export sales will, however, be subject to Business Turnover Tax at 5 percent;

(d) Manufacturers and exporters of jewellery can avail themselves of the tax concession presently available up to 1983 for small and medium-scale industries and the five year tax holiday available for manufacture for export;

(e) Exports of jewellery will be liable to a Business Turnover Tax of 2 percent.

Mr. Speaker, these are considerable concessions to the gem and jewellery industry. I hope the industry will respond in a positive manner and establish itself as a leading foreign exchange earner for the country.

If despite these concessions, persons still indulge in smuggling, it would be a crime against the nation. I propose, therefore, to introduce severe penalties for infringement of any rules and also provide rewards to informants who bring to our notice such infringements. A fine of 300 percent of the value of the gems will be imposed on anyone detected attempting to smuggle gems or violating gem licence regulations. Informants will be paid a reward of 100 percent of the value of the gems detected on information given by them. The condition on which licences are presently issued by the State Gem Corporation will be strictly enforced both as regards miners as well as dealers in gems. I hope these measures will lead to a reduction in smuggling and the revitalisation to the gem industry.

(4) Incentives for entrepot trade

Mr. Speaker, Sri Lanka is located in an advantageous position in relation to both shipping and airline routes and can be, in my opinion, developed as a centre for a lucrative entrepot trade catering to other countries in our region. To attract activities of this nature, infra-structural support in the form of quick and efficient communication links with major cities, a well organised banking system and adequate bonded warehouse facilities are essential. At a time when we are developing these services to ensure the sucess of the Investment Promotion Zone and giving every encouragement to off-shore banking, we must also try to derive the maximum advantage from our investment in these services. I wish, therefore, to include a provision in the Inland Revenue Act, granting exemption from income tax on the profits from entrepot trade in respect of specified commodities. Some of the likely commodities that could be traded on this basis are precious metals and precious stones not mined in Sri Lanka, petroleum products and other primary produce not produced in Sri Lanka.

(5) Exemption of presidential awards and government awards to inventors

I also propose to amend the Inland Revenue Act to exempt from income tax cash prizes given together with presidential awards and cash prizes to be given to inventors by the Government with a view to encouraging new research and inventions.

Mr. Speaker, my tax proposals and the incentives I have offered are in line with our basic objectives of investment and quick economic growth. They cost very little in terms of loss of revenue. I expect my pre-budget income tax revenue to come down marginally by Rs. 12 million in respect of corporate taxes and Rs. 18 million in respect of non-corporate taxes. Considering their long-term, or even for that matter, their short-term effects, they should in fact be self-financing by inducing increased production and exports, and less tax evasion. Fiscal policy is not merely a question of taxing regardless of circumstances, incidence of the consequential effects of taxing. As Colbert, one of the greatest Finance Ministers of all time said, "The art of taxation consists in so plucking the goose as to obtain the largest amount of feathers with the least possible amount of hissing".

Mr. Speaker, let me now come to the next set of proposals which will assist me in the task of collecting revenue:

© 1980 International Bureau of Fiscal Documentation — BULLETIN

(J) Withdrawal of tax exemptions from public corporations which are statutorily exempt

Mr. Speaker, I have already referred to the massive investment in public corporations which successive Governments have undertaken, mostly with loan funds, on which interest is payable by the Government. The returns received by Government in relation to the capital employed have been very disappointing, being less than 2 percent. The system of levies on corporations which has been tried out in the past by the Treasury, has led to lack of uniformity and has tended to penalise the relatively more successful corporations, just because they have proved to be more efficient. On the other hand, statutory provisions currently exempt from income tax the profits of certain corporations and statutory boards. Such exemptions may be justified, as in the case of new industrial undertakings, provided the concession is limited to a period of time sufficient to enable them to become viable enterprises. The continuation of these exemptions beyond this period is, however, indefensible. I, therefore, propose to withdraw the present statutory exemption conferred on the National Lotteries Board, Sri Lanka Broadcasting Corporation and on the Sri Lanka Insurance Corporation in respect of its profits from the business of life insurance. These enterprises have now been in existence for a long period of time and are certainly viable enough to meet any normal tax liabilities. The additional income tax revenue I hope to collect as a result would be in the region of Rs. 30 million.

(K) Non-citizens employed in Sri Lanka

The existing provisions in the Inland Revenue Act confer an exemption on the emoluments arising in Sri Lanka of a non-citizen who being a scientist, technician, expert or advisor is employed by Government or any public corporation or institution approved by me. There is also provision in the Act to exempt foreign personnel employed by the hotel industry.

Mr. Speaker, there is no reason whatsoever why non-citizens of any category should be granted full exemption. The loss to revenue could be considerable. I am of the view that they should be subject to income tax, though not on the basis of the existing rate schedules. I, therefore, propose in future to levy a flat rate of tax at 25 percent on all non-citizens employed in all undertakings. However, employees who have already been granted an exemption under the existing provisions will continue to enjoy the benefit. This scheme of preferential treatment will apply to any non-citizen for three years of employment either at one stretch or in broken periods which aggregate to three years in all. In addition to ensuring that local personnel are sufficiently trained to replace these expatriate personnel as quickly as possible, this will also enable us to save a considerable amount of tax revenue now lost.

(L) Airport levies

The Embarkation Tax that is levied at our International Airport at present of Rs. 25 per passenger is very low by international standards. I propose to increase the levy to Rs. 100 per passenger.

(M) Fees levied by the registrar of motor vehicles

(a) Registration fees for vehicles

The fees charged at present for the first registration of a motor car, motorcycle or scooter is only Rs. 10 per vehicle. On lorries, buses and tractors the fee levied is only Rs. 20. These fees have remained unchanged for many years. It is proposed to increase the fee for the first registration of vehicles as follows:

Rs. 50 for motor cycles, scooters and three wheelers;
Rs. 200 for motor cars, tractors and other land vehicles; and
Rs. 400 for buses and lorries.

(b) Annual licence fee on diesel driven passenger cars

Mr. Speaker, although the fuel prices were raised to partly offset the tremendous losses that were being incurred on its sale, we were compelled to keep the prices of certain fuels like diesel, low enough to soften the impact on the cost of living. However, there is no justification why this price advantage on diesel vis-a-vis petrol should accrue to the owners of diesel operated passenger cars. Hence, I propose to levy a 100 percent surcharge on the current annual licence fee payable on such vehicles.

(c) Tax on transfer of motor vehicles

The present transfer tax of Rs. 5,000 in respect of cars less than 17 cwt. and Rs. 10,000 in respect of cars of 17 cwts. or over, was introduced last year in place of the earlier prohibitive tax which discouraged the official transfer of cars. This reduction brought about the desired and intended effect of increasing revenue substantially from Rs. 2 million per year to Rs. 20 million in 1979. With the increase in the price of petrol and slump in the car market, the present rates of tax have once again become high enough to discourage compliance. In view of this, it is proposed to levy a uniform rate of transfer tax of Rs. 2,500 in respect of the first transfer in Sri Lanka of all vehicles other than three wheelers, motor cycles and scootors. These several measures will result in an additional revenue of Rs. 7 million.

(N) Fees on the issue of passports

The current fee levied by way of stamps for the issue of a passport is Rs. 20 and for the extension of a passport is Rs. 5 per year. These charges have remained unchanged for quite some time, and are totally unrelated to the administrative costs involved.

A fee of Rs. 5 per individual is now charged on persons granted admission to the airport departure lounge and/or viewing gallery. It is proposed to increase this levy to Rs. 10 per person. The additional funds to be collected from these measures are estimated at Rs. 21 million.

It is proposed to revise the fees levied as follows:

Issue of passport	Rs. 100
Issue of emergency certificate . .	Rs. 25
Extension of passport . .	Rs. 20 per year

The additional revenue expected is about Rs. 15 million.

(O) Revision of B.T.T. rates

Services and professions are today subject to BTT mostly at the 1 percent rate. A higher rate of 10 percent applies to tourist hotels. Some of these services cater to the affluent. In the case of certain others, such as the travel agency and Indenting Agency businesses, there has been a remarkable increase in the turnover consequent to liberalisation.

I propose to increase the present rates of BTT applicable to Services and Professions as follows:

	%
Professions	5
Tourist Hotels	15
Travel Agencies	5
Produce Brokers	5
Advertising	5
Indenting and Commission Agents	5

The additional revenue is estimated at Rs. 90 million.

(P) Cigarettes

Mr. Speaker, the yield from tobacco tax has been decreasing for some time, as a result of the increased production of filter as against plain cigarettes and the loose packing of cigarettes. While it is true that a turnover tax on the manufacture of cigarettes operates at the same time as the Tobacco Tax, and would probably recoup some part of this loss, the manufacturers have gained overall, at the expense of State revenue. With a view to recouping this loss as well as to raise additional revenue, I propose to increase the BTT rate on cigarettes from the current 25 percent to 30 percent. The retail prices of all brands of cigarettes will go up as a result by 2 cents per cigarette.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

The additional revenue I hope to collect by this measure is Rs. 75 million.

(Q) Stamp duty

Under the provisions of the Stamp Ordinance, trust receipts were once liable to be stamped on an ad valorem basis. The rate applicable was the same as for mortgages. Trust receipts were, however, exempted from stamp duty by an amendment to the Stamp Duty Act in 1973. These trust receipts are for very large sums of money and it is my view that these documents should be properly stamped on an ad valorem basis. These transactions, however, are for short-term credit as compared with mortgages which are invariably long-term. In view of this I propose to buy a moderate rate of stamp duty on trust receipts and other credit instruments like pro-notes and letters of guarantee for imports and a slightly lower rate for similar documents for exports. The rates will be as follows:

(a) a flat rate of 0.1 percent (Re 1 per every Rs. 1,000) on the value of trust receipts and other credit instruments on imports;
(b) a flat rate of 0.05 percent (50 cts. on every Rs. 1,000) on the value of pro-notes and other documents for exports.

In the case of pro-notes, for sums below Rs. 10,000 the rate of Re. 1 will be continued.

The additional revenue expected is about Rs. 10 million.

(R) Import duties

Mr. Speaker, I am also taking this opportunity to make some changes in import duties which will be gazetted tonight. In the main, these changes will give relief to the hotel industry, the leather making industry and the paper manufacturing industry. I have also eliminated the duty on agricultural implements.

Sri Lanka: 1980 Budget Proposals

by Dr. M.P. Dominic *

A new "simplified" and restructured Income Tax Act was brought into effect in May 1979. However, the new Budget proposes to amend this Act with a view to providing further incentives and relief "to trigger off productive investment which is the surest foundation for increasing employment and raising the living standards of the people".

I. Taxation of companies

A. Reduction of company tax rate

Under present law, companies are taxed at a rate of 50 percent. In the case of a "people's company" the rate is reduced to 40 percent. A "people's company" means a company which is resident in Sri Lanka and in respect of which the Assessor is satisfied that:

(i) it is not a private company within the meaning of the Companies Ordinance;
(ii) the number of shareholders of the company exceeds 100 and the nominal value of each share does not exceed 10 Rs.;
(iii) any person may invest in one or more shares of the company at any allotment of shares by the company or in the open market;
(iv) no person either individually or together with his wife or minor children holds, either directly or through nominees, more than 5 percent of the issued share capital;
(v) there are three or more directors each owning one or more shares;
(vi) none of the directors of the company holds office as director of any other people's company; and
(vii) no other company holds any share either directly or through nominees.

However, the "people's company" concept with its restrictive conditions has not proved to be popular in Sri Lanka. The new Budget proposes to extend the concessionary rate of tax of 40 percent to cover all public limited liability companies whose shares are quoted and which make available for purchase by the general public a stipulated minimum percentage of shares.

B. Reduction of dividend withholding tax rate

At present, dividends paid by resident companies are subject to 33 1/3 percent withholding tax. If the dividends are paid to companies, whether resident or not, the withholding tax is the final tax payable on such dividends. If the dividends are paid to individuals, whether resident or not, the withholding tax is not the final tax; the dividends will be subject to income tax with a credit for the tax withheld.

The new Budget proposes to abolish the withholding tax on dividends paid by public limited liability companies whose shares are quoted and which make available for purchase by the gneral public a stipulated minimum percentage of shares. The new Budget also proposes to reduce the withholding tax on dividends paid by other resident companies to 20 percent.

It may be noted that the 5 percent levy in lieu of estate duty which is deducted, in addition to the withholding tax on dividends, from dividends paid to non-resident companies will remain.

The abolition or reduction of the withholding tax will not benefit individual shareholders; the dividends will continue to be subject to income tax at the rate applicable to them. But these proposals will reduce the effective tax burden on dividends received by companies, whether resident or non-resident; for them the effective

* Attorney-at-law, Sri Lanka.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

tax rate (both company tax and tax on dividends) is as follows:

Effective tax rates (in percent)

Quoted companies

	Dividends received by resident companies		Dividends received by non-resident companies	
	Present law	Budget proposal	Present law	Budget proposal
Company tax	50	40	50	40
Tax on dividends	33 1/3	nil	33 1/3	nil
Levy in lieu of estate duty	nil	nil	5	5
Effective tax rate	66 2/3	40	69 1/6	42.5

Other companies

	Dividends received by resident companies		Dividends received by non-resident companies	
	Present law	Budget proposal	Present law	Budget proposal
Company tax	50	50	50	50
Tax on dividends	33 1/3	20	33 1/3	20
Levy in lieu of estate duty	nil	nil	5	5
Effective tax rate	66 2/3	60	69 1/6	62.5

C. Exemption of dividends paid from exempt dividends

At present, dividends paid by a company from exempt dividends received by it are subject to tax. The new Budget proposes to exempt from tax dividends which are declared out of exempt dividends received by a company so long as they are paid out as dividends in the year in which the exempt dividends were received or in the year immediately succeeding.

D. Exemption of capital gains arising from transfer of shares

Capital gains that arise from the transfer of shares in public limited liability companies whose shares are quoted and which make available for purchase by the general public a stipulated minimum percentage of shares will be tax exempt.

E. Exemption of capital gains on te conversion of a sole proprietorship or a partnership in a broad-based public company

Capital gains arising on the conversion of a sole proprietorship or a partnership into a public limited liability company whose shares are quoted and which makes available for purchase by the general public a stipulated minimum percentage of shares will be tax exempt.

II. Taxation of individuals

A. Reduction of the maximum marginal rate

The present maximum marginal rate is 70 percent. This will be reduced to 55 percent. The Minister of Finance states:

> High marginal rates induce a greater degree of evasion and compel governments to have recourse to periodic tax amnesties. Amnesties by and large discriminate against the honest taxpayer. Greater compliance with tax laws and less evasion can be induced by reasonable rates of tax. Moreover high marginal rates can also exert an adverse effect on incentives to work, save and invest. They hamper growth. Mr. Speaker, I, therefore, propose to reduce the maximum marginal rate of tax on individuals to 55 percent. A differential of 5 percent and 15 percent respectively between this rate and 50 percent on ordinary resident companies and 40 percent on broad-based companies is intended to encourage company formation and growth. I do not expect any significant loss in revenue as a result of this measure, as less evasion is likely to take place.

This statement may be contrasted with the view taken by the same Minister in his Budget Speech, 1978.

> The previous government, in order to safeguard the new capitalist class which aided and abetted it, reduced personal income tax to 50 percent. In the interests of the common man I am increasing the rate of personal income taxation to 70 percent. Our aim is to maximise taxes on the incomes of capitalist classes that can bear the burden and use such funds to give relief to the common man.

B. Terminal benefits of private sector employees

Under the existing law terminal benefits of private sector employees are liable to a single rate of tax determined by the average rates for the last three years of assessment, subject to a maximum of 15 percent.

The new Budget proposes to tax them as follows:

		percent
on the first	50,000 Rs.	Nil
on the next	25,000 Rs.	5
on the next	25,000 Rs.	10
on the balance	—	15

This concession will be made available only if the benefits paid by an employer are on the basis of a scheme under which payments are made to all employees of the enterprise under a common set of rules.

It may be noted that under the present law, public sector employees are exempted from income taxes both on their employment income as well as on their superannuation benefits. This will continue.

III. Depreciation allowances

At present, all plant, machinery and fixtures acquired before April 1, 1980 are eligible for 100 percent depreciation allowance in the year of acquisition. The straight

© 1980 International Bureau of Fiscal Documentation – BULLETIN

line method is to be applied to any plant, machinery and fixture acquired on or after April 1, 1980.

The new Budget proposes to extend the 100 percent depreciation allowance in the year of acquisition for another two years, i.e. until March 31, 1982.

IV. Charitable institutions

The present 23 percent tax rate will be reduced to 20 percent. Further, the first 12,000 Rs. of taxable income will be exempt. At present, such institutions are taxed on their entire income if it exceeds 12,000 Rs.

V. Wealth tax

For purposes of wealth tax, estate duty and gifts tax, the values of immovable property will be frozen, as of March 31, 1977.

VI. Exemption from income tax

Will be withdrawn from certain (government) corporations.

VII. Penalties for non-payment of tax

The current law stipulates the following penalties for non-payment of tax by the due date:

— an automatic penalty of 5 percent of the amount of tax due, if the tax is not paid on or before the due date;
— where the tax is not paid before the expiry of 30 days after the tax has begun to be in default, an additional penalty of 5 percent in respect of each further period of three months or part thereof during which tax is in default.

The maximum amount leviable as a penalty on tax in arrears is 25 percent per annum of the tax outstanding.

The penalty for each quarter in which the tax is in default will be increased by 5 percent and the ceiling on the amount of penalty payable will be increased from 25 to 50 percent.

VIII. Tax incentives

A. Construction of houses for employees

Employers who construct houses for occupation by employees with a floor area not exceeding 1500 sq. ft. may claim expenditure incurred on the construction of such residential houses as "qualifying payments". In the event of the houses being sold to employees, such sale proceeds will be taxable as capital gains. It may be noted that "qualifying payments" are deductible from assessable income up to one-third of such assessable income.

B. Contract work for Mahaweli Development, import substitution industries and industries of a pioneering nature

1. A five-year tax holiday will be granted to new companies engaged solely in:
   — contracts in respect of irrigation works, clearing of lands, etc. with the Mahaweli Development Board;
   — import substitution industries and industries of a pioneering nature;
   and which have been approved by the Minister of Finance and Planning.
2. Dividends declared out of exempt profits will also be tax exempt.
3. Investment in shares of such companies will be treated as "qualifying payments" enabling the investor to claim deduction up to 33 1/3 percent of the taxable income.

To qualify for these concessions, the companies should be broad-based public companies whose shares are quoted in the stock market.

C. Property development projects approved by the Urban Development Authority

1. A ten-year tax holiday will be given to new companies engaged in such projects.
2. Dividends declared out of exempt profits will also be exempt.
3. Investment in shares of such companies will be treated as "qualifying payments" enabling the investor to claim deduction up to 33 1/3 percent of the taxable income.

To qualify for these concessions, the companies should be broad-based public companies whose shares are quoted in the stock market.

D. Offshore banking

The Central Bank has recently introduced the Foreign Currency Banking Unit Scheme, with the objective of making Sri Lanka an offshore banking centre and making available financial facilities at competitive rates of interest to GCEC enterprises (i.e. enterprises established in the Investment Promotion Zones).

The new Budget proposes to grant the following incentives for this purpose:

1. Depositors of foreign currency with Foreign Currency Banking Units (FCBU) will be exempted from income tax on their interest income.
2. Foreign Currency Banking Units will be granted tax exemption on their profits and income from offshore transactions and on certain designated onshore foreign currency transactions.

E. Gem and jewellery industry

The following incentives will be granted:

1. Exemption from income tax will be given to profits from the sale of gems at gem auctions (to be conducted by the Chamber of Commerce).
2. Exemption from business turnover tax will be given to the sale of gems at such gem auctions.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

3. Exemption from income tax will be given on profits from all gem exports. At present, only profits from the sale of gems to the Gem Corporation and from exports made through the Corporation are exempt. Export sales, however, will be subject to business turnover tax at 5 percent.
4. Manufacturers and exporters of jewellery can avail themselves of the tax concession presently available up to 1983 for small and medium-scale industries and the five-year tax holiday available for manufacture for export.

However, exports of jewellery will be liable to a business turnover tax of 2 percent.

F. Entrepot trade

In order to develop Sri Lanka as an entrepot trade centre catering to other countries in the region, exemption from income tax will be given for profits from entrepot trade in respect of specified commodities. Some of the likely commodities that could be traded on this basis are precious metals and precious stones not mined in Sri Lanka, petroleum products and other primary produce not produced in Sri Lanka.

G. Expatriate employees

A flat rate of tax at 25 percent will apply to all emoluments arising in Sri Lanka of any non-citizen employed in any undertaking. This scheme of preferential treatment will apply for three years of employment either at one stretch or in broken periods which aggregate to three years in all.

At present, expatriate employees in a number of approved undertakings are fully exempt from income tax. Otherwise, they are subject to the normal tax rates which are very high.

H. Government awards and cash prizes given to inventors

They will be exempt from income tax.

IX Business turnover tax rates – increase

The tax rates applicable to services and professions will be increased as follows:

	percent
Professions	5
Tourist hotels	15
Travel agencies	5
Produce brokers	5
Advertising	5
Indenting and commission agents	5

X. Stamp duty

Stamp duties are charged in respect of trust receipts and other credit instruments as follows:
(a) a flat rate of 0.1 percent (1 Rupee on every 1,000 Rs.) on the value of trust receipts and other credit instruments on imports;
(b) a flat rate of 0.05 percent (50 cts. on every 1,000 Rs.) on the value of pro-notes and other documents for exports. In the case of pro-notes for sums below 10,000 Rs. the rate of 1 Rupee will be continued.

IX. Import duties

Import duty relief is given to the hotel industry, leather making industry, paper manufacturing industry and agricultural implements.

XII. Estate and stamp duties

New Estate Duty and Stamp Acts will be enacted.

XIII. Embarkation tax

The embarkation tax (at present 25 Rs.) per passenger will be increased to 100 Rs.

XIV. Registration fees

Registration fees for vehicles, annual licence fees on diesel driven passenger cars, fees on the issue of a passport, and fees charged on persons granted admission to the airport departure lounge and/or the viewing gallery will be increased.

XV. Motor vehicles

The tax on transfer of motor vehicles will be reduced to 2,500 Rs.

UNITED STATES:

VAT BEFORE CONGRESS

I. INTRODUCTION *

The Honorable Al Ullman (D., Oregon), Chairman of the Committee on Ways and Means, U.S. House of Representatives, today announced that he has introduced H.R. 5665, the "Tax Restructuring Act of 1979", a bill that would provide substantial reductions in individual income taxes, corporate income taxes and social security taxes in order to promote economic growth, stability and productivity. In order to preserve fiscal and budgetary discipline, the bill provides that these reductions would be funded by the imposition of a new Federal value added tax (VAT) to be applied at each stage of business activity on an added value basis. The Chairman simultaneously announced public hearings on his bill and on alternative proposals to revitalize the economy and to restructure the Federal tax system, beginning Wednesday, November 7, 1979.

In announcing these hearings, Chairman Ullman stressed that the tax reductions and the value added tax should be viewed as a total package. He emphasized that the package is designed to be revenue neutral, with the new VAT serving as a replacement tax for certain existing revenue sources, not an additional tax. The Chairman stated that witnesses will be expected to state their position and recommendations on the entire package — not just on selected parts of the bill.

The purpose of these hearings is to re-examine the basic Federal tax structure in light of the imperative need to face up to the critical problem of persistently escalating inflation, to encourage capital formation and to increase savings, investment, and productivity in the private sector, and to provide important tax relief for individuals and businesses.

A brief summary of Chairman Ullman's bill is attached to this notice. A more detailed summary will also be available to the Committee office.

The hearings will begin on Wednesday, November 7, 1979, at 10:00 a.m. each day and will be held in Room 1100 Longworth House Office Building, the Main Committee Hearing Room.

The lead-off witness on Wednesday, November 7 will be the Honorable G. William Miller, Secretary of the Treasury, to be followed on Thursday, November 8 by other Administration witnesses and by the Honorable Paul A. Volcker, Chairman of the Federal Reserve Board. On Wednesday, November 14 and Thursday, November 15, the Committee will hear several panels of invited expert witnesses. The Committee will then begin testimony from Members of Congress and the general public who have requested to be heard on Tuesday, November 27.

Please note that these hearings are subject to interruption for conference committee meetings on urgent legislation, such as the oil windfall profits tax.

II. STATEMENT BY REPRESENTATIVE AL ULLMAN (D., OREGON) UPON INTRODUCTION OF THE "TAX RESTRUCTURING ACT OF 1979", OCTOBER 22, 1979

We all share a deep foreboding that our way of life is eroding; that the ingenuity and the competitive spirit that established America's economic leadership is lagging.

The signs of economic weakness are widely visible. Inflation — our most dreadful enemy — is quietly stealing control of our vital choices. Running higher than 13 percent, it seems all but immune to traditional economic remedies.

We've suffered two significant recessions over the last decade, yet inflation seems to have emerged stronger from each. Sending prime interest rates above 14 percent attacts inflation in some sectors of the economy — at the very real risk of sending the entire country into a prolonged recession. A balanced budget by itself won't solve inflation.

Productivity — the measure of economic efficiency — is declining. Much of the drop is explained by our national fear of spiraling inflation and the race to consume rather than save and invest. Without economic certainty and the incentives to expand, the private sector will continue to lose its technological and competitive edge.

Interest rates are perilously high, and rising. Our trade balance is deep in the red. The reckless price of gold reflects the weakness of the dollar. Public debt is at an all time high, yet is far outdistanced by consumer and corporate debt.

These symptoms of decay — especially inflation — cannot be treated on the surface. They must be fought at the source.

I have come to the conclusion that the only way we can get to the source is to restructure the tax system — now.

In recent years we have improved standards of tax fairness and equity. We have accommodated shifting economic and social demands. But the fundamental structure of the system — heavy reliance on income and payroll taxes — has become muscle bound and unresponsive to recent economic trends.

We don't have to look much beyond the ends of our noses to see that traditional responses — the "quick fix" tax cut, shotgunning tax credits, indexing — no longer carry much punch. By now we've learned that chipping away at the tax code won't solve today's economic troubles.

Income and payroll taxes — forced up by inflation — are discouraging employment and investment. The nation is pushed to spend, rather than save. As confidence in our tax system erodes, so does the tax base.

---

* Extract of Press Release of October 22, 1979.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

BRIEF SUMMARY OF THE TAX RESTRUCTURING ACT OF 1979

The bill would restructure our tax system to promote investment and productivity growth. Total tax reductions would equal $130 billion on a calendar year 1981 basis. Net proceeds from the value added tax imposed by the bill would also equal $130 billion.

TAX REDUCTIONS

Social security—$52 billion.

A 2.15-percentage point reduction on the employee and the employer rates, with comparable reductions for the self-employed.

Individual income—$50 billion.

Rate reductions of $42 billion concentrated on middle income taxpayers.

A 50-percent maximum rate.

Earned income credit increased to a maximum of $750; childless couples made eligible.

Tax credit for elderly made refundable.

Increased AFDC payments.

Special savings accounts into which individuals could contribute $1,000 per year; earnings on account not taxable until withdrawn.

Individual Retirement Account (IRA) limit increased to $2,000 per year.

New Limited Individual Retirement Accounts; $1,000 a year limit for those not qualified for IRA's.

Dividend reinvestment plans for up to $1,500 per year.

Business income—$28 billion

Corporate rate cuts; maximum rate reduced to 36 percent; lower bracket rates reduced to 15, 20, 25, and 30 percent, and brackets widened to $40,000 each.

Liberalize depreciation by increasing the Asset Depreciation Range (ADR) variance to 40 percent above and below the ADR class lives; small businesses would be allowed to use ADR lives and the variance without being subject to complicated regulations.

Liberalize the investment tax credit by applying the full credit to assets with lives of five years or more; 60 percent of the full credit would apply to assets with three- and four-years lives.

VALUE ADDED TAX

The bill would impose the VAT at each stage of the production and distribution process, including the retail stage. The tax would generally be 10 percent of the value of property or services and would be included in the price which a business charges its customers. Each business in the production and distribution chain would receive a credit for the VAT previously paid on its purchases of property and services from other businesses (including purchases of plant and equipment). Thus, each business would pay a net tax equal to 10 percent of the value it adds to the product, and the total tax paid with respect to sales to consumers would be 10 percent of the retail value of the product.

To avoid narrowing the VAT base, special rules or special tax rates have been limited except where considered absolutely essential. Food, medical care, and residential housing would be taxed at only a five-percent rate at the retail level. Transactions of charities, public and private non-profit educational institutions, mass transit, and non-retail sales by farmers and fishermen have been given a zero tax rate, which means there would be no tax but the taxpayer would receive applicable VAT credits. Governments and non-profit organizations other than charities have been exempted from the VAT; they would pay no tax and get no credit. The bill provides special rules for real property, interest transactions, and insurance companies. Also, businesses which have sales of property and services below $10,000 per year could elect to be exempt from the VAT.

The VAT would be imposed on imports. Exports have been zero rated to permit a rebate of VAT previously paid for goods and services associated with the export. This "border tax adjustment" will permit American exporters to compete more effectively with foreign businesses.

This drift comes at a time when our capital needs for energy products, transportation, environmental quality and research and development have never been greater.

Restructuring the tax system must begin by rolling back social security tax by a third — from 6.65 percent to 4.5 percent. We must cut personal income taxes to counter the impact of inflation. And that includes major expansion of the earned income tax credit for the poor and the retirement tax credit for the elderly.

If business is to survive, let alone prosper, we've got to expand incentives for capital formation. A 10 percentage point cut in the top corporate tax rate (from 46 percent to 36 percent), depreciation reform, reducing the maximum personal tax rate to 50 percent, special treatment of personal savings income, and dividend reinvestment must all be components of a broad tax proposal.

Brought to bear at once, these incentives represent the largest adjustments in U.S. taxation since 1913. Combined, their effect on investment, savings, capital formation, and exports would be massive. These tax cuts amount to $130 billion a year, beginning in 1981.

There are three ways of paying for a plan of this magnitude: cut spending by $130 billion, run up the deficit another $130 billion, or create an alternative source of revenue.

No reasonably informed Amercian believes that spending can be reduced enough to compensate for such enormous tax cuts without creating severe economic and social disruption.

Likewise, to finance these tax changes with additional debt — or the promise of "feedback" — would be political arrogance. Washington has received the taxpayer's message. We understand the national demand for fiscal discipline and a balanced budget.

The remaining option is a replacement tax that raises one dollar for every dollar lost through these tax cuts. In my judgment, the best alternative available — one that would both allow deep tax cuts and directly confront our critical economic imbalance — is

© 1980 International Bureau of Fiscal Documentation – BULLETIN

a broad-based consumption tax. In short, an Americanized version of the value added tax (VAT).

A value added tax is a novelty in this country. It stirs many prejudices and cliches. But I think the trade off for tax cuts justifies the proposal.

The goal we must keep in focus is the need to shift income from consumption to savings and investment — within the framework of a balanced budget. No painless formula exists. Any new economic course demands short term adjustment — and imbalance. The crucial question that we must address is whether we are willing to make a short term investment for a long term gain.

What is a value added tax?

A value added tax is a tax on consumer goods and services. It is a flat tax — a 10 percent tax — that falls every time the item passes from one firm to another on the way to the final market place. At every step, the tax is collected and sent to the government. Using a system of rebates on taxes paid along the line, the cumulative tax at the retail level cannot exceed 10 percent.

The VAT is not a new tax concept. It is used by most of our competitors in the free world — countries that are surpassing us in economic growth.

Many attack VAT as a "national sales tax". A sales tax is imposed only once — at the retail level. If the final seller does not collect the tax, the revenue is lost. A VAT, by contrast, is collected all along the way. It is more efficient than a sales tax, and, consequently, minimizes economic distortion. But, like all taxes on business, the value added tax is ultimately paid by the consumer.

A tax on consumption would give us an even flow of tax revenue. Today's boom and bust cycles have turned tax receipts into a guessing game. Every time we sink into recession, tax revenues fall off because more workers are out of jobs — and, at the same time, federal spending increases to pay for higher insurance protection. A value added tax would be paid all the time — by all the people. And the effect on economic certainty and stability would be dramatic.

The VAT in my bill is virtually a tax without loopholes. Everyone would pay — including those engaged in the "underground" economy. Those who spend more would pay more. Although those with limited budgets typically would pay proportionally more than those with large incomes, a VAT can be shaped into a fair tax — certainly less regressive than the payroll tax, which nearly everyone now pays.

We have made every effort to lessen the individual burden of the tax. The Americanized VAT would place a lower tax rate — five percent — on vital human necessities like food, housing, and medical costs. Mass transportation, tuition, and charities would pay no net VAT. Income and social security tax reductions will make up much of the lost purchasing power.

We cannot make everyone "whole". The price of combating the real causes of our economic crisis is high. In the long run, the rate of inflation will come down and productivity will climb — and we will share the benefits. In the meantime, we must begin to share the cost of those future benefits.

A VAT would also help improve our trade posture by putting American workers and manufacturers on a more equal footing with our trading partners. Unlike payroll and income taxes the VAT could be rebated to manufacturers when products are exported and could be imposed on imported goods. Such border taxes are now levied in most other free world countries, and help to explain our current unfavorable trade balance.

A VAT would have a one-time inflationary impact. However, retail prices would rise less than 10 percent because of offsetting payroll and income tax cuts — and a strong surge of market competition. And the consumer would also benefit from the same cuts in his own taxes. In the long run, the benefits brought with a value added tax — payroll and income tax cuts, savings and investment incentives — will give us the economic muscle to control inflation and restore productivity growth.

The value added tax is a new approach for most Americans. It will draw sharp debate, as must all new concepts for massive change. But our economy today hangs in the balance. We've got to move this country off dead center. The question ultimately comes down to our willingness to pay the freight charge.

The choices are few. An American value added tax is not the easiest answer — but it is the most realistic.

I trust the bill I introduce today [10-22-79] will intensify national focus on our economic weaknesses — and ultimately lead to a dramatic shift in our tax laws. Only then can we convince the world that America is determined to retain its leadership on the strength of a productive and stable economy.

To that end, I have scheduled full Committee hearings — beginning November 7 — on the full scope of economic trends, their meaning, and what can be done to set a new course in tax policy. It is not my intention to make the value added tax the focal point of these hearings — only a serious option.

III. VAT — TEXT OF THE LAW AND EXPLANATION

SEC. 301. IMPOSITION OF TAX.

(a) In General. — Subtitle D (relating to miscellaneous excise taxes) is amended by inserting before chapter 31 the following new chapter:

"CHAPTER 30 — VALUE ADDED TAX

"Subchapter A. Imposition of tax.
"Subchapter B. Taxable transaction.
"Subchapter C. Taxable amount; rate of tax for certain transactions; credit against tax.
"Subchapter D. Administration.
"Subchapter E. Definitions and special rules; treatment of certain transactions.

"Subchapter A — Imposition of Tax

"Sec. 4001. Imposition of tax.

"SEC. 4001. IMPOSITION OF TAX.

"(a) General Rule. — A tax is hereby imposed on each taxable transaction.

"(b) Amount of Tax. — Except as other wise provided in this chapter, the amount of tax shall be 10 percent of the taxable amount."

Explanation 1 — Imposition of value added tax.
The bill would impose a value added tax (VAT) on sales of property and services at each stage of the production and distribution process, including the retail stage. The tax would generally be 10 percent of the value of property or services sold and would be included in the price which a business charges its customers. Each business in the production and distribution chain would receive a credit for the VAT previously paid by it on purchases of property and services from other businesses. Thus, businesses would generally pay a net tax equal to 10 percent of the value they add to products and services sold. The total tax paid with respect to a sale to a consumer would be 10 percent of the retail value of the property or services.

"Subchapter B — Taxable Transaction

"Sec. 4003. Taxable transaction.
"Sec. 4004. Commercial-type transaction.
"Sec. 4005. Taxable person.
"Sec. 4006. Transactions in the United States.
"Sec. 4007. Rules relating to other terms used in section 4003.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

"SEC. 4003. TAXABLE TRANSACTION.

"For purposes of this chapter, the term "taxable transaction" means —
"(1) the sale of property in the United States,
"(2) the performance of services in the United States, and
"(3) the importing of property into the United States,
by a taxable person in a commercial-type transaction.

"SEC. 4004. COMMERCIAL-TYPE TRANSACTION.

"*(a) General Rule.* — For purposes of this chapter, the term "commercial-type transaction" means a transaction engaged in by —
"(1) a corporation, or
"(2) any person (other than a corporation) in connection with a business.

"*(b) Sales and Leases of Real Property; Imports.* — For purposes of this chapter —
"*(1) In general.* — The term "commercial-type transaction" includes —
"(A) any sale or leasing of real property, and
"(B) any importing of property,
whether or not such transaction is described in subsection (a).
"*(2) Certain imported articles.* — Notwithstanding paragraph (1)(B), the importing of an article which is free of duty under part 2 of schedule 8 of the Tariff Schedules of the United States shall not be treated as a commercial-type transaction unless such transaction is described in subsection (a).

"SEC. 4005. TAXABLE PERSON.

"*(a) General Rule.* — Except as otherwise provided in this chapter, for purposes of this chapter, the term "taxable person" means a person who engages in a business or in a commercial-type transaction.

"*(b) Treatment of Employees, Etc.* — For purposes of this chapter, an employee shall not be treated as a taxable person with respect to activities engaged in as an employee.

"SEC. 4006. TRANSACTIONS IN THE UNITED STATES.

"*(a) Sales of Property.* — For purposes of this chapter —
"*(1) In general.* — Except as provided in paragraph (2), the sale of property shall be treated as occurring where delivery takes place.
"*(2) Real Property.* — The sale of real property shall be treated as occurring where the real property is located.

"*(b) Performance of Service.* — For purposes of this chapter —
"*(1) In general.* — Except as otherwise provided in this subsection, a service shall be treated as occurring where it is performed.
"*(2) Services performed inside and outside United States.* — If a service is performed both inside and outside the United States, such service shall be treated as performed —
"(A) inside the United States, if 50 percent or more of such service is performed inside the United States, and
"(B) outside the United States, if less than 50 percent of such service is performed inside the United States.

"SEC. 4007. RULES RELATING TO OTHER TERMS USED IN SECTION 4003.

"*(a) Exchanges Treated as Sales.* — For purposes of this chapter —
"(1) an exchange of property for property or services shall be treated as a sale of property, and
"(2) an exchange of services for property or services shall be treated as the performance of services.

"*(b) Certain Transfers to Employees Treated as Sales.* — For purposes of this chapter, the transfer of property to an employee as compensation (other than a transfer of a type for which no amount is includible in the gross income of employees for purposes of chapter 1) shall be treated as the sale of property.

"*(c) Performance of Services.* — For purposes of this chapter —
"*(1) Certain activities treated as performance of services.* — Activities treated as included in the performance of services shall include (but shall not be limited to) —
"(A) permitting the use of property,
"(B) the granting of a right to the performance of services or to reimbursement (including the granting of warranties, insurance, and similar items), and
"(C) the making of a covenant not to compete (or similar agreement to refrain from doing something).
"*(2) Employers and employees.* —
"(A) Services for employer. — An employee's services for his employer shall not be treated as the performance of services.
"(B) Services for employee. — An employer's services for his employee shall not be treated as the performance of services unless such services are of a type which constitute gross income to the employee for the purposes of chapter 1.
"*(3) Performance of services treated as sale of services.* — The performance of services shall be treated as the sale of services."

Explanation 2 — Taxable transaction.

The bill would define "taxable transaction" as the sale of property in the United States, the performance of a service in the United States, and the importing of property into the United States by a taxable person in a commercial-type transaction.

The term "sale of property" would not be restricted to the sale of property in the usual sense. It would also include (1) the exchange of property, (2) the transfer of property to an employee as compensation, (3) the permanent transfer of business property to an owner of the business, (4) gifts of business property, and (5) certain transactions of governments and tax-exempt organizations.

The term "performance of services" would include certain transactions in addition to the performance of personal services for a fee. These other transactions would include (1) permitting the use of property, (2) the exchange of services, (3) the granting of a right to the performance of services or to reimbursement (including the granting of warranties, insurance, and similar items), (4) the making of a covenant not to compete or a similar agreement, (5) the use of business property or services by an owner of the business, (6) gifts of business services, and (7) certain transactions of governments and tax-exempt organizations. However, the "performance of services" would not include an employee's performance of services for his employer.

Under the bill, "commercial-type transactions" would mean a transaction engaged in by a corporation (other than a subchapter S corporation) or by any person engaged in a business. The sale or leasing of real property and the importing of property would also be treated as a commercial-type transaction and would be subject to the VAT, even if engaged in by a consumer and not by a corporation or a person engaged in a business. Importing of articles by a consumer which would be free of duty under the personal exemptions under the United States Tariff Schedules would not be subject to the VAT.

The bill would define "taxable person" as a person engaged in a business or in a commercial-type transaction. Business would include a trade as well as an activity regularly carried on for profit. Governments and tax-exempt organizations would also be taxable persons in certain circumstances.

Under the bill, the sale of property would generally be treated as occurring in the United States if delivery of the property takes place in the United States. In the case of real property, the sale would be deemed to occur where the real property is located.

Services would be treated as occurring where the services are

© 1980 International Bureau of Fiscal Documentation — BULLETIN

performed. If services are performed both inside and outside the United States, the services would be deemed performed entirely inside the United States if 50 percent or more of the services are performed in the United States. Otherwise, the services would be treated as performed entirely outside the United States.

The bill would define "property to mean any tangible property.

"Subchapter C — Taxable Amount; Rate of Tax for Certain Transactions; Credit against Tax

"Sec. 4011. Taxable amount.
"Sec. 4012. 5-percent rate of tax for food, housing, and medical care.
"Sec. 4013. Zero rating for farmers, fishermen, mass transit, section 501(c)(3) organizations, the educational activities of governmental entities, exports, and interest.
"Sec. 4014. Credit against tax.

"SEC. 4011. TAXABLE AMOUNT.

"*(a) Amount Charged Customer.* — For purposes of this chapter, the taxable amount for any transaction for which money is the only consideration shall be the price charged the purchaser of the property or services by the seller thereof —
"(1) including all invoiced charges for transportation, and other items payable to the seller with respect to this transaction, but
"(2) excluding the tax imposed by section 4001 with respect to this transaction and excluding any State and local sales and use taxes with respect to this transaction.

"*(b) Exchanges.* — For purposes of this chapter, the taxable amount in any exchange of property or services shall be the fair market value of the property or services transferred by the person liable for the tax (determined as if such person had sold the property or services to the other party to the exchange).

"*(c) Imports.* — The purposes of this chapter, the taxable amount in the case of any import shall be —
"(1) the customs value plus customs duties and any other duties which may be imposed, or
"(2) if there is no such customs value, the fair market value (determined as if the importer had sold the property).

"*(d) Special Rule in the Case of Sales of Certain Used Consumer Goods.* —For purposes of this chapter, if —
"(1) a taxable person acquires any tangible personal property in a transaction which was not a taxable transaction, and
"(2) Such property had been used by an ultimate consumer before such acquisition,
the taxable amount in the case of any sale of such property by such taxable person (determined without regard to this subsection) shall be reduced by the amount paid for such property by such taxable person."

Explanation 3 — Taxable amount.
Generally, the taxable amount on which the VAT would be imposed would be the price charged for property or services. This would include charges for transportation and other items payable to the seller. The taxable amount would not, however, include any interest or carrying charges. In an exchange of property or services, the taxable amount would be the fair market value of the property or services exchanged by the taxable person (determined as if the taxable person had sold the property or services to the other party to the exchange).

In the case of imports, the bill provides that the taxable amount would generally be the customs value plus customs and any other duties which may be imposed. If there is no customs value, the taxable amount would be the fair market value of the property.

The bill provides a special rule for the determination of the taxable amount in the case of certain used consumer goods. When a taxable person acquires used property from a consumer for resale, the taxable amount on the resale would be the difference between the selling price and the taxable person's acquisition cost of the used property.

"SEC. 4012. 5-PERCENT RATE OF TAX FOR FOOD, HOUSING AND MEDICAL CARE.

"*(a) 5-Percent Rate for Food, Housing, and Medical Care.* — The rate of the tax imposed by section 4001 shall be 5 percent with respect to the following:
"*(1) Food.* — The retail sale of food and non-alcoholic beverages for human consumption.
"*(2) Housing.* — The sale and renting of residential real property for use by the purchaser or tenant as a principal residence.
"*(3) Medical care.* — Medical care.

"*(b) Definitions.* — For the purposes of subsection (a) —
"*(1) Non-alcoholic beverages.* — The term "non-alcoholic beverages" does not include any article which is taxable under chapter 51.
"*(2) Medical care.* — The term "medical care" means the performance of any service, and the retail sale of any property, payment for which by the purchaser would constitute medical care within the meaning of section 213.
"*(3) Mobile homes, etc., treated as real property.* — A mobile or floating home shall be treated as real property."

Explanation 4 — Five-percent rate of tax for food, housing and medical care.
Under the bill, a five-percent rate of VAT, rather than the standard 10-percent rate, would be imposed on (1) the retail sale of food and non-alcoholic beverages for human consumption, (2) the sale and rental of residential real property for use by the purchaser or tenant as a principal residence, and (3) medical care.

"SEC. 4013. ZERO RATING FOR FARMERS, FISHERMEN, MASS TRANSIT, SECTION 501 (c)(3) ORGANIZATIONS, THE EDUCATIONAL ACTIVITIES OF GOVERNMENTAL ENTITIES, EXPORTS, AND INTEREST.

"The rate of the tax imposed by section 4001 shall be zero with respect to the following:
"*(1) Sales by farmers or fishermen.* — The sale (other than at retail) of —
"(A) agricultural commodities by the producer of such commodities, or
"(B) fish (or any other form of aquatic animal life) by a person in whose business such fish (or other forms) were caught.
"*(2) Mass transit.* — The performance of mass transportation services in urbanized areas.
"*(3) Section 501 (c)(3) organizations.* — Any taxable transaction engaged in by a section 501 (c)(3) organization other than as part of an unrelated business.
"*(4) Educational activities of governmental entity.* — The providing by a governmental entity of property and services in connection with the education of students.
"*(5) Exports.* — Exports of property.
"*(6) Interest.* — Interest."

Explanation 5 — Zero rating for farmers and fishermen, mass transit, section 501 (c)(3) organizations, educational activities of governmental entities, exports, and interest.
Under the bill, the rate of tax which would be imposed on certain transactions would be zero. Thus, no tax would be imposed on (1) non-retail sales of farmers and fishermen, (2) mass transit in urbanized areas, (3) transactions engaged in by an organization described in section 501 (c)(3) of the Code other than as part of an unrelated business, (4) educational activities of governmental entities, (5) exports, and (6) interest.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

"SEC. 4014. CREDIT AGAINST TAX.

"*(a) General Rule.* — There shall be allowed as a credit against the the tax imposed by section 4001 the aggregate amount of tax imposed by section 4001 which has been paid by sellers to the taxpayer of property and services which the taxpayer uses in the business to which the transaction relates.

"*(b) Exempt Transactions, Etc.* — if —
"(1) property or services are used partly in the business and partly for other purposes, or
"(2) property or services are used partly for taxable transactions and partly for other transactions,
the credit shall be allowable only with respect to the property and services used for taxable transactions in the business. No credit shall be allowable for any transaction occurring when the taxpayer was a non-taxable person.

"*(c) Excess Credit Treated as Overpayment.* —
"*(1) In general.* — If for any taxable period the aggregate amount of the credits allowable by subsection (a) exceeds the aggregate amount of the tax imposed by section 4001 for such period, such excess shall be treated as an overpayment of the tax imposed by section 4001.
"*(2) Time when overpayment arises.* — Any overpayment under paragraph (1) for any taxable period shall be treated as arising on the later of —
"(A) the due date for the return for such period, or
"(B) the date on which the return is filed."

Explanation 6 — Credit against VAT.
A taxable person would generally be permitted to take a credit (VAT credit) for the VAT paid by its suppliers on its purchases of property and services. The VAT credit would be allowable only with respect to property and services used for taxable transactions in the business. If such property or services are used partly in the business and partly for other purposes or partly for taxable transactions and partly for other transactions, the amount of VAT credit which could be taken would have to be determined on the basis of an allocation.

The VAT credit would first be applied to reduce the VAT liability for a taxable period. If the amount of the credit exceeds the amount of tax for the taxable period, the excess would be treated as an overpayment of tax and would be refundable.

"Subchapter D — Administration

"Sec. 4021. Seller liable for tax.
"Sec. 4022. Tax invoices.
"Sec. 4023. Small business exemption.
"Sec. 4024. Time for filing return and claiming credit; deposits of tax.
"Sec. 4025. Treatment of related businesses, etc.
"Sec. 4026. Value added tax not separately stated.
"Sec. 4027. Secretary to be notified of certain events.
"Sec. 4028. Regulations.

"SEC. 4021. SELLER LIABLE FOR TAX.

"The person selling the property or services shall be liable for the tax imposed by section 4001.

"SEC. 4022. TAX INVOICES.

"*(a) Seller Must Give Purchaser Tax Invoice.* — Any taxable person engaging in a taxable transaction shall give the purchaser a tax invoice with respect to such transaction if the seller has reason to believe that the purchaser is a taxable person.

"*(b) Content of Invoice.* — The tax invoice required by subsection (a) with respect to any transaction shall set forth —
"(1) the name and identification number of the seller,
"(2) the name of the purchaser,
"(3) the amount of the tax imposed by section 4001, and
"(4) such other information as may be prescribed by regulations.

"*(c) No Credit Without Invoice.* —
"*(1) In general.* — Except as provided in paragraphs (2) and (3), a purchaser may claim a credit with respect to a transaction only if the purchaser —
"(A) has received from the seller and has in his possession a tax invoice which meets the requirements of subsection (b), and
"(B) is named as the purchaser in such invoice.
"*(2) Employees or other agents named in invoices.* — To the extent provided in regulations, the naming of an employee or other agent of the purchaser shall be treated as the naming of the purchaser.
"*(3) Waiver of invoice requirement in certain cases.* — To the extent provided in regulations, paragraph (1) shall not apply —
"(A) where the purchaser without fault on his part fails to receive or fails to have in his possession a tax invoice,
"(B) to a taxable transaction (or category of transactions) where —
"(i) the amount involved is de minimis, or
"(ii) the information required by subsection (b) can be reliably established by sampling or by another method and can be adequately documented.

"*(d) Time for Furnishing Invoice.* — Any invoice required to be furnished by subsection (a) with respect to any transaction shall be furnished not later than 15 business days after the tax point for such transaction.

"SEC. 4023. SMALL BUSINESS EXEMPTION.

"*(a) In General.* — Under regulations, a person —
"(1) whose aggregate taxable transactions for the calendar year do not exceed $10,000, and
"(2) whose aggregate taxable transactions for the next calendar year can reasonably be expected not to exceed $10,000,
may elect to be treated as a person who is not a taxable person for the next calendar year.

"*(b) Exceptions.* — Subsection (a) shall not apply —
"(1) to any sale or leasing of real property, and
"(2) to any importing of property.

"*(c) Termination of Election.* — Any election under subsection (a) for a calendar year shall terminate if the aggregate taxable transactions —
"(1) for the first calendar quarter in such year exceed $3,500,
"(2) for the first 2 calendar quarters in such year exceed $6,000, or
"(3) for the first 3 calendar quarters in such year exceed $8,500.
Such termination shall take effect on the first day of the second month following the close of the first period in which the requirements of paragraph (1), (2), or (3) are met.

"*(d) Taxable Amount Treated as Zero for Zero-Rated Transactions.* — For purposes of this section, the taxable amount of any zero-rated transaction shall be treated as zero.

"*(e) Condition of Election.* — In the case of a person who is a taxable person for any period, an election under subsection (a) may be made for succeeding periods only with the consent of the Secretary. Such consent shall be conditioned on placing such person, for all succeeding periods, in the same position with respect to the tax imposed by section 4001 (and the credit allowed by section 4014) he would have been in if all property and services he holds at the time he becomes a non-taxable person had been acquired as a non-taxable person.

"*(f) Casual Sales and Leases of Real Property Excluded.* — For purposes of this section, the term "taxable transaction" does

© 1980 International Bureau of Fiscal Documentation — BULLETIN

not include a transaction which is treated as a commercial-type transaction solely by reason of section 4004 (b)(1)(A).

"SEC. 4024. TIME FOR FILING RETURN AND CLAIMING CREDIT; DEPOSITS OF TAX.

"*(a) Filing Returns.* — Before the first day of the second calendar month beginning after the close of each taxable period, each taxable person shall file a return of the tax imposed by section 4001 on taxable transactions having a tax point within such taxable period.

"*(b) Credit Allowed for Taxable Period in which Purchaser Receives Invoice.* —

"*(1) In general.* — Except as provided in paragraph (2), a credit allowable by section 4014 with respect to a transaction may be allowed only for the first taxable period by the close of which the taxpayer —

"(A) has paid or accrued amounts properly allocable to the tax imposed by section 4001 with respect to such transaction, and

"(B) has a tax invoice (or equivalent) with respect to such transaction.

"*(2) Use for later period.* — Under regulations, a credit allowable by section 4014 may be allowed for a period after the period set forth in paragraph (1).

"*(c) Taxable Period.* — For purposes of this chapter —

"*(1) In general.* — The term "taxable period" means a calendar quarter.

"*(2) Exception.* —

"(A) Election of 1-month period. — If the taxpayer so elects, the term "taxable period" means a calendar month.

"(B) Other periods. — To the extent provided in regulations, the term "taxable period" includes a period, other than a calendar quarter or month, selected by the taxpayer.

"*(d) Tax Point.* — For purposes of this chapter —

"*(1) Chapter 1 rules with respect to seller govern.* — Except as provided in paragraph (2), the tax point for any sale of property or services is the earlier of —

"(A) the time (or times) when any income from the sale should be treated by the seller as received or accrued (or any loss should be taken into account by the seller) for purposes of chapter 1, or

"(B) the time (or times) when the seller receives payment for the sale.

"*(2) Imports.* — In the case of the importing of property, the tax point is when the property is entered, or withdrawn from warehouse, for consumption in the United States.

"*(e) Monthly Deposits Required.* — To the extent provided in regulations, monthly deposits may be required of the estimated liability for any taxable period for the tax imposed by section 4001.

SEC. 4025. TREATMENT OF RELATED BUSINESSES, ETC.

"*(a) General Rule.* — For purposes of this chapter (other than section 4023), to the extent provided in regulations, the taxpayer may elect —

"(1) to treat as 1 taxable person 2 or more businesses which may be treated under section 52(b) as 1 employer, and

"(2) to treat as separate taxable persons separate divisions of the same business.

"*(b) Small Business Exemption.* — For the purposes of section 4023, all businesses which are under common control (within the meaning of section 52(b) shall be treated as 1 business.

"SEC. 4026. VALUE ADDED TAX NOT SEPARATELY STATED.

"If —

"(1) property or services are sold to an ultimate consumer, and

"(2) the seller has reason to believe that the purchaser is not a taxable person,

the sales ticket or other similar document shall not separately state the amount of the tax imposed with respect to such sale under this chapter.

"SEC. 4027. SECRETARY TO BE NOTIFIED OF CERTAIN EVENTS.

"To the extent provided in regulations, each person engaged in a business shall notify the Secretary (at such time or times as may be prescribed by such regulations) of any change in the form in which a business is conducted or any other change which might affect the liability for the tax imposed by section 4001 or the amount of such tax or any credit against such tax, or otherwise affect the administration of such tax in the case of such person.

"SEC. 4028. REGULATIONS.

"The Secretary shall prescribe such regulations as may be necessary to carry out the purposes of this chapter."

Explanation 7 — Administrative provisions. a. Liability for VAT and invoicing.

Under the bill, liability for the VAT would be imposed on the seller of property or services. In addition to paying the VAT, the seller would be required to provide a tax invoice (setting forth the amount of VAT imposed on the sale and certain other information) to the purchaser if the seller has reason to believe that the purchaser is a taxable person. The invoice would have to be furnished no later than 15 business days after the "tax point."

Generally, a purchaser would not be allowed to claim a VAT credit with respect to a transaction unless it has received a tax invoice in which it is named as a purchaser.

b. Small business exemption.

The bill would permit certain businesses, the aggregate taxable transactions of which are and are expected to continue to be below a certain level, to elect not to be treated as a taxable person except with respect to imports and housing. If the election is made by the small business, no tax would be collected on its sales and no credit would be permitted for VAT paid on its purchases. In addition, a recapture of previously allowed credit would be required on property held by the business at the time of the election.

A person could elect to be exempt under the bill's provisions if its taxable transactions do not exceed $10,000 for a calendar year and can reasonably be expected not to exceed $10,000 for the next calendar year. The election, however, would terminate on the first day of the second month following any calendar quarter in that next year if the following has occurred:

(1) aggregate taxable transactions for the calendar quarter exceed $3,500, in the case of the first calendar quarter; or
(2) aggregate taxable transactions for the first two calendar quarters exceed $6,000, in the case of the second calandar quarter; or
(3) aggregate taxable transactions for the first three calandar quarters exceed $8,500, in the case of the third calendar quarter.

c. Time for filing return and claiming credit.

The bill would require a taxable person to file a VAT return during the first month following the close of each taxable period. A taxable period for this purpose would generally be a calendar month.

The return would reflect the VAT due on taxable transactions with a "tax point" in the period as well as the VAT credit allowed for the period. When the VAT due exceeds the VAT credit, payment of the difference would accompany the return. If the VAT credit exceeds the VAT due, the excess would be

© 1980 International Bureau of Fiscal Documentation – BULLETIN

treated as an overpayment of VAT, and the return would be treated as a claim for a refund.

The term "tax point" would be used to describe when a taxable transaction takes place for purposes of the requirement that a taxable person furnish a tax invoice. For a sale of property or services, the determination of the tax point would depend on whether the taxable person keeps its books on the cash basis or on the accrual basis for Federal income tax purposes. In the case of a cash basis taxpayer, the tax point would be the date the taxable person receives payment for the sale. In the case of an accrual basis taxpayer, the tax point would be the earlier of the date the taxable person (1) should accrue income or loss with respect to the sale, or (2) receives payment for the sale. For an importation, the tax point would be the date the imported property is entered for consumption in the United States.

A VAT credit with respect to a purchase transaction would be allowed for a taxable period only if certain conditions were met. The taxable person would be required to have (1) paid or accrued (depending on its method of accounting for Federal income tax purposes) the VAT as part of the purchase price, and (2) received a tax invoice from the seller with respect to the transaction. The VAT credit would generally be allowed for the first taxable period in which both of these conditions were satisfied.

d. Treatment of related businesses, etc.
The bill would allow a taxable person to elect to treat itself and all related businesses as one taxable person for VAT purposes. A related business would encompass any business under common control with the taxable person under the more than 50-percent control test described in section 52(b) of the Code. However, for purposes of applying the small business exemption, all businesses under common control would be treated as one business.

The bill would also allow a taxable person to elect to treat any of its divisions as a separate taxable person.

e. Treasury notification and regulations.
The bill would require a taxable person to notify the Internal Revenue Service if certain events occurred. These reportable events would be developed by regulations and would encompass a change in the form of a business, or any other change which could affect VAT liability, VAT credit, or VAT administration with respect to the business.

The bill would also give the Secretary of the Treasury broad authority to write regulations with respect to the VAT.

"Subchapter E — Definitions and Special Rules; Treatment of Certain Transactions

"Sec. 4031. Definitions.
"Sec. 4032. Special rules.
"Sec. 4033. Personal use by owner of business property or services.
"Sec. 4034. Gift of business property or services.
"Sec. 4035. Special rules for dispositions of non-business real property.
"Sec. 4036. Special rule for insurance contracts.
"Sec. 4037. Governmental entities; exempt organizations.

"SEC. 4031. DEFINITIONS.

"*(a) Property.* — For purposes of this chapter, the term "property" means any tangible property.

"*(b) Business.* — For purposes of this chapter, the term "business" includes —
"(1) a trade, and
"(2) an activity regularly carried on for profit.

"*(c) Employee.* — For purposes of this chapter, the term "employee" has the meaning such term has for purposes of chapter 24 (relating to withholding).

"*(d) Person.* — For purposes of this chapter, the term "person" includes any governmental entity.

"*(e) Business Day.* — For purposes of this chapter, the term "business day" means any day other than Saturday and Sunday and other than a legal holiday (within the meaning of section 7503).

"*(f) United States.* — For purposes of this chapter, the term "United States" when used in a geographical sense, includes a Commonwealth and any possession of the United States.

"SEC. 4032. SPECIAL RULES.

"*(a) Coordination with Subtitle A.* — For purposes of subtitle A —
"*(1) Treatment of credit.* — Any credit allowable to a taxpayer under section 4014 which is attributable to any property or services shall be treated as a reduction in the amount paid or incurred by the taxpayer for such property or services.
"*(2) Amount of deduction for tax.* — The amount allowable as a deduction for the tax imposed by section 4001 shall be determined without regard to any credit allowable under section 4014.
"*(3) Computation of percentage depletion.* — For purposes of sections 613 and 613A —
"(A) gross income shall be reduced by the amount of the tax imposed by section 4001, and
"(B) taxable income shall be determined without regard to any deduction allowed for such tax.

"*(b) Special Rule Where Sale of Property Includes Incidental Performance of Services.* — For purposes of this chapter, if in connection with the sale of any property there is an incidental performance of services, such performance of services shall be treated as part of the sale of such property.

"*(c) Special Rule Where Performance of Services Includes Incidental Transfer of Property.* — For purposes of this chapter, if in connection with the performance of any services there is an incidental transfer of property, such transfer shall be treated as part of the performance of such services.

"*(d) Authority to Zero Rate De Minimis Transactions, Etc.* — The Secretary may prescribe regulations providing that the rate of tax shall be zero for a taxable transaction (or category of such transactions) where —
"(1) the amount involved is de minimis, or
"(2) the revenue raised by taxing the transaction is not sufficient to justify the administrative and other costs involved in the payment and collection of the tax.

"*(e) Importing Treated as Sale and Purchase.* — For purposes of this chapter, the importing of any property into the United States shall be treated as both a sale and purchase of such property by the person importing such property.

"*(f) Subchapter S Corporation Treated as Not a Corporation.* — For purposes of this chapter, an electing small business corporation (as defined in section 1371(b)) shall be treated as a person which is not a corporation.

"*(g) Use Includes Held for Use.* — For purposes of this chapter, property and services held for use by any person shall be treated as used by the person.

"SEC. 4033. PERSONAL USE BY OWNER OF BUSINESS PROPERTY OR SERVICES.

"*(a) General Rule.* — If any business property or services are used by an owner of the taxpayer for personal purposes, for purposes of this chapter such use shall be treated as a taxable transaction.

"*(b) Taxable Amount.* — In the case of a use described in subsection (a), for purposes of this chapter, the taxable amount shall be —
"(1) except as provided in paragraph (2), the fair market value of the property or the services, or
"(2) if such use is only the temporary use of property, the fair rental value of such use.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

"*(c) Definitions.* — For purposes of this section —

"*(1) Business property or services.* — The term "business property or services" means any property or services if a sale of such property, or the performance of such services, by the taxpayer would be a taxable transaction.

"*(2) Owner.* — The term "owner" means —

"(A) in the case of a sole proprietorship, the proprietor,

"(B) in the case of any other business enterprise, any holder of a beneficial interest in the corporation, partnership, or other entity, and

"(C) any member of the family (within the meaning of section 267(c) (4)) of an individual described in subparagraph (A) or (B).

"SEC. 4034. GIFT OF BUSINESS PROPERTY OR SERVICES.

"*(a) General Rule.* — In the case of any gift of business property or services, for purposes of this chapter —

"(1) such gift shall be treated as a taxable transaction, and

"(2) the taxable amount shall be the amount determined under section 4033(b).

"*(b) Gifts Related to Business Promotion Activities.* — For purposes of subsection (a), the term "gift" includes any gift of property or services transferred in connection with business promotion activities.

"SEC. 4035. SPECIAL RULES FOR DISPOSITIONS OF NON-BUSINESS REAL PROPERTY.

"*(a) In General.* — In the case of any sale of real property which is treated as a commercial-type transaction solely by reason of section 4004(b) (1) (A), for purposes of this chapter, the taxable amount shall be the excess (if any) of —

"(1) the amount realized on such sale, over

"(2) the adjusted cost to the taxpayer of such real property.

"*(b) Adjusted Cost.* — For purposes of subsection (a) —

"*(1) In general.* — Except as provided in paragraph (2), the term "adjusted cost" means, with respect to any property, the basis of such property increased by expenditures properly chargeable to capital account (other than taxes or other carrying charges described in section 266) for periods during the holding period for such property.

"*(2) Transitional rule.* — The adjusted cost of any property shall include only amounts incurred during periods after December 31, 1980.

"*(c) Value Added Tax Not Taken Into Account.* — For purposes of this section, the amount realized on any sale of real property shall not include any amount attributable to the tax imposed by this chapter.

"SEC. 4036. SPECIAL RULE FOR INSURANCE CONTRACTS

"In the case of any contract of insurance, for purposes of this chapter, the taxable amount is the excess of —

"(1) the portion of the premium attributable to insurance coverage, over

"(2) the actuarial cost to the insurer of providing such insurance coverage.

"SEC. 4037. GOVERNMENTAL ENTITIES; EXEMPT ORGANIZATIONS.

"*(a) Taxable Transactions for Governmental Entities Only Where Separate Charge Is Made.* — For purposes of this chapter, the sale of property and the performance of services by a governmental entity shall be a taxable transaction if (and only if) a separate charge or fee is made therefor.

"*(b) Section 501 (c)(3) Organizations.* — For purposes of this chapter, a section 501 (c)(3) organization shall be treated as engaged in a business with respect to all of its activities.

"*(c) Other Exempt Organizations.* — For purposes of this chapter, the sale of property and the performance of services by any exempt organization other than a section (501 (c)(3) organization shall be a taxable transaction if (and only if) a charge or fee is made for such services.

"*(d) Definitions.* — For purposes of this chapter —

"*(1) Governmental entity.* — The term "governmental entity" means the United States, any State or political subdivision thereof, the District of Columbia, a Commonwealth or possession of the United States, or any agency or instrumentality of any of the foregoing.

"*(2) Section 501 (c)(3) organization.* — The term "section 501 (c)(3) organization" means an organization described in section 501 (c)(3) which is exempt from tax under section 501 (a).

"*(3) Other exempt organization.* — The term "other exempt organization" means any organization (other than a section 501 (c)(3) organization) which is exempt from tax under chapter 1."

(b) Clerical Amendment. — The table of chapters for subtitle D is amended by inserting before the item relating to chapter 31 the following:

"Chapter 30. Value added tax."

SEC. 302. EFFECTIVE DATE FOR TITLE III.

The amendments made by section 301 shall apply to transactions occurring after December 31, 1980.

Explanation 8—Special rules and treatment of certain transactions.

a. Coordination with income tax rules.

Under the bill, a taxable person's basis in property for Federal income tax purposes would not include the portion of the purchase price of the property which represents creditable VAT.

b. Sale of property and incidental services; sale of services and incidental property.

Under the bill, a sale of property together with incidental related services would be treated as a single transaction constituting a sale of property, rather than as separate sales of property and services. Also, a sale of services together with an incidental transfer of property would be treated as a single transaction constituting a sale of services, rather than as separate sales of services and property.

c. Authority to zero rate de minimis transactions.

The bill would provide that, under regulations, an otherwise taxable transaction would be zero rated if (1) the amount involved is negligible, or (2) the VAT revenue from taxing that type of transaction would not be sufficient to justify resulting administrative and compliance costs.

d. Importing.

Under the bill, the importer of property would be treated as both the seller and purchaser of the property at the point of importation. Thus, the importer would be both liable for VAT and eligible for a VAT credit with respect to the import.

e. Subchapter S corporation not treated as a corporation.

Under the bill, a subchapter S corporation (Code sec. 1371(b)) would not be treated as a corporation for VAT purposes. Accordingly, it would not automatically be considered engaged in business. Thus, as in the case of a non-corporate entity, the determination of whether it is engaged in business and is hence a taxable person would have to made on the basis of relevant facts and circumstances.

f. Personal use by owner of business property or services.

Under the bill, the use of business property or services by an owner of a business would be treated as a taxable transaction. In the case of services or a permanent use of property, the amount subject to tax would be the fair market value of the services or property. In the case of a temporary use of property, the amount subject to tax would be the fair rental value of the property. Property or services are considered business property or services if their sale by the taxable person would be a taxable transaction. Under the bill an owner of a business generally means a sole

© 1980 International Bureau of Fiscal Documentation – BULLETIN

proprietor, partner, or shareholder, as well as certain related family members determined under Code section 267(c)(4).

g. Gift of business property or services.
Under the bill, a gift by a business of any business property or services would be treated as a taxable transaction. The taxable amount in the case of such a gift would generally be fair market value. However, where the gift permits the temporary use of business property, the taxable amount would be the fair rental value of the property.

h. Special rule for dispositions of non-business real property.
Under the bill, where real property is sold by a person who is not otherwise a taxable person, the person would become taxable with respect to the sale. However, in contrast to most sales transactions, the VAT would not be imposed on the selling price, but would be imposed only on the excess of the selling price over the seller's adjusted cost for the property. For this purpose, the selling price would be calculated exclusive of VAT. The seller's adjusted cost would be his basis in the property increased by certain expenditures properly chargeable to capital account. However, the seller's adjusted cost would not include basis or expenditures due to amounts incurred in periods before January 1, 1981.

i. Special rule for insurance contracts.
Under the bill, sales of insurance would be subject to the VAT. The value added of an insuror is represented by the excess of premiums collected over claims paid. Thus, the VAT would not be imposed on premiums at the rate of 10 percent because this would result in taxing an insuror on an amount greater than its value added. In addition, amounts representing savings should not be taxed because the VAT is designed to tax consumption. Accordingly, the bill would impose the VAT only on the difference between the portion of a premium attributable to insurance coverage and the actuarial cost of the coverage.

j. Taxable transactions for governmental entities; exempt organizations.
The bill would generally exempt governmental entities from the application of the VAT. An exception would be made for sales by governments for which separate charges are made. Such charges would be subject to the VAT. In the case of charges for education, however, the rate of tax would be zero. Governments would be permitted a VAT credit only on purchases relating to taxable sales, including zero-rated sales.

Charities described in section 501(c)(3) of the Code would be zero rated for all of their sales, except those engaged in as part of an unrelated trade or business (Code sec. 513). Thus, they would be eligible for the VAT credit on their purchases.

Under the bill an exempt organization not described in section 501(c)(3) of the Code would generally be exempt from the aplication of the VAT. However, sales by such organizations would be taxable if made for a charge. The organizations would be permitted a VAT credit only on purchases relating to taxable sales.

INCOME TAXATION AND FOREIGN INVESTMENT IN DEVELOPING COUNTRIES

by *Dr. M.P. Dominic*

On January 18, 1980 Mr. M.P. Dominic received his doctor's degree in law submitting and defending his doctoral thesis: *Income taxation and foreign investment in developing countries* at the University of Amsterdam.

The author selected for his study the following countries: India, Pakistan, Sri Lanka, Singapore, Malaysia and Hong Kong, whose tax systems still show certain common characteristics due to their British heritage.

The purpose of Mr. Dominic's thesis is to assist the countries he reviewed and also development countries in general to formulate more effectively their income tax policies for foreign investment.

This book contains a wealth of information on the income tax systems of the above countries.

TAX GLOSSARY

*by H.W.T. PEPPER**

PERIODICITY OF PAYMENTS — Since a government's expenditure accrues throughout the fiscal year it is important to secure a steady inflow of taxes and other revenue through the year. Accordingly sales taxes, including V.A.T,, are often collected monthly from the larger taxpayers, income taxes deducted at source, e.g., P.A.Y.E. deductions from employees, and payroll taxes are usually remitted monthly. In the U.K. ADVANCE CORPORATION TAX (q.v.) is paid over quarterly, and in the U.S.A. income tax is payable quarterly by the larger individual taxpayers and corporations. In general it is desirable that taxes be paid as soon as they become due, and particularly in the case of withholding taxes it is desirable that the withholder hand them over as soon as possible.

PERMANENT ESTABLISHMENT — A term mainly to be found in double taxation treaties, where it is customarily provided that a business in one country will not be liable to the income tax of the other country, unless it has a "permanent establishment" through which it conducts business *in* that other country. A permanent establishment is usually defined as a place of management, a branch, an office, a factory, a workshop, a mine, quarry or other place of extraction of natural resources, or a building site or assembly project which exists for more than a certain period (6 or 12 months). The definition usually excludes the use of facilities solely for purposes of storage, display, or delivery of goods belonging to the enterprise and there are often some other similar restrictions.

PERQUISITES — See BENEFITS IN KIND, FRINGE BENEFITS.

PERSONAL EXPORT SCHEME — Goods exported from a country are not normally subject to that country's customs duty or sales taxation. When goods are bought within the country by tourists who intend to take them away, there should also, in principle, be no duty or tax on such "personal" exports. Accordingly many countries have schemes whereby tourists may buy goods free of tax, etc., either in duty-free shops, or in other shops where either the goods are delivered direct to the departing ship or plane; or on initial payment of duty with subsequent refund being made at the tourists' departure.

PERSONAL HOLDING COMPANY — A personal holding company, i.e., a private company the shares in which are owned by the taxpayer (or by him and his wife) personally, is usually set up to hold his investments. The company may be set up in a tax haven in order to gain a tax advantage, but where the taxpayer resides in a developed country such as the U.S.A., the U.K. and other European countries, Australia, Japan, etc., there are usually tax laws which deem the taxpayer to have had the income of the holding company (personal family holding company in Japan) distributed to him for the purpose of calculating his tax.

PERSONAL RELIEFS — Personal reliefs, also known as personal allowances, or personal exemptions, are granted to individuals as deductions from income in computing their personal income tax. There is usually a deduction for the individual himself, and others for his dependents, wife, children, and indigent relatives. There is at present a trend among countries which grant FAMILY ALLOWANCES (q.v.), i.e., cash allowances towards the support of a taxpayer's children, to phase out personal relief for the same children.

PERSONAL TAX — This term is applied to income tax on individuals, as distinct from tax levied on corporate and other bodies of taxpayers. The term is also applied sometimes where there is a schedular tax system and the moderate amounts of schedular tax deducted from different types of income are supplemented by a tax on the total income of individuals, which may be known as a residents' tax, supplementary tax, or personal tax. (See SCHEDULAR TAXATION.)

PERSONELE BELASTING — (Belgium, Holland) A minor tax on real property.

PERSONEN BELASTING — (Belgium) Personal income tax.

PERSONENBEZOGENE GESELLSCHAFT — (Germany) Closely-held company.

PERSONEN TEN LASTE — (Belgium) Dependents of the taxpayer for whom he may claim personal tax reliefs.

PERSONFRADRAG — (Denmark) Personal reliefs.

PETROLEUM REVENUE TAX (PRT) — A tax imposed in the U.K. on profits from the exploitation of North Sea oil and gas. The tax is levied half-yearly at the rate of 60 percent. The tax commenced with half-yearly production periods ending after 12 November 1974, the tax rate being 45 percent for periods up to 31 December 1978.

PHANTOM TAX — The tax which would have been paid on its profits by a PIONEER INDUSTRY (q.v.), which has in fact been exempted under TAX HOLIDAY (q.v.) provisions, but nevertheless is "recognised" for tax relief purposes under a TAX SPARING (q.v.) article in a double taxation treaty.

PHASENPAUSCHALIERUNG SYSTEM — This is the system under a cascade tax whereby the whole of the tax due at different stages of production and distribution is covered by a single charge to tax at one stage at a rate of tax which is equivalent to the total amount likely on average to have been levied at the various different stages of distribution. (See also FORFAITAIRE.)

PHYSICAL HANDICAP, TAX RELIEF — Some countries provide additional personal tax reliefs to physically-handicapped individuals, e.g., Japan grants additional relief which varies within certain limits according to the severity of the handicap. The U.S.A. grants an additional personal exemption to blind persons. Most countries provide cash benefits to the handicapped through state welfare schemes which may make tax relief unnecessary.

* With the assistance of the staff of the International Bureau of Fiscal Documentation.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

PHYSICAL INGREDIENT RULE — This is the rule in the U.S. state retail tax legislation by which it is laid down that goods becoming actual ingredients in other goods are exempt from retail sales tax.

PIONEER INDUSTRY — The term "pioneer industry" is usually encountered in legislation in developing countries designed to encourage the setting up of industries which do not already exist in the country or which exist on an inadequate scale. Such industries are often classed as "pioneers" and granted tax and other concessions which may include income tax holidays (or exceptional allowances for depreciation), freedom from customs duties on imports of building materials and equipment, and sometimes raw materials, for a limited period of years, and land and buildings, initially at sub-economic rents. (See also INFANT INDUSTRY, PHANTOM TAX, TAX HOLIDAY, TAX SPARING.)

PLANNING, TAX — The term is not exactly synonymous with TAX AVOIDANCE (q.v.) in the worst sense of that word. Nowadays it is increasingly realised that there are fields in which long-term planning can help in producing a more TAX-EFFICIENT (q.v.) way of doing something, and tax codes are in some ways designed to favour one method rather than another. For example, provision for one's retirement may be made in several ways but some tax codes give preferential treatment to saving through life assurance. Disposing of assets to those more needy, or perhaps able to make better use of them, during one's lifetime usually incurs less tax (or even none if there is no gift tax in force) than bequests on death.

PLAYING CARD TAX — Japan has a tax on manufacturers of playing cards and mahjong sets, and for a long time the U.K. had a specific excise duty on packs of playing cards. Such levies are obviously likely to be trivial in yield but are part of the pattern of taxing gambling (since cards and mahjong can be used in gaming) and leisure activities.

PLUS VALUES — (Belgium and France) Capital gains.

POLL TAX — A tax on each member (or each male adult), of the population. (See also GRADUATED POLL TAX, SELECTIVE EMPLOYMENT TAX.)

POLLUTION TAX — See ANTI-POLLUTION TAX.

POOL BASIS — For the purpose of computing DEPRECIATION or CAPITAL or WRITING-DOWN ALLOWANCES (q.v.) in respect of machinery and plant or other qualifying assets it is administratively convenient to "pool" all assets which qualify for the same rate of allowance, and this method is accepted by various tax administrations, e.g., Canada and the U.K., and in fact most countries that use the REDUCING (or DECLINING) BALANCE METHOD of computing relief. The cost of additions is added to the written-down balance of value of the machinery, etc., and the proceeds of sales of old machines or scrap is deducted from the total, the depreciation allowance being calculated on the single figure of the adjusted balance.

POOLING — For the purpose of computing capital gains tax on sale, e.g., of shares in a quoted company, where there have been several purchases of the particular shares over a period of time and the sale is of only part of the holding, pooling treatment may be prescribed (as in the U.K. capital gains law) to determine the cost of the shares sold. All purchases are totalled and the average taken to represent the cost of the part of the holding sold.

POOLS BETTING DUTY — In the U.K. a levy on the stake money on pool betting (principally applying to sums staked on greyhound track totalisators and betting by coupons, mainly on football match results). (See also FOOTBALL POOLS TAX.)

PORTFOLIO HOLDING COMPANY — A company set up to hold investments rather than to trade in them. (See also PERSONAL HOLDING COMPANY).

POSSESSIONS CORPORATION — A U.S. corporation operating in a U.S. possession overseas, e.g., Puerto Rico, receives special tax treatment, the object being to encourage investment in these areas.

POST-CESSATION RECEIPTS — Where there are post-cessation receipts related to some activity after the formal termination of the trade or profession, tax liability would arise and this is confirmed in legislation in some countries which is designed also to counteract avoidance techniques related to receipts after cessation.

POST-WAR CREDITS — In Britain, in the period from April 1941 to April 1946, covering 5 fiscal years (mainly falling within World War II), earned income relief and personal allowances for income tax purposes were reduced and the extra tax payable in respect of these reductions was treated as post-war credits repayable after the war. In the post-war period, credits were made repayable at retiring age (eventually to men aged 60, women aged 55) and in certain other circumstances, e.g., death, blindness, disablement, and long-term sickness or unemployment. Finally, all outstanding credits were made repayable unconditionally in 1972.

POST-WAR REFUND — The EXCESS PROFITS TAX (q.v.) which operated in Britain for the period from April 1939 to December 1946 was charged at 100 percent for the period April 1940 to December 1945 and of the 100 percent 20 percent was to be refundable as a post-war refund. The refunds were, in fact, made reasonably soon after the termination of the tax on December 31, 1946 to taxpayers who incurred expenditure on re-equipment, etc., against which the refunds could be used as credits.

POUNDAGE — A levy which originated in 1891 and was used for a time to pay the staff of surveyors of taxes in Britain. Since the yield from the levy depended on the amount of tax assessed and collected, there were the usual allegations encountered under such systems that taxpayers found difficulty in having their assessments reduced. The term "poundage" has other connotations. As regards LOCAL RATES (q.v.) in Britain "poundage" is the number of pence in the £ (equivalent to percentage) at which rates are levied. The charge for a postal order issued by the British Post Office is also known as "poundage".

POVERTY SURTAX — The expression is used to describe the position arising from the FAMILY INCOME SUPPLEMENT (q.v.) and other income-related welfare, educational, and other benefits and abatements. Where the family's earnings rise above certain limits, reduced benefits are due, and it may be that the cost in lost benefits represents a very high percentage of the increase in earnings, thus appearing similar to a high marginal rate of tax, or SURTAX (q.v.).

POVERTY TRAP — The position in which the breadwinner who has a low income and substantial responsibilities, when by striving to and succeeding in earn-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ing more, finds that the loss in benefits may nearly equal or even exceed his increase in earnings. (See also POVERTY SURTAX.)

POWER TAX — A tax on power (measured by the use of electricity, fuels such as coal, gas, or oil, etc.) has sometimes been advocated on the grounds, inter alia, that a person's affluence or the profitability of a business is proportionate to the amount of power used. A completely logical case for such a tax cannot be made out because it cannot be shown that the grounds referred to are wholly valid. (See also PUBLIC UTILITY TAX.)

PRAEFERENCEAKTIE — (Denmark) Preference shares or stock.

PRECOMPTE — (Belgium, France) A pre-payment of tax, usually by withholding.

PRECOMPTE MOBILIER — (Belgium, France) A pre-payment by deduction at source, e.g., of income tax on dividends or interest paid on securities, including bearer bonds.

PREEMPTION, DROIT DE — The right of the French tax administration to buy real property at the value (increased by 10 percent) which has been declared for the purposes of the registration tax at the time of transfer of ownership. (See also UNIVERSAL VALUES.)

PREFECTURAL TAXES — Local taxation in Japan, where prefectures and municipalities, the units of local authorities, have power to levy taxation.

PREFERENTIAL DEBT FOR TAX — Most countries provide that tax unpaid should have preference over other debts in the event of the bankruptcy of an individual or liquidation of a company. This is a reasonable provision since tax was originally a debt from the taxpayer to his sovereign, but the preferential treatment is usually limited to the tax for a particular year, other tax ranking with other debts on an equal footing.

PREMIUM ON LEASE — In the U.K. the granting of a lease subject to payment of a premium involves additional income tax based on the use of a formula for spreading the premium over the term of the lease. Sale of a premium is usually a subject for capital gains tax. Most countries accord broadly similar treatment to leases.

PREMIUMS ON LIFE ASSURANCE POLICIES, ANNUITY CONTRACTS — See LIFE INSURANCE RELIEF, PENSION SCHEMES, RETIREMENT BENEFIT SCHEMES.

PRICE, ARMS' LENGTH — The concept of an arms' length price is relevant to various kinds of taxation, e.g. customs duties, stamp duties and capital gains tax on the disposal of property, the valuation of goods internally or domestically consumed by taxpayers who are subject to sales taxation, and to income taxation on their profits. The allocation of profits between head office and the branches of a concern trading in several countries, or between associated persons or companies in an integrated business may also depend on arms' length pricing, etc.

PRICE CONTROL — See QUASI-TAXATION.

PRICE, EFFECT OF TAX ON — See ESCALATION, PYRAMIDING.

PRIORITY FOR TAX — See PREFERENTIAL DEBT.

PROBATE DUTY — A tax payable when an executor or beneficiary takes out probate for the estate of a deceased person. The term may refer merely to a moderate stamp duty on documents or may be applied to the DEATH DUTY (q.v.) charged as a revenue or "redistributive" levy on the assets passing at death. In Britain, Probate Duty was in force from 1694 to 1894 (finally as a 3 percent levy on the value estates over £ 1,000) when it was replaced by Estate Duty.

PRODUCTION, FACTORS OF, TAX ON — See FACTORS OF PRODUCTION.

PRODUCTION GOODS — The term applied to goods which are, in turn, used to produce other goods. The term may be applied accordingly to equipment and machinery, but is also sometimes applied to other goods which are not embodied in the products but may serve as catalysts in the production process.

PROFESSIONAL TAX — Annual taxes are sometimes levied on those carrying on professions. Sometimes the levy may be a kind of registration fee relating to the administrative cost of supervising the activities of various professions for the protection of the public. Occasionally, and usually inadvisedly, such taxes have been levied for revenue purposes avowedly because those who exercise professions are alleged to have more favourable treatment for income tax purposes than employees, and greater opportunities for evasion and avoidance. To levy a special tax for the last reason is, of course, unsound in principle since it seems to confer a "licence to cheat".

PROFITS TAX — The term may be used to denote an ordinary income tax on profits or occasionally a special tax such as that levied in Britain in the period 1946 to 1965 on corporate profits in addition to the ordinary income tax on those profits. The various versions of the British profits tax in its lifetime included a simple levy of tax on profits which was calculated slightly differently from those chargeable to income tax — finally at the rate of 15 percent with an abatement where the profits did not exceed £ 12,000 and an exemption where they did not exceed £ 2,000. At other times the tax was charged more heavily on dividends than on retained profits and the differential rate on distributions varied from time to time with changes in government policy.

[to be continued]

IFA NEWS

Mr. DAVIES HONOURED

Our congratulations go to Alun G. Davies, President of IFA, who was made a Commander of the British Empire in Her Majesty's New Year's Honours List.

Books

The publications listed in this bibliography have recently been acquired by the Bureau's library which will gladly supply further information upon request (please quote the reference numbers). They should, however, be ordered through a bookseller or direct from the publisher indicated, and not through the Bureau.

AFRICA

AFRICA GUIDE 1979

Editor Graham Hancock. Essex, World of Information, 1979. 366 pp.
Comprehensive guide to the African continent containing political, economic and other basic information. (B. 10.992)

AMERICAN SAMOA

INVESTING IN THE FUTURE: AMERICAN SAMOA

Prepared by the Office of Development Planning. Pago Pago, Government of American Samoa, 1978. 32 pp.
Guide to investment in American Samoa, including tax incentives. (B. 51.431)

STATISTICAL BULLETIN 1979

Annual report on economic indicators. Compiled by Development Planning Office, Government of American Samoa. Pago Pago, Government of American Samoa, 1979. 53 pp. (B. 51.432)

ARGENTINA

FOREIGN INVESTMENT IN ARGENTINA

By C. Langbehn. The Hague, Fenedex, 1979. 27 pp.
Introductory guide providing information to prospective investors in Argentina, including tax aspects. (B. 15.913)

ASIA

STATISTICAL YEARBOOK FOR ASIA AND THE PACIFIC 1977

Bangkok, U.N. Economic and Social Commission for Asia and the Pacific, 1977. 492 pp. (B. 51.409)

AUSTRIA

WERTBEGRIFFE IM ÖSTERREICHISCHEN ABGABENRECHT

Definitionen und Anwendungsprobleme. By Reinhold Schürer-Waldheim. Vienna, Manzsche Verlags- und Universitätsbuchhandlung, 1978. 164 pp., 41.50 DM.
Monograph discussing the principles of valuation in Austrian tax law, e.g. the concepts of market value, sales value, going concern value etc., and the problems of application of these principles with respect to income tax, net worth tax, inheritance tax, turnover tax and other taxes. (B. 102.046)

BRAZIL

DOING BUSINESS IN BRAZIL

By Pinheiro Neto & Cia. Advogados. London, Oyez Publishing; New York, Matthew Bender, 1979.
Loose-leaf publication explaining the commercial laws of Brazil. Topics covered include types of business organizations, foreign investment regulations, immigration control, import-export control, bankruptcy and insolvency, taxation, social and labour legislation, licensing and technical licence agreements, trade regulations. English translations of the relevant statutes are appended, such as on corporation law and foreign capital law. (B. 15.900)

MANUAL DE NORMAS PARA TRIBUTAÇAO NAS FONTES

Brasilia, Ministéro da Fazenda, 1977.
Loose-leaf handbook containing information on taxes withheld at source. (B. 15.916)

MANUAL DE NORMAS PARA TRIBUTAÇÀO DAS IMPORTAÇOES

Brasilia, Ministéro da Fazenda, 1977.
Loose-leaf handbook on import duties. (B. 15.919)

MANUAL DE NORMAS PARA TRIBUTAÇAO DAS PESSOAS FISICAS

Brasilia, Ministério da Fazenda, 1978.
Loose-leaf handbook containing information on the taxation of individuals. (B. 15.915)

SUMMARY OF THE INVESTMENT LEGISLATION IN BRAZIL

Brasilia, Banco do Brasil, International Division, 1979. 106 pp.
Binder including several booklets explaining rules on investments and tax incentives in Brazil. (B. 15.908)

CHINA (PEOPLE'S REPUBLIC OF)

HOW TO DO BUSINESS WITH CHINA

A seminar for businessmen, bankers, lawyers, accountants and insurance executives. New York, Law Journal Seminars-Press, Inc., 1979. 372 pp.
Collection of informative articles on China relating to doing business with China. The English texts of the Constitution and the Act for the Control of Trademarks are included. (B. 51.424)

PRELIMINARY CHAPTER ON THE PEOPLE'S REPUBLIC OF CHINA

Reprint from Taxes and Investment in Asia and the Pacific. Amsterdam, International Bureau of Fiscal Documentation, 1979. 22 pp.
Assessment of investment and taxation in the People's Republic of China. Addresses of China's Foreign Trading Corporations and selected bibliography are appended. (B. 51.338)

ECUADOR

ECUADOR INVESTITIONSBEDINGUNGEN

Cologne, Deutsche Gesellschaft für wirtschaftliche Zusammen-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

arbeit (DEG); Bundesstelle für Aussenhandelsinformation (BfAI), 1979. 70 pp.
Reference guide explaining investment conditions in Ecuador. Investment law and taxation aspects are considered. (B. 15.911)

EGYPT

FOREIGN INVESTMENT IN EGYPT

An analysis of critical factors with emphasis on the foreign investment code. By Robert E. Driscoll, P.F. Hayek and Farouk A. Zaki. New York, Fund for Multinational Management Education, 1978. 90 pp., $ 8.50.
Description of the investment environment in Egypt. The text of Law No. 43 of 1974 concerning the investment of Arab and foreign funds and the free trade zones as amended is appended. (B. 10.991)

INVESTMENT INCENTIVES AND TAXATION: EGYPT

London, Touche Ross International, 1979. 21 pp.
Booklet on Egypt in the series "Investment Incentives and Taxation", prepared by Touche Ross International, dealing with general investment law and taxation. (B. 51.367)

EUROPE

OIL AND GAS, THE NORTH SEA EXPLOITATION

By Hamish McN Henderson, St. John Bates, Patricia Birnie and Robert Burgess. New York, Oceana Publications, Inc., 1979.
Loose-leaf publication in one binder (out of projected four). The work covers the documents with respect to the law of the North Sea Coastal States with emphasis on Norway and the United Kingdom. The abbreviated table of contents of binder one is as follows: Book I: International law and related national laws. United Kingdom—Norway prevention of marine pollution. Book II: The North Sea Exploitation and European Community Law. Book III: National Regulations of the North Sea Exploitation. Book IV: Taxation of the North Sea Exploitation. (B. 102.048)

FRANCE

LAMY SOCIETES

Droit des sociétés commerciales; formules; annexes. Sous la direction de Jean Burgard. Paris, Lamy S.A., 1979. 1270 + 347 pp.
Monograph in two bound volumes explaining the company law for doing business in France effective as of February 1, 1979. Forms and other relevant documents are contained in one separate volume. The material will be updated each month until a revised edition is published. (B. 102.052/053)

LES DEROGATIONS AU PRINCIPE DE TERRITORIALITE DES IMPOTS ETABLIS SUR LES BENEFICES DES SOCIETES DE CAPITAUX EN DROIT FISCAL FRANCAIS

By Jean-Pierre Jarnevic. Clermont, Travaux et Recherches de la Faculté de Droit et de Science Politique de L'Université de Clermont, 1978. 264 pp.
Thesis on the infringement on the tax principle of territoriality with respect to profits derived by companies under French tax law. (B. 102.031/31A)

RICHARD CANTILLON ESSAY DE LA NATURE DU COMMERCE EN GENERAL

Texte manuscrit de la Bibliothèque municipale de Rouen. Avec le texte de l'édition originale de 1755 et une étude bibliographique. By Takumi Tsuda. Tokyo, The Institute of Economic Research, Hitotsubashi University, 1979. 453 pp.
Study of Richard Cantillon's "Essay on the nature of general commerce", based on the original text and other available manuscripts. (B. 51.343)

GERMAN FEDERAL REPUBLIC

AUSTRITT AUS PERSONENGESELLSCHAFTEN

In einkommensteuerlicher Sicht. 6., erneuerte Auflage. By Erwin Kobs. Herne/Berlin, Verlag Neu Wirtschafts-Briefe, 1978. 131 pp.
Handbook on the income tax and accounting problems caused by the withdrawal of partners from partnerships. Jurisprudence and literature up to 1977 are taken into consideration. (B. 102.039)

BETRIEBSGRUNDSTÜCKE IM ERTRAGSTEUERRECHT

Erwerb, Einbringung, Herstellung, Nutzung, Veräusserung, Entnahme von Gebäuden sowie Grund und Boden. By Armin Harbich. Berlin, Erich Schmidt Verlag, 1979. Grundlagen und Paxis des Steuerrechts, Band 17. 240 pp., 46 DM.
Comprehensive handbook on all aspects and problems of the treatment of business real property by German profit related taxes. This book, which is destined for the use of enterprises, provides a pragmatic approach containing many examples derived from the jurisprudence on this subject. (B. 102.038)

HANDBUCH DER STEUERVERANLAGUNGEN 1978

Einkommensteuer, Körperschaftsteuer, Gewerbesteuer, Umsatzsteuer. Munich, Verlag C.H. Beck, 1979. 2670 pp., 112 DM.
Annual guide for filing 1978 returns for individual income tax, corporate income tax, business tax and turnover tax. (B. 102.024)

KOMMENTAR ZUM KAPITALVERKEHRSTEUERGESETZ

Gesellschaftsteuer - Börsenumsatzsteuer. 3., völlig überarbeitete Auflage. By Herbert Brönner and Balduin Kamprad. Cologne, Verlag Dr. Otto Schmidt, 1979. 272 pp., 68 DM.
This commentary on the capital transfer tax law includes the company tax which is levied on transfers of participation in companies and the securities exchange transfer tax which is levied on the purchase of securities within Germany. In the annex are also contained the executive regulation and the EEC directives on this subject. (B. 102.025)

- Informationsaustausch bei Doppelbesteuerungsabkommen; ***Joseph H. Guttentag***

G. Thimmaiah:

ESTIMATION OF TAX POTENTIAL AND TAX EFFORTS OF STATE AND LOCAL GOVERNMENTS 80

The author discusses concepts such as taxable capacity, tax potential, tax burden and tax effort which relate to a country's economic potential to raise revenue. He concludes that tax potential depends on three major principles, i.e. the constitutional-legal framework, the economic potential and the economic-administrative possibilities.

EVALUATION DE POTENTIEL FISCAL ET DES EFFORTS FISCAUX DES GOUVERNEMENTS NATIONAUX ET LOCAUX

L'auteur analyse des concepts tels que: la capacité imposable, le potentiel fiscal, la charge fiscale et l'effort fiscal se rapportant au potentiel économique d'un pays pour l'obtention de revenus. Il conclut en indiquant que le potentiel fiscal dépend de trois facteurs principaux: le cadre légal constitutionnel, le potentiel économique et les possibilités économico-administratives.

EINSCHÄTZUNG DES STEUERPOTENTIALS UND DER STEUERERHEBUNG DURCH ZENTRAL- UND LOKALBEHÖRDEN

Der Verfasser untersucht die Theorien in bezug auf Steuerkraft, Steuerpotential, Steuerlast und Steuererhebung, welche die Determinanten für das Steueraufkommen im Rahmen des Wirtschaftspotentials eines bestimmten Landes darstellen. Er kommt zu dem Schluss, dass das Steuerpotential von drei wichtigen Faktoren abhängt: dem verfassungsrechtlichen Rahmen, dem Wirtschaftspotential und den Möglichkeiten auf administrativem Gebiet.

FORTGESCHRIEBENES INHALTSVERZEICHNIS

F. Akin Olaloku:

NIGERIA: AN EPILOGUE TO A DECADE OF FEDERAL BUDGETING -- AN APPRAISAL OF THE 1979/80 GOVERNMENT BUDGET 88

The 1979/80 Budget is the last in a decade-long series of annual budgets by the Federal Military Government in Nigeria. It rounds off the series of annual budgets of the last ten years and attempts like its predecessors to solve problems such as inflation, balance of payments deficits, unemployment and economic development and growth.

NIGERIA: EPILOGUE D'UNE DECENNIE DE BUDGET FEDERAL – UNE APPRECIATION DU BUDGET GOUVERNEMENTAL 1979/80

Le Budget 1979/80 est le dernier d'une série décennale de budgets annuels présentés par le Gouvernement du Nigéria. Il achève les séries des budgets annuels de ces dernières années et comme ses prédecesseurs veut lutter contre des problèmes tels que l'inflation, le déficit de la balance des paiements, le chômage et encourager le développement et la croissance.

NIGERIA: EPILOG ZUR FINANZPLANUNG DES VERGANGENEN JAHRZEHNTS – EINE BEWERTUNG DES HAUSHALTSPLANES 1979/80

Der Haushaltsplan 1979/80 ist der Letzte in der Serie der von der nigerianischen Bundesregierung im letzten Jahrzehnt verabschiedeten Jahreshaushaltspläne und zielt wie seine Vorgänger darauf ab, Probleme wie z.B. die Inflation, das Zahlungsbilanzdefizit, die Arbeitslosigkeit, die wirtschaftliche Entwicklung und das Wachstum zu lösen.

Jap Kim Siong:

INDONESIA: TAX INCENTIVE PACKAGE TO SUPPORT THE THIRD FIVE-YEAR DEVELOPMENT PLAN (1979-1984) 95

The author discusses the main provisions of the tax incentives designed to support and achieve the goals of the third Five-Year Plan. The tax measures intend to improve tax compliance by corporate taxpayers and to increase revenue.

INDONESIE: ENSEMBLE DES MESURES D'ENCOURAGEMENTS FISCAUX DESTINEES A SUPPORTER LE 3EME PLAN QUINQUENNAL DE DEVELOPPEMENT (1979-1984)

L'auteur commente les principales dispositions des encouragements fiscaux destinés à supporter et réaliser les buts proposés par le troisième plan quinquennal. Les dispositions fiscales tentent à améliorer la honnêteté fiscale des sociétés et à augmenter le revenu.

INDONESIEN: FÖRDERUNG DES FÜNFJAHRES-ENTWICKLUNGSPLANES (1979-1984) DURCH EIN PAKET STEUERLICHER MASSNAHMEN

Der Verfasser untersucht die wichtigsten Vorschriften auf dem Gebiet steuerlicher Anreize, durch die die im Fünfjahresplan angestrebten Ziele erreicht werden sollen. Diese steuerlichem Massnahmen zielen auf eine Verbesserung der Steuermoral der Körperschaften ab und sollen darüberhinaus des Steueraufkommen erhöhen.

Exploration of Income Tax Treaty Policy Issues in the United States

National Meeting of the United States Branch of IFA, March 15 & 16, 1979

PART I - PROPOSED AGENDA: Introduction of the Subject

by Robert J. Patrick*

IN GENERAL

Compared to many areas of U.S. tax law, there has been relatively limited public discussion of the fundamentals of United States income tax treaty policy. It was for this reason that the U.S. Branch of IFA organized a committee on tax treaties two years ago and income tax treaty policy is the theme of this year's National Meeting.

We will be devoting our program today and part of tomorrow to the exploration of certain income tax treaty policy issues. One of the recent criticisms has been that recent U.S. treaties attempt to do too much. On the other hand, it has been argued that one reason the U.S. has so few treaties, particularly with developing countries, is because U.S. treaties typically do so little with respect to changing U.S. taxation of U.S. taxpayers. Thus, an important aspect of our inquiry is what is it that our treaties should be attempting to do?

Concern is also expressed about the treaty negotiating and ratification process in the U.S. The process of negotiation and ratification of agreements will be discussed this afternoon.

Current U.S. treaties are built upon prior U.S. precedent and increasingly upon the Model Convention of the OECD (revised in 1977). One also detects some influence of the UN Group of Experts suggestions for treaties between developed and developing countries, which will be further described this morning.

I would describe the purposes and scope of coverage of comprehensive income tax treaties in this manner:

"The generally accepted underlying purpose of tax treaties is to contribute to freedom in the flow of goods, capital, technology and personnel across national boundaries by reducing substantive and procedural tax burdens (principally through elimination of double taxation), by harmonizing tax rules, by providing a mechanism for resolving tax disputes, and by authorizing national tax administrations to cooperate with each other in enforcing their tax laws. The United States Model Treaty[1] seeks to accomplish these goals by providing rules on the following questions: the right of a country to impose tax on the basis of the connection of the taxpayer, property or activities with the taxing country; the determination of allocable income and deductions to ascertain taxable net income and, in the case of certain withholding taxes, limitations on the rate of tax. The Model further provides a tax credit mechanism for avoiding double taxation of the same income; requires nondiscriminatory tax treatment for treaty partners; and provides machinery for cooperation between tax administrations to resolve tax disputes and to exchange information to enforce compliance with domestic law and treaty tax rules."

Table of contents

Part I: Proposed agenda: Introduction of the subject

In general

I. Tax treaty policy with respect to U.S. taxation of foreign investors
   - A. Types of income
     1. Business activities
     2. Withholding taxes: Dividends/ Interest/Royalties
     3. Real property
     4. Capital gains
     5. Personal services
   - B. Conduit issues
   - C. Overall policy
   - D. State law

II. Policy issues with respect to treaties changing U.S. tax rules applicable to U.S. citizens and residents

III. Treaties with countries having integrated tax systems

IV. Tax treaties with developing countries

Part II: Proceedings of the technical session of March 15, 1979

Status of tax treaty negotiations (*Marianne Burge*)

Panel discussion

Interaction of the U.S. tax system and U.S. tax treaty rules with foreign integrated corporate / shareholder tax systems (*Hugh Ault*)

Panel discussion

Tax treaty procedures (*David Milton*)

Panel discussion

Exchange of information under tax treaties (*Joseph H. Guttentag*)

Panel discussion

Appendix: U.S. treaties in force and under negotiation at February 28, 1979

* Vice-President of the USA Branch of IFA.

1. *Bulletin* editor's note: This Model Treaty is reproduced in 31 BULLETIN FOR INT'L FISCAL DOCUMENTATION 313 (1977).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

These rules subsume a great many policy decisions and cut across a great many substantive rules.

While the U.S. has unilaterally adopted a number of rules to relieve double taxation and accommodate to an international tax context, it is virtually impossible to legislate solutions to the detailed differences between the systems in contrast to resolving problems in a bilateral treaty (as illustrated by the recent U.S./French Protocol). Nevertheless, we need some basic policy guidelines as to what our treaties should be accomplishing and the Treasury has been encouraging such examination.

This morning we shall look at four policy aspects of treaty rules:

1) Treaty rules affecting U.S. taxation of non-resident aliens and foreign corporations;
2) Treaty rules affecting U.S. taxation of U.S. citizens and residents;
3) Issues in the negotiation of tax treaties with countries having integrated tax systems; and
4) Issues in negotiations with developing countries.

I. TAX TREATY POLICY WITH RESPECT TO U.S. TAXATION OF FOREIGN INVESTORS

Background: 1966 Foreign Investors Tax Act
1977 OECD Model and Commentary
1977 U.S. Treaty Model

A. Types of income

1. Business activities

The U.S. has adopted the standard treaty rule giving a right of taxation to the country in which a permanent establishment is located with respect to income attributable to the permanent establishment (including types of income that would be treated under separate treaty articles, but for the fact that such income is effectively connected with the permanent establishment and is therefore considered as business profits of the establishment).

The U.S. has tended to support restrictive definitions of what constitutes a permanent establishment, presumably because of the large amount of U.S. overseas activity that we would just as soon have taxable only in the U.S., including export income. There is also a desire to avoid imposing tax in cases where it is difficult to establish allocable taxable income.

— *Should this remain the U.S. position as foreign trade with the U.S. continues to develop?*

2. Withholding taxes: dividends/interest/royalties

Present U.S. treaty rules:

a. *Dividends*

U.S. withholding of 30 percent is reduced to 5 percent on direct investment dividends and to 15 percent on portfolio dividends. The direct investment rule suggests the limited amount of published debate on policy since it is virtually impossible to discover why it is 5 percent on direct investment and not 15 percent or zero, other than that 5 percent and 15 percent are OECD rules.

— *What is the rationale for these reductions?*
— *Why should the withholding rate on intercorporate dividends be 5 percent and not zero?*
— *Should reductions always be reciprocal (without regard to underlying corporate rates)? (The problems of negotiations with countries having corporate/shareholder tax integration will be discussed under* III *below).*

b. *Interest/royalties/equipment leasing*

Present U.S. policy is to seek exemption at source. The usual justification relates to the difficulty in achieving the equivalent of a net income tax if there is a positive rate of withholding.

3. Real property

In the case of real estate, the treaty provisions of the recent past have provided for taxation on a net income basis for rental income, in some instances on an annual election basis (which is no longer permitted).

4. Capital gains

U.S. Treaty rules on capital gains have tended to follow the 1966 Foreign Investors Tax Act and to exempt foreign investors not engaged in trade or business in the U.S. from tax on the sale of U.S. personal property. In form, the treaties retain the right to tax gain on real estate held directly by the seller, even though U.S. law does not at this time impose tax on a passive investor.

The 1978 Tax Legislation called for a Treasury review of U.S. taxation of non-resident aliens and foreign corporations owning U.S. real property directly or through domestic or foreign corporations.

— *Where should U.S. policy move in this area?*
— *What rules are enforceable as a practical matter?*

5. Personal services

The U.S. Treaty rules substantially enlarge the U.S. statutory exemptions for *independent personal services* (limiting taxation to physical presence for 183 days or the existence of a fixed base regularly available to the individual).

The treaty rules also expand the exemption for *dependent personal services* if the employer is not a U.S. resident.

The Model contains a stringent exception, however, for entertainers and athletes, who are limited to an exemption only if total gross receipts of such entertainer or athlete do not exceed $15,000 in the taxable year.

— *Is there a legitimate basis for this discrimination?*

B. Conduit issues

Treaties are negotiated on a bilateral basis and there is a traditional concept that "concessions" are negotiated to benefit the resident of the contracting states. In

© 1980 International Bureau of Fiscal Documentation – BULLETIN

practice, of course, the existence of the corporate form of doing business means that third country residents owning stock in a corporation in one country can benefit indirectly from treaties entered into by that country. The significance of this depends upon the combination of the treaty rules, the domestic tax laws of the state of incorporation (e.g., the exemption of holding companies from taxation), and the tax rules of the shareholder's country of residence.

Two questions appear to be involved:

a. What verification arrangements should be employed (and who has the responsibility) to see that persons claiming treaty benefits (such as reduced withholding) are in fact residents of the other contracting state, and

b. What rules should be applicable to investments by corporate investors having shareholders from third countries?

- *Is a refund system for withholding taxes desirable or practicable?*
- *Are rules that require withholding agents to have information concerning the identity of shareholders of foreign corporations or the activities of such corporations desirable or practicable?*
- *What is the role of a "sham" doctrine in this area? What recognition should be given to treaty country corporations (see Rev. Rulings 75-23, 79-65)?*
- *Do these problems primarily arise from having treaties with countries that have or introduce "tax haven" type provisions in their domestic law? What should be done about such treaties? About investment already undertaken in reliance upon the treaty provisions?*

C. Overall policy

Can we make any general statement as to what U.S. objectives should be in changing U.S. tax rules by treaty to affect the taxation of non-resident aliens and foreign corporations under federal law?

D. State law

Should U.S. tax treaties, as a matter of policy, apply to state income taxes?

II. POLICY ISSUES WITH RESPECT TO TREATIES CHANGING U.S. TAX RULES APPLICABLE TO UNITED STATES CITIZENS AND RESIDENTS

Background: Pending U.K. treaty; Pending Israel treaty; Pending French protocol

A unique but standard provision of U.S. tax treaties, the "saving clause", states, in effect, that, with certain specific exceptions, nothing contained in the treaty shall affect the application of U.S. statutory tax rules to U.S. citizens and residents. The one major exception is that the U.S. will provide the principle of a foreign tax credit for the treaty partner's taxes that are specified in the treaty. This is basically a guaranty of a principle unilaterally provided in the Internal Revenue Code.

In considering the appropriateness of the saving clause policy (and the foreign tax credit and other possible exceptions) it appears to be useful to distinguish between different situations:

1) The first case is where a modification of U.S. statutory law by the treaty would result in an aggregate reduction or elimination of both foreign and U.S. tax for the taxpayer. This would be true of "tax sparing" and other incentive provisions, which can be discussed as a policy issue under the topic of negotiations with developing countries.

2) A second situation is that in which there would be a residual right of U.S. taxation (after a credit for the foreign country's tax) and the U.S. is being asked to cede tax jurisdiction in the first instance to the other country, as for example, by accepting a treaty source rule or a characterization of the income from an activity that differs from U.S. law.

3) An additional example of treaty coverage of current importance is the use of a treaty definition of a creditable foreign tax to treat certain foreign taxes as income taxes where their status is arguably unclear or even where the tax does not meet the technical interpretation of an income tax that is being applied administratively.

Questions:

- *In what cases is it appropriate to modify U.S. statutory law? Are there any guidelines to use?*
- *What should be the relationship of such changes in bilateral treaties to other parts of the Code, e.g., the overall tax credit limitation.*

III. TREATIES WITH COUNTRIES HAVING INTEGRATED TAX SYSTEMS

Background: Ault, "International Issues in Corporate Tax Integration", 10 Law and Policy In International Business (1978); Pending U.S./U.K. Income Tax Convention.

The standard U.S. and OECD treaty rules on taxation of income at the corporate level and upon distribution of dividends is based upon a so-called "classic" system under which income tax is imposed separately at the corporate level and again at the shareholder level. A recent development in the tax rules of a number of countries is the adoption of varying forms of corporate/shareholder integration. Such rules are now in place in Canada, Denmark, France, Germany, Italy and the U.K.

While the details vary, a common theme is that domestic shareholders are entitled to credits (and sometimes refunds) on dividend distributions from domestic corporations. These provisions thus reduce tax on domestic investment by domestic investors (compared to foreign investment by such investors) and they tend to restrict the granting of credits (or refunds) that are given in the case of distribution of dividends by companies solely to domestic investors, or to extend such refunds to only those foreign investors who qualify as portfolio investors.

In order to avoid distortions within the common

© 1980 International Bureau of Fiscal Documentation – BULLETIN

economic union, the Commission of the European Economic Community in 1975 proposed in a draft directive that all investors resident in EEC countries investing within the EEC be entitled to the flow-through of these benefits within the community.[2] The U.S. has taken the position that countries adopting tax integration rules should extend tax reductions or credits that they give to domestic investors to U.S. portfolio and direct and investors in treaty negotiations.

- *It is proposed that the panel discuss the appropriate U.S. treaty policy with respect to such tax systems, including suggestions for implementing U.S. policy if foreign concessions are advocated. Related questions include the following:*
- *What is the U.S. interest? What is the conceptual basis for seeking such concessions, e.g., non-discrimination, unreasonably high withholding rates?*
- *To what extent would the result of extending integration rules to non-residents be a transfer of revenues between Treasuries or a benefit flowing to U.S. investors?*
- *Do different variations in the foreign systems (compare Canada which does require funding of its shareholder credit and does not give a refund, with the U.K. or Germany) suggest that different treaty approaches are appropriate?*
- *What are the implications for the tradition of reciprocal withholding rates?*

2. See the Special Issue of EUROPEAN TAXATION on the harmonisation of systems of company taxation and of withholding taxes on dividends (Nos. 2-4, 1976).

IV. TAX TREATIES WITH DEVELOPING COUNTRIES

Background: Surrey, "United National Group of Experts and The Guidelines for Tax Treaties Between Developed and Developing Countries", 19 *Harv. Int'l Law Journal* (1978).

Apart from the extension of prior U.S. treaties with former colonial powers to their former colonies, the U.S. has only a handful of income tax treaties in force with developing countries. It is proposed that the panel discuss the U.S. negotiating situation.

- *Why do we want treaties with developing countries?*
- *What is the interest of the developing countries?*
- *What are our differences?*
  A. The tax incentive issue: Is it an appropriate time to re-examine the question of incentives as a part of U.S. economic policy (tax sparing, investment credit, other proposals)?
  B. What are the substantive treaty rules that separate the U.S. and Developing countries and can we find solutions? In this connection, it would be useful to outline the work of the UN Group of Experts on the topic of Treaties Between Developed and Developing Countries.
- *Increased source jurisdiction*
- *Taxation of services*
- *Problems relating to the allowances of deductions*
- *Discriminatory tax rules*
- *Soak-up taxes*

PART II
Proceedings of the Technical Session of March 15, 1979*

Mr. Tom Jenks, chairman of the Washington Regional Branch of IFA welcomes the participants to the third annual national meeting of the USA branch of IFA.
The first speaker, Marianne Burge of Price Waterhouse and Company, brings the meeting up to date on the status of treaty negotiations.

STATUS OF TAX TREATY NEGOTIATIONS

Marianne Burge

Monitoring the status of tax treaty negotiations seems to be like trying to get a firm hold on a amoeba, it always seems to slip out of your grasp. I have tried to prepare a list of the current status of our treaties, as of February 28, 1979, [Attached as Appendix to these Proceedings] but it is probably more prudent to describe it as a discussion draft since I am sure that before the meeting is over representatives from the Treasury will have pointed out that I am not up to date on all items. But al least we will have an update as of March 15 by the time we leave the meeting.

In June, 1977, the USA branch of IFA set up the Tax Treaties Committee under the chairmanship of Bob Patrick. The first duty the committee undertook was to prepare periodic reports for U.S. IFA members on the current status of U.S. treaty negotiations. Since that time the Treasury has introduced a very welcome procedure of holding public meetings on treaties which are in an advanced stage of negotiation. Bob and I have attended each of those meetings to date and have reported on the issues discussed in considerable detail. Since June, 1977 we have prepared and distributed to the [IFA] members three reports:

1. The first report covered the six months through December, 1977.
2. The second report covered January through August 1978.
3. The third report, covering the last four months of 1979, was recently mailed to the members with the U.S.A. Branch President's 1978 report.

The first two reports were published in Tax Management International, in their issues of April and October, 1978 and the current report will also be published by them. So far, each of these reports has contained a detailed discussion of issues and trends in important treaty negotiations. They are intended to provide a record for anyone who is trying to keep track of developments in U.S. treaty negotiations. Here are some of the highlights of the first three reports.

* Reporter, Michael Mulroney, Lee, Toomey & Kent, Washington, D.C. This paper is taken from a recording of the proceedings as edited by the Reporter and by the participants. The commercial organization which taped the proceedings failed to record all participants' remarks. Where gaps in the tape occurred the participants have been gracious enough to supplement their remarks.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

1. Six months through December, 1977

The first report for 1977 covered the release of the U.S. model conventions for income tax and estate tax treaties. They represent the basic U.S. treaty negotiating positions in general terms. We also reported that the last four treaties ratified by the United States were those with Iceland and Russia in 1975 and Poland and Rumania in 1976. No treaties were ratified in 1977 or 1978. The recent record suggests that Eastern bloc countries have a better chance of concluding treaties with us than with other countries. In any event, in spite of the very active efforts of the U.S. Treasury team, we seem to be far behind other OECD countries, such as France and Sweden, in the number of treaties that we have been able to ratify and have in force, in particular modern treaties dealing with current international tax conditions.

In the first report we also reported on the July, 1977, Senate Foreign Relations Committee public hearings to consider the treaties which had been signed with the U.K., Korea and the Philippines. The report contains a discussion of the issues raised at the hearing. As regards the discussion of the U.K. treaty, Senator Church raised the question of the inclusion of the U.K. Petroleum Revenue Tax ("PRT") as a creditable income tax, and asked the Internal Revenue Service Commissioner Kurtz when the Service would complete its review of the Revenue Rulings dealing with the creditability of OPEC country taxes. As we all know, Commissioner Kurtz heeded this admonition and issued numerous rulings in 1978 revising the interpretations of what is considered as income tax.

We also reported at length on the state taxation issue contained in Article 9(4) of the U.K. treaty. The testimony in favor of the new treaty approach to state taxation was most pursuasive. Nevertheless, as you all know, and as we reported in our August 31, 1978 report, the Senate ratified the U.K. treaty on June 27, 1978 subject to a reservation on Article 9(4). As a result, the U.K. treaty, which had previously appeared in our status summary as signed and awaiting ratification is now back in the list of treaties in process of negotiation. I will be discussing portions of that treaty in a little more detail in a moment.

The 1977 report also contains a list of treaties in force, a short bibliography, and an analysis of recent Revenue Rulings.

2. Eight months through August, 1978

The August, 1978 report is of particular interest because in it we reported on the first two Treasury briefings on treaty negotiations with Italy and Jamaica. Since there are no official transcripts or published records of the discussion, the IFA reports are the only available record of the proceedings. Some other organization such as Tax Executives Institute may also be reporting to some of their members on some of the meetings.

3. Four months through December, 1978

Our third report, covering the last four months of 1978, refers to the treaty negotiations with Denmark and Canada. The meeting on Canada was the best attended to date and included several visitors from Canada. That report also contains the November 3, 1978, Treasury Release on the current status of treaty negotiations giving dates when negotiating meetings were held or are expected to be held. It also contains news of two estate tax treaties which have been signed, one with the U.K., one with France. It also contains reference to the first of a new breed of agreements which are not described as treaties — the Social Security Totalization agreements with Italy and Germany.

I will now discuss briefly the status of some of the more important treaties which are now under negotiation.

United Kingdom

The most important one which we have been watching for some years now is the 1975 Protocol for the U.K. treaty. Unfortunately, the attempt to deal with the state unitary tax systems through the treaty mechanism has had the result of bringing this treaty into the limelight where it has become a political concern on both sides of the Atlantic. Since then some people have observed that it has taken only one dissenting voice on one issue to prevent the ratification of the treaty which is acceptable in other respects. For example, the delay in the treaties with Korea, the Philippines, Egypt and Israel, all of which were submitted to the Senate Foreign Relations Committee in July of 1977 and none of which have proceeded to ratification.

British industry concerned about U.S. State unitary taxation and resulting information disclosure

The present status of the UK treaty is that the U.S. Senate ratified it subject to a reservation on Article 9(4), in order to provide the same income base for both state and federal income tax purposes for U.K.-owned subsidiaries in the U.S. This action has resulted in the negotiations of a third protocol: first, to delete the provisions of the Article 9(4) provision, and second, to meet U.K. requests for concessions to compensate them for the loss of the unitary provisions. Thus, forced into the limelight, the treaty has met with considerable opposition in the U.K. in British industry expressing itself through the Confederation of British Industries, and in Parliament.

It seems that the U.K. has placed a much greater emphasis and importance than we could predict on the unitary issue as it affects British subsidiaries in the U.S. I think U.K. companies are particularly concerned about information disclosure. U.K. companies also fear that the unitary concepts may spread to other states or become a general factor hindering U.K.-owned firms in competing in U.S. markets.

Equally important, however, many U.K. businessmen are opposed to the granting of a refund of one half of the U.K. Advance Corporation Tax, ("ACT") to U.S. parent companies. They perceive this as giving U.S.-owned firms in the U.K. a tax advantage over U.K.-owned firms.

Another growing practical problem for the U.K. is that of the retroactivity of the U.K. refund of the ACT that would apply to U.K. subsidiaries' dividends paid since April, 1975. This problem gets worse as each year passes. Questions have been asked by Members of Parliament as to how much that refund would be. It is obviously going to be very difficult for the British Parliament to explain why hundreds of millions of pounds in U.K. tax money should be sent to America. Negotiations are now underway and probably at an advanced stage. To give the U.K. an acceptable *quid pro quo* for the loss of the unitary provisions, it seems to me that one of the concessions would affect U.S. service companies operating in the U.K. North Sea Continental Shelf. Under the latest protocol they would be considered to have a permanent establishment if they operate in the North Sea for thirty days or more.

Inclusion of the British Petroleum Revenue Tax as a creditable tax

Another amendment to the protocol was included at the urging of Senator Kennedy who objected in the Senate debates to the inclusion of the PRT as a creditable tax without any limitation. His objection was that this tax which might otherwise not be creditable under the new concepts in Revenue Ruling 78-61, [1978-1 C.B. 221] could result in excess credits which could be offset against other foreign source income. Many people, including some government officials who testified at the 1977 Treaty Hearings, thought that the PRT was a creditable tax even without the aid of the treaty. This notion was challenged when Revenue Ruling 78-424 [1978-2 C.B. 197] was published at the end of 1978 just when the third U.K. protocol was being negotiated. That ruling stated that the PRT is not a creditable income

© 1980 International Bureau of Fiscal Documentation – BULLETIN

tax. The new protocol will contain some limitation on the amount of credit which will be allowed for PRT, limiting the PRT to the U.S. tax on U.K. oil extraction income.

We hope that in spite of these difficulties, the Treasury will resist any pressures to roll forward the date for which the ACT refund is to be given by the British tax authorities since this would cause considerable confusion. The dates of the treaty do, after all, offer considerable benefit to the U.K.

One example is the elimination of Article XV as it affects the U.K. taxation of U.S. banks in the United Kingdom.

Disallowance of British Corporation Tax satisfied by payment of ACT as creditable income tax

There has also been a further development in the U.S. in regard to the U.S. foreign tax credit of the U.K. Act in the absence of the treaty. The Manhattan District Director has announced his intention of disallowing the U.K. corporation tax as a creditable income tax to the extent that it is satisfied by a payment of ACT. That part of the U.K. corporation tax according to the Manhattan District, does not meet the criteria for income tax established in Revenue Ruling 78-61 because the advance payment is not measured by gain but by distributions. This might be considered to put more pressure on interested parties to get the treaty ratified because the treaty would provide for the creditability of the U.K. corporation tax including the advance corporation tax. Nevertheless, I think it would be most regrettable if the creditability of the corporate tax was made entirely dependent on the treaty because there may be technical situations in which the U.S. taxpayer may not be able to have recourse to the treaty — situations which the Treasury has not thought of in advance — and also because of the delays in ratification which are not the fault of U.S. taxpayers who have for some years been faced with great uncertainty on the treatment of this tax. I would refer you to the letter from the U.S. Chamber of Commerce dated November 27, 1978 to Commissioner Kurtz. In this letter the Chamber urged the IRS to announce promptly that it will allow credit for taxes imposed by countries having tax treaties with the United States on the basis that the existence of the tax treaty provides implicit recognition that the income tax the treaty has dealt with is a creditable income tax.

Procedurally, the U.K. treaty is in renegotiation. When a third protocol is signed it has been agreed between the two countries that it will first go to the U.S. Senate for ratification and then to Parliament in the U.K. for ratification. We are therefore to be many months away from ratification. Quite apart from any difficulties which may be encountered in the U.S. Senate, the situation in Britain is that there will be an election sometime between now and the Fall. We cannot but wonder whether the present government will wish to debate this treaty in the last few months before an election in view of the opposition that has been voiced from several of its constituencies.

Other important nuances of the U.S.-U.K. treaty negotiations will be discussed today in the panel discussion which will follow. Let me touch on several interesting points as to other countries.

France

The recently published Protocol to the French treaty seems to be one which may have a good chance of early ratification. This Protocol makes a number of updating changes to the existing treaty. Of particular interest are those provisions which seek to avoid the double taxation of investment income of U.S. citizens resident in France. The French have precipitated the need for this protocol by changing their internal law to make U.S. citizens living in France subject to French tax on their worldwide income. That change was delayed and finally came into effect on January 1, 1979. The new protocol would also exempt U.S. citizens from French tax on remuneration for services while in the United States. This follows to some extent the French territorial concept and also prior practice in France.

Of great interest is the proposed method of avoiding double taxation on U.S. source investment income which would now be subject to worldwide taxation in both countries, with no U.S. foreign tax credit for French taxes on the U.S. source investment income. The treaty provides a complicated technique whereby the U.S. will collect a tax of 15 percent on the U.S. dividends, which is the same rate of tax the U.S. would collect from French residents. The French will allow a credit for the 15 percent U.S. tax against the French tax and the U.S. will then allow a credit for French tax on the U.S. dividend, by converting the source of the dividend to foreign source. This is called the *triple bite approach* and it seems to me that this will form the basis for dealing with this problem in other treaties, such as Canada and Denmark.

Canada

The treaty with Canada is under active negotiation but there seems to be no specific timetable for completion. There are many issues to be resolved which result from the two countries' close relations and geographical proximity The treatment of Canadian dividends is one serious difficulty. The U.S. would like to see a lower withholding rate than the present 15 percent Canadian rate under the present treaty. The treaty discussions also have to deal with the problems of capital gains taxation for individuals. Canadian rules on taxing departing aliens on unrealized gain and the U.S. rules of taxing them on realized gain can result in timing differences and in double taxation. Agreement on these issues does not seem to be imminent, and possibly the present treaty is basically viewed as adequate by the two governments for the time being.

Germany

Negotiations with Germany are still at the stage of dealing with the basic issues of German taxation of dividends paid to U.S. parent companies, and the question of discrimination against U.S. shareholders as inherent in the German imputation system. Requests for comments from U.S. taxpayers have been sought by the Treasury. So far, there are insufficient negotiations to warrant public meetings.

Italy

Negotiations on the Italian treaty seem to be moving at a steady but not frantic pace. The issues there include the treatment of Italy's imputation system, the problem of dual corporate residence (as discussed in our August, 1978 report) which the Treasury proposes to deal with on an "80-20 company" approach.[1] New source rules with respect to royalties are also the subject of discussion of this treaty, reflecting the new interest in the U.S. source rules in general. The problem of Italian local taxes seems to be aggravated by the fact that we cannot include our U.S. state taxes as taxes covered in our treaties. A new treaty does not seem to be imminent.

Jamaica

There are some negotiations with developing countries. The Treasury briefings on Jamaica are of interest because they represent some of the U.S. tentative concessions to developing countries, short of tax sparing. The principal innovations are to be found in connection with the permanent establishment rules. These are similar to those found in treaties with Korea and the Philippines. The main thrust seems to be to permit the developing country to tax U.S. taxpayers on a net income basis on projects in the country for a certain length of time. The U.S. seeks the benefit of taxation on the net income basis as opposed to a withholding tax on gross income. This will be of importance to U.S.

1. *Bulletin* Editor's note: This would mean that if a corporation would receive 80 percent or more of its gross income from sources within Italy, it would be deemed to be a resident of Italy for tax treaty purposes. Otherwise, it would be deemed to be a U.S. resident under the treaty.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

taxpayers if the IRS does not withdraw its ruling on the creditability of the Tanzanian withholding tax on management service fees. See Rev. Rul. 78-234, 1978-1 C.B. 237.[2]

Many developing countries impose heavy withholding taxes on management service fees. While the negotiations are well under way in this treaty, I think it is impractical to believe that treaties with developing countries are the way to resolve foreign tax credit problems which arise from the concept of the Tanzanian ruling, given any practical forecast of the speed with which we will conclude treaties with developing countries.

Argentina and Nigeria

Negotiations have commenced with Argentina and there are to be discussions with Nigeria, which terminated its treaty with us earlier this year.

Eastern bloc

The Eastern bloc continues to do well. We have recently seen the publication of a treaty signed with Hungary.[3]

Estate tax treaties

Two estate tax treaties have been signed recently, one with France, which has been submitted to the Senate, and one with the U.K. which may be submitted shortly. These treaties are receiving insufficient attention and they may have some serious deficiencies. Without public discussion, the U.S. seems to be abandoning its policy of taxing its U.S. citizens on the basis of citizenship with a credit for foreign estate tax on foreign situs property. The new treaty with the U.K. adopts the domicile approach, which the U.S. government always stated to be unsatisfactory as a basis of taxation because we do not know what domicile means from a federal standpoint or even from a state tax standpoint. The estate tax treaties seem to be concerned only with avoiding estate taxation of business excutives dying in a foreign country while on a foreign assignment. Little consideration seems to be given to U.S. private citizens living in those countries for other than business purposes.

Totalization agreements

Finally, I would like to mention the new breed of agreements which technically are not treaties and which are being concluded by the Social Security Administration: the *Totalization agreements*. These agreements deal with the contributions and benefits for employees working in several countries in the course of their careers. The agreements try to avoid the costs of double coverage and the loss of pension benefits through mechanisms which involve electing out of individual coverage where dual coverage arises and the aggregation or "totalization" of working time in more than one country in computing pension benefits. This is an area which bears watching because it does not come to your attention through the normal tax treaty channels.

Totalization agreements with Italy went into effect in November, 1978, and an agreement with Germany has been submitted to Congress for ratification. Fortunately the ratification procedures do not require affirmative action by Congress. The agreement must be submitted to Congress for ninety days while it is in session and during this period unless either House adopts the resolution to disapprove the agreement it takes effect. The taxation of benefits continues to be covered by the tax treaty.

Foreign social security taxes which are covered by a totalization agreement will not be creditable for U.S. tax purposes.

PANEL DISCUSSION

Jenks. Thank you very much, Marianne, for that excellent analysis of the current treaty status. I was particularly interested in the discussion of the U.S.-U.K. treaty which seems to be in serious trouble on both sides of the ocean.

At this time I would like to turn the podium over to *Bob Patrick*, formerly International Tax Counsel, now with Exxon, who will lead the discussion of current tax treaty policy issues.

Patrick. Thank you Tom. I think that we are fortunate in having here today a number of people with backgrounds and interests in the U.S. tax system and tax structure. Those that are participating on the panel this morning are *Daniel Lundy*, Tax Director IT&T, *David Brockway*, International Tax Counsel of the Staff of the Joint Committee on Revenue Taxation, *David Rosenbloom*, International Tax Counsel of The Treasury, *Professor Stanley Surrey* of Harvard Law School, *Leif Muten* of the Fiscal Affairs Department of the International Monetary Fund, and *Hugh Ault*, Professor of Law at Boston College Law School.

Fundamentals of U.S. income tax treaty policy neglected

Compared to many areas of U.S. tax law there has been relatively little discussion, or at least limited public discussion, of the fundamentals of U.S. income tax treaty policy. It was for this reason that the United States Branch of the International Fiscal Association organized a committee on tax treaties two years ago, and it is the reason that U.S. income tax treaty policy is the theme of this year's national meeting. We are devoting the technical portion of our program to the exploration of certain income tax treaty policy issues. One of the criticisms has been that U.S. tax treaties in recent years have attempted to do too much, therefore have become controversial and so have contributed to the problem of obtaining Senate consent to ratification or, indeed, have impeded the actual negotiating process with foreign countries because of what was being demanded by the U.S. negotiators. On the other hand, it has been argued that the one reason the United States has so few treaties compared to a number of developed countries, and so few treaties particularly with developing countries, is because United States treaties typically do very little with respect to changing U.S. taxation of United States taxpayers, and as a result there is no substantial reason to enter into treaties with the United States. Thus, an important aspect of our inquiry here is what it is that our treaties should be attempting to do. Obviously, concern is expressed increasingly about the treaty negotiating and ratification process with the delays Marianne Burge referred to earlier. The process of negotiation and ratification, and the input that goes into the U.S. tax treaties, will be discussed later by *David Milton's* group. David is a member of our U.S.A. Branch tax treaty committee who has been giving particular thought to the treaty processes.

Underlying purpose of U.S. tax treaties

Now, United States tax treaties themselves are of course built on the precedent of previously negotiated treaties and increasingly upon the OECD model convention including the revised version of that model in 1977. I think one also detects in negotiated treaties with developing countries the increased influence of the U.N. group of experts on treaties with developing countries. The work of U.N. group in particular will be discussed later this morning. I would like at the outset to give a description of what is a possible way of looking at the purpose, the coverage and

2. *Bulletin* Editor's note: This Ruling provides that the Tanzanian withholding tax on the gross amount of management or professional fees received by non-residents is not the substantial equivalent of a withholding tax and is therefore not creditable under section 901 of the Code. Such taxes imposed on the gross amount of dividends, interest and royalties received by non-residents, however, do qualify as creditable income taxes.

3. *Bulletin* Editor's note: See for a discussion of this treaty Edward J. Leahy: An analysis of the new Hungary-United States tax treaty in 19 EUROPEAN TAXATION 325 (1979).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

the intent of the U.S. tax treaties. I think the generally accepted underlying purpose of the treaties is to contribute to the freedom of the flow of goods, capital, technology and personnel across national boundaries and to do so by reducing substantive and procedural tax burdens principally through the elimination of double taxation, by harmonizing tax rules, by providing a mechanism for resolving tax disputes and by authorizing national tax administrations to cooperate with each other in administering and enforcing their internal tax laws.

The United States Model Treaty

The United States model treaty, which is used as a basis for starting negotiations with foreign governments, seeks to meet those rather broad goals by providing rules on such questions as the right of a country to impose tax on the basis of the connection of the taxpayer, property, or activities in the taxing country and the determination of allocable income and deductions to ascertain taxable net income. In the case of certain withholding taxes, limitations on the rate of tax are imposed which reflect a balance of considerations between the treaty partners, including revenue flows. The model further provides a tax credit mechanism for avoiding double taxation of the same income, requires non-discriminatory tax treatment for treaty partners, and provides machinery for cooperation between tax administrations to resolve tax disputes and to exchange information and enforce compliance with domestic and treaty rules. Now these general objectives and principles incorporated in the treaties subsume a great many policy decisions and cut across a great many internal rules in attempting to harmonize or accommodate the laws of two countries. Part of our focus this morning will be to talk about some of this interaction.

While the United States has unilaterally through its tax credit mechanism adopted rules to relieve double taxation and accommodate foreign tax systems to U.S. rules, it is virtually impossible to encompass all of the detailed problems and the differences which may arise between the tax laws of two countries. I think the protocol recently signed with France illustrates the difficulty in attempting to resolve a number of double taxation problems solely through statutory provisions. One of the themes of our discussion this morning should be when, if ever, it is appropriate to modify United States tax laws by treaty, and what is the proper approach when one is seeking modification to accommodate the internal tax rules of another country. It is clear that we need some basic policy guidelines as to what our treaties should be accomplishing. Fortunately, the Treasury has been encouraging an examination of policy in this area.

Aspect of U.S. tax policy for treaties

This portion of the technical session will concentrate on four aspects of U.S. tax policy for treaties. *First*, the treaty rules affecting U.S. laws on the taxation of nonresident aliens and foreign corporations; *second*, those treaty rules that affect United States taxation of United States citizens and residents, *third*, issues in the negotiation of tax treaties with countries having integrated tax systems; and, *finally*, current issues which arise in negotiations with developing countries.

U.S. taxation of foreign investors

The first of these categories, which is really a question of the development of U.S. tax policy with respect to U.S. taxation of foreign investors, also gives us the opportunity to review to some extent the structure of tax treaties and the types of substantive rules that are applicable in determining when a country has a right to tax and under what conditions. My own comment on each of these subjects hopefully will be fodder for comment by our panelists.

I think that United States policy in treaties with respect to the taxation of foreign investors or foreign persons doing business in the United States has tended to grow out of a principal focus by the United States on U.S. business or individual U.S. investors investing or operating abroad. As the historical pattern has developed, the treaty rules which were looked at had to do with when Americans should be taxed abroad, what sort of permanent establishment limitation do we want to have foreign countries apply to Americans, what sort of withholding rates do we want to have on income received by American investors, and, only in turn, through a general notion of reciprocity, have we asked what rules the United States should adopt on its side with respect to taxing foreign investors in the United States. I suggest that the orientation has been to look primarily at these rules in terms of their effect on U.S. investors abroad. This should also be put in some general context today as to what United States policy is toward foreign investment in the United States and how that is reflected in United States tax treaty considerations. Historically, we had the major change in U.S. domestic tax rules in the 1966 Foreign Investors Tax Act which in large part was intended to facilitate foreign investment in the United States. There have also been efforts in subsequent years to eliminate U.S. withholding taxes on the investment income of foreign investors and other activities to stimulate foreign investments in the United States. I asked *David* [*Rosenbloom*] if he could comment today on how the Treasury perceives U.S. tax policy with respect to foreign investment, and how that might be reflected as a general policy matter in any given treaty.

Internal Revenue Code and U.S. tax treaties are in need of harmonization

Rosenbloom. You said tax policy. I think the first point to make in regard to United States law in that regard is that the Code and our treaties are badly in need of harmonization. We use an entirely different language in a treaty than we use in the Code, a language which we have inherited from, in large part, either prior treaties or the OECD. Many of the words that are determinative under the treaties are not found in the Code and the treaty concepts have grown up as a kind of a parallel body of law.

Our basic approach to foreign investors in the U.S. is to paint in the Code on a very broad canvas, to cast our net extremely wide without any effort (with the exception of the section 864 rules) to fine tune the system. We then tend to carve away from that broad assertion of jurisdiction in individualized treaty arrangements, treaty bargains. Thus, I assume, when you speak of tax policy, what you are really asking is what policies are we following in the treaty negotiating process. There is, incidentally, work to be done in the Code, both in putting the Code and the treaties into something of a more parallel track, and in reviewing the 1966 Act — which in some respects is to say the least, a little peculiar.

In the treaties I think you are quite right, *Bob* [*Patrick*], the inherited view — and probably the still prevailing view — is to approach negotiations with most countries, (there are one or two fairly insignificant exceptions) with the background knowledge that there is greater outflow of U.S. investment to that country than inflow from that country. But I think that our policies would not be significantly reversed if the shoe were on the other foot, at least insofar as the relationship with most developed countries is concerned. We would still, as a matter of general tax and treaty policy, not want to assert source basis of taxation to the full extent that our Code allows. We have too many problems areas; after all, the residence country is ultimately in the better position to tax its own residents than the source country.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Saving clause in U.S. tax treaties

Patrick. Let's shift gears a bit and talk about another aspect of U.S. treaty policy that is of increased importance in view of the general concern over foreign tax credit interpretations. That is, not the taxation of foreigners investing in the U.S., but rather to what extent the United States in its treaties should be modifying United States tax rules concerning the taxation of U.S. citizens and corporations. As you all know in our tax treaties we have a very standard provision, basically unique to the United States, which says that notwithstanding any of the provisions of the treaty, United States citizens, residents, and corporations will be taxed as if the treaty had not come into effect: we will simply apply our domestic law and tax United States citizens under this saving clause with some limited modifications for foreigners who are resident in the U.S. Our treaties do contain a limited exception to the saving clause that, in effect, guarantees at least the principle of a foreign tax credit for the United States citizens and residents with respect to the foreign income taxes covered by the treaty. That exception stands as a guarantee to the other treaty partner that, for those taxes considered income taxes in the treaty, the U.S. will give a foreign tax credit, substantially in the form or method which is applied from time to time in the Code. Whether it be per country or overall limitation or other procedural limitations, in any event the principle will be maintained. It seems that in considering the appropriateness of the saving clause policy, it is useful to distinguish several different situations.

The *first* case might be a modification of U.S. law applicable to U.S. citizens and residents when it results in an aggregate reduction or elimination of both foreign tax and U.S. tax. Tax sparing would probably be the best example of that, which we will talk about a little later when we get to treaties with developing countries. That is one type of case where U.S. law could be affected by effectively eliminating taxation for U.S. citizens.

The *second* situation is one in which the U.S. retains a residual right of taxation, after a credit for foreign taxes, but the U.S. in its negotiations with the foreign country is being asked in the first instance to cede tax jurisdiction to the foreign country. This would arise, for example, where they want a change from what would be our statutory source rule to give them a right to tax in the first instance, and the correlative of that taxation right would be that the U.S. would give a foreign tax credit for their tax on what is now U.S. income but would become foreign source income from that country. In this example, we are still modifying the application of U.S. tax laws to United States citizens, but it could be characterized as a determination of which country has the initial right of taxation and which has the residual right of taxation under a foreign tax credit system. We have seen previously some rulings on this dealing with the Belgian treaty, the Japanese treaty in a case involving U.S. crew members on Japanese aircraft, in which those treaties are interpreted as changing the source rules to provide a foreign tax credit for foreign taxes on what, under the Code would be U.S. source income. But in those cases it is then treated as income from the treaty country and they tax it and then the U.S. gives the credit. Similarly, as Marianne Burge explained, in relation to the protocol to the French treaty, efforts are now being made to deal with the situation of U.S. citizens residing in a foreign country that taxes on a residence basis and who receive income from U.S. sources, thus creating a very difficult foreign tax credit issue as to who taxes the income first and who gives a credit.

Now, a *third* example of treaty coverage affecting the U.S. taxation of U.S. persons that is of current importance is the question of what is a creditable income tax. Perhaps the most notable recent case is the U.K. treaty where you have both Petroleum Revenue Tax and the Advanced Corporation Tax as taxes covered under the treaty. Most people seem to agree that where there is a reasonable doubt about whether or not a particular tax is creditable, it is a proper function of a tax treaty to clarify the status of the tax. And you could have something like the provision in the Israeli treaty which treats forced loans for the period of time that they are outstanding as if they were taxes subject to being treated as a refund of tax, when and if these loans are repaid to the U.S. investor, even though contrary to previously published rulings on that type of loan, and would not be considered a creditable income tax in the absence of the treaty.

The question I would raise for the panel is *in what cases is it appropriate to modify U.S. statutory law affecting the taxes of U.S. citizens and residents?* Are there guidelines to use in this context? I think we have just seen some indication of Treasury's thinking on this in Assistant Secretary *Lubick's* testimony for [Congressman] *Rosenthal's* subcommittee two days ago in which there was some discussion in the context of oil tax credits as to the appropriateness and inappropriateness of the use of treaties to deal with the foreign credit provision. Perhaps during our discussion *David Rosenbloom* might want to summarize generally the sentiment expressed there.

May we have some comments, first, on whether there is a consensus on the panel that the types of situations described — at least the one of changing source rules — is appropriate, and second is the use of treaties for providing for the creditability of foreign taxes an appropriate and acceptable use of the treaty process?

Ault. The first one I think is easy. It seems to me it is perfectly consistent with the purposes of tax treaties. The situation is one in which double taxation would literally arise if there is not some fine tuning of the two jurisdictions. It comes out of the negotiation process in which we are not changing our domestic source rule but fitting it together unilaterally with somebody else's source rule given the fact that the source rules are not written in stone someplace. It seems to me the Japanese rule is perfectly consistent with our treaty policy and acts to fit the edges of the two systems to avoid double taxation in this particular situation.

German pension costs

Lundy. I am thinking of the situation involving German pension costs under which it is extremely difficult to fund German pensions. As a result, German companies have very large accrued but unfunded pension liabilities. They are even preferred liabilities; they are the strongest liabilities the Germany company has. When a U.S. company receives a dividend from this German subsidiary the IRS takes the position that the earnings and profits in the section 902 computations have to be made by treating those German pension costs as not being a proper charge against earnings and profits. As a result the credit can be diluted. Assume this is not a proper charge against earnings and profits, which I don't concede in any way. But even if it were, it seems to me the German treaty provisions could be applied here in order to give a credit that would override internal law. The provision in the German treaty calls for giving appropriate credit for German taxes paid. When you receive a dividend from a German company it seems to me in a case like that the treaty could be very fruitfully used to iron out a problem that otherwise creates timing differences and loss of credits where double taxation really wasn't intended.

Muten. I would say that the fact the United States stands practically alone in the world in taxing nonresident citizens would make it a rather national thing for the United States to be more ready to make such concessions than other countries. It would seem that this whole idea of taxing citizens throws a monkey wrench into the machinery, and it is up to those who throw it in to pull it out.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Ault. I guess I would distinguish between this case and a source rule case. I think I would have a little more hesitation in saying that in the situation in which they have a different principle under which deductions are allowed should be accommodable in the treaty. I would be a little slower to say the treaty negotiation process was appropriate than I would be to say that a different source rule was appropriate which derives purely out of the application of the international aspects of the U.S. system.

Patrick. Would you take that same view with respect to, say, granting a deduction for gifts to charities in the other treaty country?

Ault. I would take the same view, yes.

Patrick. Do you have a way of drawing a line. You may be more cautious. Is it inappropriate?

Ault. I think I would try to distinguish three kinds of situations. One is a situation of international rules and it is the problem of harmonizing those international rules. That I think is the classic case for treaty harmonization. Secondly, where there are problems involving provisions in the countries which are basically determinations of income. Thirdly, since Professor Surrey is here and therefore we cannot get through the morning without saying tax expenditures, there are provisions that involve tax expenditures. In the latter two cases I think I would want to think about how I would be applying my treaty principles.

Surrey. I think I would agree with *Hugh* [*Ault*] in general, but in the source rule aspect as he indicated you are largely dealing with an overload, and the question is — should there be an overload with the two taxes. You are dealing to some extent in creditable taxes, where the line is obviously indistinct. The treaty purpose is to eliminate overload of two income taxes. When you depart from that and say the treaty is to make a concession to reduce really the basic U.S. rule of what is net income I think it is quite a different matter and I would agree with *Hugh* [*Ault*] on that.[4]

Rosenbloom. I guess I believe the treaties can be used for any of the three purposes that have been enunciated, in appropriate circumstances. I think the source rule changes presuppose that fact. Many of our treaties do indeed change United States source rules. That is a lot of water under the bridge. I think the changes are probably correct. If we were not able to change United States source rules in treaties we would have even fewer treaties than we do. I also think that a treaty should — and by this I do not necessarily mean that all U.S. treaties do — guarantee a credit independently of the Code. Now it is one thing to guarantee a credit independently of the Code for another country's taxes which would otherwise be independently creditable, or which the negotiators believe would be independently creditable. It is another thing to take the next step and credit taxes that there are some doubts about. I think that is appropriate under carefully controlled circumstances and I think *Marianne* [*Burge*] said that earlier in her exposition. Incidentally, I noted *Marianne's* [*Burge*] comment that the ruling on the Petroleum Revenue Tax settled the question of whether that tax is creditable. I think that is a very nice view, Marianne, but I do not think it is exactly accurate. Nobody really knows, and we will not know for many many years on some of these very difficult credit questions, what is creditable and what is not creditable. I think there are plenty of grey areas. At the same time, I think there are also things that we know are not creditable.

I would hesitate a long time before agreeing to credit an economically important type of payment that I felt, really flat out, did not have a chance of being a creditable income tax for United States purposes. On *Dan Lundy's* point, I think that too is probably something that can be discussed in a treaty context. The question there, really, is whether (and in describing it this way I am giving the German situation every benefit of the doubt) if you have an amount which is accrued on the books of a German subsidiary and which cannot be used under any circumstances to pay dividends to the United States parent, but for one reason or another the item does not meet United States rules for deductibility because, for example, it is a pension which does not qualify under ERISA, should the United States in order to avoid dilution of the credit recognize not that income is reduced — that's different — but that earnings and profits are reduced by that amount. That amount — remember my assumption of it not being able to be used for dividends — will never be available to reduce your earnings and profits to zero, so you will always have less than one hundred percent of the credit available. I think that is a legitimate treaty issue. But I diverge sharply from *Dan* [*Lundy*] if he is suggesting that one could find a resolution of that issue in any United States treaty as it presently exists, with the possible exception of the newly negotiated treaty with Denmark.

Patrick. Thank you. I am going to raise one more question before we take a break, and then turn to two major topics of interest: treaties with countries with integrated tax systems and treaties with developing countries. I would like to ask *David* [*Rosenbloom*] just one more question. It is part of our first topic of taxing foreigners in the United States and should be mentioned at least briefly here because it has been such a keen treaty issue for the last couple of years in connection with the U.K. treaty considerations. That is whether U.S. tax treaties affect taxation by the states of the United States and what I would simply ask *David* [*Rosenbloom*] at this point:
One, what is the U.S. negotiating position when faced with a request by foreign countries that U.S. state taxes are covered by our treaties; and,
Two, if he would give some suggestion as to how he sees the fact that the decision of the Senate on this issue has affected U.S. treaty negotiations with other countries.

Can tax treaties affect U.S. state taxes?

Rosenbloom. I think we all know the history of the United Kingdom treaty dealing with U.S. state taxation. It was clear, at least at the time of the Senate vote, that a two-thirds majority could not be mustered for a treaty that would bind the states even to the relatively minimal extent of Article 9 (4). I think we assume that continues to be the case; and if anything, Congressional sentiment is perhaps a little bit stronger today than it was then. Since we like to negotiate treaties that we have some chance of getting ratified we are not presently including any general provision covering U.S. state taxation in our treaties. That notwithstanding, the case for allowing the individual states to experiment with foreign taxation is extremely weak. My personal view is that tax treaties are really every bit as much an instrument of foreign policy as they are of taxation. It seems to me that the states are recognized to have very little legitimate role in the foreign policy areas. It is only when the word "tax" appears in the caption that everybody gets excited. I like to believe that the right long-range answer is for the United States to cover state taxes generally in its tax treaties, particularly since we regularly insist that any country that has significant state taxes cover its own state taxes on its side, since our state taxes are usually by no means as substantial as theirs. But it is not in the cards immediately. I do not exclude it in the long run.

* * *

4. At this point in the proceedings the tape failed to pick up additional remarks by Professor Surrey. In general, those comments paralleled several that were contained in his article, "United Nations Group of Experts and the Guidelines for Tax Treaties between Developed and Developing Countries", 19 Harvard International Law Journal pp. 1-70 (1978). The essence of this article also appears in PUBLICATIONS OF THE INTERNATIONAL BUREAU OF FISCAL DOCUMENTATION No 25: THE EXCHANGE OF INFORMATION UNDER TAX TREATIES at 34 (1978).

© 1980 International Bureau of Fiscal Documentation — BULLETIN

Patrick. Next, let us try to divide the world up into a couple of major problems geographically for our treaty negotiations. I think it is fair to say that the major issue today with negotiations with developed countries is basically the question of the interaction of our tax system and our tax treaty rules with countries having integrated corporate — shareholder tax systems. I refer everyone to *Hugh Ault's* article for examples on some of the international issues in corporate tax integration in the volume of Law and Policy in International Business in 1978 that was dedicated to Nate Gordon.[5] I have asked *Hugh* [*Ault*] today if he would introduce this topic for our discussion and then we will let the panel comment on what they perceive as the relevant considerations and issues; what U.S. policy has been in this area; and, indeed, what it should be. Hugh.

5. Hugh Ault, International Issues in Corporate Tax Integration, 10 Law and Policy in International Business 401 (1978).

INTERACTION OF THE U.S. TAX SYSTEM AND U.S. TAX TREATY RULES WITH FOREIGN INTEGRATED CORPORATE-SHAREHOLDER TAX SYSTEMS

Hugh Ault

With an audience like this I am assuming you all are generally familiar with the integration systems as such and also are in general familiar with the problems that we are going to be talking about. I think it would be useful to give a little background about exactly how the problems arise and what are the arguments. Basically, the treaty questions in the integration context arise because all of the integration systems in their internal structure do not grant the imputation credit to foreign shareholders. Having finally to grant the credit as a matter of domestic law, the issue then moves to the treaty level which is our principal concern today.

I think discussions can really be divided into two parts. First, questions of theology, and second, questions of applied religion. I think maybe you can understand the applied religion better if you get the theology first.

Basic principles of corporate-shareholder tax integration

If you look at the integration countries their theological principles are something like this: The first commandment is that the integration system operates entirely at the shareholder level. At the corporate level all corporations, as such, are taxed the same regardless of the nationality of their shareholders. At the shareholder level where the integration system operates it is appropriate to distinguish between shareholders who are subject to worldwide taxation and shareholders who are not subject to worldwide taxation. And therefore it is appropriate to grant the credit to worldwide tax shareholders and inappropriate to grant the credit to foreign shareholders. This failure to grant the credit to foreign shareholders is not a matter of discrimination because everything is operating at the shareholder level rather than at the corporate level, and there are legitimate distinctions between foreign and domestic shareholders.

Now, assuming that some heresy creeps in and you are going to grant some credit to foreign shareholders, the second integration commandment is that in any event you will not give the credit to foreign corporate shareholders. There are really two reasons: *one*, granting the credit to corporate shareholders does not have anything to do with the basic idea of integration which is after all to integrate individual and corporate taxes and integration is not appropriate as long as the income is still in the corporate level solution, and *secondly*, the integrationists say that the responsibility for granting relief comes at the point of distribution to individual shareholders and from the country of residency of the corporation that is making the distribution. So when, for example, dividends come from a German company or a U.K. company to a U.S. company under the European view as expressed in the E.E.C. draft model directive it is the responsibility of the U.S., if anyone, to give distribution relief when the ultimate individual shareholders get the distribution.

United States: existing corporate-shareholder tax integration systems are discriminatory

The U.S. sees the world quite differently. We have a different set of ten commandments. Traditionally, the U.S. has argued that the failure to grant the credit was discriminatory and this argument has taken several forms.

Most simply stated it says there is really no corporate tax in an integration system since it is really just a withholding tax on shareholders and therefore it is a withholding tax that violates international withholding norms, Germany's 36 percent, for example.

A somewhat more sophisticated view, I think, is to say that despite its formal structure the integration system does operate at the corporate level. It operates at the corporate level because it gives the corporation the ability to increase the return to shareholders by increasing the level of distribution. This is true whether the system takes the form of a split rate system, in which an increased distribution lowers the corporate rate, or in the case of imputation system in which a dollar of dividend paid allows the corporation in effect to distribute through the government an additional amount of dividends to the shareholders. So, if the imputation system is really seen as operating at the corporate level then it is a discriminatory system and the failure to grant the credit to U.S. shareholders is discrimination.

This principle of U.S. theology is usually joined with a second principle, that is, that withholding tax rates ought to be reciprocal and that because a country has a lower corporate rate than we do is no reason for it to have a higher non-reciprocal withholding rate. Those are the ten commandments, slightly summarized, of integration in the U.S.

Corporate-shareholder tax integration in practice

When we move to the level of applied religion where theological purity has to be tempered with political and economic reality the situation gets a little bit more complicated. There have been two important developments here. One as you all know, France is granting the credit in its treaties to portfolio investors. Also, the U.K. in the U.S.-U.K. treaty which still awaits ratification, granted one half of the distribution relief to direct investors. The U.K. solution works in part because the U.K. had only partially integrated its system; that is, only about half its corporate tax was integrated at the shareholder level. This brings us to the situation with Germany where the process of tempering theology with reality really has not made much progress.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

I think the German situation puts most starkly the conflicting views and concepts as to the integration problem. The Germans, rooted in their view of integration theology and pointing to the fact that U.S. subsidiaries of German corporations pay 46 percent plus a 15 percent withholding tax, refused to consider granting the credit. Indeed, the German Parliament forbade the granting of the credit to foreign shareholders in its enabling legislation. A quite elegant piece of bootstrapping I think. The United States on the other hand, viewing it from our perspective, says that the 36 percent German tax is really a withholding tax. Thus, a comparable German company which distributes all its income has really zero tax and therefore the German controlled company bears a lower rate of tax than the U.S. controlled company. As a result, Germany has in effect financed its integration system by making up the revenue loss by increasing the tax on foreign-owned German companies. Therefore, the credit ought to be granted. I think it is a fair statement of the impasse in the current treaty negotiations.

There are some other factors which further complicate this problem. Whatever the theoretically right answer is I think the U.S. has to ask itself if it wants to encourage portfolio investment in German or other integration country corporations. If Germany is not a real problem, then look to Canada. Do we really want to insist that portfolio shareholders get the imputation credit? On the other hand, with respect to direct investors, it is clear that both the Treasury and the investors have an interest in getting the German rates down to approximately the U.S. rates, since presently Germany is a potential excess credit-generating country. One possibility there would be to go to a zero withholding rate by Germany. Just giving up reciprocity as a principle is a possibility although one that breaches our principle that we are entitled in fact to the imputation credit. On the other hand, Germany is arguing non-reciprocity in the other direction. It is that arguing because of its split rate and the famous foreign effect when you compare wholly-owned German companies with foreign controlled companies that distribute out and reinvest. They are entitled to non-reciprocal withholding rates only in the other direction. Ten percent of zero rather than zero and ten percent.

Where does this all leave us? I hope *Dave* [*Rosenbloom*] can tell us more after I have completed this summary. But I think, to summarize: Germany really puts in a very stark way the implications of the two ways of looking at integration; if the traditional U.S. position that we are entitled to get the imputation credit is correct, and if we apply OECD withholding rates, then Germany is really only going to be collecting 5 percent withholding tax on U.S. investments in Germany. That seems an improper division of the investment tax base. On the other hand, if you look at it from the U.S. point of view, Germany has indeed taken advantage of the fact that shareholders are not going to get the credit in structuring both the financial and international aspects of their integration system. How these theological principles will be worked out in this world of sinners I am not sure but I think they are very difficult questions.

PANEL DISCUSSION

Patrick. Thank you *Hugh* [*Ault*]. If it is possible *David* [*Rosenbloom*] may like to make some comment on the general U.S. negotiating position; it being understood that the fact that the U.S. is now engaged in negotiations, poses some constraint on details.

Variety in corporate-shareholder tax integration systems significant

Rosenbloom. I think Hugh's exposition was really superb. The only missing aspect was the treaty policy vis-a-vis a less developed country with an integration system. That does come up with more frequency than you might expect, since the old British system was in effect an integrated tax system.

We encounter that system in one form or another in a large number of former British colonies and what we do in that instance may be a little different than what we would do with respect to developed countries. In dealing with developing countries, we tend not to try to reduce source basis taxation below the credit limit. Another point here: there are variations in integrated taxes and to my way of thinking, the variations make a difference. For example, some countries have relatively low corporate rates, Denmark and Italy, for example. Some countries integrate relatively small portions of the corporate rate so that you can say that there remains a fairly substantial domestic tax on dividends at the shareholder level, Denmark for example. Some countries are concerned about funding the imputation credit. Canada allows the credit irrespective of whether it has collected any taxes at the corporate level. Italy is the same. There are other differences. For example, Canada grants a non-refundable credit. These variations on an integrated system do have an effect on an appropriate United States posture. I also believe that an integrated system, which is normally adopted to improve local investment in local corporations, has concomitantly the effect of disadvantaging foreign investment in local corporations. This is the other side of the coin, and it is inevitable. The negotiating question is what should we be asking to alleviate that disadvantage. In the United Kingdom context, as you know, we asked for refunds. Quite apart from the theology that *Hugh* [*Ault*] discussed, the refund mechanism is rather complex and, as anybody who has read the technical explanation of the U.K. treaty knows, it raises phenomenal issues regarding the foreign tax credit computations. Personally, at some point I would be willing to give up a little bit of the theoretical purity in favor of a result that achieves justice and simplicity, and that kind of thinking may lead toward dealing with withholding rates. Passing to Germany for a moment, I think Hugh's explanation of the situation therefore is really pretty accurate. There is really a difficulty in communicating. We are dealing with two extremely different world views.

Muten. To begin with, let me say that I speak here purely in a personal capacity, not representing the views of the International Monetary Fund. I shall mainly deal with issues concerning less developed countries.

Some issues affecting less developed countries

One important issue is the extent to which a country like the United States establishes very precise rules on matters dealt with in Section 482 and 861 of the Code. By their way of applying these rules, the United States authorities put taxpayers dealing with them into a position where they really have to listen very carefully to what the Internal Revenue Service has to say. In doing so, these taxpayers may show correspondingly little interest in the attitudes of other competing tax administrations. If I were in charge of a tax department like *Bob Patrick's*, and forced to make a choice between making the U.S. Internal Revenue Service my enemy or getting in trouble with the Inland Revenue, say, in The Gambia, I would in all likelihood find it prudent to be friendly with the I.R.S. and care little about The Gambia.

This is at least what the less developed countries suspect. Therefore, they would very much like to have some feed-back from the big countries, since they feel that they cannot cope adequately with the problems arising.

They hope to get a favorable deal, not least through exchange of information and other administrative assistance, as a result of tax treaties. They are also interested in treaties as a way of assuring a positive result of their tax incentive measures by way of tax sparing. The performance of the U.S. has been disappointing to them, however. It is difficult for foreigners to understand the ratification procedure, under which the U.S. Senate unilaterally

© 1980 International Bureau of Fiscal Documentation – BULLETIN

changes treaties that are the result of bargaining. Delays in ratification and reservations against important treaty provisions make the negotiation of tax treaties with the U.S. a rather frustrating experience.

A simple first line of defense for countries fearing the conflict of interest between their tax administrations and the Internal Revenue Service is the mandatory local incorporation. It might not stop at that, however. By making conditions too harsh on the capital-importing countries on issues such as arm's length pricing, cost allocation, and foreign tax credit — the latest developments in regard to the definition of creditable taxes has really been a very hard nut to crack for these countries — the industrialized countries, and notably the U.S., may force the less developed countries into a situation where they simply feel they have to give up. If they feel that it is beyond their capacity to administer the U.S. kind of a tax system, they might well go for something else. And the alternative might be less then appetizing for those who feel strongly about free enterprise, free trade and free movements of capital across borders.

I apologize for having been perhaps too critical in what I have said, but being the only non-American in this discussion I thought I should try to interpret some of those foreign voices I hear. Outside of this country, I feel more need than in this gathering for explaining and defending the U.S. position.

Patrick. I am sure that there are many of us who take it as very constructive criticism. We appreciate that. If not in rebuttal, at least in comment on this subject I will interject my observation that I do think some of the developed countries, including the United States, could adopt treaty rules to accommodate some requests of the developing countries that are not burdensome concessions and which are reasonable in accommodating the two systems. This is something that can be encouraged, not only for the United States, but for foreign countries as well. Perhaps there is a very real basis for bringing more and more countries into a reasonable tax system but I would like to have *David Rosenbloom* comment on what the LDCs are requesting, what he sees as the possibilities, not merely on the tax sparing issue or the incentive issue, but on the accommodation of some of the substantive rules.

Rosenbloom. We have been through a number of negotiations with developing countries fairly recently and there are a couple of things I am not sure are so apparent when you are dealing with the U.N. group, which we hear when you are dealing across the table from another particular foreign delegation.

There are political implications to the treaties between the United States and particular developing countries, and in some cases I think the political implications may be predominant in the minds of at least the other country. Whether it is possible to secure a treaty conforming to our guidelines — which I take it means pushing a lot of items of income into net basis taxation at source, and being relatively generous with net basis taxation at source — is a hard question. I think, generally speaking, we are moving in that general direction in the United States; but the ability to sell that approach to a particular developing country — which may feel much aggrieved and extremely mistrustful — is really a function of the background and personality and, indeed, the political standing of the people you are dealing with on the other side of the table.

That would not be true, I suspect, if I were representing the United Kingdom, or France, or Germany, but it is true since I am representing the United States. I think that developing countries behave in negotiations in ways — at least in my relatively brief experience — that are not always predictable on the basis of their participation in group discussions of policies. I think the reason for that is a different setting for the negotiations; the country can be extremely reasonable when it is dealing with broad guidelines, but when the question really is posed as to whether they are going to tax equipment leasing on a net basis of sorts, as opposed to imposing a stiff withholding tax, different considerations may result. I think there are serious implications to that decision which some treaty negotiators are not willing to accept.

In any event, we are spending a fair amount of time negotiations with developing countries. I quite agree that the procedure for having these treaties ratified on the Hill has not been altogether satisfactory in recent times. We are hoping that the treaties that we have there now can get ratified fairly early, not so much because the treaties are necessarily wonderful agreements in their own right, but because we have to start somewhere to broaden our treaty network with the developing world.

* * *

Jenks. We are going to start with another panel session dealing with tax treaties. It is chaired by Dave Milton as moderator and includes Mordecai Feinberg and William Gifford. Later, we will have with us my colleague George Beatty, and Joseph Guttentag. At the outset the discussion will consider treaty procedures and the process of those procedures in the U.S. from the initiation to the ratification of treaties.

TAX TREATY PROCEDURES

David Milton

Milton. Thank you, Tom. This does open a new subject for consideration. We had a small band of courageous people who agreed to try and do this, most of whom you see here at the table. *Marianne* [*Burge*] also has agreed to join us together with *Mort Feinberg*, our treaty negotiator, also known as the Associate Director of the Office of International Tax Affairs, and *Bill Gifford* of Wilmer, Cuttler & Pickering.

To introduce the subject and to attempt to set the stage for the panelists I would like to sketch some background color. In common with the range of topics that was discussed this morning, the historical procedures used for negotiation of tax treaties have become a matter of public and private concern over the last several years. Perhaps the most raucous voices heard were those of certain state tax administrators who, in my view, were caught with their hands in the cookie jar by the recently revised U.S.-U.K. income tax treaty as signed December 31, 1975, but who at this point appear to have made away with not just the cookies but also the jar.

Beyond that, there are many tax practitioners who have observed the increasing perplexity of the tax laws around the world and the increasing tendency of the U.S. and some other countries to reach beyond their borders. We have also seen an increasing tendency towards the use of the tax structure, and its application and interpretation, for specific political purposes. The inevitable result of this, of course, is an increased conflict of law and an increased possibility of multiple tax burdens and potential discrimination — as to the kinds of problems you heard about this morning.

The treaty system is a principal weapon in meshing conflicting laws and easing multiple taxation and discrimination. It must become even more significant than it has been. So taxpayers obviously are going to have a greater interest in the treaty

© 1980 International Bureau of Fiscal Documentation — BULLETIN

process and so are those individuals, including members of Congress, who may feel that the Internal Revenue Code should not be altered by forces outside of the control of one or both of the Houses of Congress.

Congressional interest would not be new. There are a number of instances, both recent and past, where legislation or proposed legislation has included provisions dealing with executive branch agreements which have tax subjects.

Recent examples of that would be: (a) [Congressman] *Al Ullman's* modified integration proposal last year which would purport to give the Secretary of the Treasury authority to add a portion of a corporation's foreign tax credit to the shareholder account as a result of agreements with foreign government. These agreements were to be made subject to approval by both the House and the Senate. (b) Then there was the Social Security Act amendment referred to earlier which would provide authorization to the President to enter into agreements establishing totalization arrangements between the Social Security System of the United States and the social security systems of any foreign country.

There are two interesting aspects of the Social Security Act amendment. First, the Act describes certain mandatory and optional provisions for inclusion in the arrangements. In other words, Congress speaks to the content of the agreements in advance. Second, the mechanics provided are for the agreements to be transmitted to Congress whereby they will become effective after a stated time period unless either House adopts a resolution of disapproval of the agreement.

In the past we have had significant acts such as the Mutual Security Act of 1954 which provided that the President should accelerate a program of negotiating treaties for commerce and trade including tax treaties. The Foreign Assistance Act of 1961 is almost the same. Note that here Congress calls the document a "treaty", whereas in the current Acts we have referred to before, they are called "agreements".

You get the question of what is the applicable law. Are there fixed legal parameters that deal with the shape of the tax agreement process? Are these parameters mainly political?

The governing rules that I have found seem to be rather few in number. We have, of course, Article II Section 2, Clause 2 of the U.S. Constitution which reads, in effect, as you all probably know: I, the President, shall have power by and with the advice and consent of the Senate to make treaties provided two-thirds of the Senate is present and concur.

Now, the scope of those words "advice and consent" have not been fully explored by the courts, and to my knowledge the precise division of functions between the President and the Senate, and the treaty making process, has not really been debated fully in recent years. In looking at history, we find that from virtually the beginning the Senate seems to have been content in practice to have the Executive branch negotiate treaties, usually as an independent activity, and then present them to the Senate for consent. The "advice" side seems to have been generally inactive except for such things as the instructions to accelerate negotiations of treaties contained in the Mutual Security Act which we mentioned earlier, and in multilateral negotiations. There are a number of examples of what seem to be "advice" in the multilateral area: Congressional advisors appear to have attended the SALT discussions in sequence, while the Law of the Sea delegation had Congressional members, the International Energy Agency has also had Congressional attendance. But generally, the members of Congress are there as observers and not as delegates. However, there are some who feel that even this moves close to the Constitutional line.

As you all know the President also has the power to enter into other forms of international contracts either as the country's Chief Executive or otherwise under authority of law. Those that are made as Chief Executive do not require the consent of the Senate. So we have an interesting question as to whether an agreement made under one of the Constitutional sources of authority, for the President to make international agreements, could cover tax issues, rather than calling it a treaty. Now we have seen Congress do a similar thing in reverse in the social security area, calling the operative document an agreement rather than a treaty, and then imposing requirements beyond the Senate's advice and consent called for by treaties.

Delegation of tax treaty negotiation function to the Treasury

Within the Executive branch, the President has delegated the treaty negotiation function to the State Department, as I understand it. State has, in effect, redelegated that power to Treasury as to tax treaties. Now those treaties that have some tax provisions, such as the treaties of friendship, commerce and navigation, were negotiated by State with Treasury input. So in theory it could be that Treasury would adhere to State's rules as to procedure.

The only State Department procedure which I have come across that pertains to this topic appeared in the July 24, 1974 revision of the Circular 175 procedure. [Foreign Affairs Manual, Volume 11 (Chapter 700) at sections 720.2D, 722.3, and 723.1.] Circular 175 is an internal State Department guideline and information manual on negotiation and signature of treaties and other international agreements. The procedure provides that as a general objective where in the opinion of the Secretary of State or his designee the circumstances permit, the public will be given an opportunity to comment on treaties and other international agreements. While this was adopted in 1974 its implementation has not been formalized to this time, to my knowledge. Under this procedure the request for authorization to negotiate a treaty is in a form of an action memorandum addressed to the Secretary. Among other things, the action memorandum is to indicate what arrangements are planned with respect to Congressional consultation and also to the opportunity for public comment on the treaty or agreement being negotiated. The officer who is responsible for negotiation is specifically charged with keeping in mind that the interest of the public is to be taken into account and where, in the opinion of the Secretary of State or his designee as the circumstances permit, the public is to be given an opportunity to comment. Of course, this does not say whether that should be a onetime opportunity or only at intervals. This procedure also establishes an objective that timely and appropriate consultation is to be had with Congressional leaders and committees on treaties and other international agreements. The officer responsible for negotiation is to keep the appropriate Congressional leaders and committees advised of the intention to negotiate significant new international agreements, consulted concerning these agreements, and informed of developments affecting them, especially if there is need for implementing legislation (which, of course, we would not find frequently in tax areas).

Treasury practice as to tax treaty procedure negotiations

With this general background, what has been the past practice of Treasury as to treaty procedure negotiations. It generally has followed these lines: First of all, tax negotiation has assumed that the resulting document was a treaty and not an executive agreement. The procedure would be to announce the list of current and proposed negotiations and ask for comments. This list, as you all know, was not kept on an active basis and these comments could be a little old. Since the U.S. model treaty was developed it has been used as a base. In the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

background there was a handbook, I believe a classified handbook, which is not disclosed. As to consultation with Congress, The Treasury Department obviously has, to some extent, consulted with the Chairman and other members of the Senate Foreign Relations Committee in the course of negotiations. Treaty language was not known until the treaty was published at some point after signing, and then there were hearings before the Senate Foreign Relations Committee.

Recently, in response to suggestions and expressions of interest in opening treaty negotiations to public comment, including informal comment from IFA members, and obviously in line with his own views [Treasury representative] *David Rosenbloom* scheduled public review and comment sessions on four treaties. Italian, July, last year; Jamaica August, last year; Danish November, last year; Canadian December, 1978.

You have seen these reports, I am sure, and they were referred to earlier, but to summarize very briefly for those who have not read the reports, and who were not there, the meetings were informal and no transcript was made. *David Rosenbloom* and several members of the Treasury negotiating team were present. There were also IRS representatives present at the Canadian treaty session and at the Danish session. I am not aware of their being at the others. Treasury summarized the major issues and the state of the negotiations. The participants could raise questions and make comments. Apparently you could turn in papers, but there was no formal paper presented at the session by anyone, to my knowledge.

These latest events would seem to be of great potential significance in the treaty process and we would like to start talking about them. *Mort* [*Feinberg*] was at three of the four meetings on behalf of Treasury and we would like him to review them from the Treasury side pointing out what the ground rules were for the meetings. I believe Treasury viewed the meeting as a success.

PANEL DISCUSSION

Ground rules for tax treaty meetings

Feinberg. Thank you. A word about the ground rules. First, in each instance, we discussed with the partner our plans to do this and in every case they agreed that this was an appropriate procedure. We made it clear both to our partners and to the participants in the meetings that we were speaking only for the U.S., not for the treaty partners, and that what we discussed would be the U.S. negotiating positions given the nature of the two tax systems and the nature of the problems we have to deal with, and the conceptual approaches we were taking to some of these problems — they were not necessarily agreed solutions. We were not discussing the negotiating position of the other country or where there were final agreements; we were not necessarily indicating what those agreements were. It was an effort to indicate to the public where we were coming from in these negotiations. I think we found them very useful. I think I speak for all of us at Treasury who have been involved. It provided us with knowledge of some of the specific issues that were of concern to the taxpayers that we may not have been aware of, or areas where the standard or model approaches we have taken in the past may not precisely deal with the problems that were raised in that particular treaty and that particular relationship. In a number of cases we did receive proposals for resolutions for some of those issues that we may not ourselves have thought of or were able to think of.

Along the same lines attention was called to problems that would arise in meshing two particular tax systems that may not be able to be dealt with in a model treaty in a standardized approach. It is equally important that we were involving to a much greater extent the public in the process of negotiating a treaty. I think in addition we generated considerable interest outside of the meetings, and as a result of the meetings, additional representations from the public with respect to the problem that they face. I think that we do intend to continue these meetings, where appropriate, and we appreciate the input that we have received.

Milton. Mort, do you intend to continue them? These were done at an intermediate state of the process of negotiations as distinct from at the beginning. Do you intend to continue them in that intermediate stage or also do this kind of things for openers?

Feinberg. I think it is most appropriate to do this at the stage where we have been doing it. That is at the point where we have achieved probably our greatest understanding of the issues and we have identified all the issues at that point and that is the time we need as much help as we can get. At the beginning, what we have practised for a number of years now, is issuing an announcement that negotiations will be held and soliciting comments. At the early stages this is the more appropriate way to deal with it. We have a clear picture of where we intend to go and what issues we may not be able to resolve ourselves. It is a better time to involve the public in this kind of a form.

Burge. What kind of response does the announcement usually elicit, Mort? A hundred letters or five letters?

Feinberg. There is no way to generalize. In some, very very few. Are we talking about Canada or Bangladesh? It varies tremendously.

Milton. Marianne, you were at all four of these public meetings as I understand it. What is your view of their worth, looked at from the taxpayer's side?

Burge. From the taxpayer's side I would say I am wholeheartedly in favor of the public briefing procedure. And certainly for the advisers to the taxpayer. The public briefings are a one hundred percent improvement over the previous method of obtaining information from somebody in Washington who heard it from somebody in Washington, who heard it from somebody in Washington. This is a tremendous improvement and I am wholly in favor of continuing the procedure and also having IFA report on the proceedings to its members and giving the report as wide a circulation as possible and in other publications, and to encourage more taxpayers and their advisers to participate.

Advantages of public briefings

I think the specific advantages are that the taxpayers can find out at a stage before the treaty is signed and almost fixed in stone as to what the issues are and they can then review their own operations and comment on the effect of that proposed treaty to the Treasury. The taxpayers and their advisers also can learn for the first time what Treasury policies lie behind some of the treaty provisions. It is difficult to know what the policy is behind some of the language in the treaties. So there is a cumulative educational effect, I think, of the public briefings to those who attended all four so far. I think it is very important to the taxpayers. Treaty issues are something of a mystery to most people and they are different and a part of the international tax law that a lot of people are just getting involved with. So it is very important that taxpayers and their advisers should know what is in store for them in the treaty area because if the taxpayers are not kept informed of what is being planned in the treaty area they may find out that the costs and the problems of the treaty might even exceed the benefits.

I say this because I think we may be getting into deep water in some of the treaties in trying to create perfect accommodations between two tax systems and the results may be that we end up having something that's so abstract that it is unworkable, in the effort to try and be very fair and very perfect. So I think we

© 1980 International Bureau of Fiscal Documentation – BULLETIN

end up not being able to complete treaties at all. Taxpayers may not as yet respond as you might have hoped to the Treasury, and I suppose you could see why that might be the case so far. I suppose the only treaty of major interest that we have had a briefing on so far has been Canada. The public session was very well attended. I think you will generally find that taxpayers will not respond unless they see something important or immediate for them in their own operations in a certain country because there certainly isn't time for everybody to keep informed on everything.

Also, the briefing procedures are new. It is possible that people are not really aware of them and that the meetings are being held. The briefings were a bit one-sided. I suppose a briefing is intended to be for information giving, and not much time was left for audience participation. The issues were also discussed somewhat in the abstract. Some of us found it a bit hard to follow the policy concepts. I found that this grew easier from one meeting to the next as one came to recognize the policy issues that were being discussed. So I think it is very important that one attend them. I think that even with a limited discussion we found that some comments and information that was of use to the Treasury came out of them.

Panelist. Marianne, I do not want to interrupt, but could you tell us whether the majority of the people there were there for education as distinct from having an interest in a given country?

Burge. I think most of the people there were there because they had an interest in the country or a particular industry. There were certain industry representatives there.

Panelist. If I may, I think it was particularly clear in the Canadian meeting that a number of people were there to hear about one particular article, one particular kind of issue. I think that may well be why there was so much larger crowd at the Canadian meeting because there were many more people who had interest in particular issues rather than in the treaty process in general.

Burge. I think it is a bit too early perhaps to say whether the comments the taxpayers have made are going to be taken in account in the negotiations. I do not know how you feel about that, Mort.

Feinberg. In general, sure they will be taken into account. We will consider them; whether we consider them appropriate or whether in fact there is anything we can do about it in a give and take negotiation is another matter.

Milton. We did not make any opening comment about taking questions but I do not see any reason why we should not take any.

Question from audience. Is there any follow-up by people asking questions and giving thoughts to you?

Feinberg. As I said before I think these meetings generated a great deal of additional interest and submissions and meetings and conversations that we would not have had otherwise.

Audience comment. I was wondering if there will be an opportunity for the partners that are negotiating the treaty to have their own advisers and representatives participate and give their own position at the briefing. Does this occur in fact? For instance could they hire U.S. tax counsel to participate in the briefing?

Feinberg. Yes, they are open meetings. Anyone can attend. We have advised the other government, in each case, as to when the meetings were and there have been at least embassy representatives. In the Canadian case there were people from Canada who came down and I do not recall whether they participated actively or not, but they were certainly free to.

Milton. Let us pursue this question of openness from another side. I know my understanding is that the business community in the OECD has indicated that they would like further openness in treaty negotiations from the side of their governments. *Mort* [*Feinberg*], do you think that from your experience in dealing with the treaty partners that if there is increased openness on the U.S. side that that will foster the same kind of thing with other governments with respect to their taxpayers?

Feinberg. That is hard to say. I think it will inevitably put some pressure on them, at least those in countries where they are aware of what is going on here. There undoubtedly would be calls for similar meetings at home in their countries. Whether they can feel they can respond to that kind of pressure I really cannot say. I have the impression that without limited openness they tend to be much more open in these matters than most other countries and my guess is that relatively few will pick up the idea. I mentioned before that there are now more long standing practices of issuing announcements before the meetings. I believe we were the first to do that. Several other countries have picked up that idea and have found it profitable.

Milton. There are some countries that I know of, but I cannot of course speak for many of them, that do circularize their trade organizations and such at the commencement of [treaty] negotiations to get them into the picture. The U.K. does that for instance. They send a notice around to the Confederation of British Industries and I think the U.K. branch of the International Chamber, and accounting groups, and others. There is someone doing these things.

And speaking of trade groups, in conversations that *Bob Patrick* and I had about a year ago with *David Rosenbloom* a suggestion that was tossed out for consideration involved the use of the IFA U.S. branch as a private clearing house to identify taxpayers' interest and to try to get a focus on problems by countries. *Bill* [*Gifford*], what do you think about that from a practical point of view? Are there a lot of legal problems and such involved?

IFA as a private clearing house for international tax problems

Gifford. Without advocating for or against the idea, I would identify one of the problems as when in the process IFA would play a role as a private clearing house. If it is before negotiations are undertaken, or when the Treasury's initial announcements come out, I suppose that it could be a fairly free and open forum for exchange of ideas. As the issues get more specific and narrowed in the course of negotiations, I think it gets more difficult for taxpayers to participate, whether through a trade association or other group. To the extent that effective participation consists in sharing empirical data, rather than technical legal suggestions as to what the treaty ought to contain, it of course becomes more difficult. To pick up on the specific question, about the legal issues that come up, the commercial secrecy questions come to mind immediately, but I do not find that area in itself too troublesome. Taxpayers would be largely self-selecting, and they simply will not participate when the matters involve extreme confidentiality.

Jenks. Well, we have certainly had a summarization of differing views on this topic. Thanks to all of you. It is now time to pass on to other things.

Competent authority procedure

I would now like to ask *George Beatty* to offer some ideas of his about the competent authority mechanism.

Beatty. Thanks, Tom. We are fortunate enough to have *Dave Reizes* of OIO [Office of International Operations] here with us this afternoon to participate in the discussion.

As you know, one of the principal functions of the U.S. competent authority program is to deal with cases involving the section 482 requirements of our Code and the equivalent rules of other developed countries. The interplay between their transfer price rules and ours necessitates

© 1980 International Bureau of Fiscal Documentation – BULLETIN

some mechanism to avoid double taxation of the same income.

It is difficult to assess the qualitative and quantitative effects of our present approach to competent authority proceedings. Perhaps the best success, not surprisingly, is the experience we have had with the Canadian program — a program that is, in many respects, a pioneering one. Of course, we have had competent authority proceedings with Canada for some years, but certainly not on the scale of the modern program which dates from the early 70's.

To me, one of the threshold problems with competent authority cases is deciding whether or not competent authority relief should be invoked in the first place.

Initially, the reaction of most people is that if double taxation has been proposed as a result of conflicting adjustments in different countries, the obvious solution is to initiate competent authority proceedings and let the two governments battle it out. But there are some threshold considerations that may in many instances make it undesirable to do that. One that I think is most often encountered in practice is the notion that cases can be more expeditiously settled on audit if the taxpayer is willing to forego competent authority rights as part of what amounts to a package settlement with either the agent, or in some cases, the appellate conferee. This, in effect, uses the availability of competent authority proceedings as a negotiating weapon or at least a consideration to be weighted in settling the case. The argument is that because relief is available, the taxpayer should get some benefit for giving up his rights to invoke formal competent authority proceedings. This happens not only here, but certainly abroad as well. To a certain extent I think it can be viewed as undermining the integrity of the competent authority relief mechanism. On the other hand, by definition the end result must be one that is satisfactory to the taxpayer. For a variety of reasons — the aggravation, the expense, the time and effort involved — the taxpayer may be willing to unilaterally absorb a certain amount of double taxation in order to get its case closed.

On other factor that enters into the decision in a number of cases is the threat or possibility, either real or imagined, of retaliation in the foreign jurisdiction if the taxpayer invokes competent authority proceedings. *Dave* [*Reizes*], do you get any feel from your experience to date as to whether the threat of retaliation that is often talked about is real or not?

Retaliation by foreign tax authorities

Reizes. I have a feeling that many taxpayers are worried about retaliation and have not sought competent authority assistance just because of those fears, real or imagined. As of today, we have looked into many cases. Wherever there is an allegation of retaliation, we get into it very quickly and very strongly. We have not yet run across a single case of retaliation. There are two potential cases we are looking into now. I sent a group manager and one of my team leader senior analysts over to Europe yesterday and they should be meeting this afternoon, as a matter of fact. The meetings will continue on through next week. Our initial investigations of the cases they are working on disclose that a negotiating factor is involved. Here in this country there is often a question whether a taxpayer should come and seek competent authority. I am sure most of you have handled difficult complex examinations, gotten in at the audit level, and very often, once a case has been developed and the issues have been pretty well defined, the International Examiner, the agent and the case manager are seeking agreement on a case in which you are not really that far apart. It is very similar to the negotiation or settlement of a law suit. You have all your points in issue, all your litigating positions, you have all the auditor's issues that have been raised. Some are pretty solid; some might be weak; some have a little bit of water in them, but are basically very arguable. When you sit down to discuss those issues and determine whether or not you are going to agree, I am sure one party or the other starts trading off. Basically one party says, "these are the cards we have on the table; if you will agree to these three points, we will be willing to wipe out the other one or two points, or whatever. But if you are going to go forward, and you are going to contest it, we are going with the whole ball of wax on all of the issues."

I think that some of the fears of retaliation are really a réflection by foreign tax advisors at the foreign office of some of the accounting firms or the law firms. Those advisers are saying that the foreign revenue officials have so many issues, so many points that they have developed in their examination, and if the case is settled, if it is agreed, then some of those issues or points are going to be dropped. If it is not agreed and it goes to competent authority and is subject to review, the officials are going to submit a very complete and full report. That explains a good portion of it. What it does not explain is, where there has been an examination or there has been an agreement in a foreign country, and then at a later time, because our audit cycle is slower than in most other countries and a little bit more complete, we start proposing an adjustment. At that point the taxpayer wants to go to the foreign competent authority or a foreign revenue authority to get a refund, or credit. We then hear that there are fears of retaliation because if the foreign country has to give a correlative adjustment, the company better look out in its succeeding years or it is going to be dealt with harshly. I think those are the fears we are particularly concerned with, but we have not yet hit one case where they have been justified.

Beatty. But if I understand your comment, you do in fact investigate and follow up on any serious assertion that retaliation has in fact been threatened.

Reizes. Yes. It would be unthinkable for us to allow it to continue.

Question from audience. What happens if the taxpayer believes that a foreign government will come up with a different type of interpretation and in effect will create a tax liability which did not exist?

Reizes. Let me see if I understand your question. You are saying, in other words, we have a proposed adjustment. A taxpayer hesitates ...

Comment from audience. What I am talking about is that under the existing treaties is it not a question of interpretation of the treaty? I do not believe we distinguish competent authority cases we have which are interpretations on issues when we are dealing directly with foreign governments, in contrast as to how to interpret them, for example, in terms of our view of whether specific prices are reasonable. When you get a question of interpretation, where can you discuss it with the taxpayer? And what about retaliation?

Reizes. It is part of the competent authority's role to be interpretative. The U.S. competent authority is the Assistant Commissioner of Compliance. In the interpretative area the Assistant Commissioner of Compliance acts with the concurrence of the Assistant Commissioner Technical. At the present time, we have 33 non-allocation cases of which, let us say, maybe 10 of them deal with interpretations, the treaty language or entitlement of treaty benefits, things of that nature. Where there is a dispute between our interpretation and a foreign country's interpretation of the treaty language — who the provision was meant to cover, whether there is qualification for particular benefits, what is meant by permanent establishment, whatever it may be — of course we will entertain it. The question is retaliation. What I cannot really discern from your question is, how would this come about in a retaliation setting? We handle cases involving conflicting interpretation. We are happy to; that is our job.

Reizes. Well, there are cases in which there is an awful lot of coordination and consultation with International Tax Counsel in Treasury. There are cases where we find

© 1980 International Bureau of Fiscal Documentation – BULLETIN

that the foreign competent authority is proposing to treat a class of taxpayers in a particular way. If they are going to be interpreting the treaty language in administering their laws in a way that we do not think is appropriate, we are very interested in that.

I think the United States competent authority has an affirmative duty to represent its taxpayers. The question really is, depending upon the particular case, at which point is it appropriate for the competent authorities we are talking about — the administrative competent authority in negotiation of cases and controversies, and interpretations — to get involved, versus at which point is it a question of negotiation between International Tax Counsel and the foreign government. In this country, of course, we do have that separation between policy and administration. It is not necessarily the case in most other countries. So it is a difficult issue, but I think we would see an affirmative obligation to do something about that.

Comment from audience. When you reach an interpretation agreement with the other country, do you ever publish the results?

Reizes. Yes.

Panelist. Dave, was the recent ruling with respect to the interpretation of the Japanese Treaty and the application of sections 861 and 482 to a U.S. permanent establishment of the Japanese company, was that agreed with the Japanese competent authorities or that ruling ...?

Beatty. I promised Dave that we would not get into a discussion of that problem because of its current status.

Comment from audience. At least that is an example of the kind of issue you are talking about, I think, and where there has been a question of interpretation, the interpretation was made and it was published.

Comment from audience. In what percent of the cases brought to the U.S. competent authority by U.S. taxpayers is the competent authority relief denied either by the U.S. or the foreign government?

Competent authority cases accepted

Reizes. The figures I have are of cases that have been accepted for competent authority consideration, for negotiation. Of those figures, in allocation cases we are talking about 86 percent full relief and an additional 14 percent partial relief. In most cases relief was given. What is not included in those figures is the number of cases that have come in where we did not think that competent authority consideration was warranted. We did not find there was double taxation; we found in certain cases taxpayers may have come in without clean hands for any number of reasons; we have found that in certain cases, the statute of limitations had expired. This was a recurring issue, where the statute of limitations had expired previously and the taxpayers had been on notice. The statute expired again, there was nothing we could do as far as obtaining a correlative adjustment from our treaty partner, and the taxpayers came in just after the statute expired. So we turned them down the second time around.

There are several questions involved here, and cases which we felt were inappropriate for consideration are not included in these figures. There have been a number of those cases, I do not know exactly how many, but in the last five years you are maybe talking about 8 or 9 cases.

When a case is submitted for competent authority consideration, it can either be accepted or rejected. If it is rejected that decision is appealable under an appeals procedure. Rev. Proc. 77-16 [77-1 C.B. 573], or Rev. Proc. 70-18 [1970-2 C.B. 493]. There are cases right now in appeal on that very issue — whether a case is appropriate for competent authority consideration. Competent authority consideration, and the efforts the competent authority goes through once a case is accepted, can range from the advocacy of the taxpayer's position with the foreign government to the other side of the coin. In other words, to help the taxpayer secure relief via a correlative adjustment, or sometimes the relief that is given is unilateral, that is, *we* will give relief. Sometimes, we might find the case is not developed substantially enough so that we could carry a burden of proof with the foreign government and persuade them to make a correlative adjustment. In such a case we may well withdraw an issue. We might find various reasons why we will give relief unilaterally under this bilateral procedure. Sometimes we split the issues, but that is once the case is accepted.

Question from audience. Did you say that competent authority cases were published?

Reizes. No.

Comment from audience. Oh. Because I was going to say I had never seen one.

Competent authority cases are not published

Reizes. Well, that's good! (laughter) I really hate to anticipate some of the things *George* [*Beatty*] wants to talk about, but we are dealing here with questions of privacy and disclosure, and the competent authority plays a very different role than the Revenue Service in general. Officially it advocates *for* the U.S. taxpayer. There has to be a somewhat confidential relationship where taxpayers can feel free to disclose to the competent authority facts that they would not even disclose in arguments with an examining agent. If we have to go forward and argue *your* case to the foreign government, we have to know all the facts and we cannot be surprised. That is one of the reasons for our announced policy that we do not raise affirmative issues. If a company, for example, has been examined and that examination is complete, we are not going to raise an affirmative issue when the case is under competent authority jurisdiction so long as there's no fraud or misrepresentation. We will just argue what we think to be the good solid points on behalf of the taxpayer. And this confidential relationship obviously is going to get into business operations and data about the company that cannot be disclosed.

Another factor that really is not a matter for publication is what goes on in the negotiations between the governments. We normally do not go over to negotiate a particular case. Very often we will have a group of ten cases which will be negotiated together, and there are a number of trade-offs that can occur. And so, really very often, at least in allocation areas as opposed to the treaty benefit non-allocation entitlement type cases, the competent authority decision cannot be a precedent for a later case. We would not want to publish and give people the wrong opinion.

Transfer pricing and the customs impact

Beatty. In addition to the whole problem of disclosure of trade secrets or sensitive information, the possibility of encouraging joint audits, and other exchanges of information which *Joe* [*Guttentag*] will touch on later, there is one other factor which I think often influences people in deciding whether or not to go to competent authority. In pricing cases, the potential customs impact can clearly be significant. As you know, *Robert M. Brittingham* [66 T.C. 373 (1976) affirmed — F.2d — (5th Cir. 1979)] refers to the relationship between customs duties and proper transfer pricing in section 482 cases. There was also a recent situation where what started out as an anti-dumping investigation in this country turned into a section 482 case with some of the files and data that had been made available to the customs people being turned over to the tax authorities. I think that there is going to be an increasing relationship between customs considerations and pricing considerations, particularly in foreign countries where the two are administered by the same governmental agency, with the result that there is more likely to be cross checking of data.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Competent authority procedure and timing requirements

There are a whole variety of procedural questions that arise if the decision is made to seek competent authority relief, but the most obvious is the timing requirement for invoking the procedures. There have been statements made in the past to the effect that nothing need be done until the U.S. taxpayer receives the standard form letter from OIO advising the taxpayer that section 482 adjustments are under consideration. I think Dave's feeling, if I understand it correctly, is that it is not always possible to wait until that point, if by so doing the taxpayer is going to let an applicable statute of limitations expire in the foreign country that would be affected by the potential adjustment. Am I right Dave, that in a case where the past history and nature of the audit clearly indicate that a section 482 adjustment is under consideration, you would expect the taxpayer to take protective action abroad even though a form letter had not been officially delivered by the IRS?

Reizes. Yes. There was a lot of confusion, about a year and a half ago, as to exactly when the taxpayer was on notice, that is, when was the taxpayer required to take this protective action. There was a statement made. I think half of that statement was, "if the taxpayer is not given the form letter and the statute of limitation expires, the U.S. competent authority would unilaterally withdraw a proposed adjustment." But the other half of the statement, was that the time a taxpayer is on notice — the time that his entitlement to relief is considered to have expired — is when he *knew or should have known* that he had to take protective action in the other countries!

Every situation is different. In some cases there is a recurring examination with the same issues recurring, and the taxpayer already knows that this issue is going to be examined again, the same facts are going to be found. He can protect himself in the other country. What we in the Service find very difficult to determine is, when is the proper time to give the pattern letter in order to be fair to taxpayers? I think a while ago it was being given at the point that the issues became pretty firmed up. We do not think it is proper to unnecessarily have the international examiner walk in and say he has arrived and hand you a pattern letter, particularly when you have a client or you have a company that has subsidiaries all over the world. If you have to start rushing out and keeping the statutes open without knowing what adjustments may be involved, certainly you are going to get into trouble. We realize that. What we are really trying to do is find an appropriate time when taxpayers can be reasonably sure of what the potential adjustments are and so be able to make a business decision as to which procedural impediments in foreign countries they can stop from being interposed against future relief. That is certainly before the 30-day letter and it is probably in an overwhelming number of cases sometime after the opening conference. But we really have not yet firmed this up and we go on a case by case basis.

Tax treaties and statute of limitations

Beatty. As I am sure most of you know, the statute of limitations problem falls into three distinct categories. In our most recent treaties — the Polish treaty, the Egyptian proposed treaty, the pending Israeli treaty, and in our model treaty — there is a provision stating explicitly that any competent authority relief that is granted shall be reflected in an appropriate adjustment notwithstanding any procedural bar in either of the countries involved. There is no statute of limitations problem when you are operating under a treaty of that sort.

In a second group of treaties involving countries such as Finland, France, Iceland, Japan, Korea, Netherlands, Norway, Rumania, Russia and Trinidad, there is a provision in the treaty stating that if the adjustment is agreed to be made, it "shall" be made. The U.S. interpretation of those treaties has generally been that they were intended to override any local statute of limitations problems. However, in at least two instances involving Germany and the U.K. where that type of treaty is presently in effect, there is disagreement on the other side of the fence as to the meaning of those provisions. This is particularly true in the U.K., although the competent authorities have been able in one fashion or another to solve most of the problems that have arisen to date. The official U.K. position is that the statute of limitations may not be waived under the existing treaty and indeed under the new one that has been negotiated. As a result, anybody who has a U.K. problem should certainly proceed under the assumption that the U.K. statute can and will operate as a barrier if you do not institute competent authority proceedings in timely fashion. I would hope that in the near future the IRS would issue some sort of release warning people of this because there is a published ruling, Rev. Rul. 72-437 [1972-2 C.B. 660], that catalogues the treaties of this sort and indicates that the statute of limitations is not a problem.

The third category of cases involves our older treaties which contain no provision at all with respect to the statute of limitations. In those instances, if relief is not sought in timely fashion, the statute operates as an absolute bar. Canada is one outstanding example. There is simply no way that the competent authority here has been able to persuade the Canadians to override their statute in one fashion or another. In Australia, where the treaty is in the same form, the problem has been solved through what has been called telescoping the adjustment, by having the Australians reflect adjustments that really relate to prior years in a current year which is open. This can raise some very difficult foreign tax credit questions that we will touch on later if we have got time.

Guidelines for competent authority procedures in Canada and the United States

On the content for a claim for relief we have got explicit guidelines for two countries in the world. Rev. Proc. 70-18 [1970-2 C.B. 493] provides the procedures for U.S. taxpayers involved in allocation cases. The only other country to publish procedures is Canada which has issued information circular 71-17 spelling out the procedures to follow there. I think it is interesting and encouraging that an explicit provision has been added as Article 25-5 of the U.N. model treaty in effect directing or strongly encouraging competent authorities to develop specific procedures implementing their competent authority programs by spelling out in some detail the route that taxpayers are supposed to follow in invoking the procedures.

I think the heart of the whole competent authority program is the jurisdictional aspect of it, because the effectiveness of the program depends on the willingness of the authorities in the affected countries to deal with issues as they are presented. A number of questions in this area arise. For example, where you have a double inclusion in income or disallowance of a deduction which results not from different factual treatment of the same item, but rather from differences in the internal law of the two countries involved, should the competent authority try to deal with that type of case? Does the answer depend on whether or not the treaty explicitly gives the competent authority directions to deal with problems arising, for example, as a result of different sourcing rules? Or should it be within the broad general discretion of the competent authority to deal with those cases even though there is no explicit direction? Should the U.S. negotiate questions that involve just earning and profit matters, as opposed to allocations of taxable income or expense? Should the U.S. negotiate on section 861 adjustments which, depending on the circumstances, may have the same effect for somebody who is in limitation under section 904(a) as

© 1980 International Bureau of Fiscal Documentation – BULLETIN

a disallowance of the deduction for the amount that is being allocated to foreign source income under the section 861 rules? How should the competent authority deal with de minimis cases where the amount involved is relatively small with respect to any one country but in the aggregate is perhaps significant? For example, a pricing adjustment on export sales by a U.S. parent to subsidiaries in 25 different treaty countries may involve a relatively small amount with respect to each one of those countries viewed separately, but in the aggregate it may be significant enough so that the revenue agent is properly raising the issue in the first instance. To what extent should the competent authority exercise its discretionary jurisdiction if there are overtones of negligence or, worse yet, actual fraud in the case? All of these, it seems to me, are difficult and important questions. *David Rosenbloom* is in the back and I would appreciate, Dave, any thoughts that you have on what the proper scope of competent authority proceedings ought to be.

Rosenbloom. George, only in non-allocation cases does the issue arise. I think in the allocation cases the question of what a competent authority can or cannot do is really not currently creating much of a problem. Maybe one way to interpret a treaty for purpose of the competent authority function in re-allocation cases is to take much the same position that we would in regard to ruling requests under the Internal Revenue Code. I think that we are really in the first stages of asking ourselves what the appropriate competent authority role is, and I think that is a major treaty problem.

Beatty. In addition to the competent authority relief that is available under treaties we have also been developing a mechanism to deal with allocation issues arising in the possessions. Dave, am I right that we have a formal agreement with the Virgin Islands and that we are working on one with Puerto Rico?

Allocation issues in connection with U.S. possessions

Reizes. We have an agreement with the Virgin Islands. We talk about it somewhat procedurally in the nature of the treaties. But it is wholly different than the treaties. The basic document is modeled the same way that the Internal Revenue Service has agreements with all of our state taxing authorities, the cooperation and coordination agreements for exchanging information, verifying return data, programs to assist one another in the administration of the laws. Now of course, the Virgin Islands is in a unique position of having people who are dealing with essentially the same taxing document. Under Article 28-A of the Revised Organic Act of the Virgin Islands, U.S. citizens and U.S. taxpayers generally must pay taxes under our tax system to the United States where their income is sourced. But they are excused from filing with the United States and paying to the extent that an individual is an inhabitant of the Virgin Islands and they file and pay with Virgin Islands. There is a lot of interplay between corporate taxation, the Virgin Islands industrial incentive act, and the tax benefits that are granted to business taxpayers under the Code. And we do coordinate our taxes. In as much as we are applying the same basic legal document — the Internal Revenue Code of 1954 as amended and as interpreted up to the current date — it is fairly important that we deal consistently with it. So, under this cooperation and coordination agreement we have a mutual agreement procedure very much like the treaty procedure that we are talking about that handles just the same type of questions as far as allocation facts, taxation facts, jurisdictional facts and questions of residence are concerned. If we have the same law, and there should be only one set of facts, we should arrive at the same result. We are attempting to resolve problems of double taxation in those cases. That is an easy situation.

Now you bring up Puerto Rico. We have been negotiating with the Secretary of the Treasury of Puerto Rico. We have a basic negotiating document, identical pretty much to the Virgin Islands document. The difficulty here, and one of the reasons why we do not have yet anything implemented, is that we are not dealing with an identical code; we are dealing with the Puerto Rico Code (which is taken from the 1939 Internal Revenue Code). There are possible differences of law and interpretation. While we are looking forward, hopefully, to something in the near future, we do not have anything final with Puerto Rico yet.[6]

Beatty. Let me move on at this juncture to a brief consideration of some of the negotiating policies. There are a number of situations where an issue which arises in both treaty countries and non-treaty countries will be disposed of satisfactorily in competent authority proceedings. The question arises at to whether that disposition should be given effect by the IRS in dealing with section 482 adjustments in the non-treaty countries. My understanding of current policy is that it is not given effect, because the result reached in competent authority treaty discussions represents a compromise of competing positions; it represents one of the benefits that is attributable to the existence of the treaty and you would be denegating the status of the treaty if you applied the same result and gave similar relief in the non-treaty context. Is that essentially right?

No competent authority procedure in non-treaty situations

Reizes. The competent authority has its basic power deriving from the treaty. The competent authority, which is a centralized function, has no authority to tell the district what to do with the non-treaty case. The second factor to consider is the negotiating position of Treasury. As they have represented it in the past, to the extent that a non-treaty country can obtain for taxpayers and companies having tax relationships with it the same benefits that treaty countries can obtain, then there is no advantage to having a tax treaty. We defeat our system.

Beatty. In cases where an agreement has been reached and provision has been made for repatriation of the amount of section 482 allocation adjustments, am I right that under the typical competent authority closing agreement there will be no interest charged on the amount of that repatriation in contrast to the procedure that is used in non-competent authority cases where a Rev. Proc. 65-17 [1965-1 C.B. 833] receivable is created and interest is charged?

Reizes. Almost every one of our closing agreements providing for repatriation has allowed the U.S. taxpayer to forego interest.

Jenks. George, I think time is running out on us. I would like to thank you on behalf of the group for a very fine presentation.

* * *

Joe Guttentag will be our next speaker. He will comment on exchange of information under treaties.

6. IR 2123 released April 25, 1979, sets forth the U.S.-Puerto Rican mutual agreement procedure which was adopted after this conference.

EXCHANGE OF INFORMATION UNDER TAX TREATIES

Joseph H. Guttentag

This subject has moved from a position of being completely ignored to one of extreme, importance to tax administrators, taxpayers and their advisors within recent years. Provisions for exchange of information in tax conventions have long existed and in substantially the same form as they appear in the current Article 26 of the OECD draft, and in the U.S. model treaty. In the past technical explanations and the Senate reports listed exchange of information as one of the standard tax convention administrative provisions and with some exceptions paid little attention to what it meant or how it was administered.

Why the recent interest in exchange of information? First, it appears that tax administrators are becoming increasingly concerned about the tax consequence of transactions extending beyond their national boundaries. This concern exists regardless of whether the tax system uses a territorial or worldwide approach. Information available only outside the country of residence or home country of the taxpayer may be necessary in order to determine whether the taxpayer is paying his appropriate share of taxes on income earned within the home country or entitlement to tax credit. Secondly, there are problems of tax evasion which can only be detected and determined with information obtainable outside the home country. There is also increasing concern over the use of tax havens. Through information exchange tax administrators, even though not able to obtain information directly from tax haven countries, can through the use of triangulation zero in on transactions and determine the extent of income which may be sheltered overseas.

The United States has always supported the broadest type of information exchange, with certain caveats which we will mention and which are reflected in the current U.S. model convention. It is very natural for the United States to do so. The United States has an extremely extensive taxing jurisdiction and needs all of the information it can obtain. The U.S. also has the ability to use such information effectively. It is also in the interest of the United States to provide information to other tax authorities to enable them to enforce their tax laws. From a competitive point of view, the multi-national resident in a country which has low enforcement may very well have a competitive advantage over a competitor located in a strict enforcement jurisdiction. Accordingly, to the extent that the United States is able to provide information which assists countries in a stricter and more equitable enforcement of their tax laws, the competitive position of the U.S.-based multinational is enhanced. On the other hand, to the extent that the information exchange system provides assistance to the United States for even stricter enforcement of its extensive taxing jurisdiction, the competitive position of the U.S. companies may be weakened. We are dealing exclusively, at least in the case of the United States, with bilateral provisions for information exchange. Accordingly, more equitable tax enforcement, meaning probably stricter tax enforcement by the United States and its treaty partner, country "X", may provide a more equitable competitive position between companies resident in those two countries, but may create a greater competitive disadvantage for both companies vis-a-vis a company located in country "Y", which has no tax treaties with either the United States or country "X". The United States has more information available and better means to obtain it than any other country in what we used to call the free world.

The imbalance in providing information and the use of the information is probably most viable with respect to the developing countries. The subject of information exchange was one of great concern in the development of the draft model convention for treaties between developed and developing countries. The developing countries were quite concerned, and rightfully so, that a treaty which was imbalanced as far as the economic consequences, the flow of investment and the flow of trade, had to be balanced and protected on the fiscal side by enabling tax administrators in developing countries to ensure, to the extent possible, that they were receiving the appropriate share of revenue from income earned by residents of their treaty partner.

LDC's fear imbalance in the provision of information

Furthermore LDC's interested in broader taxing jurisdiction at source thus require more available information. The lack of sophistication or the ability to enforce effectively the tax laws of the developing countries made these information exchange issues of much greater significance than in treaties between developed countries. There are still relatively few treaties in effect between the developed and developing countries and it will be some time before we see the results of the efforts of the group of U.N. experts in the development of the information exchange article, and the effect on the multi-nationals involved as well as the developing countries.

With this background of a few of the significant issues, let me turn briefly to what the United States is doing in the area of information exchange, and then to a few suggestions as to possible developments in this area and additional matters which should be considered.

The United States is restricted by the Internal Revenue Code from disclosing tax information. The present statutory pattern creates privacy for tax return information and then lists specific exceptions which permit disclosure. One of these exceptions permits the United States to provide tax information under the terms of any tax convention which provides for such exchange of tax information. It would appear that information exchange could be covered in a convention other than a typical tax convention. The Code provides for the disclosure to the competent authority of the other country involved and specifically limits the provision of information to the extent provided for in and subject to the terms and conditions of any such convention. The transfer of tax information contrary to the provisions of the Internal Revenue constitutes a criminal offense punishable by five years in prison and a $5,000 fine. Accordingly, we can anticipate that the Internal Revenue Service would be more cautious in its information exchange program since the enactment of the Revenue Act of 1976, and this appears to be the case. Under present procedures, information is furnished by the United States to the competent authorities of treaty partners only under the signature of the United States competent authority, who at the present time is the Assistant Commissioner (Compliance), *Singleton Wolfe*. While certain other responsibilities of the competent authority may be delegated, particularly to the Director and other officials of the Office of International Operations, and while the responsibility for gathering information and handling information requests may be so delegated, the actual transfer is apparently a non-delegable function under present procedures.

Four different methods to provide information

I have classified four different methods by which the United States provides information to its treaty partners. One of these, however, does not involve tax information of the type which is subject to the Code restrictions. These methods of furnishing information are as follows: (1) routine; (2) specific request; (3) simultaneous

© 1980 International Bureau of Fiscal Documentation – BULLETIN

examination; and (4) meetings with the competent authority.

The most significant number of information items furnished is through the *routine disclosure* of information as provided on the Forms 1042 and 1042S reflecting payments of periodic-type income to residents of treaty countries, U.S. persons making payments of U.S. source income to nonresidents. During 1976, the last year for which figures are available, there were 652,000 separate documents filed with the Internal Revenue Service reflecting payments to foreign persons. Of those, 531,000 reflect payments to residents of treaty countries, or at least to persons whose addresses were in treaty countries. These information documents reflected total income payments of approximately $3.4 billion, of which approximately $3 billion were to treaty countries. The total tax withheld is just under a half billion dollars, or approximately 15 percent of the total income payments. The United States receives an almost equivalent number of information items from its treaty partners. In 1976, there were approximately 392,000 such items received indicating payments to U.S. residents by residents of U.S. treaty countries, and in 1977 the figure increased to 562,000.

The increase in items received indicates a greater importance attached to these items by both U.S. and foreign tax administrators. Even the procedures for furnishing these items have been improved, and at the present time several countries receive and furnish information through the use of computer-generated tapes or disks. The use to which this information is put varies, of course, from country to country. The Internal Revenue Service was criticized by a Congressional committee several years ago for failing to maximize the use of not only these information documents but other information documents. Currently, the IRS maintains a staff of specially trained persons at the Philadelphia Service Center who receive information forwarded from other countries, classify or translate as required, and furnish appropriate items of information to local District Directors.

The second type of information exchange is by *specific request.* During the past year the IRS received approximately 170 specific requests for information and made approximately 118 requests of treaty partners. The specific requests are reviewed most carefully to ensure that they meet the standards set forth in the treaties and other policies which guide the furnishing of such information. The Internal Revenue Service must be satisfied that the foreign country has exhausted to a reasonable extent its ability to obtain the information from other sources. It must also be satisfied that the information will be used solely for the purposes set forth in the treaty, that is, the enforcement of the tax laws which are the subject of the convention. Note that current treaty language does not limit the use of the information, however, to persons covered by the treaty. For example, Japan could ask for information from the United States relevant to the determination of the Japanese tax liability of a Canadian company not resident in Japan. On the other hand, while the United States has proposed broader language so that the treaties cover any taxes, the tax involved must be a tax covered by the treaty, which would generally exclude, therefore, sales excise taxes and value added taxes.

The information furnished by the U.S. is kept to the minimum necessary to meet the needs of the foreign tax administrators. For example, if the foreign government is interested in the salary paid to a U.S. citizen, the foreign government would not be provided with a copy of the 1040 but merely would be given the information requested — the salary paid by a particular employer. The request must be very specific as to the information required and why. Only in rare and unusual cases would a document such as the 1040 be provided. The IRS would have to be satisfied that the document was needed, for example, if there was a court case involved, and would also have to be satisfied as to the use to which the document might be put. In such cases, the U.S. response will vary from country to country. Canada, for example, would be furnished information in such form and I assume that would be reciprocal also.

I have heard stories from time to time of widespread disclosure of U.S. tax information to foreign tax authorities. One story is that through a computer error, the German competent authority was furnished with the Federal income tax return of every U.S. citizen reflecting an address in Germany. Needless to say, the IRS categorically denies these stories and stands by its policy, which I believe I have set forth accurately. It is, of course, possible for foreign tax authorities to obtain copies of U.S. tax returns. One way that they can do this is by authority under their local law to demand of U.S. citizens a copy of their U.S. federal returns.

Tax files timely removed from Iran

There are other ways, of course, some of them accidental. Those of you with interest in the Middle East will be pleased to know that the U.S. did recover all of its files from Iran prior to the revolution. As you know, Tehran was landlord of 14 OIO post outside the U.S. The Revenue Service Representatives located there covered the Middle East. Tax returns under audit for U.S. persons living in the Middle East were located at that office. You will be relieved to know that all of the files were removed safely and the Ayatollah Khomeini does not have any returns of your clients or employers.

The IRS not only is authorized and directed to furnish information from its files in response to requests, but to obtain information from third parties to the same extent that it would be enforcing U.S. tax law. This principle was tested in the *Burbank* case [*United States* v. *A.L. Burbank & Co., Ltd.*, 525 F.2d 9 (2d Cir. 1975)]. The IRS now cites the Burbank case in any situation under which it requests information from a third party for use in answering a specific request under a tax convention. If it has to issue an administrative summons, it will do so and it is only in those cases that the U.S. taxpayer involved may be notified that a request is made involving his foreign tax liability and the U.S. taxpayer must be advised as a result of the changes to the Code made by the Revenue Act of 1976. I have been concerned that the information furnished pursuant to the eleven and now four question procedure regarding sensitive payments would be the subject of many requests for the IRS.

Apparently foreign governments have been satisfied by the procedures established by the Justice Department in obtaining information from other sources. I have been advised that there have been no requests for information of the type which would be generated by the eleven questions procedure. While the U.S. is obviously concerned about the use and sensitivity of information in these exchanges other countries are too, and since no one wants the information exchange procedures to be weakened, they all realize that discretion must be used. In one case, for example, a foreign country that had received information from the United States was about to put it to use and decided that the use of the information or the type of information, I do not know what, would be embarrassing to the United States. The foreign competent authorities advised the United States that it would not use the information and returned the information to the U.S. competent authority.

Now, *simultaneous examination.* This is really another form of information exchange. We have entered into an agreement with Canada and with the UK. I understand there are examinations underway with Canada and the UK and procedures have been initiated to identify appropriate cases to handle under the simultaneous examination procedure.[7] Negotiations are

7. *Bulletin* Editor's note: see for the US-UK simultaneous examination procedure 18 EUROPEAN TAXATION 175 (1978).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

also underway with other countries to institute similar types of agreements. These are all, so far as I know, bilateral not multilateral agreements.

The last type of information exchange involves *a meeting of the competent authorities and other tax officials* on a bilateral and multilateral basis to discuss tax avoidance and evasion problems generally. Usually these do not involve exchanges of tax information. That is, they are not talking about a specific taxpayer but in general about the latest techniques which have been devised possibly by some of you here in the room, and specific transactions which may be used for tax avoidance or tax evasion. Such meetings are increasing in frequency and usefulness. Tax administrators, the OECD, and the group of UN experts have encouraged such meetings and the IRS has engaged in several meetings and thought that it was important enough even to mention it in the Commissioner's last annual report that such meetings were taking place.

While we continue to provide this, that is the type of information exchanged under the U.S. treaties, let us take a look just for a minute at what is happening in the Common Market. A directive in 1977 provided that beginning January 1, 1979 there would be an exchange of information among the Common Market countries covering taxes on income and capital but not covering value added tax, so that has been the subject of a separate notice and has been proposed to include value added taxes because of the substantial number of avoidance and evasion problems that they think exist.[8] These provisions provide for exchanges on request, the kind we have described. They also provide for automatic exchanges, and then a new type of information exchange which the United States does not presently use, the spontaneous exchange of information.

Spontaneous exchange of information not used by the U.S.

This requires that the tax administrators furnish information to any other country when they find that there is a possibility that this information would be useful to the other country in enforcing its tax laws. But what are they supposed to do? Well, they are supposed to furnish information to the other tax authority if there are grounds for "supposed", I think that is the word, loss of tax to the other state. For example, I suppose, it would cover a case where a taxpayer reported X dollars of income and only claimed a foreign tax credit say of 20 percent. The tax auditor knows that the foreign tax is 60 percent. Now, I guess in that case you could assume that there may be some tax avoidance in the other country, so that he is then spontaneously to provide this information to the other country. When there has been a reduction or exemption of tax in one state which would increase the tax in the other state, the tax official is required spontaneously to furnish this information. When there is a use of tax havens by the companies located in two different states with the tax haven country in the middle this could be another case for spontaneous disclosure. And in section 482-type cases on pricing, when information has been received from another country and then through the use of that information it appears that there would be return information which would be useful, they are supposed to send that back as well.

The EEC directive also provides for giving the tax administrators of one country access to and the ability to work in another; it provides the usual secrecy rules similar to the model convention, and it also provides something that is not specifically covered under our treaties, that is, the transmission of information which has been received by the competent authority of one country to a third country. The EEC directive says that it is supposed to go back to the country from which the information was received for permission to send it on to a third country. So the EEC is quite a bit ahead of the United States in this area, or a bit behind, however you want to look at it.

Let me give you some areas now which I think we should be looking at. Some of these are pretty simple and straightforward, but others require some further discussion.

Question from audience. One basic problem. The information documents that come into the United States do not have the U.S. taxpayer identification number on them. The entire U.S. computer system is based on the taxpayer identification system. Why does not the U.S. request of the foreigners that at least before they give a reduction or rebate or exemption under a tax treaty that the U.S. person receiving the income is required to furnish the taxpayer identification number so it can be put on the information item sent to the Philadelphia Service Center?

Guttentag. The U.S. is working with the OECD in the development of a standard information exchange and there is a meeting of the working party, this week actually, trying to work on that standardized form which very likely would include some sort of identification numbers or the equivalent overseas.

Possibly we should be exchanging more information on *income which is exempt*; for example, bank interest. Should we furnish to our treaty partners information on foreigners living as residents of treaty countries who get exempt bank interest which is not considered U.S. source income and so require no reports that furnish that information? On the other hand, should we ask for the same information from our treaty partners?

Tax havens: What can we do about the tax haven problem? One of the biggest problems is the lack of information. Do we try as has been suggested in the past, to enter into treaties with the tax haven countries to obtain information, solely for the purpose of obtaining information, even though they may not have an income tax to be the subject of a regular tax treaty? What is our leverage in trying to obtain this, and is it worthwhile to obtain it from half a dozen tax haven countries if there are going to be another half a dozen which do not have such conventions? What do we do about bearer instruments, and (their effect, for example), in the case of corporations which invest in the United States? Do we have the optimum coordination of our treaty exchange of information and competent authority between the IRS and the Treasury? I think not without any disrespect to any of the people involved. I think it is rather an awkward procedure that we have the Office of International Operations under the Assistant Commissioner (Compliance) and we have the Office of Assistant Commissioner (Technical) involved, all under the Commissioner; but then we also have the Office of International Tax Counsel and there are really no direct lines of communication or coordination among them. I think in many cases we have to rely on the personalities involved to communicate effectively and I think that is an area in which we ought to take another look.

Spontaneous exchanges. What should the U.S. do? Should the U.S. make spontaneous exchanges? Should we ask revenue agents, or district directors, who think that somebody may have avoided a Swiss tax to notify the Swiss competent authority? We have to worry about protecting the rights of the individual involved. It may be unequal exchanges of information, depending on the seriousness with which the revenue administration approaches the problem. Imagine, for example, a spontaneous exchange arrangement between this country and Italy. I think that it will require some considerable thought before we adopt a spontaneous exchange system.

8. *Bulletin* Editor's note: See for this directive SUPPLEMENTARY SERVICE TO EUROPEAN TAXATION, Section D and 18 EUROPEAN TAXATION 139 (1978).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Question from audience. Why don't we advise taxpayers before we exchange information so that the taxpayer has the opportunity to make sure that the information is accurate or require the foreign government to explain that the information is not really wanted for tax purposes but is wanted for exchange control or some other criminal procedure? Why should we not provide the taxpayer with that information the same way that we do when a third party summons is used in the U.S.? What about the balance of information? Is the balance of information significant? Is this a one way street? We have just signed a treaty with Hungary which contains, it appears at a quick look, the standard exchange of information provisions. Now we can provide these routine items. I do not know how much flows to Hungary, and I do not know that much about the Hungarian tax system, but will we receive anything of much significance from Hungary and does that mean that we are going to use a different method of enforcing and carrying out our obligations under what appears to be the standard exchange of information article in this type of treaty which may have been entered into for really limited purposes?

Maybe *Dave Reizes* would like to put his nickel in at this point.

Reizes. I would be happy to, Joe. One of the first things I did when I moved to OIO to take over this area was to separate the competent authority cases of double taxation or double benefit from the staff work. In one group we have all the equity cases. In the other group are hard-nosed compliance types that handle the exchange of information requests. The routine exchange of information is one of the continuing projects in that particular group. I think you have covered it fairly well. We are making some significant progress. That area is becoming much more coordinated and is becoming subject to a lot of cooperation. We have always tried to use our procedure as a model. But of course every country resents using the U.S. model. You talked about using the identification number; we have had problems with five or six countries lately who would be happy to give us a number but not the social security number. Canada recently tried to pass a law to provide for it. In fact, one Canadian form has a block (at our request) for insertion of the social security number. Canada has an SIN as we have our SSN. In Canada we found that there is a political, moral movement against big brotherism, where using one number to identify citizens for social insurance *and* tax purposes is antipathetic to many Canadians, I am sure there are many Americans who feel the same but who have just not been as vocal.

Introduction of an international tax identification number

We find the same thing in several of the other countries. We have been talking to the Scandinavian countries for the past several weeks. Perhaps in your IFA committee, or in the OECD committee, you could possibly put forward our most recent suggestion: that we develop among the various treaty partners an international tax identification number. The first time a name comes up with a flow of, say, investment income between countries, that name is assigned some "clearinghouse number" just for that particular purpose, and subject to all the treaty secrecy and confidentiality requirements. We think in this way we can get around the problem and keep the purpose of this information strictly for passive investment tax information.

You have said so much it is hard to respond. In the first 40 minutes you covered almost every point that this group of mine is working on, and you have covered it fairly well. I think that between the several persons involved in the administration of tax treaties, that just by the very force of character they are keeping communications open, and an operation running which could really get bogged down in the bureaucratic morass.

Guttentag. I wondered if anybody here has been involved in, or knows about, and is willing to talk about, any simultaneous examinations and what's happening with them. I do not think we have that many going on.

Comment from audience. I do not have one going on, but exchange of information, the treaties, is supposed to be between the competent authorities. I notice that the simultaneous examination procedures provide for consultation at the agent level, and was wondering what the authority for doing that was.

Reizes. In Professor Surrey's article on the UN Treaty the statement is made, if I recall, that the exchanges of consultations can be at the various levels, it can be between the competent authorities, it can be in writing, it can be in face to face meetings, it can be between delegated subordinates. At this particular time, where it has been different in the past, but at this particular time there is no delegation of the actual competent authority. However, the simultaneous examination program is called simultaneous, as opposed to joint, because they are two separate examinations and the way it has been structured is to in effect have parallel examinations with exchanges of information at certain points pursuant to formal requests and pursuant to specific delegations or authorizations to receive or act as an agent. As I have said, I have not been along on one of them. I have watched the development of the program from a distance. What we see is that when the agents get together, they are getting together at a planning stage. They are talking about issues; they are talking about approaches; they are talking about time schedules; allocation of resources; development of issues by economists; and they are not necessarily exchanging tax information. Formal exchange is going on. The agents can exchange documents as authorized and be designated to, perhaps, ask a question about it for further clarification. This is being done very formally.

Comment from audience. There was, you know, an agreement entered into by the Commissioner and the Minister of Revenue and I suppose that resulted in a delegation of the competent authority to exchange that information because one of the provisions, for example, says that the individual case managers from the audit team will exchange information. Now the Commissioner signed that and I suppose he has authority to do that. He is delegating an unnamed person by title only.

Guttentag. You think that cannot be delegable in that way or at all?

Comment from audience. Well, I feel that the people might be concerned about confidentiality because of the information.

Guttentag. In what way?

Comment from audience. Well, that it is being discussed among a large group of IRS officers in the United States?

Beatty. Joe [*Guttentag*], is there any possibility that the restrictions on the disclosure of tax information that are governed by the Code extend to the foreign recipients of return information exchanged under the simultaneous audit program? Is there, in other words, the same restriction on the UK auditor who obtains U.S. data that there would be on the U.S. agent himself?

Guttentag. You mean does the Code have extra-territorial impact on this ...

Beatty. Is there an obligation on the part of the IRS to insist as one of the conditions of the transfer ...

Guttentag. The limitation on the use of that is contained in the treaty itself. It provides for the secrecy in the handling of that information and the improper disclosure of that information. I do not know as to what detail the IRS goes with respect to specific requests. With respect to routine pieces of information, that information is just put in a bundle and shipped off to the competent authority overseas, and to what extent there are any requirements beyond the treaty language as to what can be done with it, I do not know of any.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Reizes. I would like to add that we have gotten agreements to use restrictions similar to our Code restrictions. Information is given upon specific understandings. Now, the Canadian treaty is our only treaty that does not have a secrecy provision in it. It is an "old" exchange of information provision. The commitment we have received from the Canadians is that, notwithstanding that secrecy is not specifically mentioned, we read it into the exchange provision. They have agreed to consider our internal domestic statutes. Our agreement is to respect the use restriction. It will be read in, and we will follow it.

Question from audience. Is there any way of checking the sanctions for violations of restricted use to make sure that any individual in a foreign administration who makes improper use of such administration will be proceeded against with reasonable severity?

Reizes. You are getting into a diplomacy type of argument. I really do not know how far we can go on that. Our primary consideration is that treaty partners get so many significant information exchanges that we both would hesitate to violate the confidentiality provisions either of the treaty or agreed to provisions of a specific exchange, because it would cut off further exchanges. It could impact the entire program with that particular country. We, and they, just would not do it.

Questions from audience. Political organizations of a particular foreign country may be capable of requesting tax information for purposes of their own. What I am thinking about is whether there are instances in which the government uses other means to find out about overseas wealth of internationals. Is somebody there to make that kind of political assessment?

Reizes. It is made, if necessary, by the competent authority but it is a very broad consultational process. I think Treasury is directly involved in situations of this nature. I know that anybody with any expertise or experience throughout IRS is consulted and brought into the progress. I have not seen a bad case of that type yet.

Question from audience. Under the U.S.-Canada joint audit agreement there are some directives in which some areas of the exchange are set forth some of which pertain to tax savings and it seems that through the issuance of these directives through joint tax audits that the U.S. will eventually accomplish what the EEC is doing under its exchange of information provisions.

Reizes. I think they are heading towards the same place but I think they have two different purposes. The EEC in exchanging information, is trying to develop an information pool for each country to do what they will with. The simultaneous audit program is an attempt to maximize the use of resources where two countries have significant interest. One of the things that *Joe Guttentag* mentioned was the method of exchanging information where we try to triangulate, for example, where we have a tax haven situation. If you look at the news releases about the simultaneous examination program, whether it is with U.K. or Canada or other countries, I think you will see a particular emphasis on existence of tax haven subsidiaries. This is always one of the criteria that will be evaluated in the selection process. The important thing in the program is that the U.S. and its simultaneous audit partner will get together and actually select cases which have high impact for both countries. This way they are able to triangulate and also conserve resources.

U.S. overseas audit program

We have an overseas audit program. OIO, either at the request of a District, or where an OIO taxpayer is involved, sends people overseas to examine books and records. We send people from the various foreign posts that we also have in 13 foreign countries to do on-site audits of subsidiaries of U.S. parents, and foreign branch operations. It is a tremendous saving of our limited resources to know that the same examination of that foreign country operation is going to be performed by our treaty partner who will be able to give us the same information we will need to verify the tax return. The additional benefit that might come from this is at the same time there is a simultaneous examination there is also fact finding; so, for example, you do not have two different sets of pricing proposals. There are many benefits to be derived from this program as long as you go about it cautiously and make sure that it is not abused, which I think is the common fear, as expressed here today.

Beatty. We might mention one other thing on triangulation cases that we did not touch on in the discussion of competent authority proceedings. There have been several cases that have developed where goods were being sold from one treaty country to another treaty country through an intermediate tax haven. An example would be exports running from a United States to a Bahamas company which in turn resold the goods to France. In the days when it was possible to shelter Subpart F income from U.S. tax, that sort of structure could have an impact in the U.S. obviously. It would also clearly create a potential for French tax avoidance. If the U.S. and France independently proceeded to make section 482 type allocations, the net result of both allocations might be to put the tax haven company in a loss position because its adjusted cost of goods sold for the goods purchased from the U.S. was greater than the selling price into France permitted by the French authorities. You then have a very interesting type of competent authority proceeding. Can and should the U.S. and French competent authorities proceeding under the treaty grant relief in that situation?

Special aspects of triangulation cases

I gather from *Dave* [*Reizes*] that a number of European competent authorities, particularly the Swiss and the French, tend to analyze the transaction in accordance with its forms and say that it simply is not a competent authority case. They say, "We have adjusted the inter-company transfer price from the Bahamas to France. We have no treaty with the Bahamas and there is no reason to talk with you."

Unidentified comment. I think it is just another reflection of the whole attitude toward correlative adjustment in Europe. I think the idea is if a company makes a reasonable effort to come to a reasonable price, we are going to leave it alone — we are not going to have these crazy rules that the Americans have. On the other hand, if they are way out of line we are going to hit them. And in addition to paying the additional tax the price they pay is the loss of that correlative adjustment. They do not care about correlative adjustments. This is going to help keep people honest. The U.S. does not take that approach, of course.

Unidentified comment. I think we are overly concerned with the competitive posture of business and the stated effect of a treaty: avoidance of double taxation. We try to stay away from this punitive idea that, if this is the way the taxpayer set up the transaction, let him lie in the bed he has made.

Question from audience. What percentage of volume of information is there between the developed countries with the United States as opposed to the United States with undeveloped countries.

Volume of information regarding less developed countries

Reizes. The volume is almost entirely with the developed countries, because we can only exchange under the tax treaties. Section 6103 specifically contains an exception from the prohibition on disclosure, if information is exchanged pursuant to a treaty. If there is no treaty, we cannot disclose the tax information.

Question from audience. There are a few

© 1980 International Bureau of Fiscal Documentation – BULLETIN

treaties with undeveloped countries. Are they getting any volume out of that? British Virgin Islands, Netherlands Antilles.

Unidentified comment. Yes. I think we are talking about a little bit of information in the less developed countries, a couple of Caribbean countries. But we are really concerned with the volume countries, the countries where we have passive investment income flowing through.

The Netherlands Antilles does give us information on either a specific request or routine use basis. As to most of the others, the overseas departments of France and former British colonies, I do not know. If it were significant, I am sure I would know. I do not think we get very much, and I do not think we really supply very much. It is a reciprocal relationship. Sometimes we will give first in order to convince a treaty partner that that is the way to do it, and then we hope we will get exchanges in return. Somebody has to start the procedure. But looking at the list of these former British colonies and the overseas departments of France I really do not think we are talking about any substantial volume of exchange.

Comment from audience. My suspicion is even if we had a treaty with them, I do not think they are equipped to handle it, to receive or give.

Reizes. I agree with you. It is probably one of the reasons why they do not have very sophisticated tax systems. They get by with the sun, most of them.

Question from audience. In the foregoing discussion it was said that we generally would not exchange information in some instances. Do we give a U.S. government independent auditing group that is auditing the effectiveness of the foreign tax authorities sufficient information to see whether the tax authorities are covering the job capably or not?

Reizes. We have not been faced with that yet. I would tend to resist it. I think our position has been, so far, that we are still trying to define the parameters of what the secrecy clause of the convention means, and whether a U.S. government organization can look at specific case information in our treaty cases. I do not think we have come to a very strong, hard, answer as to whether they can do it. We certainly are not going to authorize it or allow it overseas until we have arrived at that situation. In the United States, GAO does audit our operation, they look at our statistics, they look at our procedures, they see, I think they see, the bulk of our files, but I know that as far as protected information, my people are very careful about what we will let anybody see. I think it is still up in the air, so until we clean our own house we are certainly not going to let anything happen overseas.

Question from audience. Joe [*Guttentag*], you mentioned that because of the exchange of information under treaties the Service might want to require the reporting of bank interest. In 1966 I believe they proposed such a rule, a rule that was much broader, a broader reporting requirement, but withdrew it because of substantial adverse comments from banks and others.

Guttentag. I think we need to do some more work in this area. In looking at the statistics developed by the IRS there is some discrepancy in them as far as the tax collected and so forth which I do not quite understand and for which I have not received a satisfactory explanation. I think we need some more work. Is this useful information? Are our treaty partners interested in it? If you take a look for example at the new French estate tax treaty which has just been sent to the Senate you will find there that we excluded from U.S. estate tax most assets of French domiciliaries except real estate from a permanent establishment, but we maintained a requirement that we still keep records as to the nature and the amount of those assets for furnishing to the French to make sure that they were able to tax those assets. But I think that this is just another area where we need more, but we have to see whether it is useful. If the foreigners are not interested in knowing how much their residents earn in U.S. bank interest then why should we bother? Is there something reciprocal that we can get in return?

Comment from audience. I understand that the Danish tax authorities or the Danish Parliament has such a reporting law and that right after they did that many non-residents just pulled their money out of Danish bank accounts and transferred them to others.

Guttentag. We could bring a lot more foreign investment into the United States if we eliminated other reporting requirements and taxes. Why have this exception? Are the banks right? I don't know.

Jenks. I think we are out of time for this afternoon. Thank you all very much for your participation in the program.

From Prentice Hall

An indispensable aid for American businessmen, investors and corporations engaged in or planning foreign operations and for those in foreign countries planning or doing business in the United States —

TAX TREATIES

This definitive guide is indispensable for any businessman or corporation that sells, buys, manufactures, or invests in the United States — as well as for any American businessman or corporation that does business in foreign countries. It tells you:

- How and where to handle your investments while eliminating the chance of double taxation.
- How much of your investment income will be protected by tax treaty exemptions.
- How much business Americans can carry on in a foreign country and vice versa without becoming taxable as a "permanent establishment."
- How to protect your employees who are temporarily at work abroad from a double tax burden.

In Tax Treaties, you'll also find:

1. The full official text of every existing treaty, supplementary treaty, or protocol relating to income taxes and estate and gift taxes between the United States and each of its tax-treaty countries, including model treaties showing the latest trends.
2. Annotated editorial text arranged in a Uniform Paragraph Plan . . . makes for easy direct comparison of provisions of one tax treaty country with another . . . permits a single unified index which works hand in hand with this unique setup. You'll make sure, speedy decisions at the flip of a wrist.
3. Official reports on each treaty giving you the background behind the provisions; why particular treaty articles were included; and what each provision means to you.
4. A Special Finding List at the beginning of the editorial summary for each country . . . speeds you quickly to explanatory and official material that affects you.
5. Monthly REPORT BULLETINS, analyzing the latest treaties, decisions and rulings, keep you right on top of today's fast breaking tax treaty developments . . . (plus Current Matter containing the most recent U.S. court decisions and IRS rulings giving you the latest judicial and official word on tax treaties.)

In today's constantly expanding international commerce, expert tax-managing or tax-counseling of business activities between the United States and each of its treaty countries is a must — so keep up to date with Prentice-Hall's TAX TREATIES.

To order a one-year introductory subscription to this unique publication at the low rate of only $ 120, address Department S-TT-103.

Estimation of Tax Potential and Tax Efforts of State and Local Governments

by G.Thimmaiah*

The burgeoning literature on the modern theory of public finance has thrown up new concepts both to replace and to supplement the old ideas on various aspects of public finance. This process has also led to some confusion regarding the specific connotation of some concepts. A case in point is the terms tax potential *and* tax efforts, *which have been used in place of* taxable capacity *and* tax burden *respectively. The purpose of this paper is to analyse certain conceptual issues relating to* taxable capacity, tax potential, tax burden *and* tax efforts *in their historical context and to highlight their analytical contents with a view to evaluating their usefulness in policy formulation. These concepts have been used mostly with reference to governmental units such as national, state and local governments. Hence, their analysis in this paper refers only to governmental units rather than to individuals. In the case of individuals, the concept of* tax incidence *is more prominent, although the concept of* tax burden *is also used to indicate the nature and extent of final incidence of a tax on individuals. However, the concept of* tax incidence *has received sufficient attention from economists* [1] *although the result has not been encouraging from the point of view of specification for empirical measurement.*

I. CONCEPT OF TAXABLE CAPACITY

The concept of *taxable capacity* has engaged the minds of economists for a considerable period of time. Perhaps the earliest attempts to analyse the concept of taxable capacity were made by European economists, particularly in Great Britain. They confined their discussion to "tax", without extending their analysis to the non-tax revenue of the government. This was obvious from the fact that the role of government was confined to very essential activities, and the private sector was considered the sine qua non of any civilized society. Any large-scale interference by the government in private sector economic activities was considered an evil; hence organized pressure groups were always watching the role of the government. In view of the necessity of having the government, the need to raise revenue for supporting even such a "minimum government" was willy nilly permitted. Here again such issues as how to raise the required revenue, and what would be the maximum amount of taxation a country could afford, were discussed at length by using concepts like *absolute taxable capacity* and *relative taxable capacity*.

The concept of absolute taxable capacity was popularized in the U.K. by Sir Josiah Stamp [2] in the early part of the 20th century. He used the Ricardian theory of surplus to formulate the concept of absolute taxable capacity, interpreting absolute taxable capacity as total production minus the subsistence level of consumption plus some essential investment. So defined, the concept of absolute taxable capacity becomes cardinally measurable. He noted, however, that such absolute taxable capacity cannot remain constant as it would vary with the production. The cardinal concept of absolute taxable capacity was used by Findlay G. Shirras [3] to measure the absolute taxable capacity of the U.K. and British India for the pre-World War I and inter-war years. He defined absolute taxable capacity as "the surplus of production over minimum of consumption required to maintain that volume of production per head of population, the essential standard of living remaining unchanged over a number of years". [4] Shirras deducted from the gross national income the minimum of consumption including the necessary expenses for efficiency and savings for ordinary replacement and addition to capital; the surplus he considered as the amount of absolute taxable capacity. The influence of this concept can be noticed even now in academic circles as is evident from a recent attempt

to measure the absolute taxable capacity of the agricultural sector in India by using the following formula: [5]

$$\bar{t} = (\bar{y} - \bar{c}_m) - \bar{i} = (\bar{s} - \bar{i})$$

$\bar{t}$ = per capita absolute taxable capacity
$\bar{y}$ = per capita income
$\bar{c}_m$ = per capita minimum consumption requirements
$\bar{s}$ = per capita potential surplus
$\bar{i}$ = per capita allowance for minimal investment

If taxable capacity is strictly interpreted as equal to total production minus necessary consumption plus replacement costs, it equals the net savings of a country. Such a concept may be useful for measuring the taxable capacity of a socialist country where there is no private sector. In such countries taxable capacity can be theoretically made equivalent to the net savings of the country. But in a country where the private sector is predominant and is as important as the public sector, the government cannot tax away the entire net savings of the people. It would amount to discouraging or even restricting investment in the private sector.

Even if an allowance is made for depreciation and some addition to the existing capital in the form of new investment, the concept of absolute taxable capacity becomes arbitrary because there are no objective criteria to determine how much surplus should be allowed in the form of additional investment in the private sector. Another weakness of the concept of absolute taxable capacity is its static nature, in the sense that it suggests that the government should allow only the existing standard of living to continue intact and need not allow it to rise over time. It is true, in the context of the low level of savings in a country like India, that we must reduce the level of consumption through taxation in order to divert an increasing proportion of national income to public investment. But such a policy should be selective so that those whose level of consumption is above an objectively determined reasonable level should be made to reduce it by paying taxes and those whose level of consumption is just at subsistence or below should be allowed to maintain or reach that objectively determined reasonable level. Furthermore, as and when the economy develops the consumption standard should also increase to match the rising expectations, for the very purpose of economic development is to increase the standard of living of the masses. Hence, the static concept of absolute taxable capacity does not fit into the dynamics of economic growth and development. Even the socialist countries which curbed the consumption standards of their people during the initial stages of their economic development are now allowing them to rise. This only suggests that the concept of absolute taxable capacity as it has been interpreted and used becomes static over time even in socialist economies. Therefore, it loses its analytical validity. Hugh Dalton was right when he observed that "absolute taxable capacity" is a myth and relative taxable capacity is a reality". [6]

The concept of relative taxable capacity can be considered as an ordinal concept, [7] because we can only indicate whether the relative taxable capacity of a nation or a sector or different states in a country has increased or not over time or at one point of time. For this purpose we must know the determinants of relative taxable capacity such as the levels and rates of growth of national/sectoral/state incomes, changes in the distribution of national/sectoral/personal incomes, the levels, rates of growth and patterns of consumption of different income groups, and the levels, rates of growth and distribution of government expenditure. These are some of the important economic determinants, leaving aside a host of non-economic variables such as wars, *displacement effect*, [8] etc. on which the relative taxable capacity depends. On the basis of the direction of movement of these determinants of relative taxable capacity over time, we can infer whether the relative taxable capacity has increased or not.

Until recently economists used to find out the changes in the determinants of relative taxable capacity and conclude whether relative taxable capacity of a country/state/sector had increased or decreased in an ordinal sense. But in recent years, with the advent of econometrics, attempts have been made to use regression analysis to quantify the extent of increase in the relative taxable capacity of a country/state/sector of an economy. This method of estimating the relative taxable capacity has come to be known as the *regression approach*. [9] It should be noted here that the pioneering studies of Jeffrey G. Williamson, [10] Harley H. Hinrichs [11] and

8. The need to finance war leads to the introduction of new taxes in democracies. But these new taxes are not abolished after the war. Instead, they are continued under the justification of post-war reconstruction and other social security programmes. Thus new justification displaces the original justification for new taxes. This situation is characterised as "displacement effect" by Alan T. Peacock and Jack Wiseman in their book: *Growth of Public Expenditure in the United Kingdom* (Princeton, Princeton University Press, 1961).

Richard S. Thorn [12] relating to the determinants of government revenue in the developed as well as the developing countries (and which used regression analysis) were the precursors of the aggregate regression approach to measuring the relative taxable capacity and tax efforts. In a way these studies themselves can be said to have been inspired by the attempts [13] to estimate the income elasticity of taxation (revenue elasticity) by using regression analysis. In the regression approach, both univariate and multivariate methods have been used to quantify the relative taxable capacity. The univariate method has been christened *income approach* because, in the U.S., the relative taxable capacity of the states was measured mainly by using state income as the sole determinant of taxable capacity, though in the case of local governments the taxable property was used as the main determinant of relative taxable capacity. Paul Studenski's and Selma J. Mushkin's studies are worth mentioning in this context. [14] Some recent studies have shown that income is the best available index of the relative taxable capacity of even the local governments in the U.S. [15] In the income approach it is assumed that all taxes are ultimately paid out of income and hence income can be taken to indicate the relative taxable capacity of a country/state/sector as the case may be. [16] Accordingly, the total revenue is regressed on income and the resulting regression coefficient is considered as the effective tax rate. This rate is applied to the actual or projected income to get the aggregate potential revenue. However, it is realised that although all taxes are paid out of income, all of them are not levied directly on income. Therefore, the income approach, by confining itself only to income as the main tax base, cannot explain the extent to which governments have cultivated and exploited various tax bases as specified in the Constitution or tax legislations. Besides, the income approach cannot capture the taxable capacity arising from "tax-exporting" or taxation of non-residents. Therefore, the income approach is now broadened to include various other relevant variables which determine the relative taxable capacity such as per capita income, ratio of exports and imports to GNP, degree of urbanization, ratio of agricultural income to GNP, ratio of non-agricultural income to GNP, etc. However, even this comprehensive multivariate regression method gives only the hypothetical taxable capacity and hence cannot give a clear idea about the true taxable capacity because the determinants of taxable capacity are chosen on an *a priori* basis and are therefore only proxies (best possible substitutes) for the true tax bases which alone can indicate the true taxable capacity.

II. CONCEPT OF TAX POTENTIAL

During the post-World War I period the science of public finance developed rapidly on the American continent. This development also had its influence on the concept of taxable capacity. In America the concept of taxable capacity as expounded by the British economists remained mostly in textbooks. The policy makers did not pay much attention to this concept apparently because of its limited applicability to policy formulation. During the 1920s and 1930s some attempts were made in the U.S. to arrive at more pragmatic approaches for the purpose of providing quantitative guidelines for policy makers, particularly at local and state government levels. [17] Perhaps the earliest attempt in this direction was made by a committee appointed by the National Tax Association. [18] The committee suggested what is known as a "model tax system" which included a personal income tax, a business income tax for the states and a property tax for local governments. Specific rates of these taxes were suggested, keeping in view the tax bearing capacity of the business, trade and income earners as well as the revenue requirements of state and local government in the U.S. This model tax system was suggested as an alternative to what was then considered as an anarchy of several taxes which were hindering business and trade. But the model tax system has been criticized as "...little more than the values and opinions of an individual researcher. This is because there is little in the way of consensus concerning what constitutes the ideal or optimal state-local revenue system.... As such they may bear litte relation to the devices that are actually used or are available to raise revenues." [19]

However, some of the studies made at Teachers College, Columbia University, New York, relating to the tax paying capacity of the local school districts were the forerunners of the representative tax system approach in which the concept of revenue potential has been widely used. It has been reported that as early as 1923 Strayer and Haig [20] suggested a formula for measuring the relative taxable capacity or the tax potential of

the school districts for the purpose of guiding the state governments in making foundation grants for school districts. The formula they suggested is as follows:

$$A_i = N_i\, u - rY_i$$

A_i = subsidy to the i^{th} school district

N_i = number of pupils in attendance in the i^{th} school district

u = foundation expenditure per pupil

Y_i = tax base of the i^{th} school district (i.e. equalized value of taxable property)

r = average effective tax rate

The tax rate, r, was common for all districts and was chosen in such a way that a "representative" rich school district of the state did not get any foundation grant (i.e. A equals zero). This formula was further improved by Swift in his *Federal and State Policies in Public School Finance in the United States* in 1931. [21] However, it was Mabel Newcomer [22] who conceived for the first time in 1935 what is now known as representative tax system approach, though her approach was inspired by the model tax system approach.

Thus American scholars have coined the concept of *tax potential* for the purpose of guiding policy decisions instead of using the traditional concept of *taxable capacity*. It should be emphasised here that the concept of tax potential ultimately means the same as the concept of relative taxable capacity, as both of them refer to the potential tax paying capacity of a country, state or a sector as the case may be. This is evident from Roy W. Bahl's observation that "taxable capacity is defined... as the tax ratio that would result if a country applied to its tax bases a set of 'average' effective rates on those bases, these rates are computed as net regression coefficients... The variable indicators of taxable capacity are proxy measure of tax bases." [23] In the case of relative taxable capacity only a hypothetical estimate is made based on proxy tax bases to indicate whether it has increased or not, whereas in the case of tax potential the relevant true tax bases and some economic determinants are used to measure the existing true tax potential. As in the case of relative taxable capacity, tax potential is also a relative concept "because the size of the public sector depends upon society's willingness to substitute public goods for private goods". [24]

Two methods have been used to estimate the revenue potential through the representative tax system approach: (i) the direct method and (ii) the regression method. Apart from Swift, Cornell, Newcomer, and Strayer and Haig in the 1930s, in 1962 the American Advisory Commission on Inter-Governmental Relations [25] (ACIR), used the direct method to estimate the tax potential of state and local governments in the American federation. This method was also used again in 1971 by the ACIR to estimate both the tax and non-tax revenues potential of state and local governments. [26] The same method has been used by scholars like James H. Lynn in Canada to estimate the revenue potential of the provinces in the Canadian federation. [27] In Australia a slightly different version of the direct method has been used since 1933 to measure the revenue efforts of the claimant states which applied for special grants. This method was developed by the commonwealth Grants Commission, particularly under the guidance of L.F. Giblin. [28]

The direct method of the representative tax system approach used by ACIR first of all estimates the tax base of each tax of individuals state and local governments. Then the actual revenue raised by these state and local governments from a particular source of revenue is divided by the estimated tax base of that source of revenue of the state/local governments to obtain what is known as the "effective average tax rate". This is the effective rate which should be applicable to all the states/local governments in a federation. In other words, it is an average rate at which the tax bases prevailing or located in each state/local government area should be taxed. This rate is applied to the estimated tax base of each state/local government and the potential revenue is estimated. This is the potential revenue from a particular source of revenue in a particular state/local government. [29] Thus the formula of the ACIR direct method can be written in the following way:

$$RP_j = \frac{\sum_{j}^{n} r_i}{\sum_{j}^{n} b_i} \times (b_{ji}) + \ldots\ldots + \frac{\sum_{j}^{n} r_m}{\sum_{j}^{n} b_m} \times (b_{jm})$$

RP_j = estimated tax potential of j^{th} state

$\sum_{j}^{n} r_i$ = total tax yield of all the states from j to n in a federation from i^{th} tax

$\sum_{j}^{n} b_i$ = total estimated/actual tax base of all the states from j to n in a federation relating to the i^{th} tax

b_{ji} = the estimated/actual tax base of i^{th} tax in j^{th} state

b_{jm} = the estimated/actual tax base of m^{th} tax in j^{th} state

The actual revenue raised as a proportion of this potential revenue is known as the "revenue or tax effort" as the case may be. In the direct method, the difference between potential and actual efforts arises mainly due to variation in tax rates, though variations due to different sizes of the tax base located or assessed in difference states cannot be dismissed. However, this method requires true estimates of legal tax bases; in the absence of such estimates, if near proxies are used the estimated tax potential becomes arbitrary. Further, because of the use of an average tax rate, the tax potential of those governmental units whose tax base is below average gets overestimated and that of those units whose tax base is above average gets underestimated in terms of the principle of progressive taxation. Furthermore, it has been pointed out by W. Douglas Morgan that the ACIR direct method assumes base and rate elasticities of the tax yield equal to unity. [30]

In Canada the direct method of the ACIR has been used for estimating the revenue potential of the Canadian provinces. [31] In fact the equalization payments made by the Dominion Government to the provinces in Canada are determined on the basis of the revenue potential of the provinces estimated on the basis of the representative tax system approach by using the national average rate. The equalization grants are provided only to those provinces whose per capita actual revenue yield is below the estimated national average per capita revenue from twenty sources. [32]

The method used by the Australian Commonwealth Grants Commission differs to some extent from the ACIR direct method. The Australian Commonwealth Grants Commission (ACGC) has been concerned with recommending special grants to the claimant states which are in need of special financial assistance. For this purpose, it first takes into account the level of government services provided in the richest states in the Australian federation. In order to provide those services (both the level and quality) in the states which ask for special financial assistance, the Commission expects the claimant states to apply to their tax bases the rates which the richest states apply to their tax bases located within their boundaries. Therefore, the Grants Commission estimates the tax bases of the claimant states and applies the rates prevailing in the richest states to the estimated tax bases of the claimant states to arrive at the potential tax yield. The difference between what is actually raised by the claimant states and what is estimated by the commission is adjusted for the amount of special grants provided. This method has been replaced by a more direct method in the Forty-First Report of the Grants Commission [33] in keeping with the changed methodology of the Commission. Now the Commission estimates the revenue efforts of the claimant states as equivalent to the "revenue of claimant state assuming standard revenue-raising capacity and standard revenue-raising effort (average per capita modified revenue of standard states multiplied by claimant state's population), *minus* revenue of claimant state assuming claimant state's revenue-raising capacity and standard revenue-raising effort (average of standard states' revenue effort applied to claimant state's revenue base)". [34]

In recent years many economists have advocated that multiple regression analysis should be used to estimate the revenue bases and also the effective rates even under the representative tax system approach. It is maintained that multiple regression analysis will take into account all those factors (including the interdependence of different tax/revenue bases) which influence the yield from a particular tax or the entire tax system as the case may be. Under the regression method, in addition to the relevant tax base of a particular tax or a source of revenue, certain other important economic determinants of the yield from the source such as per capita income, etc. are used and their relative impact on the revenue potential is estimated. The regression coefficients so obtained are converted into standardized beta coefficients and are treated as "marginal effective rates". They are applied to the relevant tax/revenue base and to other independent variables used in the regression analysis, and accordingly the potential revenue from a particular tax/revenue or the entire revenue system, as the case may be, is estimated. This regression method takes into account the influence of not merely the relevant tax or revenue base but also other possible economic factors which might influence directly or indirectly the yield from a particular source. The tax/revenue potential estimated by using the multiple regression method, therefore, is weighted by the relevant tax/revenue base and other important variables used therein. As the regression method yields marginal effective tax rates and takes into account the influence of other important determinants of the tax potential, there will be a difference between the tax potential as estimated by the ACIR direct method and that estimated by using the regression method. The ACIR direct method yields a simple average tax/revenue potential whereas the regression method yields a weighted marginal tax revenue potential. Although the regression method helps in identifying the relative influence of other relevant economic factors on the revenue yield in addition to the relevant tax/revenue base, whether it is appropriate to take into account such influence while estimating the revenue potential of state and local governments is a moot question. It may be mentioned here that this regression method was first used by Roy W. Bahl in an IMF study [36] to estimate the tax potential and tax efforts of 49 developing countries. Recently it has been used by John S. Akin [37] to estimate the revenue potential and efforts of the states in the American federation. He has claimed that the regression method yields a marginal effective tax rate which he considers more relevant for estimating the revenue potential of the States. On this ground he has maintained that the ACIR direct method which uses an average effective rate is methodologically inferior. But it may be argued that the multiple regression method is appropriate for estimating the tax potential of an individual country/state/local government taken in isolation as it does not involve any comparison with the tax potential of other countries/states/local governments. In such an estimation, it is necessary to take into account the influence of other factors, in addition to the relevant tax base, on the tax potential of a country/state/local government. However, the ACIR direct method is appropriate for estimating the tax potential of several countries/states/local governments with a view to knowing their relative tax potentials. In such comparative studies it may reasonably be assumed that the effect of "tax exporting" by the countries/states/local governments is offset by the effect of "tax importing".

III. TAX EFFORT AND TAX BURDEN

The concept *tax burden* has been used in the orthodox theory of tax incidence to indicate both absolute tax burden and relative tax burden on both individuals and countries. *Absolute* tax burden indicates the absolute amount of tax paid or borne by individuals and/or a country. The *relative* tax burden indicates the proportion of the amount of the tax paid/borne to income in the case of an individual, and the proportion of tax revenue raised to GNP in the case of a country, state or sector, as the case may be. However, these indices do not throw much light on the true burden of taxation. Therefore, Henry J. Frank, Richrd M. Bird and Vito Tanzi have suggested some alternative methods of measuring inter-state and inter-country tax burdens. [38]

Frank's index of tax burden is measured by the proportion of state and local taxes to personal income divided by per capita personal income. Bird has suggested a slight modification to this index in the following way:

$$\left[\left(\frac{T}{Y-T}\right) \times 100 \div \frac{Y}{P}\right] \times 100$$

T = tax revenue
Y = gross domestic product
P = population

Henry Aaron has maintained that this index of tax burden implies excessive progressivity of taxation while referring to countries. [39] Therefore, not satisfied with this kind of estimation of inter-State and inter-country tax burdens, Vito Tanzi has suggested a variant of the ACIR-ACGC and regression method. [40] According to his method,

> "If the total tax 'burdens' — consisting of the ratios of the aggregated federal, State and Local taxes to the States' incomes — could be determined for each State, and these burdens could be related to the per capita income of the States, one could obtain an estimated relationship which would tell us what would be the most likely tax 'burden' that a foreign country would have if, *ceteris paribus*, it were a State of the United States. In its simplest form, that relationship could be written as:
>
> $$\frac{T_i}{Y_i} = a + \overline{Y}_i \text{ ",}$$
>
> (where T_i stands for total taxes, Y_i and $\overline{Y}_i$ for total personal income and per capita personal income respectively)." [41]

This method assumes that the U.S. personal income tax system is ideal in the world merely because it is progressive. Further, it does not take into account the process of structural change in the tax system which takes place in the course of development of a country. Finally, all these measures of tax burden disregard the influence of distribution of income on the tax burden of a country and/or State. Richard Bird and Henry Frank also disregard the value judgement involved in comparing tax burdens; they also use the concept "tax burden" synonymously with "tax sacrifice", although Richard Bird has clarified that no value judgement relating to interpersonal comparison of utilities

37. "Fiscal Capacity and the Estimation Method of the ACIR", *National Tax Journal*, June 1973, pp. 275-91. Also see his Ph.D. dissertation, *Estimation of Local Fiscal Capacity*, University of Michigan, 1971.
38. See for details Henry J. Frank, "Measuring State Tax Burdens", *National Tax Journal*, June 1959. and Richard M. Bird, "A Note on 'Tax Sacrifice' Comparisons", *National Tax Journal*, September 1964.
39. "Some Criticisms of Tax Burden Indices", *National Tax Journal*, September 1965. It may be noted here that V.P. Gandhi has suggested the following degree of progressivity to make the index of tax burden a policy tool:

" $\frac{t}{(y-s)^{e_o}}$, $(1 < e_o < 2)$, where t is taxes per capita, y is income per capita, s is subsistence per capita and e_o is the exponent whose value lies between one and two".

Some Aspects of India's Tax Structure: An Economic Analysis (Bombay, Vora & Co., 1970), p. 130. However, Richard Bird has criticised this kind of injecting progressivity into the tax burden index as arbitrary. See for details Richard M. Bird, "Assessing Tax Performance in Developing Countries: A Critical Review of the Literature", *Finanzarchiv*. Vol. 34, No. 2, 1976, pp. 244-265.
40. "Comparing International Tax "Burdens": A Suggested Method", *Journal of Political Economy*, September/October 1968.
41. Ibid., p. 1080.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

of income and disutilities of tax payment is assumed. He has further observed that the concept "tax burden" does not imply any excess burden of taxation. If this is so, then there is no justification for using this term to indicate the relative tax efforts of the governmental units. In any case, the suggested methods of measuring the relative tax burdens of states and/or countries are not useful for policy formulation, particularly to estimate the extent of tax potential tapped by the state and local governments.

It was in this context that the concept *tax effort* was coined by the American economists who attempted to measure the tax potential. Tax effort refers to the ratio of actual tax revenue raised to the estimated potential tax revenue. The "relative tax effort is the percent relationship between tax revenue and estimated tax capacity".[42] It does not involve any kind of value judgement relating to "burden" or "sacrifice" implied in tax payment. Here again, the concept "tax effort" has been used only with reference to governmental units and not in the context of individuals and hence does not get itself entangled in the problem of tax incidence.[43]

IV. A COMPREHENSIVE VIEW

The foregoing analysis of the concepts of taxable capacity, tax potential, tax burden and tax effort refers to the relative economic capacity/potential to raise tax revenue. However, in democracies a more comprehensive view of the tax potential and tax effort will have to be taken in order to make these concepts useful for policy analysis and policy formulation. Tax potential may be viewed comprehensively from three angles, all of which are relevant for any democratic government in its tax policy formulation. They are: (1) the constitutional-legal potential, (2) the economic potential and (3) the political-administrative potential.[44] The constitutional-legal capacity/potential refers to the constitutionally allocated powers of a governmental unit to raise revenue from constitutionally specified sources, and the legal definitions specified in the tax law to cover the tax base of such sources for purpose of tapping the revenue. This legal potential depends upon the limitation placed on the government through exemptions, deductions, etc. to tax a particular tax base. Thus, for example, if we compare the tax potential of the states in India, which do not have the constitutional power to raise revenue through a general income tax, with their counterparts in the U.S. which do have such power to tax income, it becomes arbitrary. Any attempt to measure taxable capacity/potential without reference to such constitutional-legal potential is merely a hypothetical exercise without any relevance to practical tax/revenue policy formulation. It is in this sphere that the traditional concepts of absolute and relative taxable capacity become obsolete, and the ACIR method scores over other methods of measuring tax potential in regard to legal power to tax. For it takes into account the legally defined source of revenue as given and tries to measure the potential revenue yield by applying an average rate to the specific tax base.

The economic capacity/potential refers to various indicators of the tax base discussed earlier. However, the existing statistical data relating to potential "taxable base" may not be appropriate from the point of view of its legal coverage. Any discrepancy between legal definition and economic definition of the tax base created by the absence of relevant data to measure the tax base will be reflected in the estimated tax potential and hence in tax effort. In the ACIR method, for want of appropriate data to represent the legal tax base, some proxies have been used. This invariably results in some arbitrariness apart from the earlier mentioned defects of this method.

The political-administrative capacity/potential is difficult to measure and hence economists have not attempted to measure it. Nevertheless, this aspect is a very important determinant of tax effort. In modern democracies the political will to tap the tax revenue to the hilt by utilising the constitutional powers is determined by support from the people of the party in power, group interests and the willingness on the part of the government to risk power in elections. As the main objective of a democratic government is to continue in power *à la* Anthony Downs,[45] one may remark that governments very rarely risk their popularity in tax measures. For instance, the cry for taxing the agricultural sector by the Indian states does not recognise the political risk involved for the state governments which are dependent on rural votes. Economists have no suggestions to make to get over this difficulty except to suggest centralizing agricultural income tax. They forget that that policy itself has its political implications. This is also true of local governments' unwillingness to utilize their revenue sources in India. Economists sidetrack the issue of local governments' nearness to their voters and the consequences of taxing them without providing proportionately apportionable benefits. This aspect of tax potential has not been appreciated by economists in their discussion of tax potential and tax effort.

Given the constitutional-legal and political potentials, the administrative efficiency is a major determinant of tax effort. Unfortunately all the methods developed so far to measure tax potential have failed to take into account the administrative efficiency. Even the modified method suggested by Akin to take into account the influence of interdependence of tax bases and also the taxing of non-residents has not attempted to allow for variations in the political capacity and administrative

---

42. Krazniewski, op.cit., p. 14.
43. It may be noted here that Richard M. Bird has maintained that the usefulness of the concept of "tax effort" in guiding the foreign aid policies of international agencies has been overemphasized without realizing the inherent subjective judgement involved in the concept. See, for details, his article "Assessing Tax Performance in Developing Countries...".

© 1980 International Bureau of Fiscal Documentation – BULLETIN

efficiency in tapping the tax potential. It may be argued that the representative tax system approach takes implicitly into account the efficiency of tax/revenue administration through the process of estimating the average effective rate. This is not necessarily true. It only assumes the actually existing level of efficiency of tax/revenue administration as given and does not specify variations in tax/revenue efforts arising from varying levels of efficiency of tax/revenue administration. For instance, a state, by raising the level of the tax administration above an average level, may raise more revenue from a given average tax base by applying a rate of tax lower than the average effective rate. On the other hand, a state may raise more revenue from a given average tax/revenue base by applying a higher rate with a below average level of tax/revenue administration. In view of these possibilities it is very difficult to justify that average effective tax rate reflects an average level of efficiency of tax administration.

Therefore, future attempts to measure tax potential and tax effort of state/local governments should use specific indicators of administrative efficiency as explanatory variables in regression equation or weight the average rate of tax for variations in administrative efficiency in the ACIR method of estimating the true tax potential. Because of the difficulties inherent in specifying and quantifying the indicators of administrative efficiency, the tendency is to use dummy variables in a regression equation. This method is arbitrary and hence its results cannot be used for the purpose of tax policy formulation.

Thus taxable capacity/potential and tax effort are not merely economic concepts. They also have their legal, economic, political and administrative aspects which have got to be covered in any useful estimation of tax potential and tax effort of governmental units in democratic societies. Hence, the tax experts who are called upon to advise governments in developing countries have to take into consideration all these aspects while formulating their recommendations.

III. THE 1979/80 BUDGET

IV. AN APPRAISAL

V. CONCLUSION

APPENDICES

I. INTRODUCTION

The 1979/80 Federal Government Budget is the last in a decade-long series of annual budgets by the Federal Military Government of Nigeria which began in the fiscal year 1970/71 and were directed initially at the adverse effects on the Nigerian economy of a thirty-month-long civil war which ended in January 1970. [1] *Later on, as the decade proceeded, subsequent annual budgets were designed to solve the problems of later developments in the economy, some of which were still directly or indirectly traceable to the effects of the war. Although each of these budgets focused on the general objectives of fiscal policy, attention was directed to specific objectives: holding down inflation, promoting economic growth and development and maintaining a health balance of payments position. While the emphasis by the Government varied from time to time as the need arose, fiscal measures to achieve these objectives featured in all the budgets throughout the period in question.*

Beginning with the rehabilitation of a completely war shattered economy in the immediate post-civil war years, budgetary measures were subsequently aimed at easing the scarcity in the supply of essential goods and services, first by stimulating domestic output and secondly by liberalizing imports through the relaxation of wartime import and foreign exchange controls. Both of these measures were designed to control the inflation that had developed out of wartime public spending which stimulated the growth of income rather than that of output.

In the meantime, the post-civil war surge in oil production and export, coupled with the quadrupling of oil prices in 1973, led to a great improvement in the country's balance of payments and government revenue position, thereby providing the means to sustain what could be described as a boom in imports as well as the continuous upward trend in government spending at a more rapid rate than ever before. While the former development was expected to relieve the scarcity of domestically produced goods and services and thus reduce the inflationary pressure on the economy, this objective was not realised due to the port congestion and distribution bottlenecks that developed because of the inadequacy of infrastructural facilities to cope with the flood of imports. Additionally, the continued upward trend in government expenditure, especially on defence and other non-productive government activities, worsened the inflationary situation in the economy, despite the Government's efforts to dampen this down through anti-inflationary fiscal measures in subsequent budgets, inflation continued although the rate decelerated somewhat towards the end of the period.

* Senior Lecturer, Department of Economics, University of Lagos, Nigeria.

1. This is the last budget by a Federal Military Government in Nigeria as the administration of the country was handed over to civilian politicians from October 1, 1979.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

As already hinted above, the buoyancy in the country's balance of payments and Government revenue position in the immediate post-civil war years lasted until about 1976, after which the favourable trend became reversed due to other developments. First, the rapid build-up of foreign exchange resources through increased oil export earnings and the boost given to domestic resources through the escalation in oil revenues both put the Government in a position to declare at the time of the launching of the country's Third National Development Plan, 1975-80, that finance was no longer a constraint on the country's economic development. Thus, with the launching of the latter Plan, the Government was committed to an unprecedented development expenditure of some ₦32 billion [2] — a commitment for which complete self-reliance was envisaged. This, however, later proved to be an illusion, not only because the commitment was revised upwards by about one third of the original amount, but also because of the drop in oil revenues and export earnings after 1976, necessitating the need to borrow from abroad to augment the country's own resources. [3]

II. FISCAL POLICY MEASURES

Against the above background of recent developments in the economy, fiscal measures in various annual budgets since 1976 continue, by the encouragement given to local industries through incentives, to focus attention on the solution to the problem of inflation through systematic cuts in Government expenditure and also increases in the output of locally produced goods and services. Also, as increased imports worsened the country's balance of payments position, foreign exchange controls became more intensified through licensing, restrictions and sometimes outright ban of imports on a selective basis. These measures were also introduced in pursuance of the economic development objective in the form of the encouragement given to the growth of domestic industries by the restriction and in some cases the complete prohibition of those imports that compete with locally produced goods, while at the same time liberalizing imports which constitute vital inputs for these industries.

Fiscal policy measures have also been undertaken to increase Government revenue, especially non-oil tax revenue, given the relative decline of Government revenue from the oil sector of the economy.

III. THE 1979/80 BUDGET

The 1979/80 Federal Government Budget completely falls in line with the above pattern of the application of fiscal measures since 1976. More specifically, fiscal measures in this particular budget, as disclosed by the Federal Commissioner for Finance in his briefing to the Press, are directed at the "*.... need to save foreign exchange by placing on import licence some of those goods that can be locally produced in adequate or near adequate quantities, and to promote local employment. These measures are designed to further encourage the mobilisation of local resources to increase production in both industry and agriculture.* [4]

Other objectives in the Budget at which fiscal measures are directed are those of maximum revenue productivity and equitable distribution of income. While measures for the solution to the problem of inflation in the economy are not specifically articulated as in the budgets of the past years, most of the measures designed to achieve the other objectives spelled out above are likely to have favourable implications for price stability.

For the achievement of the first two objectives above, i.e. foreign exchange savings and increased export earnings for attaining a healthy balance of payments position on the one hand and the increased output of domestic goods on the other, the Government is clamping down a complete ban on some imports and putting under open licence a wide range of other imports as well as an upward revision of duties on some others (see Appendices 1, 2 and 3 for details). While these measures would conserve foreign exchange, it would also help the growth of domestic industries by affording them some measure of effective protection. A completely novel measure in this connection is the decision of the Government to afford certain selected local industries protection through long term import controls by the promulgation of a decree against imports for a period of at least eight years. [5]

With respect to the desire to increase foreign exchange earnings, especially of non-oil exports, and thus reduce the great dependence of the country on oil, the Government is to adopt the strategy of export promotion by the granting of fiscal and other incentives, the details of which are yet to be worked out.

In order to further the objective of maximum revenue productivity, particularly of non-oil tax revenue, the Government is to make good the loss of revenue from import duties through import controls by the imposition of a nominal excise duty of 5 percent on a wide range of manufactures (see Appendix 4 for details).

In addition, certain measures are to be undertaken in order to increase the revenue productivity of the income tax. [6] These are in the form of plugging the

---

2. This was later revised to ₦42 billion.
3. Among the more important factors which caused the drop in oil revenue and export earnings after 1976, (i) the general cut back in output due to the world recession at this time, (ii) the general reaction of consumers to oil price increases as well as (iii) the official policy of oil reserve conservation in producer countries.
4. "Statement on the 1979/80 Budget", by Major General J.J. Oluleye, Federal Commissioner for Finance (Mimeo, Lagos: April 1979), p. 1.
5. This will, however, be subject to periodic reviews, preferably annually.
6. These measures are essentially the Government's adoption of some of the proposals made by the Task Force on Tax Administration set up by the Federal Military Government in 1978. See *The Interim Report of the Tax Force on Tax Administration*, (Lagos: Cabinet Office, July 1978).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

loop-holes that make the evasion of income tax easy, [7] the codification and unification of all the country's personal income tax laws and the discontinuation of certain generous exemptions and allowances granted to companies for tax purposes. [8]

In pursuance of the policy objective of income distribution for the attainment of an egalitarian society, the Government is to embark on a programme of highly subsidised housing for the low income group with units costing as low as ₦5,000. The achievement of this objective will also be furthered by the complete exemption of the relatively low income group from the current wage freeze in the country, while the abolition of non-taxable allowances of the relatively high income group will also help to redress the income distribution imbalance. [9]

IV. AN APPRAISAL

From the above review of Government economic policy objectives and the measures designed to achieve them, the current financial year's budget strictly conforms to the budgets of the preceding years. There is therefore nothing in it that is particularly striking, although the prospects of success with respect to particular objectives appear better with the greater articulation of the measures aimed at their achievement. In this connection the fiscal measures to conserve and increase foreign exchange reserves in order to improve the current worsening of the country's balance of payments are all in the right direction. They should have the desired effects, given the fact that other non-fiscal complementary measures such as the abolition of foreign private expenditure on primary and secondary education, the control of the repatriation of share sales and the banning of gambling and casinos as it affects the repatriation of the proceeds of the latter should all increase the possibility of success in achieving this objective.

The measures aimed at economic growth and development in the form of incentives and encouragement to both agriculture and industry are also the right ones, but doubt exists about their effectiveness. For example, the encouragement given through quantitative and qualitative effective protection may lead to inefficiencies in domestic production either through poorer quality manufactures or the inability to satisfy the domestic demand for these goods, with the consumers ending up worse off. This is observed to be happening currently. Although the Government has constantly warned domestic manufacturers against such exploitation of the consumers, the persistent complaints of the latter against the poor quality and high prices of home-made goods is indicative of the fact that manufacturers have failed to heed such warning. But their profits have been increasing by leaps and bounds from year to year. The Government should not only take positive steps to enforce standards for the quality of domestic goods, but also make manufacturers reduce their prices to the benefit of consumers. It should also ensure that protection aimed at the growth of particular industries is not extended beyond the full growth of such industries so as to make them efficient.

One other objective which is well articulated in the current budget is that of equity as implemented through income redistribution in favour of the low income group. While the Government had taken some income redistribution measures in the past, all of which are supposed to continue, the measures announced in this Budget of very low cost housing and the exemption of the low income group from the wage freeze as well as the abolition of non-taxable allowances for the high income group should all lead to a greater measure of income redistribution than in the past. However, the latter measure, if not extended to the private sector quickly enough, may result in the movement of labour resources from the public to the private sector. But in practice it is difficult to predict results because of other factors, such as inertia, which may serve as barriers to intersectoral mobility of labour resources.

An important aspect of the 1979/80 Federal Government Budget is the determination of the Government to maximise the productivity of its tax revenue, especially of non-oil tax revenue, with the aim of reducing the economy's dependence on oil. The announced measures, as they affect the personal and company income taxes, should go a long way in achieving this objective. This is already in evidence, judging from the rush with which members of the public are paying taxes, both due and in arrears, in order to obtain Tax Clearance Certificates to undertake particular transactions in the public sector. The Government should extend these measures as soon as possible to the private sector as it has promised, so as to ensure maximum effectiveness.

One remarkable feature of this year's Budget is that for the first time ever in this decade, employment as an economic policy objective is specifically mentioned for attention by the Government. [10] Although, there

---

7. For example, in order to identify relatively easily all taxable individuals, a systematic numbering of streets is to be undertaken all over the country by the relevant responsible local government authorities. For the same purpose, registration of all business names and premises must be renewed annually, while the registration of all professionals in private practice must be made by the appropriate Registries to the relevant tax authorities. In addition, individuals undertaking certain business transactions with Government ministries, departments and agencies are now required to provide evidence of tax payment, for at least three previous years, by the presentation of Tax Clearance certificates before such transactions can be approved. A list of these transactions is provided in Appendix 5. This measure is also expected to be extended to private business transactions at some date in the future.

8. The provision in Section 33 of the Company Income Tax Law which grants an exemption of the first ₦6,000 of every Nigerian company's profits from tax has now been abolished. Also, Section 21 of the same Law is to be amended to make any excess life assurance premiums transferred to profit and loss accounts of Life Assurance Companies taxable. See "Statement on the 1979/80 Budget", by Major General J.J. Oluleye, p. 6.

9. One such allowance enjoyed by the relatively high income group is the basic car allowance. This income class also enjoyed in the past the privilege of obtaining car loans from the Government at highly subsidised rates of interest.

10. Government indictment for the neglect of the employment objective in its past budgets was, some time ago, the subject of comment (on the 1976/77 Federal Government Budget) by

© 1980 International Bureau of Fiscal Documentation – BULLETIN

are no specific measures designed to promote this objective, as already noted above, the measures aimed at stimulating domestic production should have favourable effects on the level of employment in the economy. However, the measure to ban betting and gambling as socially undesirable activities is likely to have a negative effect on the employment objective, by increasing the rate of unemployment in the economy. This is being witnessed already from the several thousands engaged in the betting and gambling industry losing their jobs with the closing down of the betting and gambling houses. Thus, while the Government regards betting and gambling as social ills which should be eliminated as a matter of social policy, it conflicts seriously in this case with the economic policy objective of full employment.

With respect to the objective of price stability, as already observed, while a good many of the measures discussed above should help in furthering this objective, it appears as if the Government is not as articulate as in the budgets of the past years as far as the fight against inflation is concerned. Perhaps the reason for complacency is due to the Government's sense of considerable achievement — having brought down the rate of inflation by more than half, from about 36 to 15 percent in the last three years. But this is a very wrong attitude to adopt, given the fact that gains from the battle against inflation can be quickly wiped out if they are not consolidated by the continuous application of specific anti-inflationary measures.

In my opinion, the related anti-inflationary measures adopted in this Budget will not go far enough. Although encouragement to domestic production would tend to ease domestic shortages, on is, however, not sure of the extent of its impact. For one thing, the inclusion of certain essential food items such as flour in the list of imports for which licences are required may create the problem of shortages in the event of inadequate domestic supply. Moreover, the cut in Government expenditure (which has constituted the greatest single source of inflationary pressures in the economy for quite some time now) is rather marginal. For example, a reduction of only ₦76 million in the relatively huge defence budget is not likely to have much impact on the price level.

Finally, there are two changes with respect to taxation introduced in this year's Budget which are worth mentioning. The first is the separation, once more, of the company from the shareholder for tax purposes. [11] Thus, the former practice, whereby a certain rate of the company's profits tax (fixed at 50 percent last financial year) was payable while dividends to shareholders accrued *net* of this rate of tax, will now cease. (See Appendix 6, table 1.) [12] From April 1, 1979, the company profits tax rate is fixed at 45 percent while shareholders will be subjected to a deemed withholding tax rate of 12.5 percent on their gross dividends. One important advantage of this separation of the shareholder from the company as a corporate entity is the fact that it reduces the burden of company taxation on the shareholder, thereby making the tax system more equitable and thus encouraging investment in shares. [13]

Editor's note:

The new system can be illustrated as follows:

Company profits		100
Company income tax (45%)		45
Dividend distribution		55
Deemed withholding tax (imputation credit) (12.5%)		6.875
Taxable dividend (gross up)		61.875
Personal income tax (assume 30%) is 30% of 61.875 or	18.5625	
Less imputation credit	6.875	
Personal income tax due		11.6875

Total tax burden (45 + 11.6875) or 56.6875

Since the total tax burden under the previous tax system amounted to 65% (50% company tax plus 30% personal income tax on the distribution), the new system will undoubtedly be much more attractive for equity investment.

the present author. It is rather gratifying to note that the policy suggestion in that comment is well taken. See F. Akin Olaloku, "The Employment Implications of the 1976/77 Federal Government Budget: A Comment", 31 *Bulletin for International Fiscal Documentation* 83-85 (1977).

11. Company profits and dividend taxes in Nigeria have been subjected to frequent periodic changes in the last eight years or so. For example, prior to the fiscal year 1972/73, the company profits tax was fixed at the rate of 40 percent, while dividends to shareholders were paid *net* of this tax. Beginning from the 1972/73 fiscal year, however, the company profits tax rate was increased to 45 percent, while dividends were paid *gross* to shareholders and taxed in their hands by the appropriate income tax authorities. As from April 1, 1975, i.e. during the fiscal year 1975/76, a change was again effected in the company profits tax, which represented a reversion to the 1972/73 period whereby dividends were paid to shareholders *net* of tax. In the 1978/79 fiscal year, the company profits tax rate was further increased from 45 to 50 percent. With the maximum rate of dividend payable to shareholders being at the same time increased from 30 to 40 percent of *gross* profits, the shareholder received a rate of 20 percent while the other 20 percent represented a dividend tax deducted at source. This was the state of affairs before the change in the current financial year's Budget.

12. Editor's note: see the editor's note accompanying Appendix 6.

13. One of the traditional arguments used to support the inequity of the company income tax is the *additional* burden which it imposes on the individual stockholder. This additional burden takes the form of what has come to be regarded as the "double tax" on dividend income. In order to remove, or at least minimize, this "double tax" element, methods have been suggested as to how the personal and company income taxes can be integrated. One such method, which is of relevance in our case here, is the "Withholding method", or "partial imputation credit", whereby the Nigerian Federal Government, with effect from April 1, 1979, is deemed to have withheld 12.5 percent of dividends

© 1980 International Bureau of Fiscal Documentation — BULLETIN

A possible effect of this change, also, is the discouragement to profit retentions as opposed to distributions on the part of companies. The likely advantage of this effect is the greater scope for the development and growth of a more virile capital market.

The second change in taxation in the current financial year's Budget is the introduction of what the Government has called a "capital transfer tax" — a tax which essentially tries to combine the gift and inheritance taxes that are in use in some industrialized countries. Although, the Government's intention for introducing the tax is to encourage the children of relatively rich families to work harder and depend less on the wealth of their parents, I think its impact will go beyond this. For example, it is likely to help the income redistribution objective since the rate structure will be progressive. But I personally think that the exemption level of less than ₦100,000 is rather high, considering the fact than an individual with an accumulation worth ₦50,000 is relatively wealthy in a society like ours. In terms of revenue yield, the Government should not expect much from the tax, as the base will be quite restricted.

V. CONCLUSION

The 1979/80 Nigerian Federal Government Budget, being the last by a Military Administration in Nigeria, at least for now, rounds off the series of annual budgets of the last ten years. The measures in this particular Budget are designed to provide solutions to most of the nagging problems in the Nigerian economy. These problems, which include inflation, balance of payments deficits, economic development and growth as well as unemployment among the more prominent ones, have engaged the attention of the Government throughout the decade since the end of the Nigerian civil war in January 1970.

Although the Government achieved some measure of success in finding solutions to these problems, they are still more or less with us in varying degrees of severity. This fact is reflected in the Government economic and social policy objectives as set out in the current budget and the corresponding measures designed to achieve them. For example, while the danger of inflation, which was very serious at the beginning of the decade and for most of it, appears to have been warded off somewhat, with its rate having been brought down considerably, it still persists in the economy. The problem of balance of payments deficits, which appeared to be solved towards the middle of the decade, has reappeared with renewed vigour. The problem of economic growth and development, especially as it relates to dependence on oil is still a source of concern, while the Government has now identified unemployment, though rather belatedly, as a problem that must also be taken care of.

The limited success of the Government in tackling these problems is partly due to conflicts in the application of fiscal and other policy measures, but more importantly to developments in the international economy, which is completely outside the control of the Government. Most of the measures in the 1979/80 Budget are in the right direction that will lead to solutions to the above problems. As we go into the 1980s and with the takeover of the management of the economy by a Civilian Administration from October 1, this year, it is hoped that measures in future budgets will continue in the right direction, not only to consolidate the past successes of the outgoing regime, but also for the attainment of a greater measure of success in achieving the stated economic and social policy objectives of the Government.

---

in the form of tax paid at source by stockholders, which is later credited against their income tax liability with respect to the dividends.

In Table 1 (Appendix 6), we demonstrate the amount of additional tax burden on the stockholder by the imposition of a 50 percent rate of company income tax as it operated in Nigeria before April 1979. In Table 2 of the same Appendix, we try to show how the newly introduced imputation credit of 12.5 percent results in the removal of some 12.5 percent of the additional burden, for all income groups, of the 50 percent company income tax as it operated previously. The calculations in these two tables are based on those used by Joseph A. Pechman in his *Federal Tax Policy* (Washington, D.C.; Brookings Institution, 1971), pp. 141 and 145.

Column (6) = column (5) ÷ column (2)

Editor's Note

The following illustrates the Nigerian corporate-shareholder tax system applicable prior to April 1, 1979:

Company profits	100
Company income tax (50%)	50
Dividend distribution	50
Personal income tax (assume 30%)	15
Total tax burden	*65*

In a fully integrated corporate-shareholder income tax system the shareholder would have been subject to a tax of 30% of 100 or 30. Therefore, the *additional* burden of the company income tax is 65 — 30 or 35 (cf. Appendix 6, table 1, column 7, line 4).

Under the new system which is applicable on or after April 1, 1979 the computation is as follows (*note that for convenience's sake the rate of corporate income tax is also deemed to be 50%, whereas in fact it was reduced to 45%):*

Company profits		100
Company income tax (50%)		50
Dividend distribution		50
Deemed withholding tax (imputation credit) (12.5%)		6.25
Taxable dividend (gross up)		56.25
Personal income tax (assume 30%) is 30% of 56.25 or	16.87	
Less imputation credit	6.25	
Personal income tax due (which equals 15 (cf. Appendix 6, table 1, column 5, line 4) less 4.38 (cf. Appendix 6, table 2, column 4, line 4))		10.62
Total tax burden (50 + 10.62) or (which equals 65 (cf. Appendix 6, table 1, column 6, line 4) less 4.38 (cf. Appendix 6, table 2, column 4, line 4)).		*60.62*

I. INTRODUCTION

The guidelines of the taxation policy in Indonesia for the third Five-Year Development Plan, April 1, 1979 to March 31, 1984 — also referred to as Pelita III (an abbreviation of the Indonesian term "Pembangunan Lima Tahun") — were announced by the President of the Republic of Indonesia in his Instruction No. 6 of 1979, dated March 26, 1979.

The taxation policy is in conformity with the existing "Development Trilogy" of the earlier Pelitas of Indonesia, in fact, the Development Trilogy in Pelita III is the same as in the first two Pelitas. It encompasses the following aims:

(1) the equalization of economic development including the furthering of an equal distribution of income from development;
(2) the achievement of a greater economic growth; and
(3) the maintenance of a reasonably stable economic equilibrium which is strong and sufficiently high, but without developing substantial unemployment on the one hand or upward or downward movements in the general price level on the other hand. [1]

The target of the economic policy of Pelita I (1969-1974) was to rehabilitate the economy devastated by four years of civil strife. The 1970 tax amendments were more enterprising for they were to provide people with enough purchasing power to encourage consumption and saving as well as investment. [2]

Pelita II (1974-1979) focussed more on stimulating a rapid growth in the gross national product and concentrated on the development of the petroleum and gas sectors of the economy. Amendments in production sharing contracts for petroleum and in the work contracts for mineral mining reflected this tax policy of Pelita II. [3]

At present, Pelita III (1979-1984) is concentrating on the development of the non-petroleum sector of Indonesia's economy. It therefore strives to develop the agricultural sector and to increase investments in labour-intensive and export-oriented industries, with special emphasis on small and medium-sized manufacturing enterprises. [4] It will concentrate now on developing export-oriented industries and move away from the import-substitution policy adopted during the first two Pelitas.

The three objectives of the taxation policy are in conformity with the Developmental Trilogy scheme of the Pelitas:

(1) to provide that tax revenue is the main source for the stage budget, not foreign aid (see Table 2);
(2) to encourage an increase in investment and production; and
(3) to equalize the distribution of income in the society.

The taxation policy followed by the government to support the Development Trilogy of Pelita III emphasizes a better calculation of the corporate income tax. To achieve this, it is considered necessary that companies keep open and orderly business records in order to facilitate the assessment and the collection of tax by the tax administration.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

In addition, tax incentives will be granted to increase investment by the private sector, to equalize redistribution of income and to increase state revenue. [5] See further, Table 3 through 9 for the steady increase in revenue since the establishment of the Five-Year Development Plans.

As a consequence of the announced taxation policy for Pelita III, the Minister of Finance has enacted the following tax measures:

(1) Indonesian enterprises which use an Indonesian public accountant to prepare their audit reports are granted a reduced corporate income tax and tax amnesty;
(2) Revaluation of fixed tangible assets of enterprises will be taken in 1979;
(3) Reduction of the general corporate income tax and the special corporate income tax for cooperatives;
(4) The use of the LIFO (last in, first out) system of inventory if the company keeps good and complete bookkeeping records and its financial statements are audited by an Indonesian public accountant as of the tax year ending June 30, 1979;
(5) Amendments to the tax incentives granted to companies which go public through the Indonesian stock exchange;
(6) Tax amnesty will be granted to local investors who invest in priority industries in Indonesia;
(7) Tax incentives will be granted to companies in which capital is divided into shares and which reinvest their undistributed profits;
(8) Reduction of the domestic sales tax; and
(9) An increase in import duty and sales tax on importation.

This article aims to set out the major provisions of the tax incentive package designed to support and achieve the goals of the Development Trilogy in the third Five-Year Plan. [6] The tax measures must be seen in the light of the purposes of the plan: to improve tax compliance by corporate taxpayers on the one hand, and to increase revenue to the tax administration on the other.

The tax incentive package designed to improve tax compliance by corporate taxpayers is known as the March 27, 1979 Tax Package — (1)-(7) above — whereas the tax incentive package concentrated on indirect taxes is known as the April 19, 1979 Tax Package.

I. TAX AMNESTY AND REDUCED CORPORATE INCOME TAX TO ENTITIES WHICH USE PUBLIC ACCOUNTANTS

In order to increase the participation of the entire community, and in particular the business society, in the development of Pelita III, it was considered necessary to provide measures to encourage and increase the collection of corporate income tax. To achieve this goal it was believed important to create a favorable climate for the business world in the form of more objective and reasonable tax assessments based upon the existence of an orderly and open commercial administration by businessmen disclosing the actual results of their business operations.

The use of Indonesian public accountants by Indonesian business enterprises to administer, control and prepare their audited reports is to serve as a yardstick for this purpose. Therefore, specially prescribed tax incentives may be granted to business enterprises who keep proper records and conform to the governmental policy of disclosure. If companies are ready "to go naked", they will not be prosecuted for previous tax evasion or other abuses.

In addition, reduced corporate income tax will be given to companies using public accountants to audit financial statements. At present, many local enterprises refuse to open their books to independent auditors, apparently preferring to negotiate tax assessments with tax officials directly.

The tax incentives given to companies using public accountants to audit financial statements are designed to eliminate secrecy and bargaining about taxes.

Major General Slamet Danusudirjo of the State Planning Agency stated in Jakarta on September 3, 1977 that more than US$ 3.8 billion, or about 40 percent of the national budget, would be saved annually if all Indonesians were to work honestly without resorting to corruption or taking bribes. [7]

Of the 730 registered foreign companies in Jakarta only 444 or 61 percent use a public accountant and of the 841 registered Indonesian or domestic companies situated in Jakarta only 46 or 5.5 percent use a public accountant. [8]

Effective as of the 1979 and subsequent tax years, tax incentives will be granted to entities which are subject to corporate income tax in Indonesia and which use an independent public accountant to audit their financial statements, all in accordance with the requirements prescribed in the Decree of the Minister of Finance No. 108/KMK.07/1979, of March 27, 1979.

Requirements of the Decree of March 27, 1979

Public accountants must be in possession of a legal permit to perform the services of a public accountant in Indonesia.

No employee or member of the management of a public accountant's office or their families must have work or financial relations, directly or indirectly, with the business enterprise or its subsidiaries to be audited by them.

The conduct of the accountant's audit must be in accordance with the accountant's audit norms and Code of Ethics prescribed by the Accountants' Association of Indonesia. Further requirements on the norms and

content of the financial reports prepared by public accountants are prescribed in the Annexes to the Decree.

The financial report of an enterprise audited by a public accountant shall be submitted to the Head of the Tax Inspection Office within a maximum period of 12 months after the end of the tax year. It shall be used as the basis for obtaining reduced corporate income tax rates and tax amnesty.

The public accountant may use any one of the following qualifications when submitting his report:
— unqualified opinion;
— qualified opinion;
— no opinion;
— adverse opinion.

"Unqualified opinion" means "correct without reservations", "qualified opinion" means "correct with reservations".

With respect to audit reports on which an unqualified opinion has been given, the Head of the Tax Inspection Office may only make limited tax corrections on matters which are of a juridical tax nature based on the provisions of the tax law.

In cases when a qualified opinion has been given, besides the limited tax corrections based on tax law provisions, the Head of the Tax Inspection Office may make corrections on matters involving the reservations made.

If the audit report contains "no opinion" or an "adverse opinion", the taxpayers are not eligible for tax relief and the Head of the Tax Inspection Office may make an assessment at his discretion.

In cases of an unqualified opinion or a qualified opinion, before the tax assessment is made, the Head of the Tax Inspection Office shall notify the enterprise in writing of the fiscal corrections made, and send a copy to the public accountant involved. When an enterprise objects to the corrections made it can submit its case to the Director General of Taxes within a period of 14 days after the receipt of the notification. As long as the case has not yet been decided upon by the Director General of Taxes, the Head of the Tax Inspection Office concerned shall postpone his tax assessment.

Tax incentives

(a) Tax amnesty

Taxpayers subject to corporate income tax will not be prosecuted for tax evasion nor will they be assessed on any taxes payable in 1978 and earlier years, if new facts result from the use of an independent public accountant to audit the financial statements of the enterprise.

(b) Reduced corporate income tax

The reduced corporate income tax effective as of the tax year ending after June 30, 1979 and in following years with respect to entities which use independent public accountants to audit their financial statements is as follows:

Taxable profits	*Percentage*
— on the first 100 million Rp	20
— on the next 250 million Rp	30
— on the remainder	45

For normal rates, see below.

III. THE 1979 REVALUATION OF FIXED ASSETS

Due to the development of economic and monetary conditions and the increase of prices at present, both within Indonesia and in foreign countries, it is considered necessary to give businesses the opportunity to revalue their fixed assets. Granting the right to such a revaluation is further aimed at creating a favorable climate for the business world and to achieve an appropriate taxation system in conformity with the Development Trilogy.

By virtue of the Decree of the Minister of Finance No. 109/KMK.04/1979 of March 27, 1979, entities domiciled in Indonesia which are subject to corporate income tax may opt for revaluation of their fixed tangible assets acquired between 1960 and 1978 in order to deal with inflation, except for land and rights on land.

The date for the revaluation of fixed assets is January 1, 1979. Taxpayers who desire to make use of the revaluation of fixed assets may do so at the latest on December 31, 1979 in accordance with the rules set out in the Decree involved. The date has been extended to March 31, 1980 by virtue of the Decree of the Minister of Finance No. 551/KMK.04/1979 of December 20, 1979.

Fixed assets which qualify for revaluation include:
(1) buildings, construction sites and their supplementary facilities (such as roads, bridges);
(2) machinery, heavy equipment and accessories;
(3) transportation means and office equipment;
(4) ships, airplanes and their equipment;
(5) plantations of hardy plants that are more than two years old.

For multipliers see Table 1.

Fixed assets eligible for revaluation must fulfill the following requirements:
(a) they must be in use by the enterprise at the moment of revaluation;
(b) according to the enterprise's plans they are not intended to be transferred or sold; and
(c) the fixed assets were acquired during the tax years 1960 through 1978.

Entities which decide to revalue have to revalue all their qualified fixed assets. Only those entities which keep books of accounts in Indonesia in such a manner that the value of acquisition of the fixed assets, repairs and changes as well as the amount of the depreciation of the fixed assets can clearly be seen are eligible. In addition revaluation is not granted to entities which are permitted to keep their bookkeeping in foreign currency instead of in Indonesian rupiahs.

The acquisition value of a fixed asset and its aggregate depreciation up to the moment of revaluation shall be

© 1980 International Bureau of Fiscal Documentation – BULLETIN

multiplied by the multiplier pertaining to that fixed asset and the balance of the adjusted acquisition value and depreciation constitute the new value of the fixed asset on January 1, 1979. The difference between the new value of the fixed asset and its fiscal book value at the moment of revaluation is recorded as "Balance of revaluation of fixed assets January 1, 1979".

For plantations the acquisition value is the value at the moment the plantings are ready to start production.

Fixed assets whose value is in old rupiahs (which were valid before 1966) shall first be converted into new rupiahs at the ratio of 1,000 old to one new rupiah.

Depreciation with respect to revaluation of fixed assets

Depreciation taken on the new value of fixed assets is computed as follows:

(1) For fixed assets the useful life of which at the moment of acquisition is estimated to be ten years or less, the depreciation is spread over the remaining useful life increased by three years, up to a maximum of ten years;

(2) For fixed assets the useful life of which at the moment of acquisition is estimated to be more than ten years, the depreciation is calculated as follows:
   (a) where the remaining useful life is five years or more, the depreciation is spread over this period;
   (b) where the remaining useful life is less than five years, its depreciation is spread over five years.

Tax incentives

1) The balance between the new and the old fiscal book value of the fixed assets is exempt from corporate income tax.
2) That part of the revaluation gain which is capitalized is exempt from stamp duty on corporate rights.
3) Distribution of bonus shares or registered increases in the nominal value of stock, without additional payments by the shareholders, resulting from the capitalization of the revaluation gain is exempt from: (i) the corporate income tax; (ii) the individual income tax; and (iii) the tax on interest, dividents and royalties.
4) In case revaluation of fixed assets has taken place and tax evasion has been found no corporate income tax assessment will be made retroactively for the 1978 and previous tax years.

Sanction

If later it is proved that the obligations and requirements set out in the 1979 Decree concerning revaluation of fixed assets have been violated, corporate income tax shall be levied on the amount of the revaluation gain at the rate of 10 percent and other sanctions shall apply in accordance with the current law.

V. REDUCTION OF CORPORATE INCOME TAX

In order to support the Development Trilogy in the third Five-Year Plan it is necessary to create a more favorable tax climate for businessmen. In addition an appropriate taxation scheme should be devised which may also become the basis of improving the taxpayers' discipline and compliance. As a consequence a reduction of the general rate of corporate income tax with respect to cooperatives was introduced by the Decree of the Minister of Finance No. 110/KMK.04/1979, of March 27, 1979. The rate structure of the corporate income tax in comparison with the old rate structure is shown in the following examples.

A. Normal rate of corporate income tax

(1) Prior to 1979

Total taxable profit was subject to a 20 percent rate. In addition, if the profit exceeded 10,000,000 Rp., an additional tax was levied at the rate of 25 percent of the amount in excess thereof. In practice when computing the tax the normal rate of 20 percent was levied on profits of up to 10,000,000 Rp. The excess, if any, was taxed at 45 percent. Both methods of calculation have the same result and produce a tax burden of 20 to 45 percent.

Prior to 1970 the rate of the corporate income tax was progressive, ranging from 20 to 60 percent. As of 1970 the rate of tax was reduced to a flat 20 percent, with an additional rate of 25 percent if the taxable profit exceeded 5,000,000 Rp. It was further provided that the amount which is exempt from the additional tax of 25 percent will be fixed for every tax year.[9] The amount of 5,000,000 Rp. has been increased to 10,000,000 Rp. for tax years ending after June 30, 1974.[10]

(2) 1979 and subsequent years

Taxable profits	*Percentage*
— on the first 25,000,000 Rp.	20
— on the next 50,000,000 Rp.	30
— on the remainder	45

B. Special corporate income tax rates for cooperatives

(1) Prior to 1979

The balance of the cooperative proceeds after deduction of refunds to its members in percent of the contributed capital	Within a 5-year period of its establishment (percentage)	After a 5-year period since its establishment (percentage)
— up to 5 percent	0	5
— between 5 and 10 percent	5	10
— more than 10 percent	10	20

9. At the moment of this amendment effected by Law No. 8, 1970 (LN 1970 No. 43) it was found that, in general, corporations in Indonesia earned less than 5,000,000 Rp. in profits per year. Jap Kim Siong, "Tax incentivies and income tax liability of foreign business enterprises operating in Indonesia as affected by the 1970 amendment laws", *Bulletin for International Fiscal Documentation* 26:3 (1972), at 105.
10. Decree of the Minister of Finance, No. KEP-1169/MK/II/11/1973, dated November 20, 1973.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

(2) 1979 and subsequent years

	Within a 10-year period of its establishment	After a 10-year period of its establishment (percentage)
— profit up to 10,000,000 Rp.	exempt	2.5
— on the next 25,000,000 Rp.	exempt	5
— on the remainder	exempt	10

The reduction of the general corporate income tax can be illustrated as follows:

I. Old corporate income tax rate

1. Taxable profit up to 10,000,000 Rp. — 20 percent
2. Remainder — 45 percent

Example I.
Assume the taxable profit is 80,000,000 Rp. The corporate income tax is calculated as follows:

10,000,000 Rp. x 20 percent	=	2,000,000 Rp.
70,000,000 Rp. x 45 percent	=	31,500,000 Rp.
Total tax amount		33,500,000 Rp.

Effective rate — 41.9 percent

Example II.
Assume the taxable profit is 500,000,000 Rp. The corporate income tax is calculated as follows:

10,000,000 Rp. x 20 percent	=	2,000,000 Rp.
490,000,000 Rp. x 45 percent	=	220,500,000 Rp.
Total tax amount		222,500,000 Rp.

Effective rate — 44.5 percent

II. New corporate income tax rate

1. Taxable profit up to 25,000,000 Rp. — 20 percent
2. The following 50,000,000 Rp. — 30 percent
3. The remainder — 45 percent

Example I.
Assume the taxable profit is 80,000,000 Rp. The corporate income tax is calculated as follows:

25,000,000 Rp. x 20 percent	=	5,000,000 Rp.
50,000,000 Rp. x 30 percent	=	15,000,000 Rp.
5,000,000 Rp. x 45 percent	=	2,250,000 Rp.
Total tax amount		22,250,000 Rp.

Effective rate — 27.8 percent

Example II.
If the taxable profit is 500,000,000 Rp. The corporate income tax is calculated as follows:

25,000,000 Rp. x 20 percent	=	5,000,000 Rp.
50,000,000 Rp. x 30 percent	=	15,000,000 Rp.
425,000,000 Rp. x 45 percent	=	191,250,000 Rp.
Total tax amount		211,250,000 Rp.

Effective rate — 42.25 percent

V. THE USE OF THE LIFO SYSTEM FOR INVENTORY

One of the decisive factors in calculating the taxable profit of a company is the system of inventory valuation. In general, inventory may be valued at cost or at market value, whichever is lower. However, where the price level tends to increase, the application of this rule may result in a loss for the enterprise.

Considering that the development stategy in Indonesia is based on the Development Trilogy, including a sufficient economic growth, it is deemed necessary to provide a relief for the survival and growth of the business world.

By virtue of the Decree of the Minister of Finance No. 111/KMK.04/1979, of March 27, 1979, companies may opt to apply the LIFO (last in, first out) system for the first time in the 1979 tax year. The use of the LIFO system may only be applied if the company keeps a good and orderly bookkeeping system and its financial statements are audited by an independent public accountant. The Head of the Tax Inspection must approve the use of the LIFO system after the company submits a written application. Once the LIFO system is applied it must be used consistently and continuously.

VI. TAX INCENTIVES TO COMPANIES GOING PUBLIC

The Development Trilogy in the third Five-Year Plan emphasizes the importance of an equal distribution of income to improve the welfare of the people. In an effort to achieve a more equitable income distribution and to mobilize public funds for productive development projects, various tax incentives are offered to Indonesian companies selling their shares through the stock exchange to private individuals of Indonesian nationality or to entities specified by the Minister of Finance in his Decree No. KEP 1677/MK/II/12/1976, of December 28, 1976. This decree provides tax incentives to those companies selling their shares through the stock exchange only during the calendar years 1977 through 1981. (There have only been three listings on the Jakarta stock exchange since 1977, namely, P.T. Semen Cibinong, a U.S.-Indonesian cement venture, P.T. Century Textile Industry (abbreviated Centex), a Japanese-Indonesian integrated textile venture), and P.T. British-American Tobacco Manufacturers (abbreviated B.A.T.).)

To support the Development Trilogy in the third Five-Year Plan the temporary rules of the 1976 decree were amended and supplemented to become permanent by the Decree of the Minister of Finance No. 112/KMK. 04/1978, of March 27, 1979. In other words, the temporary 1976 decree applies to the years 1977 to 1981 whereas the permanent 1976 decree applies to 1979 and subsequent years. However, both rules in the said decrees apply for the calendar years 1979 through 1981. The provisions at present may be summarized as follows:

© 1980 International Bureau of Fiscal Documentation -- BULLETIN

A. Revaluation of fixed assets

The revaluation value is to be the maximum reasonable value as determined by the appraiser appointed for this purpose by the Minister of Finance.

The term fixed assets does not include land and rights to land nor are intangibles and current assets eligible for revaluation. The Director General of Taxes must approve the revaluation value of the assets determined by the appointed appraiser.

Depreciation of the reasonable (revalued) value of the fixed assets of the company is computed as follows:

1. Fixed assets the useful life of which at the moment of acquisition is estimated to be ten years or less: the depreciation is spread over the useful life which remains according to the records increased by two years (maximum ten years);
2. Fixed assets the useful life of which at the moment of acquisition is estimated to be ten years or more: the depreciation is calculated as follows:
   (a) where the useful life which remains according to the records is three years or more, the depreciation is based on the useful life which remains according to the records;
   (b) where the useful life which remains according to the records is less than three years, depreciation is based on a useful life of three years.

B. Reduced corporate income tax rates for companies going public

(1) 1977 to 1981

Companies selling their shares during the calendar years 1977 through 1981 through the stock exchange obtain a reduced corporate income tax liability as follows:

- for companies selling at least 30 percent of their shares, the corporate income tax on taxable profits exceeding 10,000,000 Rp. shall be reduced to 35 percent; and
- for companies selling at least 51 percent of their shares, the corporate income tax on taxable profits exceeding 10,000,000 Rp. shall be reduced to 25 percent.

(2) 1979 and subsequent years

Companies selling their shares through the stock exchange in 1979 and later years obtain the following reduced corporate income tax:

- for companies selling at least 20 percent of their shares:
  - on the first 200,000,000 Rp. 20 percent
  - on the next 350,000,000 Rp. 30 percent
  - on the remainder 45 percent
- for companies selling at least 35 percent of their shares:
  - on the first 300,000,000 Rp. 20 percent
  - on the next 450,000,000 Rp. 30 percent
  - on the remainder 45 percent
- for companies selling at least 51 percent of their shares:
  - on the first 450,000,000 Rp. 20 percent
  - on the next 600,000,000 Rp. 30 percent
  - on the remainder 45 percent

Companies selling their shares during 1979, 1980 and 1981 may opt for the reduced corporate income tax rate mentioned under either (1) or (2) above, whichever is more favorable for them.

C. Tax exemption from individual income tax for private Indonesian individuals buying shares

By virtue of the Decree of the Minister of Finance No. KEP.1676/MK/II/12/1976, of December 28, 1976, individuals buying shares through the stock exchange shall be exempt from net wealth tax, individual income tax and tax on interest, dividends and royalties. No investigation into the origin of the capital used for share purchases shall be made if the capital does not exceed 10,000,000 Rp. However, this exemption applies only to private individuals buying shares through the stock exchange not in connection with their business or profession, e.g. not a stockbroker.

Capital gains derived by private individuals from the sale of shares through the stock exchange are exempt from individual income tax notwithstanding any provision to the contrary in the Income Tax Ordinance. Note that the purchase must have taken place during the validity of the present Decree, i.e. during the calendar years 1977 through 1981.

D. Stamp duty on the purchase or sale of securities

Stamp duty is payable on the purchase or sale of securities by a stockbroker who performs his services in Indonesia in the stock exchange. The stamp duty levied is 25 Rp. on each note or bill drawn for the purchase or sale of securities.

E. Sales tax on services rendered

The 5 percent sales tax will not be levied on services rendered by stockbrokers in connection with purchases and sales of shares through the stock exchange.

F. Stamp duty on corporate rights

Any retained profit found in a company which goes public and where the retained profit is transferred into share capital is exempt from stamp duty on corporate rights. The stamp duty on paid-up capital of a company is 0.1. percent; the duty is 0.05 percent on issued but not paid-up capital.

VII. TAX AMNESTY FOR LOCAL INVESTORS WHO INVEST IN SPECIFIED PRIORITY SECTORS

In order to increase investment to achieve the Development Trilogy in the third Five-Year Plan, the period for laundering of capital has been extended and revised by virtue of the Decree of the Minister of Finance No. 114/KMK.04/1979, of March 27, 1979, in line with the investment need in selected sectors.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

No investigation by the tax authority shall be made in order to impose corporate income tax, individual income tax and net wealth tax in case Indonesian capital is invested in accordance with the Domestic Capital Investment Law of 1968, as amended. The investment must take place between April 1, 1979 and March 31, 1984 (i.e. the period of Repelita III) in sectors still open for investment in accordance with the prevailing Investment Priority Rating List. In general, the investments are divided into:

(a) investment made outside Java,
(b) investment made within Java,
    (1) in top-priority enterprises;
    (2) in labor-intensive enterprises; or
    (3) in enterprises producing for export.

VIII. REINVESTMENT OF PROFITS BY COMPANIES

To support a sufficiently high economic growth in accordance with the Development Trilogy, it is necessary to increase private savings, especially when they are re-invested in the company. By virtue of the Decree of the Minister of Finance No. 113/KMK.04/1979, of March 27, 1979, provisions are introduced which may enlarge the business capacity by increasing the production activities and accordingly creating new employment.

Companies whose capital is divided into shares, which re-invest their undistributed profits after payment of corporate income tax by adding such profits to their share capital, are granted the following tax incentives:

— Exemption from stamp duty on corporate rights with respect to the increase of the share capital of that company;
— The tax on interest, dividends and royalties is reduced to 5 percent on bonus shares distributed to shareholders or on registered increases of the nominal value of stock (without additional payment by shareholders);
— Exemption from tax on interest, dividends and royalties on distributed bonus shares or on registered increase of the nominal value of stock (without additional payment) by the shareholders so far as the increase of the share capital is financed from:
    (a) undistributed profits derived during the tax holiday period granted to entities as provided under the Foreign Capital Investment Law or the Domestic Capital Investment Law;
    (b) undistributed profits derived during the first two years from the moment of the start of production by entities which have not been granted a tax holiday but instead an investment allowance under the Foreign Capital Investment Law or the Domestic Capital Investment Law.
— Exemption from the individual income tax with respect to bonus shares and registered increases in the nominal value of stock (without additional payments) and obtained by non-shareholder employees of that company.

The company concerned is obliged to re-invest the undistributed profit in the company and to keep orderly bookkeeping records as required under the corporation tax law.

In addition, the company must declare in writing to the Head of the Tax Inspection its intention to increase its share capital and indicate that it wishes to distribute bonus shares to its shareholders as well as to its non-shareholder employees, or to increase the registered nominal value of stock, without additional payments.

IX. REDUCTION OF DOMESTIC SALES TAX RATES

To support the Development Trilogy in the Repelita III, [11] it is necessary to create a more beneficial climate for businessmen with more appropriate taxation, so that investment and production may increase. The improved climate will also become the basis for increasing discipline and compliance by the taxpayers.

With a view towards stimulating industrial growth and the use of domestically produced goods, it is considered necessary to revise the rate structure for domestically produced goods and services which are subject to sales tax and to provide a reduction in the sales tax burden. There were several objectives achieved by revising the sales tax structure which can be summarized as follows:

— the imposition of sales tax more in line with the capacity and level of income of the group consuming the goods and services concerned;
— to stimulate exports and increase the capacity of small businessmen in economically weak groups; and
— to reach an overall reduction of the sales tax burden notwithstanding the cascade effect of the Indonesian sales tax system.

By virtue of the decree of the Minister of Finance No. 175/KMK.04/1979, of April 19, 1979 effective as of April 21, 1979, the rate structure of domestic sales tax was revised. Previous rates were nil, 5, 10 and 20 percent and currently these rates are nil, 1, 2.5, 5, 7.5, 10 and 20 percent. Sales tax on services rendered has been reduced from 5 to 2.5. percent, whereas the services of auctioneers and the sales of shares by brokers through the stock exchange are exempt from sales tax. The following principles are used in classifying the goods under the respective sales tax rates:

List I contains goods which are subject to sales tax at the rate of nil percent, namely goods which were also formerly exempt from sales tax. It includes goods which are regarded as most essential in the economic development of the country.

List II contains goods which are subject to sales tax at the rate of 1 percent, such as goods which are regarded as essential: raw materials, basic materials for industry, agrarian, fishery, cattle-breeding and mining production, goods which are mostly to be exported and certain goods which directly back up the development of the infrastructure.

11. "Repelita" refers herein to the Five-Year Development Plan whereas "Pelita" to the Five-Year Development. The terms are abbreviations derived from the Indonesian expressions, Rencana Pembangunan Lima Tahun and Pembangunan Lima Tahun respectively.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

List III contains goods which are subject to sales tax at the rate of 2.5 percent, namely, goods in the form of auxiliary materials, semi-finished goods which are still to be further processed by manufacturers to be turned into finished goods which can be consumed, including also packing materials, tools, as well as several specified finished goods which are largely consumed by the public.

List IV contains goods which are subject to sales tax at the rate of 5 percent, i.e. finished goods for general consumption.

List V contains goods which are subject to sales tax at the rate of 20 percent, i.e. finished goods for consumption of a luxury character as well as certain goods which are mechanically or automatically produced so that they use much less manpower.

All other goods not listed in those five lists are subject to sales tax at the rate of 10 percent, i.e. finished goods for consumption of a less essential character.

List VI contains household and office appliances which are subject to sales tax at the rate of 7.5 percent, i.e. refrigerators, freezers, washing machines, electric or gas stoves, cameras, pianos and organs and color television sets.

Reductions in sales tax on domestically manufactured goods as of April 23, 1979 are, for instance:

- from 10 to 5 percent: sugar, porcelain goods, soap, shoes, sandals and photographic and recording equipment;
- from 10 to 2.5 percent: coffee and cacao beans, pepper, tea, automotive body parts and spare parts and electrical appliances;
- from 5 to 1 percent: vegetables and animal foodstuffs, industrial raw materials, mineral products, red bricks, bicycles and pedicabs.

The aim to be achieved by reducing sales tax on domestically manufactured goods is to stimulate businessmen to increase their production in an effort to successfully achieve the Development Trilogy of the Repelita III.

To ease the implementation of levying the sales tax at the delivery of goods and rendering of services, it is to be applied at the moment of payment by the buyer or user of services as of April 21, 1979 irrespective of whether delivery of goods or rendering of services will take place before or after that date. [12]

X. INTRODUCTION OF SPECIFIC TAX ON IMPORT DUTY AND SALES TAX ON IMPORTATION

In line with the objective of the third Five-Year Development Plan to move from promoting import substitution operations during the first two Five-Year development plans to encouraging export-oriented manufacturing operations in the following Five-Year development plans, import protection for goods manufactured by infant industries in Indonesia was considered necessary. To this end, increase of import duties and sales tax at importation on a number of such goods has been enacted by the Decree of the Minister of Finance No. 185/KMK.05/1979, of April 20, 1979, which went into force on April 23, 1979.

In addition, in order to improve the process of determining more effciently the value for purposes of the import duty on the goods, and thereby effectively raising the import duties, they will now be levied on a specific basis in lieu of an ad valorem basis on those imported goods which are also produced in Indonesia. Some items now subject to specific tax include ready made clothes, shoes, some foodstuffs, kitchen and tableware and video cassette recorders and tapes.

The use of a specific tax is considered more efficient for collecting purposes than an ad valorem tax in order to avoid abuse by importers. For instance, importers once imported their finished trademarked goods without a trademark so that the check price or standard price of the imported goods would be low. The customs duty is imposed on the counter-value of the imported goods against the check price determined periodically by the Directorate General of Customs and Commodities. After importation of the goods and their entry into the open market the trademark would be attached again to the imported goods.

It is hoped that the use of a specific tax will eliminate the need for arbitrary assessment of a product's value and corresponding duty by the customs officials.

Table 11
Local Government revenue in Special District Jakarta in 1977/1978
in million rupiah

Casino tax (tax on gambling)	11,000
SWP 3 D (motor vehicle tax)	9,300
BBN (motor vehicle transfer tax)	7,600
Entertainment tax	3,000
Development Tax I	2,700
Alien Tax	600
Surcharge on net wealth tax	100
Advertisement tax	200
Slaughter tax	60
Radio tax	50
Non-motor vehicle tax	2
Other taxes and fines	197
Total	34,809

About one third of the revenue from taxes in the Special District of Jakarta is obtained from the tax on gambling paid by the casinos. Notwithstanding strong opposition by the public to the maintenance of casinos, the tax on gambling remains the sole permanent source of local revenue necessary for the maintenance and development of the infrastructure of the Special District of Jakarta.

Solomon Islands: **BUDGET 1980**

Extracts from the Budget Speech 1980 which was pronounced on November 15, 1979

To carry out the recurrent operations of the national government, and to finance the development projects that are now running or planned to start in 1980, we estimate that we shall require to spend a total of just over $ 56 million.

Of this total, $ 27 million will be for the Recurrent Budget end $ 29 million for the Development Budget.

Detailed estimates of expenditure have been in the hands of Members for three weeks. I hope very much that the House will have received the report of the Public Expenditure Committee, before we reach the Committee of Supply to examine the Draft Estimates in detail. The unwillingness of some Honourable Members to play a full part in the work of this Committee is disappointing, but I am sure I speak for the House in thanking the Chairman and those Members who have taken part, for their work in scrutinising the Draft Estimates, examining Accounting Officers, and preparing the report.

Turning now to the revenue required to finance the Budget, I remind the House of our two-pronged policy that

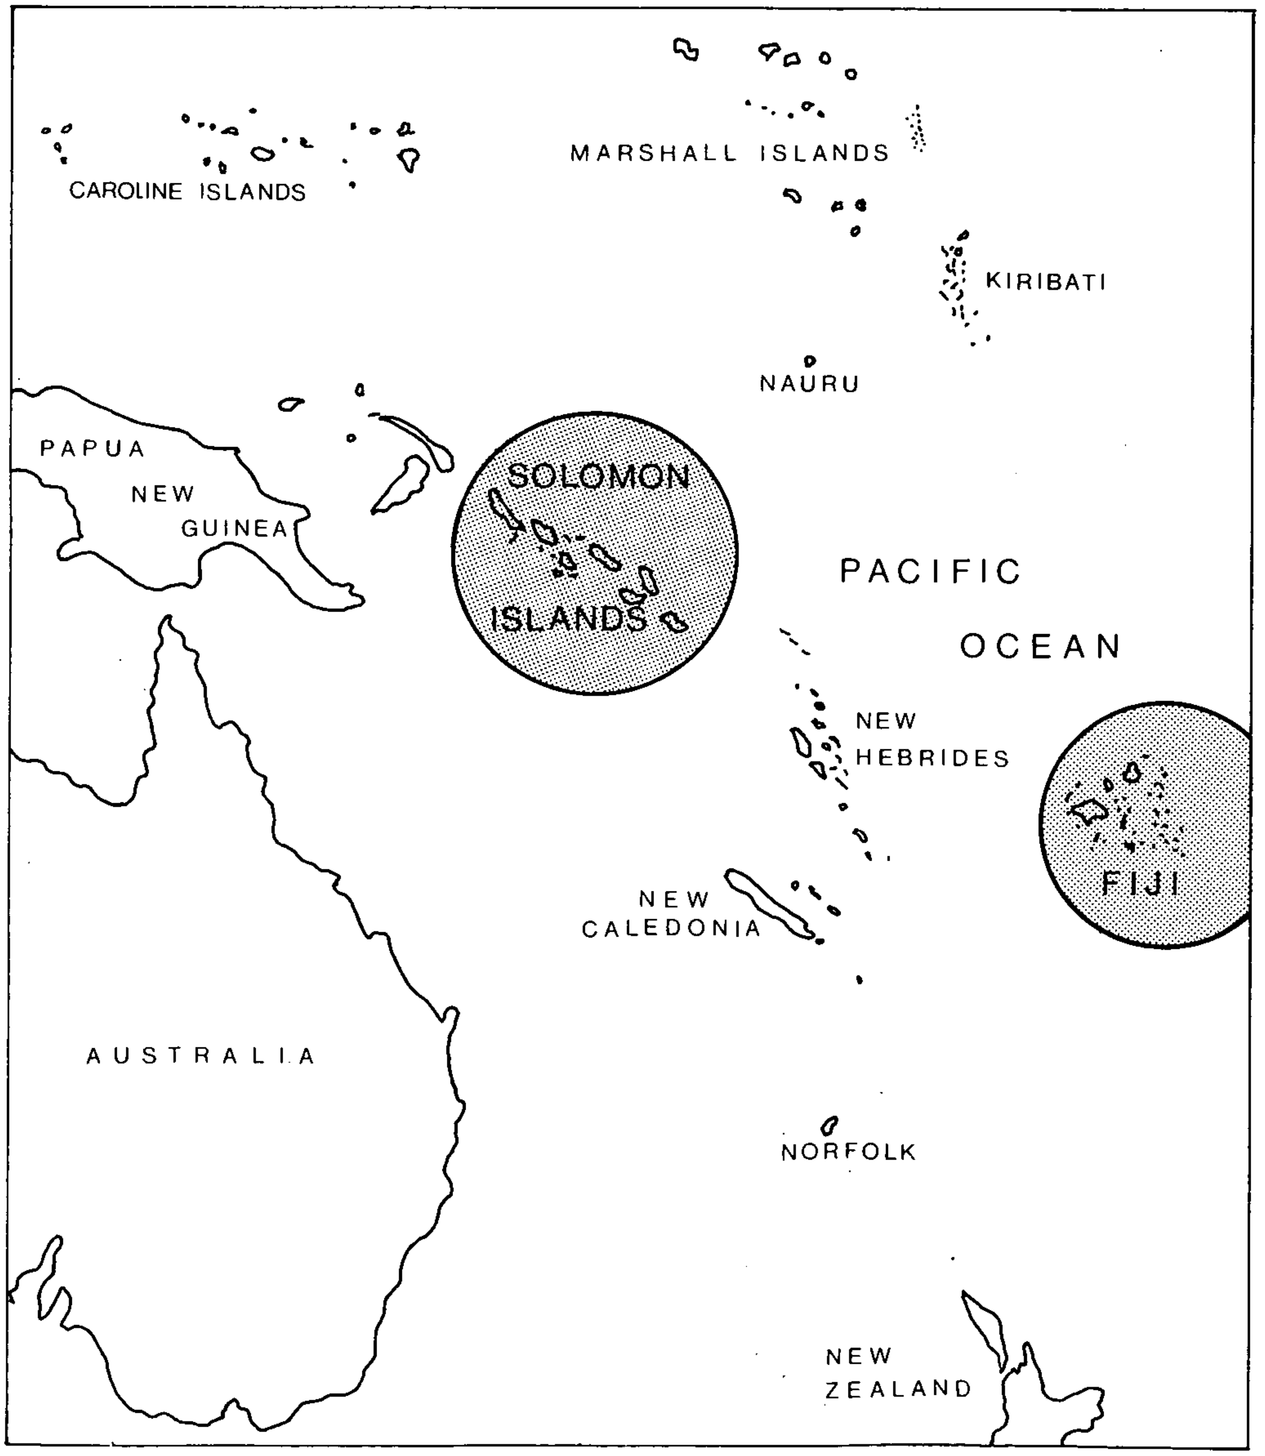
- we should move as quickly as possible to self-sufficiency in funding the recurrent budget
- we should steadily increase our contribution of local funds to the development budget.

With that in mind, we aim to raise about $ 26.5 million of local revenues in 1980, that is $ 7.25 million more than we originally budgetted for in 1979, and $ 6.4 million more than we now expect 1979 to produce. This increase, of about one-third, represents a major step in self-reliance and mobilising our own finances. About half of it will come from the "natural" growth of various forms of revenue; and about half will come from the net result of changes to direct and indirect taxation.

Export duties will be unchanged except for copra export duty. This will be changed from a c.i.f. basis to f.o.b. and the free limit before duty will be raised from $ 150 to $ 180. The effect of this change is to reduce the probable tax to be paid by the copra industry in 1980 from $ 2 million to $ 125 million. The saving to the producers is about three quarters of a million dollars. Companies of course will pay tax on their increased profits, but smallholders will benefit in full through the increased prices the Copra Board will be able to pay, worth about $ 25 a ton at expected price levels.

Import duties will be increased on about forty items. I will mention here only the most important ones; full details are being released by the Controller of Customs and Excise at eleven o'clock today. The Order amending the tariff came into effect this morning.

Duty on beer is increased from 47.5 cents to 55 cents per litre, that is an increase just under three cents a bottle of the most popular brand. A similar increase, from $ 5.20 to $ 6.50 per litre, is made in the duty on spirits.



The tariff on cigarettes and tobacco is raised from $ 17.50 per kilogram to $ 22.50. This means an increase in duty of 12½ cents on a packet of 20 cigarettes, and a similar amount on imported tobacco. The excise duty on locally-manufactured tobacco is not changed.

Duty on sugar is increased from the present 3.3 cents per kilogram to 10 cents. The tariff on imported sweets, confectionery and soft drinks is raised to 50 percent.

I come now to income tax, on personal and business incomes. Next week I will be presenting to the House the Income Tax (Amendment) Bill, 1979. This Bill seeks to make a number of important changes to our income tax structure. Most of these arise from the Report of the Working Party on Income Tax, which members have received. We shall be debating the Bill, in the normal way, and I will go into more detail at that time.

Here I will mention only those changes that have an important impact on revenue, and people's incomes, in the 1980 Budget.

The level of income at which personal income tax starts to be paid will be raised from $ 600 to $ 1,200 for single persons, and from $ 1,200 to $ 2,400 for a married couple. This change is intended to recognise the wide family responsibilities of

© 1980 International Bureau of Fiscal Documentation – BULLETIN

HIGHLIGHTS OF SOLOMON ISLANDS TAXATION

General: The scope of income tax is limited to income derived or received from the Solomon Islands. A "pay as you earn" system operates for both employment and business income.

Company tax: The rate for both private and public companies is 30 percent. Shareholders are liable to individual income tax on dividends received but receive a tax credit of 30 percent of the gross dividend thereby ensuring that company profits are taxed on a once-only basis. There is no undistributed profits tax.

Personal tax: Total income less personal deductions is subject to a progressive rate commencing at 11 percent for the first $ 360, which rate increases by 1 percent for every successive $ 360 of chargeable income until a maximum of 40 percent is reached on all chargeable income in excess of $ 10,440. Personal deductions are:

Basic personal allowance —	$ 600, or $ 900 for a widow or widower with a dependent child.
Wife allowance —	$ 600.
Child allowance —	$ 120 for each child up to four in number.
Education allowance —	the cost of the full time education of a dependent child up to four in number with a maximum of $ 1,200 in respect of each child.
Life insurance and superannuation allowance —	the actual cost of contributions up to a maximum of 20 percent of total income, less any tax free contribution by the employer.
Medical allowance —	actual cost of medical treatment.
Passages for medical treatment —	actual cost.
Passages for school children —	actual cost with maximum of two visits per year for each child up to four.
Holiday passages for persons not domiciled in Solomon Islands —	actual cost with maximum of two single journeys between Solomon Islands and country of domicile.
Home mortgage interest relief —	actual cost to extent that mortgage does not exceed $ 15,000.
Alimony and maintenance allowance —	actual cost apportioned on basis of world income to Solomon Islands income.

Withholding tax on non-resident income:

Interest, know how payments, royalties, insurance premiums	15 percent
Income from contracting	6 percent
Income from shipping or air transportation subject to Sec. 8 Income Tax Act	30 percent

Local tax: The local councils established under the Local Government Ordinance have a wide range of rating powers including basic rates and rates on possessions and property. Basic rates vary between $ 1 and $ 60 a year and are generally at a uniform amount per capita, although some councils have introduced graduated rates according to the occupation or assessed income of the ratepayer. Basic rates are payable by all persons of or above the age of 18 and resident within the area of a council's authority unless generally or specifically exempted. Only the Honiara Town Council has introduced general property rates based on the unimproved value of rateable land in the town. The current property rate is seven and a half percent.

Solomon Islands income earners. The change will remove the burden of income tax from about seven thousand people, all Solomon Islanders, who pay tax at present. It will reduce the number of persons paying personal income tax in 1980 to about three thousand, of whom about two thousand will be nationals and the remainder expatriates. This change will provide an immediate cash benefit to almost all taxpayers, but the proportionate benefit is greatest for married people on income between $ 2,000 and $ 3,000 a year.

In making this change, together with the reduction in copra export duty, we are deliberately opening up greater opportunities for the Provincial Assemblies to adopt a more progressive attitude to taxation through basic rate collection from people earning up to $ 100 or so a month. It is very important that Provincial Governments, with their much simplier collection methods and direct contact with taxpayers, do take these opportunities to increase their own revenues and reduce to some extent their dependence on national government grants. This change will also greatly ease the pressure on the Income Tax Division, and enable much more attention to be given to making sure that companies and people on higher incomes, where payment by each taxpayer is significant, do pay all the tax they ought to pay.

At the same time as the starting point for income tax is raised, we intend to increase the starting rate to 15 cents in the dollar, and take it up in 2 cent steps for each thousand dollars of income to a new maximum rate of 45 cents in the dollar, which will be reached on taxable incomes of $ 17 to $ 18,000 dollars a year. Revised valuations will be introduced, for tax purposes, of housing supplied by employers, so as to keep a fair balance between those who receive subsidised housing and those who do not.

Business tax rates will also be changed. The basic rate will go up from 30 percent to 35 percent, and a new rate of 45 percent will apply to companies operating here but not incorporated here, that is, local branches of overseas companies.

Tax on dividends will be greatly simplified. Under the proposed changes, a withholding tax of 20 percent will be paid on dividends paid to shareholders resident here, and 35 percent on dividends to overseas shareholders. The company itself will pay tax at 35 percent on the profits that are not distributed as dividends.

The increased revenue from these changes will go a long way towards balancing the annual revenue reduction of $ 0.5-0.75 million that we estimate will result from the changes in the personal income tax. The new rates of company tax are fair and reasonable, and we believe strike a good

© 1980 International Bureau of Fiscal Documentation – BULLETIN

balance between the needs of companies and the needs of the wider community.

In this context, I am pleased to inform the House that good progress has been made in talks with our co-investor in the oil palm project, CDC, about changing the taxation arrangements for SIPL. This project has performed very well indeed, thanks to skilled management, hard work, and favourable market prices. Under the proposed new arrangement, SIPL will start to pay tax four years earlier than it otherwise would have done, yielding a substantial benefit to government revenues during the coming Development Plan period. It is this which has mainly enabled me to make the major reduction in copra export duty I announced a few minutes ago. As a result of these talks we expect to make an agreement with CDC that will recognise the valuable role CDC can play in Solomon Islands national development, in partnership with Solomon Islands interests, and pave the way for further CDC investment on appropriate terms.

Mr. Speaker, the changes I have described in taxation, together with the growth of the monetary economy which we expect to take place, are estimated to bring in tax revenues of between $ 17 and $ 18 million in 1980, about two-thirds of our estimated recurrent revenue requirements. This represents an increase in tax revenues of $ 4 million or 30 percent above the revised estimates for this year, and is three and a half times greater than in 1975, the first year of the current National Development Plan.

Fiji: BUDGET SPEECH 1980

Extracts from the Budget Speech 1980 pronounced on November 16, 1979 by the Minister of Finance, Mr. Charles Walker.

It has been widely recognised in Government and in the private sector, and also strongly endorsed by the Financial Review Committee that an Economic Development Board should be established to give direction and thrust to investment and job creation. A Tripartite Forum Committee has been meeting to define the role and powers of such a Board. They are expected to make their recommendations shortly and legislation will be introduced early in 1980 to set up the Board. This move will give much needed impetus to an area that has tended to lag and which in the next few years will become very critical.

Arising out of a thorough evaluation of the Financial Review Committee's recommendations Government will implement the following taxation measures:

1. Allowance for the first child and second child, without income limitation, will be increased from $ 130 to $ 200;
2. Maximum deduction for interest on housing loans will be raised from $ 200 to $ 500;
3. Taxpayers earning less than $ 8,000 a year will be given a rebate of 12½ percent on new savings for home ownership;
4. Rates of normal tax on companies will be raised as follows:
   (1) non-resident companies from 37½ to 42½ percent;
   (2) non-resident life insurance companies from 22½ to 27½ percent; and
   (3) every other company from $30^5/_6$ to 35 percent;
5. Write-off of depreciation on assets acquired after 31st December 1979, and used in a business, will be changed to a straight-line method;
6. Profit from sale of a business asset being replaced will be available for set-off against the cost of replacement asset, at the option of the taxpayer;
7. Initial depreciation allowance for plant and machinery will be raised from 20 to 30 percent;
8. Consideration is being given to exempt from tax bonus shares issued out of trading profit;
9. Gift duty exemption will be increased to $ 10,000, and spouse to spouse gift will be exempted from duty subject to certain safeguards against tax avoidance;
10. Export incentives allowance for timber sales will be equal to 10 percent of the f.o.b. value of arm's length sales, with a maximum of 50 percent of the chargeable income;
11. Method of claiming export incentives relief will be simplified so that separate records need not be maintained, and export profit to be based on export sales over total sales of total profit;
12. Withholding tax on royalty payments will be increased from 15 to 25 percent;
13. Deductions for the Fiji National Provident Fund contribution by employers will be raised from $ 600 to $ 1,000;
14. Expatriate employees will be able to join the Fiji National Provident Fund but on withdrawal of contributions must comply with current legislation;
15. Period of tax exemption for co-operatives will be increased from 5 to 8 years, and amounts transferred to reserve for expanding the business will be allowable deductions for tax;
16. Hotel aid will continue to apply to expanding hotels and concessionary treatment will be accorded where in-

HIGHLIGHTS OF FIJI INCOME TAXATION

Income taxation consists of (i) basic tax, (ii) normal tax and (iii) a number of withholding taxes.

Basic tax: This is levied on income before deduction of any allowance of individuals and companies. Individuals whose income does not exceed $ 600 are exempt.

Normal tax: This is levied on individuals whose income exceeds $ 600 at progressive rates ranging from 7.5 percent for the first $ 600 to 50 percent for income exceeding $ 24,000. Companies are also subject to normal tax at varying flat rates as follows:

— standard rate	$30^5/_6$ %
— non-resident shipping companies	2 %
— non-resident mutual insurance companies	22.5 %
— other non-resident companies	37.5 %

Withholding taxes:

Dividends distributed by a Fiji company to a resident individual	5 %
Dividends distributed by a Fjji company to a resident corporation	0 %
Dividends distributed by a Fiji company to non-resident individuals and corporations	15 %
Royalties paid by a Fiji company to non-resident individuals and corporations	15 %
Interest paid by a Fjji resident to non-resident inviduals and corporations	10 %

© 1980 International Bureau of Fiscal Documentation – BULLETIN

vestment allowance is not utilised in full within 5 years;

17. Estate duty exemption will be raised.

In addition to implementing the foregoing recommendations of the Financial Review Committee, with minor modifications where considered appropriate, following measures will be taken to give further impetus to development:

18. Film-makers will be encouraged by special tax treatment dependent on the amount to be spent in Fiji; and
19. Third schedule income tax concession will be raised on sliding scale dependent on the number of employees, with a maximum relief equivalent to 25 percent of the paid up capital where over 50 employees are engaged by the enterprise, and minimum tax concession will be raised from $ 5,000 to $ 8,000.

To remove an anomaly which exists in the legislation:

20. A 15 percent withholding tax will be levied on all film hire paid to non-resident film suppliers.

Netting out all the above means an overall loss in revenue of about $ 100,000. The aim has been to provide some relief through the increased child allowance, inject incentives for greater savings and inducement for greater investment for job creation. No doubt there will be other views on what could or should be done but these are significant measures.

I should mention that when considering the Financial Review Committee Report, a number of tax recommendations could not be accepted by Cabinet. One was that Fiji National Provident Fund contributions should be taxed. Government has also not agreed that the income derived by a wife from her assets, or a salary or wage received from a business which is conducted or controlled by her husband should not be aggregated with husband's income. The recommendation would encourage income splitting among families and other tax avoidance schemes; it would be hard for the Commissioner of Inland Revenue to counter such avoidance schemes without a large increase in staff.

On deemed distribution and self-employed taxpayers, the Committee made two recommendations. The first was all companies should be allowed to retain profits without dividends being paid provided the profits are reinvested in the business. The short answer to this is that the Income Tax legislation adequately covers this point and we see no reason to change the existing law.

The second recommendation was self-employed taxpayers be taxed only on their personal spendings provided the minimum amount to be taxed be set at 60 percent of their income after tax. The immediate loss of revenue arising from the implementation of this proposal would exceed $ 8,600,000. If implemented the benefit would accrue to only a very small sector of the community, which I might add, would mainly include taxpayers who are already wealthy in our context.

On group assessment Government has not agreed with the Committee's recommendation that companies with 75 percent common shareholders be taxed as one unit. The Committee did not give any reasons for making this recommendation, but nevertheless, we consider that there would be little economic benefit accruing to Fiji should such a system be implemented. It could, in fact, have the reverse effect, in that such companies would not accept further equity investment by others for fear of being denied the benefit of group assessments.

Turning now to customs and excise, Government has decided to restore revenue from this source to the level obtained prior to 1974 by increasing taxes and excise on some traditional items and introducing new items.

One of our difficulties when trying to raise revenue from imported goods is that the burden tends to fall hardest on a limited number of items. We have been guided this year by the advice given by the Financial Review Committee and the measures we have taken are based on their lists.

Importation of cars and other passenger vehicles will continue to be under licence. Total import quotas for both classes of vehicles will remain unchanged, that is 1,100 units and 300 units respectively. In addition, goods vehicles of a gross unladen weight of two tonnes and less designed primarily for transport of goods, will be brought under annual quota. The 1980 quota for this class of vehicle is 850.

To provide additional incentives to local substitution for imports, help conserve foreign exchange and to broaden our indirect tax base, we are immediately raising duties on the following items:

1. Meat fresh or frozen; raised from 5 to 10 percent.
2. Fowls, ducks, in pieces and poultry liver fresh etcetera: increased by 15 percent to 45 percent.
3. Geese, turkeys etcetera: increased by 35 percent to 45 percent.
4. Butter: raised from nil to 10 percent.
5. Honey natural and artificial: raised by 20 percent to 45 percent.
6. Vegetables frozen, preserved and dried: raised by 25 percent to 30 percent.
7. Dried leguminous vegetables: raised from nil to 5 percent.
8. Fruits fresh, fruits preserved by freezing and fruits dried etcetera: increased by 25 percent to 30 percent.
9. Brown rice: raised from nil to 5 percent.
10. Polished rice: raised from nil to 10 percent.
11. Sausages etcetera: increased by 45 percent to 50 percent.
12. Canned fowls and ducks: increased by 5 percent to 45 percent.
13. Ice cream: increased by 25 percent to 35 percent.
14. Import duty of 15 percent has been increased to 40 percent for textile fabrics which are so processed that they are clearly suitable for conversion by a minor operation into made up articles.
15. Garments: increased by 10 percent to 55 percent.
16. Corsets, brassiers etcetera: increased by 15 percent to 55 percent.
17. Table and household linen: increased by 10 percent to 55 percent.
18. Parts of hats and headgear: increased by 27½ percent to 60 percent.
19. Headgear and hats: increased by 22½ percent to 60 percent.

In addition Customs duty on bulk tea and wheat and meslin has been raised from nil to 5 percent. It will be noted that we are levying Customs duty on imports of bulk tea and wheat rather than making packaged tea and the products of wheat excisable.

Items on which duties are raised for revenue purposes are:

1. Imported Beer: fiscal duty of $ 1.00 per litre is increased to $ 1.05.
2. Spirits: duties of $ 6.08 per litre on spirits containing 57.12 percent or less alcohol by volume and $ 10.64 per litre of spirits containing more than 57.12 percent alcohol by volume have been increased to $ 6.58 per litre and $ 11.52 per litre respectively.
3. Imported Cigarettes, Cigars and Tobacco: duties of $ 21.70 per kilogram on cigars and cheroots, $ 21.15 on cigarettes and $ 19.30 tobacco have been increased to $ 22.40, $ 21.85 and $ 20.00 per kilogram respectively.
4. The existing duty free list has also been extended by the addition of clocks, cigarette lighters, figurines of ceramics, audio amplifiers, speakers and household pewter ware. Duty has been reduced to 5 percent Fiscal and 5 percent Customs.

Opportunity has also been taken to regularise concessions granted to duty free shops at International Airports by suitably amending Code 214.

Excise duties have also been raised to yield additional revenue. The following changes become effective immediately:

1. Local Beer: increased from 30 cents per litre to 32.5 cents per litre.
2. Local Cigarettes: currently 10.395 cents per 10 cigarettes with local tobacco content and 16.52 per 10

© 1980 International Bureau of Fiscal Documentation – BULLETIN

cigarettes with imported tobacco content, increased to 13.60 cents and 18.05 cents respectively.

3. Local Tobacco: currently $ 9.15 per kilogram with local tobacco content and $ 14.54 per kilogram with imported content increased to $ 9.88 per kilogram and $ 15.94 per kilogram respectively.
4. Matches: increased to $ 1.44 per gross from 15 cents per gross. Since the manufacture of matches started in Fiji in 1966, the excise duty on matches has remained at 15 cents per gross. On the other hand the import duty on matches containing not more than 60 matchsticks per box is presently $ 3.14 per gross.

Honourable Members will recall my predecessor's statement last year of Government's policy to progressively levy excise duties on local manufactures so as to ensure a wider revenue base. In line with this policy the following new items are being made excisable:

1. Ice cream: an excise rate of duty of 5 cents per litre.
2. Aerated Waters: an excise rate of duty of 4 cents per litre.
3. Cement: an excise rate of duty of $ 1.00 per tonne.
4. Toilet Paper: an excise rate of duty of 2 cents per roll.
5. Soap and Detergents: an excise rate of duty of 5 cents per kilogram.

The impact of these measures on the Consumer Prices Index has been evaluated and I am assured it would not be increased by more than one percent in a full year.

All these new measures together will yield a total of about $ 4.3 million, which added to the net loss of about $ 100,000 from income tax will mean a net additional yield of $ 4.2 million. This will enable us to maintain a balance in the operating budget for 1980.

There is no question that another "cycle" of hard economic times has begun with the international economy facing a slow down of economic growth and inflation endemic and increasing. And it is upon us just as we were energing out of the 1974 oil crisis and recession. None of us, neither the Government nor the responsible Opposition nor the country at large can duck our allotted responsibilities. The Budget I have presented is clear evidence that Government is prepared to take the first step and balance its operating budget; it is clear evidence that Government has noted the views of the Financial Review Committee and will have to move forward cautiously making adjustments so as to be sure to better cope with the difficult times ahead.

Mr. Speaker, Sir, I commend the Bill to the House.

Steuer und Studium

The Editors received from the German publishing house "Verlag Neue Wirtschafts-Briefe" the following announcement with respect to a new tax journal which is in particular aimed at assisting persons being trained to become tax inspectors or tax counsel. Since this announcement will be of interest primarily to our German readership the text of the announcement is reproduced in German.

Ab 1. April 1980 erscheint im Verlag Neue Wirtschafts-Briefe eine neue Zeitschrift: Steuer und Studium. Steuer und Studium ist eine Zeitschrift für die Aus- und Fortbildung im Steuerrecht. Sie berücksichtigt in der Konzeption besonders pädagogische Gesichtspunkte und dient dem Lernenden gleichzeitig als Repetitorium. Die Zeitschrift will vorhandene Lehrbücher wirksam ergänzen. Wer Steuer und Studium regelmässig liest, ist während seiner Ausbildung und zur bevorstehenden Prüfung bestens vorbereitet.

Steuer und Studium ist speziell konzipiert für die Ausbildung der künftigen Steuerinspektoren an den Fachhochschulen für Finanzen. Gleichzeitig wendet sie sich an die Personen, die sich auf die Steuerberaterprüfung vorbereiten. Auch der Student an der Hochschule sollte Steuer und Studium lesen. Darüber hinaus spricht Steuer und Studium den Mitarbeiter in der Steuerpraxis oder im Betrieb an, der etwas für seine Weiterbildung tun will und sich z.B. auf die Bilanzbuchhalterprüfung vorbereitet.

Erfahrene Dozenten, die an Fachhochschulen für Finanzen der Bundesrepublik und an Steuerschulen tätig sind, sowie Fachleute aus der Steuerpraxis schreiben für Steuer und Studium. Interessierte Leser können ein Probeheft beim NWB Verlag, Postfach 16 20, 4690 Herne 1, anfordern.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Malaysia: BUDGET 1980

Extract from the Budget Speech pronounced by the Minister of Finance Yang Berhormat Mulia Tengku Razaleigh on October 18, 1979.

A detailed discussion of the Malaysian tax system appears in the Bureau's publication: TAXES AND INVESTMENT IN ASIA AND THE PACIFIC

However, these strategic goals of increasing economic growth and stepping up Government and private investments, must be directly linked to increasing the national capacity to produce the increasing supplies of especially essential consumer goods, that will be needed, to meet the rising demands of our people. Increased production dampens inflation. Conversely reasonable price stability promotes steady economic growth and improves the standard of living of our people.

The budget impact

I am therefore presenting to this House a *package of bold budgetary measures* to help ensure the attainment of the 1980 Budget Objectives.

I propose:

(a) A total appropriation of $ 20,724 million for the 1980 Budget - $ 10,868 million for Operating Expenditure and $ 9,856 million for Development Expenditure; and

(b) A *tax cut* amounting to $ 482 million. This is the biggest tax cut in our history. If we were to include the tax concessions and the subsidies, to Lembaga Letrik Negara and for petroleum products amounting to $ 491 million, the total amount of Government assistance will be $ 973 million.

Operating expenditure alone represents an increase of $ 2,159 million or 24.8 percent over the original 1979 estimates of $ 8,709 million. These high expenditures will enable Government to provide better and wider services to the public. At the same time Government will be able to expand and increase the effectiveness of its implementation capacity for the vast development efforts, programmes and projects, that have been increased under the *Third Malaysia Plan.* Indeed the recent *Operasi Isa Penuh* will be financed from these increases in the Operating Expenditure. This exercise will help establish an even stronger manpower base, for the planning and implementation of the *Fourth Malaysia Plan,* 1981-1985. It will also strengthen the rapidly growing Government machinery to better serve the private sector.

Retiring gratuities and pensions

In order to maintain and strengthen the Government's capacity to effectively implement the Fourth Malaysia Plan, it is necessary to retain the senior and experienced Government staff. In view of this need I now propose to withdraw the exemption of the tax on retiring gratuity and pension paid to an employee in the public sector who retires before the age of 55.

The exemption of tax on gratuity and pension now will only be given to an employee in both the public and private sectors who retires from employment on reaching the age of 55 or on reaching the compulsory age of retirement specified under any written law. Although the proposal will take effect from assessment year 1980, there is provision to preserve the rights and obligations of employees whose retirements were approved by their employers before today.

Commodity taxes

As a further measure to expand economic growth I am therefore proposing a major reform in the export commodity tax structure. This reform is to enable producers of primary commodities, particularly rubber, palm oil, and pepper smallholders, and operators of marginal tin mines to benefit from lower taxes which will result in higher disposable income thereby increasing demand and stimulating further economic growth.

The new concept of commodity taxation will be based on a cost plus approach. Under this concept the cost of production of the commodity will be taken into account and the appropriate duties will only be imposed at prices above the prevailing cost of production.

It is discerned that the average cost of production for rubber is 53 sen per pound, tin $ 1,110 per pikul, crude palm oil $ 455 per tonne, and for black and white pepper $ 130 per pikul and $ 160 per pikul respectively.

It is also felt that the duty structure should not, however, create disincentives to the producers. Thus it is proposed that the maximum marginal rate should not exceed 50 percent for all the commodities.

Based on the new concept of taxation, the export duty on rubber will now commence at a price level exceeding 60 sen per pound. When the price exceeds 60 sen but does not exceed 65 sen, duty will be applied at a rate of 20 percent for every sen increase within this price range. Similarly, for every sen increase in price thereafter but not exceeding a price of 70 sen, a rate of 25 percent will be applied. This progression of the marginal rate by 5 percentage points for every 5 sen increase will be applied up to a price of 90 sen above which the maximum marginal rate of only 50 percent will be levied.

As for tin, it is proposed that the duty will apply only at prices exceeding $ 1,200 per pikul. When the price exceeds $ 1,200 but does not exceed $ 1,250, duty will be levied at a rate of 20 percent for every ringgit increase within this price range. Similarly, for every ringgit increase in price thereafter but not exceeding a price of $ 1,300, a rate of 25 percent will be applied. The marginal rate progresses by 5 percentage points for every $ 50 increase thereafter until a price of $ 1,500 after which a maximum marginal rate of 50 percent begins to apply.

In view of the restructuring of the export duty on tin which will benefit the profitable mines more, it is proposed to revise the top marginal rate of tin profits tax from 12½ percent to 15 percent on taxable tin profit which exceeds $ 400,000.

The export duty on crude palm oil is also revised so that the duty is levied only when price exceeds $ 500 per ton. When the price exceeds $ 500 but does not exceed $ 550, duty at a rate of 30 percent will be levied for every ringgit increase within this price range. For every ringgit increase in price above $ 550 but not exceeding $ 600, a rate of 35 percent will be applied. Thereafter the marginal rate progresses by also 5 percentage points for every $ 50 increase in price until a price of $ 700 after which the maximum marginal rate of 50 percent will apply. The present export duty differential of 30 percent between Peninsular Malaysia and Sabah and Sarawak will remain unchanged.

It is also proposed that the by-products of processed palm oil namely palm stearin and palm kernel oil be subject to a nominal duty of 5 percent.

As can be seen the new duty structure for rubber will achieve two main Government objectives. It will reduce the higher tax

© 1980 International Bureau of Fiscal Documentation – BULLETIN

incidence on the rubber industry vis-à-vis palm oil and it will give the rubber industry a better edge over palm oil in keeping with the Government's dynamic policy on rubber to encourage the expansion of the industry.

As for pepper, duty will only apply at prices exceeding $ 130 per pikul for black pepper and $ 160 per pikul for white pepper. For prices in excess of the threshold levels which I have just mentioned, marginal rates ranging from 10 percent to a maximum of 50 percent will apply.

In order to encourage the development of the spice industry, it is proposed that the export duty on spices other than pepper be abolished.

Hon'ble Members will agree that the private sector can only operate effectively in an environment of business confidence and the availability of, and accessibility to, basic infrastructure facilities. Business confidence is largely a function of political stability and business opportunities. Therefore, at this time of economic slowdown the private sector is particularly encouraged and understandably so, by Government's own initiatives to sustain and increase its own investment.

For this reason, the Budget has provided $ 585 million to improve and expand the telecommunications system. With this allocation, it is expected that the telephone exchange capacity would be increased by about 164,000 lines, underground cable network by 374,000 pairs, trunk and junction circuit by 120,000 circuit miles and the installation of about 80,000 additional direct subscriber exchange lines. This large allocation for telecommunications projects would not only help to overcome some of its present problems, but would also enhance the facilities for investors as well as traders particularly in the Commodity Exchange that will soon be established.

Similarly, $ 581 million will be provided for the expansion of our capacity to supply electricity in order to keep pace with the increase in private investment expansion.

Individual income tax

The commodity tax reforms and the provision of more efficient basic infrastructure facilities will provide new incentives to the private sector to invest and produce. To ensure that consumers at the same time have the necessary means to avail themselves of the goods and services, the Government is particularly conscious that such demand is effectively backed by sufficient purchasing power in the hands of consumers. I therefore propose to make significant adjustments in the individual income tax structure.

Relief for the individual which currently stands at $ 2,000 is to be revised to $ 5,000. The increase by $ 3,000 consists of a $ 1,000 increase in actual personal relief, another $ 1,000 to replace the present earned income relief and another $ 1,000 to provide relief for dependents. The present personal rebate of $ 60 is also retained.

Wife's relief of $ 1,000 is now proposed to be increased to $ 2,000. The relief for wife's earned income is to be withdrawn but the rebate for wife of $ 30 is to be retained.

Having regard to the increasing cost of education abroad, it is proposed that the allowance for children educated abroad which currently is double the amount of children's relief be now quadrupled.

Currently chargeable income exceeding $ 50,000 but not exceeding $ 75,000 is taxed at a rate of 50 percent while income exceeding $ 75,000 is subject to a rate of 55 percent. With the objective of providing more incentive for work effort, it is proposed to reduce the tax liability on chargeable income exceeding $ 50,000. Under the proposal, chargeable income exceeding $ 50,000 but not exceeding $ 75,000 will be subject to a reduced rate of 45 percent and for income exceeding $ 75,000 but not exceeding $ 100,000, the rate will be 50 percent for income exceeding $ 100,000 the rate will be 55 percent.

For *excess profits tax*, the present exemption limit of $ 75,000 for any person (other than a company) is raised to $ 100,000. Therefore, an individual will be liable to excess profit tax only on chargeable income which exceeds $ 100,000.

Review of estate duty

At present there are three separate estate duty legislations for the States of Malaysia. It is proposed to unify the three separate legislations as soon as the necessary administrative preparations are finalised. In the meantime, I would like to make the following proposals with a view to making the structure more equitable and improving income redistribution.

(a) The present exemption level of $ 50,000 for the estate of the deceased who died domiciled in Malaysia will now be raised to $ 300,000 in view of present prices and values of houses and other properties so that beneficiaries will be relieved of undue hardship from estate duty liability on estates left to them by the deceased. Thus, only values of estates in excess of $ 300,000 will now be liable to estate duty.

(b) The present provision of 50 percent abatement against estate duty is at the same time withdrawn.

(c) It is also proposed to revise the estate duty structure under which the estate duty liability will be lower under the proposed structure as compared with the existing structure for estates below $ 700,000 in value. For an estate worth more than $ 700,000 the liability will be higher under the proposal compared to the present structure. A cut-off value of $ 700,000 is considered reasonable and justified taking into account the objective of income and property redistribution.

(d) Finally, I propose to raise funeral expenses to $ 3,000.

The proposals I have just mentioned are applicable to Peninsular Malaysia pending extension of the legislation to Sabah and Sarawak.

In addition to the tax measures which I have just proposed, the Government will continue to adopt a flexible monetary policy that would facilitate the growth of domestic demand, particularly private sector demand so as to stimulate economic growth, private investment and employment generation.

The monetary policy will be formulated with the following objectives: to expand money supply and credit to mitigate any recessionary forces which may be transmitted from abroad and to facilitate a sustained growth of economic activity, especially private investment, without aggravating the underlying inflationary forces; to regulate the liquidity situation in order to generate conditions favorable to the stimulation of private demand for credit at reasonable cost; and to ensure that bank credit is distributed equitably among national priority uses.

The construction sector remains one of the most dynamic sectors in the economy. A significant part of its activity has been in the construction of residential houses. At present, housing loans provided by the commercial banks and other financial institutions have a maximum maturity period of up to 15 years. The monthly repayment terms would be eased considerably and placed within the reach of a larger cross section of the lower and middle income groups if the maturity periods were to be extended to 25 years and beyond. To enable the financial institutions to do so in a prudent manner, we need to establish a secondary mortgage market. I have since directed that the feasibility and technical details of an appropriate scheme be undertaken by Bank Negara in consultation with the major financial institutions. Such a scheme, when introduced, would certainly go a long way in ensuring that home ownership will be within the reach of a vast segment of the population and provide a timely boost to construction activity in the 1980s.

Accelerated depreciation allowance

Hon'ble Members will recall that *accelerated depreciation allowance* comprising an initial

© 1980 International Bureau of Fiscal Documentation – BULLETIN

allowance of 20 percent and an annual allowance of 80 percent for capital expenditure on plant and machinery was extended in the 1978 Budget to all industries for assessment years 1979 and 1980.

I now propose that the period of offer be extended by 3 more years ending with assessment year 1983.

Reinvestment allowance

Similarly, in the 1979 Budget, a *reinvestment allowance* of 25 percent of capital expenditure on plant and machinery and on industrial building was offered for assessment years 1980 to 1982 to manufacturing and processing industries. To be in line with the extension of the accelerated depreciation allowance, I propose to extend the period of offer of the reinvestment allowance by another year to end with assessment year 1983.

Long-term Credit Bank (Bank Kemajuan Perusahaan Malaysia)

When presenting last year's Budget, I had proposed the provision of long-term financial assistance to the ailing shipping industry, so that domestic shipyards could expand and compete internationally in building vessels for export and in undertaking repairs.

Towards this end, Bank Kemajuan Perusahaan Malaysia Berhad was incorporated on August 7, 1979 with an authorised capital of $ 100 million to provide long-term finance to the shipping as well as other industries in Malaysia. Funded jointly by the Federal Government and Bank Negara Malaysia, Bank Kemajuan would assist domestic industries to expand and upgrade their production technology and capacity and to re-finance their export at internationally competitive terms.

The Bank has already launched its ship repairs financing facility. Invoices for ship repairs of domestic and foreign ships would be eligible for financing under this facility for a maximum period of 1 year at concessionary interest rate of 4.5 percent per annum. Bank Kemajuan is currently working on a range of industrial financing schemes, including medium and long-term suppliers' and buyers' credit for the export of ships, machinery, equipment and other capital goods manufactured in Malaysia.

Tax incentive for inward reinsurance

In encouraging investment we need to provide investment incentives in the *service sector* of the economy as well. This is particularly important since, as in the case of the insurance industry, there is much scope for expansion.

Presently, profits from inward reinsurance business are subject to the company tax rate of 40 percent in Malaysia. In comparison, concessional rates of only 10 percent and 17 percent are levied in some neighbouring countries. Given the heavier tax liability, the insurance industry in Malaysia is constrained from being able to develop the business of inward reinsurance.

I therefore propose to accord preferential tax treatment by reducing the present 40 percent rate applicable to profits from inward reinsurance to 5 percent so that the insurance industry in Malaysia will be able to compete effectively. Dividends paid out of profits from inward reinsurance will be exempt from tax in the hands of shareholders. With lower tax liabilities, domestic insurance companies should be able to quote lower premiums to attract inward reinsurance which should therefore help expand the scope and performance of the insurance industry.

Tax incentive for reafforestation

It is proposed that the cultivation of timber be encouraged by extending to reafforestation the same tax treatment which presently applies to the planting industry. Cultivated timber will therefore be brought within the definition of "approved crops" in the Income Tax Act. Any expenditure incurred on replanting will be allowed to be deducted against the revenue of the year in which such expenditure is incurred. Further, plant and machinery used in reafforestation will qualify for an increased initial allowance of 60 percent.

Tax incentive for exports

Manufacturing exports have been increasing at an impressive rate of 20 percent in the last few years. This is the kind of economic trend that needs encouragement especially at this time of global economic slowdown. Our own economic growth could be stimulated and supported by sustaining the good performance of our manufacturing exports. We cannot allow the recession abroad to adversely affect our own long-term industrial and modernisation plans.

I therefore propose to introduce additional incentives to encourage export oriented manufacturing industries by allowing the cost of maintaining sales offices overseas for the promotion of exports to be elibible for additional deductions. Also I propose to replace the present export allowance, with an outright allowance of 2 percent of ex-factory value of all export sales, and an additional 10 percent on the increase of export sales over that of the previous year.

The Hon'ble the Minister of Trade and Industry will be moving an appropriate Amendment Bill to the Investment Incentive Act in this House during the current session for debate and approval so that the proposed revision to export incentives could be implemented.

Export refinancing facilities

Hon'ble Members will recall that as a part of the Government's policy to promote manufactured exports, Bank Negara has been providing the export trade with concessional post-shipment as well as pre-shipment refinancing facilities. We have reviewed these facilities and I now propose to further expand pre-shipment facility, to include rubber and plastic products, footwear, metal products, sports goods and furniture. With the proposed expansion, the coverage will now be increased to about 25 percent of the total manufactured exports.

The battle against inflation cannot be the responsibility of the Government alone. The private sector must also play its part. Among others, I have often alluded to the need for a strong and well organised consumer movement. Businessmen and manufacturers also have a role. In particular, they owe it to their customers to purchase always from the cheapest markets. Since the onset of the Third Malaysia Plan, the ringgit has appreciated against the US dollar by more than 20 percent, against sterling by over 10 percent and in 1979, against the Japanese yen by 18 percent. Importers and manufacturers must take advantage of our inherent strength and react promptly to diversify their sources of supply to the cheapest sources, to alleviate the impact of imported inflation on the domestic price level.

On the whole, we have done well in expanding the nation's manufactured exports, which are directed mainly at the more traditional markets in the major industrial nations. While we need to nurture these markets, greater efforts must be made to develop the growing dynamic markets nearer home through regional cooperation.

The East-Asian countries and ASEAN have great potential for trade and industrial expansion. Furthermore, there are a vast potential and prospects for trade and industrial cooperation within the great Pacific Basin. This vast and rich region provides tremendous opportunities for the future. Indeed, while we are on the threshold of the 1980s, Malaysia must begin to think hard about planning for the promising possibilities and potential for trade and industry within the context of the larger Pacific Basin. We must look further ahead. We must raise our sights.

We cannot continue to look to the industrial countries so-called, The North. Time and again the developing countries have been turned down in their legitimate case for the establishment of a New International Economic Order.

As agreed by the developing countries at the last Unctad V Meeting, we must do much more to increase trade and industrial

© 1980 International Bureau of Fiscal Documentation – BULLETIN

cooperation amongst developing countries themselves. Besides the great potential that there is in ASEAN and other Asian developing countries, we can and should also look forward with confidence to expanding our trade relations with *Islamic* countries, with whom we have increasingly strong fraternal relations.

Establishment of a warehousing system in Malaysia

As Hon'ble Members are aware, warehousing facilities are currently very limited. It is felt that the facilities should be expanded as it will lead to better Customs supervision and more competitive prices as the importers will be able to import "bulk". Thus, it is proposed that more licences to establish warehouses will be issued throughout the country. The private sector is expected to play a major role in owing and operating these warehouses. It is also proposed that spare parts, fruits and canned food, cosmetics, watches and chemicals be included as items which may benefit from the bonded warehouse facilities. The list of items may be extended from time to time.

The operation of a warehouse requires a licence from Customs Department to whom applications could be made.

Proposal to reduce tax burden on public transport sector - taxis, hire-cars and buses

In order to improve the public transport service to the people it is felt that some incentives should be given. Towards this objective, I propose to:

(a) Reduce the excise duty on taxis and hire-cars by 50 percent.
(b) Reduce the road tax on taxis and hire cars by 50 percent.
(c) Reduce the engine tax on buses by 25 percent.

Proposal to increase road tax on privately owned diesel cars

As Hon'ble Members are aware, the subsidy on diesel is aimed to benefit the industrial users as well as the public transport industry so as to restrain price increases and was never intended to benefit owners of private diesel cars. Therefore, I propose that the road tax on privately owned diesel cars be increased to five times that of the road tax on cars using petrol compared to the present rate of four times.

Import duty and excise

Hon'ble Members will observe that the 1980 Budget has not given much attention to the reduction of import duties. This is not because the Government does not wish to reduce import duties, particularly for the goods consumed by the lower income groups. On the contrary, I can assure you that the Government has been reducing or eliminating import duties, on essential food items as well as other items of mass consumption. Whatever dutiable items there are, it is largely to protect our own domestic industries against competition and could not be reduced at the moment.

For this year's Budget therefore, I have little to offer except to propose duty reductions on a very restricted number of items as follows:

(a) Import duties on durians, mangoes and jackfruits are reduced by another 50 percent,
(b) import duty on film/negatives for movie industry is reduced from 40 to 50 percent,
(c) import duties on some sports goods such as racing bicycles, sports gloves and appliances for gymnastics are removed,
(d) import duty on cylinder block is reduced from 75 to 25 percent.

I also propose to remove the excise duty on reconditioned batteries so that the treatment is the same as for retreaded tyres. Excise duty on foam rubber mattress is also reduced from 44 sen per kg. to 33 sen per kg., so as to be on par with the duty on artificial foam plastic mattresses.

Tax incentives to encourage investment and restructuring

As Hon'ble Members are aware the Government is taking the lead to promote overall economic growth and investment in particular. However, the private sector has to support and supplement the Government's investment initiatives more strongly, in order to sustain and strengthen the growing importance of the private sector's role in promoting balanced economic growth and investment under the New Economic Policy. We therefore need to ensure that the NEP goals for restructuring are achieved on schedule. This requires concerted effort on a sustained basis through all aspects of Government policies which include fiscal policy. I therefore propose the following tax measures as incentives to accelerate the pace for restructuring and the promotion of investments and economic growth:

(a) Currently all companies have to pay income tax at a rate of 40 percent. Under the proposal, companies with a paid up capital of not less than $ 1 million or with a net asset of not less than $ 1 million which conform to the equity restructuring requirement of the Government, will only pay income tax at a lower rate of 35 percent.
(b) I am also proposing that companies which conform to restructuring with respect to employment and/or marketing network be exempted from Development Tax of 5 percent.

Both these exemptions are to be accorded upon the production of annual certification by the Foreign Investment Committee (F.I.C.). These incentives are to be offered for only 3 assessment years from assessment year 1980 to assessment year 1982.

Hon'ble Members are aware that the Government is determined to set up the pace of corporate restructuring, not only through fiscal incentives but in participating directly in the commercial and industrial sector of the economy.

The promotion of a more rapid rate of growth in private investment, in conjunction with the attainment of our national restructuring objective, will ensure not only balanced, but also stable and steady industrial growth and expansion. Thus, the 1980 Budget provides $ 1,086 million to promote and strengthen the Government's industrialisation policy. Of this large amount, a sum of $ 227 million will be provided to State Economic Development Corporations to promote industrial development in conjuction with the private sector. The Government's industrial participation in joint-enterprises with the private sector, will help to achieve our socio-economic objectives, in a mutually reinforcing manner, since both the public and the private sectors will stand to gain much from mutual cooperation to achieve our common objectives.

As a further measure to accelerate the progress that has so far been achieved in increasing the equity ownership of the Bumiputra community, an additional sum of $ 300 million is provided to supplement the present capital of $ 200 million in the Bumiputra Investment Fund.

We recognise that one of the major constraints to the expansion of Bumiputra ownership and participation in the corporate sector is the lack of finance. Therefore the 1980 Budget provides $ 256 million to supplement the credit resources and facilities of Government's major institutions, that have been established to achieve the objectives of restructuring i.e. Pernas, UDA and MARA.

I might add that these additional resources will help supplement the new guidelines on bank lending which were introduced two months ago for commercial banks and finance companies.

It is clear therefore that the Government is doing its best, in cooperation with the banking sector, to provide increasing amounts of loanable funds to the Bumiputra community and small scale enterprises, and agricultural food production to accelerate private investment and our restructuring objectives.

In line with the New Economic Policy, the Government is now making preparations for the transfer of shares in successful Government-owned companies to Bumiputras. The transfer process will take time as it may involve amending some existing

© 1980 International Bureau of Fiscal Documentation – BULLETIN

legislations. However, it is hoped that the transfer could be effected by mid-1981 through a scheme now being formulated, which will ensure that a majority of the shares in Government-owned companies will come under the control of a large segment of the lower-income population. The Bumiputra Investment Fund, operating under its own scheme, will be one of agencies for this purpose. In this way it is hoped that the lower-income groups will be able to enjoy the fruits of this *share transfer plan* as they will be able to control the biggest portion of the shares in successful Government companies.

As a preparatory measure to encourage small investors or low-income individuals to save and invest their money in profitable schemes, I propose that the profits of approved unit trusts will be exempted from income tax and that dividends not exceeding $ 4,000 a year received by the taxpayer, who is a unit holder, will also be exempted from income tax.

Malaysia's Economic and Budget Forecast for 1980

I have outlined the 1980 Budget Strategy and presented my proposals to achieve the Budget's Strategic Goals. The question that now remains is: *What then are Malaysia's economic and budgetary prospects for 1980?*

Hon'ble Members will agree that it is extremely diffcult to be precise about economic and financial estimates for the future, particularly when there is so much international economic uncertainty and monetary instability.

Be that as it may, current indicators point to a real growth in the domestic economy of about 6-7 percent for 1980 as a whole. Implementation of the Budget Strategy I have outlined would provide a firm foundation for the economy to grow faster than envisaged, not just in 1980 but also in the immediate years beyond. Both the tax cuts of $ 482 million and the tax concessions as well as subsidies relating to electricity and petroleum products amounting to $ 491 million in 1980, will have the effect of achieving the Budget objectives. With these firmly in place, we can reasonably expect the domestic price level to stabilise at about 5-6 percent in 1980.

The big tax cuts have been possible not only because of the basic resilience of our economy, but also because of the consistently strong Budget performance and the favourable outturn estimated for next year. The 1980 Budget's Current Account surplus is estimated at $ 515 million before tax changes and $ 33 million after tax changes.

These big tax cuts together with large Expenditures and subsidies have enabled us to design the Budget Strategy of promoting Economic Growth and Combatting Inflation, to not only encourage further investment and expand production but also to help, particularly the poverty and lower income groups, to face the economic difficulties that lie ahead.

SOME MAJOR PROPOSED TAX AMENDMENTS

A. INDIVIDUAL INCOME TAX

Under the existing tax structure, the tax burden for various chargeable income, after allowing all possible deductions is as follows:

Chargeable income ($) (1)	Marginal rate (%) (2)	Marginal liability ($) (3)	Liability ($) (4)	Average tax rate (%) (5)
1,000 – 2,500	6	150	150	6.0
2,501 – 5,000	9	225	375	7.0
5,001 – 7,500	12	300	675	9.0
7,501 – 10,000	15	375	1,050	10.5
10,001 – 15,000	20	1,000	2,050	13.7
15,001 – 20,000	25	1,250	3,300	16.5
20,001 – 25,000	30	1,500	4,300	19.2
25,001 – 35,000	35	3,350	8,300	23.7
35,001 – 50,000	40	6,000	14,300	23.6
50,001 – 75,000	50	12,500	26,800	35.2
75,001 and above	55	–	–	–

The tax burden on chargeable income is shown in column (5).

It is proposed that the following measures be taken in respect of the individual income tax structure:

(a) Relief for individual

At present the reliefs for the individual are in the form of:
(i) personal relief of $ 2,000
(ii) earned income of 1/10 of income or $ 1,000 whichever is lower;
(iii) rebate of $ 60. This is to be deducted from tax payable.

It is proposed that for 1980, the individual relief be replaced by a single individual relief of $ 5,000 and relief on earned income be withdrawn. Out of the $ 3,000 increase, the first $ 1,000 is an actual increase of individual relief, while the second $ 1,000 is to provide relief for dependents and the final $ 1,000 is to convert earned income relief into an additional individual relief. The present rebate of $ 60 is to be retained.

(b) Wife's relief

At present the reliefs for wife are as follows:
(i) wife's relief of $ 1,000;
(ii) wife's earned income of 9/10 of income of maximum of $ 500; in case where earned income exceed $ 5,000 1/10 of income or maximum of $ 1,000.
(iii) a rebate of $ 30. This is to be deducted from tax payable.

It is proposed that the relief for wife be increased to $ 2,000 and that the relief for wife's earned income be withdrawn. The rebate for wife of $ 30 is to be continued.

(c) Allowance for children educated abroad

The current allowance for children educated abroad is double the amount of children's relief.
It is proposed that the allowance for children educated abroad be *four times* the normal deductions which currently are as follows:

1st child	$ 800
2nd child	$ 700
3rd child	$ 600
4th child	$ 500
5th child	$ 400

(d) Revision of top chargeable bracket

Currently chargeable income exceeding $ 50,000 but not exceeding $ 75,000 is taxed at a rate of 50 percent while income exceeding $ 75,000 is subject to a rate of 55 percent. With the objective of providing more incentive for work effort, it is proposed to reduce the tax liability on chargeable income exceeding $ 50,000. Under the proposal, chargeable income exceeding $ 50,000 but not exceeding $ 75,000 will be subject to a reduced rate of 45 percent and for income exceeding $ 75,000 but not exceeding $ 100,000, the rate will be 50 percent. For income exceeding $ 100,000 the rate will be 55 percent. For excess profit tax, the present exemption limit of $ 75,000 for any person (other than a company) is raised to $ 100,000. Therefore, an

© 1980 International Bureau of Fiscal Documentation – BULLETIN

individual will be liable to excess profit tax only on chargeable income which exceeds $ 100,000.

The table below gives a comparison of tax liability under the present and proposed reliefs for individual and wife at various income levels:

Income	Tax payable ($) Present	Proposed	Tax saving to taxpayer
5,000	nil	nil	nil
10,000	345	120	225
20,000	2,085	1,560	525
30,000	4,885	4,110	775
50,000	12,410	11,410	1,000
75,000	24,550	22,400	2,150
100,000	39,010	35,710	3,300

The above proposal is to take effect from assessment year 1980.

B. EXTENSION OF PREVIOUS BUDGET MEASURES

(i) Accelerated depreciation allowance

The *accelerated depreciation allowance* comprising of an initial allowance of 20 percent and an annual allowance of 80 percent for capital expenditure on plant and machinery was introduced in the 1977 Budget for the agro-based and related industries for a period of 3 years from assessment years 1978 to 1980. The scope of accelerated depreciation allowance was extended in the 1973 Budget to all industries undertaking capital expenditure for assessment years 1979 and 1980. It is proposed that the period of offer be extended by 3 more years up to and including assessment year 1983.

(ii) Reinvestment allowance

In the 1979 Budget, a *reinvestment allowance* of 25 percent of capital expenditure on plant machinery and on industrial building (deductible from adjusted income) was offered for a period of three years from assessment years 1980 to 1982 (basis years 1979 to 1981) to manufacturing and processing industries undertaking expansion as approved by the Ministry of Trade and Industry. To be in line with the extension of the accelerated depreciation allowance to assessment year 1983, it is proposed that the period for reinvestment allowance should also be extended by another year up to and including assessment year 1983.

C. TAX INCENTIVE FOR INWARD REINSURANCE

Income from inward reinsurance business is assessable to income tax at 40 percent, development tax at 5 percent and excess profit tax at 5 percent on the chargeable income which exceeds the appropriate franking limit.

It is proposed that preferential tax treatment be accorded to inward reinsurance business in order to encourage the flow of profitable reinsurance business to Malaysia from other countries. It is proposed that the present 40 percent rate applicable on profits from inward reinsurance business be reduced to 5 percent. The proposal will be made effective for assessment year 1980 and subsequent years of assessment.

D. TAX INCENTIVE FOR REAFFORESTATION

It is proposed that the growing of timber be encouraged by extending to reafforestation the tax treatment which presently applies to the planting industry. Cultivated timber will be brought within the definition of "approved crops" in the Income Tax Act to enable reafforestation to qualify for capital expenditure incurred on clearing of land, new planting and construction of roads to be written off over 2 years. Capital expenditure on labour lines will be allowed to be written off over 5 years and capital expenditure on other buildings allowed to be written off over 10 years. In addition, any expenditure incurred on replanting will be allowed to be deducted against the revenue of the year in which such expenditure is incurred. Further, rules will be introduced under the Income Tax Act to enable plant and machinery used in reafforestation to qualify for an increased initial allowance of 60 percent compared to the normal rate of 20 percent.

E. TAX INCENTIVES FOR EXPORTS

At present export incentives are given under the Investment Incentives Act, 1967, and these are:

(i) Deduction for promotion of export

These are given in respect of expenses incurred for promotion of exports of manufactured products. Export expenses that qualify for deductions are:

(a) advertising expenses
(b) provision of free samples
(c) market research
(d) preparation of tenders
(e) overseas travel for negotiations and contracts
(f) expenses for giving technical information to buyers.

The deductions allowable are given in addition to any deductions allowable under Section 33 of the Income Tax Act 1967.

(ii) Accelerated depreciation allowance

Under this incentive about 90 percent of the initial outlay or capital could be written off in 5 years, instead of the 20 or more years at normal rates of depreciation allowance.

(iii) Export allowance

An allowance at the rate of 5 percent of the increase in export over the average exports of the preceding five assessment years is given as deduction from gross income. The rate is increased to 8 percent in the case of companies which use not less than 50 percent of local material in their export products.

It is proposed that the export incentives be given by:

(a) allowing additional deduction for the cost of maintaining sale offices overseas for promotion of export;
(b) replacing the present export allowance with an outright export allowance of 2 percent of ex-factory value of export sales and an additional 10 percent of ex-factory value of export sales on the increase of export sales over the export sales of the previous year. It is proposed that this allowance be given on all export sales irrespective of local content.

Crude olein and stearin, neutralised olein and stearin, neutralised palm oil, and neutralised bleached palm oil, tapioca chips, fresh fruits and vegetables, cocoa beans, coffee beans, sand, clay and stones (including granite and limestone), livestocks, and products of industries engaged in the manufacture or assembly of electrical and electronic components are to be included in the list of products not eligible for export allowance.
The proposal is to take effect from assessment year 1980.

F. TAX INCENTIVE FOR RESTRUCTURING

It is proposed that the following tax measures be adopted as incentives for restructuring:

(a) Equity restructuring

Exemption of 5 percentage points of the company income tax

© 1980 International Bureau of Fiscal Documentation – BULLETIN

of 40 percent is to be allowed to any company conforming to the equity restructuring requirement of the NEP with at least 30 percent equity ownership for Bumiputras, 40 percent for non-Bumiputra Malaysians and 30 percent for foreigners.
In order to expedite the achievement of the target, the above incentive is initially suggested to be offered on a yearly basis for 3 assessment years from assessment year 1980 to assessment year 1982. The attraction of this proposal is that it encourages companies to restructure early in order to reap the benefit of the tax reduction. In order to qualify for exemption, the company must either have a paid-up capital of $ 1 million unimpaired by contingent liabilities or have a net asset (before revaluation) of not less than $ 1 million. Pioneer companies and companies enjoying tax incentives will not qualify for this incentive.

(b) Employment and/or marketing network restructuring

Any company conforming to the employment and/or marketing network restructuring will be exempted from the development tax of 5 percent.
The period of offer is similar to (a) above i.e. on a yearly basis for three assessment years from assessment year 1980 to assessment year 1982.

Both exemptions above are to be accorded on annual certification by the Foreign Investment Committee (FIC). FIC will issue the certificate after consultation with the relevant authorities.

G. TIN PROFITS TAX

In view of the proposed restructuring of export duty on tin which will benefit the profitable mines more, it is now proposed to raise the present maximum rate of tin profits tax from 12½ percent to 15 percent as follows:

Taxable tin profits (after providing for exemptions)	Rate Present (%)	Proposed (%)
First $ 200,000	5	5
next $ 200,000	10	10
exceeding $ 400,000	12½	15

The proposal is to be made effective from assessment year 1980.

H. TAX EXEMPTIONS FOR APPROVED UNIT TRUSTS AND MALAYSIAN UNIT-HOLDERS

The incentive proposed is to exempt unit trusts which are approved by the Minister of Finance. Also resident unit holders who are taxpayers are exempted from the individual income tax in respect of the dividends they receive subject to a maximum amount of $ 4,000 per year which works out to a return of 8 percent on an investment of $ 50,000 in unit trusts.
The proposal is to take effect as from assessment year 1980.

I. REVIEW OF ESTATE DUTY

Three policy changes proposed are:
(a) The present exemption level for the estate of deceased person who died domiciled in Malaysia which presently is at $ 50,000 is proposed to be raised to $ 300,000. Only values of estates in excess of $ 300,000 will now suffer estate duty. The exemption level for the estates of a non-domiciled deceased which presently is at $ 10,000 is proposed to be revised to $ 60,000.
(b) It is also proposed that the present 50 percent abatement against estate duty be abolished.
(c) The estate duty structure for estates of domiciled deceased is to be revised as in the attached table. Under the proposed structure, the estate duty liability will be lower as compared with the existing structure for an estate not exceeding $ 700,000 in value. For an estate with value exceeding $ 700,000 the liability will be higher under the proposed than under the present structure.
(d) Funeral expenses are now proposed to be raised to $ 3,000 from the present $ 1,000 or 2½ percent of ascertained value of estate, whichever is lower.
(e) Any money received under a personal accident insurance policy will not be subject to estate duty.

The amendment will apply to the estate of any person dying on or after 18th October 1979.
The above proposals are applicable to Peninsular Malaysia, pending extension of the law to Sabah and Sarawak.

ESTATE DUTY

Taxable income		Proposal Rates (%)	Proposal Amount payable	Proposal Effective rate (%)	Existing Amount payable after 50% abatement	Existing Effective rate (%)
		(1)	(2)	(3)	(4)	(5)
On First	300,000		nil		$15,000	5
next	100,000	12	12,000			
first	400,000		12,000	3	25,000	6.2

MALAYSIA:
Deductibility of Foreign Losses
– Two Bites at the Cherry –

Hock Heng Co. S'dn. Bhd. v. Director-General of Inland Revenue

by C.S. Yeoh *

Malaysian Income Tax – Malaysian resident company with Singapore branch – whether company can set off Singapore branch's loss against Malaysian income – Income Tax Act, 1967 (Malaysia) – Malaysia/Singapore Double Taxation Agreement 1966.

Three main factors affect any claim for loss relief by an enterprise if such losses arise from activities in a foreign territory. These factors are-
(i) the local law,
(ii) double taxation treaties, if relevant, and
(iii) case law.

In *Hock Heng Co. Sdn. Bhd. (private limited) v. Director-General of Inland Revenue*, the taxpayer, a Malaysian company, which was ordinarily resident in Malaysia, had its head office in Malaysia and a branch in Singapore. For the year of assessment 1968, the head office made a profit of M$ 31,415 whilst the branch incurred a loss of M$ 538,335.

Under Section 3(a) of the Income Tax Act, 1967 (hereinafter referred to as "the Act") the global income of a Malaysian company was subject to Malaysian income tax. This section as applicable to the year of assessment 1968 reads :

> ". . . income tax shall be charged . . .
> (a) in the case of a person ordinarily resident . . . upon his income from wherever derived; . . ."

By virtue of Paragraph 1(a), Article IV of the Double Taxation Relief (Republic of Singapore) Order, 1966 (hereinafter called "the Agreement" or "treaty"), profits of a permanent establishment in Singapore of a Malaysian enterprise were exempt from Malaysian tax. The relevant paragraphs of this Article are reproduced below:

> "1. (a) The profits of a Malaysian enterprise shall not be taxable in Singapore unless the enterprise carries on business in Singapore through a permanent establishment situated in Singapore. If the enterprose carries on business as aforesaid, tax may be imposed in Singapore on the profits of the enterprise but only on so much of them as is attributable to that permanent establishment. No further tax shall be imposed in Malaysia in respect of profits of the permanent establishment which are remitted to Malaysia. . . .
>
> 2. Where an enterprise of one of the Contracting States carries on business in the other Contracting State through a permanent establishment situated therein, there shall in each Contracting State be attributed to that permanent establishment the profits which it might be expected to make if it were a distinct and separate enterprise engaged in the same or similar activities under the same or similar conditions and dealing independently with the enterprise of which it is a permanent establishment.
>
> 3. In determining the profits of a permanent establishment, there shall be allowed as deduction all expenses, including executive and general administrative expenses, which would be deductible if the permanent establishment were an independent enterprise in so far as they are reasonably allocable to the permanent establishment, whether incurred in the Contracting State in which the permanent establishment is situated or elsewhere."

The Agreement was silent as regards losses of a permanent establishment and Paragraph 1 of Article XVII of the treaty confirmed that unless otherwise provided in the treaty, the laws of Malaysia should continue to govern the taxation of income in that country. Paragraphs 1 and 2 of Article XVII are set out below:

> "1. The laws of each Contracting State shall continue to govern the taxation of income in that State except where express provision to the contrary is made in this Agreement. Where income is subject to tax in both Contracting States, relief from double taxation shall be given in accordance with the following paragraphs of this Article.
>
> 2. Where a resident of one Contracting State derives income from sources within the other Contracting State and that income in accordance with the income tax laws of each Contracting State and the provisions of this Agreement is subject to tax in the other Contracting State, the former Contracting State shall exempt such income from tax."

In computing the taxpayer's income for Malaysian tax purposes the Inland Revenue refused to allow a claim to have the Singapore loss be set off against the Malaysian income.

The taxpayer appealed to the Special Commissioners of Income Tax who decided in its favour. At the request of the Revenue a case stated was presented to the High Court.

At the High Court the learned Judge reversed the decision of the Special Commissioners. He based his judgement on the reasons given by him in the *United National Finance Bhd. v. Director-General of Inland Revenue* case of 1975. In disallowing a similar set-off of Singapore losses against Malaysian income in that case the learned Judge reasoned that such losses, if allowed, would have been deducted twice, once in Singapore and again in Malaysia.

The taxpayer then appealed to the Federal Court. The arguments put forward on behalf of the taxpayer may be briefly summarised as follows:

(a) At the relevant time under Section 3(a) of the Act, tax was payable on its income from wherever derived, i.e. upon world income. In computing its world income, losses suffered in Singapore should be deducted from profits in Malaysia - else, how could its world income be determined?

(b) In accordance with Section 44(2) of the Act, losses may be deducted and these must include, it was submitted, losses suffered in Singapore.

(c) Certain deductions were not allowed; these were enumerated in Section 39 of the Act. Losses suffered in Singapore were not included; therefore, such losses could be set against Malaysian profit.

(d) According to the ordinary principles of commercial accounting, all gains and losses must be brought into account when computing income.

(e) The Agreement and its enabling authority, Section 132 of the Act, provide for relief against double taxation; such relief was only in respect of profits made and taxed in Singapore. As the taxpayer had not claimed any relief against double taxation, the Agreement was not applicable and the losses should be allowed under Section 44(2).

The Court, however, found in favour of the Director General of Inland Revenue on the following grounds:

(i) Singapore losses, if allowed against Malaysian income, would have been doubly deducted. As Lee Hun Hoe CJ (Borneo) put it, "They cannot have two bites at the cherry".

(ii) Article IV (2) and (3) of the Agreement — business profits — provides that the Singapore branch and Malaysian head office were to be regarded as separate and distinct. In other words, the world income scope of Malaysian taxation had been transformed to the derivative scope and the Singapore losses could not be attributed to activities in Malaysia. Singapore losses should be deducted from Singapore profits and Malaysian losses from Malaysian profits.

* Executive Director, SGV-KC Taxation Services Sdn. Bhd. Kuala Lumpur, Malaysia.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

(iii) Section 3(a) of the Act has been overridden by the Agreement insofar as Singapore losses were concerned in that the branch and head office were to be regarded as distinct and separate.

An appeal by the taxpayer to the Privy Council followed. It was common ground that but for the said tax treaty, the appellant would have been entitled to set off the Singapore losses against its Malaysian income. The Privy Council was therefore faced with the question as to whether or not there were provisions in the Agreement which modify the 1967 Act insofar as the Singapore losses were concerned.

Viscount Dilhorne in his delivery of the Majority Judgement referred to Articles IV and XVII of the Agreement. In connection with the former Article he noted that any profits of a permanent establishment in Singapore of a Malaysian enterprise were taxable only in Singapore whether or not such profits are remitted to Malaysia. To this extent therefore the tax treaty qualified and modified the Act under which Malaysian tax was chargeable on all income wherever derived.

His Lordship added that expenses, as one would expect, are deductible in computing profits. Article IV was concerned with profits and what would happen to them. It did not purport to provide the tax consequences if losses were incurred.

With reference to Article XVII — Elimination from double taxation — their Lordships pointed out that paragraph (2) thereof was not applicable to the case because that paragraph referred to income only as opposed to losses. Paragraph (1), which provided that the laws of Malaysia should continue to govern the taxation of income in that state except where express provision to the contrary was found in the Agreement, was, in the opinion of their Lordships, determinative of the appeal. There were no express provisions regarding losses; hence the Act applied.

In their Lordships' view the *United National Finance Bhd.* case referred to earlier was incorrectly decided. They had sympathy for the concept that if profits from the Singapore branch were not taxable in Malaysia then, conversely, Singapore losses should not be allowed to reduce Malaysian income, but they said that the Agreement did not so provide. Lord Russel of Killowen chose to part company with the rest of the Board on this point. In his opinion an exemption from tax necessarily involved an exclusion from loss relief.

It was therefore held by a majority, Lord Russel of Killowen dissenting, that the appeal should be allowed and the Deciding Order of the Special Commissioners restored. The M$ 538,335 loss incurred by the Singapore branch could therefore be set against Malaysian income when ascertaining the company's income for Malaysian tax purposes for the year of assessment 1968.

CONCLUSION:

(1) The 1966 Order was made when the Income Tax Ordinance, 1947 was operative in Malaysia. Under this Ordinance tax was exigible on income accruing in or derived from the States of Malaya or received in the States of Malaya from outside territory.

(2) An immediate consequential amendment to the 1966 Order did not follow the replacement of the Ordinance by the 1967 Act which introduced the global scope of taxation.

(3) The said Order of 1966 has since been replaced by the Double Taxation Relief (Singapore) Order 1968 which had effect from the year of assessment 1969. Under this latest Order, Singapore profits attributable to a permanent establishment of a Malaysian enterprise in Singapore are no longer exempt from Malaysian tax.

(4) The scope of Malaysian income tax was altered as from the year of assessment 1974. There has been a reversion to the scope of the 1947 Ordinance and in its amended form Section 3(a) states:
". . . income tax shall be charged . . . upon income of any person accruing in or derived from Malaysia or received in Malaysia from outside Malaysia."
A loss cannot of course be remitted, so that under current law losses incurred through a Singapore branch are no longer deductible.

EDITOR'S NOTE

Double deduction of losses — two bites at the cherry — by a taxpayer incurring a foreign loss will occur where there exist provisions (usually a tax treaty) which exempt foreign-source income from domestic income tax. In those cases where double taxation is prevented by allowing a credit for foreign tax against domestic income tax the problem will not arise. However, where the exemption-method is used the question immediately arises whether disregarding foreign income necessarily means that foreign losses must also be disregarded. Should this be allowed then the losses may usually be deducted twice, i.e. first in the country where the taxpayer is resident and later — when there is foreign-source income — in the country where the loss was incurred. Some countries like the German Federal Republic and Luxembourg, therefore, disregard foreign losses. Other countries, like Belgium and the Netherlands introduce a special clause in their tax treaties under which foreign losses are recaptured.

TAX GLOSSARY

*by H.W.T. PEPPER**

PROGRESSION — See GRADUATION.

PROGRESSIV SKAT — (Denmark) Progressive tax.

PROOF SPIRIT — "Proof" is a concept adopted in the U.K. in connection with the levy of customs and excise duties on spirits (i.e., drinks such as brandy, gin, whisky, containing distilled alcohol). Proof spirit contains 57.06 parts of alcohol by volume in each 100 parts of spirit at a temperature of 51°F.

PROPERTY APPRECIATION TAX — A form of CAPITAL GAINS TAX (q.v.) operated by municipalities in Italy. The tax is at graduated rates imposed between upper and lower limits set by the central government, and is of interest because it contains a simple form of "index" adjustment to "write up" the original cost of the property, by a percentage for each year it has been held, when computing the capital gain.

PROPERTY TAX — This term, which was originally applied to the income tax introduced (in 1798) by Pitt in Britain, is more usually applied to local taxes on real property, although there are examples of the term being applied to a wealth tax (on the total "property" of the taxpayer in Guyana). As a levy on real property, property tax may be charged on unimproved land values, but the term is more usually applied to a tax on land plus improvements generally levied by a local authority as a means of obtaining revenue to meet local expenditure, which may be of benefit to the owners and occupiers of property in the local administrative area.

PROPORTIONAL SKAT — (Denmark) Flat rate tax.

PROPOSITION 13 — A proposal, referring to a referendum in the State of California, that property tax in that State on residential and commercial property should be levied at a rate not higher than 1 percent on capital, and that assessments should be based on 1975/76 appraised values, or the current value when purchased in the case of newly-built properties. The Californian law permits such proposals to be initiated by a minimum number of voters. Proposition 13 succeeded and resulted in a cut in property tax revenue to the State of approximately two-thirds, as well as evoking admiration and a desire to emulate among taxpayers in other States.

PRO RATA RULE — The credit due under the V.A.T. system used by E.E.C. members in respect of the trader's inputs may be restricted where some of his sales are taxable and some are not. It is logical to restrict the credit proportionately to the taxable sales and the use of the pro-rata rule is contained in Article II (2) and .22 of Annexe 'A' of the 2nd Directive to E.E.C. members.

PROSPECTING — See EXPLORATION EXPENDITURE.

PROSPECTING, ABORTIVE — See ABORTIVE PROSPECTING.

PROSPECTORS AND GRUBSTAKERS — The Canadian tax code makes special provision for prospectors and grubstakers who sell mineral properties they have acquired by successful exploration. Where the prospectors and grubstakers receive shares in a corporation in exchange for their interests they will not be taxed on the proceeds of such sales. The shares will, however, be deemed to have a nil cost if the question of capital gains tax later arises on their subsequent disposal, and the corporation acquiring the properties is deemed to have done so at nil cost.

PROTECTIVE ASSESSMENT — Where an assessment of a person's tax liability has not been made, because of delay in obtaining information, or in obtaining agreement as to basis, etc., and the time limit for making assessments is in danger of expiring, an estimated assessment may be made to protect the position of the Revenue department. Such assessments are also known as JEOPARDY ASSESSMENTS (q.v.).

PROTECTIVE DUTIES — See PROTECTIVE TARIFFS. The term "protective duty" in Britain was used to refer initially to the batch of duties which were introduced in 1932, which applied only to non-Commonwealth goods, and were chargeable at an ad valorem rate of 10 percent on all imports not held dutiable or not included in a free list. Additional protective duties above the 10 percent level could be imposed on the recommendation of the Import Duties Advisory Committee. The duties supplemented an initial instalment of protection which was conferred in respect of a few products by the KEY INDUSTRY DUTIES (q.v.) of 1921.

PROTECTIVE TARIFFS — Protective tariffs may either erect a "tariff wall" of very high duties which effectively eliminate competition altogether from a home enterprise, which is either an INFANT INDUSTRY (q.v.) or which represents a traditional activity which is in danger of destruction by cheap competitive imports. Otherwise, protective tariffs may merely give partial protection so that although foreign imports are not excluded, the corresponding local industries are allowed a price "margin", equivalent to the amount of duty, which enables them to continue to supply part of the home market.

PROVIDENT FUND — The term generally refers to a fund to which both employer and employee contribute sums which are invested and accumulated to produce a retirement benefit for the employee in the form of a lump sum, representing moneys accumulated on his account plus the interest, dividends, etc. thereon. Such funds are usually approved for income tax purposes, subject to certain conditions, in countries where this form of provision is customary, so that contributions are tax-deductible. The final lump sum benefit may be exempted from tax, but if invested or converted to an annuity, the resulting income will be taxable. PENSION SCHEMES (q.v.) or FUNDS are the more usual type of retirement provision for employees by employers. (See also PURCHASED ANNUITY.)

PUBLIC SECTOR BORROWING REQUIREMENT (PSBR) — The total sum which a government budgets to borrow from the private sector during

* With the assistance of the staff of the International Bureau of Fiscal Documentation.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

the fiscal year. PSBR determines tax policy to some extent, e.g., if it is desired to reduce PSBR this can only be done by reducing government spending or increasing taxation, or both.

PUBLIC UTILITY TAX — In some countries, public utilities are not subjected to taxation, particularly where run as state enterprises, on the basis that such taxation would be regressive on the poor and increase the cost to industry of the products or services supplied by the utility. In other countries, taxes are levied on the profits of public utilities, whether or not they are state owned. Under general sales tax codes, including V.A.T. systems, it is not uncommon to find tax, usually at modest rates, being applied to the services provided by these undertakings in order to have a wider revenue base. (See also POWER TAX, TAX BASE.)

PURCHASED LIFE ANNUITY — The purchase of an annuity for life produces an income for the annuitant higher than he could obtain by investing the purchase price at the going rate of interest, dividends, etc. Some of the income yield is attributable to a return of capital. It is usual in tax legislation to levy income tax only on the income element in the annuity, exempting the capital element.

"PURCHASE FROM SALES" METHOD — The method of computing V.A.T. by charging tax on the gross sales and then deducting the tax embodied in purchases and other inputs in order to determine the tax payable by the trader on the values added to the products or services he is selling.

PURCHASE TAX — The term used in the U.K. and a few other countries to refer to a wholesalers' or manufacturers' sales tax. The U.K. levied the tax basically on *sales* at the wholesale level so that in one sense the name was a misnomer, but it reflected the original purpose of the tax which was to discourage the purchase of scarce goods during World War II, as well as to raise revenue.

PYRAMIDING — See ESCALATION.

Q

QUASI SALES TAX — Various minor levies on goods, e.g., PACKAGE TAX, CUSTOMS HANDLING CHARGE, INVOICE TAX, TRANSACTIONS TAX, STAMP DUTIES (q.v.) on documents, etc., particularly if related in any way to the value of goods, amount in substance to a tax on the goods, which inevitably will be reflected ultimately in the price.

QUASI TAXATION — Some government measures, although not regarded as taxation, place a financial burden on one section of the community usually to the short-term benefit of another section, by means of arbitrary and often illogical sorts of transfer payments.
For example, price control, when it reduces profit margins to the trader below the normal level for the trade, constitutes a levy upon him in favour of his customer, which still applies even when the trader is a small shopkeeper and the customer comparatively wealthy. The result may be to deter some traders from dealing in the controlled commodity, giving the customer more trouble and expense in obtaining it. Rent control may restrict rent on long-let property well below the current economic rent, which is a levy on the landlord in favour of the tenant, but the latter may be more affluent than the former. The result is to reduce the inclination of entrepreneurs to build houses to let, placing an even greater burden on the government itself to fill the need.
Some governments decree arbitrarily that employers should increase their employees' remuneration, or pay them bonuses, or refrain from discharging redundant employees when a business shrinks in size. All these measures represent a levy or "tax" on the employer in favour of the employee, which may, however, result ultimately in the closure of the business and the loss of jobs, and, in the short-term, a reluctance of employers to engage more staff even when needed, and a reluctance by entrepreneurs to set up new enterprises.
Sound fiscal policy is to eliminate all types of quasi-taxes so that ordinary market forces and competition can make for a healthier economy.

QUICK SUCCESSION RELIEF — A form of relief normally applied to ESTATE DUTY (q.v.) where the duty has been paid on the inheritance of the estate of A (deceased) by B and then further duty arises where B dies within a short period of A's death, leaving his estate to C. To avoid the full rigour of duties being paid twice within a few years on the same assets, quick succession relief would be applied on B's death. The relief tends to be very substantial where the second death occurs within a few months, but it tapers off, and usually disappears after, say, 5 years. The current tendency, e.g., under CAPITAL TRANSFER TAX (q.v.) in the U.K. is for bequests to a surviving spouse to be free of tax, which, however, applies when the estate passes to a member of the next generation.

QUOTAS, IMPORT — Import quotas are a method of restricting imports to protect home industries without levying customs duties of a protective nature, the protection afforded being mainly a quantitative limitation of imports. Although in general such devices are frowned upon by G.A.T.T., they are sometimes preferable in being less likely to lead to exceptional price increases by the protected industries because of the existence of at least a modicum of imports at competitive prices.
Recent trends, e.g., in the U.S.A., have been to use the euphemism "Orderly Marketing Arrangement" (OMA) to describe arrangements, falling short of actual fixed quotas, whereby the exporting country, whose goods are damaging the importing country's own industries, is constrained to agree a voluntary restriction of its exports.

QUOTATION OF TAX IN PRICE — Although it is often required under sales tax laws that the marked price of goods sold by manufacturers or wholesalers should clearly indicate the tax element (this is a normal requirement, e.g., of V.A.T. schemes), the requirement does not normally extend to sales by retailers to consumers though some traders make a point of indicating the tax separately. There is a considerable extra burden of work involved in marking the tax as well as the price on goods displayed for sale, and although it is desirable that retail prices should be clearly marked on goods there is no apparent virtue in requiring the tax to be shown as well. Where price control is imposed, the main requirement of the administration is to know the price at which goods are sold to the consumer and there is usually comparatively little additional difficulty in ascertaining wholesale prices and mark-ups. On the other hand, retail sales taxes which are calculated as a flat percentage on total sales are required to be separately calculated on the bill to the consumer in the state sales taxes operated in most states of the U.S.A. Since most retailers in the U.S. have cash registers, the task of calculating the tax is usually delegated to the machine, although there are some complications when the retail sales tax is levied at more than one rate, so that goods have to be classified when preparing the bill. One school of thought suggests that it is in any event preferable not to bring the tax element in the prices too pro-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

minently to the consumers' attention, since the virtue of indirect taxation compared with direct taxation (that it is borne unheedingly and, therefore less resentfully would thereby be lost. (See UNMERKLICHKEIT.)

QUOTITE FORFAITAIRE D'IMPOT ETRANGER — (Belgium) Fixed credit for foreign tax imposed on foreign dividends, interest, and royalties.

R

RATCHET EFFECT — Where there is a change in the incidence of sales taxes and other indirect taxation such that there is a reduction of tax on some goods and services and an increase on others, there may be a tendency for traders selling the former category not to reduce prices (taking the tax reduction as an extra profit) while other traders increase prices to allow for the additional tax. The tendency described is known as the "ratchet effect", namely, as in the mechanical working of a ratchet, the price, where it moves, moves only in one direction. See, however, QUOTATION OF TAX IN PRICE.

RATE OF TAX — In systems of direct taxation it is usual for the rate of tax to be graduated or progressive (see GRADUATION) whereas with indirect taxes it is more usual for the rate of each particular commodity or service to be levied at a flat rate percent or as a specific charge per unit (see, however, D SCHEME as an example of an attempt to levy graduated indirect taxation on different parcels of the same commodity). An exception to the general rule of graduation for direct taxes is that flat rate tax may be levied on income under a SCHEDULAR TAXATION (q.v.) regime or on the income arising within a country which is acquired by non-residents. (See also STANDARD RATE.)

RATE REBATES — In the U.K. a system of rebates of rates (property tax) for those in the lower income groups was introduced in 1967, the maximum rebate being two thirds. Somewhat akin to these rebates were the fixed cash rebates from property tax granted in some States of the U.S.A. representing the additional sales tax on food items arising when sales tax which had formerly been levied at a lower (or nil) rate on food was raised to the same level as sales tax on other goods for administrative simplicity. The rebates were related to the extra cost to a family of the increased tax on their food purchases, hence the relief was of more importance to those in the lower income brackets.

RATING (OF PROPERTY) — The method of rating real property within the administrative area of a local authority is a feature of the system whereby the expenditures incurred by the authority on providing various services to those working or dwelling within its boundaries are divided "rateably" among the occupiers of property in proportion to the annual value or capital value of such properties. In Britain rates charged on property are levied at a lower poundage (percentage) on residential than on commercial and industrial property and are not charged at all on agricultural land and buildings. (See also RATE REBATES and LOCAL RATES AND TAXES.)

REAL ESTATE TAX — See PROPERTY TAX.

REAL PROPERTY TAX — A tax upon the owners or occupiers of real property within the area of jurisdiction of the taxing authority. (See PROPERTY TAX.)

RE-ALIGNMENT — The term has been used as a euphemism for the process whereby, under a general amnesty for tax fraud, a taxpayer may revise past declarations of income (or re-align them) in accordance with the actual figures, usually incurring only a modified penalty, and always with the guarantee of freedom from the risk of imprisonment for fraud. (See also COMMUTATION.) Since the capacity of any tax department to conduct lengthy Court proceedings in the many cases of understatement of income is limited, the use of some form of "out of Court" settlement rectifying or realigning (or some other euphemism) the tax in the years of understatement is customary.

REALISATION — The realisation of an asset, normally by exchanging it for money, is a transaction which is relevant for the levying of various kinds of tax, e.g. capital gains tax charged on the gain resulting from the realisation or disposal of property at a price higher than was paid for it. Sometimes a tax law deems various events to have resulted in a realisation, e.g. a gift of an asset to another person, or its bequest on death, is sometimes regarded as a realisation, leading to a charge to capital gains tax where the value at the time of transmission is greater than the cost price. See also FIRST LETTING TAX regarding the deeming of letting, instead of selling real property, as being a form of realisation.

REBATES, EXPORT: INTERNAL TAXATION — See EXPORT REBATES.

RECAPTURE — A term used in the U.S.A. and Canada to denote the subsequent withdrawal or cancellation of all or part of a relief formerly given. Examples include the withdrawal (U.S.A.) of the RESIDENTIAL PURCHASE INCENTIVE (q.v.) where the new residence is re-sold within 36 months of acquisition, and of foreign oil-related losses, where in subsequent years foreign oil-related income is earned. In Canada disposal proceeds of depreciated assets are taxable to the extent to which they exceed UN-DEPRECIATED CAPITAL COST * (q.v.), and there are similar provisions under other nomenclature in the tax codes of other countries. For example, STOCK RELIEF in the U.K. may be subsequently "recaptured" in certain circumstances.

* The recapture will not exceed relief already allowed.

RECEIPTS — The receipts or takings, or cash inflow from the sale of goods and services, of a business or profession may sometimes form the basis for taxation (see CASH BASIS), e.g. a simplified method of computing profits as receipts less payments may be allowed in the case of a small trader whose accounting records make it difficult to adopt a more sophisticated method. The option of paying tax upon receipts instead of sales may also be allowed for sales tax purposes under certain sales tax regimes. "Receipt", in the other sense of a document acknowledgeing that money has been received in return for goods or services, has relevance to tax administration in that some countries require receipts of some form to be given for all transactions, copies being compulsorily kept by the traders so that checks may be made by tax officials of the accuracy of a trader's records. See also GROSS RECEIPTS TAX, LOTTERIES FOR CONSUMER.

RECHTSPERSONENBELASTING — (Belgium) Income tax on public bodies (State and local authorities) and on non-profit enterprises.

RECOGNITION (OF LOSS, ETC.) — A term used in the U.S.A. and elsewhere to denote the acceptance of a loss, or various other types of expenditure, as qualifying for tax relief.

RECOVERY (OF BAD DEBT, ETC.) — While a deduction is normally afforded from income taxation for a com-

© 1980 International Bureau of Fiscal Documentation — BULLETIN

mercial debt written off as "bad" (see BAD DEBTS), if the debt is subsequently recovered the amount received is regarded as taxable. (See also RECAPTURE.)

REDISTRIBUTIVE LEVY — A tax imposed by a government, intended to fall most heavily on the rich, to provide revenue to finance social welfare expenditure intended to benefit mainly the poor. The term applies particularly to direct taxes such as income tax, surtax, wealth tax, and death duties.

REDUCING BALANCE METHOD — A way of calculating depreciation allowances whereby a fixed percentage rate of depreciation is applied initially to the cost of a depreciating asset which qualifies for tax relief and subsequently to the cost as reduced by the depreciation allowance for previous years. The system, also known as the DECLINING BALANCE METHOD, purports to grant allowances on the basis of the actual value of the asset, the market value of which obviously depreciates (other things being equal) by reason of the wear and tear which takes place during each year of use. (See also WRITTEN DOWN VALUE and, by contrast, STRAIGHT LINE METHOD, SUM OF THE YEARS' DIGITS METHOD, and UNIT OF PRODUCTION METHOD.)

REDUNDANCY PAYMENTS — In the U.K., income tax exemption is afforded in respect of payments by an employer to an employee who has been continuously employed for a certain period, but has been dismissed as redundant with compensation. (see also LOSS OF OFFICE, SEVERANCE PAYMENTS.)

REGIONAL EMPLOYMENT PREMIUM (R.E.P.) — Under the provisions of the SELECTIVE EMPLOYMENT TAX (S.E.T. — q.v.) in Britain, the contributions by employers, based on a fixed sum for each employee, were refunded wholly to manufacturing industries in the period from 1966 to March 1968 and an additional payment was also made. The additional payments or premiums ceased in March 1968. Thereafter when manufacturing industry was carried on in Development Areas where the government wished to encourage the siting of industry, Regional Employment Premiums, i.e. payments in excess of the tax initially paid by way of S.E.T., were made during the period April 1968 to March 1970 (to March 1971 in Northern Ireland). Premiums were paid for some time as a subsidy after the halving of S.E.T. contributions in July 1971, and their abolition in April 1973.

REGISTRATIERECHT — (Belgium) Registration duty.

REGISTRATION DUES AND TAXES — Certain types of trade, business or profession are required to register for various purposes, which may include the supervision of the activities under statutes relating to public health, public order, fire safety regulations, etc. Sometimes the registration is subject to an annual levy which may be little more than a sum sufficient to cover the administrative costs of exercising the various forms of statutory control. In some countries, the registration requirement relates to all forms of gainful activity by self-employed traders, professionals and artisans, and such registration may also be required in connection with a cascade tax or under a V.A.T. system.

REGISTRATION FOR SALES TAX — A feature of many single stage sales taxes is that traders who deal in taxable goods are required to register and are then allowed to buy such goods tax-free, subject to their accounting for tax on re-sale of the goods. The tax is then payable only on sales to non-registered traders and to consumers. (See also RING.)

REGRESSION — A tax is said to be regressive (in contrast to progressive — see GRADUATION) when the burden of paying it falls more heavily on the lower income groups. As far as direct taxes are concerned, regression is avoided by establishing exemption limits and providing reliefs for dependents and commitments such as superannuation payments or health insurance contributions, and sometimes for premiums on life assurance policies. Indirect taxes on commodities and services are more likely than direct taxes to be regressive, but the regressive effect of such taxes may be mitigated by exemption, for example, of food and other necessities, the cost of medical services and medicines, from indirect taxation, or the imposition of lower than average rates of tax on such goods and services. Nowadays, under state welfare provisions it is becoming more usual to pay cash allowances to those whose incomes are below an official "poverty line". (See also NEGATIVE INCOME TAX.)

REGULATED INVESTMENT COMPANIES — These companies, also known as "Mutual Funds", formed under U.S.A. law, make diversified investments with funds provided by their investors to whom they distribute dividends and capital gains realised. Special tax rules apply so that the investor does not incur additional taxation by the interposition of another company between him and the ultimate investments. Such companies are broadly similar to UNIT TRUSTS (q.v.) when in "Open End" form, but may also be "Closed End" in which case the shares issued to the public are fixed in number and traded on the Stock Exchange.

REGULATOR — See CUSTOMS REGULATOR and REGULATOR TAX.

REGULATOR TAX — The Regulator Tax (also known as the "Wobble" Tax) was introduced in Holland early in 1971 as a mechanism for adding a surcharge to, or making a deduction from, the main revenue taxes, viz., income tax, corporation tax, petrol duty, motor car sales levy and VAT, which together produce 80 percent of tax revenue. Originally levied as a surcharge at 5 percent the regulator was reduced to (an addition of) 3 percent on 1 July 1972 and has not so far been applied to VAT.

RE-INVESTMENT PERIOD — In granting ROLL-OVER RELIEF (q.v.) it is normally stipulated that the replacement asset or investment must be acquired within a limited period before or after disposal of the asset which gives rise to the potential capital gains tax liability. In the U.S.A., for example, on sale of a residence the new home must be acquired within 18 months of the disposal, or in case of a newly-constructed home, within 24 months.

RE-INVESTMENT RELIEF — Roll-over relief in respect of the purchase of a new investment after realising a capital gain on disposal of a previous investment, allowed in Belgium.

RELIEF OF DISTRESS, POVERTY, ETC. — The classic definition of a charity (see CHARITIES, DONATIONS; CHARITIES EXEMPTION) is that it has as its main purpose one or more of certain objects. These objects have been defined as the advancement of education, of religion, the relief of distress, poverty, etc., and the serving of purposes beneficial to the community.

RELIEFS — In personal income tax systems it is usual to make various deductions, based on the personal circumstances of the individual, before applying graduated tax rates to the rest of his income. (See CHILD, EARNED INCOME RELIEF, HOUSEKEEPER, SMALL INCOME RELIEF, SPOUSE.)

© 1980 International Bureau of Fiscal Documentation — BULLETIN

RELIGIOUS TAXES — Certain types of tax, the proceeds of which are used for religious purposes, are occasionally encountered even in secular states. In countries where, for example, Islam is the official religion, there may be a liability to pay FITRAH and ZAKAT (q.v.), and in Britain at one time TITHES (q.v.) were payable to the Church. In Federal Germany there are currently statutory liabilities to subscribe to one or other of various recognised religions, these payments being deductible for income tax purposes. Income tax relief is given in some other countries for voluntary or contractual contributions to approved religious bodies or to their social service activities.

REMISSION ON REVENUE ERROR — A system, recently inaugurated in the U.K., where tax has been undercharged through no fault of the taxpayer and because of a departmental error. The relief is only given where the taxpayer's income is below certain limits, and only where the tax arrears resulting from the error have not been notified to the taxpayer in the year following that in which the under assessment took place. (See also ERROR, DEPARTMENTAL, and ERROR OR MISTAKE.)

REMITTANCE BASIS — Where a person lives in one country but derives income from others, the foreign income may be taxed either on the amount actually arising, or the amount remitted to the country of residence. The latter method — the remittance basis — relates the person's tax more nearly to the amount of income actually available for him to spend in the country of residence and may be administratively easier to manage since the Tax Department is not then concerned with unremitted foreign income. Where foreign income is remitted, the tax liability normally takes account of foreign tax paid thereon (see FOREIGN TAX RELIEF, (CREDIT)). In some countries the remittance basis applies to persons resident there but not domiciled, or not ORDINARILY RESIDENT (q.v.), in the taxing country.

REMOVAL EXPENSES — In some countries the expenses incurred by an employee, after ceasing one employment, in moving his residence to another part of the country to obtain another job are not deductible because they are not regarded as incurred in connection with one particular employment (see WHOLLY, EXCLUSIVELY, and NECESSARILY). In Canada and the U.S.A. such expenses are deductible in computing employment income, and in the U.S.A. the relief is also granted to a businessman or professional who changes his place of business.

RENEWAL OF ASSETS — Although DEPRECIATION ALLOWANCES (q.v.) are generally granted in tax code for assets which depreciate in use while employed in producing profits, smaller items, such as hand tools, are sometimes dealt with on a renewals basis, i.e. purchases are deducted, sales credited and the value of the stock of such items at beginning and end of the accounting period is also brought into the calculation.

Where renewal (replacement) of an asset involves realisation of a capital gain on the old asset, ROLL-OVER RELIEF (q.v.) may be due.

RENTS, MINERAL — The rent paid for the right to exploit mineral resources, which may be in the form of a royalty, or charge on the *volume* or *weight* of mineral-bearing material extracted (see MINERAL ROYALTIES), or as a rent for an *area* of mineral-bearing land (or sea-bed) exploited. Such rents are normally deductible in computing profits from mineral production. (See also WASTING ASSETS.)

REPLACEMENT-COST DEPRECIATION — In circumstances of monetary inflation, depreciation allowances based on the historic cost of an asset may be regarded as inadequate where the cost of replacing the asset has increased sharply in money terms. If, for example, replacement cost has doubled in a particular tax year, and the value of money halved, it would be necessary to double the depreciation allowance in order to give effect to the appropriate allowance in real terms. There are obvious administrative difficulties in trying to introduce a replacement-cost depreciation system, since replacement cost may vary for technological reasons as well as because of monetary inflation. If such a system is adopted, however, rough justice may be done by using a general price index as a factor to convert "historic" allowances to take account of the degree of inflation.

REPLACEMENT OF ASSETS — See RENEWAL OF ASSETS.

REPORT DEFICITAIRE — (France) Carry forward of losses.

REPRESENTATIONAL OCCUPATION — See OCCUPATION, REPRESENTATIONAL.

RESALE PRICE MAINTENANCE (R.P.M.) — The system whereby manufacturers fix retail prices for their products, traders being discouraged or even prohibited from selling goods at less than the fixed price. This practice deprives the consumer of the full advantage of competition, as a result of which certain businesses (such as supermarkets, chain stores or discount houses) may be prepared to sell goods at less than the recommended price. Where prices are effectively controlled by manufacturers, or some other authority, there may be some slight advantage to the tax department concerned with administering income tax, since if the profit margin is fixed, the gross profit on selling the commodity will also be precisely ascertainable.

RESEARCH — Expenditure on research and development is normally allowed for tax purposes, either as a current deduction where it relates to existing products and processes, or as depreciation or amortisation allowances where it results in the creation of a new product or process. In Italy, for example, if research is abandoned without producing results the balance of expenditure may be written off in the year research was terminated. If successful, the expenditure may be written off over five years. (See PATENTS.)

RESERVES RELIEF — On general income tax principles, deductions for amounts placed to reserve are restricted mainly to specific bad debts reserves where trading debts owed to the trader, which are regarded as likely to prove wholly or partially irrecoverable, are individually valued on the accounting date. Some countries, however, provide special reliefs such as deferral of tax by way of incentive, in respect of amounts placed to reserve against some future commitment such as the incurring of capital expenditure on new premises, plant and machinery. (See BAD DEBTS, BUSINESS CYCLE EQUALISATION RESERVES.)

RESIDENCE, CHANGE OF — See REMOVAL EXPENSES.

RESIDENCE, FISCAL — The concept of residence is important for income taxes in that a resident is usually accorded RELIEFS (q.v.) from income in computing his tax, but may also be taxed on his world income instead of merely the income arising in the country of residence. A non-resident would only pay on the income arising in the country, but would probably be denied reliefs except any provided by a DOUBLE TAXATION (q.v.) treaty.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

RESIDENT ALIEN — A concept in U.S.A. tax law — U.S. passport-holders are subject to U.S. tax on world income, wherever resident, and the treatment of those resident in the U.S.A. varies according to whether they are or are not U.S. citizens. Elsewhere the criteria of domicile and ORDINARILY RESIDENCE (q.v.), etc. are used instead.

RESIDENTIAL ENERGY CREDIT — To encourage economy in the use of fuel in the U.S.A., tax relief is granted to taxpayers who install energy-saving components in their homes or who instal equipment to produce solar, geothermal, or wind energy. The relief is for expenditure incurred after 19 April 1977 and will expire on 31 December 1985.

RESIDENTIAL PURCHASE INCENTIVE — A tax incentive granted in the U.S.A. for newly-constructed residences, bought between March and December 1975. The relief was 5 percent of the purchase price, subject to a maximum tax credit of $2,000. The credit was subject to RECAPTURE (q.v.) if the residence was sold within 36 months and there were other restrictions. In the U.K. an incentive to home purchase consists in the deduction from other income for tax purposes of interest paid on mortgages entered into to finance home purchase without any tax being payable on the notional annual value of the home to its owner.

RESIDENTS TAX — In countries which have SCHEDULAR TAX SYSTEMS (q.v.) whereby income is charged at a flat rate of tax, supplementing the basic levy with additional graduated tax on total income, such extra liability may be known as a "supplementary" or "residents" tax. The latter term is particularly appropriate where the country seeks to apply graduated tax only to those residing within its borders, charging merely a flat rate of tax on income accruing to non-residents.

RESOURCE RENT (TAX) — A concept formulated by economists to the effect that taxation on the exploitation of natural resources should be related to the comparative richness of particular resources, rather than at a flat rate on the resources as a whole. The concept is difficult to put into practice, though it has been broadly adopted, e.g. in MALAYSIA'S TIMBER PROFITS TAX and TIN PROFITS TAX (q.v.).

RESTAURANT TAX — A tax sometimes levied specifically on restaurants, usually as a percentage of gross sales, but sometimes — particularly where entertainment is provided — on a per capita basis on the customers served in the restaurant. Under some types of sales tax regime, e.g. V.A.T., services provided by restaurants are taxed in common with the services, provided by other businesses as a feature of the taxation of services in general. (See also CABARET TAX.)

RETAIL EXPORTS SCHEME — A scheme operated in connection with Value Added Taxes whereby retailers may arrange for the sale of goods to tourists free of tax and customs duty, the goods being delivered to the tourist on leaving the country. Another such scheme allows the tourist to purchase goods in department stores or other shops at a tax-inclusive price but reclaim the V.A.T. (only) at a customs or tax office on leaving the country.

RETAIL SALES DRIVE — An organised physical check by Customs, V.A.T., or Sales Tax administration staff, of goods on sale in retail shops to confirm that the goods have duly borne any customs duty, sales tax, etc. which is supposed to apply to them.

RETAIL SALES TAX — An ad valorem tax on sales of goods to consumers, whether by retailers or other traders. Retail sales taxes have been levied in a number of countries, notably the individual states of the U.S.A. and the provinces of Canada, and more recently (the "turnover tax") in Eire, where it has, however, been superseded by V.A.T.

RETENUE A LA SOURCE — (France) Withholding of tax at source.

RETIREMENT — The term has two meanings relevant to taxation: (a) regarding individuals, the cessation of employment at the age of 60, 65 or whatever is the customary retirement age in the relevant country, usually followed by receiving a pension; (b) in the U.S.A. the term is used to refer to the taking out of usage items of plant, machinery, etc.

RETIREMENT ACCOUNTS, INDIVIDUAL — Individual Retirement Accounts (IRAs) were authorised in the U.S.A. by the Employee Retirement Security Act of 1974 as qualifying for favourable tax treatment. Taxpayers not covered by private pension schemes could set up their own retirement provisions and could deduct payments therefor up to 15 percent of income, subject to a maximum deduction of $1,500, and the accumulating funds would be tax-free. Subsequent legislation has liberalised the original terms in various ways, e.g. ROLL-OVER RELIEF (q.v.) is given when an employee leaves one employment but puts the IRA funds accumulated into the new provision in his subsequent occupation.

RETIREMENT ANNUITY — Most tax administrations allow deductions from current income in respect of annual contributions under contracts to provide pensions or annuities on retirement. The net effect of paying out such moneys so as to receive income during retirement is a deferment of part of the taxpayer's income. The tax treatment of allowing deductions and then taxing annuities or pensions in due course is the logical one of taxing the taxpayer at all times on his actual net income.

RETIREMENT GRATUITIES — Some "approved" pension schemes provide not only for a pension, but also for a lump sum payment at the end of active employment, which may or may not involve commutation of part of the gross pension payable. The object is usually to help the ex-employee to set up a new home or meet other expenses which may be incurred in the transition from employment to retirement. In general such "contractual" payments do not incur tax. (See also GOLDEN BOWLER, GOLDEN HANDSHAKE, REDUNDANCY PAYMENTS.)

RETIREMENT RELIEF — In the U.K. system of CAPITAL GAINS TAX (q.v.), exemption is given of the first £20,000 of gains resulting from disposal of assets by a taxpayer on retirement from business at age 65 or more. There is also relief to a smaller degree for those retiring at age 60 upwards.

PRENTICE~HALL,INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

Prentice Hall Announces:

The most strikingly different new tax guide ever published for taxpayers with income from foreign sources.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Continuously Supplemented. . . . . Always Up - to - Date

This outstanding new Service is created specifically to help save money for:

U.S. INDIVIDUALS
with investments and/or earned income from a foreign source

U.S. CORPORATIONS
with income from foreign sources

FOREIGN CORPORATIONS
with income earned or taxable in the U.S.

NONRESIDENT ALIENS
receiving income from, or taxable in the U.S.

If you fit any of these categories — or if you counsel, advise, or in any way service any of these categories — U.S. TAXATION OF INTERNATIONAL OPERATIONS will be an invaluable new tool for you.

It will deliver management benefits — operations benefits — tax benefits.

In clear, direct language, backed up by practical, tested practices of acknowledged experts in international business operations, the new work spells out how the taxpayer can best take full advantage of every popular, every sophisticated, and every little-known tax-saving device.

Authoritative, specific guidance from one source devoted exclusively to this kind of vital help has been non-existent — until now.
With the first 1972 publication of the innovative U.S. TAXATION OF INTERNATIONAL OPERATIONS this important need is now fulfilled. And bi-weekly "Report Bulletins" will keep the guide as new and up to the minute as the day you receive it.

Personal response to this new publication has been even more enthusiastic than our most optimistic projections. Subscriptions are now being accepted by mail for $ 186 a year.

Address your request to Dept. S-RR-103, Prentice-Hall Inc., Englewood Cliffs, N.J. 07632 and specify U.S. TAXATION OF INTERNATIONAL OPERATIONS, 1-year introductory charter subscription.

Annual payment is not due until 20 days after receipt of the new, ready-for-reference volume.

Bibliography

Books

The publications listed in this bibliography have recently been acquired by the Bureau's library which will gladly supply further information upon request (please quote the reference numbers). They should, however, be ordered through a bookseller or direct from the publisher indicated, and not through the Bureau.

AMERICAN SAMOA

ECONOMIC DEVELOPMENT PLAN FOR AMERICAN SAMOA

FY 1979 to 1984. Pago Pago, American Samoa Government, 1979. 446 pp. (B. 51.434)

AUSTRALIA

AUSTRALIAN INCOME TAX ASSESSMENT ACT

Including Regulations, Rating Acts & International Agreements. Second 1979 edition. 12th edition, incorporating amendments to 1 August 1979. North Ryde, CCH Australia, Ltd., 1979. 1300 pp.
Consolidated text of the Income Tax Assessment Act 1936 and other related income tax legislation incorporating all amendments up to August 1, 1979. Texts of double taxation treaties are appended. (B. 51.442)

AUSTRALIAN INCOME TAXATION OF COMPANIES AND COMPANY DISTRIBUTIONS

By Razeen Sappideen. Sydney, Butterworths, 1979. 291 pp., $ 29.75.
Comprehensive introduction to the subject of company and shareholder income taxation with reference to case law. Text of relevant sections of the Income Tax Assessment Act is appended. (B. 51.443)

AUSTRIA

ABC DES ÖSTERREICHISCHEN STEUERRECHTS

Eine gemeinverständliche Darstellung der Steuern. Mit zahlreichen Berechnungsbeispielen, Tabellen und einem Lexikon steuerlicher Fachausdrücke. 9. überarbeitete Auflage. By Hans Westermayer. Vienna, Industrieverlag Peter Linde, 1979. 246 pp., 330 ÖS.
Ninth revised edition of a general tax guide explaining the tax laws as of January 1, 1979. The book is illustrated with numerous practical examples and includes a tax glossary. (B. 102.265)

INVESTITIONSENTSCHEIDUNGEN RICHTIG TREFFEN

3., bearbeitete und wesentlich erweiterte Auflage. By Gerhard Seicht. Vienna, Industrieverlag Peter Linde, 1979. 335 pp., 262 ÖS.
Study discussing the theoretical principles and the realization in practice of the decisions of business enterprises whether or not to make certain investments, mostly from an economic point of view, and given the legal provisions in Austria. (B. 102.197)

STEUER-INDEX ÜBER RECHTSMITTELENTSCHEIDUNGEN, ERLÄSSE UND SCHRIFTTUM DES JAHRES 1978

By Kurt Neuner and Oskar Zeichmeister. Vienna, Wirtschaftsverlag Dr. Anton Orac, 1979. 238 pp., 650 ÖS.
List of cases, regulations, books, double taxation treaties and essays on Austrian tax matters published in 1978. (B. 102.069)

BELGIUM

BUSINESS OPERATIONS IN BELGIUM

By Jacques Malherbe. Washington, Tax Management Inc., 1979. 119 pp.
Publication of a series dealing with business and tax laws in Belgium covering company law, corporate and individual income taxation, Belgian income tax treaties and indirect taxation, particularly the value added tax. (B. 102.175)

FISCAAL ZAKBOEKJE 1979

By E.J. de Wolf and J. Rousseaux. Antwerp, Kluwer, 1979. 80 pp.
Fiscal Pocketbook 1979 contains practical information in a nutshell on relevant tax provisions levied in Belgium for purposes of practitioners. (B. 102.105)

HANDBOEK VOOR FISCAAL RECHT

By A. Tiberghien. Brussels, CED-Samdom, 1979. 687 pp.
Manual providing description of fiscal law and the taxes levied in Belgium. The material is up to date as of March 1, 1979. (B. 102.301)

L'INDICATEUR FISCAL

Editor: Francis Bailleux in cooperation with others. Brussels, CED-Samsom, 1979.
First part of a loose-leaf reference guide explaining the major taxes levied in Belgium, such as the individual income tax, corporate income tax, the income tax on legal entities and the tax on value added. (B. 102.233)

© 1980 International Bureau of Fiscal Documentation – BULLETIN

BRAZIL

BRITISH AND GERMAN DIRECT INVESTMENTS IN BRAZIL

By Peter-Uwe Schliemann. Hamburg, Institut für Iberoamerika-Kunde, 1979. Private Auslandsinvestitionen in Lateinamerika, No. 7. 82 pp.
Study providing a comparison of the performance and experience between British and German Federal Republic investors in Brazil. (B. 15.933)

MANUAL DE NORMAS PARA TRIBUTAÇAO DAS PESSOAS JURIDICAS

Imposto sobre a Renda e Proventos de Qualquer Natureza. Brasilia, Ministério da Fazenda, Secretaria da Receita Federal, 1979. Loose-leaf service on the taxation of corporations, indicating the legal sources. (B. 15.894)

CANADA

CANADIAN INCOME TAXATION

By Erwin C. Harris. Toronto, Butterworths, 1979. 840 pp., £19.30.
Introductory textbook on Canadian income taxation for students of accounting and business in universities and various professional training programs. Leading regulations, case law, articles and departmental announcements up to December 31, 1978 are incorporated in the treatise. (B. 102.103)

RESIDENTIAL PROPERTY TAX RELIEF IN ONTARIO

By R.M. Bird and N.E. Slack. Toronto, University of Toronto Press, 1978. 188 pp.
In-depth study of the incidence of the property tax and the property tax credit in Ontario. (B. 102.171)

TAX EXPENDITURES: AN EXAMINATION OF TAX INCENTIVES AND TAX PREFERENCES IN THE CANADIAN FEDERAL INCOME TAX SYSTEM

By Roger S. Smith. Toronto, Canadian Tax Foundation, 1979. 175 pp.
Study identifying and measuring tax expenditures (subsidies) in the Canadian tax system. (B. 102.266)

UNITED KINGDOM/CANADA PROPOSED TAX TREATY

Summary — Analysis — Text. By Nicholas J. Seed and David G. Pangbourne. London, Touche Ross & Co., 1979. 60 pp.
Summary and text of the comprehensive double taxation treaty between Canada and the United Kingdom signed September 8, 1978 and off-print of an article on the treaty published in the Canadian Tax Journal, January-February 1979 issue. (B. 102.107)

COMMON MARKET (EEC)

ARMONIZACION TRIBUTARIA

El I.V.A. en la Comunidad Economica Europea. By Raúl Luis d'Alessandro. Montevideo. Dirección General Impositiva, Dirección de Sistemas de Apoyo, 1979. 127 pp.
Paper explaining the VAT legislation in the European Common Market, with particular attention to the taxation of agriculture, financial operations and immovable property transactions. (B. 102.160)

BUSINESS ENTERPRISES IN THE EEC

By J.C. Pollock. The Hague, Fenedex, 1979. 46 pp.
Description of how to establish a business enterprise in one of the EEC member countries, and taxation thereof. (B. 102.174)

PROBLEMES FISCAUX DES MAISONS HISTORIQUES DANS LES ETATS DE LA COMMUNAUTE ECONOMIQUE EUROPEENNE

By I. Claeys Bouuaert. Brussels, Commission of the European Communities, 1979. 154 pp.
Study on the taxation of historic houses owned by private persons in the member states of the European Communities. (B. 102.207)

VALUE ADDED TAX

The evolution in the European Economic Community and the application in the United Kingdom. By Miltiades Miltiadou. Amsterdam, Europa Instituut, University of Amsterdam, 1979. 63 pp. (B. 102.268)

VERDRAGEN TOT OPRICHTING VAN DE EUROPESE GEMEENSCHAPPEN

Verdragen tot wijziging van deze Verdragen. Teksten betreffende de Gemeenschappen. Verkorte uitgave. Luxembourg, Europese Gemeenschappen, 1979. 560 pp.
Abridged edition of a compendium containing the texts of the most important agreements for the establishment of the European Communities. (B. 102.190)

DENMARK

DIRECT TAXATION IN DENMARK

A brief survey. Third edition. Copenhagen, The Inland Revenue Department, 1979. 65 pp.
Explanation of the principal provisions governing various kinds of direct taxation of individuals and companies in Denmark. (B. 102.166/166A)

OECD ECONOMIC SURVEYS: DENMARK

Paris, Organisation for Economic Co-operation and Development, 1979. 68 pp., 12 Fr.Frs. (B. 102.131)

SETTING UP IN DENMARK

Copenhagen, Copenhagen Handelsbank, 1978. 43 pp.
Brochure presenting a business survey of economic, legal and financial aspects of foreign investment, including taxation in Denmark. A German version is also available. (B. 102.060/061)

EASTERN EUROPE

LES CONTRATS DE LICENCE EN DROIT SOCIALISTE

By Alexandre Vida. Paris, Librairies Techniques, 1978. 216 pp.
Monograph explaining the specific aspects of licence contracts with Eastern European countries. The book also contains a comparative analysis of the specific legal provisions of the individual countries, including the taxation provisions. The texts of standard contracts used in these countries are appended. (B. 102.079)

EUROPE

FISCALITE EN EUROPE

Confédération Fiscale Européenne (C.F.E.). Deventer, Kluwer, 1979. 258 pp.
Proceedings and contributions of the First European Tax Consultants' Congress held in Strasbourg in 1978. The reports are published in the French language. (They have also been published in the German language.) Subjects dealt with are: The taxation of investment in the EEC; Company taxation in the EEC taking into consideration double taxation agreements, the net wealth tax and the cooperation of tax consultants. (B. 102.251)

GEMEINSCHAFTSUNTERNEHMEN (JOINT VENTURE — FILIALE COMMUNE) IM KONZERN- UND KARTELLRECHT

By Ernst-Joachim Mestmäcker, Jean-Bernard Blaise and David T. Donaldson. Frankfurt, Alfred Metzner Verlag, 1979. Arbeiten zur Rechtsvergleichung, No. 93. 80 pp., 19.80 DM.
Booklet containing the German, French and English national reports of a group of experts dealing with the company law aspects of joint ventures within the scope of the legal provisions in these countries concerning concerns and cartels. (B. 102.238)

© 1980 International Bureau of Fiscal Documentation – BULLETIN

TAXATION OF INTERCOMPANY TRANSACTIONS IN SELECTED COUNTRIES IN EUROPE AND USA

Deventer, Kluwer, 1979. 119 pp., 30 Dfl.
Survey of intercompany transactions by multinational companies in selected European countries (i.e. Austria, Belgium, Denmark, France, German Federal Republic, Ireland, Italy, the Netherlands, Norway, Spain, Switzerland, the United Kingdom) and the U.S.A. (B. 102.167)

FRANCE

BUSINESS STUDY: FRANCE

London, Touche Ross International, 1979. 212 pp.
Study on doing business in France describing investment opportunities, forms of business entities, accounting and auditing conditions and taxation in France. (B. 102.127)

COMMENT GERER VOTRE PORTEFEUILLE

La Bourse. By Gérard Vidalenche. 9e Edition, à jour au 1er janvier 1979. Paris, Editions J. Delmas et Cie., 1979. Serie: "Ce qu'il vous faut savoir". 230 pp.
Reference guide explaining how to administer one's portfolio at the stock exchange. Consideration to European, Japanese and U.S.A. stock exchanges is given. (B. 102.128)

FISCALITE IMMOBILIERE

Deuxième édition. By Jean Schmidt. Paris, Librairies Techniques, 1979. 385 pp.
Monograph dealing with all the various taxation aspects of real property under the French tax system. (B. 102.305)

FISCALITE PRATIQUE DES AFFAIRES

Avec 25 études de cas dont annales D.E.C.S. 1975-1977. 2 Volumes. By Philippe Colin, Gilles Gervaise and Thierry Lamorlette. Paris, Economica, 1979. 751 + 132 pp.
Fourth edition of textbook entitled "Practical Tax Problems" in two volumes explaining the taxes levied under the French tax system. Examples and printed statutes are contained in Volume I. Volume II consists of 25 examination questions and the solutions thereto. (B. 102.306/307)

LE REGIME FISCAL DE LA PROPRIETE INDUSTRIELLE

By Z. Weinstein. Paris, J. Delmas et Cie., 1977. 240 pp.
Second revised edition of book on the taxation of industrial property under French tax law (with respect to income, value added tax, registration duty). (B. 102.080)

L'IMPOSITION DES PROFITS DE BOURSE ET AUTRES GAINS SUR TITRES

By Pierre Courtois. Paris, Librairies Techniques (Litec), 1979. 244 pp.
Study describing the capital gains tax on gains derived from operation on the stock exchange. In addition, the taxation of capital gains derived from other transfers of title to assets such as participation in a real property company is appended. Relevant texts of statutes are included. (B. 102.225)

POUVOIR ET FINANCE D'ENTREPRISE

Droit et pratiques. By Michel Fleuriet. Paris, Dalloz, 1977. 207 pp.
Study assessing the legal aspects and practices arising from financing acquisitions of enterprises and the shareholder's voting rights. Tax aspects are dealt with. (B. 102.257)

VALEUR ET REGROUPEMENTS DES ENTREPRISES

Méthodes et pratiques. By Didier Pene. Paris, Dalloz, 1979. 271 pp.
Study assessing the characteristics of performance arising from enterprises involved in acquisitions. Tax aspects are dealt with. (B. 102.258)

LA VERIFICATION FISCALE

By Philippe Colin. Paris, Economica, 1979. 302 pp.
Monograph describing verification by the tax administration in France. (B. 102.308)

GERMAN FEDERAL REPUBLIC

ALLGEMEINES STEUERRECHT IN EINZELGESETZEN

Zugleich ein Beitrag zur Gesetzgebungstechnik. By Hermann-Josef Thebrath. Cologne. Peter Deubner Verlag, 1979. 207 pp., 59 DM.
Study examining the questions concerning the content and the impact of tax provisions of a general nature which are not regulated by the 1977 Fiscal Code but by separate laws. The author also discusses the question, to what extent can the role of these separate laws be taken over by the Fiscal Code by including such special provisions in that law? (B. 102.293)

AO-HANDBUCH

Handbuch des steuerlichen Verwaltungs- und Verfahrensrechts 1979. Munich, Verlag C.H. Beck, 1979. 699 pp., 58 DM.
Compilation of the text of the 1977 German Fiscal Code for the assessment year 1979 with related material. (B. 102.085)

Including ADR system; system for pre-1971 assets. Chicago, Commerce Clearing House, Inc., 1979. 263 pp., $ 7. (B. 102.124)

FACTS AND FIGURES ON GOVERNMENT FINANCE

20th Biennial edition, 1979. Washington, Tax Foundation, Inc., 1979. 288 pp., $ 10.
Compendium of data about government financial operations. (B. 102.170)

FEDERAL ESTATE AND GIFT TAXATION

Second edition. By John K. McNulty. St. Paul, Minn. West Publishing, Co., 1979. 488 pp.
Introduction to the law of federal estate and gift taxation. (B. 102.125)

FEDERAL INCOME TAXATION

Volume one: taxation of individuals. Third edition. By Adrian A. Kragen and John K. McNulty. St. Paul, Minn., West Publishing Co., 1979. 1283 pp.
Completely revised third edition of the Kragen & McNulty income tax casebook which contains only material dealing with the income taxation of individuals. A second volume will contain the material on the taxation of corporations and partnerships. (B. 102.204)

FEDERAL INCOME TAXATION/CASES AND MATERIALS

Volume I. By Stanley S. Surrey, William C. Warren, Paul R. McDaniel and Hugh J. Ault. Mineola, N.Y., The Foundation Press, Inc., 1972. 1419 pp.
Volume I contains provisions affecting both individuals and corporate taxpayers with emphasis on taxation of individuals. Volume II will cover the taxation of business organizations. This volume is a companion volume to Warren & Surrey, "Federal Estate and Gift Taxes, Cases and Materials". (B. 102.254)

FEDERAL INCOME TAXATION/CASES AND MATERIALS

Volume I. 1979 Supplement. By Stanley S. Surrey, William C. Warren, Paul R. McDaniel and High J. Ault. Mineola, N.Y., The Foundation Press, Inc., 1979. 487 pp.
This 1979 Supplement to Volume I of Federal Income Taxation covers the principal developments in federal income taxation since January 1, 1972. (B. 102.256)

FEDERAL INCOME TAXATION

A law student's guide to the leading cases and concepts. Second edition. By Marvin A. Chirelstein. Mineola, N.Y., The Foundation Press, Ltd., 1979. 346 pp.
Textbook explaining the federal income taxation of individuals. (B. 102.255)

FEDERAL TAX GUIDE 1980

Chicago, Commerce Clearing House, Inc., 1979.
Volume I of 1980 Federal Tax Guide in loose-leaf is entirely devoted to an explanation and new developments in the federal income tax. The other three volumes constitute the regular edition of the Guide series and contain official texts of income, estate, gift, and withholding tax regulations. The material is updated weekly. (B. 102.220)

FOREIGN TRADE TAX HANDBOOK FOR MANUFACTURERS

How to use a DISC and other forms of corporations to export and to operate abroad more profitably. By Paul D. Seghers. New York, International Tax Institute, Inc., 1979. 171 pp.
(B. 102.223)

GUIDEBOOK TO PENSION PLANNING

Chicago, Commerce Clearing House, Inc., 1979. 450 pp., $ 7.
Reprint from the Commerce Clearing House Pension Plan Guide dealing with the rules and authorities on pensions, profit sharing and employee benefits. (B. 102.285)

HAWAII INCOME PATTERNS 1976: INDIVIDUALS

Honolulu, Tax Research and Planning Office, Department of Taxation, 1979. 79 pp.
This nineteeth annual report summarizes individual income tax statistics from a sample of 1976 Hawaii individual income tax returns. (B. 102.183)

INCOME TAX REGULATIONS AS OF JULY 9, 1979

"Final" and "Proposed" under Internal Revenue Code. Three volumes. Chicago, Commerce Clearing House, Inc., 1979.
Annual three-volume compilation of "final" and "proposed" income tax regulations issued by the Treasury Department, explaining in detail the meaning and application of each section of the Internal Revenue Code. This publication is compiled from CCH 1979 Federal Tax Guide Reporter and 1979 Standard Federal Tax Reporter as of July 1979. (B. 102.123)

THE INDIRECT CREDIT

A study of various foreign tax credits granted to domestic shareholders under U.S. income tax law. Volume II. By Elisabeth A. Owens and Gerald T. Ball. Cambridge, International Tax Program, Harvard Law School, 1979. 386 pp.
Second volume of study describing and analysing the U.S. law governing the credit granted to domestic corporations for foreign income taxes paid by foreign corporations. The law and case law is stated as of November 1, 1978. (B. 102.303)

INHERITANCE AND THE INEQUALITY OF MATERIAL WEALTH

By John A. Brittain. Washington, The Brookings Institution, 1978. 102 pp.
Study which draws attention to the inequality in the distribution of wealth rather than to the inequality in the distribution of income. The role of material inheritance in the perpetuation of inequality of wealth is evaluated. (B. 102.093)

INTERNAL REVENUE CUMULATIVE BULLETIN 1978-2 JULY-DECEMBER

Washington, Department of the Treasury, Internal Revenue Service, 1979. 588 pp.
Consolidation of all official rulings, decisions, executive orders, tax treaties and other items of a permanent nature, published in the weekly Bulletin in the second half of 1978. (B. 102.232)

INVESTERINGEN IN ONROEREND GOED IN DE VERENIGDE STATEN; FISCALE ASPECTEN

By M.L.B. van de Lande and L.S. Ullman. Deventer, Kluwer; The Hague, Fenedex, 1979. Fiscale en juridische documentatie voor internationaal zakendoen, No. 6. 114 pp., 34.50 Dfl.
Monograph describing the tax aspects arising from investment in real estate in the U.S.A. by individuals and by companies resident in the Netherlands. Relevant statutes are appended. (B. 102.224)

INVESTMENT GUIDE TO THE UNITED STATES

New York, Citibank, 1979. 72 pp. (B. 102.247)

OECD ECONOMIC SURVEYS: U.S.A.

Organisation for Economic Co-operation and Development, 1979. 91 pp. (B. 102.295)

CONFERENCE DIARY 143

CARNET DES CONVENTIONS

VERANSTALTUNGSKALENDER

Goh Chok Tong:

SINGAPORE'S TAX SYSTEM: PAST AND PRESENT . . . 144

The Minister for Trade and Industry gives a historical summary of Singapore's tax system concluding with some remarks on the lessons which can be abstracted from past experience.

SYSTEME FISCAL DE SINGAPOUR: PASSE ET PRESENT

Le Ministre du Commerce et de l'Industrie a fait l'historique du système fiscal de Singapour en terminant par quelques remarques sur les leçons qui peuvent être tirées de l'expérience passé.

DAS STEUERSYSTEM SINGAPURS – GESTERN UND HEUTE

Der Minister für Handel und Industrie präsentiert einen historischen Abriss des Steuersystems von Singapur, wobei er mit einigen Anmerkungen Schlussfolgerungen zieht, die auf den in der Vergangenheit gemachten Erfahrungen basieren.

Michael Wong Pakshong:

THE FUTURE POSITION OF SINGAPORE IN INTERNATIONAL TAXATION 146

The Managing Director of the Monetary Authority of Singapore describes the features of the Singapore tax system, the tax incentives it offers to foreign investors and its development into an international financial center but points out that Singapore is not a tax haven.

LA POSITION D'AVENIR DE SINGAPOUR EN DROIT FISCAL INTERNATIONAL

Le Directeur d'Autorité Monétaire de Singapour a décrit les caractéristiques du système fiscal de Singapour, les avantages fiscaux offerts aux investisseurs étrangers, son évolution vers un centre financier international, mais a fait remarquer que Singapour n'était pas un paradis fiscal.

DIE ZUKUENFTIGE POSITION SINGAPURS BEZUEGLICH DER BESTEUERUNG INTERNATIONALER GESCHAEFTSBEZIEHUNGEN

Der Generaldirektor des Kreditaufsichtsamtes von Singapur beschreibt die Merkmale des Steuersystems, die ausländischen Investoren offerierten Steueranreize und die Entwicklung Singapurs zu einem internationalen Finanz-Zentrum, wobei er aber Wert auf die Feststellung legt, dass Singapur keine Steueroase ist.

INDIA: INTERIM BUDGET 1980 149

Extracts from the Budget Speech pronounced by the Finance Minister, Mr. R. Venkataraman, on February 29, 1980. This Budget seeks mainly to continue the existing rates of income tax. The Nobel Prize awarded to Mother Teresa will be definitively exempt from tax!

INDE: BUDGET D'INTERIM 1980

Extraits de la présentation du Budget prononcée par le Ministre des Finances, M. R. Venkataraman, le 29 février 1980. Ce budget cherche essentiellement à maintenir les taux existants de l'impôt sur le revenu. Le Prix Nobel décerné à Mère Theresa sera définitivement exempté de l'impôt!

INDIEN: DER INTERIM-HAUSHALT 1980

Auszüge aus der Haushaltsrede des Finanzministers, Herrn R. Venkataraman, gehalten am 29. Februar 1980. Dieser Haushalt hat in erster Linie den Zweck, die Sätze für die Einkommensteuer beizubehalten. Der an Mutter Theresa verliehene Nobel-Preis ist nunmehr endgültig von der Steuer befreit!

SINGAPORE: BUDGET 1980 150

A GO-GETTER BUDGET

Extracts from the Budget Speech 1980 pronounced by the Minister for Trade and Industry, Mr. Goh Chok Tong, on March 5, 1980. The Budget is characterized by prudence in keeping Government recurrent expenditure as low as possible and by the furthering of the country's development objectives.

SINGAPOUR: BUDGET 1980

UN BUDGET DYNAMIQUE

Extraits de la présentation du Budget 1980 prononcé par le Ministre du Commerce et de l'Industrie M. Goh Chok Tong le 5 mars 1980. Le budget est caracterisé par sa prudence à maintenir les dépenses régulières du Gouvernement aussi modérées que possible et à favoriser les objectifs de développement.

SINGAPUR: HAUSHALT 1980

ANREIZE FÜR EIGENINITIATIVE

Auszüge aus der Haushaltsrede des Ministers für Handel und Industrie, Herrn Goh Chok Tong, gehalten am 5. März 1980. Die Charakteristiken dieses Haushalts sind eine zurückhaltende Ausgabenpolitik der Öffentlichen Hand sowie die Fortschreibung der Entwicklungsziele des Landes.

Singapore's Tax System

Past and Present*

by GOH CHOK TONG

We are indeed honoured that you have chosen to hold your 6th International Tax Conference in Singapore for a second time. Your Third Conference was held here in 1974 and to those of you who have been here before, I hope you will find the changes and development in Singapore interesting enough to justify your coming back. May I welcome you back as well as all other participants and guests who are here for the first time.

I am, however, constrained by your eminent presence to sally forth on a subject in which you are clearly superior. There is another constraint. With the Singapore Government Budget Statement due to be delivered only a month from now, any provocative statement on taxes will unwisely take the wind out of the Budget sail. Thus, I find it prudent on my part to limit myself this morning to a brief historical description of Singapore's tax system, concluding with some remarks on the lessons that can be abstracted from our experience.

Traditionally, Singapore's economy has been dependent on entrepot trade. Industries were limited to those which could take advantage of Singapore's geographical location, such as processing industries of commodities produced in the region. The dependence on entrepot trade required the pursuit of a free port policy. This greatly narrowed the scope for raising public revenue. Unlike many countries, Singapore could not depend on extensive import and export duties. Income tax was considered undesirable and impractical because of the certainty of evasion, but the Colonial Government probably also had little incentive to tax their own wealthier and more influential expatriate population. Thus, before World War II, the main source of revenue was a tax on the consumption of liquors, pork and fish, gaming tables and pawnbrokers' shops, and a bizarre tax on opium consumption. Opium farms were created and the widespread addiction of the local population to opium provided the British Administration with an easy source of revenue. Today, the tax on all these items has been removed except for liquors on which there is a customs revenue duty. Opium consumption, of course, is illegal, and drug addiction is a tax on our resources and not the other way round.

War tax, which was a form of tax on income, was introduced for the first time in 1917 as a temporary expedience to provide funds for the war effort. An attempt was made to make it a permanent tax after the war, but it failed because of strong opposition. During the last year of the operation of the tax in 1922, $3.9 million was collected constituting about 10 percent of the total Government revenue. In 1941, tax on income was reintroduced to meet the war commitments but before much revenue could be collected, Singapore fell to the invading Japanese forces.

Goh Chok Tong

Minister for Trade and Industry

Born in Singapore in 1941. Educated at Raffles Institution and graduated in 1964 from the University of Singapore with a B.A. (Hons.) Class I in Economics. In 1966, was awarded a Fellowship to Williams College, U.S.A., where he obtained his Master of Arts in Development Economics.

Joined the Singapore Administrative Service in 1964. Worked as economic planner and research economist. In August 1969, was seconded to the newly-incorporated Neptune Orient Lines Ltd. (NOL), Singapore's national shipping line, as its Planning and Projects Manager. Resigned from the Civil Service to become a permanent staff of NOL about a year later. Appointed as Financial Controller and later Financial Director on Board of NOL. Became the Company's Managing Director in November 1973. Left in 1977 to take up appointment as Senior Minister of State.

Has served as Chairman of the National Statistical Commission and NTUC INCOME, and Board Member of Port of Singapore Authority, Post Office Savings Bank, Sembawang Shipyard Ltd., Container Warehousing & Transportation (Pte) Ltd., and various subsidiary and associate companies of NOL.

Is Deputy Chairman of Singapore Labour Foundation and Board Member of People's Association. Governor of Asian Development Bank.

Elected Member of Parliament for the Marine Parade constituency in the 1976 General Elections. Appointed Senior Minister of State for Finance in September 1977, and Minister for Trade and Industry in March 1979.

* Speech at the opening of the 6th International Tax Conference in Singapore on 4 February 1980.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

After the Second World War, huge sums were required to reconstruct Singapore. The need to explore new sources of revenue became even more acute when the smoking of opium was prohibited following public and social pressures. It was not without vocal resistance that tax on income was legislated in 1947. Since then, income tax has assumed prominence, and, today, it is the mainstay of Government revenue contributing $1.28 billion, or 35 percent of Government revenue.

Other taxes, although introduced earlier, were not that eventful or as bizarre as the opium tax. Estate duty was introduced in 1885, and stamp duty, levied on various kinds of commercial and local documents, in 1896. Property tax, which is a tax on the annual value of real property, was levied only in 1960. Prior to that, the City Council and the Rural Board levied local assessments on rates.

During the 1960s, Singapore embarked on planned industrialization to solve the main economic problems of the day — slow economic growth and high unemployment. Industrialization was spearheaded by import-substitution industries, and protective duties were introduced. But it did not take long for Singapore to realise that its future lay in export-oriented industries and not inward-looking domestic industries. Protective duties ceased to be introduced for new industries, and, today, the question is when and not whether to remove the vestiges of protective duties introduced in the early days to induce industries to be set up.

In the 1970s, Singapore strove to be a financial centre. Tax measures were used to facilitate this. In 1969, legislation was passed to exempt from tax interest derived by non-residents on deposits with banks. In 1973, the tax for certain offshore income derived by Asian Currency Units of financial institutions was reduced to 10 percent. The concession was subsequently extended to cover other offshore income such as income derived from financing or re-financing of offshore trade transactions and foreign exchange transactions in currencies other than Singapore dollars with persons outside Singapore.

Singapore's Income Tax Act is basically simple. This simplicity has been maintained over the years despite amendments made from time to time. The amendments were necessitated by economic and social considerations.

Tax concessions, however, are contained in separate legislation. The Pioneer Industries (Relief from Income Tax) Ordinance was introduced in 1959 to provide tax holidays of up to five years to pioneer enterprises and tax concessions to firms for income attributable to expansion in capital investments. In 1967, the Economic Expansion Incentives (Relief from Income Tax) Act was passed to replace the earlier legislation and to consolidate the laws. The Act will continue to be the framework upon which new tax incentives will be considered.

In the field of property tax, incentive was also employed to stimulate and assist private participation in the redevelopment of the urban area. There was a multiplicity of property tax rates, but the base rate from which reductions are given was 36 percent. For approved projects in the urban area, the rate was reduced from 36 percent to 12 percent for a period of 20 years. This incentive was also extended to developments in Sentosa Island, our tourist resort island. The present multiplicity of rates, however, will be standardized at a single rate of 23 percent by 1983. The objective of a lower standard rate is to achieve a steady growth of the property sector and an improvement in the built-up environment, particularly in the urban area.

The development of Singapore's tax system has been closely tied to the economic and social policies of Singapore. In the last two decades especially, the tax system has been used to promote economic growth, in particular, the growth of the manufacturing and financial sectors. This, in turn, has led to a larger base for income tax and taxes on property and payroll. Consequently, these taxes registered substantial increases and they have now supplanted import and excise duties as the more important revenue items. This leads us to the first theorem on taxes and that is "Less is More". The mathematical expression of this is that 40 percent of zero is zero, 40 percent being the Singapore income tax rate on

During the first week of February 1980 Singapore hosted the Sixth International Tax Conference. This Conference is the most recent in a series of conferences which started in 1970 at the initiative of Professor G.S.A. Wheatcroft and which have been held every two years (1970 — Nassau, Bahamas; 1972 — Kingston, Jamaica; 1974 — Singapore; 1976 — Nairobi, Kenya; 1978 — Honolulu, Hawaii, U.S.A). A large percentage of the speakers and the participants attended several if not all of the conferences, a feature which creates an almost ideal framework for discussing new developments in international taxation, particularly in regard to the countries and territories of the British Commonwealth. At each conference, ample attention is given to taxation in the region where it is held.

The opening address of the Sixth International Tax Conference was given by the Minister for Trade and Industry, Mr. Goh Chok Tong, whose statements are likely to surprise those who are used to the almost general call for higher income taxes in other parts of the world.

Minister Goh's address was followed by a talk by Mr. Wong Pakshong, managing director of the Monetary Authority of Singapore.

It is with much pleasure that we publish the text of both addresses with the permission of the two speakers. In addition, an extract from the Budget Speech 1980 is included in this issue.

Further details of the tax system of Singapore (as well as of the other countries in South East Asia) are contained in the 6-volume loose-leaf work Taxes and Investment in Asia and the Pacific, *prepared and published by the Bureau.*

© 1980 International Bureau of Fiscal Documentation — BULLETIN

corporation profits. Thus, conditions must be created for investments to take place, and for these investments to succeed.

As Singapore now enters its second stage of industrial development with emphasis on higher technology industries, tax incentives will play an important role in attracting investment and transfer of technological know-how. But more important than the tax system is the political and economic climate for investment. There must be political stability to ensure the security of investments. There must be discipline amongst workers and management and affable industrial relations. The private sector must be given maximum leeway to exercise its ingenuity, innovativeness and risk-taking capability. If these basic political and economic parameters are present, less tax in an expanding economy will lead to more revenue.

Work and investments are ingredients vital to Singapore's continued growth and prosperity. The income tax structure must never discourage this.

Thus, taxes must descend to the minimum level of Government expenditure consistent with good administration and not expenditure rising to the maximum taxes possible. This I offer as the second principle of taxation. There must therefore be periodical reviews of the entire gamut of taxes. Taxes which have outlived their original objectives should be scrapped even though they are convenient sources of revenue. Personal income tax rates must be periodically revised to take into account the pernicious effect of inflation. An overtaxed society which consistently yields more revenue than the expenditure required could lead to inefficient uses of public funds.

Taxes are never popular, particularly, personal income tax. In levying them, it is worth our remembering the third dictum: The more heavily a person is supposed to be taxed, the greater his incentive to escape being taxed. And if he thinks he can cheat safely, he probably will. There must, therefore, be adequate anti-avoidance and anti-evasion provisions in the Tax Act, and an effective machinery to back up these provisions. It is accepted that tax avoidance is within the law. However, artificial ways of transacting business such as the creation of "shell" companies to avoid paying tax altogether must be discouraged. Sometimes such tax avoidance manipulations slip into the area of tax evasion. Thus, the process of preventing serious loss of revenue will continue and be intensified, if necessary. But, of course, we should not tax a person too heavily.

As a government must spread the benefits of its expenditure amongst the population, the tax net must cover as many people as possible, but consistent with their ability to pay. The more taxpayers there are, the lower the tax per capita. Our fourth principle of taxation is: spread benefits and taxes amongst the population. Equity requires taxes to be levied for the benefit of the taxed.

And lastly, let me quote you the eternity law: Nothing is certain except death and taxes.

The Future Position of Singapore in International Taxation*

by Michael Wong Pakshong **

It was with some diffidence and apprehension that I agreed to speak at this conference. I would be the first to admit that I am not a tax expert. What little tax I learned as an articled clerk in London over 20 years ago has long since been forgotten. Another reason is the sneaking suspicion that the title of the address was foisted on me in the expectation that there might be a preview of tax changes to come. Alas, I fear I shall disappoint you.

My only exposure to tax — apart from the common affliction we all suffer as taxpayers — are the frequent pleas and representations why additional areas of banking and financial activities should be either exempted from tax completely or the rates reduced even further. Of course there are those who do not make a frontal assault by calling for the abolition of a tax — but rather deviously try to advocate a zero rate of tax. I

* Address given at the opening session of the Sixth International Tax Conference held from 4th to 8th February 1980 in Singapore.

** Managing Director of the Monetary Authority of Singapore.

Michael Wong Pakshong

Mr. Michael Wong Pakshong currently holds the post of Managing Director of the Monetary Authority of Singapore.

He was born June 2, 1931 in Durban, South Africa where he graduated from High School in 1949. He further acquired a B.A. (Hons) at the University of Bristol (United Kingdom) and became a Fellow of the Institute of Chartered Accountants in England and Wales in 1959.

Other appointments held by Mr. Wong are: Chairman of the Neptune Orient Lines Limited, Chairman of the Securities Industry Council, Deputy Chairman of the Board of Commissioners of Currency of Singapore and Governor of the International Monetary Fund.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

suppose there is a fine distinction between the abolition of a tax as opposed to a zero rate of tax, but I suppose it is best to leave this philosophical point for further discussion by all the experts we have assembled here today.

SINGAPORE IS NOT A TAX HAVEN

It has never been said of Singapore that it is a tax haven. The standard rate of tax on corporate profits is 40 percent, while the highest marginal rate of personal tax is 55 percent. For an individual resident in Singapore the income tax rates are as follows:

Chargeable income	*$*	*Rate of tax (%)*
first	2,500	5
next	2,500	8
next	2,500	10
next	2,500	12
next	5,000	15
next	5,000	20
next	5,000	25
next	10,000	30
next	15,000	35
next	50,000	40
next	100,000	45
next	200,000	50
income exceeding	400,000	55

Furthermore, we have as diligent and conscientious an Anti-Evasion Unit of the Inland Revenue as can be found anywhere in the world.

While there are sections of the population who escape the tax net, those of us who are privileged to pay tax can vouch for the efficacy of the collection system.

This leads me to make on prediction about the future position of Singapore in international taxation. Perhaps it is the only prediction that I feel confident of making. It is only a matter of time before the system is improved to bring within the tax net the many self-employed persons who have hitherto avoided paying tax.

Although Singapore is not a tax haven certain transactions do not attract tax. Perhaps the most obvious is that we do not have a capital gains tax. As long as anyone does not make a trade or profession in dealing, profits from buying and selling securities, for example, it can be freely carried out.

Most observers agree that there are no signs that a capital gains tax is likely to be introduced. This of course means that a number of investment companies have tried to find ways to buy and sell shares and yet escape tax — especially when there is an increasing frequency of profitable transactions. It is perfectly understandable why portfolio managers would like clearcut definitions/guidelines laid down so that they can then tailor all transactions to fall neatly as capital gains. I very much doubt if we can achieve such definitions or guidelines which the Inland Revenue authorities will readily accept.

A few years ago, when world interest rates were much lower, there existed a perfectly legal way for individuals to earn a very reasonable rate of return by opening a savings account with the Post Office Savings Bank. What was remarkable was that the interest earned from a Post Office Savings Account was not subject to tax and there was no ceiling to the amount of interest which any individual could derive from this source. The limitation was set only by the wealth of individuals.

During the period 1968 to 1978 the Post Office paid an interest rate of 5 percent p.a. — which meant that anyone with a marginal rate of 55 percent enjoyed an equivalent grossed up rate of 11 percent. But alas, all good things come to an end. Nowadays only the interest earned on a maximum deposit of $100,000 is exempt from tax — (which when grossed up at a marginal rate of 55 percent and an interest rate of 6 percent gives a grossed up rate of 13.3 percent). Deposits in excess of $100,000 are exempt from tax — but the Post Office Savings Bank only pays 4¼ percent — which gives a grossed up rate of 9.4 percent — which is hardly attractive these days.

For the non-resident of Singapore there are other attractions in making deposits with banks in Singapore. A non-resident does not have to pay tax on interest from deposits made with banks in Singapore. He also has the additional exemption from estate duty which is conferred on Asian dollar accounts.

STAMP DUTIES

Apart from income tax, we have in Singapore — as do many countries who are members of the Commonwealth — a comprehensive range of stamp duties. This is an arcane area of revenue law where many fear to tread. There were stamp duties in Singapore long before anyone thought of bringing in income tax. Like a good member of the Commonwealth, Singapore has preserved intact the stamp duties which have remained practically unchanged since 1929. Such amendments as were made were mainly concerned with increasing revenue from stamp duties.

In the 1970's, as the nature of banking became more sophisticated, it became apparent that stamp duties — especially those levied on an ad valorem basis — would inhibit the development and growth of banking and financial activities. The banking lobby was most pursuasive in getting the many stamp duty amendments which were made from 1972 onwards. They rightly pointed out that the yields from the offending stamp duties were minimal, whereas the exemption from duty at least creates a market and results in transactions whose profits would be subject to Singapore tax. This coincided at the time with the government's objective to promote the Asia Dollar Market. The market in Asian dollar bonds, negotiable certificates of deposits, promissory notes, bills of exchange and loan syndicates could not have been established if the stamp duty exemptions had not been given.

THE CHARACTER OF TAX INCENTIVES IN SINGAPORE

The study of Singapore's tax incentives in the past 20 years will be a fruitful area of study for the economic historian. Any study will show how the introduction of these incentives has been used to shape and influence not only the rate of growth — but also the direction in which economic activity was positively directed.

In the 1960's, there was unemployment and an over-reliance on entrepot trade and related activities. The policy then was to diversify the economy and to promote labour-intensive industries. It was also aimed at import substitution. To achieve this an effort was made to attract foreign investments. Thus from 1959 onwards a range of tax incentives was introduced which basically gave investors tax holidays — or pioneer status as they are called in Singapore.

As foreign investors set up plants, so the incentives were widened to encourage non-pioneer industries to invest in up-to-date capital equipment. They were allowed the benefit of accelerated depreciation (Income Tax (Amendment) Act 1965).

Incentives have evolved over the years and there is no longer the emphasis on import substitution or the promotion of labour intensive industries.

However, it is the Economic Expansion Incentives (Amendment) Acts of 1975 and 1979 which are interesting. Even without any minimum capital investment pioneer status was extended to any enterprise which places a premium on skill and craftsmanship as well as producing a product where the value added was high. It also allowed local and foreign companies to expand their operations into services. Thus we now promote the use of Singapore as a regional warehousing and service centre. Reduced rates of taxation are given to technical and consultancy services performed overseas as well as trading in non-traditional commodities in offshore markets. [1]

The change in direction now recognises the necessity to introduce higher technological levels in manufacturing and the production of more sophisticated manufactured goods — as well as the realisation that greater productivity must be achieved by all sectors of the economy. It is with anticipation that we await the next budget to see if further incentives or disincentives are in store for us.

I must not omit to mention that with the establishment of the Singapore Registry of Shipping tax exemption is given to ships which fly the Singapore flag.

BANKING AND FINANCE

In modifying stamp duty and income tax, the fiscal climate improved to such an extent that banks and financial institutions found Singapore was a strategic place to have a branch. The recognition of Singapore as a financial centre is evidence of the success of these incentives — though it would be wrong to attribute this success to tax alone.

It is my impression that we now have a system which does not require much more tinkering around with, certainly as far as fiscal incentives are concerned. Of course, there are eternal optimists who continue to advocate a zero tax rate for all offshore activity.

It seems to me that the economic growth that we have had over the last ten years in the region has not gone unnoticed. For many of the institutions, it is the desire to participate in what they perceive to be the potential opportunities for profit which draws the banks here rather than for reasons of tax. By our willingness to allow reputable financial institutions to establish offices here, we continue to receive applications and enquiries.

This is not to say that we can afford to be complacent. Far from it. There are still areas in our income tax and revenue laws which can do with some streamlining and rationalisation. Such changes as may occur will be relatively minor, certainly as far as banking is concerned. I expect that it is not so much tax changes that banks would like to see — but rather changes in the ground rules we have established for their operations. This, of course, is a controversial area which should be discussed — but in another forum.

As far as I am aware there is no measure we can take which could lead to a quantum leap similar to that which occurred when withholding tax on bank interest was abolished over 10 years ago. No measure, that is, apart from the total abolition of income tax or a drastic reduction in tax rates.

So far I have tried to describe the features of our tax system — how it has made Singapore what it is today in terms of economic strategy and development.

1. There is an effective system of taxation so that there is no question of Singapore qualifying as a tax haven.
2. Despite not being a tax haven there are a limited number of ways of conducting transactions which are not subject to tax — outside of outright tax evasion.
3. *Stamp duties*
   I described modifications and amendments which were necessary to give us an even chance of promoting banking and finance.
4. *Tax incentives*
   How incentives have evolved over the years and the growing refinement in changing the character of industrialisation.
5. *Banking and finance*
   I expressed the view that we have probably made most of the changes necessary for this sector.

All this has been enumerated to provide a perspective of where we are — and in view of what we have done — where we are likely to go.

Some guideposts of the highways and byeways we are likely to traverse may be gleaned from government statements.

---

POSITIVE FISCAL POLICY

In the 1978 Budget, taxpayers in Singapore were given a pleasant surprise when taxes were reduced by raising the ceilings before the top marginal rate of 55 percent became effective. [2] I would like to quote what was said by the Minister of Finance when he introduced the change:

"Aggravating the problem of equity or fairness in sharing the tax burden is the ability of many self-employed and professionals to incorporate themselves into companies in order to sell their personal services, and thereby quite legally avoid paying tax at more than 40 percent, the company rate. Professionals and executives working for the public sector on salaries are unable to take advantage of this loophole in the law. Nor do they enjoy the perks of tax-free 'expenses'.

I have therefore decided, from Year of Assessment 1978, to make income tax less inequitable by broadening the steps over which the tax rate goes up".

In the same budget, the Minister also stated that it was the policy to shift gradually the impact of taxation from income to consumption taxes. In order to make up for the loss in revenue from personal taxes, taxes on public utility and telephone bills were increased, as were the fees levied on the registration of cars, driving licences, entertainment duty and colour TV licences.

The implications and the import of these statements are pretty obvious. What is not obvious is to *what degree* these policies will be implemented, and *how* — as well as *when*.

WHAT IS THE FUTURE OF SINGAPORE IN INTERNATIONAL TAXATION?

One approach is to consider the business which many present at this conference specialise in. In tax planning you must keep abreast of all developments which can be exploited to minimise the tax liability of your clients.

It would be futile for me to predict what may or may not come about in terms of specific changes and where Singapore will stand in the international tax league especially as far as loopholes and concessions are concerned.

Taxation as one of the most important components of fiscal policy will undoubtedly be used in the management of aggregate demand. The fight against world inflation will be with us for some time yet.

Of possibly far greater interest to a wider audience will be the use of taxation in shaping what Singapore will be in the decades to come. Taxation will become one of the elements that will most likely be used in a package of measures.

Taxes have already been used to reduce energy consumption. It is very likely that novel and imaginative taxes can be devised to meet the problems which may befall us. The use of tax to influence demographic trends is but a simple example.

The success or otherwise of taxes ultimately rests on the reasonableness of the burden which people have to bear. Government has shown an acute awareness that effort and achievement should be adequately rewarded. As long as this is practised, I see no reason why taxes cannot be used positively and creatively for improving on what we have so far achieved in Singapore.

In other words, if you must tax — tax wisely and intelligently.

2. *Editor's note:* See for a discussion of the Budget 1978: Lee Fook Hong, *1978 Budget and tax changes* in 32 BULLETIN FOR INTERNATIONAL FISCAL DOCUMENTATION 122 (1978).

INDIA: Interim Budget 1980

Extract from the Budget Speech 1980 pronounced by the Finance Minister, Mr. R. Venkataraman, on February 29, 1980. The recently elected Indira Ghandi Government has had too little time to present a full-fledged budget which will now be submitted in May or June of this year.

36. I propose to introduce today a Finance Bill which seeks to continue the existing rates of income-tax for the financial year 1980-81. However, I have also three proposals of a non-controversial nature for the amendment of the Income-tax Act. I shall now briefly explain these proposals.

37. Some state governments have set up statutory corporations for the promotion of socio-economic interests of members of the scheduled castes and the scheduled tribes. I propose to exempt from income-tax the income of all statutory corporations or bodies, associations or institutions wholly financed by the Central or a state government, established for promoting the interests of the members of the scheduled tribes.

38. As the Hon'ble members are aware residents of Ladakh were exempted from payment of income-tax up to and including the assessment year 1979-80 in respect of income accruing or arising to them from any source in that district or outside India. I propose to continue the tax exemption for a further period of three years.

39. Under an existing provision, awards for literary, scientific and artistic work or attainment, instituted by the Central government or by any state government or approved by the Central government, are exempt from income-tax. I propose to extend this tax concession to approved awards for outstanding work in alleviation of the distress of the poor, the weak and the ailing. Hon'ble members will be glad to know that this provision will set at rest doubts about the taxability of the Nobel Prize awarded to Mother Teresa in recognition of her service to suffering humanity.

40. There is no change in the rates of customs and Central excise duties. However, provision has been made in the Finance Bill for the continuance of the auxiliary duties of customers and special duties of excise at the existing rates for the year 1980-81.

Singapore: BUDGET 1980

A GO-GETTER BUDGET

Extracts from the Budget Speech pronounced by the Minister for Trade and Industry, Mr. Goh Chok Tong, on March 5, 1980.

The FY 1980 Budget has been formulated on the basis of the following guidelines:

(a) *Financial prudence:* We shall continue with the prudent policy of keeping Government recurrent expenditure down to the minimum and within the revenue expected to be collected within the fiscal year, but consistent with a high standard of administration.

(b) *Development objectives:* The Budget should reflect the thrust and objectives of our policy to restructure the economy and of our development strategies for the Eighties. It should balance economic growth with social objectives. Investment in infrastructural development should be matched by investment in people and improvements in housing and other social amenities.

The FY 1980 Budget provides $4,019 million in the "Main estimates". This recurrent expenditure is fully covered by the expected revenue of $4,118 million. It is 19 percent higher than that for the last fiscal year and in my view is the minimum required to maintain the public services at a high standard. The need to exercise effective control over the utilisation of manpower, given our policy to encourage economy in the use of labour, is reflected in a net total increase of only 957 posts, including those created by Establishment Warrant in the course of this current financial year. This is an increase of only 1.4 percent over the FY 1979 establishment. Of these new posts, 533 are for the Ministry of Education in connection with their revised primary education system, the computerisation of education data and establishment of new schools. With the conversion of Radio and Television Singapore into a statutory corporation, 1,422 posts are taken out of the Budget. The FY 1980 establishment will, therefore, be reduced by 465 posts to 69,226 posts compared to the FY 1979 establishment of 69,691.

The Budget, however, recognises that as steps are taken to minimise staff increases, Ministries and Departments have to mechanise, automate and computerise. They must also upgrade or retrain the skills of officers. The Budget therefore provides funds for new and better machines and for computerisation as well as for training of civil servants.

The importance of infrastructural development is again emphasised in the Budget. Forty-seven percent of the FY 1980 Budget, or $3,617 million, is for development. Expenditure on economic services will amount to $1,755 million, or 49 percent of total development expenditure. This includes a sum of $1,047 million for industrial and commercial development (largely as loans to the Jurong Town Corporation and to industrial and commercial enterprises) and $430 million for the development of Changi Airport and roads in the Republic.

Our economic restructuring programme and the long term economic health of our country require that we harness our workers to produce higher value-added and skilled manufactures and services. We must maximise the talents of our people. Human resource development is therefore one of our top development priorities and is reflected in our Budget. More and better education and training of both teachers and students are necessary to upgrade the quality of our workforce. The Budget provides for higher expenditure for our schools, training institutions and universities.

Economic development must bring about a material improvement in social services. A sum of $1,133 million is provided for public housing, accounting for 31 percent of the Development Budget. The provision for economic services and public housing together accounts for 80 percent of the total Development Budget.

REVENUE: CHEERS AND TEARS

I now move on to tax changes and revenue estimates for the new fiscal year. It is not possible to bring cheers for all. There will be cheers and there will be tears, but our compass must be the overall good of Singapore.

The total revenue estimated for FY 1980 is $4,113 million. This represents a fall in collections of $167 million or 3.9 percent compared with the revised estimates for FY 1979. The drop is due to the exceptionally high revenue receipts in FY 1979 which came from land sales and back payments of land premia and also property tax arrears from statutory boards.

Income tax remains the largest single source of revenue and it is expected to show an increase of 7 percent or $93 million over the revised estimates for FY 1979. For FY 1980, income tax is expected to yield $1,423 million. Property tax collections, however, are expected to fall by some $30 million mainly because of the phased reduction of property tax rates to a level of 23 percent in 1983.

The total budgeted expenditure for FY 1980 is $7,636 million, comprising a recurrent expenditure of $4,019 million and a development expenditure of $3,617 million. The expected revenue of $4,113 million for FY 1980, therefore, falls short of the total Budget by $3,523 million. Of course, we cannot expect to finance the entire development expenditure with Government revenue. The question is how much of this should be financed from public borrowings and how much from additional taxes. I, therefore, come now to the moment of anxiety.

TAX CHANGES: WITHDRAWAL OF PROTECTION FOR CIGARETTES AND TOBACCO

I have earlier announced that we will not protect local industries against competition from imports. This applies also to the manufacture of cigarettes.

At present, the manufacture of cigarettes is protected through the imposition of an import duty higher than excise duty. Withdrawal of protection is in keeping with the development strategy to expose to competition those industries which should have grown out of the fledgling stage. I have, therefore, decided to remove this protection for cigarette manufacture by harmonizing excise duty with import duty. Excise duty on cigarette manufacture will therefore be raised from $4 per kilogram to $9 per kilogram. The import duty of cut rag will also be increased from $35 per kilogram to $36 per kilogram.

This approach in removing protection is in line with our policy of discouraging smoking.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

The revision of duty which is expected to yield an additional $21 million per year will come into effect today.

There is a loss in revenue of $50 million, however, from the general removal of protective duties. The net revenue loss arising from trade liberalization is, therefore, $29 million.

TAX CONCESSIONS

(i) Research and development

I have earlier dwelt on the plan to promote research and development in the 1980s. The purpose is to encourage manufacturers to develop new products and processes and to modify existing ones. I am pleased to declare that specific tax incentives will be given to promote R & D activities in Singapore.

For manufacturing enterprises conducting R & D and R & D institutions servicing them, the following tax incentives will be given:

(a) Double deduction of R & D expenditure, other than on buildings and equipment, on a case-by-case basis;
(b) Accelerated depreciation over three years for all plant and machinery for R & D;
(c) Investment allowance of up to 50 percent of the capital investment in R & D, excluding building costs, on a case-by-case basis;
(d) Extension of the initial allowance of 25 percent and annual allowance of 3 percent, presently available only to industrial buildings and structures, to R & D buildings; and
(e) Capitalisation and writing-off of lump sum payments for manufacturing licensings for a period of 5 years.

These concessions will take effect from Year of Assessment 1981.

(ii) Capital allowances for plant and machinery

Also, in line with our policy to develop high technology and to assist our enterprises to mechanise, computerise, and upgrade their operations, I have decided to liberalise the tax treatment of capital allowances for plant and machinery as follows:

(a) Accelerated depreciation allowance of 33 1/3 percent over three years will be extended to investment in computers and R & D equipment;
(b) The method of granting annual allowances will be converted from the reducing balance to the straight line method; and
(c) The existing depreciation schedule will be replaced by another with more realistic rates for write-offs. (This schedule is attached as Appendix I to my Budget Statement).

The rates in the new schedule take cognizance of the fact that certain assets promote mechanisation and automation. Hence, these are given increased rates of allowances. To give an example, under the existing scheme, it takes ten years to write off about 70 percent of the cost of machinery not used by "industrial enterprises". Under the new schedule, the machinery will be allowed to be written off completely in six years. The new method applies to both existing and new assets with effect from 1 January 1980. For a depreciable asset bought before the date, the straight line deduction will be computed by dividing the written down value of the asset by the remaining number of years of its estimated life in accordance with the new schedule.

The new method of depreciation together with the new rates for write-off provides for faster depreciation deductions on capital investment. Business firms will have more after tax earnings which they can use to channel into spending on depreciable assets for the purpose of mechanisation and automation.

The loss in revenue in the first year from this tax concession is estimated to be at least $78 million.

(iii) Stamp duties

In previous years, many incentives have been given to promote the development of Singapore as a financial centre. This year, I intend to remove the inconveniences experienced by financial enterprises by removing certain duties altogether and rationalising others at a single rate:

(a) Mortgages and debentures
The existing rates of duty on mortgages and debentures will apply but the maximum amount payable is now fixed at $500.

(b) Marketable securities
Asian Dollar and Singapore Dollar Bonds are presently granted stamp duty remission on a case-by-case basis. The exemption will now be given across the board.

Stamp duty on contract notes for the trading of marketable securities will also be abolished.

(c) ACU offshore loan agreements
The present 1/2 percent ad valorem stamp duty, subject to a maximum of $500 on ACU offshore loan agreements, will be abolished.

In addition, stamp duties on all other documents relating to ACU offshore loans will be abolished.

(d) Share certificates
The 0.1 percent ad valorem duty on share certificates will be removed.

(e) Share transfer deeds
The 0.2 percent and 0.3 percent duty on share transfer deeds will be standardised at 0.2 percent.

(f) Insurance policies
The existing multifarious duties will be standardised at a single rate of $1 per document.

(g) Partnership agreements
The existing manifold rates will be standardised at a single rate of $10.

(h) Promissory notes
The duty will be revised to $1 per note.

Stamp duties on the following instruments in the First Schedule of the Stamp Act will also be removed completely:

Article 3 — Agreement or memorandum of agreement
Article 7 — Appraisement
Article 8 — Apprenticeship deed
Article 12 — Average bond
Article 13 — Award
Article 25 — Contract
Article 28 — Copy or extract
Article 33 — Deed of any kind not described in this Schedule
Article 37 — Extract
Article 43 — Letter of allotment and letter of renunciation
Article 48 — Note of protest by the master of a ship
Article 54 — Protest of bill or note
Article 55 — Protest by the master of a ship
Article 67 — Valuation
Article 68 — Warrant for goods

The concessions on stamp duties will take effect from 1 April 1980. The loss in revenue is estimated at $10 million in the first year.

(iv) Concession for off-shore gold transactions

I have received representations that the tax rate of 40 percent on income derived from off-shore gold transactions inhibits the development of the market. I have studied the matter and am prepared to remove this disincentive. With effect from Year of Assessment 1981, the 10 percent concessionary tax rate will apply to the following income derived from gold transactions with non-residents:

1) Profits arising from the transactions of Asian Currency Units (ACUs) with non-residents, other ACUs, and broker and dealer members of the Gold Exchange of Singapore (GES) in the Singapore and overseas gold markets. This is an extension of the concession so far given to ACUs on income derived from off-shore transactions with non-residents.
2) Fees, commissions and profits of

© 1980 International Bureau of Fiscal Documentation — BULLETIN

approved broker and dealer members of the GES, that is, those approved by the Monetary Authority of Singapore, arising from their transactions with non-residents, other members of the GES, and ACUs, in both the Singapore and overseas gold markets. Associate members of the GES will not be eligible for the concession.

It is hoped that the loss in revenue, estimated at $1.5 million, will be compensated later by the growth of the gold market.

PERSONAL INCOME TAX

(1) Tax rates

In my Budget Statement last year, I stated that taxes should never be so high as to become a disincentive to hard work or to stifle talents and skill. But "high" is a relative term as different individuals have different thresholds of pain. We know, however, that the wider the tax base the lower the tax burden per capita will be. These are two guiding principles behind this year's tax changes.

As at 31 December 1979, there were 389,387 individual taxpayers, representing an increase during the year of 30,459 taxpayers. The Inland Revenue Department should be able to bring more taxpayers into the net when its computerisation programme is completed. Meantime, steps will be taken to ferret tax evaders.

There have been several representations in the past, including some from my colleagues in the House, to increase the tax reliefs for earned income, dependents and other deductible tax items. I decided against an increase in earned reliefs last year and I am deciding against an increase in any of these reliefs this year. The rationale for this decision is the need to spread income tax to cover as many individuals as possible.

Across-the-board reduction

At present less than 38 percent of our work force pay any income tax. The more citizens we have paying income tax, the more voters there are who understand that welfare programmes which sound such attractive giveaways from some magic cornucopia conjured up at election time, must mean an increase in their income tax. Several advanced countries, like Britain, have been hypnotised by this "soak the rich" slogan, only to discover that they have, by heavy taxes on personal incomes, stifled the drive to excel and to succeed of their enterprising and talented, of their professional and even of their skilled workers. We want our skilled workers to increase their earnings as against the unskilled and to pay income tax, but not such that he finds it not worth the time, effort and investment to learn to be a skilled worker. Paying income tax will imprint in the minds of Singaporeans the importance of prudent fiscal and welfare policies since many will have a direct responsibility to pay taxes for Government social expenditure from their own incomes.

Between increasing the level of deductible reliefs and lowering tax rates across the board to afford reliefs from inflation, I have opted for the latter. My decision is based on sound principle and on precedent, first established by the Deputy Prime Minister as Minister of Finance, and upheld by the present Minister for Finance since 1970. This general reduction in personal tax rates gives relief to all without shrinking our taxpaying population.

Details of the existing and new tax rates are being distributed to Honourable Members and they are attached as Appendix II to my Budget Statement.

Every taxpayer will be given a reduction in tax ranging from 6.8 percent to 19.9 percent, depending on his tax bracket. The average reduction in tax is 16.1 percent. This I consider generous as our Consumer Price Index rose by only 4 percent last year. The substantial reduction is evidence of our intention not to stymie the application of time, talents and effort in earning income which generates economic growth.

The highest marginal rate remains at 55 percent, but the lowest marginal rate is now reduced to 4 percent. Taxpayers in the first and second tax brackets, therefore, enjoy the largest reductions in relative terms. Those in the first taxable bracket will, on average, pay only one percent of their incomes in tax. The others are given tax reductions commensurate with their bigger tax liabilities.

The new rates will take effect from Year of Assessment 1980. The loss in revenue is estimated at $45.5 million out of a total estimated personal income tax collection of $476 million.

Combatting tax avoidance through rate reduction

The aim of the Government is to reduce the levels of personal income tax in the next 2-3 years until the maximum effective rate is no more than the company rate of income tax, i.e. 40 percent. Then there will be no advantage for people to set up companies from which they draw low salaries for income tax purposes, whilst the bulk of their needs are paid by the company whose profits carry only 40 percent company tax. Such a reduction will be fairer on those wage earners who cannot hide their incomes, and on those professionals who cannot incorporate themselves into private limited companies because their professions disallow it. Also, income tax falls unfairly. Wage earners like those in the Civil Service, who cannot put aside part of their incomes as perks carry a heavier tax burden than those in the private sector who can. There are also some professionals, like doctors, who have a natural advantage in tax evasion over lawyers or accountants because of the nature of the payments, made by patients in cash to doctors, as against cheques by clients, often corporations, to lawyers and accountants.

The Inland Revenue Department will vigorously bring more evaders into the tax net. But we shall be deceiving ourselves if we believe that we can get all successful hawkers, restauranteurs, property brokers and freelancing commercial intermediaries to keep and render proper accounts. It will be many years before we can insist on proper book-keeping and accounting which the developed societies have evolved. Even in these societies, new forms of tax evasion such as barter, or exchange of services, have defeated the tax collector.

Reward for hard work and high performance

For the next stage of our economic development to succeed, we must make it worthwhile for our young to spend time and effort to acquire skills and knowledge that will enable them to earn and to keep more of their incomes for their efforts. At present those who earn between $20,000 and $100,000 a year, the technicians, engineers, managers and professionals, are carrying the greatest burden of income tax. The Government proposes to spread these tax rates more equitably.

We shall be wise to take note of the results on those societies where personal income tax has been used to equalise spendable incomes in the name of progressive taxation. It has blunted the incentive to outperform one's peers; it has levelled the gifted and the industrious down to the mediocre and the indolent. It has narrowed the difference between what the highly skilled takes home as against the unskilled. The results have been ruinous for economies like Britain. Overemphasis on dividing up the national cake equally has ended up in smaller pieces of a non-growing cake. On the other hand, the Japanese and Germans have concentrated on making the national cake bigger and have achieved it by rewarding hard work and high performance, giving a thicker slice to those who have contributed more. The result, even for the unskilled who are entitled to the thinnest slice, has been a piece of cake larger than a thicker slice of a smaller cake. The moral for us is to concentrate on creating a bigger cake through giving full rewards for effort, skills, hard work and enterprise.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

(ii) Relief for handicapped persons

I have one more tax concession in my bag. Some years ago, the Minister for Finance extended the allowance for handicapped children to include those over 16 years of age. This year, I intend to make a modification to this relief. If a tax-payer maintains a brother or sister who is incapacitated by physical or mental infirmity and who does not earn any income and continues to depend on the taxpayer, he will be entitled to claim a deduction of $750. The allowance is presently given only to parents of handicapped persons.

This relief is given only to taxpayers who maintain such a member of the family in the same household. The deduction may also be apportioned if more than one taxpayer maintain the same handicapped brother or sister. It will take effect from Year of Assessment 1980.

CONCLUSION

The tax changes this year will result in a net revenue loss of $164 million in the coming fiscal year. But if they have the desired effect of stimulating effort and economic activities, this loss will be made good by an expanding economy in subsequent years. In case the signals of tax reductions, in particular, in personal income tax rates, are read wrongly, I want to emphasize that these reductions are given not because we are elated over our good economic performance, or because the Treasury coffers are overflowing, but because we anticipate some very difficult years ahead, including this year. The primary objective of the tax liberalization this year is to create maximum room for Singaporeans to exercise their enterprise to the utmost so that they are better prepared to cross the treacherous waters ahead. Tax is a cost item, and in some instances, an empediment to efficiency and effort. We are reducing this cost and impediment. This is, therefore, a go-better Budget. Individuals, partnerships and corporations must go for the opportunities. They must not delay. They must catch up on skills, technology, modern management and exports. They must not be trapped in indolence and lowskilled, low-valued industries and services.

We face the uncertainty of superpower conflicts in the political and military arena. We face the certainty of higher fuel prices. We face the grim prospect of the region being destabilized by external forces, and the oil life-line being cut.

We are unsure of the outcome of the Presidential Elections in the U.S. this year, and hence the global impact of its policy changes. On the other hand, we are sure of sluggish world economic growth cohabiting with inflation.

We, therefore, have the perfect recipe for trouble. We have spelt out our strategy to deal with the difficult times ahead. If we stiffen our resolve, remain robust, we stand a good chance of pulling through the next few years as planned. But we must dare to achieve, and think ahead.

Saving is essential to the growth of our economy. This year's revenue is estimated to exceed recurrent expenditure by only $94 million. We shall draw down $2,482 million from the Development Fund to finance development expenditure. This still leaves a deficit of $1,041 million in the Development Budget which has to be borrowed from private savings, primarily from the Central Provident Fund. Without this generation of savings in the past, we would have to raise taxes, or curtail our development expenditure, to the long term detriment of our economy. Our economic prosperity today is achieved through a partnership of government and individual effort, public and private savings. Present-day Singaporeans must, therefore, save a part of their earnings to secure their own future, and their children's.

They must at all times avoid waste. They must not squander their tax rebates.

APPENDIX I: NEW SCHEDULE

		Period for which annual allowances are given (Years)	Rate assuming initial allowance is claimed (Percent)
1	Manufacturing and industrial processing plant and machinery	6	13 1/3
2	Office equipment:		
	Furniture and fixtures (Includes furniture and fixtures which are not a structural component of a building.)	10	8
	Data handling equipment (Includes typewriters, calculators, adding and accounting machines, copiers, and duplicating equipment.)	8	10
	Telecommunication equipment	10	8
3	Transport equipment:		
	Buses	6	13 1/3
	Business service passenger vehicles	6	13 1/3
	Taxis	5	16
	Trucks, lorries, trailers and vans	6	13 1/3
	Motorcycles and bicycles	8	10
4	Electrical equipment (Includes assets such as electrical and industrial apparatus, domestic and commercial appliances, airconditioning and ventilating equipment.)	8	10
5	Electronic equipment (Includes assets such as electronic detection, guidance, control, radiation, computation, test and navigation equipment.)	8	10
6	Materials and passenger handling equipment (Includes assets such as lifts, escalators, weighing machines, conveyor belts, forklifts, lifting gears, trolleys and cranes.)	6	13 1/3
7	Building & construction equipment (Includes assets such as rollers, mixers, piling and drilling plants, loaders, dumpers, excavators, bulldozers and support structure.)	6	13 1/3
8	Fire safety device	10	8
9	Electric, gas, water and steam, utility plant (Includes tanks and generators.)	16	5

From other parts of the Budget Speech

DEVELOPMENT OF FOREIGN TRADE

The Trade Development Section in the Department of Trade will continue to carry out the task of trade development effectively. We will expand and revitalise the Commercial Secretary Service. We will set up two new trade offices, in the E.E.C., in addition to the existing four. We have signed a trade agreement with China at the end of last year, and are discussing the setting up of trade offices in China. We will consider the setting up of a computerised trade information system to provide trade and commercial data. We will continue our support, including fiscal incentives for local manufacturers to participate in overseas trade fairs and missions. The double tax deduction scheme will be extended to cover overseas marketing campaigns. Through the tax incentives for international trading companies, we will encourage the formation of multi-activity international trading companies to push the export of Singapore manufactured products in overseas markets. The Trade Development Committee with private sector representation has been meeting to discuss trade problems and prospects. It should continue to do so and perform an effective role as an advisory committee to the Department of Trade.

ECONOMIC POLICY: CONCLUDING REMARKS

In the Budget Statement last year, I remarked that the world in 1979 looked like becoming a more difficult place to make a living in. I was not wrong in my assessment. But, happily, Singaporeans responded with an extra spurt. We ended 1979 with a performance better than 1978's. The world in the 1980s, including 1980, does not look like a bed of roses either. But there is a streak in the Singaporeans that gives us confidence, and that is, they dare to achieve. Our job as a government is to set out our objectives, direction and modus operandi clearly and unequivocally, and lead. The rest is up to Singaporeans to achieve and excel.

It is this quality in Singaporeans, to compete and excel, that gives confidence of success in further liberalization of the economy as we restructure.

In the latter part of the Sixties, we began to shift away from import-substitution industries. We recognised that a policy of import-substitution behind tariff walls will at best give us short-term gains but will stifle our growth in the longer term. Protected industries, sheltered from competitive pressures, will become inefficient and stunted in their growth potential. Moreover, as we depend on the world markets for large scale expansion of manufacturing activities, our products must be internationally competitive. This cannot be achieved with tariff protection.

We therefore stopped introducing new protective duties around 1968. In 1973 and 1977 we removed a wide range of protective duties. Last year, we announced that the protection of locally assembled motor vehicles will cease from 1st August 1980. Nevertheless, there are still a number of protective tariffs remaining. These duties have been in existence for more than a decade. The protected industries should have grown into adulthood by now. If not, they will never mature.

Singpore practises what it preaches. We preach free trade and open competition. We shall, therefore, remove all protective duties other than those included in the ASEAN Preferential Trading Arrangement (PTA), most immediately, some in phases. Details of these tariff removals or reductions will be gazetted by the Ministry of Finance separately.

We have offered our ASEAN partners preferential tariffs on a number of items under the ASEAN Preferential Trading Arrangement. These duties will have to remain as we have to fulfil our commitments. The level of these duties, however, will be reduced as we progress in the ASEAN PTA exercise.

Mr. Speaker, Sir, I have included the discussion of protective duties in my Concluding Remarks instead of in the main body on Development Strategies because our action to remove tariff protection has an impact wider than the direct effect on the industries concerned. Our action removes the last vestiges of protectionism in the pursuit of an open, competitive economy wedded to the world's fortunes. It is an act of confidence.

IFA NEWS

British Branch

On January 8, 1980 the British Branch of IFA held a "Tax Workshop" whose main theme was "The limits of tax avoidance". Speakers were Mr. Alun G. Davies and Dr. Barry Bracewell-Milnes who were so kind as to submit their papers for publication by the International Bureau of Fiscal Documentation. These papers appeared in the January 1980 issue of EUROPEAN TAXATION.

The next "Tax Workshop" was held on March 6, 1980 and dealt with "Exchanges of information and extra-territorial claims by the Revenue Authorities". Speakers were Mr. Arthur Johnstone and Mr. John Reynolds.

The newly formed Manchester Branch of the British IFA met on March 20, 1980 where Mr. Joel Barnett spoke on "Treasury Ministers and the Inland Revenue — decision making".

Anglo-U.S. Seminar, New York

On May 8-9, 1980 a joint British-U.S. international tax seminar will be held in New York. The draft program shows that subjects to be discussed are, inter alia, the British Advance Corporation Tax and withholding taxes under the new U.K.-U.S. tax treaty; unitary taxation in the United States; employee problems; investments in the United Kingdom and the United States and interpretation of statutes and ruling procedures.

35th IFA Congress in West Berlin: New dates

Due to unforeseen circumstances the organisers of the 1981 IFA Congress in West Berlin had to change the earlier announced dates. The Congress will now be held from September 21 through 25, 1981.

TAXATION AND ECONOMIC BEHAVIOR:

A Review of Recent Literature

By Nizar Jetha *

Empirical research, including econometric, is indispensable for assessing economic effects of taxation. Theory is frequently inconclusive, and at best, can only identify the relevant factors, whose relative strengths must then be determined by other methods. Empirical research has formed an integral part of recent developments in public finance. This paper reviews some recent research on the effects of taxation on labor supply, saving and risk taking. The emphasis will be on the kind of questions that are being asked and the tentative conclusions that have emerged rather than on theoretical underpinnings of hypotheses and problems of statistical methodology. [1] *All evidence considered here relates to the United States.*

SUPPLY OF LABOR

Theory provides a clear-cut framework for studying the effect of a change in wage rate on labor supply. Consider a reduction in the wage rate. This would make leisure more attractive in relation to work, thereby inducing an individual to increase his consumption of leisure (or equivalently, to reduce his supply of labor). On the other hand, the loss of income due to lower wages would induce the individual to reduce the consumption of leisure (or equivalently, to increase his supply of labor). These effects are known as *substitution* and *income effects*, respectively. The former captures, in the present context, the response of labor supply to a change in relative prices (wage rate) with utility (or income) held constant, while the latter captures the response to a change in income with relative prices held constant. The total effect of a change in wage rate on labor supply will be given by the sum of substitution and income effects. The former will be positive since a change in wage rate (with income constant) will induce a change in labor supply in the same direction; the latter will normally be negative since a change in income (with wage rate constant) will tend to induce a change in labor supply in the opposite direction. The total effect would, therefore, depend on the relative strengths of a positive substitution effect and a negative income effect.

Empirical studies express total and substitution effects in the form of elasticities. The total (uncompensated) elasticity is derived from the total effect while the substitution (compensated) elasticity is derived from the substitution effect. [2] Assessment of the supply responses of factors to changes in their rewards, which is the subject of this paper, requires knowledge of uncompensated elasticities. However, in other problems in public finance, such as those concerned with the welfare implications of distortions in resource allocation, the relevant elasticity is the compensated elasticity since economic efficiency is a function solely of relative prices.

In practice, it has proved difficult to disentangle income and substitution effects. One of the first studies that tried to do this is by Kosters. [3] The study included an analysis of the effects of wage rates on the labor supplied by married males aged 50-64 years. The labor supply was defined alternately as the number of hours worked per week and year. An equation that gave right signs for all coefficients implied an uncompensated wage rate elasticity of -0.09 and a compensated wage rate elasticity of +0.04. The total elasticity is relatively low, but its negative sign suggests a backward sloping supply curve of labor (that is, hours of work vary inversely with the wage rate). This finding has been frequently confirmed for males. It should be stressed, however, that the study did not explicity allow for the effects of taxation.

Since married women often work primarily to supplement family income and since the marginal tax rates applied to their earnings depend on their husbands' earnings, tax considerations can be expected to be an important determinant of the labor supplied by married women. To test whether the number of hours worked

1. Two excellent surveys on the economic effects of taxation, but of a different kind from the present one, will be found in George F. Break, "The Incidence and Economic Effects of Taxation" in A. Blinder *et al.*, *The Economics of Public Finance* (The Brookings Institution, 1974), and Michael J. Boskin, "On Some Recent Econometric Research in Public Finance," *American Economic Review*, May 1976.

2. The effect of a change in wage rate on labor supply can be represented mathematically as follows:

$$\frac{\partial L}{\partial W} = \left(\frac{\partial L}{\partial W}\right)_{\text{utility = constant}} + L\,\frac{\partial L}{\partial Y}$$

where L = labor supply, W = wage rate and Y = income. The expression on the left is the total effect, and the first and second terms on the right represent substitution and income effects, respectively. Multiplying both sides of the above equation by W/L gives

$$\frac{W}{L}\frac{\partial L}{\partial W} = \frac{W}{L}\left(\frac{\partial L}{\partial W}\right)_{\text{utility = constant}} + \frac{W}{\partial Y}\frac{\partial L}{\partial Y}$$

where the expression on the left represents the uncompensated elasticity of labor supply and the first term on the right the compensated elasticity of labor supply. For a general derivation of income and substitution effects and their interpretation, see James M. Henderson and Richard E. Quandt, *Microeconomic Theory: A Mathematical Approach* (Second Edition, McGraw-Hill, 1971).

3. Marvin Kosters, "Effects of an Income Tax on Labor Supply," in A. Harberger and M. Bailey (eds.), *The Taxation of Income from Capital* (The Brookings Institution, 1969).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

by women depend on gross or net of tax wages, Rosen [4] estimated the following model:

$$HOURSj = A_1 (1 - ptj) WAGEj + \sum_{i=1}^{n} BiXij$$

where HOURSj = the jth married woman's hours of work, WAGEj = her gross wage, tj = her marginal tax rate, Xij = all other relevant factors (e.g. number of young children, other family income, etc.) and p = a parameter of tax perception. It is clear that p = 0 would imply that individuals react to gross wages, whereas p = 1 would imply that they react to net wages. An estimate of p of close to 1 was found, suggesting that the tax structure does indeed have an effect on the labor supply of married women. The results of the study imply an elasticity of supply for married women (working half time) of between 1.3 and 1.9. [5]

Evidence of a different kind concerning the impact of taxation on work effort has come from negative income tax experiments. One of the first such experiments was carried out in New Jersey. [6] The experiment involved payments of income subsidies (ranging from 50-125 percent of poverty line) to low-income families, and the imposition of tax rates of 30-70 percent on the other income of those families. Since the working poor simultaneously faced higher marginal tax rates (lower net wages) and an income subsidy, both substitution and income effects could be expected to reduce the amount of work supplied. A substantial decline in the labor supply of the participants was, therefore, expected. The evidence, however, did not bear this out; there was only a small (five to six percent) reduction in average hours worked by the male heads of families who received negative income tax payments.

Thus, contrary to popular notions which attribute to taxation substantial disincentives to work, empirical evidence is often inconclusive or reveals only modest disincentive effects (for males). While taxpayers will tend to exaggerate the impact of taxation, part of the discrepancy between the taxpayers' perceptions and empirical evidence may be due to the difficulties of capturing the complexity of the process of work decisions within a family in a model, and of measuring the supply of labor. The latter needs some elaboration. Measuring labor supply by the number of hours worked, either weekly or annually, may not reveal much about the disincentive effects of taxation where institutional factors preclude the variation in work hours by a large proportion of the labor force. In such a situation, the disincentive effects are likely to be reflected in reduced intensity of work, lesser willingness to change jobs and other kinds of work behavior. Empirical studies may have, therefore, seriously underestimated the effects of taxation on work effort by concentrating on the hours worked. Quantification of the other ways in which disincentives may manifest themselves is, however, easier said than done.

SUPPLY OF SAVING

Theory cannot tell us even the sign of the substitution effect where the response of saving to a change in the rate of interest is concerned. All that the theory predicts is that an increase in the rate of interest (that is, a decline in the price of future consumption in terms of the present consumption forgone) would induce an individual to demand a higher *quantity* of future consumption. But current saving is the *expenditure* on future consumption. This need not necessarily increase when the price at which future consumption may be purchased declines, since a higher quantity of future consumption may now be purchased with the previous level of saving. [7]

The view that interest rates have little, if any, effect on private (personal plus corporate) saving is widely held. The historical stability of the gross private saving rate (GPSR), [8] defined as gross private saving as a proportion of GNP, [9] and the failure of most studies to find a significant interest elasticity of saving are responsible for this view. The absence of a trend in the GPSR has become known as "Denison's Law" and has been given various behavioral interpretations.

Among the first studies to find a substantial interest elasticity of private saving is the one by Wright. [10] Working with consumption, rather than directly with saving, the study estimated a consumption function of the form:

$$C = a + bY + cW + dr$$

where C = consumption, Y = expected income [11] W = net worth and r = net of tax return on corporate bonds. [12] The consumption, income and net worth variables are defined in per capita terms to allow for the effect of population growth. The study found interest elasticities of saving [13] ranging from 0.18 to 0.27. [14]

4. H. Rosen, "Tax Illusion and the Labor Supply of Married Women, " *The Review of Economics and Statistics*, May 1976.
5. The study is based on a sample in which a large proportion of women were not part of the labor force. Furthermore, the particular statistical specification used implies that the number of hours worked does not affect the hourly wage rate. These considerations need to be borne in mind in interpreting the results.
6. Joseph A. Pechman and P. Michael Timpane (eds.), *Work Incentives and Income Guarantees, The New Jersey Negative Income Tax Experiment* (The Brookings Institution, 1975).
7. Martin Feldstein, "The Rate of Return, Taxation and Personal Savings," *The Economic Journal*, September 1978.
8. Paul David and John L. Scadding, "Private Saving: Ultrarationality, Aggregation and 'Denison's Law'", *Journal of Political Economy*, March/April 1974.
9. In this connection, saving is defined as gross private saving plus consumer expenditure on durables; and GNP correspondingly includes imputed annual income from consumer durables.
10. Colin Wright, "Saving and the Rate of Interest," in A. Harberger and M. Bailey (eds.), *Taxation of Income from Capital* (The Brookings Institution, 1969).
11. Expected income is normally derived as a function of past incomes.
12. Difficulties associated with the choice of an appropriate rate of return on capital will not be considered here.
13. The national accounting identity, C = Y—S, where C = consumption, Y = income and S = saving, implies that $\frac{\partial C}{\partial r} = -\frac{\partial S}{\partial r}$

The interest elasticity of saving, $\frac{r}{S}\frac{\partial S}{\partial r}$, can, therefore, be derived from $\frac{\partial C}{\partial r}$, the estimated coefficient of r in the consumption function.
14. These appear to be compensated elasticities.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

In an important recent contribution, Boskin has criticized behavioral interpretations of Denison's law and has extended Wright's research. [15] Expressing GPSR as:

$$GSPR = \frac{GPS}{GNP} = \frac{GPS}{DPI} \times \frac{DPI}{GNP}$$

where GPS = gross private saving and DPI = disposable private income, he notes that since DPI/GNP has fallen substantially due to growth of taxation, the constancy in GPSR must be due to a substantial increase in gross private saving out of disposable private income. Taking account of this observation, his direct test of the responsiveness of saving to the rate of interest consists of estimation of functions of the form:

$$\ln Ct = a + b \ln DPIt + c \ln DPIt - 1 + d \ln Wt - 1 + e \ln Ut + f Rt$$

where Ct = per capita private consumption, DPIt = per capita private disposable income, Wt = per capita wealth at the end of period t, Ut = the rate of unemployment, Rt = the real after-tax return on capital, and ln represents natural logarithms. This study finds an elasticity (uncompensated) of private saving with respect to the real net of tax rate of interest of 0.4, which is much higher than previous estimates. An elasticity of this magnitude is significant for policy purposes since it implies, for instance, that an increase in the real after-tax return from 4 percent to 5 percent could be expected to raise the gross private saving rate from 20 percent to 22 percent.

Although Boskin's work deals with taxation and inflation more carefully than previous studies, criticism of his work has centered on his derivation of the expected real after-tax rate of return. [16] This is not altogether surprising in view of the difficulties of specifying expectations concerning interest rates and inflation in a completely satisfactory way. While Boskin's results remain controversial, his work has prompted further research on the relationship between private saving and rate of interest.

A sizable proportion of private saving takes the form of corporate retained earnings, contributions to pension schemes and private housing. The high degree of aggregation involved in studies of total private saving results in a neglect of institutional factors affecting the composition of saving. The aggregative consumption and saving functions also mask the interrelationship between different forms of private saving. The relationship between corporate and private savings is particularly important because the tax structure provides substantial encouragement to the retention of corporate earnings. Does the higher corporate saving induced by tax incentives raise the rate of private saving or is it offset by lower personal saving? A similar question may be asked concerning social security. Do social security contributions raise overall saving or are they treated as a substitute for personal saving? Questions of this kind have received growing attention, but no unambiguous conclusions have so far emerged.

Feldstein has examined the relationship between corporate and personal saving by postulating that real accrued capital gains due to retained earnings are likely to be of a more permanent nature and consequently could be expected to exercise a stronger effect on consumption than those arising from a revaluation of existing assets. [17] However, lacking separate data on these two components of real accrued gains, he estimated models of the following form:

$$Ct = a + bYt + cWt - 1 + dGt + eREt$$

where Ct = consumption expenditure, Yt = disposable income, Wt = the stock of wealth at the end of period t, Gt = accrued capital gains and REt = retained earnings, all defined in per capita terms. With this specification, the coefficient of retained earnings represents the excess effect of retained earnings over capital gains in general. The coefficient of accrued gains was found to be small, but the marginal propensity to consume retained earnings (e) amounted to about two-thirds of the long-term marginal propensity to consume disposable income, implying that higher corporate saving will tend to be largely offset by lower personal saving, leaving private saving unchanged.

This conclusion has been questioned in a recent paper by Bhatia. [18] Bhatia contends that Feldstein's aggregative method of calculating accrued gains — that of deducting personal saving from changes in household wealth — gives unreliable figures. Instead, he derives accrued gains more directly by aggregating accrued gains on major household assets (corporate stock, nonfarm real estate and some farm assets). Using the series on accrued gains thus computed did not give significant coefficients either for accrued gains or retained earnings. This suggests that corporate saving has no effect on personal saving, except through expected capital gains which are treated as additions to their wealth by households. The effect of wealth on consumption tends to be relatively weak, however.

Social security will have two countervailing effects on personal saving. The availability of benefits during retirement will tend to reduce private saving in the working years. At the same time, by encouraging early retirement, social security will induce greater private saving since provision must be made for a longer retirement period. To determine the net effect of these tendencies on personal saving, Feldstein has employed a model similar to that used for assessing the relationship between corporate and personal saving. [19] The model is of the form:

$$Ct = a + bYt + cWt—1 + dSSWt$$

where Ct = consumption expenditure, Yt = disposable personal income, Wt = net worth at the end of period t, and SSWt = gross social security wealth ("the present value in year t of the retirement benefits which could eventually be claimed by all those who are either in the labor force or already retired in year t"). All variables are in per capita terms. The main conclusion of the study is that social security reduces private saving by at least 30 percent. Feldstein has found further support for his conclusion from research based on cross-section data. [20] Other studies have, however, found the effect of social security on personal saving to be much lower [21] or indeterminate. [22]

Should further research confirm Feldstein's findings, its implications for the present social security arrangements would require careful consideration. Reduced private saving due to social security would be of no consequence if it were offset by increased public saving. In a funded social security scheme with an accumulated reserve fund, a decline in private saving would be at least partially offset by an increase in public saving. However, in the pay-as-you-go social security system of the United States, where contributions are almost wholly paid out as benefits, lower private saving would not be compensated by higher public saving. A decline in private saving would, therefore, reduce overall national savings. This possible effect is viewed with concern by those who believe that a higher rate of capital accumulation would be desirable.

PORTFOLIO COMPOSITION

The effect of taxation on risk taking is also theoretically inconclusive. A pioneering study of this subject showed that a proportional income tax on total income (including capital gains) would encourage greater risk taking (that is, a shift to a portfolio that is characterized by a higher expected yield as well as greater uncertainty concerning the realization of that yield) provided that capital losses could be fully offset against other income. [23] This conclusion was confirmed in a more modern theoretical framework based on expected utility. [24] The reason for this counter-intuitive result is that a proportional income tax reduces both yield and risk in the same proportion. In this situation, an individual will wish to obtain the same combination of yield and risk as in the pre-tax situation but, to obtain that combination in the presence of the tax, the proportion of assets held in the risky asset would have to be increased. This analysis depends critically on the existence of a riskless asset with no yield, a requirement that will not be fulfilled in a world of uncertain inflation rates. Later work has shown, however, that no statement concerning the impact of taxation on risk taking can be made in a completely general framework. [25] To discover the effect of taxation on portfolio composition, one must, therefore, turn to empirical analyses.

The first econometric study on the effect of taxation on portfolio composition was undertaken by Feldstein. [26] The study examined the influence of the tax structure on the holdings of financial assets such as common stock, preferred stock, municipal bonds, savings bonds, other bonds and bank accounts. Utilizing household data, Feldstein estimated functions of the form:

$$Pji = f \text{ (tax class, wealth class, age, sex, human capital/nonhuman capital)}$$

where Pji = proportion of the ith individual's portfolio held in assets of type j. The study's most striking conclusion is that the proportion of portfolio held in common stock increases substantially with marginal tax rates (and income). The share of common stock in the portfolio was found to increase by over 30 percent from the lowest tax bracket to the highest.

The effect of taxation on relative net yields realized on different assets by each individual provides the main explanation for this result. While all individuals will receive identical gross yields, the relative net yields received by different individuals will vary due to differences in marginal tax rates and special features of the tax system. The main stimulus to the demand for equities comes from the fact that, largely due to the preferential treatment of capital gains, relative net yields on common stock increase with income. Thus, the strong positive association between high tax rates and holdings of common stock, while suggestive, does not imply that high marginal rates of tax *per se* encourage investment in common stock and other risky assets. Further research to clarify the relationship between taxation and risk taking is clearly needed.

In another article, Feldstein and Yitzhaki have examined the effect of capital gains tax on sales of common stock. [27] Two types of transactions are distinguished: "switching", where sales of common stock are followed

by purchases of different stock, and "net sales", where proceeds from sales of common stock are not reinvested. Household data are utilized to explain the ratio of "switches" to the value of common stock holding, as follows:

$$\frac{\text{Value of switches of common stock}}{\text{Value of common stockholding}} = f\,(\text{capital gains tax rate, age, value of stock holdings, income class})$$

The results, based on a marginal rate of capital gains tax of 15 percent, suggest that "switches" would have been over three times larger (than they were) in the absence of the capital gains tax. The evidence, thus, supports the conjecture that the taxation of capital gains on a realization basis, by permitting the postponement of the tax until assets are sold, significantly discourages stock sales for the purpose of portfolio reallocation. As is to be expected, tax considerations were not found to be important in decisions concerning "net sales".

CONCLUDING REMARKS

The inconclusiveness of many studies and the simplicity of statistical specifications stand out. As more data become available, hypotheses and econometric techniques of greater sophistication can be expected to be utilized. Nonetheless, the recent studies, with their careful examination of the old questions and formulation of new ones, are bound to influence the direction of future empirical research on the impact of taxation on economic behavior.

United States ~ Netherlands Antilles

Revenue Ruling 80-4: Foreign tax credit

A payment to the Netherlands Antilles pursuant to the election described in Rev. Rul. 65-16 is a payment made pursuant to a legal liability for purposes of Sec. 901(b) of the Code; Rev. Rul. 65-16 amplified.

Issue. Is a payment to the Netherlands Antilles pursuant to the election described in Rev. Rul. 65-16, 1965-1 C.B. 626, a payment made pursuant to a legal liability for purposes of the foreign tax credit provided in section 901(b) of the Internal Revenue Code?

Law. Rev. Rul. 65-16 holds that a Netherlands Antilles corporation electing to be taxed under Article 8A of the National Ordinance on Profit Tax of 1940 of the Netherlands Antilles, as added by the National Ordinance of December 30, 1963, may be entitled to the tax benefits that are accorded by Articles VII, VIII, and IX of the United States-Netherlands Income Tax Convention, 1950-1 C.B. 92, as extended to the Netherlands Antilles, 1956-2 C.B. 1116.

Section 901(b) of the Code generally allows qualifying United States taxpayers to claim a foreign tax credit for the amount of any income taxes paid or accrued during the taxable year to any foreign country subject to certain limitations.

Section 902(a) of the Code provides generally that domestic corporations owning at least 10 percent of the stock of a foreign corporation from which it receives dividends paid out of accumulated profits shall be deemed to have paid a certain portion of any creditable foreign income tax paid or deemed to have been paid by such foreign corporation on or with respect to such accumulated profits.

For purposes of claiming a credit under section 901(b) of the Code for the payment or accrual of an amount to a foreign government, such payment or accrual must constitute a tax liability to the foreign government. *See* Rev. Rul. 76-215, 1976-1 C.B. 194. Only the taxpayer liable for the tax may claim a credit under section 901 and only in the amount for which the taxpayer is liable. *See* Rev. Ruls. 72-370, 1972-2 C.B. 437 and 59-101, 1959-1 C.B. 189. When a credit is being claimed pursuant to section 902(a) by a domestic parent corporation for amounts paid or accrued to a foreign government by its foreign subsidiary, such amounts must also constitute a tax liability to the foreign government. A payment of an amount to a foreign government that is not made pursuant to a legal tax liability could be a contribution to such government rather than a payment of a tax. *See* Rev. Rul. 76-508, 1976-2 C.B. 225.

Holding. A payment to the Netherlands Antilles pursuant to the election described in Rev. Rul. 65-16 will be considered a payment made pursuant to a legal liability for purposes of the foreign tax credit provided in section 901(b) of the Code under the United States-Netherlands Income Tax Convention as extended to the Netherlands Antilles.

Effect on Other Revenue Rulings. Rev. Rul. 65-16 is amplified.

UNITED KINGDOM BUDGET 1980

New Medium-term Strategy

Extracts from the Budget Speech which was pronounced on March 26, 1980 by the Chancellor of the Exchequer, Sir Geoffrey Howe.

The tax measures relate to: high pay settlements — high oil prices — high exchange rate.

The tax measures which I am about to announce are consistent with the medium-term strategy and the overall budgetary framework. They also take account of the changes in the balance of the economy which have come about over the last year.

Many are made necessary only by the impact of inflation upon the tax system. One of the many reasons why we need to master inflation — though not perhaps the most important — is that it would enable Chancellors to make much shorter Budget speeches.

Three developments in particular have influenced me: high pay settlements, high oil prices, and the high exchange rate.

Together, these developments have swung the balance strongly in favour of consumers and against companies, in particular against those companies facing competition from overseas, whether in home or overseas markets.

Consumers have lost something as a result of the increase in oil prices. But the great majority have more than made up for this by big pay increases and the benefit they have received from income tax cuts, the high exchange rate and lower prices for imported manufactures.

In 1979, average personal after-tax incomes increased by 20 percent, while the profits of companies not engaged in North Sea operations fell by over 5 percent in money terms, and of course by much more in real terms.

In deciding the balance of my tax changes, I see a stronger case for reducing the real burdens on companies and small businesses than on private individuals.

Of course, not all companies have lost out. The oil companies are making large windfall profits. The banks are gaining from high interest rates. Some of these are in a position to contribute more by ways of taxation.

The financial position of most sections of business will be eased as interest rates come down.

So far as tax changes are concerned, I shall concentrate the limited funds available to me on encouraging enterprise and on relieving specific pressures which are particularly damaging or unfair.

PETROLEUM REVENUE TAX UP

The Government's objective in taxing North Sea oil operations must be to strike a balance between the nation's claim to a share in the profits from this national resource, and the right of those engaged in the risky business of oil exploration and development to a fair return on their efforts.

Since my last Budget, world oil prices have increased dramatically. North Sea oil prices, which follow world prices, have risen by more than half from about $20.70 to some $33.75 a barrel.

This substantial change has greatly favoured the oil companies. I propose, therefore, for chargeable periods ending on 30th June next and subsequent periods, to increase the rate of Petroleum Revenue Tax from 60 percent to 70 percent.

At the same time, I propose to rectify some anomalies in the PRT rules concerning transfers of North Sea interests between oil companies, and the taxation of gas. These are changes which the industry has requested.

I also propose to introduce special PRT provisions for fields which span the median line between the UK and the Norwegian Continental Shelves.

I have one further proposal on Petroleum Revenue Tax. It relates to the collection of tax. The PRT structure gives companies very early relief for capital expenditure. This means that PRT is not collected until some considerable time after a field has come on stream.

The increases in oil prices have greatly strengthened the industry's cash position. I am satisfied that PRT payments can in future be made somewhat earlier. The Petroleum Revenue Tax Act, 1980, went some way in this direction. I now propose to go slightly further. We shall require companies which are liable to PRT for the chargeable period to June 30, 1981, to make at the beginning of March 1981 an advance payment for that chargeable period at a rate of 15 percent based on 1980 liabilities.

Advance payments for later chargeable periods will be made in the same way but not necessarily at the same rate. These advance payments will be offsettable against normal payments of PRT.

In total the changes in oil company taxation are expected to bring in an extra £535m, making a total of Petroleum Revenue Tax, Corporation Tax and royalties for 1980-81 of rather over £4bn. We are thus ensuring that the nation as a whole secures a proper share of North Sea profits this year.

North Sea oil adds to national income mainly through increased Government revenues and oil company profits. Though the sums of money are large, we must not exaggerate them.

Even in the years of peak production later this decade, no more than 6 percent of GNP is expected to come from the North Sea,equivalent to perhaps two years of the kind of economic growth we achieved in the 1950s and 1960s.

This makes it all the more important that we should use the oil wisely, with an eye to our long-term economic interests.

In particular, we should take the opportunity offered by the growth of oil revenues to bring the level of public sector borrowing steadily down, and this is what our medium-term strategy envisages.

BANKS: WINDFALL PROFITS

In recent weeks there has been a good deal

© 1980 International Bureau of Fiscal Documentation – BULLETIN

of comment about the profits declared by the clearing banks. Some represent a "windfall" to the banks, which arises from the combination of high interest rates and the fact that interest is not paid on current accounts.

The windfall element is not a sign of enterprise or efficiency, as the banks themselves recognise. But it is equally irrational to attribute these profits to some wickedness on the part of the banks.

They need the major part to strengthen their capital base, which would otherwise have been eroded by inflation.

There could, of course, be a case in principle for a special tax related to the windfall element in these profits, and I shall be considering this further. However, it has not yet been established that such a tax is either practical or entirely desirable in today's conditions.

Leasing, in which the banks have been heavily involved, has grown rapidly in the past few years. Underlying this growth has been the 100 percent capital allowance, which leasing companies can claim on assets bought for leasing.

The present rules apply to equipment leased to UK industrial and commercial companies, which would qualify in their own right for these tax incentives if they were to purchase the equipment for themselves.

I do not propose any changes in transactions of this kind. Leasing finance of this sort has become an important — in many cases an essential — source of finance for investment in manufacturing industry. Under the present tax rules, however, these 100 percent allowances apply to all leased equipment.

Thus leasing effectively extends the benefits of tax incentives to certain users — such as overseas companies, certain public bodies in the U.K., and consumers — who would not qualify for tax incentives if they had purchased the equipment themselves. I propose to end these anomalies.

As from June 1 expenditure on leasing involving these users will normally qualify only for 25 percent tax allowances.

There will be transitional provisions for leased television sets. Though the extra revenue in 1980-81 will be negligible, the saving in a full year will be over £200m.

These provisions will replace, from June 1, the stopgap provision for foreign leasing which I proposed on October 23, when announcing the abolition of exchange control. They will also include measures to end the growing abuse of leasing by individuals for tax avoidance purposes.

However the Motability Scheme for leasing cars to disabled people will continue to benefit from the existing provisions.

COMPANY LIQUIDITY

I have already referred to the difficult problems that many companies will be facing in the coming year, with great pressure on their liquidity. I have considered how far it would make sense for the Government to help them by major tax reductions.

Such help could only be provided at the expense of much higher personal taxation or higher borrowing and thus higher interest rates.

I believe that the greatest service which I can perform for business is to reduce the burden of financing the public sector and thus to get interest rates down. I have, therefore, given precedence to this objective.

However, there is, as I observed last June, a clear need to re-examine the corporate tax structure. I have already undertaken that there will be full consultations before changes are made. I understand that the accountancy profession will be publishing their new standard on current cost accounting later this month. We will, therefore, publish a Green Paper later this year, reporting the results of our general review of the present corporation tax provisions.

Meanwhile, I do not think that it would be right to change the rate of corporation tax or to make major changes in its structure. But I do propose one important concession to help companies which face a particular difficulty.

A number of businesses in manufacturing, and certain areas of distribution, are concerned about the recovery charges which they will face as a result of reductions in stock levels likely to arise either because of the general pressure on liquidity, or in some cases as a result of the steel strike.

I propose, therefore, to allow a substantial part of the stock relief recovery charge consequent on a reduction of stocks to be deferred for one year.

This change will be subject to certain conditions dependent on the extent to which stocks are financed on trade credit.

The new relief will be given for business accounts ending after 1979-80. The cost is estimated at £210m in 1980-81 and a further £125m in 1981-82.

While further relief is justified in the cases to which I have referred, there is criticism that the present stock relief may confer an unjustifiable advantage in certain circumstances.

This is a complex matter on which detailed consultation will be needed, but my intention is to legislate next year in respect of the tax payable generally on January 1, 1982. This will give enough time for consultation.

I propose another modest measure affecting business taxation. I intend to provide relief for redundancy payments in excess of the statutory minimum paid when a business stops trading.

VAT, MINOR CHANGES ONLY

I turn now from companies to my other proposals for finding extra revenue. I begin with the indirect taxes.

Last June, I took an important step in implementing a change in the tax structure that everyone knew to be necessary. I carried out a substantial switch in the balance of taxation from direct to indirect taxes.

I do not intend to go further in that direction this year. But I do intend to ensure that the real yield of indirect taxation is not eroded. Inflation can all too easily have that effect.

First, I shall deal with Value Added Tax. Without the extra revenue from last June's Budget changes it would have been quite impossible this year for any Government to avoid either much larger cuts in public spending or big increases in income tax.

This is the first year in which the full yield of the 15 percent rate will be available. The yield will be some £12,450m in 1980-81.

I propose no change in the 15 percent standard rate of VAT. I am, however, making a number of technical changes, to ease the administrative burdens borne by small businesses — about which I shall have more to say later.

There have been signs that some large companies may have been delaying their VAT payments to the Exchequer. This must be corrected at the earliest opportunity. Customs and Excise are already taking steps, with my approval and within the existing law, to reduce the attractions of delay.

But more needs to be done. I shall, therefore, be asking the House to raise the maximum penalty for late payment. My proposal is that it should be expressed as a proportion of the tax at stake.

In practice, this will raise the penalty for only the larger companies. For them the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

existing maximum penalty, of £100 plus £10 a day is clearly inadequate.

I also propose to remedy an anomaly in the coverage of VAT. Lubricating and certain oils are currently zero-rated, without any real justification. We shall be laying an Order to charge them at the full rate from Thursday, May 1. This will yield an additional £12m in 1980-81 and £17m in a full year.

I want also to inform the House today of my decision on one of the options for staff savings in the Customs and Excise. Concern has been expressed by a number of my Hon. Friends and by representative business organisations at the possibility that we might withdraw the facility of monthly returns for those VAT traders who are entitled to claim repayments.

I have carefully considered representations about the effect on business cash flow, and I do not intend to pursue this option further.

EXCISE DUTIES UP

This year most of the additional revenue I need from the indirect taxes must come from excise duties. Because they are applied to a physical quantity, the real value of their yield declines in times of inflation. A number of them have not been increased since early 1977 and many have been declining in real value over a much longer period.

Accordingly, taking the duties as a whole, I am proposing increases which will reflect the impact of the last year's inflation and keep the real yield roughly constant.

I start with the duties on alcoholic drinks and tobacco, which were last increased three years ago. I propose from midnight tonight to increase the duties on drinks by amounts which, including VAT, represent about 2p on the price of a typical pint of draught beer, 8p on a bottle of table wine and 50p on a bottle of whisky.

The tobacco duty will be raised with effect from midnight on Friday. Including VAT, the increase will represent 5p on the price of a typical packet of 20 king-size cigarettes.

There will be consequential increases for most other alcoholic drinks and tobacco products, but rather less than the full amount on pipe tobacco.

The increases on alcoholic drinks will yield £273m in 1980-81 and £288m in a full year. The tobacco increases will yield £180m in 1980-81 and £195m in a full year.

Next, betting and gaming. I do not propose any changes in the general betting duty or the pool betting duty. But the Government has been persuaded by some of the criticisms of the present duty on casinos made by the Royal Commission on Gambling.

This duty depends heavily on rateable value. It is not an equitable tax, and the more profitable casinos are seriously undertaxed.

From October 1, therefore, the present duty will be replaced by one related more closely to the profitability of casinos, and designed to produce about two-and-a-half times as much revenue in a full year.

At about the same time, the duty on bingo will be increased from 5 percent to 7.5 percent. Provision will also be made in the Finance Bill for restructuring the duty on gaming machines.

We intend to remove the duty on penny machines, and propose to increase the revenue from the very profitable jackpot machines usually found in clubs. These changes will yield £5m in 1980-81 and £20m in a full year.

NO ABOLITION OF MOTOR VEHICLES TAXATION

I turn now to Vehicle Excise Duty. Our

HIGHLIGHTS OF THE BUDGET PROPOSALS 1980/81

This year's Budget announced by the Chancellor of the Exchequer on March 26, 1980 includes many proposals relating to all fields of taxation. The major proposals are summarised below.

DIRECT TAXES:

Personal income tax

Abolition of the 25 percent rate of tax and raising of thresholds for higher bands of tax.

Raising of the main allowances by around 18 percent.

Corporation tax

The small company rate will fall from 42 to 40 percent.

Petroleum revenue tax

Rise in the rate of PRT from 60 to 70 percent.

An advance payment of the tax will be required for the chargeable period to June 30, 1981 in March 1981 at the rate of 15 percent of the previous year's liability.

Capital taxes

The review of capital taxes promised in last year's Budget has been made but no drastic structural changes were proposed.

Capital transfer tax

The threshold for CTT will be doubled to £50,000.

Capital gains tax

The present £1000 exemption, progressively withdrawn above a certain amount, will be replaced by a straightforward £3000 allowance.

The first £1500 of gains by trusts will be exempt.

Relief will be provided on gains from the sale of a private residence used for residential letting.

The double charge to tax on gifts — CTT and CGT — which may arise on the transfer of such gifts will be removed by allowing the CTT paid to be set off against any subsequent gain on the transfer.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

predecessors announced their intention to abolish the duty on cars and other petrol-driven vehicles. They proposed to make good the revenue loss by increasing the tax on petrol.

As the House will recollect, after carefully reviewing the arguments, we decided that this was not a sensible change to make.

Even if the tax had gone, the need for a vehicle register would have remained. This is essential to the police and for vehicle control. So much of the form-filling would have continued unabated.

We decided it was much better to keep the Vehicle Excise Duty, but to achieve staff savings by streamlining its administration, along the lines which my rt. hon. friend the Minister of Transport has already proposed.

As part of this, he is announcing today that from October, four-monthly licences will be replaced by six-monthly licences. From August a stamp-saving scheme will be introduced to help motorists to budget for payment of this tax.

If the duty is to remain, we would be wrong to allow inflation to go on eroding its real value. Because of doubts about its future, the rates of this duty have remained unchanged since 1977.

I therefore make no apology for proposing increases in the duty on most vehicles of about 20 percent, and on the heaviest lorries of about 30 percent this year. As a result, the annual duty on cars will increase by £10 to £60.

The larger increase on the heaviest lorries will reflect the high road costs which they impose on the community. These changes will produce an estimated additional yield of £240m a year, but will still leave the Vehicle Excise Duty lower in real terms than after the last increase in 1977.

INCENTIVE FOR ELECTRIC VEHICLES

I have one further small change to announce in Vehicle Excise Duty. Electric vehicles at present play only a small part in road transport. But they are much cleaner and quieter than vehicles powered by internal combustion engines, and they could bring big future energy savings.

Because I want to encourage their further development, I propose to abolish Vehicle Excise Duty on them. The cost in 1980-81 will be less than £2m.

In my Budget last June, I stated that there was a continuing case for measures that would help us to conserve oil.

PETROL AND OTHER MOTOR FUELS

The price of petrol in the U.K. remains well below that in any other EEC country. If we are to ensure that our oil resources are not wasted, a duty increase is justified this year.

If we had decided, as the last Government had in mind, to replace VED progressively by higher petrol taxation, I should have been obliged to consider increasing the price of petrol by at least 20p a gallon. That would have been necessary simply to replace the revenue formerly provided by VED.

To match the VED increase I have announced would have taken the figure to 24p a gallon — and higher still, if the present petrol duty were itself maintained in real terms.

Since we are retaining the VED, such large increases are not needed. Instead, I shall be increasing the duty on petrol, from 6 pm tonight by the equivalent, including VAT, of 10p a gallon.

For the last three years the rate of duty on derv has been higher than that on petrol. I have decided that we can no longer justify this differential, which has borne heavily on commercial and industrial users.

Taking account of VAT, the increase in the duty on derv will be about 4p a gallon. This will mean that once again the duties on petrol and derv are the same.

These increases will yield an additional £450m from petrol and £55m from derv in 1980-81, and in a full year.

I also propose to raise the duty on heavy oil, other than derv, by about 0.5p a gallon from 6 pm tonight. This will yield an additional £50m in 1980-81 and in a full year.

I have decided not to increase the duty on burning oil and on domestic paraffin, which are the oils most commonly used in the home.

These VAT and excise duty changes will raise additional revenue of £1,260m in 1980-81 and £1,305m in a full year. They do not imply any real increase in indirect taxes as compared with 1979-80.

The immediate impact effect on the RPI will be just over 1 percent, but in the longer run these excise duty changes, by contributing to the reduction of the budget deficit, will help to ensure that inflation is brought down and stays down.

As I have explained, I do not believe I should be justified in allowing the real costs of motoring and road transport to fall, simply as a result of inflation.

But if it is right in principle for road users to face a constant fiscal burden, it would not be fair to disregard the increasing unreality of the income tax charge levied on those who are partly sheltered from rising costs because they have a company car available for private use.

The scales of benefit charged to income tax have been allowed to fall well behind any reasonable measure of true values. The present figures barely cover the current cost of tax, insurance and maintenance.

This is unfair to individuals who have to bear the full cost of car ownership, not to mention those who cannot afford to run a car at all.

I propose, therefore, to increase by some 20 percent the scale figures which are used for measuring the benefit of a company car for tax purposes. This change will be effective from April 1981.

At the same time, there will be one modest relief. The qualifying annual mileage of business use above which a reduced rate of tax is charged should be reduced from 25,000 to 18,000 miles a year. In the light of our widespread consultations last year, I believe these changes will generally be recognised as fair.

I have also been considering whether I ought to take action to charge tax on the value of petrol provided by employers for private use by their employees. This would present severe administrative problems, both for employers and for the Inland Revenue.

Even so, I shall feel bound to contemplate action next year if the provision of free petrol continues to spread at anything like its present rate.

BENEFITS IN KIND

As the burden of income tax is reduced, I would hope to see a decline in the provision of benefits in kind. It is consistent with that view for me to impose a reasonable charge to income tax on benefits which do remain.

In that spirit, I approach one area this year which has so far escaped the eye of my predecessors. I refer to the provision for employees of items such as suits of clothing and television sets. I propose to double, from 10 percent to 20 percent, the proportion of the value of such objects taken as a measure of the annual taxable benefit.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

And I shall impose an effective charge where the items concerned are subsequently acquired by the employee for less than true value. I am also taking steps to increase from 9 percent to 15 percent the rate of interest used to measure the value of beneficial loans to employees and to raise to £200 the limit below which the benefit of such loans is not charged to tax.

Fringe benefits are charged to tax only if the employee earns more than a certain amount, now £8,500. The case for abolishing this threshold has been pressed upon us. I have asked the Inland Revenue to consult employers and others about the administrative problems that might be involved in such a change.

INCOME TAX

I now turn to my main proposals for income tax. The cuts I made last year were an important start on reducing the oppressive burden of direct taxation. At every income level, taxpayers now retain a significantly larger share of their incomes, which they are free to spend or save as they choose.

I intend to do more in the future. But at a time when output is falling and we are making further heavy cuts in public expenditure, I cannot afford to protect income-taxpayers fully from the effects of inflation. This then must be a year of consolidation.

At first sight that would suggest increases in the personal allowances which fall some way short of the rise in prices during 1979. But this would have a number of undesirable effects.

It would lower the starting point of income tax in real terms compared with a year ago. It would increase the number of taxpayers. It would narrow the gap between tax thresholds and the main social security benefits. And it would impose particularly heavy burdens on those with the smallest incomes. All those effects would be most undesirable.

INCREASE OF DEDUCTIONS COMPENSATED BY ABOLITION OF 25 PERCENT RATE BAND

Given the limited scope available, I have considered how to avoid these consequences, I mean to do so by adopting an alternative approach. I propose to increase the main income tax allowances by 18 percent or so, which is in line with the rise in prices and in conformity with the indexation requirement of the 1977 Finance Act.

This will bring substantial relief to all taxpayers. But in order to afford this, I intend to remove the lower rate band of taxation, levied at 25 percent on the first £750 of taxable income.

This combination will protect the position of the very poorest taxpayers, whilst ensuring that basic rate taxpayers receive some, though not complete, protection from the rise in prices.

The single allowance will thus be increased by £210 to £1,375 and the married allowance by £330 to £2,145. The corresponding allowances for people over 65 will go up by £280 to £1,820, and by £440 to £2,895.

The income limit for the age allowance will go up to £5,900. Also, the additional personal allowance, available mainly to single parents, will go up by £120 to £770. The revenue cost of these increases in 1980-81 will be some £1,800m, offset by a saving of £750m from ending the lower rate band.

I cannot this year make any further reductions in the income tax rates. So the basic rate will remain at 30 percent and the higher rates will also remain unchanged.

The case for the lower rate band was never at all clear. The 25 percent rate was not the effective marginal rate for more than a small number of fulltime adult workers.

For those on lower incomes an increase in the personal allowances would always have been more valuable than the lower rate band. And the existence of this lower rate band added significantly to the complexity of the tax system.

Its disappearance will simplify and shorten the PAYE tables, and reduce the administrative burden on employers and on the Inland Revenue, where there will be a valuable staff saving of 1,300 posts.

I am in no doubt that it is right, in a year when difficult choices have to be made, to concentrate on raising the tax thresholds for everybody, as I have proposed, by about 18 percent.

I am also in no doubt that it is necessary to abate the tax reductions which follow from that change by the abolition of the lower rate band.

Taken together, these changes are equivalent to an effective increase in tax reliefs of 11 percent for a married couple and rather less than that for single taxpayers.

The 18.75 percent rise in child benefit implies a broadly comparable annual rate of increase — about 11 percent — over its April, 1979, level.

Next, higher-rate taxpayers. Given the substatial improvements last year it would not be appropriate to give major relief to higher-rate taxpayers this year.

However, our progressive income tax system operates in such a way that those who pay tax at higher rates experience sharply increasing tax burdens in times of inflation.

In the ordinary course it would be right to increase the higher rate threshold and bands by the same proportion as the increase in personal allowances. That would imply 18 percent this year.

But this year the improvements in personal allowances are partially offset by abolition of the lower rate band. That change will have only limited significance for those on higher incomes. So I have decided not to raise the higher rate thresholds fully in line with inflation, as I have done for the main personal allowances, but to put them up by only about 11 percent.

That is, as I have explained, broadly equivalent to the total net increase in tax reliefs which I have proposed for married couples paying tax at the basic rate.

In money terms the threshold for the higher rates will be raised to £11,250 and the threshold to the top rate of 60 percent to £27,750. There will be corresponding increases at the intervening points.

So far from making the rich richer, these restricted improvements will result in an increase in the real burden of income tax for the higher rate taxpayer.

The cost of increasing the higher rate thresholds is £100m in 1980-81 compared with a cost of £140m if they had been fully indexed.

I am also limiting this year's increase in the threshold to the investment income surcharge to 10 percent, that is to £5,500. However, with a view to consistent treatment in future years, I shall include provisions in the Finance Bill which should ensure, with effect from next year, that the higher rate threshold and bands, together with the investment income surcharge threshold, are covered by indexing legislation in the same way as the main personal allowances.

For the typical married couple with two children the net effect of my Budget changes will be to increase their weekly income by £2.68 per week from November. For a single man with the same earnings the increase will be 49p per week.

The income tax changes I am proposing will be given effect when new tax tables have been printed and distributed. They

© 1980 International Bureau of Fiscal Documentation – BULLETIN

will be made together and will produce a net increase in take-home pay on the first pay day after May 31.

AWARDS

I am proposing two other small income tax changes which have long merited action.

I propose to exempt from tax the payments made to holders of certain gallantry awards, such as the Distinguished Conduct Medal and the Conspicuous Gallantry Medal. These will in future be treated in the same way as annuities payable to holders of the Victoria Cross and George Cross.

I went also to do something more for widows in the difficult time immediately following bereavement. I therefore propose to increase the present single allowance which widows receive for the tax year in which they are bereaved.

The addition for that year will, at its maximum, bring the single allowance for widows up to the level of the married allowance.

We have also been reviewing the treatment for tax purposes of husband and wife. This is a complex and important subject. I am grateful in particular to the Equal Opportunities Commission for the light which their publications have shed on this aspect of sex discrimination.

It is easier to define the problems than to find the answers. Certainly, radical changes should not be made in haste. I propose, therefore, to issue later this year a Green Paper on this subject. I hope that it will stimulate further constructive debate, leading us ultimately to acceptable solutions.

Although, as I have just explained, this is not a year in which sweeping reductions of income tax are possible, that need not prevent us making sensible reforms in the tax system wherever the opportunity offers.

I have frequently drawn attention to the extent to which the tax system has woven itself deeply into the fabric of national life. Tax has been piled upon tax, often with little regard for their interaction. The accidental effects of this tax onslaught have often been as damaging as the direct consequences.

HOUSING

My first proposal is designed to help first-time buyers in particular.

I have received representations from many quarters about the burden of stamp duty on house purchasers. Difficulty in acquiring a new home restricts the mobility of labour. Those at the lower end of the market — mainly young couples — particularly deserve help.

I do not think these considerations justify us in making, this year, an increase in the mortgage interest relief ceiling, which I propose to maintain at £25,000. But I do think it would be right to raise the starting point for stamp duty on transfers of property by £5,000 to £20,000.

The limits for reduced rate bands will be similarly increased, by £5,000, so that the full 2 percent rate will now be reached at £35,000. This will cost £75m in 1980-81, and £85m in a full year.

Too many homes are underoccupied, or even standing empty. This is often a direct, even if unintended, result of rent control: sometimes it is a consequence of planning policies, which my rt. hon. friend the Secretary of State for the Environment is improving.

There are also fiscal obstacles to the economic use of the available stock of property. One of those I intend to deal with this year. I propose a new and additional relief from capital gains tax to help people who let part of their homes.

At present these house-owners, when they come to sell, can find themselves unexpectedly faced with a capital gains tax charge. This change will encourage letting, and contribute to the better use of the housing stock.

Next, the national heritage. The House has already passed a Bill to set up the National Heritage Fund. The Finance Bill will include a provision to treat if for tax purposes as if it were a charity.

The Fund will be set up with an initial amount of around £12m at its disposal. The Government will in future make an annual contribution to the Fund, including the amount needed for the continuation of the acceptance in lieu system.

But we should also do more to make it possible, both today and in the future, for owners of historic houses to look after their properties on behalf of the nation as a whole.

The last Government took a similar view and introduced provisions to assist owners to set up maintenance funds for the support of their houses. But that scheme proved to be so restrictive that it has hardly been used.

I intend therefore, to recast substantially the maintenance fund provisions. If we are going to adopt this method of encouraging the preservation of our heritage — and I believe it is the right one — then it is only sensible to make it work.

Our fresh proposals will apply to the maintenance of buildings, historically associated contents, gardens, and land of historic, scenic and scientific interest.

The overriding condition will, of course, be that the public should have reasonable access. These measures are intended to cement a bargain between those who have to bear the cost of maintaining the National Heritage, and the people as a whole.

CHARITIES

The third way in which we aim to assist private action this year is by providing tangible Government support for the widespread and often unsung voluntary effort that goes on at every level of our national life.

It is important to do all we can to help charities and to stimulate private benefactors and helpers. A partnership between Government and voluntary effort can be the best way of meeting many pressing social needs, particularly when State spending is having to be cut back. With this in mind, I have given careful consideration to the fiscal recommendations of the Goodman Committee and of the National Council of Social Service.

I propose to double — to £200,000 — the capital transfer tax exemption for bequests to charities; and to exempt wholly from development land tax all future disposals of land by charities. Income tax relief for payments to charities made under Deeds of Covenant, which has hitherto been limited to the basic rate of income tax, will be extended to the higher rates subject to a ceiling of £3,000 a year.

A minor stamp duty easement on Deeds will be made. And in response to representations I am reducing the period for tax relief on Deeds of Covenant from seven years to four years.

These measures, which will cost £30m in a full year, are designed to provide the right conditions for substantial growth in the important partnership between voluntary service and the community.

EQUITY INVESTMENT

Now I turn to an area where the tax system can be used to involve the individual more closely in the working of the econo-

© 1980 International Bureau of Fiscal Documentation — BULLETIN

my. I refer to proposals which will encourage direct personal investment in the stocks and shares of British industry.

In the last 20 years the proportion of the equity of British companies held in direct individual ownership has been almost halved. This is a trend I should like to reverse.

It is generally agreed that share-ownership and profit-sharing can help in developing employees' understanding of, and commitment to, business and industry. I believe that share-ownership can also spread a wider understanding of the role for risk-taking and initiative in the economic system.

I have two sets of proposals to make.

First, I propose to make more generous the provisions which the last Government introduced two years ago to encourage profit-sharing.

In passing, I would note that those provisions were based upon proposals originally put forward by my rt. hon. friend, the Secretary of State for Energy. They attracted all-party support.

I propose to raise from £500 to £1,000 a year the value of shares allocated to any one employee which can qualify for tax relief; to reduce from five years to two the period after which employees can sell their shares; and to cut from 10 years to seven the period after which they can draw them out free of income tax.

Second, I propose to reintroduce legislation similar to that which Lord Barber introduced in 1973 enabling employees to be given options to buy shares in their companies without incurring liability to income tax.

This scheme will have links, as in 1973, to a scheme for contractual savings. These measures will help to fulfil our promise to encourage employee share-ownership and provide the incentive to save and build up capital.

There is one anomaly in the field of life insurance, which I propose to put right.

The rate of life insurance relief used to be equivalent to half the basic rate of income tax. It has recently got out of line and I propose to restore the relationship by reducing it to 15 percent.

Because of the practical problems posed for the life insurance industry, the change will not take effect until April 6 next year.

Steps will also be taken to deny life assurance premium relief to certain short-term bonds. This change will take effect from today.

Before I leave discussion of the capital markets I should add that I propose that traded options, which at present are anomalously treated as wasting assets for Capital Gains Tax purposes, should in future be treated on the same basis as share warrants.

I hope these measures will help to encourage the wider direct ownership of shares, by altering the relative attractions of investment through the institutions and through more direct means.

I come now to a series of measures which are intended to increase the wealth-creating vitality of our economy. That means giving greater encouragement to the processes of economic change, and improving incentives to the enterprise sector. For the mainspring of economic vitality it is now widely agreed that we must look to private initiative, widely dispersed and properly rewarded. Enterprise means jobs.

TAXATION OF CAPITAL

I start with capital taxation, which is widely regarded, and rightly so, as a severe discouragement to those seeking to build up a business and pass it on to the next generation. We have, as I promised last year, subjected capital taxation to a thorough review.

Representations from a large number of bodies have confirmed that the damage done by these taxes in their present form is out of all proportion to their yield. There is, of course, a place for capital taxation, including in particular a charge on death. But change is needed.

What I can do this year must be constrained by our financial position. I am, therefore, proposing changes which will be of particular help to smaller businesses. This is an earnest [proof] of our determination to make further progress when economic conditions permit.

First, the march of inflation over the years has brought far too many estates into charge to the capital transfer tax. This is a particular burden on the small business, when it passes from one generation to another, whether on death or by lifetime transfer.

I propose therefore that the threshold for the capital transfer tax should be increased to £50,000. This will exempt from the tax at least two-thirds of the estates which would otherwise have been liable; and up to 400 fewer staff will be needed than if we had left the threshold unchanged.

A reduction in the scale of rates above the new threshold, however much it is needed, is not possible at the moment; nor are other changes I should like to have made. I am, however, making one or two minor changes designed to reduce administration.

In the case of the capital gains tax, I am fully conscious of the impact inflation has had. It can rightly be argued that the tax often falls on what are no more than paper gains. Proposals for indexation or tapering as a means of meeting this problem have been put forward on many occasions in the past.

I have had both proposals re-examined but the conclusion to which I have come is that both would result in an unwelcome increase in the cost of administration — for taxpayers as well as the revenue — while reducing the yield of the tax to negligible proportions.

I cannot, however, leave matters as they are, I propose, therefore, to replace the present £1,000 exemption — which is progressively withdrawn above £5,000 — by a straight forward allowance of £3,000.

This change, which will operate from April 6, will remove from tax half the cases at present liable; and at a reasonable revenue cost, it will reduce staff requirements by 300.

As a corollary of this new proposal, there will be an exemption for the first £1,500 of gains for trusts: and investment and unit trusts will now be exempted from the tax, although investors in such trusts will remain liable if their own gains in the year exceed the new exemption limit.

Finally, I propose to remove the present double charge on gifts, which arises from the overlap between Capital Transfer Tax and Capital Gains Tax, by providing roll-over relief for the latter. This has been a particular source of grievance and one on which representations have been received from a large number of people.

The cost of these changes in the Capital Transfer Tax will be £60m this coming year and twice as much in 1981-82.

In the case of Capital Gains Tax, there will be no cost this coming year and a cost of £25m in 1981-82. These figures need to be judged against the already rising yield of the capital taxes as a result of inflation.

I realise that these necessarily limited changes will fall short of what many people had hoped for. But I must ask for patience in present circumstances. Meanwhile the benefit the present changes give to the small business should not be under-estimated.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

Because of the 50 percent relief — which will remain, as will the comparable relief for agriculture — a person transferring a business worth £100,000 will pay no Capital Transfer Tax, if there are no other assets.

We would, of course, have liked to bring similar help to businesses of all sizes. My proposals do give some measure of relief to everybody, but this year most assistance goes to small businesses. As I have already indicated there have been extensive consultations on Capital Taxation before the Budget. We propose to continue this process. There are in particular certain specialised areas such as settled property which require every detailed consideration.

I now turn to another tax which can inhibit development, the Development Land Tax. In my last Budget I reduced the rate of this tax to 60 percent and increased the exempt slice to £50,000. I then said there would be no further reduction in the rate and no early increase in the exempt slice. This remains the position.

Representations have, however, been made to me from many quarters that the tax inhibits development because of uncertainty about the amount of tax chargeable which can normally only be ascertained once development starts.

It is important to remove obstacles of this kind if we are to make the best use of our resources. I propose to deal with this point and the necessary legislation will be added to the Finance Bill at an appropriate stage. There will also be a number of other detailed improvements. All these changes are designed to free the market and encourage development.

Taxes are stifling independent enterprise in other ways too.

SMALL BUSINESSES

For many years the fashion both in Government and in industry was to favour mergers and amalgamations. No doubt mergers have brought advantages in some cases. But it is now clear that the fashion for industrial elephantism was greatly exaggerated.

I believe that there are cases where businesses are grouped together inefficiently under a single company umbrella. They could, in practice, be run more dynamically and effectively if they could be "demerged" and allowed to pursue their own separate ways under independent management.

The present tax rules can in practice effectively discourage demergers of this kind, by charging the assets of the "demerged" company to advance corporation tax and income tax as distributions.

I propose to bring forward, during the passage of the Finance Bill, measures to ease the tax charge on distributions of this kind, subject to certain safeguards and where they are concerned solely with the genuine splitting off of independent trades within the corporate sector.

My colleagues and I would welcome any views those outside Government might have on these proposals. It may be that further measures will turn out to be justified.

I now turn to measures specifically designed to improve the tax environment in which the small business lives and works.

Any business, but particularly the new small business just starting up, needs somewhere to operate.

An imaginative and helpful new venture in recent years has been the development of estates of small industrial workshops for separate letting to small businesses.

I propose to bring in a Small Workshops Scheme which will enable industrial buildings allowances at the rate of 100 percent to be claimed on the construction of small industrial buildings. The scheme will run for three years, and will simplify the present administrative arrangements.

I shall also make provision for industrial buildings allowance to be given on the construction of industrial buildings rather than on their first lettings.

In addition to my own proposals, my right honourable friend the Secretary of State for the Environment intends to consult on relaxation of planning controls over changes of use as between light industry and warehousing for small units.

My right honourable friend the Secretary of State for Industry intends to make £5m available to build 1,000 new nursery factory units in assisted areas in co-operation with the private sector.

New businesses and particularly new small businesses also need capital. Many people with capital to invest might be ready to back enterprising ventures if they knew that losses could be offset against taxed income, instead of only against capital gains.

I propose that, through a new Venture Capital Scheme, losses on equity investment in unquoted trading companies, incurred after April 5, 1980, may be set off against income.

Next, I propose to relax the conditions for tax relief for interest paid on money borrowed for investment in, or lending to, a close company. The present rules require an investor to have worked for the greater part of his time in the company's business. I propose to abolish that condition, and thus provide added incentive for outside investment in small firms.

Just as important as attracting new capital from the outside is the generation of new capital from the inside, in the form of profits which are retained in the business.

The tax system has now contained for over 50 years a series of provisions under which a "close" company may be required to justify the amount of profits which it wished to retain in the business, undistributed.

Following last year's reduction in the rate of income tax, I now propose important changes including the abolition of the apportionment of trading income both of close trading companies and of members of trading groups.

These changes will cut out a thicket of complex tax provisions, which are time-consuming for the small trading business, and a real impediment to growth.

But if small companies are to generate the funds to finance their expansion, they must first earn profits and then they must be left with sufficient of those profits after payment of tax.

Better profits must come through improved efficiency and greater productivity. That is a matter for industry itself and not for Government. But Government can help by reducing the burden of tax.

I propose therefore to cut the small companies' rate of corporation tax to 40 percent — that is no less than 12 points below the full rate of 52 percent — and at the same time to raise the qualifying limits to £70,000 for the full relief and £130,000 for the marginal relief.

My next proposal is designed to help the unincorporated small business. It is important that the self-employed should be able, with tax assistance, to make adequate provision for their retirement.

PENSIONS

I am therefore raising the limits on retirement annuity relief. The normal percentage of earnings qualifying for tax relief will go up from 15 percent to 17.5 percent, and the ceiling on the premiums qualifying for relief will be abolished.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

BUSINESS LOANS

I also propose some minor measures affecting business taxation. Following consultations with industry I propose that the costs of raising business loan finance should be allowed for tax purposes; relief will also be given for pre-trading expenses of a business provided these expenses would have been allowable if the business had been trading when they were incurred.

Certain changes will also be made in the tax deduction scheme for the construction industry — the 714 scheme — which will lighten the administrative burden of the scheme and change certain features which operate harshly.

As the last element in my package to help small businesses, I am making certain changes in the arrangements for VAT, in order to ease the administrative burden.

I propose that from midnight the registration threshold for VAT should be increased from £10,000 to £13,500. The de-registration limit will also be increased from June 1. At the same time I shall be increasing from £50 to £250 the relief from payment of tax on stocks and assets when a person de-registers.

ENTERPRISE ZONES

Despite the severe financial restrictions we are thus giving help to smaller businesses at many, many points where the system bears too hardly. Individually relatively few of the measures could be described as of major importance; but taken together they represent a significant step forward in making this country one in which enterprise will be properly rewarded and thus flourish again. Together they will cost about £160m in a full year.

Finally, I come to an idea that is intended to pioneer a new and more adventurous approach to the whole question of industrial and commercial renewal.

There are some parts of our economy, most notably in the older urban areas, where more and more public authority involvement seems to have led to less and less fruitful activity.

The planning process has all to often allowed, even caused, whole areas at the heart of some of our most populous cities to be laid to waste for years, even decades.

Even when plans do finally come to be made, the public purse is often unable to provide the funds, or the enterprise, to match the planners' aspirations. And when private initiative might have been ready to stir, it has generally been stifled by rules and regulations — and by a tax system which pays no regard to these special problems.

Some hon. Members may recall that, in a speech made on the Isle of Dogs, a little less than two years ago, I put forward a proposal for trying to bring new life back to these areas of urban dereliction.

The idea was not politically partisan. For my thinking had taken place in parallel with that of the distinguished Fabian, Professor Peter Hall. Quite independently, we had concluded that there was much to be said for the establishment in these man-made wildernesses of what I have called "Enterprise Zones".

I am, therefore, pleased to be able to announce today action by the Government which will transform into reality the idea which I then put forward.

We are proposing to establish, in the first instance, about half a dozen Enterprise Zones — with the intention that each of them should be developed with as much freedom as possible for those who work there to make profits and to create jobs.

Each will cover perhaps 500 acres. Within these Zones two major tax incentives will be available; first, 100 percent capital allowances for both industrial and commercial buildings; and, second, complete relief from development land tax.

But fiscal concessions are only part of what is needed.

These Zones will, therefore, enjoy the following additional benefits: 100 percent derating of industrial and commercial property; a drastically simplified planning scheme; exemption from the scope of industrial training boards (with consequent exemption from industrial training levies); accelerated handling of applications for warehousing free of customs duty; minimal

requests from Government for statistical information; and abolition of the remaining industrial development certificate procedures.

I hope and believe that an imaginative experiment along these lines may succeed where conventional policies have proved inadequate. No one can doubt the need for change from present arrangements.

In far too many of our towns and cities today, and for far too many businesses, particularly small and new ones, the gap between a productive idea and a foreseeable profit has widened into a chasm of red tape. And the same red tape all too often stands between a young school leaver and the prospect of a job.

Even before this proposal had any official status at all, there has been no lack of interest in the idea. The Government will be consulting local authorities and other interests before decisions on individual areas are made. Fuller details will be found in the policy document, which is being issued this evening. There could not be a better time for making a fresh start of this kind.

For in the decade that lies ahead. Britain has the opportunity of following a more hopeful path. We have ended the 1970s with a society that is becoming less tolerant, because we live with an economy that has been growing no richer. The 1980s can be very different.

The disappointments of the last decate spring from illusions that have persisted too long; the illusion that we can pay ourselves what we have not earned; the illusion that governments may go on borrowing when they dare not tax; and, most foolish of all, the illusion that we can somehow strike our way to higher living standards.

Married couples — income all earned

	Charge for 1979/80		Proposed charge for 1980/81		
Income	*Income tax*	*Percentage of total income taken in tax*	*Income tax*	*Percentage of total income taken in tax*	*Reduction in tax after proposed changes*
2,000	46	2.3	0	0	46
2,500	171	6.8	106	4.3	65
3,000	317	10.6	256	8.5	61
3,500	467	13.4	406	11.6	61
4,000	617	15.4	556	13.9	61
4,500	767	17.1	706	15.7	61
5,000	917	18.4	856	17.1	61
6,000	1,217	20.3	1,156	19.3	61
7,000	1,517	21.7	1,456	20.8	61
8,000	1,817	22.7	1,756	22.0	61
9,000	2,117	23.5	2,056	22.8	61
10,000	2,417	24.2	2,356	23.6	61
12,000	3,036	25.3	2,956	24.6	80
15,000	4,296	28.5	4,017	26.8	279
20,000	6,704	33.5	6,302	31.5	402
25,000	9,364	37.5	8,833	35.3	531
30,000	12,273	40.9	11,588	38.6	685

Nothing will be easy in the years immediately ahead. But beyond that the strategy offers hope of real success.

It is a strategy for the defeat of inflation, by the re-establishment of monetary control. It is a strategy for the restoration of prosperity, by the encouragement of enterprise.

Politics is not only the art of the possible, it is also the art of the necessary. The strategy outlined in this Budget is designed to do what is necessary — and so lay foundations for the success which is well within the grasp of the British people.

RESTORATION OF PROSPERITY BY THE ENCOURAGEMENT OF ENTERPRISE

The essential condition for success in the 1980s is that we should turn our backs on those illusions that we should have the courage, over a period of years, to carry through the realistic policies to which there is no alternative.

In this Budget I have tried to set those policies in a strategy for the medium term.

ERRATUM

In the box accompanying Mr. Paulo Kantor's article "The Supplementary Income Tax (Imposto Suplementar de Renda) on Dividend Distributions" it was erroneously stated that corporations opting for consolidated returns are subject to a 32 percent rate of corporate income tax. This 32 percent rate was abolished by the Decree Law No. 1,648 of December 18, 1978. We wish to emphasize that the mistake was made by the Editors and that Mr. Kantor is not responsible for the contents of the box.

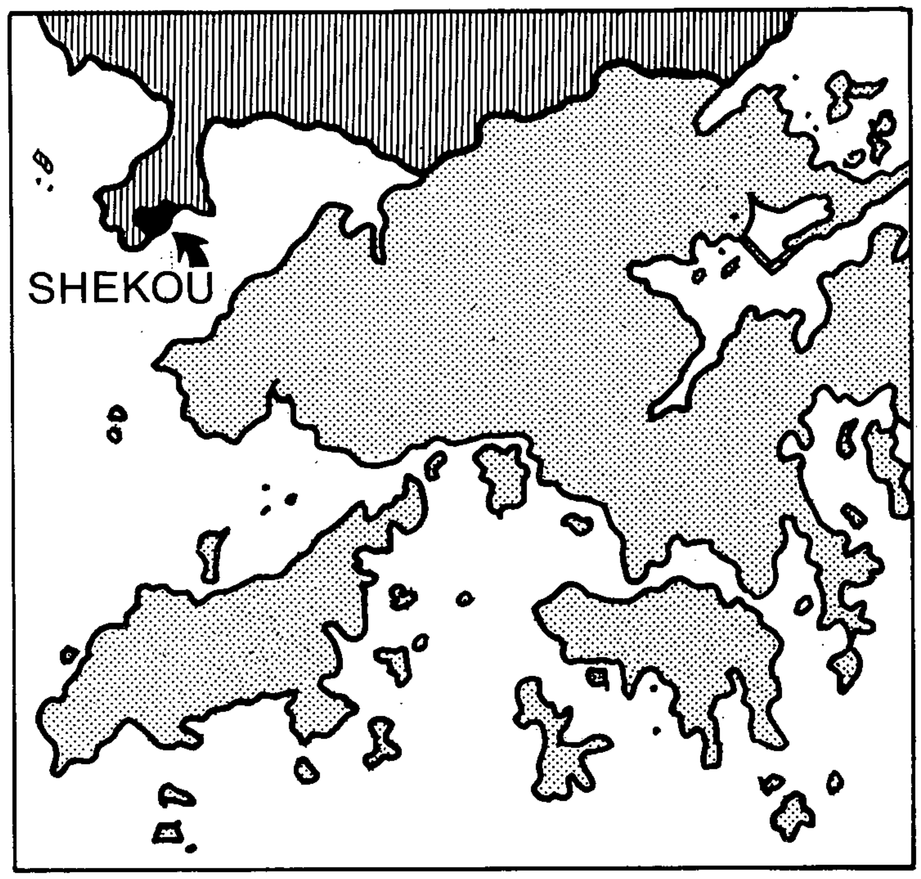
FIRST INDUSTRIAL ZONE IN CHINA ESTABLISHED*

Development of an area in Shekou district (SKIZ)

The State Council of the People's Republic of China recently authorized the China Merchants Steam Navigation Co., Ltd. of Hong Kong (hereinafter "CMSN") to develop the Shekou district into an industrial zone. In the initial stage, the area comprises some 10,000 sq.ft.; the administrative supervision lies in the hands of Shenzhen City of Guandong Province.



The major role to be played by CMSN is to attract foreign entrepreneurs, overseas Chinese as well as residents of Hong Kong and Macao to participate in joint ventures in the Shekou Industrial Zone. The main field of activity in that zone is to engage in manufacturing and processing commodities, the bulk of which is to be exported. The Joint Venture Law of the People's Republic of China [1] will govern these joint ventures. Also they must be incorporated and registered with the Administration Bureau of Industry and Commerce in Shenzhen, notwithstanding the fact that negotiations usually occur in Hong Kong.

The CMSN has published an Investor's Handbook entitled *The Shekou Industrial Zone in Shenzhen.* It deals with questions including geographical location, weather and climate, earth conditions, construction work and the particulars of joint ventures in SKIZ. Reproduced below are those sections which relate to questions of location, investment and taxation.

The sections dealing with taxation refer specifically to:
(a) *import tax;*
(b) *export tax*; and
(c) *Corporation Profit Tax.*

Apparently, the term *import tax* is used to combine the Industrial and Commercial Consolidated Tax and import duties. The Industrial and Commercial Consolidated Tax is basically a sales (turnover) tax which has, in certain respects, the features of an excise duty. The rates vary from 1.5 to 69 percent. The amount generally reflects the degree of necessity of a particular item to the economy and/or to the average consumer. No credit is given for tax previously paid, a sharp contrast with the value added tax found throughout European countries. [2] The tariff for import duties is classified into 17 categories which consist of 1864 items. The rates vary considerably and may approach 400 percent (e.g. tobacco). [3]

Export tax apparently also refers to the Industrial and Consolidated Tax but further includes export duties. Significantly, export duties are levied on a very limited number of items. [4]

In any case, the International Bureau of Fiscal Documentation was informed by the competent authority that "all supplies furnished to SKIZ ranging from equipment, construction materials, raw materials to daily necessities *shall be imported free of tax* and finished and semi-finished export products manufactured in SKIZ *shall be exported free of tax*".

Corporation Profit Tax will be levied on a joint venture's income after a 3-5 year tax holiday. No details are yet known explaining whether provisions concerning the computation of profits, etc. will generally correspond with those applied for purposes of the Industrial and Commercial Income Tax, or whether new legislation will be promulgated in this field. [5] Readers are kindly advised to follow developments as revealed in our publication TAX NEWS SERVICE.

* The editors would like to express their sincere thanks to China Merchants Steam Navigation Co. Ltd. of Hong Kong (CMSN) for the permission to reproduce parts of its Investor's Handbook *The Shekou Industrial Zone in Shenzhen.*

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Geographical location

"The Shekou Industrial Zone" (SKIZ) is located on the east coast of the Pearl River estuary, just to the west of the city of Shenzhen and embraced by the Deep Bay. SKIZ is in an advantageous location where sea and land transportations are convenient — separated only by the water of the bay from Yuen Long and Lau Fau Shan of the New Territories; about 30 kilometres from Shenzhen and about 150 kilometres from Guangzhou by road; around 20 nautical miles from the Central of Hong Kong and around 80 nautical miles from Guangzhou by sea.

The superiority of SKIZ in geographical location makes it an ideal place for foreign businessmen, overseas Chinese and compatriots from Hong Kong and Macao to make industrial investment.

Particulars of joint ventures in SKIZ:

1. *Equity ratio:*
The partners of a joint venture shall make investments in cash according to their respective percentage of share-holding in the venture. Each partner's investment shall in general not be less than 25 percent of the total investment. The exact proportion of share-holdings in a joint venture may be agreed upon between the parties according to the particular line of business of the venture. Technological patents and equipment may be converted into cash as investment.

2. *Organization:*
A joint venture shall have a Board of Directors, a president and various department managers. The Chairman of the Board of Directors shall be appointed by CMSN; the Vice-Chairman, the President, the Vice-President as well as department managers shall be appointed through consultation by the participants.
With regard to the Memorandum & Articles of Association of a joint venture, reference may be made to both Hong Kong and international conventional practices.

3. *Contract period:*
The contract period of a joint venture shall be determined by the particular line of business of the venture. The average term is around 25 years. The period may be extended upon expiration through agreement between the parties. Any application for such extension shall be made six months before the expiration of the contract.

4. *Land and land utility cost:*
The Real Estate Company of the Shekou Industrial Zone, a subsidiary of CMSN, has been authorized to plan and control the use of the land of the district.
Joint ventures shall apply to the Real Estate Company of SKIZ for the use of land there and pay its utility in compliance with the rules concerned.
The land utility cost is HK$2 to HK$4 per sq.ft. per year.

5. *Taxes:*
All supplies furnished to SKIZ ranging from equipment, construction materials, raw materials to daily necessities shall be exempted from import tax.
Finished and semi-finished export products shall be exempted from export tax. But taxes shall be levied on products for the domestic market in accordance with Customs' regulations of the PRC.
A joint venture shall qualify for a 3-5 year tax holiday from the date of its commissioning. From the 4th or 6th year on, a 10 percent Corporation Profit Tax shall apply.

6. *Visa application:*
Foreign residents, overseas Chinese and compatriots from Hong Kong and Macao entering SKIZ by sea may have their passports or travel documents visaed at the wharf of the Zone.
Compatriots from Hong Kong and Macao entering SKIZ by road via Shenzhen shall go through visa formalities in accordance with the usual practice.
Foreign nationals, foreign nationals of Chinese descent and overseas Chinese entering SKIZ by road via Shenzhen may present their passports or travel documents two days in advance to the Planning and Development Division of CMSN, which will obtain the required visas for them.
Those who wish to make a one day trip to the place shall be granted entry-exit visas valid for one day; technical and management personnel who have to frequent the Zone to perform their duties shall be granted 3 or 6 month multiple entry-exit visas.

7. *Staff and workers:*
A joint venture shall present a list of manpower requirement covering the numbers and qualifications of workers, technicians and administration personnel needed in the venture to the Labour Services Company of the Shekou Industrial Zone, which shall in turn recommend to the joint venture suitable candidates they could possibly find.
The joint venture has the right to scrutinize the candidates. If the candidates prove to be satisfactory, employment contracts shall be concluded between the joint venture and the Labour Services Company of the Shekou Industrial Zone.
The joint venture also has the right to dismiss any workers or staff members who seriously violate the rules and regulations of the venture during the execution of the employment contracts.

8. *Salaries, wages and welfare funds:*
A joint venture shall pay the workers in Hong Kong dollars which shall be converted into Renminbi. The average wages for ordinary workers of a joint venture shall be higher than those for workers working in the same kind of enterprise of China and lower than those for workers working in the same kind of enterprise of Hong Kong. A joint venture shall appropriate a certain sum of money equivalent to 10 percent of the total amount of wages as welfare funds and medical benefits for the workers. A bonus shall be given to workers and staff members who have fulfilled or overfulfilled their production quotas with products up to the standard both in quality and in quantity.
The staff and workers of a joint venture in SKIZ shall enjoy the statute holidays, festivals and leave days with full pay in line with the laws of the People's Republic of China. Staff and workers on sick leave shall get

© 1980 International Bureau of Fiscal Documentation — BULLETIN

their pay in accordance with the pertinent regulations of the PRC.
Labour insurance for workers and staff members shall be effected with the insurance company in SKIZ by the joint venture.
Salaries and benefits for senior technicians and management personnel shall be fixed separately.
Salaries for technicians and management personnel from abroad as well as from Hong Kong shall also be fixed separately. The foreign and Hong Kong staff shall pay a certain sum of personal income tax.

9. *Foreign exchange control:*
Foreign currency shall be used in book-keeping/accounts of the joint ventures in SKIZ. Every joint venture should submit to the General Administration of the Shekou Industrial Zone its quarterly balance sheets. Foreign exchange transactions shall be conducted at the banks in SKIZ. Foreign currencies can be freely remitted both inwards and outwards but through the banks in SKIZ only.

10. *Power and water supply:*
Power consumption in SKIZ shall be charged at the same rates as applied in Hong Kong for industrial electricity. Water consumption shall be charged by the unit (1,000 gallons of water is calculated as one unit.) and at a rate 20 percent lower than that applied in Hong Kong.

11. *Arbitration:*
In case of economic or legal disputes, the parties involved shall endeavour to settle them through friendly consultation. Should consultation be exhausted, the disputes may be settled through conciliation or arbitration by an artbitral body of China or through arbitration by an arbitral body agreed upon by the parties.

CHINA: LEGAL COUNSEL OFFICE
Now set up in China Council for the Promotion of International Trade (CCPIT)

Along with the development of China's foreign economic and trade relations, inquiries from industrialists, businessmen as well as lawyers and practitioners abroad about the relevant legal matters are pouring in. At the same time, requests of the parties concerned for consultation or for the recommendation of legal agent to act on their behalf in negotiation, conciliation, arbitration or legal proceedings in respect of their economic, commercial and maritime disputes with their respective foreign or Chinese counterparts are growing in number. In these circumstances, the China Council for the Promotion of International Trade has decided to set up a Legal Counsel Office which can deal with the following matters:

1. *To act as agent in litigation and arbitration cases having to do with economic, commercial and maritime disputes between foreign and Chinese counterparts, as entrusted by clients at home and abroad;*

2. *To assist in resolving economic, commercial and maritime disputes between foreign or Chinese counterparts, as entrusted by clients at home and abroad;*

3. *For consultation on questions relating to economic, commercial and maritime laws and practices.*

The Legal Counsel Office will charge reasonable fees for services in accordance with work done, efforts made and actual costs to be borne by the clients.

Address: China Council for the Promotion of International Trade
4, Taipingqiao Street, Beijing, China
Attention: Legal Counsel Office
Cable: COMTRADE, Beijing, China
Attention: Legal Counsel Office
Telex: 22315 CCPIT CN
Attention: Legal Counsel Office

CORRIGENDUM

The country bordering the North and Mid-East of Ethiopia shown in the map on page 4 of the January issue of the Bulletin should read the Republic of Djibouti. Moreover, the administrative region of Ethiopia bordering Shoa, Hararge, Bale and Sidamo is Arsi.

The GATT Multilateral Trade Negotiations – Principal Results

Information Note prepared by the Commission of the European Communities (November 1979) on the occasion of the agreement given by the Council of Ministers on 20 November 1979 to the results of the Multilateral Trade Negotiations undertaken in the framework of the GATT.

Contents

I. Results which exceed appearances
II. Protectionism and the "world crisis" held in check
III. Protracted and sometimes difficult negotiations
IV. Lowered customs tariffs
V. Freer and more stable agricultural exchanges
VI. Improved discipline and more balanced development of international exchanges

I. RESULTS WHICH EXCEED APPEARANCES

The multilateral trade negotiations (MTN) — known as the "Tokyo Round" because the decision to initiate them had been taken in the Japanese capital in September 1973 by 103 nations of the world — ended on April 1979 with a general agreement on the essential points. Their goal was to reduce obstacles to trade in the world, and the most spectacular element is, to all appearances, the lowering of customs duties which will go into force at the beginning of 1980.

Nevertheless, without wishing to minimize the importance of this aspect, the results of the MTN far exceed the simple fact that in the future, duties will be lowered; basically speaking:

— *a new discipline in international exchanges has been instituted*

Between industrialized countries, customs duties — with the exception of "peaks" remaining in a few customs tariffs — had as obstacles to trade become almost secondary as compared to the regulations and restrictions of customs valuations, of technical standards, subsidies, compensation rights, and protectionism in national markets. The MTN have helped to define (with one exception, the safeguard clause) new codes and other legal texts on these various aspects which should if not eliminate, at least reduce abuses and disguised protectionism and pave the way for a freer and more harmonious development in international exchanges.

— *International trade for agricultural products will be considerably improved and facilitated*, by taking into consideration the special aspects of this sector. Prior to the Tokyo Round two major gaps (among several others) existed in the organization of worldwide agricultural exchanges: the United States benefited from a dispensation which allowed it not to respect all the GATT rules and for example to apply a surcharge on imports of subsidized products without taking into account GATT's clear-cut regulations in this sector; the common agricultural policy (CAP) of the European Community was in certain of its aspects, the object of recurring disputes aimed at challenging its legitimacy.

This situation has been modified by negotiation: the United States will, at present, accept greater international discipline; and the specific mechanisms of the CAP will no longer be contested as to their basic principle, their application being — as in the past — subject to GATT regulations.

In addition, systems for permanent consultation have been introduced into the agricultural sector, in order to supervise the stabilization of world markets in view of the special responsibility of this sector in the solution to such problems as hunger in the world and the chronic malnutrition of entire populations.

II. PROTECTIONISM AND THE "WORLD CRISIS" HELD IN CHECK

The results of the Tokyo Round are all the more significant that they were achieved in a period of international economic recession. In periods of expansion, it is relatively easy to reduce obstacles to exchanges as imports do not contribute to fear of unemployment or the failure of local business enterprises. The situation is quite different in times of recession when the "protectionist reflex" comes into play with the illusion that it is possible to solve problems by transferring them to others and by closing one's borders. The multilateral trade negotiations largely contributed to reducing this danger: conscious of their interdependence and their responsibilities, the leading countries or world trade-groups — headed by the Community — turned their backs on protectionism which could easily have taken hold and which, in case of failure of the negotiations, would have plunged them into a situation more severe than that of the 30's. The Vice-President of the European Commission, Mr. *Haferkamp*, had declared that in the event of a world trade war, the number of unemployed in the Community could have exceeded 10 million: social and political tensions would have become such that the structures of European society would undoubtedly not have resisted.

Naturally, to hold protectionism in check it would not be sufficient to suppress the barriers to exchanges without criteria, guidelines or precautions. The guidelines constitute the "rules of the game". They are the codes and procedures already mentioned. The criteria concern, for example, the special advantages granted the weaker nations, that is to say, the developing nations, from whom the industrialized nations expect only partial reciprocity and in some cases none at all. Precautions

© 1980 International Bureau of Fiscal Documentation – BULLETIN

refer essentially to the balancing of reciprocal concessions. After several years of efforts, the European Commission, which conducted negotiations on behalf of the Community, on the advice of the Council of Ministers and in permanent contact with the Committee of Representatives of the Member States (Committee known as the Article 113 Committee), has considered that the overall results are "reasonable, well-balanced and acceptable". From the European Community's point of view, the results are far from negligeable: goals have not all been achieved, but in a few fields they have even been exceeded; in return for certain concessions, the European Community has improved its access to the American market, and, to a lesser degree, to the Japanese market and to those of other developed countries. The Community Ministers have also shared this view, on the condition, of course, that the commitments subscribed to would be respected and that the decisions taken would be completely and correctly implemented by all countries.

III. PROTRACTED AND SOMETIMES DIFFICULT NEGOTIATIONS

The multilateral trade negotiations (MTN) were formally opened upon the adoption of the "Tokyo declaration" by the Ministers of 103 countries, gathered together in September 1973 in the Japanese capital within the context of the General Agreement on Tariffs and Trade (GATT). The Tokyo meeting was the result of an initiative on the part of the United States, the European Community and Japan who, early in 1972, had agreed upon two joint declarations dealing with the timeliness of seeking ways to reduce obstacles to international trade. These declarations gave the basic political impetus to the project. Following the Tokyo meeting, negotiation structures were rapidly put into place, in Geneva. However, the leading partners still had to define their goals and acquire the necessary instruments of negotiation.

For the Community, this was done in June 1973, when the Council adopted a "global concept" specifying the goals to be attained and the conditions for reciprocity. The government of the United States had to wait until January 1975 that Congress in its "Trade Act" grant it the necessary powers to negotiate. The following month, the Community established the details of its negotiation stand.

After a long period of preparation, the actual discussions began towards the middle of 1977, when a certain number of basic divergences (concerning in particular the scope and conditions of negotiations relative to agriculture) between the Community and the United States were smoothed out. The criteria for the lowering of customs duties, with, as requested by the European Community, the acceptance of the principle according to which the highest duties were to be reduced to a greater degree so as to harmonize the tariff "profiles", were defined on the basis of a formula proposed by the Swiss. The basic agreements reached in the middle of 1977 made it possible to establish a precise schedule for the presentation of the demand and offers of the various participants with regard to "tariffs", "agriculture" and "non tariff measures" (for recurring problems), and also to achieve substantial progress in the elaboration of codes concerning the non-tariff measures liable to find multilateral solutions.

Towards the middle of 1978, an agreement in principle was achieved between the leading participants, on the content of the "final negotiation package", following a few difficult phases and several interventions at a political level. Technical difficulties were surmounted and the political will to succeed on the part of the Nine as well as of the United States, Japan and the other developed countries was confirmed. A "joint agreement memorandum" was published in July 1978, summing up the situation and mentioning the goals still to be achieved. By the end of 1978, the tariff negotiations, both in the field of industry and agriculture, as well as the elaboration of the codes had been fully completed. Several months were then necessary to iron out the last divergences and to determine the particular conditions of reciprocal concessions. In April 1979, the negotiators were able to initial the minutes recording the results of the negotiations, in view of submitting them to the respective governments and authorities. The Congress of the United States accepted these results in July 1979. Confronted with a Commission report on the October negotiations, the Council of the European Community deliberated on it at its session on October 29. In the meantime, contacts and conversations were being pursued with the developing countries and with a few developed countries, among which Australia, with a view to completing the negotiations on specific points.

A tariff protocol finalizing details of the tariff negotiations between industrialized countries was signed in July and an additional tariff protocol was established in November to enable other countries, principally the developing countries, to include their concessions.

It was not possible to conclude negotiations on one point alone, the new procedures and guidelines concerning the safeguard clause to be included in the GATT. Discussions on this subject will continue outside the Tokyo Round, and in the meantime the GATT's existing "clause" remains valid.

IV. LOWERED CUSTOMS TARIFFS

Customs duties throughout the world had already been reduced in the past in preceding negotiations. There remained nevertheless, certain particularly high customs duties, specially within certain "irregular" tariffs which were composed of very high duties next to others which were very low. The Tokyo Round provides for a new *generalized lowering of tariff rates by close to one third* by the leading trade partners (European Community, United States and Japan in particular) and the total suppression of duties in a significant sector, *aeronautics*. Reductions will not be "linear", that is to say that they will not be identical in their percentage: the duties which at present are the highest and which are to be reduced according to the so-called Swiss formula, will be subject to greater reductions than others. This will decrease the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

difference between the customs tariffs of the leading partners in international trade.

The customs duty rates of the European Community will, for the greatest part be of 5 percent to 10 percent; as few as 180 duties out of several thousand included in the Community's customs tariff will exceed 10 percent and only one (the rate applied to lorry imports) will exceed 20 percent. This homogeneous tariff will continue to constitute an important element of cohesion for the Community and will enable it to maintain reasonable protection with regard to outside pressures. For sectors with special economic and social conditions, the present reduction of duties will be small or non-existent: automobiles, lorries, shoes, fertilizers, and certain plastic and chemical products. In "sensitive" sectors such as the textile sector, protection is not provided by customs duties alone, but by quantitative agreements ("multifibre" international agreement).

The United States will reduce its tariff by close to a third. Thus, most of its imports will be subject to customs duties inferior to 5 percent; a few duties superior to 20 percent and even 30 percent will nevertheless still remain. In its final list, the United States thus tends to eliminate restrictions and to suppress the "American Selling Price".

Japan will reduce its tariff by almost one half if one takes into consideration the legal tariff (which, in fact, was not applied for several years), and by one quarter if the duties actually applied are taken into account. The profile of the Japanese tariff will be quite similar to that of the European Community (most duties will be inferior to 5 percent) but more 15 percent to 20 percent "peaks" will remain. The incidence of the Tokyo Round tariff reduction on the other industrialized countries will be less important particularly in view of the fact that the European Community already applies reciprocal exemptions in its exchanges with most of the Western European nations such as Switzerland, Austria, Sweden, Norway, Finland and Iceland.

Among the results, the following should also be mentioned: the total suppression among the leading industrial countries as a whole, of customs duties in the civil aeronautics sector, beginning in 1980. The Community had, in practice, already suspended the application of duties on its aircraft import: it finally has obtained total reciprocity, particularly significant for the Airbus sales to the United States and Japan, in addition to an extended application to exchanges of other products of this sector as well as to spare parts.

In general, the *customs reductions will be spread out over a period of eight years*, from 1980 to 1987, accelerated in certain cases such as in the field of aeronautics, as already mentioned. After the first five stages of reduction, the European Community will examine the situation to decide on proceeding to the final three stages, if disarming is pursued. The reductions as a whole should be in force by the beginning of 1987 at the latest.

V. FREER AND MORE STABLE AGRICULTURAL EXCHANGES

The specific character of the agricultural sector, which the European Community has asserted from the start, and which has finally come to be recognized by all, has led to special solutions taking into account the fact that duties do not constitute in themselves the essential element regulating exchanges. For a few basic products -- cereals, dairy products, beef — the goal was to set up special international arrangements and in two out of the three cases (with the exception of cereals) this goal was achieved. The principles and mechanisms of the Common Agricultural Policy (CAP) of the European Community were not called into question even in the aspects which had been challenged in the past (namely export refunds).

Only one important setback was noted: the failure to obtain in due time an international arrangement for cereals. The negotiations on this subject will continue outside the Tokyo Round. The arrangement on dairy products includes information and cooperation procedures for the sector as a whole, and price guidelines for powdered milk, butter, butteroil and cheese products. The beef arrangement is based on a mutual information mechanism and on a system of multilateral consultations in case of problems in the world market. In addition, it set up an "advisory organism on agricultural problems".

These arrangements and procedures are completed by specific nation-to-nation concessions. The European Community has in particular, obtained freer access to the American market for cheese products, alcohols, spirits and beef in exchange for certain concessions on poultry and on a special variety of table grapes and for a few arrangements concerning the importing of tobacco, rice and prime quality beef.

Among other positive results for Europe, the improved access obtained for cheese products (Canada, Australia, Japan), for alcoholic drinks (Canada, New Zealand, Japan) and for products of the agro-alimentary industry should be mentioned. In exchange, the European Community will stabilize the regulation of its own imports of beef and of certain dairy products coming from various countries.

VI. IMPROVED DISCIPLINE AND MORE BALANCED DEVELOPMENT OF INTERNATIONAL EXCHANGES

The reduction, and even suppression, of customs duties would not be very significant were the possibility of introducing other obstacles to trade, of applying discriminatory measures on foreign products originating in certain areas, of applying, whenever one chooses, compensation duties, of excluding certain sectors from international competition, not contained and disciplined. It is for this reason that the defining of new, more clear-cut and more equitable rules for international exchanges constitutes one of the most important results of the Tokyo Round, without which the customs

© 1980 International Bureau of Fiscal Documentation – BULLETIN

reductions would have led to advantages that were simply illusory or at the least uncertain and short-lived.

At the same time, however, it would have been unthinkable — for the European Community as for the other nations — to grant partners excessive "inspection rights" over domestic legislation and conduct, which are dictated at times by legitimate and urgent demands (for example, when public health is involved). A balance has, in general, been achieved after long and complicated negotiations. The "codes" elaborated as a result, improve and update the rules and procedures governing world trade, by facilitating the suppression or reduction of a number of non-tariff barriers to exchanges and by improving supervision.

The new rules cover the following fields:

(i) *Code on the technical obstacles to trade*, concerning obstacles resulting from the fact that the compulsory technical standards for a large number of industrial products (cars, electrical machinery, household appliances, etc.) are not the same from one country to another. The new agreement introduces procedures which, while respecting the right to establish the standards which protect the health and safety of consumers and utilizers, aim at avoiding discriminations and "disguised protectionism" (the possibility to protect national production by imposing standards which create problems that are often insurmountable for foreign producers).

(ii) *Code on Government purchases.* This code aims to eliminate legislation or administrative practices which channel government purchases to national suppliers or which provide price preferences for these purchases. The goal has only been partially achieved; but the code nevertheless opens exceptionally important markets to European industries while naturally guaranteeing a certain reciprocity. This presents two advantages: for the firms, which will benefit from a widening of their markets, and the governments which will benefit from broadened competition.

(iii) *Code on subsidies and compensation rights*. The goal of this code is to put an end to the arbitrary introduction of compensation rights on importing by guaranteeing a uniform application of the GATT provisions. The imbalance between rights and obligations which previously existed has been eleminated. On the other hand, new procedures for the discussion of domestic subsidies which could adversely affect international trade, have been established.

(iv) *Anti-dumping code* which aims at prohibiting practices which consist of penetrating foreign markets by selling at prices below the normal price. In this case, the goal has also been to eliminate the discrepancies between the various countries in their application of GATT rules. Procedures have been more clearly defined.

(v) *Code on import licences and code on customs valuations* (namely, the manner in which the value on imported products is calculated in view of applying an ad valorem customs duty to these). These codes cover technical fields, which, however, are of considerable importance to importers and exporters and to the legal basis for stability of exchanges. The same can be said of the agreement which aims at discouraging the exchange of spurious merchanidse.

An agreement on a new *safeguard clause* was not reached. At the present time, should a country note that imports of a given product provoke serious perturbations on its market, it can adopt measures of protection, which, however, according to a certain interpretation of existing rules, must be applied to all exporting countries. The new clause under consideration would establish criteria for the application of "selective" measures exclusively to products from certain sources having caused the serious prejudice observed. Certain of the developing countries opposed the clause, fearing that, in practice, the "selective clause" would be more often directed against their products. Nevertheless, the problem remains extremely urgent for a large number of GATT countries and the European Community will continue to explore the possibilities of an agreement after the Tokyo Round.

of the May 1980 issue

Lee Fook Hong:

SINGAPORE: TAX DEVELOPMENTS 191

I. **Tax changes** *191*
The author discusses the new incentives to further the expansion of the economy and various amendments introduced by the Income Tax (Amendment) Act 1980.

II. **Summary of the 1980 Budget** *195*
The author analyzes the Budget 1980 presented by Mr. Goh Chok Tong which has been well received by most Singapore citizens who describe it as a "tax cut"-budget.

SINGAPOUR: MODIFICATIONS FISCALES

I. *Aménagement des lois fiscales*
L'auteur étudie les nouvelles mesures d'encouragement pour favoriser le développement de l'économie et les différentes modifications introduites par le "Income Tax (Amendment) Act" de 1980.

II. *Résumé du Budget 1980*
L'auteur analyse le Budget 1980 présenté par M. Goh Chok Tong et bien accueilli par la plupart des habitants de Singapour qui le qualifie de Budget "réduction d'impôt".

SINGAPUR: STEUERENTWICKLUNGEN

I. *Steueränderungen*
Der Verfasser bespricht die Anreize, durch die ein weiteres Wachstum der Wirtschaft bewerkstelligt werden soll, sowie die sonstigen Veränderungen, die durch das Einkommensteueränderungsgesetz 1980 bewirkt werden.

II. *Zusammenfassung zum 1980-Haushalt Singapurs*
Der Verfasser untersucht den vom Herrn Goh Chok Tong vorgelegten Haushalt 1980, der von den meisten Bürgern begrüsst und als "Steuersenkungs-Haushalt" bezeichnet wurde.

Dr. Erwin Spiro:

THE 1980 INCOME TAX CHANGES IN THE REPUBLIC OF SOUTH AFRICA 199

The author discusses the latest developments in South African taxation. The Budget 1980 adjusts various tax concessions in order to prevent the combination of inflation and a progressive tax system from increasing the real tax burden on the community and thereby retarding economic growth.

LES MODIFICATIONS DE 1980 DE L'IMPOT SUR LE REVENU EN REPUBLIQUE SUD-AFRICAINE

L'auteur commente les dernières modifications intervenues en matière d'imposition sud-africaine. Le Budget de 1980 adapte différentes concessions fiscales afin d'éviter que l'inflation combinée à un système fiscal progressif entraîne une augmentation de la charge fiscale réelle pesant sur la communauté, retardant ainsi la croissance économique.

DIE STEUERAENDERUNGEN FUER 1980 IN DER REPUBLIK SUEDAFRIKA

Der Verfasser untersucht die neuesten Entwicklungen im Steuersystem Südafrikas. Durch den Haushalt 1980 werden verschiedene Vorschriften dergestalt angepasst, dass der progressive Steuertarif durch die inflationäre Entwicklung nicht zu einer höheren Steuerbelastung führt und damit das volkswirtschaftliche Wachstum beeinträchtigt.

THE TAX SYSTEM OF KIRIBATI 204

Brief survey of the fiscal policy and the tax system of Kiribati (former Gilbert Islands).

LE SYSTEME FISCAL APPLICABLE A KIRIBATI

Résumé succinct de la politique fiscale et du système d'imposition en vigueur à Kiribati (les anciennes îles Gilbert).

DAS STEUERSYSTEM IN KIRIBATI

Kurzer Überblick über die Finanzpolitik und das Steuersystem der Republik Kiribati (früher: Gilbert Inseln).

IRELAND: BUDGET 1980 207

Extract of the text of the Budget statement by the Minister for Finance, Mr. O'Kennedy, pronounced on February 27, 1980. The relatively low level of tax in Ireland has been made possible by large-scale borrowing and again income taxes and social welfare have been improved. However, indirect taxes will be considerably increased, for instance VAT will go up from 20 to 25 percent.

IRLANDE: BUDGET 1980

Extrait du Budget présenté le 27 février 1980 par le Ministre de Finances, M. O'Kennedy. Le niveau d'impôt relativement bas en Irlande a été rendu possible par les emprunts à grande échelle et les impôts sur le revenu ainsi que la sécurité sociale ont de nouveau aménagé. Toutefois les impôts indirects ont été considérablement augmentés, par example la TVA passe de 20 à 25 pour cent.

IRLAND: DER HAUSHALT 1980

Auszüge aus der Haushaltsrede, die der Finanzminister, Herr O'Kennedy, am 27. Februar 1980 gehalten hat. Die verhältnismässig geringe globale Steuerbelastung in Irland wurde durch eine umfangreiche Kreditaufnahme ermöglicht. Der Haushalt sieht Verbesserungen bei der Einkommensteuer sowie bei der Sozialversicherung vor. Andererseits werden die indirekten Steuern beträchtlich erhöht; der Umsatzsteuersatz steigt z.B. von 20 auf 25 v.H.

ZAMBIA: BUDGET SPEECH 1980 . . . . . **218**

Extract of the Budget Speech 1980 pronounced by the Minister of Finance, Mr. Musokotwane. The Zambian Government primarily intends to mobilise additional revenue. Consumption of luxury items will be discouraged and the conservation of expensive imported materials will be promoted.

ZAMBIE: BUDGET 1980

Extraits de la présentation du Budget 1980 prononcée par le Ministre de Finances M. Musokotwane d'obtenir des revenus supplémentaires. La consommation de produits de luxe serait dissuadé et l'utilisation de matériaux chers importés serait faite avec discernement.

SAMBIA: HAUSHALTSREDE 1980

Auszüge aus der vom Finanzminister, Herrn Musokotwane gehaltenen Haushaltsrede. Die Regierung will in erster Linie die Staatseinnahmen erhöhen. Ferner soll der Konsum von Luxuswaren verteuert und eine bessere Unterhaltung von teuren Importgütern gefördert werden.

II. SUMMARY OF THE 1980 BUDGET

A. THE ECONOMIC EXPANSION INCENTIVES (RELIEF FROM INCOME TAX) (AMENDMENT NO. 2) ACT, 1979

The Economic Expansion Incentives (Relief from Income Tax) (Amendment No. 2) Act, 1979 was passed by Parliament on December 11, 1979 and assented to by the President on December 18, 1979. It was published in the Singapore Government Gazette Act Supplement No. 31 dated December 28, 1979.

This Act amends the Economic Expansion Incentives (Relief from Income Tax) Act to ensure that in computing the export profit of an export enterprise which qualifies for tax relief under Section 32 of the Act, such part of the capital allowance as may be attributable to the export profit qualifying for the tax relief must be deducted.

The Amendment will take effect from the Year of Assessment (Y/A) 1980.

B. INCOME TAX (AMENDMENT) ACT, 1980

The Income Tax (Amendment) Act, 1980 was passed by Parliament on March 17, 1980 and assented to by the President on March 26, 1980.

It was published in the Government Gazette Act Supplement No. 12 dated April 3, 1980. [1]

The Income Tax (Amendment) Act, 1980 seeks to implement some of the tax changes announced in the Government's 1979 Budget proposals and also to make other amendments to the Income Tax Act.

The major tax changes effected by the Amendment Act are summarised in the Appendix hereto. Below are some brief notes on the amendments to the various sections and the respective dates on which such amendments will be effective.

1. The Act Supplement is obtainable from the Singapore National Printers (Pte.) Ltd., 303 Upper Serangoon Road, Singapore 1334 and S.N.P. Publications Sales Division, Fullerton Building, Ground Floor, Singapore 0104. The price is S$ 1.50 per copy.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Section 10(1A) — **Effective from Y/A 1980**

1. Net annual value of owner-occupied properties

The proviso to Section 10(1A) has been amended to include "..... any property owned by a married woman living with her husband shall be deemed to be owned by the husband."

Before the amendment, the Act allows a husband and a wife to claim exemption from income tax on one property each.

After the amendment, only one property for each couple will be exempt from income tax with effect from the Year of Assessment 1980.

Section 10(8) — **Effective from Y/A 1979**

2. Maintenance payment received by a child

This new Section 10(8) provides that any maintenance payment made to a child under a court order or a deed of separation is not deemed to be income and therefore will not be subject to tax.

Section 10(6A)
Section 13(1)(x) — **Effective Y/A 1979**

3. Exemption for pensions

Since the Year of Assessment 1977 only 50 percent of the pension derived by a Singapore resident has been subject to tax. This Section has now been deleted and the following new paragraph (x) has been added to Section 13(1):

> "(x) the income derived by a person resident in Singapore from any pension granted under any written law relating to pensions in Singapore or under such other pensions scheme as may be approved by the Minister by notification in the Gazette."

Accordingly any pension granted under any written law in Singapore as well as under any approved private pension scheme designated by the Minister will be exempt from tax with effect from the Year of Assessment 1979.

Section 14(3A) — **Effective 1.4.79**

4. Deduction from car expenses

A new Sub-section (3A) has been added to Section 14 to increase the limitation on the amount of allowable expenses from $15,000 to $25,000 in respect of a motor car acquired on or after April 1, 1979. The effect of this amendment is that the deduction for expenses incurred by any business service passenger vehicle with "Q" registration costing more than $25,000 purchased on or after April 1, 1979 shall be limited to the amount which bears to such outgoings and expenses the same proportion as $25,000 (previously $15,000) bears to the capital expenditure incurred by the owner in respect of the motor car. For example:

1) Total running expenses incurred is $5,000
2) QEL 1234 costing $30,000 was purchased in November 1979
3) The amount to be allowed against taxpayer's income will be $\frac{25,000}{30,000}$ x $5,000 = $4,166.70

Section 14B (3)(c) — **Effective 1.4.79**

5. Double deduction not allowed

This amendment precludes any company which is enjoying tax relief under the Economic Expansion Incentives (Relief from Income Tax) Act from being given double deduction of expenses under that Section.

Section 14C — **Effective 1.4.79**

6. Double deduction for export market development expenditure

The new Section 14C provides for double deduction of the following expenses incurred on or after April 1, 1979 by a company resident in Singapore principally for promoting the export of goods manufactured in Singapore:

a) Export market development expenditure incurred in carrying out a marketing project overseas approved by the Minister; or
b) Advertising expenses in respect of advertisements placed in any approved Singapore publication designed for publicity overseas.

Section 14D — **Effective 1.4.79**

7. Expenditure on scientific research projects

A new Section 14D has been inserted to provide for deduction of expenditure on scientific research incurred on or after April 1, 1979 by a manufacturing company where the deduction would not be allowable as revenue expenses under Section 14 of the Act. The expenditure must be incurred on scientific research carried out in Singapore and related to the trade or business of the taxpayer or consist of payments to an approved research institute for scientific research related to the taxpayer's trade or business.

Expenditure of a capital nature e.g. capital expenditure incurred on plant, machinery, land or buildings will qualify for deduction.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Section 15(1)(j) — **Effective Y/A 1980**

8. Motor cars registered and used outside Singapore

Section 15(1)(j) has been amended to allow deductions for expenses incurred in respect of motor vehicles registered outside Singapore and used exclusively outside Singapore provided such vehicles are used for the purposes of producing income subject to Singapore income tax.

Section 19(2A) — **Effective Y/A 1980**

9. Capital allowances on cars limited to $25,000

A new proviso to Section 19(2A) has been introduced to increase the limitation on capital allowances from $15,000 to $25,000 in respect of a motor car acquired on or after April 1, 1979.

When a business service passenger vehicle costing more than $25,000 was purchased on or after April 1, 1979 the respective amounts of initial and annual allowances claimed shall be limited to 20 percent each of $25,000.

For example, if a business passenger car (QEL 1234) was purchased in November 1979, costing $30,000, the initial and annual allowances to be allowed for Year of Assessment 1980 will be restricted to $5,000 and $5,000 respectively.

(Note: There are proposals in the 1980 budget for new depreciation rates and change from reducing balance method to straight line method).

Section 19(2D) — **Effective**

10. Capital allowances for cars registered and used outside Singapore

This sub-section has been amended to enable capital allowances to be granted in respect of motor vehicles which are registered outside Singapore and used exclusively outside Singapore provided such cars are used for the purposes of producing income liable to Singapore income tax.

Section 20(5)(c) — **Effective 1.4.79**

11. Sale price of cars purchased on or after 1.4.79

Consequent upon the increase in the limitation of capital allowances from $15,000 to $25,000 the sale price of a business service passenger vehicle purchased on or after April 1, 1979 costing more than $25,000 will be computed according to the following formula:

$$\frac{25{,}000}{\text{purchase price of the car}} \times \text{selling price}$$

Section 20(5A) — **Effective Y/A 1981**

12. Balancing allowances for business service passenger vehicles only

This new Sub-section has been introduced to assure that

TAXES AND INVESTMENT IN ASIA AND THE PACIFIC

Sponsored by the U.N. Economic and Social Commission for Asia and the Pacific – ESCAP.

- Economic Analysis

no balancing allowances will be granted on the sale of a motor car which is not, for any basis period after the basis period for the Year of Assessment 1981, registered as a business service passenger vehicle.

Section 39(2)(e)(ii) **Effective Y/A 1980**

13. Central Provident Fund (CPF) contributions

The maximum amount of compulsory contributions made to the CPF Board allowable as relief has been increased from $4,000 to $5,000.

For example, if Mr. A's CPF contribution for the year 1979 is $5,080 the maximum amount of CPF to be allowed against his assessable income will be $5,000 (maximum) for the Year of Assessment 1980.

This amendment also applies to compulsory contributions made to other pension or provident fund schemes approved by the Minister for Finance.

Section 26
Section 43C **Effective Y/A 1980**

14. Concessionary rate of tax for income from insuring of offshore risks

The scope of the concessionary rate of tax for insurance companies under Section 43C of the Act has now been extended by the amendment act from income derived from the *reinsuring* of offshore risks to income derived from the *insuring* of offshore risks.

II. SUMMARY OF THE 1980 BUDGET*

On March 5, 1980, the Minister for Trade and Industry, Mr. Goh Chok Tong, presented his 1980 Budget to the Parliament of the Republic of Singapore. Before outlining the financial policy for the coming year, he summarised the salient points of the "Economic Survey of Singapore 1979" and spelt out the economic objectives for the future and the strategies for the Eighties.

Singapore's economic performance in the seventies

In his summary of Singapore's economic performance in the 1970s Mr. Goh revealed that Singapore's economy grew at an average annual rate of 6.8 percent in 1974 and 4.0 percent in 1975. For the decade as a whole, real GDP grew at an average rate of 9.4 percent per annum, better than the 8.7 percent achieved in the Sixties.

Singapore's economy in 1979

On Singapore's economy in 1979 Mr. Goh said that in 1979 world economic performance remained sluggish for the third successive year. The industrialised economies averaged a growth of 3 1/4 percent, slower than the already poor growth rates of 3.7 and 3.9 percent in 1977 and 1978 respectively. World trade grew by 7 percent, slightly faster than the previous year. Inflation, however, worsened. Consumer prices climbed up to 10 percent, from 8 percent in the previous two years.

Singapore's economic performance in 1979 was encouraging, and better than the previous years. Real GDP rose by 9.3 percent, as against 8.6 percent for 1978. The higher rate of growth was achieved with relative price stability. Despite the higher oil prices and the larger wage increase recommended by the National Wages Council (NWC), consumer prices rose by only 4 percent, lower than the 4.8 percent in 1978. Unemployment was reduced to 3.3 percent from 3.6 percent in the previous year.

All sectors of Singapore's economy expanded. Manufacturing grew by 14 percent, the highest rate of expansion since the recession. The value of external trade rose substantially by 32 percent, but this was due mainly to oil price increases.

Mr. Goh said that overall he would have rated last year's economic performance as excellent had it not been marred by one black spot — declining productivity growth. Economic expansion was achieved more through a quantitative input of workers than through productivity increases. Employment increased by 6.6 percent, 2.1 percentage points higher than the previous year, while productivity growth fell to 2.6 percent, from 4 percent in 1978.

Economic objectives and development strategies for the Eighties

Outlining his development strategies for the 1980s, Mr. Goh set clearly defined targets for 1990. Singapore's development strategies for the 1980s aimed at attaining the standard of living achieved by Japan in 1978. This means that the target is an 8-10 percent annual growth in the 1980s.

"*If we succeed, we shall attain in 1990, a per capita income of S$15,000 to S$18,000 (at 1979 prices) which Japan has already achieved in 1978*", said Mr. Goh. He then proceeded to elaborate on the objectives in specific areas.

On industrial development Mr. Goh said that in the 1980s, he would like the manufacturing sector to become even more dynamic, increasing its share of GDP from the present 22 percent to 31 percent by 1990, and leading the economy through consistent high productivity increases.

The Singapore Government will provide better jobs with higher wages for a better educated and trained population as well as opportunities for local entrepreneurs to participate in industries either on their own or in joint ventures with foreign investors.

On trade development the Minister forecasts that by 1990 manufactured goods will comprise 60 percent of exports if Singapore succeeds in achieving its industrial goals in the 1980s.

Through the tax incentives for international trading companies, the Government will encourage the formation of multi-activity international trading companies to push the export of Singapore manufactured products in overseas markets. The double tax deduction scheme will be extended to cover overseas marketing campaigns.

On services development Mr. Goh said that in the 1980s Singapore would be developed into a financial supermarket offering a wide and sophisticated range of financial services. The Government aims to develop Singapore into an international funds management centre. Bankers would be encouraged to improve efficiency and productivity through greater computerisation and other forms of automation.

Transport and communication were the leading growth sectors in the 1970s. These sectors will remain an important pillar of the economy while computer services will be more actively promoted in Singapore and overseas.

The export of consultancy and technical expertise will become more important in the 1980s. The conces-

* See for an excerpt of the Budget Speech 1980 page 150 of the April 1980 issue of the BULLETIN.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

sionary tax on income and the 5 percent preferential margin to local contractors should help in the aim of exporting consultancy services.

Computer services are a crucial area to concentrate on and Singapore should also plan to export its computer software and services.

To stimulate utilisation, computers and peripheral equipment will be allowed to be written off in three years for tax purposes. In addition to the incentives given to International Consultancy Services, the Government is studying the feasibility of granting pioneer status for highly sophisticated computer software activities which are export-oriented as well as providing a concessionary tax rate of 10 percent, for a period of five to ten years for certain computer-related specialised companies.

On ASEAN economic cooperation the Minister stressed that in the 1980s, Singapore would continue to seek and foster closer economic cooperation within ASEAN for Singapore has a stake in the stability and prosperity of the ASEAN region.

On manpower development Mr. Goh said that the pressing need throughout the restructuring of manufacturing industry would be for an abundant supply of skilled, technical and professional manpower. Exact needs are still being worked out and the universities and technical institutions will be asked to expand rapidly. Singapore will be short of engineers in the 1980s at the current rate of output from the University. The University of Singapore will be asked to expand and re-constitute its Engineering Faculty to produce more and better-suited engineers to service and manage Singapore's expanding economy.

Professionals need experience to measure up to international standards of professional competence. It is, therefore, necessary to ensure that there are no closed shop practices of professional cartels. Registration for professionals like architects, doctors, engineers, accountants and lawyers would be further liberalised.

The Minister added, *"To help overcome shortages of labour, policies would be reviewed to attract more females to take up employment and to encourage older people who are still fit to remain in employment."*

On the Budget for the coming fiscal year, the Minister said that it has been formulated on the basis of the following guidelines:

(a) *Financial prudence:* We shall continue with the prudent policy of keeping Government recurrent expenditure down to the minimum and within the revenue expected to be collected within the fiscal year, But consistent with a high standard of administration.

(b) *Development objectives:* The Budget should reflect the thrust and objectives of our policy to restructure the economy and of our development strategies for the Eighties. It should balance economic growth with social objectives. Investment in infrastructural development should be matched by investment in people and improvements in housing and other social amenities.

After quoting figures for the total estimated expenditure and revenue for the financial year 1980, the Minister proposed the following:

(a) Tax changes
(b) Tax concessions
(c) Personal income tax
    (i) Reduction in tax rates, and
    (ii) Relief for handicapped persons.

Tax changes

Withdrawal of protection for cigarettes and tobacco

At present, the manufacture of cigarettes is protected through the imposition of an import duty higher than excise duty. Withdrawal of protection is in keeping with the development strategy to expose to competition those industries which should have grown out of the fledgling stage. The Singapore Government has, therefore, decided to remove this protection for cigarette manufacture by harmonizing excise duty with import duty. Excise duty on cigarette manufacture will therefore be raised from $4 per kilogram to $9 per kilogram. The import duty of cut rag will also be increased from $35 per kilogram to $36 per kilogram.

Tax concessions

(i) Research and development

To encourage manufacturers to develop new products and processes, and to modify existing ones, specific tax incentives will be given to promote R & D activities in Singapore.

For manufacturing enterprises conducting R & D and R & D institutions servicing them, the following tax incentives will be given:

(a) Double deduction of R & D expenditure, other than on buildings and equipment, on a case-by-case basis;
(b) Accelerated depreciation over three years for all plant and machinery for R & D;
(c) Investment allowance of up to 50 percent of the capital investment in R & D, excluding building costs, on a case-by-case basis;
(d) Extension of the initial allowance of 25 percent and annual allowance of 3 percent, presently available only to industrial buildings and structures, to R & D buildings; and
(e) Capitalisation and writing-off of lump sum payments for manufacturing licensings for a period of 5 years.

These concessions will take effect from Year of Assessment 1981.

(ii) Capital allowances for plant and machinery

In line with Singapore's policy to develop high technology and to assist enterprises to mechanise, computerise, and upgrade their operations, the tax treatment of capital allowances for plant and machinery will be liberalised as follows:

© 1980 International Bureau of Fiscal Documentation – BULLETIN

(a) Accelerated depreciation allowance of 33 1/3 percent over three years will be extended to investment in computers and R & D equipment;
(b) The method of granting annual allowances will be converted from the reducing balance to the straight line method; and
(c) The existing depreciation schedule will be replaced by another with more realistic rates for write-offs. See Appendix I to the Budget speech on page 153.

(iii) Stamp duties

In previous years, many incentives have been given to promote the development of Singapore as a financial centre. This year, the Government intends to remove the inconveniences experienced by financial enterprises by removing certain duties altogether and rationalising others at a single rate:

(a) *Mortgages and debentures*
The existing rates of duty on mortgages and debentures will apply but the maximum amount payable is now fixed at $500.

(b) *Marketable securities*
Asian Dollar and Singapore Dollar Bonds are presently granted stamp duty remission on a case-by-case basis. The exemption will now be given across the board.

Stamp duty on contract notes for the trading of marketable securities will also be abolished.

(c) *ACU offshore loan agreements*
The present 1/2 percent ad valorem stamp duty, subject to a maximum of $500 on ACU offshore loan agreements, will be abolished.

In addition, stamp duties on all other documents relating to ACU offshore loans will be abolished.

(d) *Share certificates*
The 0.1 percent ad valorem duty on share certificates will be removed.

(e) *Share transfer deeds*
The 0.2 percent and 0.3 percent duty on share transfer deeds will be standardised at 0.2 percent.

(f) *Insurance plicies*
The existing multifarious duties will be standardised at a single rate of $1 per document.

(g) *Partnership agreements*
The existing manifold rates will be standardised at a single rate of $10.

(h) *Promissory notes*
The duty will be revised to $1 per note.

Stamp duties on the following instruments in the First Schedule of the Stamp Act will also be removed completely:

Article 3 — Agreement or Memorandum of Agreement
Article 7 — Appraisement
Article 8 — Apprenticeship Deed
Article 12 — Average Bond
Article 13 — Award
Article 25 — Contract
Article 28 — Copy or Extract
Article 33 — Deed of any kind not described in this Schedule
Article 37 — Extract
Article 43 — Letter of Allotment and Letter of Renunciation
Article 48 — Note of Protest by the Master of a Ship
Article 54 — Protest of Bill or Note
Article 55 — Protest by the Master of a Ship
Article 67 — Valuation
Article 68 — Warrant for Goods

The concessions on stamp duties will take effect from 1 April 1980.

(iv) Concession for off-shore gold transactions

The Singapore Government has received representations that the tax rate of 40 percent on income derived from off-shore gold transactions inhibits the development of the market. The matter has been studied and Government has decided to remove this disincentive. With effect from the year of assessment 1981, the 10 percent concessionary tax rate will apply to the following income derived from gold transactions with non-residents:

1) Profits arising from the transactions of Asian Currency Units (ACUs) with non-residents, other ACUs, and broker and dealer members of the Gold Exchange of Singapore (GES) in the Singapore and overseas gold markets. This is an extension of the concession so far given to ACUs on income derived from off-shore transactions with non-residents.
2) Fees, commissions and profits of approved broker and dealer members of the GES, that is, those approved by the Monetary Authority of Singapore, arising from their transactions with non-residents, other members of the GES, and ACUs, in both the Singapore and overseas gold markets. Associate members of the GES will not be eligible for the concession.

Personal income tax

(i) Tax rates

Between increasing the level of deductible reliefs and lowering tax rates across the board to afford reliefs from inflation, the Government has opted for the latter. This decision is based on sound principle and on precedent, first established by the Deputy Prime Minister as Minister of Finance, and upheld by the present Minister for Finance since 1970. This general reduction in personal tax rates gives relief to all without shrinking the tax-paying population.

Details of proposed reduction in individual income tax are shown in Appendix II to the Budget speech on page 154.

Every taxpayer will be given a reduction in tax ranging from 6.8 percent, depending on his tax bracket. The average reduction in tax is 16.1 percent.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

The highest marginal rate remains at 55 percent, but the lowest marginal rate is now reduced to 4 percent. Taxpayers in the first and second tax brackets, therefore, enjoy the largest reductions in relative terms. Those in the first taxable bracket will, on average, pay only one percent of their incomes in tax. The others are given tax reductions commensurate with their bigger tax liabilities.

The new rates will take effect from Year of Assessment 1980.

The aim of the Government is to reduce the levels of personal income tax in the next 2-3 years until the maximum effective rate is no more than the company rate of income tax, i.e. 40 percent.

(ii) Relief for handicapped persons

If a taxpayer maintains a brother or sister who is incapacitated by physical or mental infirmity and who does not earn any income and continues to depend on the taxpayer, he will be entitled to claim a deduction of $750. The allowance is presently given only to parents of handicapped persons.

This relief is given only to taxpayers who maintain such a member of the family in the same household. The deduction may also be apportioned if more than one taxpayer maintain the same handicapped brother or sister. It will take effect from Year of Assessment 1980.

Reaction to the Budget

The 1980 Budget has been well received by most Singaporeans who describe it as a Tax Cut Budget or a Joy Budget. Because of the across-the-board tax cuts in personal income tax most people welcome the budget as a give-away budget as every taxpayer at all levels is given a reduction in personal income tax payment for the Year of Assessment 1980. (See old & new rates compared in Appendix I.) There are more "cheers" than "tears" as cigarette manufacturers are perhaps the only group to spill tears over the Budget.

A summary of the tax changes and tax concessions appears as Appendix II.

APPENDIX II

Summary of tax changes and tax concessions

Tax changes

Withdrawal of protection for cigarettes and tobacco

Excise duty on cigarette manufacture is raised from $4 to $9 per kilogram and import duty on cut rag is increased from $35 to $36 per kilogram.

Tax concessions

1. Tax concessions for research and development

Tax incentives for research and development to encourage manufacturers to develop new products and processes and to modify existing ones. (Double deduction for R & D expenditure, accelerated depreciation and investment allowance of the capital investment.)

2. Capital allowances for plant and machinery

Higher capital allowances for plant and machinery to encourage development of higher technology and greater automation. (An accelerated depreciation allowance for plant and machinery including computers and R & D equipment, and a more favourable accounting method for writing off equipment, i.e. changes from reducing balance method to straight line method.)

3. Stamp duties

Removal of certain duties and rationalising others at a single rate aimed at promoting the Republic's development as a financial centre. (Removal of stamp duties for Asian dollar and Singapore dollar loans, Asian currency unit off-shore loans, share certificates and standardisation of the duty on share transfer deeds to 0.2 percent.)

4. Concession for offshore gold transactions

To encourage the growth of the market the Minister removed the 40 percent tax on income derived from goal transactions with non-residents and replaced it with a 10 percent concessionary rate.

5. Personal income tax

(i) Tax rates
An across the board reduction in personal tax rates ranging from 6.8 percent to 19.9 percent.

(ii) Relief for handicapped person
A relief of $750 if the taxpayer maintains an incapacitated brother or sister.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

The 1980 Income Tax Changes in the Republic of South Africa

BY DR. ERWIN SPIRO

While pursuing a policy of more growth from greater strength, Senator O.P.F. Horwood, the Minister of Finance, when delivering his Budget speech, emphasized that tax concessions had to be adjusted to prevent the combination of inflation and a progressive tax system, the so-called "fiscal drag", from increasing the real tax burden on the community and thereby actually retarding economic growth. Adverting to the expectations of the taxpayer, however, the Minister of Finance asked him to heed Halifax's warning: "*Men should do with their hopes as they do with their tame fowl: cut their wings that they may not fly over the wall.*"

I. FURTHER CONCESSIONS

Initial and investment allowances. The existing initial and investment allowances, which are two of the principal incentive devices, will be extended for a further period of three years till June 30, 1982.

Building costs of dwellings for employees. To encourage participation by employers in the provision of housing for their employees, the presently existing ceiling on the deduction, for tax purposes, of the building costs of any one dwelling for a farmer's employee will be increased from R4,000 to R5,000. For other employers, the existing allowance of 25 percent of the expenditure incurred will be increased to 50 percent, with a maximum of R4,000 instead of the present R3,000. The revised allowances will apply to the cost of buildings, the erection of which commences on or after April 1, 1980.

Lump sum distributions. The maximum tax-free lump sum benefit paid out of a pension, provident or retirement annuity fund on or after March 1, 1980, will be increased from R45,000 to R60,000. A number of other allied adjustments will also be effected.

Expenses incurred by the physically disabled. The maximum deduction for tax purposes in respect of expenses incurred by the physically disabled will be increased from R600 to R1,200, and all other limitations will be removed.

Married working women. As rising costs prejudice the net income of the two-breadwinner family more than that of the single-breadwinner family, the tax-free portion of married women's income will be increased from R900 to R1,200.

II. STRUCTURAL CHANGES

Subscription shares. The interest on subscription shares of building societies is currently tax-free on a maximum share investment of R150,000 per person (whether such person is the taxpayer or not). This concession appears to the Minister of Finance to be out of line with the far more modest amounts which may be invested tax-free in the Post Office, the Treasury and also in the form of tax-free indefinite period building shares and will now be restricted — to the obvious dismay of the building societies — to a maximum tax-free subscription share investment of R50,000 per taxpayer. To minimize inconveniences, the restriction will be phased in equal amounts over a period of three years.

Loan levy. There being no reason for the continuation of compulsory loans to the State as the necessary funds can be substituted for on a voluntary basis in the form of Government stock issues in the domestic market, all loan levies on individuals and companies will be abolished as from April 1, 1980.

Fringe benefits. Taxation of fringe benefits really means taxation of income in kind. Certain fringe benefits have always been subject to tax, and a new source of revenue is not envisaged. Differences of opinion relate mainly to the method of taxation and the date the tax should be instituted. There are now revised draft proposals, aiming at taxing all housing loans, entertainment allowances, private use of business cars, share participation schemes and low interest or interest free loans and the elimination of discrimination between the private and public sectors. The Minister of Finance intends to bring them into force from March 1, 1981.

Single basic income tax rate for married and unmarried persons. In future, the differentiation between unmarried and married persons will now be achieved, firstly, by allowing a smaller primary rebate to unmarried persons (see the examples under Tax Rebates) and, secondly, by increasing their tax by means of a 20 percent surcharge. The progression of the basic marginal rates of the normal income tax will be adjusted so that the maximum rate in respect of married persons is only reached at R40,000 and in respect of single persons, inclusive of the surcharge, at R28,000. In addition the maximum basic marginal rate will be decreased from the present 55 percent to 50 percent. Reference is made to Annexure — Table II.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Tax rebates. There will be a return to a system of tax rebates as was in force prior to 1972, in contrast to the system of diminishing income abatements applicable at present. The latter are deducted from the taxable income, reduced, however, as income increases whereas rebates are deducted from the tax regardless of the size of the taxable income (see *Bulletin* 328 (1971)). The existing combined abatement for medical expenses and insurance premiums will be separated. Insurance premiums will continue to qualify for rebate purposes, but as far as medical expenses are concerned, from the 1980/81 tax year, actual medical expenses up to a maximum amount of R1,000 will qualify as a deduction (in the case of persons over the age of 60 years up to a maximum amount of R2,000). As a result a person will only become liable to tax if his taxable income, after deduction of actual medical expenses, exceeds the following amounts:

Persons over the age of 60 years

unmarried	R3,000
married	R4,000

Persons under the age of 60 years

unmarried	R1,500
married	R2,500
married with 1 child	R3,750
married with 2 children	R5,000
married with 3 children	R6,200
married with 4 children	R7,166

III. TAXATION OF BLACK PEOPLE

Last year the Minister of Finance pointed out that the equalization of the tax liability of whites, coloureds and Indians, on the one hand, and blacks, on the other, would extend over a period of three years. As in the case of other population groups, it is necessary also to grant relief in respect of black taxpayers. The threshold of liability for tax will, therefore, be increased from R1,200 to R1,800 per taxpayer, and the tax rate thereafter will be reduced by 20 percent. Reference is made to Annexure — Table I.

IV. FUTURE LAW

Initial and investment allowances. There are certain controversies, but the Minister of Finance felt that the status quo should not lightly be changed and, therefore, directed the Standing Commission on Taxation to investigate the whole issue and to submit recommendations to him.

Fringe benefits. In view of the fact that the proposed measure is to apply only from March 1, 1981 (see II above), employers and employees have, according to the Minister of Finance, been afforded sufficient time to determine the effect of the proposals on their take-home earnings and to adapt to the new approach.

Separate taxation of (working) wives. Referring to fresh representations for the separate taxation of (working) wives, the Minister of Finance still did not see his way clear, both for reasons advanced by the Standing Commission on Taxation Policy and for practical and logistical reasons, to change over now to a system of separate assessments and, one may add, to a separate incidence of tax.

V. RATES OF INCOME TAX (NORMAL TAX)

Persons other than companies. Persons other than companies are, in respect of the taxable income derived in the year of assessment ending on February 28, 1981, or June 30, 1981, whichever is applicable, subject to normal income tax at the rates contained in Annexure — Table II with a maximum basic marginal rate of 50 per cent and with the addition, in the case of unmarried persons, of a 20 percent surcharge on the tax. As mentioned earlier (sub II), the maximum rate will thus be reached where the taxable income exceeds R40,000 in the case of married persons and R28,000 in the case of unmarried persons.

Companies. The rates for companies in respect of taxable income derived in the Republic of South Africa in the year of assessment, that is the financial year ending during the twelve-month period from April 1, 1980 to March 31, 1981, are as follows:

(i) *taxable income derived otherwise than from mining:* 40 cents per R1. A surcharge of 5 percent of such tax is to be added to such tax. The effective rate is thus 42 cents per R1.

(ii) *taxable income derived from gold mining:*
(a) on any mine other than a post-1966 gold mine an amount determined in accordance with one of the formulae laid down plus a surcharge which is not payable in respect of certain assisted gold mines equal to 5 percent of the said amount;
(b) on post-1966 gold mines an amount determined in accordance with one of the formulae laid down plus a surcharge of 5 percent of the said amount;
(c) in the form of excess recoupments over capital expenditure accruing to companies which are or have been gold mining companies the average rate of tax as determined in accordance with the Act or 35 cents per R1, whichever is higher.

(iii) *taxable income derived from mining for diamonds:* 45 cents per R1 plus a surcharge of 5 percent of such amount;

(iv) *taxable income derived from mining operations other than mining for gold or diamonds (or natural oil):* the position is the same as in the case of a non-mining company (see (i) above);

(v) *taxable income derived from mining for natural oil:* in respect of taxable income derived from mining for natural oil (excluding gas) normal tax at the rate applying to non-mining income plus an amount equal to 40 percent of the balance remaining after deducting the normal tax and in respect of taxable income derived from mining for natural oil in the

© 1980 International Bureau of Fiscal Documentation — BULLETIN

form of gas normal tax at the rate applying to non-mining income, the normal and additional taxes chargeable being subject to such a reduction as the Minister of Mines, in consultation with the Minister of Finance, may determine. Where sulphur, salt or any other mineral is won in the course of mining for natural oil, the income derived from the mining of sulphur, salt or other mineral is deemed to be derived from mining for natural oil.

Summary of reductions. The reductions may be summarized as follows:

(i) in the case of all persons; the disappearance of the loan levy, that is 10 percent;
(ii) in the case only of persons other than companies: the reduction of the maximum rate from 55 to 50 per cent, such maximum rate being reached now at R40,000 (instead of before R30,000) in the case of married persons and at R28,000 (instead of before R22,000) in the case of unmarried persons.

VI. RATE OF OTHER TAXES CONTAINED IN THE INCOME TAX ACT

Non-resident shareholders' tax. The non-resident shareholders' tax is 15 percent of the amount of the dividend or interim dividend in question.

Undistributed profits tax. The undistributed profits tax is 33 1/3 cents on every R1 by which the 'distributable income' as defined exceeds the amount of dividends distributed during the 'specified period' as defined.

Non-residents' tax on interest. The non-residents' tax on interest is 10 percent on the amount of the interest in question.

Donations tax. The donations tax is at progressive block rates, the block exceeding R90,000 being taxable at the rate of 25 percent.

ANNEXURE – TABLE I (BLACK TAXATION)

Taxable income	Rates of tax
Where the taxable income—	
does not exceed R1,800	Nil
exceeds R 1,800 but does not exceed R 2,100	R0.00 plus R0.24 for each completed amount of R30 by which the taxable income exceeds R1,800;
exceeds R 2,100 but does not exceed R 3,120	R2.40 plus R0.72 for each completed amount of R30 by which the taxable income exceeds R2,100;
exceeds R 3,120 but does not exceed R 4,140	R26.88 plus R1.68 for each completed amount of R30 by which the taxable income exceeds R3,120;
exceeds R 4,140 but does not exceed R 5,160	R84.00 plus R2.40 for each completed amount of R30 by which the taxable income exceeds R4,140;
exceeds R 5,160 but does not exceed R 6,180	R165.60 plus R3.12 for each completed amount of R30 by which the taxable income exceeds R5,160;
exceeds R 6,180 but does not exceed R 7,200	R271.68 plus R3.36 for each completed amount of R30 by which the taxable income exceeds R6,180;
exceeds R 7,200 but does not exceed R 8,220	R385.92 plus R3.84 for each completed amount of R30 by which the taxable income exceeds R7,200;
exceeds R 8,220 but does not exceed R 9,240	R516.48 plus R4.80 for each completed amount of R30 by which the taxable income exceeds R8,220;
exceeds R 9,240 but does not exceed R10,260	R679.68 plus R5.28 for each completed amount of R30 by which the taxable income exceeds R9,240;
exceeds R10,260 but does not exceed R11,280	R859.20 plus R6.24 for each completed amount of R30 by which the taxable income exceeds R10,260;
exceeds R11,280 but does not exceed R12,300	R1,071.36 plus R6.72 for each completed amount of R30 by which the taxable income exceeds R11,280;
exceeds R12,300 but does not exceed R13,320	R1,299.84 plus R7.68 for each completed amount of R30 by which the taxable income exceeds R12,300;
exceeds R13,320 but does not exceed R14,340	R1,560.96 plus R8.16 for each completed amount of R30 by which the taxable income exceeds R13,320;
exceeds R14,340 but does not exceed R15,360	R1,838.40 plus R8.88 for each completed amount of R30 by which the taxable income exceeds R14,340;

The Tax System of Kiribati[1]

I. INTRODUCTION

On July 12, 1979 the Gilbert Islands, which until that date had been a colony of the United Kingdom, became independent under the name of the Republic of Kiribati. Its total surface is no more than 655 square kilometres (approximately one quarter of the size of Luxembourg) although its islands are spread over a part of the Pacific which measures more than 4,000,000 square kilometres (about twice the surface of Greenland). [2] Its capital city is Bairiki on the island of Tarawa.

The Republic of Kiribati consists of three groups of islands:

The Gilberts Group:
Makin, Butaritari, Marakei, Abaiang, Tarawa (centre of government administration), Maiana, Abemama, Kuria, Aranuka, Nonouti, Tabiteuea (North and South), Beru, Nikunau, Onotoa, Tamana, Arorae, Banaba.

The Line Group:
Tabuaeran (Washington), Teraina (Fanning), Christmas (Northern Line Group), Malden, Starbuck (Central Line Group), Vostock, Caroline, Flint (Southern Line Group).

The Phoenix Group:
Canton, Orona (Hull), Nikumaroro (Gardner), Moara (Sydney), Phoenix, Birnie, Mckean, Enderbury.

II. POLICY OBJECTIVES

A. Tariff policy

Import tariffs are of particular importance in an economy in which imports constitute a large proportion of local consumption and investment. They influence consumption patterns, the viability of local businesses and the distribution of real incomes. The revenue from import tariffs accounts for 40 percent of locally raised revenue.

The level of tariffs may thus have a considerable effect on the achievement of objectives.

The following principles have been established for guidance in setting tariffs at levels which will assist in establishing a sound long term economic structure and in achieving the objectives of the "National Plan".

(a) Duties should promote the most beneficial economic structure in the long term.
(b) Where compatible with (a), local production should be encouraged by tariff measures.
(c) Where compatible with (b), basic consumer necessities should be subject to minimal duties.
(d) Luxury consumer goods should be subject to high rates of duty for revenue purposes.

---

1. We are indebted to Mr. P. Jackson of the Kiribati Ministry of Finance for most of the information published in this note.
2. Wereldmarkt, July 10, 1979 at 8.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

(e) Where compatible with (d), goods which are important in the consumption of rural people should be subject to minimal duties.
(f) Taking into account (a), raw and semi-processed goods should generally be subject to lower duties than processed goods.
(g) Goods conducive to education and health should be subject to minimal duties.

In the Budget of 1978, amongst other measures, the duties on bicycles, sewing machines and lamp oil were eliminated, duties on cotton fabrics reduced and on poultry and eggs increased.

B. Recurrent revenue and investment

The recurrent budget has been financed entirely from local revenue, with a substantial surplus in most years which has been used to build the Revenue Equalisation Reserve Fund. With the expiry of phosphate during this year, the position changes radically, which can be seen from Table 1. Local revenue will be substantially below present expenditure.

Arrangements for funding the deficit have been made with the United Kingdom under the "Independence Financial Settlement", but this settlement allows for the utilisation of part of the Reserve Fund interest per year. It is intended to manage the Reserve Fund so as to slow down, as far as possible, the depreciation of its capital value in real terms. The Agreement provides for a review of financial arrangements in 1982.

C. Foreign investment

The British Phosphate Commissioners (BPC), a partnership of the British, Australian and New Zealand Governments, have played a dominant role in the economy of Kiribati for most of this century through their phosphate mining operation on Banaba.

The BPC has been the main source of overseas earnings, the main source of government revenue and a substantial employer. The consequences of the termination of phosphate mining on Banaba were realised some time ago when it was decided to build up the Revenue Equalisation Reserve Fund with the income derived from phosphate mining.

Besides the BPC, the only significant foreign investment has been in copra plantations, banking and fuel supplies. Fanning Island Plantations owns the islands of Fanning and Washington and operates copra plantations employing about 135 people. Total employment by foreign owned companies, excluding BPC, amounts to about 175 people.

The main constraints on the growth of foreign investment have been the remoteness of the country from major markets, the shortage of land and the lack of skilled manpower. Little effort has been made to promote foreign investment.

With the loss of phosphate revenue the Government is now concerned to build up economic activity in the country and is taking a more active role in the promotion of foreign investment. A number of sectors have been identified as suitable for foreign investment, the most important being fisheries, tourism and mineral exploration.

Foreign investment is specifically to be encouraged in order to develop the economic strength of the nation after the end of phosphate mining. Some of the objectives of this foreign investment will be to promote the development of new and existing industries based on marine and other resources, and to encourage foreign business investment in Kiribati.

Foreign investment will particularly be sought for the development of the country's natural resources and in the commercial and manufacturing sectors. The most suitable projects for foreign investment are likely to be those that:

(a) provide employment for local people;
(b) expand exports or reduce imports;
(c) require large capital sums in joint ventures, where the government contribution can be in the form of the resource to be exploited;
(d) require foreign technology or management to ensure success (e.g. in mineral exploration);
(e) require foreign participation to ensure access to markets.

Further aims regarding foreign investment are:

(a) to ensure local participation in significant ventures involving foreign capital;
(b) to ensure maximum local benefit in employment, overseas earnings and government revenue from ventures involving foreign capital;
(c) to minimise any adverse social effects arising from foreign investment.

III. THE TAX SYSTEM

There are no provisions for such taxes as Wealth tax, Gift tax or Corporation tax, neither is there a levy for Estate duty.

A. Income tax

Income tax is charged on the income earned by a resident, which accrues in, is derived from or is received in Kiribati, and, in the case of a non-resident, that income which accrues in or is derived from Kiribati.

Income tax is charged on all of the following:

(a) gains or profits from:
  (i) any business, for whatever period of time carried on (provided that a husband and wife carrying on a business together shall not be treated as partners in relation to each other for any purpose of this Ordinance);
  (ii) any employment or services rendered;
  (iii) any right granted to any other person for the use or possession of any property;
(b) dividends, interest and discounts;
(c) any pension, charge, annuity or alimony;

© 1980 International Bureau of Fiscal Documentation – BULLETIN

(d) any amount deemed to be his income under this Ordinance.

Note

Any income directly derived from the sale of copra shall be exempt from Income tax, but instead a charge of 25 percent in respect of "Copra tax" shall be levied.

The rates of tax are as follows:

	Australian $		%
First	500	—	9
next	500	—	12
next	1,000	—	21
next	1,000	—	30
next	1,500	—	39
next	1,500	—	45
exceeding	6,000	—	50

The following outgoings and expenses are allowable when ascertaining income in respect of individuals, partnerships or companies:

(a) Interest paid upon borrowed money, where the said money is employed in the production of income chargeable to tax (providing the loan was not for acquiring a source of income outside Kiribati).
(b) Rent paid by any tenant of land or buildings occupied for the purpose of acquiring the income.
(c) Sums expended on the necessary repair of premises, plant, machinery, etc.
(d) Bad debts incurred (in the course of a business).
(e) Contributions to approved pension schemes.
(f) Certain expenditure of a capital nature for the purposes of a business.
(g) Any amount paid by way of alimony or allowance under a decree of divorce.
(h) Any loss incurred, and where it cannot be wholly "set-off" against income from other sources for that year, the remainder shall be carried forward and deducted in ascertaining total income for subsequent years in succession.

In addition to Income tax there are one or two specific taxes, i.e.:

Phosphate taxation (as per the government ordinance as follows): Of the net proceeds per ton of phosphate minerals exported from the Republic, the British Phosphate Commissioners shall in any phosphate year (ending 30/6) pay a phosphate tax. Phosphate tax per ton shall be calculated in with the Table contained in the Schedule, ranging from $3.9045 tax on $4.40 proceeds per ton to $5.6039 tax on $6.40 proceeds per ton.

Landowners taxation: This is a land tax assessed, levied and collected by the Council within whose area of authority the land is situated. The amount of tax to be imposed is determined by the amount of Revenue required to be raised from this source for the Council Fund.

B. Customs duties

Customs duties are levied on both goods imported into and exported out of Kiribati. The rates are either ad valorem or specific and are indicated in the Customs Tariff.

IV. REVENUE

The Government's internal revenue for the years 1973 through 1979 and the forecasted figures for 1980 through 1982 are set out in Table 1.

Table 1

	1973	1974	1975	1976	1977	1978	1979	1980	1981	1982
Direct taxes	301	353	592	700	885	880	1,060	820	880	935
Indirect taxes	1,545	2,312	1,889	2,520	2,818	2,510	2,553	2,370	2,410	2,520
Phosphate taxes	2,910	10,603	22,783	9,500	8,301	8,082	6,544	—	—	—
PWD overheads	—	—	—	—	—	450	300	320	340	360
Tuna licences	—	—	—	—	—	259	1,000	1,360	1,430	1,500
Other income	741	1,172	1,091	1,152	1,947	2,807	3,140	3,390	3,630	3,850
Total revenue	5,497	14,440	26,355	13,872	13,951	14,988	14,597	8,260	8,690	9,165

Ireland: BUDGET 1980

"It's good news for non-drinking, non-smoking, non-driving taxpayers" (Irish Times, February 28, 1980 at 15)

The following is an extract of the text of the Budget statement by the Minister for Finance, Mr. O'Kennedy, pronounced on February 27, 1980.

Prudent management of the public finances and improving the climate for economic development are normal priorities for a Minister for Finance when drawing up his Budget. This obligation takes on a special significance at a time of international economic recession, such as we now experience.

Because the international recession has had a particularly damaging impact on our energy dependent open economy, there is a new burden to be carried today. We must all ensure that this new burden, unwelcome though it may be, will be shouldered evenly by all who can bear it. A progressive economic policy can only be implemented through the collective commitment and action of all sections of the community. It must be built on the firm foundation of a caring and sharing society, so that in overcoming the immediate problems, we emerge more determined to achieve a healthy social and economic order which we can all respect.

My proposals today, and Government policy throughout the year, will be firmly directed towards those ends.

The experience of last year indicates that we have found it difficult as a nation, in a period of growing prosperity, to adjust to the new reality of international economic recession.

But adjust we must, and my Budget proposals today are intended to encourage that adjustment in our individual and national interest. The pursuit of social justice in a basically healthy economy, beset as it may be by serious difficulties, has been a guiding principle for the Government in adopting the proposals which I will outline. I hope that they will evoke a positive and helpful response at this critical time in our national development. Our renewed determination, following the dramatic upsets of the past year, to achieve the objectives of equity and a proper balance in our national finances will not yield immediate results in the year ahead, but it will make a major contribution towards positive progress in that direction.

There is an urgent need to reduce the balance of payments deficit and the level of Exchequer borrowing. In seeking to reduce the level of borrowing, the Government have concentrated on curbing the growth of public expenditure, so as to ensure that taxpayers will be called upon to contribute only to absolutely essential services. We must see to it that the taxpayer's money is used effectively and in a manner that he or she will fully endorse. This will also ensure that the general burden of taxation is kept to the minimum consistent with economic and social priorities.

I will return to both of these themes later, but first I wish to review the economic developments in 1979. These comments will be brief because Deputies have already received a copy of the paper "Economic Background to the Budget, 1980".

●●●

TAXATION

I turn now to the subject of taxation. The over-all level of taxation in Ireland, at 34 percent of GNP in 1978, compared with an average of 40 percent for the other EEC countries. This relatively low level of taxation in Ireland has been made possible only by large-scale borrowing over the past five years to finance current services.

The Government is fully committed to devising an equitable tax system, as between each taxpayer and each section of the community. It is not possible to allow each section the tax system of its choice, nor can a complex tax system be changed all at once. The Government will endeavour to ensure that taxpayers will recognize that no one is being disproportionately burdened and, particularly, that no one, by evasion, passes on his burden to another.

Steps have already been taken in the last two Budgets to improve the position of low income taxpayers, in particular by means of large increases in the personal allowances. The proposals in this Budget will advance the Government's objectives significantly.

The Government-ICTU Working Party on Taxation has devoted considerable time to devising acceptable and factual bases of comparison of the distribution of the tax burden. These are but the initial steps in tackling the complexities of the matter.

In order to assist the Government to assess the problem, objectively, and to design an equitable tax system, the Taoiseach has proposed a full-scale Commission on Taxation. The Government envisages that the Commission would discharge its task with all possible speed and might, by arrangement, provide interim reports on specific tax areas. Significant changes need not await the conclusions of the Commission, as today's Budget measures will show.

Within the obvious constraints that apply this year, my tax proposals should demonstrate the Government's commitment to equity in the tax system in a manner consistent with the economic and social priorities we must pursue.

PERSONAL INCOME TAX

I will deal first with personal income tax. Of all taxes, personal income tax has most notably become a cause of widespread public unrest and dissatisfaction. I cannot in my Budget

© 1980 International Bureau of Fiscal Documentation – BULLETIN

resolve all the problems associated with income tax but, when I have finished, I hope it will be clear that I have gone a long way towards an acceptable tax system — indeed, probably further than most people would reasonably expect, in the present circumstances. I am satisfied that the need to give justice and fair-play to income taxpayers requires that substantial measures be taken now rather than later.

In principle, income tax is a fundamentally fair tax system. Its essence is that each taxpayer pays, according to his means, on a common basis with everybody else in the same position, and that those who are better off pay more by an appropriate amount. The tax code also has a wide range of allowances and reliefs to cater for a varying range of social and family circumstances.

It is when the tax system is allowed to drift away from the basic principle I have outlined that the public's notion of fairness and equity is offended and disquiet about the tax system begins to mount. This is an issue which must be faced and resolved.

There are four main problems to which my proposals must address themselves:

- First of all, in the light of the recent Supreme Court decision, I have to deal with the taxation of married couples, particularly those where both husband and wife are earning.
- Next, I have to tackle the higher tax burden imposed on an increasing number of taxpayers in recent years, because income increases have attracted higher rates of tax.
- Thirdly, I think there is a need to give further reliefs to the less privileged taxpayers — those with low incomes, and, particularly, those with social and physical handicaps.
- Finally, there has been increasing unrest caused by the difference between the basis of assessment applied to wage and salary earners on PAYE and that applied to other taxpayers such as self-employed. These, as a general rule, pay tax based on profits of the accounting period ending in the preceding income tax year.

Married taxpayers

With regard to the taxation of married couples, the Government is satisfied, in the light of recent developments, that nothing less than substantial changes in income taxation will now suffice. We intend, therefore, to implement our undertaking to alleviate the taxation of married couples.

A narrow approach towards effecting the minimum changes to meet the Supreme Court's decision would lead to unjustifiable discrimination against the one income family particularly where a married woman elects to care for the family on a full time basis at home rather than take up work outside the home.

Even in cases where both spouses are working, their tax liability, if nothing were done, would vary depending on how incomes were divided between them. There would also be considerable scope for tax avoidance by self-employed and better-off taxpayers, who could now attempt to take advantage of the Court's decision and arrange for both spouses to have an income designed to minimise liability for tax.

To implement the basic principle that taxpayers, with the same income and the same family and social circumstances should pay the same amount of tax, the Government has decided to implement now in full our longer-term plans for income-splitting.

This means, in effect, that all married couples, whether with one, or two, incomes, will have the benefit of double the personal allowance and rate bands applicable to single persons.

The Government is reinforced in its view that this represents a major and much needed social advance in the tax system by the views expressed by such representative bodies as the Irish Congress of Trade Unions. The Government believes that the introduction of this principle accords with the general needs and wishes of the community, notwithstanding the cost and the inevitable measure of tax redistribution involved.

The main personal allowances have been increased, substantially, in each of the past two years and, even if unchanged, would still be higher in real terms than they were in 1977.

Employees

However, I am providing a special Schedule E employee allowance of £400 for each PAYE taxpayer in order to improve the tax progression for these taxpayers, and also to take account of the fact that the self-employed, generally, have at present the advantage of paying tax on a previous year basis.

I intend to exclude from this provision those Schedule E taxpayers in a position to control their own remuneration or that of their spouses, for example directors of proprietary companies. This Schedule E employee allowance is also intended to take account of the case made by ICTU that the present general scheme of allowances discriminates against employees and in favour of other taxpayers. Where an eligible husband and wife are both earning, this allowance will apply to each income. On the other hand, as a consequence of the introduction of income-splitting, the working wife allowance is being abolished.

Adjustment to inflation

The higher rates of tax — or tax bands — now apply at unduly low rates of pay. This has occurred largely because, over the years, the value of the tax bands has not kept pace with inflation. Income taxation has become too progressive. Relatively high marginal tax rates clearly contribute to inflation and affect the attitude to work and attendance at work.

I have decided to tackle this problem as effectively and as fundamentally as I can. I propose, therefore, to raise the income levels at which the tax rates from 35 percent upwards apply.

The new rate structure will be as follows:
The first £1,000 of taxable income

© 1980 International Bureau of Fiscal Documentation – BULLETIN

for single persons and £2,000 for married persons will be at a rate of 25 percent; the next £4,000 for single persons and £8,000 for married persons will be at 35 percent; the next £2,000 for single persons and £4,000 for married persons will be at 45 percent; the next £2,000 for single persons and £4,000 for married persons will be at a new rate of 55 percent; and the balance of taxable income, that is above £9,000 for single persons and £18,000 for married persons, will be taxed at a rate of 60 percent.

The special allowance for PAYE taxpayers will have the effect of raising the point of application of the 25 percent and higher tax bands by a further £400, or by a further £800 where an eligible married couple are both earning.

A male industrial worker on, say, just over £100 a week will get relief of about £150 if he is single and £230 if he is married. If his wife also works and earns the average industrial female wage, the total relief for the couple will be about £500 or over 20 percent of their tax bill.

At present a married PAYE earner whose wife does not work may move from the standard, or 35 percent rate, to 45 percent at £122 per week. As a result of may proposals, this will not now happen until his earnings reach not less than £243 per week. The corresponding figure for single persons is raised from £100 to £125 a week.

The new structure, at one stroke, will bring over 180,000 taxpayers, or nearly two-thirds of those at present liable at higher rates, down to the lower standard rate band.

Tables which are circulated with my Financial Statement will show the relief which is granted to different categories of taxpayers.

It may appear that the distribution of tax relief unduly favours married couples with higher incomes, but this is an unavoidable consequence of observing the Supreme Court decision and of implementing income-splitting in full.

In broad terms, a relief given to a single person is doubled for married couples. Consequently, unless single persons on relatively modest incomes were to have their income tax burden increased, married couples with high incomes had to obtain substantial tax relief. The Government were faced with a situation in which the income of the average single male industrial worker had in many cases brought him into the 45 percent tax band. To remedy this situation, it was necessary to widen the standard rate tax band for single people — with a resultant double benefit for married couples.

The following is an example of the effect of my proposals on a married couple where the husband is earning £8,000 and his wife, who also works, is earning £4,000. Between them, because both are working, they have an income of about twice the average income for single workers. In 1979/80 they paid much more than twice the average tax of single persons and the top rate of 60 percent applied to part of their incomes. Their top rate of tax will now be reduced to 35 percent and the amount of tax they pay will be twice that of two single persons each earning half their combined income of £12,000 — their tax will be reduced by over £1,300. Under my proposals, much the same

HIGHLIGHTS OF THE IRISH BUDGET 1980

- The 20 percent VAT rate is increased to 25 percent from May 1, 1980.
- Following a recent court case declaring certain tax provisions unconstitutional, married couples may be assessed separately as single persons. There is an option for joint assessment whereby double the single allowance and double the tax bands for single persons is applicable. The single allowance is £1,115 and the tax rates for 1980/81 are:

Single persons	*Married couple-joint assessment*
25 percent on first £1,000	on first £ 2,000
35 percent on next £4,000	on next £ 8,000
45 percent on next £2,000	on next £ 4,000
55 percent on next £2,000	on next £ 4,000
60 percent above £9,000	above £18,000

- New special allowance of £400 for each PAYE employee except proprietory directors.
- Allowance for a child reduced by £23 to £195; allowances for one-parent families and blind persons doubled to £500 and £330 respectively.
- Exempt compensation for loss of employment increased from £3,000 to £6,000.
- The burden of taxation on farmers is increased. A resource tax of £3.50 for every £1 of rateable value in respect of holdings of £70 rateable value and over is introduced from April 6, 1980. The notional basis of assessment to income tax is abolished and replaced by the normal accounts basis. Furthermore, accelerated capital allowances for plant and machinery are restricted to 30 percent of net farm profit.
- Special rate of corporation tax of 25 percent for manufacturing companies is extended to December 31, 1980 where necessary conditions are satisfied.
- Stock relief is extended for a year — 1980/81 for income tax and accounting periods ending in the year to April 5, 1980 for corporation tax.
- Deductions for business expenses restricted to 50 percent of the taxpayer's taxable profits.
- Rises in excise duties include 20p per gallon on petrol, diesel and LPG and 40p per bottle on table wine.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

relief will now be given to a single income family.

The net result of the Budget proposals will be that the burden of income tax for nine out of ten single people on PAYE will now be less than it was in 1977/78. In the case of all married couples on PAYE, the burden will now be less than at any time since the introduction of the present unified system of income tax in 1974/75. For married couples generally, the income tax structure will be at least comparable with that in the U.K. and, for the vast majority of taxpayers on lower incomes, whether single or married, it will be significantly better.

Subsidiary deductions

I now come to deal with less privileged taxpayers. I am concerned that liability to income tax can apply to persons on very low incomes, particularly young people just starting work and casual or part-time workers. I cannot solve this problem completely but I am happy to go a long way in that direction by introducing complete tax exemption limits for people on low incomes, including those affected by sickness and unemployment. The exemption limits will be £1,700 for single and widowed persons and £3,400 for married persons. There will also be marginal relief at a rate of 60 percent for taxpayers with incomes just above the exemption limits. As a result of this proposal, 75,000 persons who would otherwise pay tax this year will now not do so.

A single person on £33 per week will be relieved of all his tax amounting to £146 per year. A married couple on £66 per week will get full relief of £300 a year.

The Government are particularly aware of the difficulties and anxieties experienced by many old persons in completing their income tax returns and complying with their tax obligations generally. In many cases this is out of all proportion to the ultimate liability involved. For this reason, I propose to raise the age exemption limits to £2,000 and £4,000 respectively for single and married persons aged 65 years and over. Special exemption limits of £2,500 and £5,000 will be introduced for persons aged 75 years and over. These limits will remove 8,000 old persons from the tax net, bringing to 83,000 the number of low-income taxpayers removed from liability. Marginal relief will benefit many more.

In 1969, an allowance was introduced to cover the case in which an individual, or his wife, is totally incapacitated throughout the year of assessment and a person is employed for the purpose of taking care of the incapacitated persons. I propose to double this allowance to £330.

I also propose to increase the allowance for incapacitated children to double the normal child allowance.

A special allowance of £250 was introduced last year for one-parent families which consist of a widowed person, a deserted spouse or an unmarried parent with a dependent child or children. This was widely welcomed. I am satisfied that this allowance fulfils a genuine social need and I propose to double it, to £500.

The allowance for blind persons has been increased since it was introduced in 1971. I propose to double this allowance also to £330. In the case of a married couple, both of whom are blind, this allowance will apply to each spouse.

Welfare benefits

The Government have been reconsidering the planned taxation of short-term social welfare benefits from April 6th next, which was provided for last year. The new tax exemption which I have proposed for those on lower incomes would reduce any revenue gain from the effects of making short-term social welfare benefits taxable and, moreover, the new tax structure will improve the incentive to work. In these circumstances the Government have come to the conclusion that the proposal should not be implemented. This change in plans will cost £8.5 million in 1980. The necessary amendment will be included in the Finance Bill.

In drawing up my proposals I had particular regard to the representations made by ICTU. In many respects the effects of my proposals on individual taxpayers are quite similar to those of the ideas they had put forward. Where there are differences, they are not, I feel, major ones.

The total cost of the changes in allowances, rate bands and exemptions is £131.5 million in 1980 and £227 million in a full year. Including the decision not to tax short-term social welfare benefits, I have now deducted £140 million in 1980 from the revenue side of the Budget.

Self-employed

The fourth major element in my income tax package this year is to devise more uniform treatment of employed and self-employed persons.

Self-employed persons are normally charged to income tax in any year on the basis of the profits of the accounting period ending in the preceding income tax year. In present circumstances, when both incomes and profits are rising rapidly in money terms each year, this results in a substantial advantage to the self-employed compared with taxpayers in the PAYE sector, where tax is charged on current earnings. It would be in the interest of greater equity if both sectors were brought to an equivalent basis of assessment as soon as possible. Where there are considerable difficulties in doing this, I am examining the matter with a view to bringing about the changes that are necessary.

I have already announced that I am giving a special PAYE allowance of £400 to compensate PAYE taxpayers for the generally more favourable basis of assessment applied to other taxpayers. I now propose also to change the dates of payment for Schedule D tax on self-employed. At present this tax is payable in two instalments on September 1st and January 1st in the year of assessment. Subject to an exception to which I shall come later, I propose to provide that all income tax other than PAYE will now be payable in one instalment on October 1st in the year of assessment.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

This change will yield £24 million in 1980.

Supreme Court judgement

As I have outlined, my tax proposals for 1980/81 take fully into account the Supreme Court decision on the taxation of married couples where both spouses are earning. I have extended this principle to all married couples and legislation in the Finance Bill will be drafted on this basis for 1980/81 onwards. I await the decision of the Supreme Court in regard to the issues recently opened before it to determine the further measures, if any, I might be required to adopt.

Home improvements

Last year a scheme was introduced, to operate for 1979/80 only, to give income tax relief, within certain limits, for the labour content of expenditure on home maintenance and improvements. As the implementation of this scheme was affected by last year's postal dispute, I propose to continue the relief for another year.

Life insurance

I have received representations that the £1,000 limit on relief in respect of life insurance premiums, which was introduced in 1974, should be raised. Due to the restriction to one-sixth of total income on the amount of premiums qualifying for relief, an increase in the limit would only benefit persons with incomes over £6,000, who are already getting substantial tax relief under my Budget proposals otherwise. However, I have decided that where a husband and wife are assessed as single persons the £1,000 limit should be applied to premiums paid by each spouse on policies on the life of either spouse. Where a couple opt for income-splitting a limit of £2,000 will apply. This will cost £0.2 million in 1980.

Compensation for loss of job

Representations have been made to me that the existing tax exemption limit of £3,000 in respect of lump sums paid as compensation for loss of employment is too low as it has not been changed since 1964. I propose to increase the limit to £6,000.

FARMING

Developments in agriculture have generally been very favourable to our farmers since we joined the EEC. Last year was, however, an exception. Between 1975 and 1978 farm incomes rose by 76 percent but in 1979 it is estimated that they fell by about 4 percent. Proposals made recently by the EEC Commission on price fixing as part of the annual review of prices and on measures to deal with surplus production would, if approved, seriously affect our farmers, particularly those engaged in the production of milk and sugar-beet. These proposals would also seriously affect workers in the related food processing industries. The Government have already made known their opposition to the proposals and they will continue to oppose them strenuously.

A strong and developing agricultural sector is basic to the economic well-being of the nation. Agriculture supports not only those directly engaged in farming but also the many thousands of others working in food processing and in services. The rapid development of agriculture since we joined the EEC reflects the energy and dynamism with which our farmers have taken advantage of the opportunities opened to them through higher prices and free access to markets provided by the Common Agricultural Policy. Investment in land improvement and in up-to-date equipment and buildings has grown enormously — traditional methods are more and more giving way to modern sophisticated techniques of farm management and production.

There is a growing realisation of the mutual interdependence between the rural and urban communities. I am anxious that understanding between farmers and workers in general be promoted and fostered. I am heartened by the recent meeting between the farming organisations and the Irish Congress of Trade Unions to develop such understanding and also by the support given by the unions to the recent rally against the proposed super-levy on milk.

Do farmers pay too little?

However, the proportion of tax paid by each sector has been unfortunately, a source of division rather than understanding between them. Since the introduction of farm taxation in 1974, taxpayers generally have felt that the amount of tax paid by farmers was less than was justified by reference to farm incomes and was not conducive to achieving equity between farmers and other sectors of the community. It is true that, in that period, farm incomes have risen substantially and the Government last year, after lengthy consultations, announced a revised system of farm taxation to be introduced this year.

Whatever differences of opinion exist on the appropriate relative share of tax paid by each sector, I believe there is universal acceptance of the principle that the amount of tax paid should reflect the income of the taxpayer. Where there is a decline in income as was experienced by the farming community in the unfavourable conditions of last year, the estimate of yield from tax must be reduced. To do otherwise would be to add a disproportionate burden of tax to the loss of income already sustained.

I do not therefore propose to insist that the yield from farm taxation in 1980 be of the same order of £100 million as was calculated before this fall in income emerged. I am not insisting on a pre-determined yield from the scheme that has been announced but I must estimate the likely yield from that scheme as with every other revenue category.

Deputies will be familiar with the scheme announced last year. How-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ever, I feel I should outline it here again, particularly as I propose to make some adjustments to it. These adjustments should have little or no revenue implications but should facilitate the operation of the scheme and at the same time take account of the special circumstances of the farming community.

In the first instance, the threshold for liability to income tax will be lowered from £50 RV to £40 RV, making a further 9,000 full-time farmers, or 36,000 in all, liable to income tax. However, marginal relief will apply between £40 RV and £49 RV, so that a farmer with a holding of £40 RV will pay only one-tenth of his full liability, two-tenths at £41 RV and so on until the full liability becomes payable at £49 RV.

All farmers who are liable to income tax will be assessed on the basis of their profits as shown in accounts. I recognise, however, that farmers between £40 and £50 RV entering the tax system for the first time may have difficulty in preparing accounts. Accordingly I have decided that a simplified form of accounts should be used in these cases. The Revenue Commissioners, at my request, are consulting with the farming organisations to examine the form such simplified accounts should take. A new mobile advisory service which I propose to provide for taxpayers generally, and to which I will refer later, should be of special assistance for farmers in this new category.

As is normal when the income tax threshold is lowered, farmers entering the tax net for the first time will have the option of presenting current year's accounts rather than the normal previous year's accounts. This option will only apply this year as the Government have decided that the tax threshold for farmers will not be further lowered within the next three years. I think this is desirable to enable the Government to assess the operation of the scheme as it now stands. It will also enable farmers to plan ahead without the uncertainty in this area which can sometimes appear to act as a disincentive.

Lump sum assessment abolished

The notional basis of assessment will be abolished. The notional basis was introduced in 1974 and was designed to assist farmers who were not used to keeping accounts and in general to ease farmers into the tax system. It has now outlived its usefulness and can no longer be justified on equity grounds since it allows some of the highest-earning farmers to pay tax on only a fraction of their real incomes.

As announced, a restriction of capital allowances to 30 percent of net profit before deduction of capital allowances was to apply where accelerated allowances are claimed. However, as I am anxious to encourage investment for further development and increased productivity, I have decided that the restriction should be confined to plant and machinery only. This means that the restriction will not apply to farm buildings or to farm works such as land reclamation or fencing.

Over investment in plant and machinery inspired by tax avoidance is not in farmers' own best interest; nor is it in the best interest of the community as a whole since the bulk of farm machinery has to be imported to the detriment of our balance of payments. In addition, there is not a limitless pool of available credit for agriculture and wastefully soaking up an undue amount on plant and machinery which is not sufficiently employed to pay its way, deprives other more deserving and productive areas of the necessary funds. The restriction which will not affect ordinary wear and tear allowances, represents merely a deferment to later years of part of the extra capital allowances. It should not affect genuine investment which is so important to the development of agriculture.

Rates on land

As regards rates on land, which was another element of the scheme, the Minister for Environment has already announced that he will shortly introduce the necessary legislation to lower the cut-off point for rates relief under the Agricultural Grant from £60 RV to £40 RV. The cut-off point will remain at £40 RV for three years.

The scheme announced last year provided that full-time farmers would no longer pay their income tax in a single payment on January 1st, but rather in two instalments on September 1st and January 1st, in the same way as other Schedule D taxpayers. I have already announced that a single payment date of October 1st is to be introduced this year for Schedule D taxpayers generally. However, if this were applied to full-time farmers, it would mean that they would pay two years' tax in 1980 — their full 1979/80 tax under the existing single-payment date system on January 1st last, and their full 1980/81 tax under the new single-payment date for Schedule D taxpayers on October 1st. I have decided to avoid this in the interest of equity in their case. I intend instead to postpone the payment of the first instalment of 1980/81 income tax to October 1st to coincide with the single payment date of other Schedule D taxpayers.

The resource tax on all holdings of £70 RV and over at a rate of £3.50 per £ RV will be introduced from April 6th 1980. It had been intended that this tax would have been payable in one instalment on September 1st. But, in line with what I have already indicated in relation to income tax, I propose that this date should be October 1st. Marginal relief will apply to holdings between £70 TV and £79 RV.

As I have indicated, I must provide in my Budget, as in all other cases, for an estimate of the revenue yield from the farm tax scheme. Accordingly the estimated 1980 yield will now be £86 million, consisting of £33 million from income tax, £46 million from rates on land and £7 million from the resource tax. This compares with £16 million from income tax and £36 million from rates on land in 1979.

The income tax reliefs which I have announced earlier will, of course, apply also to farmers.

This scheme of farm taxation is designed to move towards equity be-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

tween taxpayers and indeed between farmers. I think that farmers themselves will recognise that it is in the interest of the farming community generally that farmers with sufficiently high incomes actually pay — and be seen to be paying — their fair share of tax from the income which they have. As I indicated to the farming organisations in my consultations with them, the operation of this revised scheme now being introduced will be kept under review in the interest of equity and in the light of experience of its operation.

Gifts and inheritances

I have received numerous representations on the question of the liability of farmers to capital acquisitions tax, i.e. gift tax and inheritance tax, on the transfer of the family farm. Many farmers have been concerned about their possible liability to the tax in view of the big increase in land prices since the tax was introduced in 1976. Because of this land price rise the market value of many farms has in recent times been substantially higher than their income-earning capacity.

Despite a tendency lately for market prices to reduce more in line with use value and thereby easing this concern I have decided to increase the upper limit of the special agricultural relief from £100,000 to £150,000 in the Finance Bill, with effect from April 1st next. This will mean that the market value of agricultural property for the purposes of the tax may be reduced by up to £150,000 for farmer beneficiaries, thereby directly relieving the problem caused by the land price rise. The cost in the current year of this change will not be significant because of the time lag between liability and payment. I firmly hope that this concession will act as a real incentive to transfers of farms to the younger generation of the farming community, and thereby promote productivity and increase the income from family farms — to the benefit of the whole economy.

ADVISORY OFFICE

It has been my experience and, I am sure, that of many Deputies that many taxpayers are bewildered about tax and find it difficult to come to grips with the complexity of the workings of the tax system. This may cause unnecessary apprehension which, in my opinion, can be overcome if the taxpayer could have access to an advisory service. Some people may not be aware that such a service is already provided in tax offices and is widely availed of. I have now arranged, in addition for the acquisition by the Revenue Commissioners of a mobile tax advisory office. This unit should be ready in a few months and will provide an advisory service for those not resident near tax offices. I stress that this service will be purely for advisory work, to enable individual taxpayers who need it to have direct access to advice, free of charge.

I will keep the operation of this service under review in the light of experience, to ensure that it is of maximum benefit to those taxpayers who require it.

Deputies will appreciate that its success will depend on the closest cooperation and understanding between the people who have access to it and the Revenue officers who are always ready to provide guidance for the public in filling in their returns form.

BUSINESS

Inventory

Stock relief was introduced as a temporary measure in 1975 in order to assist firms in certain sectors in coping with the effects of inflation on the cost of replacing stocks. Under present legislation, stock relief is available in respect of accounting periods ending before 6 April 1979.

The 1979 Budget continued the relief for a further year at a rate of three-quarters of that previously allowed. I have decided that the relief should be continued for a further year at the level obtaining in 1979. This will cost the Exchequer £3 million in 1980.

Manufacturers

The 1977 Budget introduced an incentive scheme whereby manufacturers showing certain improvements in output and employment could benefit from a special 25 percent rate of corporation tax. The scheme, whose terms were made more favourable in 1978, covered the years 1977, 1978 and 1979.

I have decided to extend the scheme to 1980 pending the introduction of the new 10 percent rate for manufacturing profits generally. As Deputies are aware, a 10 percent rate of corporation tax will come into operation as from 1 January 1981 and will run to the end of the year 2000. Provision will be included in the forthcoming Finance Bill to give effect to this scheme.

Entertainment

Considerable disquiet has been caused by the fact that many business concerns are seen to entertain on an unduly lavish scale, ostensibly for the purpose of building up the goodwill required to secure and retain customers. The stricter test for determining the admissibility of expenditure incurred for business entertainment which was introduced in 1973 does not appear to be having the desired effects. Unnecessary entertainment not only entails a subsidy from the taxpayer but also arouses a sense of inequity in the minds of those taxpayers who cannot afford to indulge in it themselves. Accordingly I propose to limit the allowance for business entertainment expenses for tax purposes to 50 percent in future.

Financial institutions

I am conscious of the vital role which the financial institutions play

© 1980 International Bureau of Fiscal Documentation – BULLETIN

in providing for the requirements of industry and commerce as well as individuals. The question nevertheless arises as to whether the contribution to taxation by these institutions is fair and equitable having regard to the contribution being made by individuals to income taxation.

Intricate problems and interests other than those of the financial institutions themselves are involved and I am at present reviewing the matter. At the same time, I feel that this whole field might well benefit from the type of close and objective study which could be given to it by the proposed Commission on Taxation. I will consider, therefore, asking the commission, as soon as it is set up, to carry out such an investigation as a matter of urgency and, if practicable, to deal with the question by way of an interim report.

I have considered, as a general matter of tax equity, the desirability of bringing forward the time of payment of tax by companies in the light of the change now proposed in relation to individual taxpayers other than PAYE taxpayers.

This could be justified in equity, but I am also conscious of the effect which such measures could have on liquidity and investment in present circumstances. While keeping the matter under review, I have decided to defer making such a change for the present. I have also in mind that it would be useful if the proposed taxation commission were to investigate the contribution to taxation by companies at large and I would propose to ask them to include it in their programme of work.

INDIRECT TAXATION

There is of course no escaping the fact that the income tax improvements and social welfare improvements being announced today must be met from taxation and the only realistic source for the vast bulk of this is indirect taxation. There is no scope through other forms of income taxation or of direct taxation otherwise for raising the amounts involved.

Pursuing the general social orientation of my proposals, I have concentrated my indirect tax proposals on discretionary expenditure as far as possible. In this way, the impact will be minimised on the necessities of life, and therefore on households and individuals whose means and commitments are such as to allow of only limited discretionary expenditure.

There are of course limits to the extent to which the wide range of essential public services can be financed from highly selective taxation, but my purpose has been to travel this road as far as I can.

The one area where I have felt obliged to tax less discretionary expenditure has been oil products and related headings. Energy considerations, balance of payments considerations, and of course revenue considerations all arise here. The balance of payments and budgetary needs I have already explained. We simply have to reduce our dependence on highly priced imported oils. Our pattern of usage of private motor transport in particular derives from an era when our roads and streets were less congested and when the human, environmental and financial costs of our habits were of little consequence.

It is vitally important for economic, social and environmental reasons that we rationalise our consumption habits. Car-pooling, use of public transport, good driving habits and staggered arrangements for delivery of goods to congested urban and city areas can all play a major role in relieving the obvious problems and ensure that motor transport can once again be an unqualified social and economic benefit for all. Some recovery of the lost ground of latter years in petrol taxation is clearly called for, together with a greater balance in taxation of oil products generally.

Hydrocarbon oils

Excise on all of the hydrocarbon oils has not been increased since 1976, and road diesel has remained at its present level since 1969. I purpose the following increases.

First, I propose an increase of 20p per gallon for petrol, road diesel and liquid petroleum gas (LPG) used in motor vehicles. Revenue considerations demand that no undue encouragement be given to switching away from the more highly taxed petrol.

The rebate for diesel oil used in buses on services scheduled in accordance with the relevant legislation will be increased appropriately so that bus fares will not be affected.

I am particularly concerned about the special case of handicapped drivers, a concern which I believe the public share.

In order to avoid imposing additional taxation on these drivers, I am arranging that the rebate to them will be increased by the full amount of the duty. In addition, I am increasing from 450 to 600 gallons the annual quota allowed to these drivers.

Other oils

I have given very careful consideration to the effects an increase in the duty on "other oils" might have on different categories of users, to energy conservation and to the alternative tax measures which might be otherwise required. I have decided that it would be appropriate, taking all the relevant factors into account, as they affect both individuals and industrial concerns, to propose an increase of 5p per gallon on these oils. By way of extension of an existing concession, producers with glasshouses of a minimum area of one quarter of an acre and mushroom growers with not less than 3,000 square feet of cultivation area will be rebated 3p of this 5p increase.

The additional revenue in 1980 from the tax increases on hydrocarbon oils is estimated at £113 million.

Private motor vehicles

In the light of what I have already

© 1980 International Bureau of Fiscal Documentation – BULLETIN

said, additional taxation on private motor vehicles also clearly falls to be considered. I propose that the excise duty on private motor vehicles, including motor cycles, should be increased from 35 percent to 40 percent. This can be expected to result in an increase of about 3.5 percent in the retail price. The estimated revenue yield in 1980 is £9.2 million.

The total yield in 1980 from the foregoing proposals for tax increases would be £122.2 million. This would be far short of what is required to finance the cost of the reliefs in direct taxation so I must turn at this point to what are popularly known as the "old reliables". In doing so I am encouraged by the fact that these are discretionary expenditures, and expenditures not without their social undertones in some cases.

Tobacco

I am proposing a tax increase of 10p in the retail price of the packet of 20 cigarettes in the most popular price category, with pro rata increases for cigars and other tobacco products. These increases are estimated to bring in extra revenue of £19.0 million in 1980.

Spirits

An additional 16p tax is proposed in the retail price of a glass of spirits. This will mean an extra 8p on the normal half-glass measure. This is estimated to bring in extra revenue of £14.0 million in 1980.

Beer

An increase of 6p is proposed in the tax element in the retail price of the pint of beer. This is estimated to bring in extra revenue of £30.8 million in 1980.

I also propose to increase the taxes on wine, cider and perry, and table waters.

Wines

An increase of 40p is proposed in the tax element in the retail price of a bottle of table wine. The increase will be pro rata for stronger wines, and for sparkling wines the proposed increase is 80p per bottle.

Cider

Following the restructuring of the excise duty on cider and perry in the 1979 Budget, I propose a modest increase of 10p in the tax element of the retail price of the gallon of ordinary cider. The change represents an increase of roughly 2.0p in the price of the ordinary flagon of cider. The highest strength will bear excise duty at the new rate proposed for "made wine", while cider and perry of intermediate strength will be increased by 55p a gallon.

Table waters

The existing rate of excise duty of 10p per gallon on table waters has not been altered since 1975. I propose to increase the tax element in the retail price per gallon by 30p. The new rate will be equivalent to: 6.6p on the family sized bottle (1 litre), 2.2p on the 12 oz. can and 0.7p on the 4 oz. mixer.

I am very aware of the effects this increase could have on the smaller manufacturers of mineral waters so I propose to increase the existing rebate provision pro rata. The new level of rebate will be: 12.4p on the first 20,000 gallons of output and 6.2p on the next 80,000 gallons of output.
The increases proposed for tobacco, alcoholic drinks and table waters are estimated to bring in extra revenue totalling £75.8 million in 1980.

Value-added tax

I consider in the special circumstances of this year and particularly from a balance of payments point of view that some more general constraint on expenditure is needed. The Government gave careful consideration to the question of some fundamental alterations in value-added tax. They decided, for reasons of social concern, that the present zero and 10 percent categories should remain unaltered but that an increase in the 20 percent rate to 25 percent would be justified and least likely to cause hardship. This will take effect from 1 May 1980. The additional revenue expected in 1980 from this change is £17.75 million.

I turn now to other, less general, excise and other duties where an upward adjustment of tax is necessary and appropriate.

Televisions and records

It is proposed that the specific duty of £69 on the top category of colour TV sets will be increased by £10 with pro rata increases for all other categories of colour and monochrome sets. It is also intended to increase the excise duty on gramophone records from 30 percent to 40 percent.

Cigarette lighters

I am aware that for some time now there has been a rapid growth in the sale of disposable cigarette lighters. Lighters are not subject to excise duty while matches are. Notwithstanding the fact that lighters attract VAT at a higher rate, the overall taxation favours lighters. For this reason I propose that a new excise duty of 20p per lighter be imposed on all lighters.

Stamp duty on cheques

I propose to increase in the Finance Bill the stamp duty on cheques from 1p to 3p. The 1p rate has applied since February 1971.
These three changes will yield an extra £1.6 million in 1980.

Minor excise duties

There is a large number of miscellaneous licences issued which bear an excise duty. They relate mainly to the alcoholic drinks industry and to auctioneering, betting and gaming, as well as to many other activities. I am having these examined with a view to increasing the duty, where appropri-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ate, in order to bring them up to a realistic level in present day terms or, at least, to cover the present day costs of administering them. I would intend to make the bulk of these changes in the forthcoming Finance Bill.

I have already decided to increase the licence duty on gaming machines. The proposed new rate is £100 for a full licence for each machine and £25 for a quarter year. I am increasing the reduced rate licence to £16.50 a quarter, but at the same time extending it to cover Saturdays as well as Sundays and public holidays. I also intend to provide in the Finance Bill for an increase in the licence duty for gaming premises from £100 to £200.

I also propose to double the existing rates for firearm certificates. The new rate, for example, for a shotgun will now be £6.50 a year.

The additional revenue in this area of miscellaneous licence duties is estimated at £1.2 million in 1980.

I turn to two further revenue proposals, one affecting outdoor and the other indoor recreation. I feel I voice a commonly held view when I say that racecourse betting and dancing might be called on to make a contribution to revenue needs.

On-course betting

There is a wide differential between the 20 percent excise duty which applies to off-course betting and the 6 percent levy which operates for on-course betting with bookmakers. I am having the general role of the latter levy in the financing of the racing industry reviewed but, in the meantime, I propose to impose a stamp duty of 1.5 percent on on-course betting with bookmakers, the proceeds to accrue to the Exchequer rather than to the racing industry as in the case of the levy. The benefit to the Exchequer in 1980 is estimated at £0.5 million. Betting on the tote will be unaffected by this change.

Dances

Dances, discos, cabarets, dinner-dances and the like comprise one area which can bear an additional element of taxation. I am considering the various alternatives which may be open to me in this respect and I would intend to bring forward firm proposals at an early date.

Before I leave the area of excises, there are two subsidiary matters I would like to mention.

Small brewers

The first is the small brewers scheme which, by way of concession, I am continuing for a further year at a cost of £160,000 in 1980. The scheme, introduced in the 1978 Budget, readjusts the incidence of excise duty on beer so that the smaller producers bear a somewhat lesser rate of duty while the larger producers pay somewhat more.

Deferment of spirit duty

The second matter concerns the way manufacturers of spirits pay excise duty. The duty is paid at the end of the month following that in which spirits are released from bond, except for the month of March when the payment may not be deferred. This catch-up arrangement is a hang-over from the old April to March financial year. I propose to replace it with a similar arrangement which would operate in December.

This has the once-off advantage from the budgetary point of view of bringing forward to this year the duty which would have been deferred to end-January, 1981. The gain to the Exchequer in 1980 is estimated at £8.3 million.

Motor vehicle duties

My next proposals concern motor vehicle duties and relate back, to some extent, to the duty increases on petrol and oils; they have both conservation and revenue implications. I propose an increase in the initial and annual registration charges for cars of 16 horse power and under from £5 to £10; an increase in the charges for motor cycles from £1 to £5; an increase in the annual charge on excavators, agricultural tractors and other agricultural vehicles to £10; an increase in the driving licence fee from £2 per annum to £3 per annum.

The new rates will apply from April 1st, 1980. The extra yield in 1980 from these changes will be about £3.5 million.

• • •

TAX EVASION

I have mentioned the matter of abuse of the social services. This brings me to the even graver matter of abuse of the tax system in various forms.

The changes I have made in the income tax structure represent a major effort to make it a just and equitable system. It is no less important that the system should be seen to be enforced fairly and equitably. The vast majority of citizens co-operate in a public spirited manner in paying their taxes but there is unfortunately a minority in the community who do not act in this way. By evading payment of taxes they pass on their share of the burden to their fellow citizen who in many cases may be less well-off and less well able to pay tax. The taxes payable by our community are imposed in the name of the community and are expended on purposes determined by the community in a democratic process. Evasion of those taxes cannot be condoned by specious argument.

The tax evader, insofar as he engages in deliberate infringement of the law through fraud, misrepresentation and false declarations, can expect the full rigour of the law to be applied against him. I wish to reassure taxpayers that in all such cases prosecutions will be brought by the Revenue Commissioners instead of their seeking discreet settlements. Over

© 1980 International Bureau of Fiscal Documentation – BULLETIN

the past few years, there has been a significant increase in the number of cases where proceedings were initiated.

While a person engaged in tax avoidance may feel he is operating within the law, the margin between avoidance and evasion in many cases is no more than hairline. I would like it to be understood by those engaged in schemes of tax avoidance, particularly schemes which have no real economic or commercial justification, that the operation of such schemes will not be immune from changes in the law.

There are people who are avoiding paying taxes because their business activity has not come to the notice of the Revenue Commissioners. Last year the provision of additional staff enabled the Revenue Commissioners to set up special inquiry units with an emphasis on outdoor investigation, to uncover traders and landlords and providers of services and others whose business is not on record for tax purposes or whose scale of business is not fully reflected in tax returns. In recent months 6,150 such cases have been uncovered.

There is an onus on all persons engaged in business to complete tax returns. If they do not, they must realise that when discovered, the transactions of previous years will be reopened and arrears of taxes, together with any appropriate interest and penalties, will be fully recovered from them.

Very considerable changes have been made in recent years in the legal powers of the Revenue Commissioners to deal with tax evasion and omission to provide information. These powers are now being used by the Revenue Commissioners to protect the interests of the vast bulk of the community who are paying their share of taxation and, if it seems necessary to strengthen the law further, I will have no hesitation in putting forward new proposals for legislation.

If every wage earner has his tax calculated precisely on his income and deducted at source, surely justice and equity require that the self-employed and professional classes should also disclose their income fully and pay their tax accordingly. As Minister for Finance, I feel an obligation to secure that all taxpayers receive the same treatment and I will make available to the Revenue Commissioners all necessary resources to implement this principle.

ZAMBIA:
Budget Speech 1980

Extracts from the Budget Speech pronounced on January 25, 1980 by the Hon. K.S.K. Musokotwane M.P., Minister of Finance.

REVENUE MEASURES

127. Mr. Speaker, Sir, I have already referred to the size of the Budget. I have pointed out that total expenditure (including lending) will be K1,030 million, and that recurrent revenue available will be K758 million, leaving an overall deficit of K272 million. Mr. Speaker, Sir, I have already explained the financing of this deficit.

128. Sir, included in the recurrent revenue figure of K758 million is a sum of K27 million which I hope to raise through new measures. Let me now turn to the discussion of these measures.

129. Mr. Speaker, Sir, the measures I am introducing are aimed specifically at mobilising additional revenue. But some of these are introduced with the objective of discouraging consumption of luxury items and more importantly the promotion of conservation of expensive imported materials. This is primarily intended to help in strengthening our balance of payments position, a policy objective I outlined a little while ago.

(a) Excise duty

130. Mr. Speaker, Sir, I wish to commence with an outline of the measures under the category of excise duties. As Hon. Members are aware, the offtake from this source of revenue is a direct function of the volume of production or sales of goods. Government revenue thus does not change with any price increase decided on by a manufacturer. It is therefore necessary to protect our revenue offtake from inflation.

(i) Clear beer

131. Mr. Speaker, Sir, the demand of beer in Zambia continues to be relatively high. In some parts of the country the constraint seems to be insufficient supply which in many instances reflects production and distribution problems. I am therefore proposing that the price of beer should be raised by 5 ngwee per bottle. The manufacturers will receive I ngwee of this increase. Furthermore the retailers will receive 2 ngwee of the increase. This will improve the retailers' margin to the extent where it should be profitable to distribute beer to all parts of the country. Finally, 2 ngwee will accrue to the Government. I hope to raise K4.9 million in additional revenue from this measure which will take effect from midnight tonight.

(ii) Opaque beer

132. In the same vein, Mr. Speaker, Sir, there is need to adjust the price of opaque beer. I therefore propose an increase of 1 ngwee per litre with effect from 2400 hours tonight. This measure will yield K2.6 million in additional Government revenue.

(iii) Cigarettes

133. Mr. Speaker, Sir, Hon. Members will agree with me that the prices of cigarettes are still comparatively low in this country. As long as production is maintained at reasonable levels, this is a valuable source of revenue for the Government. I propose that the prices of cigarettes be increased by between 10 percent and 17 percent, with the largest percentage increase for the top luxury grades. This will mean an increase of 10 ngwee per packet of 20 cigarettes for the most expensive brands, 6 ngwee for the middle priced brands and 4 ngwee for the lowest priced brands. This measure will yield an additional K4.8 million in Government revenue and comes into effect from midnight tonight.

(iv) Soft drinks

134. Mr. Speaker, Sir, there is a general consensus in this country that the prices of various types of soft drinks are still very low. In fact some soft drinks are still cheaper than in the countries from where some of the ingredients are imported. Indeed, soft drinks are more commonly consumed by urban dwellers. I have decided, therefore, to propose an increase of 4 ngwee per 290 millilitre bottle. Out of this increase the manufacturers will get 0.5 ngwee, the retailers 0.5 ngwee and the Government will receive 3 ngwee. This measure will yield an additional K3.5 million in Government revenue and takes effect from midnight tonight.

(v) Petrol and diesel

135. Mr. Speaker, Sir, this House must now be conversant with the turbulent situation prevailing in the world oil market. Earlier this afternoon, I informed this House that the oil market is now extremely volatile with a multi-varied pricing system where availability and security of supply are the overriding considerations. I would like, Mr. Speaker, Sir, to inform Hon. Members that we as a nation will this year spend K130 million in foreign exchange on oil imports. It is imperative that we, like many other non-oil producing countries, take measures to reduce the wasteful consumption of expensive petroleum products. Since the price mechanism is one way of reducing consumption. I am proposing that the prices of various grades of petrol be adjusted upwards as follows:

Petrol — super grade to go up by 2 ngwee per litre;
Petrol — regular grade to go up by 2 ngwee per litre.

136. I also submit here that contrary to popular belief, diesel is not a cheap fuel at source. It is an expensive item commanding the same price as other fuels. To make matters worse diesel has become such a scarce commodity that suppliers may cut back on the amount they supply in our imported crude feedstock. In this situation we must take measures to prevent wasteful use. I am therefore proposing that the price of diesel should be raised by 2 ngwee per litre. As usual, the necessary tax concession has been given to the United Bus Company of Zambia (UBZ) so that its users will not face any hardship.

137. Mr. Speaker, Sir, I estimate that these measures will bring an additional K7.7 million in Government revenue and will take effect from 2400 hours tonight.

(b) Customs duty

138. Mr. Speaker, Sir, Hon. Members will recall that the rate of customs duty on capital goods was last adjusted upwards in 1978. This adjustment was from 5 percent to 7.5 percent on a specified list of items. The measure was intended to promote more labour intensive methods of production. Hon. Members will also agree with me that Zambia is one of the few countries in the world where capital goods are virtually free of duty. We must continue to encourage more use of our labour in keeping with our policy of creating more employment opportunities, a policy to which I referred earlier this afternoon.

139. I have therefore decided to adjust upwards the rate of customs duty on a selected number of capital items from 7.5 percent to 10 percent. I hope that this will further strengthen our resolve to discourage labour-saving machines. Sir,

© 1980 International Bureau of Fiscal Documentation – BULLETIN

I have also decided to suspend the import duty on sports goods like football, hockey, cricket and other outdoor games, but excluding equipment for hunting, shooting and fishing. This is in response to the resolution of the National Council and to persistent requests and representations on the matter.

140. Sir, there are also a number of minor proposals meant to tidy up the Customs and Excise Act. Included in this exercise are adjustments in the rates of customs duty on imported items competing with locally produced goods on which excise duty has been adjusted upwards. Such increase in customs duties are meant as a countervailing measure to discourage unnecessary imports.

141. Mr. Speaker, Sir, I estimate that the measures on customs duty will yield an additional K1.7 million in Government revenue and will take effect from midnight tonight.

142. Mr. Speaker, Sir, I have proposed a small increase in the price of diesel. This will affect the agriculture industry. Many of our farmers are now using diesel in increasing amounts. As such they need some relief. Indeed farmers also need added incentives to increase their production. I am therefore proposing to amend the relevant regulations of the Customs and Excise Act to enable the Minister of Finance to give duty exemption on some imported agricultural equipment. This will be on a case by case basis and shall apply to deserving cases only. Sir, this is a very attractive incentive and I hope the response will be reflected by increased agricultural output next year.

(c) Sales tax

143. Mr. Speaker, Sir, last year, my predecessor reduced the rates of Sales Tax on a number of essential household items. I do not propose to make any adjustments to these. However, in order to raise revenue, I am proposing to raise the rates on a number of items as follows:

Sugar confectionery — from 10 percent to 15 percent
Paints, varnishes and lacquers — from 10 percent to 15 percent
Gramophone records — from 10 percent to 15 percent
Tarpaulins, tents, awnings, etc. — from 10 percent to 15 percent

144. In addition, I propose to extend the coverage of Sales Tax to aerosols, insecticides and metal holloware. The rate of Sales Tax on these items will be 10 percent.

145. Mr. Speaker, Sir, I expect these measures to yield about K1.8 million in additional Government revenue and will take effect from midnight tonight.

(d) Passenger service charges (International)

146. Mr. Speaker, Sir, Hon. Members are aware that the cost of running our airports is considerable and increasing. This House will recall that in order to assist in the proper maintenance of airports, the Government introduced a passenger services charge which is paid by passengers departing for destinations outside Zambia. This was first introduced in 1972 and was increased from K3 to K4 in 1978. In order to offset the effects of inflation on the value of revenue from this source, I propose that with effect from 1st April, 1980, all passengers on international flights departing from our airports for destinations abroad should pay a service charge of K8.00. This measure is expected to add K200,000 to Government revenue.

(e) Income tax

147. Mr. Speaker, Sir, I wish to inform this House that my Ministry has received numerous representations on income taxes from a cross-section of the population in this country. Some representations merit close attention. Others obviously are mere compliants.

148. Earlier this afternoon, in my discussion of industrial and investment policy, I informed this House that the overall strategy of the Government is one of consolidation and clarification of existing incentives to investors and manufacturers. In view of the need to encourage investment, I have given considerable thought to all the submissions by our business community. Hon. Members will agree with me that if the Government were to accede to all the requests, the loss in revenue would be staggering. However, I have made some concessions which I hope will go some way in meeting the wishes of our business community.

149. Firstly, I have decided, under capital allowances, to raise the maximum amount allowable as a deduction for the cost of a road vehicle used for business purposes from K4,000 to K6,000. This increase has become necessary in view of the rising prices of motor vehicles. This means that the ceiling on allowances for purposes of wear and tear will be much higher taking into account the effects of inflation. This comes into effect on 1st April, 1980.

150. Secondly, and in the same vein, I have decided to raise the ceiling amount allowed for purposes of initial wear and tear on low cost houses. The ceiling will rise from K4,000 to K10,000. This is an attractive concession which businessmen should utilise and help to relieve pressure on local authorities for low cost housing. This concession will come into effect on 1st April, 1980.

151. Mr. Speaker, Sir, one of the areas in which there has been an outcry concerns Undistributed Profits Tax. Last year, the relevant section of the Income Tax Act which dealt with distributions of dividends was repealed and the Undistributed Profits Tax was introduced. Sir, I wish to inform the House that I have found it impossible to completely do away with the Undistributed Profits Tax as most of the business community would want. However, I feel that certain provisions of the law are too rigid. I have therefore decided, that in order to satisfy some of the demands of the business community and to introduce some flexibility, the Act will be amended to allow for business expansion requirements, i.e. reinvestments, reasonable reserve levels and other requirements to be taken into account before the Undistributed Profits Tax is applied.

152. Sir, I am satisfied that my proposal is equitable to the business community and to the Government. It remains for me to commend the business community for the very constructive manner in which they have put forward their representations and suggestions. I hope businessmen will take advantage of the new arrangements and expand their enterprises.

153. Last year, my predecessor introduced a job credit facility as an incentive to the manufacturing sector to create new jobs. Considering the fact that we also have the Industrial Development Act which extends tax incentives to all our economic sectors, I have found it necessary to rationalise this facility. Sir, instead of allowing a flat amount as credit, I have decided to tie the facility down to the salaries or wages payable to the qualifying employees. In the first charge year of the qualifying period in which an employer has commenced qualifying business, 10 percent of the basic wages or salaries payable in respect of all qualifying employees during such charge year, will apply. In subsequent charge years of the qualifying period, 5 percent of the basic wages or salaries payable will rank as a job credit against the manufacturer's tax. The facility will also be on a once and for all basis instead of being carried forward. I have decided to introduce this amendment in view of the potential loss of Government revenue due to the loopholes I am now removing from the facility. I believe this will be fair to the Government as well as the manufacturers intending to use the facility.

154. Mr. Speaker, Sir, there are also other minor amendments to the Income Tax Act which are merely part of the continuing exercise of tidying up our legislation in the light of new developments.

155. Finally, Mr. Speaker, Sir, Hon. Members will recall that earlier this afternoon I informed this House that the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Special Reconstruction Fund for the repair of bridges and other damaged installations now stands at just over K1 million from contributions by the people of this country. In a further expression of appreciation for this show of committment and patriotism, the Party and its Government have decided that all cash contributions to this Fund will be allowed in full for tax purposes. This will also apply to future cash contributions. Once again, I wish to publicly thank all those who have contributed so generously.

CONCLUSION

156. Mr. Speaker, Sir, I have now come to a stage where I must conclude my remarks. Before I do this, allow me the opportunity to summarise what I consider the critical issues facing the Zambian economy. The paramount objective must be to ensure that the nation spends within the limits of available resources. This will mean limiting recurrent expenditure to the most essential areas. It will also entail capital spending based on national priorities that aim at increasing employment and productivity. In addition we must not relax in our resolve to restrain inflation. We must also jealously protect the industrial peace which this country has enjoyed for a long time now.

157. Hon. Members should have noted my call on all of us to temper our optimism with caution since a number of critical factors affecting our economy are beyond our control. Indeed the world situation is so uncertain that it is difficult to confidently predict future developments. We must therefore ensure that we prudently budget the use of scarce foreign exchange resources. This country has the natural resources and ability to uplift the well-being of its people. We have a duty to leave a better country for future generations. We can only succeed if we follow the correct policies and determine the correct priorities.

158. Mr. Speaker, Sir, we have been faced with problems as a nation since Independence. We have continued to overcome all these. These problems have made our national character ever stronger. Because of the difficulties we have gone through, we have been able to demonstrate and prove to ourselves and to the world that we are a strong and determined people. Let us therefore continue building for ourselves and for posterity a Zambia that is happy and prosperous.

159. Let us avoid servitude by continuing with individual and national self reliance and discipline. Let us use our past mistakes as lessons to learn from and our past successes as a foundation to grow from. Let us all work hard. Let us all work together. Let us remain united and concentrate on working out solutions to our problems. Let us realise that the greatest asset of Zambia is the people themselves. Let each one of us in the leadership rededicate ourselves to the unity of this nation. We have in His Excellency the President Dr. K. D. Kaunda a uniting factor. Let each one of us exploit this to the full.

IRAN

To pay or not to pay: that is the question

It has been brought to our notice that the Revolutionary High Council of the Islamic Republic of Iran passed a law on 14.9.1358 (December 5, 1979) which facilitates the settlement of outstanding tax liabilities incurred during the Iranian year 1357 (March 21, 1978 to March 20, 1979). The major points of the law are subject to dispute but the first Article caught our eye. It must be one of the few, and maybe the only one, which leaves the discretion of the amount of tax to pay to the taxpayer. The gist of the Article is that taxpayers with a basic tax liability for that period of Rls.50,000 or less need pay only what they consider justified. They are protected from further recourse by the tax authorities as the Article goes on to say that the receipt obtained for this voluntary payment will be accepted as evidence of final settlement.
How much would you pay?

CONFERENCE DIARY

JUNE 1980

Business International Institute: The Seminar on International Finance (including: Taxation of exchange gains and losses), Port Chester, New York (U.S.A.), June 9-12 (English).

Georgetown University Law Center and *The Chamber of Commerce of the United States:* Institute on multinational taxation (treaty problems anti-avoidance measures, use of computers in international taxation, currency gains and losses, international insurance transactions, Brazilian taxation), Washington D.C. (U.S.A.), June 11-13, 1980 (English).

European Study Conferences Limited: International tax planning conference; protection of assets of companies and trusts in the face of risk (including exchange of information between tax authorities), London (United Kingdom), June 12-13 (English).

European Study Conferences Limited: Investing in United States real estate in the light of the current and proposed financial and taxation considerations, Amsterdam (the Netherlands), June 19-20 (English).

Institute for International Research: Successful trading in commodities (including the tax angle — consider it before you trade!), London (United Kingdom), June 24-25 (English).

Inter-American Center of Tax Administrators (CIAT): Fundamental tax audit considerations (including: Components of an audit program, organization of a tax audit department, EDP and tax audit, resource management support, legal aspects of tax audit), Washington (U.S.A.), June 22-27 (English, Spanish).

JULY 1980

Management Centre Europe: The China Briefing (including: Tax aspects of doing business in China), Brussels (Belgium), July 3-4 (English).

Management Centre Europe: Managing and developing foreign subsidiaries seminar (including: Tax in international operations), Brussels (Belgium), July 2-4 (English).

Management Centre Europe: International tax management seminar (including: Anti-tax haven legislation, tax treatment on technology import and technology export, handling of disputes between tax administrations), Brussels (Belgium), July 10-11 (English).

AUGUST 1980

Management Centre Europe: International cash management seminar (including: International tax aspects in cash management), Brussels (Belgium), August 20-22 (English).

SEPTEMBER 1980

34th Annual Congress of I.F.A.: I. The dialogue between the tax administration and taxpayer up to the filing of the tax return; II. The determination of the source of income. For the seminar the subject is the flight to tax havens, their use and abuse, Paris (France), September 14-19 (English, French, German, Spanish).

NOVEMBER 1980

Confédération Fiscale Européenne (C.F.E.): Second congress of European tax consultants (subject: "La pratique de la fiscalité en Europe"), Rome (Italy), November 6 and 7 (English, French, German).

SEPTEMBER 1981

35th Annual Congress of I.F.A.: I. Mutual agreement procedure and practice; II. Unilateral measures to prevent double taxation. Berlin (German Federal Republic), September 21-25 (English, French German, Spanish).

From Prentice Hall

An indispensable aid for American businessmen, investors and corporations engaged in or planning foreign operations and for those in foreign countries planning or doing business in the United States —

TAX TREATIES

This definitive guide is indispensable for any businessman or corporation that sells, buys, manufactures, or invests in the United States — as well as for any American businessman or corporation that does business in foreign countries. It tells you:

- **How and where to handle your investments while eliminating the chance of double taxation.**
- **How much of your investment income will be protected by tax treaty exemptions.**
- **How much business Americans can carry on in a foreign country and vice versa without becoming taxable as a "permanent establishment."**
- **How to protect your employees who are temporarily at work abroad from a double tax burden.**

In Tax Treaties, you'll also find:

1. **The full official text of every existing treaty, supplementary treaty, or protocol relating to income taxes and estate and gift taxes between the United States and each of its tax-treaty countries, including model treaties showing the latest trends.**
2. **Annotated editorial text arranged in a Uniform Paragraph Plan . . . makes for easy direct comparison of provisions of one tax treaty country with another . . . permits a single unified index which works hand in hand with this unique setup. You'll make sure, speedy decisions at the flip of a wrist.**
3. **Official reports on each treaty giving you the background behind the provisions; why particular treaty articles were included; and what each provision means to you.**
4. **A Special Finding List at the beginning of the editorial summary for each country . . . speeds you quickly to explanatory and official material that affects you.**
5. **Monthly REPORT BULLETINS, analyzing the latest treaties, decisions and rulings, keep you right on top of today's fast breaking tax treaty developments . . . (plus Current Matter containing the most recent U.S. court decisions and IRS rulings giving you the latest judicial and official word on tax treaties.)**

In today's constantly expanding international commerce, expert tax-managing or tax-counseling of business activities between the United States and each of its treaty countries is a must — so keep up to date with Prentice-Hall's TAX TREATIES.

To order a one-year introductory subscription to this unique publication at the low rate of only $ 120, address Department S-TT-103.

TAX GLOSSARY

by H.W.T. PEPPER *

RETROGRESSION (RETRO-ACTION), RULE AGAINST — It is a generally accepted principle of taxation that new tax laws, or Court decisions on cases brought before them, should not ordinarily seek to change the incidence of tax on transactions that had already taken place before the law was enacted or the Court decision handed down. There have been one or two exceptions to this rule in practice; for example, in Britain an income tax provision charging tax on GOLDEN HANDSHAKES (q.v.) was enacted as a part of one year's budgetary proposals after a warning had been given in the previous year that such action would be taken if the practice of making such transactions did not cease. The retrogressive effect in this particular case related only to transactions that had taken place following the warning given.

The latest development in the running battle between tax administrations and professional "avoiders" was the statement in a 1979 Budget Speech in the U.K. to the effect that any new tax avoidance schemes would be counteracted by law retrospectively.

RETURNS — Declarations of income, sales, and other details required by tax authorities, often on forms officially provided, which are to be "returned" to the authorities.

REVALUATION OF (DEPRECIABLE) ASSETS — An alternative to a system of REPLACEMENT-COST DEPRECIATION (q.v.), where inflation in a country has increased the replacement cost of assets considerably above historic cost, is to revalue the asset and then re-calculate depreciation allowances on the revised values. It is not usually administratively possible to calculate indices of revaluation for each of the many types of asset involved, so that in practice some established index of prices compared with a base year would normally be used even though the results may be anomalous between different industries.

REVENUE ERROR — See REMISSION ON REVENUE ERROR.

REVENUE-SHARING — A system introduced in the U.S.A. in 1974 whereby State and local governments were granted a share of certain Federal revenues for which, however, the Federal Government remained the collecting agent. The system is also known as PIGGY-BACKING. In Sweden, joint collection of national and local government income taxes has been in operation for many years, as has a system in the U.K. for joint collection of income tax and certain pension contributions — systems which are broadly similar to revenue "sharing".

REVENUE TAXES — Taxes which are levied to produce revenue rather than to serve any particular fiscal of economic purpose.

RECOVERABLE SETTLEMENT — Under U.K. tax law, settlements which transfer income to other persons, but which are subject to any form of revocation, are set aside for tax purposes by Sections 445 and 446 of the 1970 tax code, the income involved being regarded as the income of the settlor.

RIBICOFF AMENDMENT — See OVERSEAS EMPLOYMENT.

"RING" — In connection with a single stage sales tax where tax is payable only on sales to non-registered traders or consumers, the traders who are registered are said to form a "ring" in that purchases and sales among such traders (i.e. transactions within the "ring") are not taxable, but as soon as goods are disposed of outside the "ring", tax becomes payable.

"RING FENCE" — A term used in connection with PETROLEUM REVENUE TAX (q.v.). The profits of each field are dealt with separately — there is a "ring fence" placed around them in that external losses may not be offset, except in the case of a final loss in another terminating field.

ROAD TAX — It is common to levy various forms of taxation on vehicles using public roads, the justification being the cost of maintenance of the roads themselves, the main wear of which is caused by those using such vehicles. The tax may be based on the horsepower of a vehicle or the cubic capacity of its cylinders, or may be related to the laden weight of goods vehicles or the passenger-carrying capacity of buses and coaches. (See also ROAD TOLL.)

ROAD TOLL — During the era of turnpike roads in Britain, private entrepreneurs or land owners were authorised to build roads and charge tolls, the tolls being collected at turnpikes from those who used them. Because those entitled to collect the tolls tended to be more diligent about collecting them than maintaining the roads for which they were paid, the system fell into disrepute and was abolished. At the present time, however, a number of countries charge tolls on motor roads and bridges which are available for certain types of vehicle only, the roads and bridges, however, being provided and maintained by the government. Such charges are, for example, made in the U.S.A., Italy and France. The essential basis for such a tax must be that the road is used by a large volume of traffic, so that the cost of collection would only be a small fraction of the total tolls collected and that the payment process will not unduly slow down the flow of traffic. The term "turnpike' to denote a road on which tolls are charged is still used in the U.S.A.

ROERENDE VOORHEFFING — (Belgium) Advance payments (usually withholding tax) of tax on dividends, royalties and interest.

ROLL-OVER RELIEF — Relief from capital gains of income tax granted where assets of one class are disposed of and the proceeds of disposal are reinvested in replacement assets of the same class and where the profit on disposal would otherwise have been chargeable to tax. Such relief is provided, for example, in the U.K. (see Section 33 F.A. 1960 and Section 60 F.A. 1971). In Britain the relief is applied to business assets; in the U.S.A. it is also applied for capital gains tax purposes (in lieu of exemption) to private residences.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ROOM TAX — A tax charged on the occupancy of rooms in a hotel, usually at a fixed rate per head per night, but sometimes on a graduated basis according to the price of the rooms. A room tax is thus a tax on hotels (and sometimes others providing accommodation for tourists at a fee) but the tax is not usually extended to the other services provided by the hotel, including the provision of meals in its dining rooms.

ROYALTIES, COPYRIGHT — The most important international flow of copyright royalties is usually that of sums paid for the hire or rental of cinematograph films. Other copyright royalties may be taxed by deduction at source, particularly where the royalties are payable to a non-resident, but double taxation treaties often mutually exempt such payments from taxation in the country of payment. (See FILM HIRE TAX, FOOTAGE TAX.)

ROYALTIES, MINERAL — See MINERAL ROYALTIES.

ROYALTIES, PATENT — As in the case of copyright royalties, tax is often deducted at source from payments of patent royalties made to non-residents (in Britain, from all such payments), subject to exemption which may be granted on a mutual basis in double taxation treaties, the country of residence taking full powers to tax.

ROYALTIES WELFARE LEVY — A levy originally concurrent with MINERAL RIGHTS DUTY (q.v.) in Britain imposed in 1910 on coal royalties and abolished when coal deposits were nationalised in 1946.

RÜCKLAGE — (Germany) Reserve for future contingencies.

RÜCKSTELLUNG — (Germany) Reserve for debts or losses existing at the balance sheet date, the amount of which is not precisely known.

RUMMAGE — The process of making a detailed search of a ship by Customs officials in a quest for contraband is known as "rummaging" the ship.

S

SAERBESKATNING — (Denmark) Separate assessment.

SAFETY EXPENDITURE — Expenditure on fire prevention, accident prevention, and so on, usually is given favourable tax treatment: either the expenditure may be deducted when incurred, or the total cost may be written off over a period of years.

SALE AND LEASE-BACK — See LEASE-BACK.

SALE OF INCOME — The device of selling present or future earnings for a capital sum in order to avoid or reduce tax liability (see, per contra, SPREADING) is countered in some countries' tax codes (U.K., U.S.A.) by making the resulting lump sum taxable as income.

SALES AND USE TAX — The scope of sales taxation in a country with a federal government, where the individual states or provinces have the power to levy sales taxation, is often expanded to a charge on "sales and use". The "use" element deals with the case where residents of the taxing state purchase taxable goods outside the taxing state from other states within the same federal jurisdiction, sometimes from "inter-state" enterprises that operate in several different states within the country. The scope of the tax is thus extended to cover sales outside the state, but within the country as a whole, which are made to residents of, in respect of goods used in, the taxing state. The "use" provision counters tax avoidance and equalises the tax position of traders within the taxing state with traders outside who sell to residents of that state.

SALES TAX — An ad valorem tax on sales of goods, and sometimes services also, usually calculated at a percentage rate, and collected at regular intervals (e.g. monthly or quarterly) from traders who are entitled to "shift" the tax to their customers by suitably adjusting the prices of the goods or services the traders provide.

SALES TAX LOTTERY — See LOTTERIES FOR CONSUMERS.

SALVAGE VALUE — The residual value (which may be merely a scrap value) of depreciable assets at the end of their service life when capital or depreciation allowances are given in respect of the cost of providing the asset. The sale proceeds or salvage value of the asset when it is taken out of service are usually credited in computing the total deduction for depreciation (see BALANCING ALLOWANCES AND CHARGES). An estimate of the ultimate salvage value of an asset may be taken into account, along with estimated service life, when computing the appropriate depreciation allowances.

SAMBESKATNING — (Denmark) Joint assessment of combined incomes of husband and wife.

SAMBESKATNING SELVANGIVELSE TIL — (Denmark) To file a joint return.

SAMTIDIGHEDSSKAT — (Denmark) Pay As You Earn (P.A.Y.E.)

SANDWICH EFFECT — The term "sandwich effect", in connection with a V.A.T., is applied to the situation when an exempt trader buys taxed goods and sells them, after processing, to a taxable trader. In the absence of special provisions, no relief would be due to the trader who finally sells to the consumer in respect of the tax originally embodied in the goods when they were purchased by the exempt trader. In fact, relief in these circumstances has in some instances been allowed to the final trader, notably in Brazil's V.A.T. (I.C.M.), and another remedy is to allow the "sandwiched" trader who buys the taxed goods to have "zero tax" treatment so that he may re-claim the tax he paid on purchase. In the latter case the goods then pass free-of-tax to the next trader, who has to account for the total tax on his sales but at least has incurred no pre-payment of tax which cannot be requited. (See also ZERO RATE.)

SATS (SKATTESATS) — (Denmark) Tax rate.

S.A.Y.E. — Save-As-You-Earn, the name given to various schemes whereby employees and others may contribute regular sums by way of savings which are refundable after five or more years with the addition of interest and/or a bonus or premium. Such schemes have relevance for taxation only where, either, some tax deduction is allowed for the contributions made, e.g. by employees who authorise deductions from their pay for the purpose, or where the bonus or interest element in the amount realised at the termination of the deduction period (i.e. the excess of the sum paid out over the amounts contributed) is exempted from tax.

SCHACHTELBETEILIGUNG — Participation of at least 25 percent by a German company in the control of another German company.

SCHACHTELVERGÜNSTIGUNG (also SCHACHTELBEFREIUNG or SCHACHTELPRIVILEG) — Exemption from corporate income tax granted to German parent companies in respect of dividends from their German subsidiary companies.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

SCHEDULAR TAXATION — Taxes on particular items of income which are applied as separate taxes, often at fixed rates, in contrast to the system of aggregating all income accruing to the same person and applying graduated rates thereto, which is the more usual form of income taxation at the present day. An example of a country which retains some elements of schedualr taxation in its income tax system is provided by Hong Kong.

SCHEDULES A TO F — Under the British income tax system tax is levied under different "schedules" or divisions according to the nature and source of the income. This compartmentalisation does not affect the incidence of the tax, which is a graduated charge upon total aggregated income. Income is classified under the various schedules, as follows:

Schedule A: Net profits from rents on leases of land, ground rents, feu-duties and other annual payments from land and other receipts arising from the ownership of, or rights over, real property.

Schedule B: Income from the occupation of certain woodlands if the occupier has not opted to be assessed under Schedule D.

Schedule C: Interest from certain securities of the British and certain overseas Governments where it is paid in Britain, the tax being paid by the paying authority and deducted from the interest paid to the investors.

Schedule D: Profits on trades, businesses, and professions, and woodlands where the owner has opted to be taxed on his commercial profits therefrom, and certain other income including interest on loans, rents and other income from real property, and certain income from abroad. This Schedule is subdivided into a number of "Cases" and the Short-Term Gains Tax (abolished April 1971) was formerly included in Case VII.

Schedule E: **Income from offices,**

Schedule E: Income from offices, employments or pensions. The schedule is subdivided into "Cases", according to the territorial source of the income.

Schedule F: Dividends and other distributions of resident companies.

SCHENKINGSRECHT — (Holland) Gift Tax.

SCHENKUNGSTEUER — (Germany) Gift Tax.

SCHIJVENTARIEF — (Holland) Tax rate computed on slices of income.

SCISSION — (France) Company splitting.

SCISSORS TRANSACTIONS — A tax avoidance device whereby a company trading in securities would buy (a controlling interest in) another company, arrange for its assets to be realised (or "stripped") then re-sell the company at a loss, deductible from its own trading profits.

SCOPE OF TAX — The "scope" of a tax, sometimes referred to as the "tax base", is its coverage, which includes the geographical area to which it is applied, the nature of the capital, income, or transactions which is to be taxed, and the persons, e.g. resident and non-resident individuals, corporate bodies and other bodies or artificial persons to whom, and in some cases the period of time (e.g. the duration of a war, emergency, or of inflation or depression) during which, the tax is to be applied.

SCRIP DIVIDEND OPTION — During the time that Governmental rules limiting dividend payments (an anti-inflation device) were in operation some companies offered shareholders an option to take scrip (stock) dividends instead of cash. Initially the move, which enhanced the anti-inflation effect of the Government's restrictions, was encouraged by the exemption of such dividends from income tax, though subsequent sale of the extra scrip would have entailed capital gains tax. After April 1975, however, such scrip dividends were made liable to income tax and options were thenceforward no longer offered.

SCUTAGE — A medieval levy in Britain under the Feudal system (the word literally means a shield tax) exigible by a feudal chief from others who owed him military service, as a cash payment in lieu of such service.

SECURITY FOR TAX — Where a taxpayer handles tax monies (PAYE deductions, V.A.T.) on behalf of a tax department, the question arises whether some security should be sought from the person involved because he is effectively in a position of trust regarding public money. In practice it is rather unusual for security to be actually sought by the tax department. Good tax administration, however, normally secures that where money is withheld at source in respect of income taxation, or in effect collected from customers by traders under a sales tax or V.A.T. regime, it should be handed over reasonably promptly after receipt.

In practice P.A.Y.E. tax is usually remitted monthly, sales tax and V.A.T. may be remitted monthly, quarterly, etc. according to the size of the amounts involved. In Brazil, where VAT (I.C.M.) is to a large extent collected by the banks on behalf of the administration, there are precise rules as to the number of days that may elapse between receipt by the bank and payment to the Treasury.

Where a taxpayer seeks to leave the country when he owes tax, and there is a genuine risk that the tax could not be collected in the event of his not returning, there is often provision in the tax law ensuring that some security be given by the departing taxpayer. See also PERIODICITY OF PAYMENTS, TAX CLEARANCE.

SECURITY TAX — In the 1970s, because of the prevalence of the hijacking of airliners by terrorists and criminals, many countries instituted body-searches and electronic surveillance of personal luggage in respect of passengers boarding aeroplanes at the main airports. Some countries have financed the cost of such security measures by a levy or tax on all passengers.

SELECTIVE EMPLOYMENT TAX (S.E.T.) — A tax which operated in the U.K. from 1966 to March 1973, in effect as a levy on the cost of services, with the stated object of encouraging the movement of employees from service industries to manufacturing industries, although some economists considered the latter already over-manned. The tax was levied at a relatively high specific amount (in a sense a "poll tax") in respect of each employee (initially £2.40 per week per man, £1.20 per woman or boy, £0.80 per girl; one-third only of the levy was made on elderly or part-time workers). The levy was payable by employers who were permitted to shift the tax to the consumer. The selective nature of the tax was in the refund system. Refunds of the total levy were granted to manufacturers, but none to service industries, while manufacturers in Development Areas were also paid a premium (see REGIONAL EMPLOYMENT PREMIUMS).

SELF-ASSESSMENT — See ASSESSMENT, SELF.

SELF-CHECKING — One of the merits claimed for V.A.T. is that because each trader pays tax on his sales and deducts the tax embodied in the purchases passed on to him by his suppliers, each trader has a vested interest in the accuracy of the certification to him of the tax paid by the traders from whom he purchases goods or services. This feature is thus claimed to be a means whereby the tax is "self-checking" or "self-enforcing".

© 1980 International Bureau of Fiscal Documentation – BULLETIN

SELF-ENFORCEMENT — See SELF-CHECKING.

SELF SUPPLY — In V.A.T. systems, e.g. that in the U.K., there may be a charge to tax on goods produced in the taxpayer's business which he uses himself. See also HOME CONSUMPTION.

SELSKAB — (Denmark) Company (Corporation).

SELVANGIVELSE — (Denmark) Income tax return.

SEPARATE ASSESSMENT — In the U.K. a husband is assessable on the joint incomes of himself and his wife, but a wife may elect to be separately assessed on her income, from which she will then be granted a proportion of the total reliefs. Somewhat similar provisions exist in the U.S.A. (see also INCOME-SPLITTING).

SERVICE LIFE — The period during which it is estimated an asset will provide useful service to the business in which it is employed. The rate of depreciation allowed will normally depend upon the length of service an asset may be expected to give.

SERVICES TAX — A tax, usually on ad valorem lines, on various types of services, sometimes included within the scope of a general sales tax including a V.A.T., but sometimes levied separately (e.g. the former French T.P.S. (Taxe sur la Prestation des Services)) and at other times a series of individual levies on different types of service often at different rates of tax; e.g. a higher tax may be charged on entertainments, particularly those of a luxury kind, gaming or betting taxes may be levied on casinos, horserace betting, etc., and there may be special levies on the stakes in football pools. The services of artisans may be exempted or charged at lower rates in some instances, and it is fairly common to exempt from tax the services of the liberal professions, including lawyers, accountants, doctors, dentists and architects.

SEVERANCE PAYMENTS — Non-contractual gratuities payable to an employee, usually on redundancy and usually non-taxable. (See, however, GOLDEN HANDSHAKE, GOLDEN BOWLER, also LOSS OF OFFICE, REDUNDANCY.) In Italy an employer may obtain a tax deduction for provisions made for severance payments which may arise, so long as the provision is in accordance with statutory and contractual obligations concerning employment. In Japan payments on cessation of employment, including lump-sum retirement or pension allowances, and severance payments, are taxed separately from other income. Deductions are made for the period of service (¥ 250,000 p.a. up to 20 years, ¥ 500,000 for each year over 20, plus ¥ 5,000,000) and tax is applied to 50 percent of the remaining amount.

SHARE FOR SHARE ACQUISITIONS — Where the shares in a company are taken over in exchange for the shares of another company which has assumed control of the first company, the "disposal" is often disregarded for capital gains tax purposes, though a charge may arise if the shareholder subsequently realises the shares he has received in exchange for the old ones.

SHARE (STOCK) OPTIONS FOR EMPLOYEES — Some companies allow directors and key employees to have an option to buy at some future date shares or stock in the company at a price usually in keeping with current stock market value. The theory is that those benefitting will have an incentive to make the company more profitable and thus enhance the value of its shares which they are enabled to buy at specified future dates at the option price.

The tax treatment of the difference between the market value and option price of shares under such schemes varies in different countries and over a period of time. For example, in the U.K. such gains were free of tax altogether until capital gains tax was introduced in 1965. Then in 1966 the gain was made chargeable to income tax. In 1970 some tax relief was given for formal schemes for share acquisition at fixed prices and there was further liberalisation in 1972. On a change of Government in 1974, however, the benefits were made taxable to personal income tax. Most countries tax the benefits in one way or another.

SHIFTING OF TAXES — In the case of indirect taxation the tax is normally intended to fall upon consumption and be borne by consumers, so that a trader who pays the tax on his sales or deliveries in general passes on the tax, or "shifts" it "forward", to the consumer by adjusting his prices appropriately. Such taxes are said to be shifted "backwards", particularly in the case of a new or increased levy, when some traders or manufacturers are forced to absorb some of the tax if they fear or find that their products are unable to bear an increase in price of the same dimensions as the tax because the demand for their products is elastic (see also TAX PUSH INFLATION).

SHIP-MONEY — A mediaeval tax for the support of the Navy, levied in Britain on coastal towns, revived by Charles I in 1634-36, when refused financial supplies by Parliament, and declared illegal by Parliament in 1641. Refusal to pay ship-money by John Hampden and others was among the events leading up to the Civil War of 1642-45.

SHIPPING CENTRE — A country which provides (inter alia) FLAG OF CONVENIENCE facilities for ship-owners and charterers. The tax pattern is usually exemption from income (company) tax on the profits from operating shipping, but fairly substantial registration or tonnage dues are charged on an annual basis. Usually the labour laws and other relevant legislation are less onerous in the haven country than in the countries of origin of the ship-owners. The term "shipping centre" is a euphemism adopted since Flag of Convenience vessels have become unpopular in some spheres, and the haven country may develop financial and other services for the benefit of the shipping companies.

SHORTFALL ASSESSMENT — A charge made on CLOSE COMPANIES (q.v.) in Britain prior to the 1972 Finance Act where the distributions made by such companies fall short of the statutory limits.

SHORT-TERM GAINS TAX — A number of countries tax short-term capital gains, generally defined as gains accruing from the acquisition and disposal of an asset, usually within a period of six months to two years (the period is six months in the U.S., 12 months in the Philippines while France and Sweden use a two-year period). Such gains are deemed by the tax law to be income chargeable with income tax, but in some systems may be charged at rates which are lower than income tax rates but higher than the rates applicable to gains which have accrued over a longer period.

At one time Britain taxed only short-term gains, there being no charge upon longer term gains. The tax law was specially designed to tax short-term gains which were defined as gains from disposals of securities which had been acquired within 12 months of the disposal date. As regards other property, gains were taxable if the disposal took place within three years of the acquisition of the asset. This tax survived the introduction of a general capital gains tax in 1965, but was finally repealed following the Budget of April 1971. (See also SPECULATION, LAND, TAX.)

© 1980 International Bureau of Fiscal Documentation – BULLETIN

SIEGE SOCIAL — (France) Residence of company.

SIGHT ENTRIES — The procedure whereby goods are allowed into a country by its customs officials, on an urgent basis, e.g. in the case of perishables, leaving full documentation and formalities to be completed later. (See also PERFECTION OF ENTRY.)

SINGLE STAGE SALES TAX — A sales tax which is applied at a single level of production or distribution, examples being the manufacturers' sales tax in Canada, the purchase tax in Britain and the retail sales taxes in the U.S.A. and Eire.

SINGLE TAX — A theoretical concept held by Henry George (1839-97) and his followers who advocated that all tax revenue should come from a single tax upon the increase in land values. In general, however, governments need to draw revenue from a number of different taxes, since the levying of all revenue by means of a single tax, whatever the tax base, would tend to be regarded as a rather oppressive levy. In practice, however, certain small countries, in effect, derive all their revenue from a single tax, notably the tax on minerals applied where the country has exceptional deposits of oil, phosphates or other minerals and the revenue derived from their exploitation is adequate to cover government expenditures because such revenue is large in proportion to the number of the population. In the U.S.A. over 80 percent of federal revenue is derived from the federal income tax, so that it is conceivable that the federal government could rely on a single tax if it were decided that other forms of revenue were undesirable, although present tendencies are rather in the opposite direction, adoption of a federal V.A.T. being mooted from time to time.

SITE VALUE TAXATION — A form of property taxation where the tax base is restricted to the value of the site, nothing being included for the value of the buildings or other improvements erected thereon. The tax is advocated by its proponents as a method of encouraging development, since the owner of a suitable site has no tax disincentive to deter him from developing the site to the limit of its capabilities. In practice, where site value taxation is in force it is often supplemented by an urban tax on buildings and the purity of the concept is in other cases diluted by provisions that when the total value of improvements to the site exceeds a certain percentage of the value of the site, site value tax will be payable on the value of the improvements as well as the site.
Use of the tax as an economic stimulus to development has proved of dubious value in practice. Developers tend to erect commercial or residential buildings when the time is judged right for being able to let them at a profit, rather than by reference to the degree of beneficence of the tax system. In any event PROPERTY TAX or RATES (q.v.) is normally shifted to the occupiers of buildings, not borne by developers.
In practice, also, where site value taxation has been used in developing countries it has often been found that the tax does not yield sufficient revenue to meet the budgetary needs of the taxing authority unless tax is levied at a rather high rate, which would accentuate anomalies in the tax structure.

SITUS RULE — A provision in a tax law, or in a DOUBLE TAXATION TREATY (q.v.), establishing in what place or country a source of income may be deemed to be situated for tax purposes. See also SOURCE RULE.

SITZUNTERNEHMEN — A company domiciled in Liechtenstein.

SKATTEFRI — (Denmark) Tax-free.

SKATTELEMPELSE — (Denmark) Abatement or reduction of tax.

SKATTEPLIGT — (Denmark) Tax liability.

SKATTESVIG — (Denmark) Tax fraud.

SKATTETILSVAR — (Denmark) Tax liability.

SKATTEUNDDRAGELSE, LOVLIG — (Denmark) Tax avoidance.

SKATTEUNDDRAGELSE, ULOVLIG — (Denmark) Tax evasion.

SKATTEYDER — (Denmark) Taxpayer.

SKATTEÅR — (Denmark) Year of assessment (tax year).

SLAB SYSTEM — A system of charging increasing rates of tax varying with increases in the taxable base such that the whole of the taxable sum is charged at the higher rate instead of successive slices or tranches being charged at a separate rate in the graduated scale. The slab system was used in connection with the estate duty in Britain until replaced by the slice or tranche system in 1969. Some countries still adhere to the slab system. The nomenclature is not universally adopted; some use the term "slab system" to mean what others would term the slice or tranche system. The definition of slab system given above is that adopted in the Green Book published in Britain in March 1972 on the "Taxation of Capital on Death".

tax news service

A concise newssheet reporting latest tax changes and developments throughout the world, twice per month, by air.

Free of charge with subscriptions to one or more of the major services of the Bureau.

Also available separately.

Cables: Forintax

SLICE SYSTEM — See TRANCHE SYSTEM.

SMALL BUSINESS CORPORATION — Under Section 1371 of the U.S. Internal Revenue Code a small business corporation is defined as a company with not more than ten shareholders, all of whom must be individual and none a non-resident alien and the company must only have one type of equity share. Such corporations may, in effect, elect to have the corporation income taxed as if it were the personal income of the shareholders.

SMALL BUSINESS RELIEF — Various types of relief tend to be made available in tax codes for small businesses. One economic factor in favour of special relief is that small businesses seem to have a greater capacity for rapid growth than larger ones and greater need to conserve capital for re-investment. In the U.K. there are concessions in the impact of CAPITAL TRANSFER TAX (q.v.), and a lower rate of corporation tax on corporate

© 1980 International Bureau of Fiscal Documentation – BULLETIN

income applies up to a certain level. See also SMALL TRADERS, SPECIAL TAX REGIME FOR; SMALL BUSINESS CORPORATION.

SMALL DISPOSALS RELIEF — To reduce the administrative burden of operating a capital gains tax, disposals below a certain level of value may be excluded from consideration. The growing tendency, however, is to exclude a certain level of *gains* from the scope of the tax, this being a fairer way of exempting small gains from tax.

SMALL INCOME RELIEF — Apart from the basic personal reliefs granted in computing personal income tax, some countries establish an exemption limit somewhat higher than the reliefs due to a single person, so as to eliminate many small cases from the tax field. MARGINAL RELIEF (q.v.) may also be granted where the actual income is slightly above the exemption limit. In some tax codes higher exemption limits are also set for married persons, and those above certain age limits. The U.K., which was one of the pioneers of this system, has now abolished it in favour of higher personal reliefs. (See also ZERO BRACKET AMOUNT.)

SMALL TRADERS, SPECIAL TAX REGIME FOR — It has been a feature of some sales tax systems to make special provisions for small traders, defined as those whose sales are below certain limits. For example, in Federal Germany's V.A.T. system the small trader may opt to be assessed at a small percentage rate of his total sales, instead of on the ordinary V.A.T. system of paying a higher rate on sales and receiving a deduction for tax embodied in his purchases which has been passed on to him by his suppliers. Under the V.A.T. systems generally, traders whose sales are below a certain level are exempted altogether from V.A.T., while those whose sales are above the exemption limit but below a further "abatement" limit will have their tax bill abated by a formula which provides a sliding scale of abatement giving maximum relief where the exemption limit is slightly exceeded and the minimum relief where the upper limit is almost reached. Special regimes are also sometimes applied under income tax systems, somewhat simpler forms being required of the smaller trader than are expected from the large ones.

SNAKE IN A TUNNEL — The European Monetary System (EMS) which applies to most of the members of the European Economic Community (E.E.C.). While the currencies of the EMS countries may together vary against other countries freely, the value of each member country's currency with regard to other EMS members may only vary between narrow limits, in effect between the roof and floor of the "tunnel".

SOCIAL SECURITY LEVIES — Levies for social security may take the form of a tax such as a payroll tax on the total remuneration paid by an employer to his employees, which is not related to the circumstances of individual employees (see PAYROLL TAX) or may be a contributory scheme whereby the employer and employee contribute jointly for the benefit of the employee, whose ultimate benefits are specifically related to the contributions made by and for him. The third alternative is a scheme whereby compulsory contributions are made proportionate to the salaries and wages of employees, but the benefits are related to their circumstances at the time of retirement, for example, there may be a minimum pension for the lower grades of employees, the actuarial value of whose contributions would not have produced the level of pension granted.

SOCIETÀ A RESPONSABILITÀ LIMITATA (S.R.L.) — (Italy) A company whose members are liable only up to the nominal value of their quotas.

SOCIETÀ PER AZIONI (S.P.A.) — (Italy) A company whose members (shareholders) are liable for the company only up to the nominal value of their shares.

SOCIÉTÉ CIVILE — (France) A company formed as a partnership.

SOCIÉTÉ HOLDING — A holding company, especially those in Luxembourg, which receive special tax treatment.

SONDERAUSGABEN — (Germany) Deductible personal expenses.

SOURCE RULE — In a DOUBLE TAXATION TREATY (q.v.) it is customary to indicate, either in a separate article (the "source rule") or in a clause in each relevant article dealing with a particular type of income, which of the contracting countries should be regarded as the source country for such type of income.

SØMANDSSKAT — (Denmark) Seamen's Tax.

SPECIAL CHARGE — A charge which was imposed in Britain becomes payable on 1 January 1969 on investment incomes of more than £3,000. The levy operated in the form of an additional surtax charge which was applied in conjunction with the taxpayer's normal rates of income tax and surtax. The rates adopted were such that anyone receiving an investment income of over £15,000 had to pay more than 100 percent of it in tax; the charge thus amounted to a CAPITAL LEVY (q.v.) on those with investment incomes above that figure. The tax was similar to the SPECIAL CONTRIBUTION (q.v.) levied 20 years earlier.

SPECIAL CONTRIBUTION — A tax introduced in Britain in the 1948 Budget imposing tax at graduated rates on investment income. The tax was charged for the fiscal year 1948/1949 (payable January 1949) on the investment income of 1947/1948 where that income exceeded £250. The rates of tax were graduated up to a maximum of 50 percent which, when added to ordinary income tax and surtax, involved a total tax levy exceeding 100 percent, representing a CAPITAL LEVY (q.v.) on taxpayers with higher investment incomes.

SPECIFIC DUTIES — Customs and excise duties which are levied at a certain sum per unit, or per unit of volume or weight, are known as specific duties. Current examples include the duty in the U.K. on each mechanical cigarette lighter, which is a kind of COUNTERVAILING DUTY (q.v.) to the duties on matches avoided by using a lighter, and the duties on tobacco, and on alcoholic beverages, usually quoted as so much money per unit of weight or volume, respectively.

SPECULATION, LAND, TAX — A land speculation tax has been introduced in the Isle of Man to levy tax at the standard income tax rate on land and real property which is disposed of within five years of acquisition in the case of a non-resident, and within three years in the case of residents. The tax is charged on the excess of disposal price over cost and forms a SHORT-TERM GAINS TAX (q.v.).

SPENDINGS TAX — Another term for EXPENDITURE TAX (q.v.), i.e. a tax on the total amount of expenditure incurred, or money spent, on "consumption" by the taxpayer.

SPLITTING, INCOME — See INCOME-SPLITTING.

Bound volume of 1978 issues of Bangladesh Tax Decisions, containing reports on tax cases decided in Bangladesh courts, texts of Finance Act 1978, rules, notifications, circulars and orders and the budget speech. (B. 51.474)

BRAZIL

ESTUDOS E PARECERES DE DIREITO TRIBUTARIO

(Imposto sobre a renda). By Gilberto de Ulhoa Canto. São Paulo, Editora Revista dos Tribunais, 1975. 518 pp.
Compilation of different studies connected with income tax and some other tax problems. (B. 15.956)

ESTUDOS E PARECERES DE DIREITO TRIBUTARIO

2 Volumes. By Geraldo Atalibo. São Paulo, Editora Revista dos Tribunais, 1978. 253 + 413 pp.
Studies and opinions of the author on several subjects related to general tax law and also to Brazilian tax law. (B. 15.955)

FUNDO DE INVESTIMENTOS DO NORDESTE

Rio de Janeiro, Banco do Nordeste do Brasil, 1978. 101 pp.
Discussion of the Investment Fund for the North-Eastern region and its operation. (B. 15.951)

IMPOSTO DE RENDA 1980

Imposto de renda na fonte sobre rendimentos do trabalho não assalariado para o ano de 1980. São Paulo, Revista Imposto Fiscal, 1979. 256 pp.
Wage tax table for 1980. (B. 15.961)

OBRIGAÇAO TRIBUTARIA

By Américo Masset Lacombe. São Paulo, Editora Revista dos Tribunais, 1977. 100 pp.
Theoretical study about the tax obligation coverning both its origin and its structure. (B. 15.959)

PROCEDIMENTO ADMINISTRATIVO TRIBUTARIO

By Eduardo Domingos Bottallo. São Paulo, Editora Revista dos Tribunais, 1977. 78 pp.
Discussion of principles and rules governing the administrative procedures regarding taxation. The study covers both general principles and Brazilian law. (B. 15.958)

CANADA

PREPARING YOUR INCOME TAX RETURNS

For filing 1979 income tax returns plus planning your 1980 return.
By R.A. Lachance and G.D. Eriks. Don Mills, CCH Canadian Limited, 1979. 340 pp., $7.75. (B. 102.460)

CHINA (People's Rep.)

BUSINESS PROFILE SERIES: THE PEOPLE'S REPUBLIC OF CHINA

Hong Kong, The Hong Kong and Shanghai Banking Corporation, 1979. 36 pp.
Booklet providing information on business operations and economic facts and figures in the People's Republic of China. (B.51.488)

CHINA

Hamburg, Deutsche Bank, 1979. 95 pp.
Book providing information on the development and economic policy of the People's Republic of China. (B. 51.487)

CHINA'S FINANCE AND TRADE

A policy reader. Edited by Gordon Bennett. London, M.E. Sharpe, Inc., 1978. 249 pp.
Compilation of studies with respect to the development of the two disciplines of political science and economics in China. (B. 51.338)

CHINA'S FOREIGN TRADE AND MANAGEMENT

Hong Kong, Chung Hwa Book Co., Ltd., 1978. 157 pp., HK$30.
Collection of papers delivered at the seminar on China's foreign trade and its management jointly sponsored by the Ministry of Foreign Trade of the People's Republic of China and UNCTAD, held in China between October 16 and November 12, 1978. Experts from individual departments of China's foreign trade business discuss the policy, organization and management of China's foreign trade. (B. 51.478)

CHINA NU, VAN CULTURELE NAAR INDUSTRIËLE REVOLUTIE

By W.E.C. van Kemenade. Rotterdam, NRC Handelsblad, 1978, NRC Handelsblad, Kortschrift No. 13. 24 pp.
The author describes the present move in China from the cultural to the industrial "four modernizations" revolution. (B. 51.484)

CHINA'S SEARCH FOR PLENTY

The economics of Mao Tse-tung. By Leo Goodstadt. New York, Longman Group (Far East), Ltd., 1973. 266 pp.
An assessment of the economic policy to construct a socialist economy during the first twenty years of the existence of the People's Republic of China. (B. 51.484)

CONTEMPORARY CHINESE LAW: RESEARCH PROBLEMS AND PERSPECTIVES

Edited by Jerome Alan Cohen. Cambridge, Harvard University Press, 1970. Harvard Studies in East Asian Law. No. 4. 380 pp.
Compilation of studies on contemporary Chinese law contributed by various authors. Subjects include the following: "Chinese legal publications: an appraisal" by Tao-tai Hsia; "Methodological problems in studying Chinese communist 'civil law'" by Stanley Lubman; "Soviet perspectives on Chinese law" by Harold J. Berman. (B. 51.485)

DOING BUSINESS WITH CHINA

By Juanita M. Kreps and Frank A. Weil. Washington, U.S. Department of Commerce, Industry and Trade Administration, 1979.
Introduction to business opportunities in China. (B. 51.489)

HOE VER IS CHINA?

Protocollen en artikelen naar aanleiding van de studiereis naar de Volksrepubliek China in oktober 1977 van de China Studiegroep van de Erasmus Universiteit Rotterdam. Rotterdam, Erasmus University, China Studiegroep, 1978. 619 pp.
Report containing the findings of the study trip to the People's Republic of China by the China Study Group comprising students and lecturers from several disciplines at the Erasmus University, Rotterdam, Holland. (B. 51.481)

INVESTOR'S HANDBOOK: "THE SHEKOU INDUSTRIAL ZONE IN SHENZHEN"

Hong Kong, China Merchants Steam Navigation Co., Ltd., 1980. 15 pp. (B. 51.501)

SOZIALE SICHERHEIT IN CHINA

By Holger Dohmen. Hamburg, Institut für Asienkunde, 1979. Mitteilungen des Instituts für Asienkunde, No. 105. 82 pp.
Study of the social security system in the People's Republic of China. (B. 51.480)

TEN GREAT YEARS

Statistics of the economic and cultural achievements of the People's Republic of China. Compiled by The State Statistical Bureau. Introduction by Feng-hwa Mah, Washington, Western

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Washington State College, Program in East Asian Studies, 1974. Occasional Paper No. 5. 154 pp.
Reprint of the English version of the publication concerning economic statistics pertaining to the first ten years since the founding in 1949 of the People's Republic of China. (B. 51.444)

VERSLAG VAN DE STUDIEREIS NAAR DE VOLKS-REPUBLIEK CHINA DOOR STUDENTEN EN DOCENTEN EKONOMIE, SOCIOLOGIE EN RECHTEN VAN DE KATHOLIEKE HOGESCHOOL TILBURG, MEI 1975

Tilburg, Buro Buitenland, 1975. 292 pp.
Report containing the findings of the study trip to the People's Republic of China by students and lecturers in the disciplines of economy, sociology and law of the Catholic University of Tilburg, Holland. (B. 51.483)

VOLKSREPUBLIEK CHINA

Een economisch-commerciële oriëntatie. The Hague, EVD (Dienst voor Economische Voorlichting en Exportbevordering), 1979. 95 pp.
Study of economic and commercial perspectives in the People's Republic of China. (B. 51.364)

COLOMBIA

LA INVERSION EXTRANJERA EN COLOMBIA

Normas básicas. Bogota, Departamento Nacional de Planeación, 1979. 96 pp.
Main provisions for foreign investment in Colombia. (B. 15.960)

DEVELOPING COUNTRIES

TOWARDS DISTINGUISHING BETWEEN TRADITIONAL AND MODERN ACTIVITIES IN THE NATIONAL ACCOUNTS OF DEVELOPING COUNTRIES

By Harry Schimmler. Paris, Organisation for Economic Co-operation and Development, 1979. 78 pp. (B. 51.503)

ECUADOR

INVIERTA EN EL ECUADOR

Quito, Banco Central del Ecuador, 1979. 76 pp.
Information about opportunities for investment in Ecuador and tax benefits granted. (B. 15.962)

FRENCH POLYNESIA

INVESTIR EN POLYNESIE FRANÇAISE

Paris, Bureau de Développement, 1979. 60 pp.
Investment guide providing information on investment opportunities in French Polynesia. Taxation survey is included. Text of the investment law is appended. (B. 51.497)

GERMAN FEDERAL REPUBLIC

AUSSENSTEUERGESETZ (AStG)

Kommentar. Stand Februar 1979. By Winfried Wöhrle. Stuttgart, Fachverlag für Wirtschafts- und Steuerrecht, 1979. 466 pp., 58 DM.
Updated edition of a loose-leaf publication on the German Foreign Tax Law, containing the text of the law, comments thereon, the rulings and the German-Swiss double taxation treaties on income, capital and succession duties. (B. 102.439)

DIE BESTEUERUNG VON AUSLANDSBETRIEBSTÄTTEN

By Paul-Hermann Schieber. Cologne, Verlag Dr. Otto Schmidt, 1979. Praxis des Internationalen Steuerrechts, Band 1. 178 pp., 48 DM.
Monograph dealing with the taxation of permanent establishments of German firms abroad, the taxation of building sites and construction projects abroad and of personnel of such firms sent out to work abroad. (B. 102.404)

DAS GESAMTE LOHNSTEUERRECHT

Kommentar. 5., völlig neubearbeitete Auflage. Stand: Oktober 1979. By Heinz Oeftering, Hans Görbing and Heinz Wehmeyer. Munich, Verlag Franz Vahlen, 1979.
Fifth updated and revised edition of a loose-leaf publication on the German legislation with respect to the wage tax, containing the text of the law, comments thereon, ministerial rulings and other implementing regulations and an extensive index. (B. 102.440)

MEINE EINKOMMENSTEUER-ERKLÄRUNG FÜR 1979

1. Auflage 1980. Stand: 1. November 1979. By Dietmar Schreyer. Munich, Verlag C.H. Beck, 1980. Beck-Rechtsberater im dtv, Band 5213. 315 pp., 6.80 DM.
Practical guide for filing the 1979 German individual income tax return. (B. 102.406)

MEIN LOHNSTEUER-JAHRESAUSGLEICH FÜR 1979

9., neubearbeitete Auflage. Stand: 1. November 1979. By Dietmar Schreyer. Munich, Verlag C.H. Beck, 1980. Beck-Rechtsberater im dtv, Band 5212. 284 pp., 6.80 DM.
Practical guide dealing with questions in relation to the levying of the wage tax in 1979/1980. (B. 102.407)

RECHTSAUSKUNFT UND RECHTSSCHUTZ BEI STEUERBEGÜNSTIGTEN KAPITALANLAGEN

By Reinhard Hein and Dieter Quast. Cologne, Peter Deubner Verlag, 1979. 102 pp.
Monograph dealing with the right of the tax administration to require relevant information and the right of the taxpayer to legal protection with respect to the information delivered on tax-favored capital investments. (B. 102.402)

STEUERPLANUNG IM NATIONALEN UND TRANS-NATIONALEN UNTERNEHMEN

By Wilhelm H. Wacker. Berlin, Erich Schmidt Verlag, 1979. Steuerberatung, Betriebsprüfung, Unternehmensbesteuerung, Band 1. 224 pp., 44 DM.
"Tax planning of national and transnational enterprises" is the first book of a series entitled "Tax advising, accountancy and taxation of enterprises". (B. 102.403)

MEHRWERTSTEUER

Textsammlung mit Gesetz, Durchführungsverordnungen und Verwaltungsvorschriften. Stand vom 1. Oktober 1979. Munich, Verlag C.H. Beck, 1979.
Second revised and updated edition of a loose-leaf publication in one volume dealing with the German Value Added Tax Law, including the full text of the law, its implementing regulations and decrees. Comprehensive indices are appended. (B. 102.438)

UMSATZSTEUERGESETZ 1980

By Günter Rau. Cologne, Verlag Dr. Otto Schmidt, 1979. 358 pp., 49 DM.
Book containing an introductory commentary on the new 1980 German Value Added Tax Law (adapting German law to the sixth EEC Directive on VAT). A list with cross references to the old law, the texts of the new law and the implementing regulations are appended. (B. 102.409)

UStG — MEHRWERTSTEUER

Mit Durchführungsbestimmungen und Ergänzungsvorschriften. Stand Januar 1979. By Otto Sölch, K. Ringleb and Heinrich List. Munich, Verlag C.H. Beck, 1979.
Updated edition of a loose-leaf publication explaining the German turnover tax system (value added tax). Texts of the law and implementing regulations are appended. (B. 102.441)

GUATEMALA

TAXATION IN GUATEMALA

International Tax and Business Service. New York, Deloitte Haskins & Sells, 1979. 46 pp.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

Booklet on taxation in Guatemala in the series "International Tax and Business Service" prepared by Deloitte Haskins & Sells based on material available as of January 1979. (B. 15.952)

HONG KONG

HONG KONG EXTERNAL TRADE

Hong Kong, Trade Research Section, Census and Statistics Department, 1979. 64 pp. (B. 51.500)

REPORT OF THE ADVISORY COMMITTEE ON DIVERSIFICATION 1979

Hong Kong, Government Printer, 1979. 426 pp.
Report of the Advisory Committee on the process of diversification of the Hong Kong economy, with particular reference to manufacturing industries. (B. 51.496)

INDIA

TAX ON CAPITAL GAINS IN INCOME TAX LAW

By T.A. Ramakrishnan and T.A. Venkataraman. Madras, Company Law Institute of India Private Ltd., 1979. 260 pp.
Monograph describing the general principles relating to tax on capital gains with reference to important tax cases, with a subject index of cases for easy reference. Relevant texts of statutes, circulars and notification on the subject are appended. (B. 51.468)

INDONESIA

DASAR-DASAR HUKUM PAJAK DAN PAJAK PENDAPATAN 1974

Cetakan IX. By Rochmat Soemitro. Jakarta, Pt. Eresco Bandung. 1979. 358 pp.
Ninth edition, which is a reprint of the eighth revised edition, of a textbook on Indonesian individual income tax.
(B. 51.494/494a)

DOING BUSINESS IN INDONESIA 1978

Jakarta, The SGV Group — Utomo, 1978. 78 pp.
Informative guide describing business environment, business regulations and taxation for those interested in doing business in Indonesia. (B. 51.471)

VARIA PAJAK

By A.J.L. Loing. Jakarta, Ichtiar, 1978. 274 pp.
Compilation of essays on taxation in Indonesia including humorous tax anecdotes to liven things up. (B. 51.470)

INTERNATIONAL

THE EFFECT OF LOSSES IN ONE COUNTRY ON THE INCOME TAX TREATMENT IN OTHER COUNTRIES OF AN ENTERPRISE OR OF ASSOCIATED ENTERPRISES ENGAGED IN INTERNATIONAL ACTIVITIES

XXXIII Congrès International de Droit Financier et Fiscal, Copenhagen 1979. Deventer, Kluwer, 1979. Cahiers de Droit Fiscal International, Volume LXIVb. 470 pp.
Congress report for the International Fiscal Association containing general report and national reports on the above-mentioned subject. A summary of each report in English, French, German and Spanish is appended. The report by the general reporter, Gerhard Laule, is given in full in the four languages. National reports include the following countries: German Federal Republic, Argentina, Australia, Austria, Belgium, Brazil, Canada, Denmark, Spain, U.S.A., Finland, France, Israel, Italy, Japan, Luxembourg, Mexico, Norway, New Zealand, the Netherlands, the United Kingdom, Sweden, Switzerland and Uruguay. (B. 102.443)

DIREITO TRIBUTARIO ROMANO

By Silvio Meira. São Paulo, Editora Revista dos Tribunais, 1978. 151 pp.
Public finance under Roman law. Discussion of taxes and some fiscal institutions under Roman law. (B. 15.957)

STRATEGIC PLANNING FOR INTERNATIONAL CORPORATIONS

Organization, systems, issues & trends. New York, Business International Corporation, 1979. 98 pp.
Research study on the use of various planning techniques by international companies to identify and analyse global changes in their markets. (B. 102.410)

THE TAXATION OF TRANSFERS OF FAMILY-HELD ENTERPRISES ON DEATH OR INTER VIVOS

XXXIII Congrès International de Droit Financier et Fiscal, Copenhagen 1979. Deventer, Kluwer, 1979. Cahiers de Droit Fiscal International, Volume LXIVa. 492 pp.
Congress report for the International Fiscal Association containing general report and national reports on the above-mentioned subject. A summary of each report in English, French, German an Spanish is appended. The report by the general reporter, Thøger Nielsen, is given complete in four languages. National reports include the following countries: German Federal Republic, Argentina, Australia, Austria, Belgium, Canada, Colombia, Denmark, Spain, U.S.A., Finland, France, Israel, Italy, Luxembour, Mexico, Norway, New Zealand, the Netherlands, the United Kingdom, Sweden and Switzerland. (B. 102.433)

TAX & TRADE PROFILES: BERMUDA, BAHAMAS, THE CARIBBEAN

London, Touche Ross International, 1979. 119 pp.
Information on ten countries in the Caribbean for investors contemplating doing business in the Caribbean, Bermuda and the Bahamas. The Caribbean countries include Barbados, Cayman Islands, Dominican Republic, Guyana, Jamaica, Netherlands Antilles, Puerto Rico, Trinidad and Tobago. (B. 15.947)

ITALY

DAS NEUE ITALIENISCHE KÖRPERSCHAFTSTEUERRECHT

Ein Modell für eine Vereinfachung des deutschen KStG?
By Augusto Fantozzi, Siegfried Mayr and Johannes P. Muller-Dott. Munich, Verlag C.H. Beck, 1979. 66 pp., 38 DM.

Enrique Jorge Reig:

A STUDY OF TAX RATES MADE AT THE EIGHTH HISPANO-LUSO-AMERICANAS MEETING 240

Report on the convention of Spanish and Portuguese speaking countries held in Buenos Aires in September 1979. Subject of the discussions were the structure and level of tax rates for various types of taxes (income, capital, net worth and consumption taxes).

ETUDE DES TAUX D'IMPOSITION REALISE LORS DE LA 8EME RENCONTRE ESPANO-LUSITANO-AMERICAINE
Rapport de la réunion des pays de langues espagnole et portugaise tenue à Buenos Aires en septembre 1979. Les sujets étudiés étaient la structure et le niveau des taux des différentes sortes d'impôts (impôts sur le revenu, le capital, la fortune et sur la consommation).

STUDIE UEBER STEUERSAETZEN, ERARBEITET FUER DIE 8. KONFERENZ DER SPANISH- UND PORTUGIESISCH-SPRACHIGEN LAENDER AMERIKAS
Bericht über eine Konferenz der spanisch- und portugiesisch-sprachigen Länder Amerikas, die im September 1979 in Buenos Aires stattfand. Themen der Diskussionen waren die Struktur und Höhe der Steuersätze für verschiedene Arten von Steuern (Einkommen-, Kapital-, Vermögen- und Verbrauchsteuern).

Howard M. Liebman:

ALLOCATIONS OF FOREIGN BLOCKED INCOME UNDER UNITED STATES TAX LAW 251

Discussion of rulings of the Internal Revenue Service supporting the taxation of foreign blocked income of American parent corporations.

REPARTITIONS DES REVENUS ETRANGERS BLOQUES SOUMIS A LA LEGISLATION FISCALE AMERICAINE
Discussion des décisions du Internal Revenue Service en faveur d'imposition des revenus étrangers bloqués des sociétés mères américaines.

AUFTEILUNG GESPERRTER AUSLANDSEINKUENFTE IM US-AMERIKANISCHEN STEUERRECHT
Besprechung von *rulings* der amerikanischen Steuerverwaltung, die die Besteuerung gesperrter Auslandseinkünfte amerikanischer Muttergesellschaften begründen.

Dr. M.P. Dominic:

MALDIVES: FOREIGN INVESTMENT LAW 258

Discussion of a number of tax incentives and the conditions under which they are available under the Maldives investment law.

ILES MALDIVES: LOI SUR LES INVESTISSEMENTS ETRANGERS
Etude d'un certain nombre de mesures d'allégements fiscaux et de leurs conditions d'application par la loi maldive sur les investissements.

MALEDIVEN: DAS GESETZ FUER AUSLAENDISCHE INVESTITIONEN
Untersuchung einer Reihe von Steueranreizen und deren Voraussetzungen, wie sie durch das Investitionsgesetz der Malediven gewährt werden.

UNITED STATES: TERRITORIAL INCOME TAX SYSTEMS 260
Income taxation in the Virgin Islands, Guam, the Northern Mariana Islands and American Samoa (A U.S. Treasury Report)

This report reviews the essential features of United States Federal income tax laws, which, under the so-called "mirror systems", are the basis of the territorial income tax systems. It discusses problems of coordination with the Federal system and evaluates the territorial systems in terms of raising revenue, equitable treatment of taxpayers and simplicity of administration.

ETATS-UNIS: SYSTEMES TERRITORIAUX DE L'IMPOT SUR LE REVENU
Imposition du revenu dans les Iles de la Vierge, Guam, les Iles Mariannes du Nord et Samoa américaine
(Rapport du Ministère des Finances)
Ce rapport note les points essentiels des lois fédérales américaines de l'impôt sur le revenu qui sous le nom de "système miroir" forment la base des systèmes territoriaux de l'impôt sur le revenu. Il discute les problèmes de coordination avec le système fédéral et évalue les systèmes territoriaux en terme de revenus obtenus, égalité de traitement entre les contribuables et simplicité d'administration.

USA: DAS EINKOMMENSTEUERSYSTEM DER TERRITORIEN
Die Besteuerung des Einkommens auf den US-Jungferninseln, Guam, der Inselgruppe der Nördlichen Mariannen sowie auf Amerikanisch-Samoa.
(Ein Bericht des US-Schatzamtes)
Dieser Bericht gibt einen Überblick über die wesentlichen Merkmale der US-Einkommensteuergesetze, die nach dem sog. "Spiegelsystem" die Basis für die Erhebung der Einkommensteuern auch in den genannten Territorien darstellen. Er untersucht die Probleme, die im Zusammenhang mit der Abstimmung auf das System des Bundes auftauchen und würdigt die Systeme der Territorien im Hinblick auf die Steuererhebung, die rechtstaatliche Behandlung der Steuerpflichtigen und die Überschaubarkeit der Verwaltung.

VIRGIN ISLANDS: RESIDENCY **274**

United States Revenue Ruling 80-40 describes a situation in which a dual residence occurs: a corporation which is recognized as an inhabitant of the Virgin Islands may benefit from the dividend-received deduction as a domestic U.S. corporation.

ILES DE LA VIERGE

L'instruction américaine 80-40 décrit une situation où apparaît une double résidence: une société reconnue comme résidente des îles de la Vierge peut bénéficier de la déduction des dividendes reçus de la même façon qu'une société des Etats-Unis.

US-JUNGFERNINSELN: DIE FRAGE DER ANSAESSIGKEIT

Das US-Revenue Ruling Nr. 80-40 behandelt die Situation, in der die Frage eines Doppelsitzes auftaucht. Schlussfolgerung: eine Körperschaft mit Sitz auf den US-Jungferninseln kann bezüglich erhaltener Dividenden die gleichen Vergünstigungen wie die Körperschaften in Anspruch nehmen, die ihren Sitz in den USA haben.

STUDY OF TAX RATES

Made at the Eighth Hispano-Luso-Americanas Meeting

by Enrique Jorge Reig*

I. INTRODUCTION

During the Jornadas, a convention of Spanish and Portuguese speaking countries held in Buenos Aires in September 1979, discussions on the subject of tax rates took place. As an introduction to this paper we begin with a brief outline of the areas covered in the discussions on tax rates as well as the form and development of the dialogue that led to various conclusions on the subject. The objectives to be achieved by these discussions were stated in directives that were used as a basis for the analysis of the tax rates (either progressive or proportional), their structure and level (the amount of tax), but special note was taken of the type of tax — on income, capital, net worth or consumption — to be imposed and the ends to be achieved by its imposition.

In order to study the various factors that influence the rate structure of the different taxes, particularly the problems involved with public expenditures and public administration (especially the tax administration), a questionnaire and psycho-social study were prepared. This questionnaire, answered by the reporters from Argentina, Brazil and Uruguay, was a study of taxpayer attitudes that was included in the directives issued in order to form the basis of a comparative study of the tax rates in the participating countries.

Although many different factors that influence the tax rates were analyzed and their importance discussed they were not all included in the conclusions reached and recommendations made by the group. Such topics as the varying degrees of compliance and tax evasion that exist among the different countries were studied along with problems relating to public expenditure and public administration; however, no conclusions were reached on these subjects nor was a decision made on the actual effect of inflation upon the economies of the countries attending this meeting in the context of a comparative analysis of their tax systems and tax rates.

The materials used in this comparative study were the national reports. Because Argentina requested that they be submitted in advance it was possible to use them as a basis of the report. Among the ideas used in the analysis of the tax rates was Argentina's proposal that a mathematical formula be used in order to maintain continuous progressive rates, which provoked a lively and interesting discussion. However, before there could be any use of the proposed formula the whole question of whether or not taxation should be based upon a progressive scale had to be decided. In contrast to the utilitarian theory that looks at the usefulness of additional wealth or income to an individual or family group to determine the rate of taxation, the progressive tax theory rests upon a taxpayer's ability to pay the tax that is imposed upon him. The group considered a progressive tax rate therefore inherent to the general principles of equity that underlie taxation.

In order to determine clearly and precisely what is ability to pay taxes, as defined in the progressive scheme, the group devised an objective definition that was based upon the economic welfare potential of a given taxpayer. In

addition, in order to define the framework within which the rates were to be studied we agreed that the pattern that the progressive tax rate should take is dependent upon the current consensus and the political philosophy of the party in charge of the particular country in question at a given moment. Such is the case when, for example, a redistribution of wealth becomes an objective of the government's taxation policy; the progressive theory of taxation is then strengthened.

The recommendations proposed by the general reporter to facilitate the discussion on tax rates and to elaborate upon the conference's conclusions were made in 14 separate points, in addition to those made for each of the three tax groups (income, sales and exercise, capital and net worth) that comprise a modern system of taxation. Discussions were held based upon these points as well as the 17 conclusions that were finally approved by the Jornadas.

Because of the explicitness of the resolutions and the explanation contained in the preamble ("whereas" section) of the conclusion reached by the Jornadas it was not considered necessary to make comments on each of the individual proposals listed in the Recommendations. However, it was believed that it might prove helpful to review some of the considerations taken into account in the discussions of the different taxes.

(a) Taxation on income

Recommendation 1, which deals with the pattern of progressive income tax rates, refers to the fact that it would be desirable to reduce the spread between the marginal and average tax rates in the middle range, in such a manner that it would also result in a reduction of the average rate of tax in the corresponding tax bracket. This was viewed as an indication of the pattern to be established by a progressive tax rate. This notion was based on the premise, accepted by all the participants in these discussions, that the tax produces a less adverse effect on the productive activities undertaken by the groups of taxpayers classified in the medium income brackets (income effect) in contrast to the effect it may have on those in the high level income groups (substitution effect).

Recommendation 2 also presented interpretational problems which were clarified in discussion. The suggestion that the exemptions and exclusions from the personal tax base be kept to a minimum only refers to their number but by no means to the fixed personal minimum exemption permitting a taxpayer and the members of his family a minimum subsistence level (i.e. a so-called "non-taxable minimum" and "family allowances"). It was only intended to recommend that the number of exemptions and franchises be kept as low as possible with a view to their effect upon the erosion of the tax bases in general. Neither was the suggestion meant as a comment on the policy behind the establishment of the personal minimum exemptions which may relate to the efficient administration of a great number of lower income taxpayers, whose exemption also is often justified considering the fact that they suffer from the proportionally heavier burden that consumption taxes impose on them.

Another interesting discussion resulted from the terminology in the writing of the resolutions due to the use of the term "rate". There was some confusion on the part of some of the participants as to its meaning. In the Spanish language, "rate" (tasa) is also a certain type of revenue. Therefore, it was noted, it was best not to use "tasa" in the text when the term was employed to refer to a portion of the share of the taxable base but that such words as "aliquotes" (alicuotas), "tariffs" (tarifas), or "types" (tipos) should be used instead.

An important comment on the type of rate that should be imposed on those who derive income from personal services was made by an Argentinian participant (see Recommendation 8). Because social security payments have become such an important governmental task and social security contributions constitute a significant portion of government tax revenue, it was suggested that coordination of income and social security contributions be made. In order better to coordinate and consider these two forms of taxation when establishing a rate and in order to follow equitable tax principles, the bases upon which both social security contributions and income tax are calculated for those with earned income should be similar.

Another important recommendation — Recommendation 6 — related to the taxation of corporations or businessses is that the income from a corporation or business should be included in the tax base for the progressive personal income tax; it was pointed out at the same time, however, that corporate income tax is not applied at progressive rates but only at proportional or uniform rates.

The Preamble and Recommendations 3, 4 and 5 show that the group was aware of inflationary aspects although it generally limited the analysis to those aspects more directly related to the effectiveness of tax rates and to the fulfillment of the tax obligations by the taxpayers. The participants agreed on the need to extend the remedies formulated in the tax rate area to other spheres of tax, e.g. non-taxable minimum and family allowances, loss carry forward provisions and exemption limits. The group felt that it was understood that the meeting was to be confined to a study of the tax rates, so that the discussions did not extend to these other phases of taxation.

(b) Taxation on consumption

In the conclusions reached at the meeting, Recommendations 9 through 13 deal with consumption tax. It is interesting to note that despite the form this tax may ultimately take in the various countries, the recommendations all emphasized the need to keep the number of exemptions to a minimum. Because of the practice of allowing numerous exemptions to consumption taxes, higher rates than would otherwise result presently exist on those items subject to the tax. It was also suggested that these exemptions be limited to those that are absolutely necessary so as to reduce the burden of this

© 1980 International Bureau of Fiscal Documentation – BULLETIN

type of tax upon taxpayers in lower income tax groups (that is, to reduce its regressivity).

In addition, after considering the importance of the type of tax, one must fix the rates (cumulative, one-stage, value added, etc.). It was decided that in the establishment of any form of consumption tax, it would be advantageous to both the tax administration and the taxpayer if only one rate were employed. Even though it was admitted that differentiated rates may be necessary to improve the distribution of the tax burden, it was also thought advantageous that their number be limited. They should be confined to two or three different rates and at the same time restrict the number of goods and services subject to another rate than the standard rate.

(c) Taxes on capital and net wealth

The four Recommendations which were adopted with respect to the taxation of capital and net wealth, 14 through 17, voice the need for a progressive rate scale, structured similarly, as in the case of income tax, applicable to net wealth and inheritance taxes; in addition, they emphasize the supplementary nature of the individual net wealth tax to the income tax. It was therefore believed advisable, when establishing the rate of this tax, to take into consideration both income and net wealth taxes and to evaluate the additional burden of the tax upon capital income.

Another important proposal which was adopted refers to the inequity that results from the use of progressive tax rates levied on certain isolated types of property. One recommendation accented the need, when fixing the tax rate, to observe the principles of non-confiscation. Another expressed the need to note that the individual net wealth tax considers as part of the taxable net wealth of an individual his investment in shares of stock companies and his interest in any business enterprise. It was therefore believed necessary to integrate individual and corporate net wealth tax when a corporate net wealth tax is imposed as a method of making collection easier, so that corporate net wealth tax is considered as an integrated part of, and not a separate revenue, from the individual net wealth tax itself.

II. THE BASIC CRITERIA USED IN THE ANALYSIS

The following discussion reproduces a substantial part of the general report, mainly from the section on the structure and level of tax rates. These were the basic criteria used in the analysis of the subject.

A. Introduction

1. Scope

The subject, "The tax rates applicable in the Spanish and Portuguese speaking countries", was analyzed from two points of view:
- the rate structure; and
- the limits or the maximum amounts that would be applicable.

The first problem encountered in the analysis is how should the tax burden be distributed among the taxpayers in keeping with the generally accepted principles of equity. This difficulty is recognized by Due and Friedlaender in their study of taxation when they remark: "What is "fair" or equitable in taxation is unavoidably a value judgement; no scientific specification of an equitable distribution pattern is possible."[1]

On the other hand, Due and Friedlaender point out: "the conflict created between equity rules and determined economic goals [such] as saving, investment and economic growth, could complicate the administration and compliance, to a point [at] which evasion could be of importance."[2]

The fundamental reason for choosing this subject for the Jornadas was to come to some conclusions about the adequacy of the structure and level of the tax rates currently in use in the countries which participated in this conference. This subject was therefore chosen in the hope that its analysis would aid in achieving compliance on the part of the taxpayers and with the expectation of reaching some conclusions and recommendations on the form and limits of the tax rates in keeping with the social and economic patterns that prevail in the interested countries.

Before analyzing the subject and the objectives to be achieved, it might prove useful to outline the current state of thought on the subject of fairness or equity in taxation.

2. The equity principle

Equity or justice in taxation, as defined by Seligman, is generally discussed in relation to the problem of progressive taxation, which from the first half of the sixteenth century was based on the "ability to pay" theory.

A vast literature has developed on the subject of the impossibility of measuring the various benefits to the individual of the aggregation of additional wealth or income to that which he already possesses. The use of the notion of sacrifice as the basic for the test of the "ability to pay" has gradually been abandoned because of substantial defects. Thus, this theory is only studied from an academic point of view and has been replaced by the "faculty theory". Thus Due and Friedlaender[3] are of the opinion that the concept of sacrifice is irrelevant and reduce their anlysis of its impact to a footnote and base the theory of equity on the "ability to pay" theory, defining this within the framework of economic welfare.

Fagan in his works on the economics and theories of

3. Op. cit.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

taxation[4] is clearly of the opinion that "ability to pay" is a separate and independent doctrine from that of measuring the sacrifice on the part of the taxpayer. He attributes the broader acceptance of the "ability to pay" theory to its higher degree of objectivity, although it maintains sufficient subjectivity to keep it in line with the "sacrifice" theory.

Neumark in his study on the principles of taxation[5] refers to the problem by declaring that the "ability to pay" should permit that the loss suffered by individual taxpayers because of the effect of the imposition of taxes upon their financial situation, be an equally onerous burden in relative terms after taking into account all the important personal factors.

The well known Carter Report on Taxation[6] defines the "faculty" theory using only economic criteria. It explains the "ability to pay" as proportional to the "discretional economic potential" of the taxable units; "discretional economic potential" is the product of the total economic capability that the taxable unit can contribute to the total expenses. In short, according to the Carter Report, the "ability to pay" is equal to the real and potential economic capacity of the taxable unit to acquire goods and services to the extent it is not required to support the members of these taxable units in a comfortable standard of life measured in relation to other taxable units.

Thus, the currently accepted view of the "ability to pay" theory is based upon the concept of measuring that part of the economic potential of the taxable unit that can be disposed of without affecting an adequate standard of living for the unit members. It is evident that this concept, by making itself more objective and disassociating itself from the "sacrifice" doctrine, does not give a solution as to the manner of distribution of the required tax burden. This will depend on the income to be used to cover necessities out of the total funds available in each stratum of wealth or income.

3. The redistribution effect

The use of the "ability to pay" principle as a basis for achieving justice or equity in taxation and in conformity with its definition involves a redistribution of wealth or income by the use of progressive taxes. But according to Neumark,[7] such redistribution is not in and of itself an objective of the "ability to pay" theory. Only when redistribution is considered a socio-political and ethical aim does any levy surpassing that which is necessary to accomplish such theory become different and acquire a separate identity. As Neumark mentions, this occurs when the distribution of the fiscal levies among individuals is progressive in a higher proportion than is necessary to fulfill the "ability to pay" theory.

The adoption of redistribution as a nowadays generally accepted objective of taxation starts with the premise that the distribution of wealth and income that occurs under free market conditions in a liberal economy is not the best and has a tendency to magnify the differences between the various social classes. Thus, the effect of redistribution transforms itself into a political end that is different from that of justice or equity, this being acceptable, according to Neumark, if the results, compared with the fundamentals of the economic order based on a market economy, are considered just in the general concensus. Thus the idea of justice also becomes part of the criteria taken into consideration when discussing redistribution.

The redistribution of wealth or income, on the other hand, is not the only objective that can be accomplished through taxation; to a significant extent it can also be achieved through a public expenditure program. In countries with developing economies where education, medical and hospital services, retirement pension funds and so forth are totally or partially financed at government expense, and these programs specially benefit the lower income class, do the government's expenses fulfill an important function of redistribution. This does not mean, however, that in order to obtain an income level that is considered "just" that the tax system could not be used in order to put into action such a plan.

B. Structure and level of the rates

In analyzing the structure and level of the tax rates, recent American contributions in this area will be taken into consideration with respect to each of the following types of tax that form the fiscal system: income tax, consumption tax and taxation of capital and net wealth.

1. Structure of the rates

(a) Progressive rates

The problems involved in structuring the tax rates cannot be presented in a general manner because they are so closely related to each type of tax imposed.

The taxes on income and on capital, in the latter category particularly the taxes on inheritance and individual net wealth, demonstrate more frequently than any other type of tax the application of progressive tax rates. As a result, their imposition gives rise to the discussion on progressivity. On the other hand, consumption taxes are not consistent with the theory, and their fairness can be maintained only by the proper selection of exemptions from the tax or by the use of differentiated proportional rates of tax on groups of products that are consumed by the various income groups of the population.

There are three different methods of establishing progressivity, by groups or classes, by scales and by the

linear or continuous method (without taking into account the use of exemptions on the basis, as this method is generally not utilised as a form of progressivity because they produce an unsatisfactory distributional curve).

The use of the progressive method of taxation for groups or classes of taxpayers is inconvenient. Measuring the tax on the basis of one rate for each group or class of taxpayer in each level of the scale leads to abrupt changes in the level of taxation when going from one group or class to the next causing inequities in the transition zones. Thus, it cannot be considered to be an acceptable manner to effect progressivity.

The second alternative, namely, the so called progressivity by scales, eliminates the anomaly which occurs under the preceding method. Progressivity is accomplished by increasing the marginal tax rates that are applicable successively to the taxable sums located between the lower and higher limits (i.e. "brackets") of each step in which the base of the tax is divided. This method undoubtedly has greater merit for which reason it has been generally accepted.

The linear or continuous method makes use of a mathematical formula that permits a more rational application of the progressive principle. Once the basic parameters are chosen it is easy to fix a progressive tax rate curve. This method is criticized, however, because of the difficulty to the taxpayers in applying it.

Taking into consideration the above, it was concluded that the analysis of the structure of the rates must focus upon the use of the progressivity by scales method. The variables to be considered in this analysis include:

- the number of steps (or scales) that must be established;
- the criteria to be used to determine the limits between the different steps; and
- the pattern to be used to increase the marginal rates in each step.

As the Kaldor report[8] demonstrated and as also is said in the conclusions of the Interamerican Conference where this work was presented[9] — and in most of the other studies on the use of progression for determining tax rates — it is better to limit the number of brackets in structuring the scale.

It is more difficult to come to any conclusion about constructing the scale, when this would mean determining whether the limits of each step must be constant or variable, and, if it is to be variable, then what would be the best pattern of variation.

The Carter Report[10] proposes that the brackets within the scale used for the imposition of income tax should be increased in geometric progression. This can be accomplished by multiplying by two each step on the scale in order to reach the next one until reaching the maximum rate within the individual scale. By so doing the large number of taxpayers who are located on the bottom of the income distribution pyramid can be divided into a reasonable number of brackets. The last of these brackets would be the largest and the number of taxpayers would be smaller. The resulting curve will reveal a rapid increase in the earlier steps and then a flattening out as it progresses.

However, we believe it would be difficult to determine with sufficient precision the rules necessary to establish the limits of each tax bracket which would also take into account the distribution of the taxpayers among the proposed brackets. The distribution of the tax base in the different brackets within the scale is a problem that effects both its limits, the highest and lowest, as well as fixing the marginal rate applicable in each bracket. The Carter Report proposed that in order to fix the marginal rates, the rates should increase step by step following an arithmetical progression, as long as the limits of the brackets grow progressively in a geometical trend. This is the most difficult area in which to make decisions about how to structure a progressive tax rate because they must not only take into account the general consensus in the respective country, in conformity with what is accepted to be fair, but they also must involve definitions on the redistribution of wealth and in achieving the socio-economic objectives that are being pursued in each country.

The National Report on Argentina for the Jornadas[11] incorporated what were believed to be the goals to be achieved by the introduction of a tax scale as proposed by Carter. Under this scheme the intermediate steps of the scale would be increased gradually but would then level off at the highest point. This method would reflect the principles of equity based on both the "ability to pay" principle and the socio-economic objectives.

This method may entail the least adverse effects on the incentive to work. Because of the "income effect", taxpayers in the lower income categories may increase their efforts whereas the imposition of heavy taxes in the higher tax brackets reduces re-investment and productivity. Several factors also come into play that can define the form of the step by step curve in the marginal rate scale. These factors include the total amount of revenue to be earned from the levying of the tax without, however, exceeding the previously established maximum rate of tax and the amount of income to be generated by the various steps.

Once having fixed the exact number of brackets to be established and the criteria to be used to determine the parameters of those brackets, the final element to be taken into consideration when forming the rate structure is to what rates will the marginal rates conform at each step. This must be done in order to arrive at the total tax due from the prospective taxpayer, which can be calculated by totalling the tax due in each step,

taking into consideration the bracket of the scale which the taxpayer reaches.

Once again a value judgement must be made on the principles of equity to be applied and of the socio-economic objectives that are to be achieved by taxation. In order to solve this dilemma the Carter Report proposes the use of a linear progressive ascending tax rate, with geometric progression to delineate the limits of each bracket. Nothing, however, in either instance should prevent the progression (in either the higher or lower brackets) from being constant over the whole length of the rate scale or being variable in its run.

Therefore, the only rule that can be recommended is that any formula to be adopted should be reasonable in order to justify any differentations that may be introduced so that they may not be seen as arbitrary or anomalous.

García Garzón demonstrated mathematically in his work on tax rates,[12] using the Argentinian income tax rates to clarify his analysis, that a steeper progression occurs immediately after a demarcation point than before. Consequently, this situation points to the fact that the progression is subject to as many ups and downs as there are divisions in the rate scale. His observation, based on this mathematical analysis, leads him to the conclusion that the system of progression by scales contradicts the theory of uniform progression and does not conform to the theory of a uniform reduction of the marginal utility of the successive amounts of income or wealth. This would seem to be a valid observation for any system that uses a progressive scale.

(b) Proportional rates

Up to this point there has only been a study of the progressive rates of tax; hereafter will follow a discussion of proportional tax rates which is a much simpler problem.

In general — and under the fundamental principles by which progressive rates were analyzed above — progressive rates are only acceptable when applied to income or property taxes levied upon an individual or family unit as the taxable entity. However, when taxes are imposed upon profits, business operations or isolated transactions (objective or real taxes), then progressive rates are not justifiable. The rates uniformly acknowledged to be acceptable for such types of taxes and that are used in various legislation when establishing tax rates are "proportional", also called "constant" or "uniform". This term is applied to either a tax levied as a percentage of values of the taxable base (ad valorem tax) or as an amount imposed on each unit of same (kilogram, meter, liter, etc. — specific tax), the percentage and amount not varying no matter what the size of the tax base. There are two structural problems that must be resolved when a proportional tax rate is to be applied. First a choice must be made between two different tax rate systems, either a single rate, or various rates applicable to sundry goods or services or groups of goods or services which it is considered desirable to tax differentially. The second problem is upon what basis should the tax be used, an ad valorem basis or a specific one.

The first decision to be made in the choice between a single or multiple rate structure was discussed in connection with rates for a general sales tax and more specifically with regard to the value added tax. The emphasis of the analysis of this problem was placed on the administrative problems caused by using a differentiated rate system. This same difficulty was discussed in 1971 at the Buenos Aires Conference held by the Joint Program on Taxation OEA — BID — CEDAL[13] which dealt with such topics as the *administrative criteria required to establish the structure of sales and excise taxation.* At that time comment was made upon the work presented by John F. Due[14] who pointed out the administrative advantages of using a single rate of tax. Not only does this method eliminate definitional problems which are similar to those which arise if exemptions are granted but it also prevents pressure which might be placed upon the Secretary of the Treasury by various interest groups seeking to change the position of their products on the tax rating lists.

On the other hand, as a controversial point for this analysis, the advantages afforded under a differentiated tax rate scheme can be evaluated. It enables a higher rate of tax to be imposed on non-essentials or luxury articles and in this manner it also helps to influence a better use for the country's resources. This variation in the rates, provided it takes into consideration the taxpayer's ability to pay the tax imposed on the items, would thus provide a way of introducing a certain amount of progression into the tax system which would in that way balance the fact that income tax is generally relatively less important in the Latin American countries.

The simplicity or ease of administration of one rate of tax is again demonstrated when applied to the problems of tax payments and tax inspection. With just one rate there is no need to classify different taxable operations into different groups subject to different rates of tax. This problem is particularly complicated when seeking to control the amount of tax credits in cases where multiple stage taxes are imposed and credit is given for taxes paid in the previous stages such as occurs under the usual form of value added tax.

Among the tax experts writing on tax rates, Due proclaimed himself firmly in favor of uniform rates of tax. In a paper presented at the First Annual Meeting of CIAT he said: "The use of a certain number of rates for the purpose of increasing the equity of the tax and decreasing the consumption of certain luxury articles, creates the same difficulties as the exemptions, interpretative problems with regard to the rate to apply and

© 1980 International Bureau of Fiscal Documentation – BULLETIN

causes complications in the taxpayer's compliance and application of the law."[15]

The model tax system proposed by the OEA in the Third Inter-American Conference on taxation, held in Mexico in 1972, also was in favor of the use of a single tax rate for the levying of a general sales tax accompanied by a selective tax on specific merchandise or services.[16]

It can be seen from the comments made on the proposed model tax system that there was a noticeable difference between the type of tax rates that should be imposed from Herschel's and Due's point of view.[17] Herschel gave preference to the "redistribution" effect of the variation in tax rates. He emphasized the results which would be achieved by the use of selective consumption taxes. Taxes on consumption, he believed, would serve an important function by influencing the direction of consumption. He therefore recommended that these taxes be given as broad an application as possible within the limitation imposed by the feasibility of its administration. Due, on the other hand, maintained that with any form of general sales tax, but especially with value added tax, a uniform tax rate is very important.[18] He then suggested that any selective tax on consumption should be limited to a relatively small number of goods and that the income tax was a better tool to use in order to achieve progressivity and redistribute income.

The above analysis exceeds the scope of the conference's topic (the structure of rates) for it is a discussion on the policy behind the establishment of tax rates. It must be emphasized, however, that this problem is an important one when decisions are being made on proportional tax rate systems. Because of the conflict between the goals sought to be achieved through the use of a tax rate that is administratively simple and just with those of a rate that will reflect economic goals and the redistribution of wealth, it is important to note that policy differences do exist and can be influential in making a decision on the type of system that will be used. This fact was demonstrated recently when Argentina announced that it was changing its hitherto two-rate value added tax system, in force since 1975, into a single rate of tax.

It must be confessed that it is difficult to come to conclusions on the subject of the structure of a system of proportional rates. The ease of administration and control of a single rate of tax clearly argues in favor of its adoption. On the other hand, in order to accomplish other objectives in developing countries, it is not always possible to realize such objectives through income or wealth taxes so that the use of various rates in consumption taxes is desirable.

Another problem that arises in discussion on selective or specific (excise) taxes on consumption is whether the rates imposed should be levied on an ad valorem or upon a specific unit basis. Specific rates of tax are still, however, the prevailing method of imposition despite the generally recognised advantages of using an ad valorem basis when imposing a tax on consumption, thereby using the sales values of the taxable good or service as the basis for levying the general sales tax, which is also a principal element for determining taxable income in the income tax.

During periods of inflation an ad valorem tax avoids the pitfalls that a specific tax on the taxable goods or services would have.

If a specific per unit tax were imposed on such goods or services during periods of inflation the tax would not keep up with the rapidly increasing rise in prices. The tax would therefore prove to be insufficient as a source of revenue. Under these circumstances such a tax would fail to achieve its stated goals because the basis of its imposition was expressed in units others than its real value.

As was mentioned in an earlier paper on the subject of taxes and inflation,[19] for the above-mentioned reasons Argentina changed in October 1976 to an ad valorem taxing system on a majority of the consumption taxes imposed by the government.

Since the functions assumed by modern states vary according to the prevailing political philosophy of the government which dictates the amount of governmental intervention necessary to provide general services, including the infrastructure needed to supply such services to its citizens, the general level of tax rates and its structure are also due to the role played by the government. In a state where socialist tendencies prevail, taxes generally are higher owing to the fact that the state provides many services that must be financed by the revenue from taxes. In contrast, in a non-socialist state public expenses are lower, therefore the state's need for revenue is lower, which results in a lower tax pressure.

Nevertheless, it is not only the degree to which the government needs to raise revenue, generally known as "fiscal pressure", that determines the level of the different rates of tax, but also the number of taxes that are imposed that determines such level.

In general, tax rates can be lower if the number of taxes is large. Therefore in a tax system in which there are numerous taxes the required revenue can be obtained even though the rates of the particular taxes are low. In contrast, in those systems where very few taxes are levied higher rates are imperative in order to raise the same amount of revenue. The amount of efficiency or lack thereof in the management of public funds is also a determination of the total amount of money needed by

the state. Consequently the need to increase or decrease the taxes imposed under a given system of taxation is a direct product of this situation. This same efficiency factor is also an important point that can influence taxpayer compliance which must also be included in the calculations that fix the rates for the various taxes. It is a well known fact that because of all-pervasive tax evasion, governments are compelled to increase the tax rates thus placing a relatively heavy tax burden on honest taxpayers. However, other criteria also influence tax rates for there is a definite relationship between the amount of a particular tax imposed by a given fiscal system and the amount of revenue expected from other sources of the same system which, taken into account, influence any decision made on the structure and limits of the tax rates.

Finally, in an effort to give some structure to the discussion, the author feels that it would be appropriate to offer guidelines to be used for the analysis undertaken when a determination is made on what should be the extent of the tax rates applicable to the different types of taxes. It is well known that the steeper the tax rate the more the taxpayers are reluctant to pay the tax. Because of this, the first recommendation made with respect to the level of tax rates is that it should be kept within the level acceptable to most taxpayers. The rates, therefore, should not be so exorbitant that they would prove to be unacceptable to the taxpayers and thereby lead to a greater incidence of tax evasion. Taking into consideration the fact that the Carter Report[20] recommended that the maximum marginal income tax rate for Canada should be 50 percent, it is evident that in the countries represented at the Jornadas there is an exceptionally high rate of tax on income. Although these countries (based upon their gross national products) are poorer than Canada, their tax rates in many cases are the same as or even higher than those in Canada.

On the other hand, this observation must be tempered by the following considerations. First of all, there is no uniform tax base in the various countries as a result of, for instance, the individual governments' policy towards tax exemptions or because of the fact that dividends distributed by joint stock companies are not included in the tax basis for the computation of individual progressive income tax.

Secondly, some taxes have political restraints placed on their imposition. For example, taxes on property owned or transferred as a result of an inheritance are frequently resisted on the basis of the philosophy that taxes should not be so excessive as to become confiscatory. This concept is often seen in the individual national constitutions such as in Argentina in which the inviolability of private property is guaranteed.

When considering taxes on consumption the reason behind the restrictions placed on their level seems to be mainly the attitude of the taxpayer towards the rate of tax. This is so except in those types of multiple stage cumulative taxes (e.g. "cascade" taxes) where there is an additional element to take into consideration: the tax must not distort the form of business organisation (vertical integration). For other taxes, e.g. customs duties, that are imposed for reasons of protection, or an expenditure tax used to lower consumption, rather high rates can be imposed that even exceed 100 percent when they are in keeping with the purpose of the tax.

III. CONCLUSIONS OF THE JORNADAS

Preamble

The following 17 recommendations were made as a result of the discussions held during the Jornadas (summarized in part 1 of this paper). Most of the proposals upon which the recommendations are based are included in the general report to the Congress but are not reproduced herein due to the fact that they are very similar to the ones approved.

The recommendations are as follows:

Whereas

1. The papers were presented to these Jornadas by the national reporters from Argentina, Mr. Jorge Macon; Brazil, Mr. Ives Gandra Da Silva Martins; Chile, Mr. Juan de Dios Vergara Baeza; Spain, Mr. Mariano Sebastián Herrador; Mexico, Mr. Javier Moreno Padilla; Portugal, Mrs. Antonio Joaquín Carvalho and Mr. Manuel Henrique de Freitas Pereira; and Uruguay, Mrs. Betis Inglés de Forecella and Mr. Horacio Fernández Susena.
2. The technical communications were added by Mr. Juan Oscar García Garzón, Mr. Saúl Witis, Mr. Ricardo Calle Saíz, Mr. José Alberto Parejo Gamir, Mr. José Luis Perez de Ayala and Mr. Angel Schindel.
3. The report of the general reporter, Mr. Enrique Jorge Reig, was presented.
4. The propositions and suggestions offered during the discussions that took place during the working sessions of the Commission have been compiled.

Considering

1. That the problem of the tax rates, tariffs or types[21] of tax is based upon a series of factors the most significant being, first, the dominant political philosophy in the particular social-economic community in which it is employed which determines the level of taxes imposed on the taxpayer and, second, the consensus which is reached in that community on the criteria to be used to judge the fairness of the distribution of the tax burden among the population.
2. That it is the efficiency of the government in managing and directing public expenditure, as well as the reasonableness and efficiency of the public administration, in particular the tax administration, that are important elements in establishing differentiated tax rates, which because of their sensibleness will be capable of obtaining the acceptance and the compliance of the taxpayers.
3. That the presence of inflation in most of the

20. The Carter Report, vol. I (1 and 2 of the Report), p. 277.
21. See introduction for the term "tax rates, tariffs and types".

© 1980 International Bureau of Fiscal Documentation – BULLETIN

countries attending this meeting makes it necessary to take into account the distortions it causes in the distribution of taxes and in the taxable base, affecting the fairness that was envisioned when establishing the taxes and the taxpayer attitude with regard to compliance.

4. That likewise, before analyzing the problem of the tax rates and tariffs and types,[22] to achieve an effective imposition of these taxes in the desired amounts as foreseen by the legislature, it is necessary to stress the fundamental importance of the correct and uniform determination of the taxable base.

   In economies suffering from inflation, the rules for estimating the taxable base ought to refer to the same period of time whatever the taxable matter, so that may reflect, for the particular tax, the taxpayer's ability to pay; the time of payment also should be fixed to correspond with the moment the tax arises in the different taxpaying sectors and in the different taxes. If this is not done distortions would result from the failure to consider the above-mentioned factors, so that the fairness sought by distributing the taxes among different sectors of taxpayers is lost and compliance with the obligation of paying taxes is disturbed along with those objectives sought to be achieved by the tax.

5. It must be emphasized that taking into account in the tax system the distortion caused by inflation is not meant to imply an acceptance or agreement with the latter and, on the contrary, fiscal policy as one of the instruments able to do so ought to be utilized to fight inflationary trends.

   The fiscal adjustment of the distortions produced by inflation helps to maintain adequate tax collection levels and to prevent treasury deficits.

6. That the economic and social objectives which are at present achieved through the use of taxation can, in connection with the public expenditure policy, achieve a redistribution of wealth and economic stability and development, intended to improve the well-being of all, also establish general guidelines related to rates, tariffs or types of tax.

7. Before formulating any recommendations about the structure of tax rates, it is felt that given the harmful effect that tax evasion has upon the achievement of the above-mentioned purposes of taxation, as well as being the cause for an increase in tax rates by governments wishing to maintain a specific level of revenue, it is necessary to think about the desirability of funding programs to educate the public on the need for taxes since such knowledge may encourage compliance by giving them a proper picture of the functions of taxation and public expenditure in a modern society.

In view of this, the Eighth Meeting on Tax Studies of Spanish and Portuguese speaking countries recommends the following:

Recommendations

The meeting recommends the following guidelines that must be taken into consideration, when structuring the rates of the various taxes:

(a) Income taxation

1. *Individual income tax should be progressive through the use of a system of scales in which the rate applicable in each bracket exceeds the rate in the preceding bracket but in which the marginal rate gradually approaches the average rate thus taking into account the distribution of the taxpayers' incomes.*

   The rationale for the differences in the width of each bracket, the marginal rate and the number of brackets, should reflect the prevailing consensus on the fairness of the tax, the policy of redistribution of the country's wealth, the administrative efficiency of the tax and the taxpayers' compliance.

   However, this proposed scale system bears an inherent structural conflict since on the one hand it should for simplicity's sake have as few brackets as possible, whereas on the other hand an adequate continuity of graduation would require a large number of brackets. This does not mean that the advantages of the continuous or linear scale method are ignored but it is advised to continue research with the view of finding a simple formula enabling its practical application.

2. *Exemptions or exclusions from the taxable base of the individual income tax should be kept to a minimum so that it would not be necessary to raise the tax rates in order to maintain a determined level of tax revenue.*

3. *In view of the fact that inflation is present in most of the Spanish and Portuguese speaking countries, in order to maintain the level of the tax imposed on the taxpayers there should be a permanent adjustment made in the tax brackets of the progressive scale to compensate for this inflationary trend.*

4. *In cases where inflation turns out to be significant and permanent, in order to eliminate its effect and the lack of compliance on the part of the taxpayers with the resulting loss of revenue and a probable fiscal deficit, it would be desirable to use a system that adjusts the debts owed and credits granted, and taking into account the inflation in the calculation of the advance payments of taxes, when these are based on figures declared in the previous year's tax return.*

5. *Similarly, with respect to taxable bases during periods of inflation, they too should be adjusted to avoid distortions.*

6. *The corporate income tax should be applied at a "proportional" or "uniform" rate since progressive rates are not considered to be appropriate for corporations, and also encourage its artificial structural division. However, as was recommended by the Fifth Jornadas (held in Cordoba, Spain in October 1972), corporate income, at the moment it is*

22. See note 21.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

considered to have been distributed to the shareholders or partners, should be taxed at the progressive rate levied on the individual income tax.

The rates of the capital gains tax ought to relate to those of the regular income tax, and in order to avoid distortions caused by inflation, the tax adjustments should also apply in a manner similar to that proposed for regular income tax. Preferably, capital gains should be included as part of the taxable income. In order to correct the impact that a progressive tax rate would have upon earnings that have accrued during periods of over a year, among the several suggestions proposed, the most acceptable was considered the so called "pro-rata system" that might be used to modify such impact.

In cases when income is derived from personal services and social security contributions are paid based upon this income, the similarity between the bases of these contributions and income tax should be taken into consideration in order to co-ordinate and integrate them upon the principles of tax equity.

b) Taxes on consumption (sales and excise taxes)

It would be desirable that a change be made in the form of tax used, in countries which have adopted a cumulative multiple stage or cascade general sales tax so that these taxes are applied only once to the price. In this way distortions could be avoided in the organization of businesses caused by cumulative taxes and the taxpayers' attitude towards compliance could be improved in particular when the rates are significant.

10. *At present due to the great number of exemptions that frequently exists in the various types of multiple and single stage sales taxes including VAT, higher rates of tax are required on those items which are subject to tax. Therefore, it would be advisable to reduce the exemptions, limiting them to those which are unavoidable to lessen the regressivity of the tax.*

11. *When establishing the appropriate size of the proposed tax rate, besides the fiscal purpose of the tax, the type of sales tax should be taken into consideration and whether it should be cumulative or not in different stages of the economic process as well as at what stages it will be placed, in order to avoid any possible economic distortions between the numerical amount fixed as the rate and the actual incidence of the tax. In addition, taxes similar to a sales tax imposed by different levels of government such as the provinces or the municipalities should be taken into consideration when determining the rate of the proposed tax.*

12. *Due to the advantages to both the tax administration and the taxpayer of a one-rate tax it would be desirable not to use differentiated rates based upon the ability of the taxpayer to pay as revealed in the consumption of the taxable goods or services. Nevertheless, when it may be necessary to have graduated rates as a means of improving the distribution of the tax burden among the taxpayers, it would be advisable to limit the number of tax rates to two, or at the most three. Likewise it would be advisable to reduce the number of such goods and services subject to such different rates.*

13. *It is also advisable with respect to specific excise taxes, that only a limited number of goods and services be included under this special category of taxation separated from the general sales tax. In order better to achieve the purpose of distributing the tax burden according to the "ability to pay" principle and to avoid rates lagging behind, attention should be paid to the possibility of transforming specific per unit taxes into ad valorem ones. For this type of tax the rate can be much higher than those used in the general sales or consumption tax, this tax being levied upon sizeable taxpayer units and its aims are different from those of other such taxes.*

(c) Taxes on capital and net wealth

14. *The criteria listed in paragraph 1 under income taxation are also applicable to any plan to use progressive scales for wealth, inheritance and gift taxes. By taking into consideration the complementary nature of the individual net wealth tax with regard to the income tax, the wealth tax rates should be significantly lower than those of the income tax so that the total tax burden, considering jointly both taxes, would be a reasonable one.*

    In those countries that levy taxes on inheritances and gifts, the same criteria used for structuring progressive scales should be used to plan these rates in addition to the traditional criteria that take into consideration the degree of familial relationship, with the lower rates assigned to transfers between parents and children and to direct ascendants and descendants.

15. *The rates of tax on inheritances and gifts as well as net wealth should be graduated so that the results are not confiscatory, a principle which determines a limit to the rates, varying this according to the prevailing opinion of what is the purpose of the tax in the pertinent country.*

16. *Real property tax and other taxes levied upon determined properties should not use progressive rates when the tax is based upon the isolated value of the property, because they are taxes on* goods or things *as opposed to* personal *taxes. Progressive rates are better applied to those taxes to which individuals or families are subject on all or a major part of the properties they possess, less deduction of debts, among which the individual net wealth tax is the most complete expression.*

17. *It is advisable that the tax on a company's net worth should use proportional or uniform rates for the same reasons expressed above in point 6 under the discussion of corporate income tax. Furthermore, capital invested in companies subject to net worth tax should integrate the net worth tax base with the individual net wealth tax imposed upon its shareholders and partners.*

ALLOCATIONS OF FOREIGN BLOCKED INCOME UNDER UNITED STATES TAX LAW

by Howard M. Liebman *

In two recent Private Letter Rulings, [1] the Internal Revenue Service (IRS) has taken a position which not only raises a number of conceptual difficulties but may also create significant practical problems for taxpayers doing business with affiliates in countries which have stringent exchange control regulations. In both rulings, the IRS National Office issued Technical Advice Memoranda which supported an allocation of income from a foreign subsidiary to its U.S. parent even though the local law of the foreign country had precluded such payments.

THE BLOCKED INCOME ALLOCATION RULINGS

n the first ruling (No. 7923003), [2] the U.S. taxpayer ad entered into two technical assistance contracts ith its subsidiary in an unnamed foreign country. These ontracts required the U.S. parent to provide the cientific and technical information and documentation ecessary to manufacture, process and sell certain pro-ucts. In return, the foreign subsidiary was obligated o pay a technical assistance fee in the amount of 5 ercent of the revenues generated from the sale of uch products. The agreements were to last for five ears and, if permitted under local law, could be ex-nded for an additional five years. The agreements ere specifically subject to the laws of the susidiary's ost country.

nder the latter's governing law, however, the maximum llowable fee in any particular case could be varied by he authorities, although it could in no event be higher han 5 percent. The law also allowed the authorities to mit the duration during which technical assistance ees could legally be paid. This law applied to dealings oth between related parties and unrelated parties. The elevant authorities in this instance had reduced the llowable fee to 4 percent in the case of one contract nd 2 percent in the case of the second contract, and, addition, had shortened the duration of both of hem. [3]

evertheless, the IRS ruled that if the payments which ere allowed under local law did not constitute arm's ngth charges, Section 482 of the Internal Revenue ode of 1954 (I.R.C.) [4] could be used to allocate dditional income to the parent despite the fact that he foreign law prohibited the payment of such ad-itional income. The ruling does not itself state what he arms length fee should have been, but it does note that the amount of any allocation need not be limited according to the terms of the technical assistance agreements. Any such allocation should instead be based upon all the facts and circumstances surrounding the rendering of the services and the transfers of intangible property in question, applying the standards set forth in the Treasury Regulations. [5] Thus, under this ruling it is conceivable that the arm's length charge could be determined to be in excess of the 5 percent fee provided for originally in the two agreements, despite the absolute upper limit of 5 percent established by the applicable foreign law.

In the second ruling (No. 8001017), [6] a similar factual background was presented. A foreign subsidiary of a U.S. corporation had entered into a license agreement with its parent under which it was to pay royalties to the latter. Subsequently, the foreign country enacted a law whereby all royalty payments to foreign affiliates or parent companies were prohibited. The law also limited the amount of net dividends payable to foreign shareholders. For this reason, the U.S. taxpayer amended

3. The approved durations were not specified in the ruling.
4. "In any case of two or more organizations, trades, or businesses (whether or not incorporated, whether or not organized in the United States, and whether or not affiliated) owned or controlled directly or indirectly by the same interests, the Secretary may distribute, apportion, or allocate gross income, deductions, credits, or allowances between or among such organizations, trades, or businesses, if he determines that such distribution, apportionment, or allocation is necessary in order to prevent evasion of taxes or clearly to reflect the income of any of such organizations, trades, or businesses." (26 U.S.C. §482.)
5. See Treas. Reg. §§1.482-2(b) (services); 1.482-2(d) (transfers of intangible property). See generally Surrey, "Reflections on the Allocation of Income and Expenses Among National Tax Jurisdictions", 10 L. & POL. INT'L BUS. 409, 420-424 (1978).
6. See note 1.

its license agreement to suspend the payment of royalties until such time as they would no longer be prohibited under local law. [7] Once again, the IRS ruled that the income "may be allocated under Section 482 of the Code to ...[the U.S. parent] from .... [the foreign subsidiary] even though ... [the foreign subsidiary] is prohibited under the laws of ... [its corporate domicile] from paying such royalties". [8]

II. THE IRS' RATIONALE

The IRS has opted for doctrinal purity of sorts in issuing these two rulings, implying that the overarching principle of the arm's length standard should be sufficient reason to ignore the constraints of foreign law. Instead of offering any further analytical insight into such a proposition, however, both rulings merely concentrate on distinguishing the precedent established by the Supreme Court in the case of *Commissioner v. First Security Bank of Utah, N.A.* [9] That case involved an attempt by the IRS to allocate commission income to two national banks as a result of credit life insurance policies which their customers had purchased from a related, non-bank subsidiary which was a licensed insurance carrier. The Court took note of the fact that it was a customary practice for a sales commission to be paid by the insurer to the party which had sent it the business. Nevertheless, by a 6-3 majority, th Court refused to uphold the IRS allocation on the grounds that, legally, "the Banks could never have received a share of these premiums". [10] The reason for this restriction was found in Federal banking law, which had been interpreted in a number of court decisions as prohibiting a Federally-chartered bank from acting as an insurance agent unless it was located in a very sparsely populated area. The IRS had not contested the fact that the taxpayer-banks were covered by this prohibition. As the Court could find no precedent "wherein a person has been found to have taxable income which he did not receive and *which he was prohibited from receiving*", [11] it therefore would not sanction the allocation in question.

The IRS has sought to distinguish the *First Security Bank of Utah* case on the grounds that the latter only applies when it is illegal for a taxpayer to receive the income "under the laws of the United States". [12] Both Private Letter Rulings use the exact same language in this regard. Relying on a previous published ruling, [13] they both asset that:

> *It is the position of the Service that the restriction on the Commissioner's authority to allocate under Section 482 set forth by the Supreme Court in* First Security Bank of Utah *is limited to that situation where the taxpayer is prevented from receiving income under United States law.* [14]

Given this interpretation, the IRS has no difficulty in finding that I.R.C. Section 482 may be applied to allocate income among related taxpayers when it is a foreign law which prevents the receipt of the income in question.

III. A CRITIQUE OF THE IRS POSITION

An analysis of the decision in *First Security Bank o Utah* would appear to indicate that the IRS' narro interpretation is entirely misdirected. The basis fo the Supreme Court's decision lay in the fact that th taxpayers could not legally receive the income bein allocated. [15] Although the Court naturally explaine why the taxpayers were prohibited from receiving th income and therefore discussed the U.S. Federal law which were behind the prohibition, the Court's rationa is entirely unrelated to whether the U.S. or foreign la is the grounds for the prohibition. According to th Court, "[t]he underlying assumption always has bee that in order to be taxed for income, a taxpayer mus have complete dominion over it". [16] The decision the restated the principle propounded in the seminal case o *Corliss v. Bowers*, [17] namely:

> *The income that is subject to a man's unfettere command and that he is free to enjoy at his ow option may be taxed to him as income whether h sees fit to enjoy it or not.*

---

7. The ruling states that in anticipation of the entry into forc of the new law, the U.S. parent had first amended the licens agreement in order to increase the royalty rate and that it i fact collected this increased rate for at least one year pric to the blocking of all further payments. IRS Priv. Ltr. Ru 8001017, see note 1.

Horst, 31 U.S. 112, 116 (1940) (taxable income includes that which constructively derived by the taxpayer from the "use or di position of his power to receive or control the income as t procure in its place other satisfactions which are of economi worth").

© 1980 International Bureau of Fiscal Documentation – BULLETI

The Court noted that the Treasury Regulations under I.R.C. Section 482 reflect this principle in assuming that the Commissioner's reallocation authority is to be utilized in cases of related taxpayers which have "complete power to cause each controlled taxpayer so to conduct its affairs that its transactions and accounting records truly reflect the taxable income..." [18] But, as the Court concluded, this assumption of "complete power" cannot be extended to include "the power to force a subsidiary to violate the law". [19] Thus, the Court felt that "fairness requires the tax to fall on the party which actually receives the premiums rather than on the party which cannot". [20] In view of the Court's broad rationale, it is difficult to understand how the IRS can limit the decision to cases in which the prohibition involves U.S. law. [21] The fact that the prior case law only discussed the issue in terms of U.S. law is also no reason to hold that the general principle should be narrowed since such prior cases naturally reflected the facts and circumstances at issue, and the fact that such cases involved U.S. as opposed to foreign restrictions was a mere fortuity. [22]

To a certain extent, the recent decision of the Sixth Circuit in the case of *Salyersville National Bank v. U.S.* [23] highlights this point. In that case, the IRS attempted to allocate commissions for credit life insurance premiums paid by a bank's customers to the bank although the purchases were effected by the bank's president, a licensed insurance agent. Federal law was inapplicable since the taxpayer was not a national bank. Instead the taxpayer argued that it was prohibited under Kentucky law from receiving the commissions since it was not a licensed agent. For at least part of the taxable period in question, it was in fact barred by state law from becoming an insurance agent. Although the state insurance code was subsequently amended, the taxpayer had not qualified as an agent under the new law and therefore remained barred from earning or receiving commissions. The IRS argued and the District Court agreed that once the bank was no longer precluded from becoming an insurance agent, an allocation was permissible. Basically, the IRS took the position that "if the bank had the capability of making itself eligible to receive any commissions it was required to do so, even if it could legitimately choose not to do so". [24] The Sixth Circuit refused to accept this argument, however, and reversed the decisions, including *First Security Bank of Utah*, for the principle that a taxpayer need not arrange its affairs so as to maximize its tax liability. [25] In fact, quite to the contrary. [26] A taxpayer may lawfully structure its business in such a way as to minimize its taxes as long as there is a legitimate business purpose in doing so. [27] In this case, the taxpayer was able to provide a number of reasons why it would prefer, as a business decision, not to qualify as an insurance agent -- e.g. insulation from primary liability on the insurance policies; avoiding the requirement to pay fees, and avoiding the necessity of amending its charter if it were to engage in the selling of insurance. The IRS, on the other hand, did not provide the Court with any authority for why the taxpayer should be required to have qualified as an insurance agent. [28] Thus, the Court, after having determined that it would have been illegal for the taxpayer to have received the commissions being allocated to it, determined that the allocation was impermissible. Naturally, it relies heavily on the precedent established by the decision in *First Security Bank of Utah*. In so doing, it interprets the latter in its broadest sense. [29] It does not get stuck at all on the question of whether the Supreme Court only intended the case to apply to banking law, "Federal banking law", federal law in general, or any U.S. (including state) law. [30] Nor do other cases which rely upon the *First Security Bank of Utah* precedent in any way interpret the latter as implicitly having certain geographic limits to its applicability. [31] In fact, the case was even applied to preclude the IRS from attempting to allocate credit life insurance commissions using I.R.C. Section

18. Treas. Reg. §1.482-1(b)(1).
19. Commissioner v. First Sec. Bank of Utah N.A., see note 9, 1972-1 C.B. at 138.
20. Idem.
21. The only time the Court makes such a limiting reference is when it noted that the taxpayer, in effect, lacked the power to shift income among its subsidiaries, "unlessit acted in violation of federal banking laws". (Idem.) But this phrase if probably intended as a statement of fact and not of principle. If it were to be treated as a statement of principle, its effect would be even more restrictive than the principle which the IRS has attempted to invoke. At the very least, it would mean that the case could only stand as precedent in the event of prohibitions under U.S. Federal law. The Supreme Court's opinion has not been interpreted so narrowly however. See, e.g., Salyersville Nat'l Bank v. U.S., below note 23, and the discussion in the text at notes 23-28 below (prohibitions under state law).
22. For example, the Supreme Court in *First Security Bank of Utah* discussed the case of *L.E. Shunk Latex Products, Inc.*, 18 T.C. 940 (1952), *acq. in part and nonacq. in part*, 1953-1 C.B. 6,7 *Comm'r's appeal dismissed nolle prosequi* (June 5, 1953), in which an IRS attempt to allocate income to a taxpayer was frustrated by the OPA Price Regulations of World War II which prohibited the former from increasing its prices.
23. 80-1 U.S.T.C. ₱ 9190 (6th Cir. 1980), *rev'g* 77-2 U.S.T.C. ₱ 9711 (E.D. Ky. 1977).
24. Idem, 80-1 U.S.T.C. at 83,273.
25. Idem., 80-1 U.S.T.C. at 83,274.
26. It is well established that a taxpayer may legally "decrease the amount of what otherwise would be his taxes, or altogether avoid them, by means which the law permits...". Gregory v. Helvering, 293 U.S. 465, 469 (1935).
27. Salyersville Nat'l Bank v. U.S., above note 23, 80-1 U.S.T.C. at 83,274. Cf. Hansche v. Comm'r, 457 F.2d 429, 433 (7th Cir. 1972) (taxpayer may arrange its affairs to minimize or eliminate tax, although the IRS is not bound to accept "self-serving" characterizations).
28. Salyersville Nat'l Bank v. U.S., above note 23, 80-1 U.S.T.C. at 83,276. 83,276.
29. In *CIR v. First Security Bank of Utah*, 405 U.S. 394 (1972), the United States Supreme Court held that income could not be reallocated to a taxpayer who did not receive the income and who could not lawfully receive it. Idem, 80-1 U.S.T.C. at 83,275.
30. The *First Security Bank of Utah* decision has been applied as an analogy in other State law contexts as well. See, e.g., Delta Life Ins. Co. v. U.S., 363 F.Supp. 410, 73-2 U.S.T.C. ₱ 9663 (E.D. La. 1973) (computation of life insurance reserves pursuant to I.R.C. Section 801 under governing State law).
31. See, e.g, U.S. v. Basye, 410 U.S. 441, 73-1 U.S.T.C. ₱ 9250, at 80,478 n. 13 (1973). See also Aland, above note 11, at 221.

61 [32] instead of I.R.C. Section 482, when such commissions could not be received by the taxpayer bank under state law. [33]

On a more basic level, the absence of any inherent distinction between the effect of foreign as opposed to U.S. law in invoking the *First Security Bank of Utah* principle should be clear from the fact that I.R.C. Section 482 does not itself distinguish between foreign or wholly domestic transactions. Thus, the general principles should be the same in both contexts. Admittedly, the fact that a foreign transaction is involved may have an effect on the precise calculation of what an arm's length consideration should have been, [34] but it should not otherwise affect the application of the general principle behind the provision, namely "to prevent evasion of taxes" and "clearly to reflect... income". [35] To achieve these goals would appear to require some attention to the governing law, whether it be U.S. of foreign.

IV. THE PRECEDENT OF PRIOR IRS RULINGS

In both of the Private Letter Rulings under discussion, the IRS also relied on the precedent established in two prior Revenue Rulings, the more important of which is Revenue Ruling 76-243. [36] There the IRS held that an allocation was permissible under I.R.C. Section 482 to reflect an appropriate interest charge on an advance charter hire payment made to a foreign subsidiary, despite an agreement with the tax authorities of the foreign country pursuant to which the charter payment was not to be considered as a loan. The Private Letter Rulings contain an excerpt from this previously-published ruling to the effect that

> *any reliance on the holding in* First Security Bank of Utah... *would be misplaced.* [*The U.S. parent and its foreign subisidiary*] ... *were not under a legal disability since they could have accepted or rejected the terms of the contract and there was no United States law that prevented receipt of the interest allocated to* [*the parent*] *corporation...* [37]

The IRS' reliance on thir prior ruling is itself misplaced, however. The Service attempts to rely on it as support for its position that only legal disabilities under U.S. law can be used to invoke the *First Security Bank of Utah* rule. In point of fact, however, Revenue Ruling 76-243 did not involve a violation of foreign law either. The quotation above clearly indicates that the crux of the ruling is that the taxpayer [38] voluntarily acquiesced in an agreement with the tax authorities. Had it not done so, it might admittedly have been subject in the end to the same type of legal disability as is at issue in these two Private Letter Rulings. [39] But since the Revenue Ruling does not discuss that point, it should only be interpreted as having been based on the voluntary nature of the arrangement. In light of the quotation which the Service itself relies upon in the two Private Letter Rulings, the IRS would appear to take a narrow view of its previous Revenue Ruling.

The second published ruling which the Service discusses is Revenue Ruling 74-245. [40] In that ruling, th IRS permitted a taxpayer to invoke the blocked income accounting method of the Treasury Regulations under I.R.C. Section 482 [41] after the taxpayer was advised by legal counsel that the foreign governmental authorities might not allow its foreign subsidiary to make royalty payments for the use of certain registered designs. Although this ruling might be viewed as implying that such blocked income is allocable, there is once again a discernable difference in the factual settings. First, there was no actual prohibition at issue in the Revenue Ruling 74-245, only the opinion of counsel. And the opinion of counsel was to the effect that the foreign government "would not be receptive to allowing" the subsidiary to make the payments and "might consider placing some economic sanctions" on the latter if its parent sought to enforce its license agreement. [42] This would seem to indicate that perhaps no formal legal prohibition existed but rather only a strong policy concern of the foreign government.

---

32. I.R.C. Section 61 is the general provision which defines gross income. The IRS has in several cases attempted to allocate income or deductions using this general provision instead of I.R.C. Section 482, ususally without much success however. See, e.g., Rubin v. Comm'r, 429 F.2d 650, 563 (2d Cir. 1970); Richard Rubin, 56 T.C. 1155, 1162 (1971), *aff'd per curiam*, 460 F.2d 1216 (2d Cir. 1972); Philipp Bros. Chems., Inc. (Md.), 52 T.C. 240, 250 n.2 (1969), *aff'd*, 435 F.2d 53 (2d Cir. 1970); Local Fin. Corp., 48 T.C. 773, 789 (1967), *aff'd*, 407 F.2d 629 (7th Cir.), *cert. denied*, 396 U.S. 956 (1969); Grenada Indus., Inc., 17 T.C. 231, 253 (1951), *aff'd*, 202 F.2 873 (5th Cir.), *cert. denied*, 346 U.S. 819 (1953). See generally Levine, "The IRS' Position on Use of Section 482: Recent Cases have Caused Concern", 49 J. TAX. 206 (1978). But see Ogiony v. Comm'r, 80-1 U.S.T.C. ¶ 9265 (2d. Cir. 1980).

33. Olla State Bank of Olla, La. v. U.S., 77-1 U.S.T.C. ¶ 9455 (W.D. La. 1977). But see R.W. Shaw III, 59 T.C. 375, 382 n.4 (1972), *acq.*, 1973-2 C.B. 3 (*First Security Bank of Utah* held inapposite to an assignment of income case under I.R.C. Section 61 when the taxpayer actually received the income).

34. For example, in the case of a transfer or use of intangible property (which is partly at issue in the two Private Letter Rulings under discussion), an arm's length consideration may be determined (in the absence of comparable uncontrolled transactions), after considering a variety of factors -- such as the prevaling rates in the industry, the degree and duration of protection under the governing intellectual property laws, and the availability of substitutes -- any or all of which might vary from a domestic to a foreign context. See Treas. Reg. §1.482-2(d)(2)(iii).

35. I.R.C. §482.

36. See note 13.

37. Rev. Rul. 76-243, see note 13, as quoted in IRS Priv. Ltr. Rul. 7923003, *supra* note 1, and IRS Priv. Ltr. Rul. 8001017, see note 1.

38. Compare U.S. v. Basye, above note 31 (distinguishing a "consensual" arrangement from a legally-imposed disability). See also Aland, above note 11, at 221 n.2. Cf. Prop. Treas. Reg. §1.901-2(a)(2)(ii); Rev. Rul. 76-508, 1976-2 C.B. 225 (denying foreign tax credits in the case of "voluntary" payments to foreign taxing authorities arising from the lack of diligence in pursuing "all effective and practical remedies" to obtain a refund or a reduction of the foreign tax).

39. See Aland, above note 11, at 221.

40. 1974-1 C.B. 124. This Ruling is only discussed in IRS Priv. Ltr. Rul. 8001017, see note 1.

41. Treas. Reg. §1.482-1(d)(6).

42. Rev. Rul. 74-245, see note 40.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

The inference one makes is that the payments could perhaps have been made, but that the breach of policy might have led to the imposition of certain *ex post* penalties.

The fact that the Treasury Regulations make a special provision for allocations involving income, the payment of which "was prevented, or would have been prevented, at the time of the transaction because of currency or other restrictions imposed under the laws of any foreign country", [43] is potentially significant but not dispositive of whether such income is allocable by law. In the interpretive ruling governing the application of this Treasury Regulation, the governing term, "deferrable income", is defined as "income received by, credited to the account of, or accrued to a taxpayer that, owing to monetary, exchange or other restrictions imposed by a foreign country, is not readily convertible into United States dollars or into other money or property which is readily convertible into United States dollars". [44] The thrust of the Treasury Regulation therefore seems to be aimed at alleviating not so much the problems of the U.S. taxpayer who can legally receive or the foreign person who can legally pay the income but rather the problems which arise when the income cannot be converted into other currency and exported. In that respect, the Treasury Regulation would appear to fit with the context of the rule established in the seminal case of *Eder v. Commissioner.* [45] In *Eder*, Judges Frankfurter, Augustus Hand and Learned Hand held that a taxpayer could be taxed on blocked foreign income from a foreign personal holding company. The question presented was not whether the taxpayer earned the funds but whether he could be taxed (constitutionally) on the earnings when they were blocked. [46] The answer to the question was yes, although various relief measures have been introduced to alleviate the sometimes harsh results. [47] At stake in the two Private Letter Rulings, however, is whether or not the taxpayers were even able to legally earn the income in the first place.

V. AN ALTERNATIVE THEORY FOR ALLOCATIONS OF BLOCKED INCOME

According to the Supreme Court, the "purpose of Section 482 is to place a controlled taxpayer on a tax parity with an uncontrolled taxpayer... ". [48] If that is the case, the IRS should not exercise unbridled authority to allocate income when such income is precluded under foreign law from being accrued, let alone paid to the U.S. taxpayer. Such limitations on payments constitute a factor in determining the arm's length price. In effect, the foreign governmental authorities are determining what they will consider to be an arm's length consideration. Such a determination cannot simply be ignored by the United States. This form of interaction between two tax systems was recognized in the report on transfer pricing recently released by the OECD. [49] There, the OECD Committee on Fiscal Affairs remarked:

> The prices charged for goods, services, etc. transferred between associated enterprises in different countries may be affected by, for example, Government interventions in the form of price control,... or by exchange control or exchange rate policies. *It should be observed that the same considerations would apply to transactions between unrelated enterprises and that they would usually influence the prices in such transactions.*
>
> Of these constraints, exchange controls have given cause for more particular comment. Problems may arise for example because exchange controls effectively prevent an associated enterprise which has received a loan from transferring abroad the interest payments as they fall due, thus possibly throwing doubt on the treatment of the interest for tax purposes. While there may be room for more than one solution in both the country of the borrower (which may or may not regard the untransferred interest as having been paid) and the country of the lender (which may or may not be deemed to have received interest not transferred) it is considered that *there is no justification for treating blocked*

43. Treas. Reg. §1.482-1(d)(6).

44. Rev. Rul. 74-351, 1974-2 C.B. 144. It has been noted that the deferral election of the Treasury Regulations is on its face broader in scope than the terms of this ruling. See Aland, above note 11, at 223 n.17.

45. 138 F.2d 27 (2d Cir. 1943). *Accord* Rodney v. Hoey, 53 F. Supp. 604 (S.D.N.Y. 1944). But cf. International Mortgage & Inv. Corp., 36 B.T.A. 187 (1937) (no realized taxable income to a taxpayer unable to use or convert foreign currency due to exchange controls).

46. In the case of state law restrictions, it is clear that income may be taxed to the party who earns it, regardless of state law, when the income is actually received by the earner. See Ross Glove Co., 60 T.C. 569, 592 (1973); R.W. Shaw III, above note 33, at 382.

47. Compare Treas. Reg. §1.482-1 (d)(6) with I.R.C. §964 (b) and Treas. Reg. §1.964-2 (Subpart F does not apply in the case of blocked income). See also Cheska Cooper, 15 T.C. 757 (1950) (where a taxpayer could convert currency but not export it, the income was taxable but at the lower, free market value of the currency instead of at the official exchange rate).
It has been noted that although the blocked income election may be available to taxpayers facing I.R.C. Section 482 allocations, such an election does not fully cushion adverse tax results. First, the taxpayer will be required to allocate expenses to the blocked income under Treasury Regulation Section 1.482-1 (d)(6) with the consequence of, in effect, a disallowance (really a deferral) of deductions (see Aland, above note 11, at 223). Second, the Service has recently ruled that the election only applies "to a taxpayer's election to adopt the deferred income method of accounting for the first year in which the taxpayer receives (and reports under any accounting method) blocked foreign income". Thus, one may lose the privilege of making such an election for any one taxable year if he has not filed in time. IRS Priv. Ltr. Rul. 7912094, noted in Fuller, "U.S. Private Letter Ruling Report", 80-2 INT'L TAX REP. 1 (Feb. 11, 1980).
Compare Canada's *Income Tax Act* §161 (6), c.63, S.C. 1970-71-72 (giving the Canadian Minister of National Revenue the discretion to defer taxation of blocked income, taking into account the "extreme hardship" of the taxpayer, the inability of the taxpayer to transfer the blocked currency to Canada during the tax year, and the inability to dispose of the income in any manner except to pay any foreign income taxes which may be due). See also Interpretation Bulletin No. IT-351, Nov. 15,1976, reprinted in 5 CAN.TAX REP. (CCH) ¶ 52,356 (1977). See generally TAXES INT'L No. 8, at 17 (April 1980).

48. Commissioner v. First Sec. Bank of Utah N.A., see note 9, 1972-1 C.B. at 136, quoting Treas. Reg. §1.482-1(b)(1). See also Lufkin Foundry & Mach. Co. v. Comm'r, 468 F.2d 805, 1972-2 U.S.T.C. ¶ 9632, at 85,510 (5th Cir. 1972), *rehearing denied per curiam,* 72-2 U.S.T.C. ¶ 9744 (5th Cir. 1972).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

payments differently for tax purposes when they occur between associated enterprises from the way in which they would be treated if they occurred between unrelated enterprises. It is however considered that exchange control regulations in a country should not preclude the deduction for tax purposes, for either associated or unrelated enterprises, of payments due to persons outside that country, although it is recognized that the tax authorities of the other country may have to take the effects of these regulations into account. [50]

The Council of the OECD has adopted a formal recommendation that the Member States' (which includes the U.S.) tax administrations take the Report into account when "adjusting transfer prices between associated enterprises". [51] Thus, the general principle which should govern the IRS position *vis-à-vis* blocked income is that such foreign restrictions should be taken into account in determining the arm's length price. The IRS' own regulations would require no less. They expressly include "any other fact or circumstance which unrelated parties would have been likely to consider" as among those factors to be taken into account when determining the market value which would be charged for intangible property being transferred to an uncontrolled party. [52] And the parties to an uncontrolled transaction would certainly have taken exchange controls into account in their business calculations.

Had the IRS adopted this approach, the result may have been the same although the reasoning would have been different for each of the two Private Letter Rulings. In IRS Private Letter Ruling 7923003, [53] the foreign law set maximum limits on technical assistance fees which were "equally applicable to dealings between related parties and to those between unrelated parties". [54] Thus, the IRS should have taken those limits into account in determining whether an allocation was proper. In effect, the limitations have established the outer parameters of a legal, arm's length compensation in that foreign country. [55] In IRS Private Letter Ruling 8001017, [56] on the other hand, the foreign law prohibiting the payment of royalties is described as restricting such payments only between related parties. This is the case in Peru and other Andean Pact countries, for example. [57] In such cases, the controls are not really aimed at determining an arm's length price but rather at prohibiting the outflow of currency for fear that multinational companies may be trying to "milk" their local subsidiaries. Thus, it cannot be said that such a restriction delimits the arm's length price. Nonetheless, the discussion in the previous section would still be applicable and would preclude an allocation. If foreign law prohibits the payment of such income altogether (as distinguished from the payment of a royalty into a blocked account), the Supreme Court's injunction that "fairness' requires that the tax not fall on a party which cannot receive the income [58] should still be adhered to.

CONCLUSIONS

Particularly in view of the number of countries which do impose exchange controls of one sort or another, it is disturbing that U.S. taxpayers may be faced with an allocation under I.R.C. Section 482 of income which their foreign subsidiaries may not legally pay to them. As a great majority of the foreign exchange control systems are designed to ascertain whether no more than an arm's length price is being paid to related parties, [59]

INT'L BUS. 491, 538 (1979); Comment, "The Application of Section 482 to the Transfer or Use of Intangible Property", 17 U.C.L.A. L. REV. 202, 218-224 (1969).
53. See note 1.
54. Based on the description of the foreign restrictions, it would appear that the country involved was the Philippines. See PRICE WATERHOUSE INFORMATION GUIDE, CURRENT FOREIGN EXCHANGE INFORMATION 97-98 (1980).
55. The situation is very similar to that in which the taxing authorities of two countries -- neither of which has exchange controls -- have established different standards of judging the arm's length nature of a royalty or other consideration. This is a very common occurrence among the developed countries, each of which has its own range of acceptable royalty rates. Cf. Madere, "International Pricing: Allocation Guidelines and Relief from Double Taxation", 10 TEX. INT'L L. J. 108, 117-118 (1975). In such cases, the two governments may be forced to resort to the competent authority mechanism to divide the allocable income. See generally Liebman, "The Practice and Procedure of Competent Authority: Seeking Relief from Double Taxation Under Bilateral Tax Treaties", 58 TAXES 363 (1980).
56. See note 1.
57. See, e.g., PRICE WATERHOUSE INFORMATION GUIDE, above note 54, at 96.
58. Commissioner v. First Sec. Bank of Utah N.A., above note 9, 1972-1 C.B. at 138.
59. In Spain, for example, royalties or technical assistance fees may be remitted abroad if the Directorate-General of Foreign Transactions (under the Ministry of Commerce) and the Ministry of Industry and Engery have determined that the underlying contract is standard for the industry and does not contain any unfair or abnormal restrictions. See generally J. Russin, E. Vinardell & D. Bralove, "Business Operations in Spain", 273-2nd T.M. at A-30 (1979); WORLD TAX REP. 3 (March 1980). In Greece, the Ministry of Coordination will also undertake a careful analysis of the terms and conditions of any license agreement before approving the payment of royalties to a non-resident. Intercompany charges must also be approved by the Greek Chamber of Commerce. Even if approval is granted, the royalty payment may not be exported unless a license is granted by the Bank of Greece. See generally G. Stathopoulos, "Business Operations in Greece", 194-3rd T.M. at A-50-A-51 (1979). A similar review by the Foreign Investment Institute and Central Bank takes place in Portugal. See PRICE WATERHOUSE INVESTMENT GUIDE, above note 54, at 100.
Outside of Europe, such controls are even more prevalent. In Latin America, mention might be made, in particular of Argentina, Brazil, and Colombia (see idem, at 4-5, 22, 30), in all of which agreements for technology or know-how transfers must be submitted to special bodies for approvals which, in large part, depend upon an analysis of the necessity or social value of the know-how or technical assistance and the terms and conditions of the contract. See, e.g., D. Perenzin, "Business Operations in Colombia", 260-3rd T.M. at A-2 - A-3 (1978). In Africa, Nigeria has a relatively strict exchange control system, as does Malawi. See PRICE WATERHOUSE INFORMATION GUDIE, above note 54, at 72-73, 86; Alegi, "Nigeria: A Legal and Tax Primer for the U.S. Investor", 78-10 TAX MANAGEMENT INT'L J. 11, 17-18 (Oct. 1978).

the IRS should take greater cognizance of such restrictions and should not be exercising its reallocation authority in such cases.

Unfortunately, U.S. taxpayers will continue to find themselves in a bind until these letter rulings are either revoked or superseded or the issue is resolved in court. The argument that foreign tax law should have precluded an IRS allocation was raised in a recent I.R.C. Section 482 case, but the court decided in the taxpayer's favor without having to reach this issue. [60] Reportedly, the issue has been squarely raised in another case presently before the Court of Claims. [61] Until that case is decided, taxpayers can expect these two Private Letter Rulings to be followed, regardless of their lack of a solid foundation. [62]

60. See U.S. Steel Corp. v. Comm'r, 80-1 U.S.T.C. ¶ 9307, at 83,704 n. 12 (2d Cir. 1980), *rev'g* 36 T.C.M. 586, 603 (1977).
61. Trans-Arabian Pipe Line Co., Dkt. No. 561-78 (Ct. Cl.). See the discussion in Aland, above note 9, at 221-222.
62. In a recent decision by the Second Circuit Court of Appeals, Judge Oakes commented that although the IRS does not allow taxpayers to rely upon private rulings as precedent, it relies on them itself in order to determine the tax treatment to accord to similarly situated taxpayers. See Ogiony v. Comm'r, above note 32, at 83,525 (2d Cir. 1980) (Oakes, J. concurring), noted in [1980] 10 STAND. FED. TAX REP. (CCH) ¶ 8258.

Maldives: Foreign Investment Law

by Dr. M.P. Dominic

Maldives consists of 1,196 islands in the Indian Ocean to the Southwest of India and Sri Lanka, stretching nearly 500 miles in length and 80 miles in width. They lie from 7 degrees north to 1 degree south of the equator. The land area is only 115 square miles. However, the territorial boundaries have been extended to 200 miles and hence the sea area is considerable. The capital is Male. The population of 143,469 (per 1978 census) is 100 percent muslim (sunni sect). The language is Divehi.

The exchange rate of the Maldivian rupee for official transactions is 3.93 for US$1; for unofficial transactions, the exchange rate is 8.80 Maldivian rupees for US$1.

Foreign investments in Maldives are governed by Law No. 25/79. The law came into force from 1 May 1979. For foreign investment in tourist resorts and tourist hotels, Law No. 15/79 applies.

Foreign investment is welcome. Preference is given to investments which satisfy the following:

- it provides employment for the locals;
- it contributes to the economic and social infrastructure of the country;
- it could not have been made by local investors because of the size of the investment required or due to the lack of technical expertise;
- it is to be located in the outer atolls rather than in the vicinity of Male;
- the product of the proposed investment is locally marketable at competitive prices and thereby the import of such products is reduced;
- it utilizes local materials;
- it trains local employees with the aim of employing them at technical, skilled and management level.

Application for investment must be made in the prescribed form to the Department of Tourism and Foreign Investment together with the following:

- a comprehensive feasibility report;
- draft copy of the Memorandum and Articles of Association;
- a recognized bank reference;
- the draft agreement between the foreign investor and Maldivian investors;
- a covering letter; and
- other information relevant to the proposed venture

© 1980 International Bureau of Fiscal Documentation – BULLETIN

such as the terms and conditions of foreign participation.

The proposed capital of the investment must be clearly stated in a convertible currency acceptable to the Department.

The Department of Tourism and Foreign Investment will appraise the investment project in consultation with other concerned Departments and Ministries of the Government.

The decision to approve or reject the proposal will be made and notified to the applicant as soon as possible; the length of time will depend largely on the completeness and adequacy of the supporting data.

Once the approval is granted, a licence will be issued in the name of the applicant. In general, the project must be implemented within six months from the date of issue of the licence. However, the period of time for the implementation of the project may be varied and specified in the licence, if the circumstances warrant it. Under certain circumstances, the Government may, before issuing the licence, issue a letter of intent so that the prospective investor is assured of the licence after he has incurred expenses of making feasibility and technical studies.

The prospective investor must register his company, within seven days of the issuance of the licence, with the Ministry of Home Affairs, Male. Further, prior to the commencement of the investment project, one fourth of the approved capital must be deposited with a local bank agreeable to the Department of Tourism and Foreign Investment. In addition, the investor must sign an agreement with the Department of Tourism and Foreign Investments.

Guarantee is given against the closure of the investment during the agreement period, except where the investor is engaged in an activity detrimental to the security of the country. The draft agreement provides for a period of five years, but this is renewable.

Remittance of profits in accordance with the terms of the agreement and repatriation of the liquidation proceeds in the event of the closure of the investment (voluntary or compulsory) are guaranteed.

The following incentives are granted:

- exemption from duty on import of machinery, equipment, raw materials and any other articles of daily necessity for the use of the investor or his foreign employees, for a period of eight years;
- exemption of the investor and foreign employees from all corporate tax, income tax and any local taxes for a period of seven years (for local investment, the tax holiday period is limited to five years); however, it must be noted that at present no taxes other than tourism tax and the bed night tax are levied in Maldives;
- exemption from export duty for a period of ten years;
- guarantee for repatriation of profits and capital;
- guarantee against closure of the investment by the Government during the period of the agreement.

Any dispute arising between the Government and the foreign investor will be referred to the Maldivian Court of Law for adjudication; the decision of the court is final and conclusive.

Books of accounts must be maintained in such a manner that expenditure and revenue can be determined therefrom independently. The accounts may be maintained in Maldivian rupees, U.S. dollars or in any foreign currency acceptable to the Department of Tourism and Foreign Investment. The books and the supporting documents must be maintained in Divehi or in English and they must not be destroyed without prior permission of the Department. The Department of Tourism and Foreign Investment may require the investor to submit, for auditing purposes, the books of accounts and supporting documents to the authorised officials. At the end of each financial year or, failing this, every calendar year, the balance sheets and profits and loss statements must be prepared.

Law No. 15/79 applies to investments in tourist resorts and tourist hotels. Tourist resort means an island or a special area of an island where board and lodging facilities are generally provided for tourists. Tourists hotel means a place in an inhabited island where board and lodging facilities are generally provided for tourists. Under this law, tourist resorts and tourist hotels in Maldives must be registered at the Department of Tourism and Foreign Investment. The number of beds in such resorts or hotels must also be registered. Any change in the number of registered beds in a tourist resort or a tourist hotel may be made only after the Department of Tourism and Foreign Investment is duly notified and the change duly registered. Where the owner of such resort or hotel wishes to entrust the management to another party, either by a lease or on any other basis, an application must first be made to the Maldivian Government. The management may be entrusted to such other party only if the Maldivian Government declines to accept the management of the resort or hotel. When approval is obtained, the management must be entrusted to the other party through the Department of Tourism and Foreign Investment. No tourist resort or tourist hotel shall be taken over by the Government without giving at least two years' notice, except where it is required for the country's defence.

Private owners of tourist resorts and tourist hotels will be subject to

- a tourism tax of US$3.00 per registered bed per day, after 2 years of operation; and
- a bed night tax of US$1.00 per registered bed per day.

However, the imposition of these taxes on the number of beds varies according to the tourist season. For November through January, these taxes will be imposed on 80 percent of the registered beds and must be paid before 15 February. For February through April, these taxes will be imposed on 60 percent of the registered beds and shall be paid before 15 May. The taxes for May through October will be on 20 percent of the registered beds; the taxes for May, June and July must be paid before 15 August and the taxes for August, September and October must be paid before 15 November.

TERRITORIAL INCOME TAX SYSTEMS

Income taxation in the Virgin Islands, Guam, the Northern Mariana Islands and American Samoa (A U.S. Treasury Report)

I. INTRODUCTION AND SUMMARY

This Report examines the income tax systems of the Virgin Islands, Guam, the Northern Mariana Islands and American Samoa. The U.S. Treasury has two interests in the workings of these income tax systems. The first and more historical is that these systems bear a special relationship to the Federal income tax. Not only do the territorial tax codes "mirror" the Federal code, but U.S. citizens who are inhabitants of the Virgin Islands, Guam, or the Northern Mariana Islands are relieved of the obligation of filing a Federal return and paying Federal taxes by doing so in the territory. No other tax jurisdictions in the world are accorded this status. This special status, together with the industrial incentive programs which provide for a rebate of territorial income taxes, has created for the U.S. Treasury and Internal Revenue Service an unending series of technical problems which cannot be resolved satisfactorily under existing statutory authority.

More recently, the Administration has been concerned with the slow growth of the private economic sector in the territories, the growing fiscal problems of the territorial governments and their increasing dependence on the Federal government for financial support. Because the dollar value of the territories' income tax collections, despite inflation, has increased only slightly over the last five years, the territorial income tax systems appear to be failing to fulfill their basic, revenue-raising objective.

The Administration's concern for the territories' economic development, financial problems, and political status is reflected in a separate series of Interagency Task Force Reports and, accordingly, will not be addressed in any detail here. This Report has a narrower, more technical objective. It seeks to evaluate the territorial income tax systems in terms of their ability to raise revenues in a straightforward and equitable fashion. Section II reviews the essential features of the Federal income tax laws, which, under the "mirror" systems, are the basis of the territorial income tax systems. Section III describes the operation of each territory's mirror system and the problems of coordination with the Federal income tax system. Section IV evaluates the territorial tax systems in terms of raising revenue, equitable treatment of territorial versus stateside residents, and simplicity of compliance and administration.

The Report concludes that the territorial income tax systems are functioning poorly and should be overhauled. Specific proposals for reform are being considered by the Administration in light of overall Federal policy toward the territories and will be advanced shortly.

Summary

In general, territorial residents and corporations operating in the territories file returns and pay taxes to the territory which they inhabit and, by doing so, are relieved of such obligations to the Federal government. Each territory is a separate tax jurisdiction administering income tax laws which are identical to those in force in the United States. To give the Federal code its proper effect in each territory, the words "Virgin Islands", "Guam", "Northern Mariana Islands" or "American Samoa" are substituted for the words "United States" where appropriate in the Federal Internal Revenue Code. This results in what have come to be known as the "mirror" codes. Together with various special provisions differing from territory to territory, but all relating to the coordination of Federal and territorial income taxation, the "mirror" codes govern the system of income taxation in each U.S. territory.

The "mirror" systems are, at least in principle, well suited to meeting three objectives. First and foremost, they provide the territories with local tax revenues for meeting a part of their government expenditures. Second, they subject territorial and mainland residents to comparable income tax burdens. Third, they may simplify income tax administration by providing the territories with a tax code, regulations, tax forms and a judicial system.

Although having the territories mirror the Federal income tax system seems well suited to these three objectives, in actual practice the results have been disappointing. The most obvious disappointment has been in the amount of income tax revenues collected by the territories.

In the Virgin Islands and Guam, income tax revenues as a percentage of gross territorial product fell by more than one third in the period 1973 through 1978. The reports of the Federal comptrollers for the territories and the recently released GAO report on Guamanian tax administration[1] suggest substantial deficiencies in procedures for collecting taxes due. The territories have attributed this drop in income tax collections to recent changes in the Federal income tax (such as the increase in the standard deduction) which were automatically mirrored in the territorial tax codes. As demonstrated below, however, the loss of territorial tax revenues must be attributed to other factors.

The mirror systems have also failed to ensure that territorial and mainland residents are subject to comparable income tax burdens. In all territories, the poor records of administration and compliance have widened the gap between the law and actual practice. Moreover, the substance of the territorial income tax laws produces inequities in the tax treatment of mainland residents vis-à-vis residents of the territories. Under the Virgin Islands mirror system, mainland residents who derive income from the Virgin Islands are eligible for fewer deductions and subject to possibly higher tax rates than they would be if they were V.I. residents. Under the Marianas mirror system, 100 percent of the tax on Marianas-source income is rebated to Marianas residents. Under the Guamanian mirror system, 75 percent of the tax paid to Guam on foreign earned income may be rebated to Guamanian residents. In addition to reducing equity, these rebate provisions undermine Federal tax administration by encouraging U.S. citizens to establish (or claim to have established) residence in the territories in order to avoid having to file a Federal return, pay Federal taxes, and be subject to Federal audit.

1. Report by the Comptroller General of the United States, "The Government of Guam's Administration of Its Income Tax Program", GGD-80-3, October 3, 1979.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Although basing the territorial income tax systems on the Federal tax laws has the advantage of giving the territories a ready-made income tax together with published regulations, tax forms, and a judicial system, the need to mesh the Federal and territorial tax jurisdictions has given rise to numerous problems. Because the laws governing the coordination of the Federal and territorial tax systems are in many cases conflicting or ambiguous, these questions cannot be resolved satisfactorily under existing statutory authority. For example, section 935 of the Internal Revenue Code provides that Guamanian residents are free of Federal income tax liability. Another section of the Code permits the United States to withhold Federal taxes on pensions paid to retirees resident on Guam. The provisions by which such withholding taxes were paid over to the Guamanian treasury were apparently repealed in 1972. These and other inconsistencies are continual irritants in U.S.-territorial relations.

A final problem with the territorial tax systems is that they provide an inefficient and costly system of tax incentives for territorial investment. In general, current law permits corporations to operate in the territories free of Federal income tax on their territorial source income, while it permits the territories to enact companion tax-incentive programs. The rationale of the current Federal law is to promote the economic development of the territories, but the law does not relate the Federal tax foregone to the benefits received by the territories. The relief from Federal tax and the rebate of territorial tax on territorial source income encourages profit-sharing to the territories, and generates numerous and severe transfer-pricing problems for the Internal Revenue Service. In one case, the tax relief granted by territorial law and then "preserved" by Federal law represented almost $60,000 for every Virgin Islands employee.

II. FEDERAL INCOME TAXATION OF INDIVIDUALS AND CORPORATIONS

A. U.S. citizens, residents and corporations

To understand the systems of income taxation in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, one must first understand certain essentials of the Federal system of taxation of individuals and corporations. U.S. citizens,[2] non-U.S. citizens who are resident in the United States, and corporations organized under the law of the United States or of any State are all taxed on their *worldwide* gross income less allowable deductions. Corporations are taxed on income of unincorporated branches operating abroad as well as at home, and on dividends,[3] interest and other income received from domestic and foreign subsidiaries. U.S. corporations are not subject to Federal tax on earnings retained by a foreign subsidiary unless such income has certain "tax haven" characteristics as defined under the Internal Revenue Code.

In general, deductions are allowed for all ordinary and necessary expenses of earning income. Individuals may either itemize deductions or claim the standard deduction (zero-bracket amount).[4] Individuals may also exempt $1,000 of income for themselves, for each qualifying dependent, and on account of age or blindness. U.S. citizens who are resident in a foreign country may deduct "excess" housing and other living costs, costs of dependents' education, and home-leave transportation.[5]

Net income is taxed at progressive rates: the maximum rate for individuals is 70 percent; for corporations, the top rate is 46 percent. Married individuals filing jointly and unmarried individuals pay a maximum rate of 50 percent on wages, salaries and other personal service income. The total tax liability can be offset by various tax credits, such as the investment tax credit and the foreign tax credit. The investment tax credit generally equals 10 percent of the value of equipment and other qualifying assets "placed in service" in the United States; the credit is not available for assets placed in service outside the United States.[6] The foreign tax credit is a dollar-for-dollar credit available for income taxes paid to foreign governments. However, to prevent the foreign tax credit from offsetting U.S. tax on domestic income, the amount of credit is limited to the U.S. tax liability on foreign source income.

B. Nonresident aliens and foreign corporations

Under some circumstances, a foreign individual will pay a higher U.S. tax if he is not considered a resident of the United States; in other circumstances, his U.S. tax will be lower. Accordingly, the criteria for determining residence are important in determining the U.S. tax liability of a non-U.S. citizen. Regulations issued under the Internal Revenue Code provide standards for the determination of residence:

> "An alien actually present in the United States who is not a mere transient or sojourner is a resident of the

---

2. Although persons born or naturalized in the Virgin Islands and Guam are U.S. citizens, for convenience of exposition references in this paper to "U.S. citizens" will mean only individuals born or naturalized within the fifty States and the District of Columbia. The source of this distinction is the Internal Revenue Code, sections 932 and 935, and the Revised Organic Act of the Virgin Islands, section 28(a). Persons born or naturalized in the Northern Mariana Islands will become U.S. citizens upon the termination of the Trusteeship Agreement, expected in 1981.

3. Affiliated corporations that do not file consolidated returns are allowed to deduct from their income 100 percent of "qualifying dividends" received from members of the affiliated group. Only U.S. corporations may qualify as members of an affiliated group for purposes of the dividends-received deduction.

4. The zero-bracket amount is $3,400 for married individuals filing jointly, $1,700 for married individuals filing separately, and $2,300 for unmarried individuals.

5. Taxpayers who must live in construction, mining or other "camps" may exclude $20,000 of income earned abroad in lieu of taking the otherwise applicable deductions for excess living costs.

6. An exception to this rule is made for assets placed in service in a U.S. territory, provided that the taxpayer does not receive the tax relief benefits of section 931, 932, 933, 934, or 936. (U.S. Income Tax Regulations section 1.48-1(g)(vii)).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

United States for purposes of the income tax. Whether he is a transient is determined by his intentions with regard to the length and nature of his stay. A mere floating intention, indefinite as to time, to return to another country is not sufficient to constitute him a transient. If he lives in the United States and has no definite intention as to his stay, he is a resident. One who comes to the United States for a definite purpose which in its nature may be promptly accomplished is a transient; but, if his purpose is of such a nature that an extended stay may be necessary for its accomplishment, and to that end the alien makes his home temporarily in the United States, he becomes a resident, though it may be his intention at all times to return to his domicile abroad when the purpose for which he came has been consummated or abandoned. An alien whose stay in the United States is limited to a definite period by the immigration laws is not a resident of the United States within the meaning of this section, in the absence of exceptional circumstances."[7]

The intention of an individual is usually inferred from the terms of his visa for entering the United States, the length of his stay, his ownership of a home or the terms of an apartment or office lease.

A foreign national who is not a resident of the United States (a nonresident alien) or a foreign corporation may have three types of income for U.S. tax purposes:

1. Income effectively connected with a U.S. trade or business. Such income can be *offset by deductions* and is taxed *according to the same general rules* as those applicable to income earned by U.S. residents and domestic corporations. This category includes an individual's wages, salary or other remuneration for personal services performed within the United States, and profits attributable to a U.S. plant or office of a foreign corporation.

2. Interest, dividends, rents and other "fixed and determinable, annual or periodic" income (plus certain other types of income) which are U.S.-source, but not effectively connected with a U.S. trade or business. This income *cannot be offset by deductions* and is taxed *at a flat rate of 30 percent* (or less if covered by a tax treaty with a foreign country).

3. All other income (including some U.S.-source income) which is *exempt from U.S. taxation.*

Although effectively connected income is generally taxed as if it has been earned by a U.S. resident or domestic corporation, some differences do occur in the tax treatment of a nonresident alien or foreign corporation with respect to such income:

— A nonresident alien's or foreign corporation's losses effectively connected with a U.S. trade or business cannot be used to offset U.S.-source interest, dividends, and other income not effectively connected with a U.S. trade or business.

— A nonresident alien can claim only one personal exemption. Additional exemptions cannot be claimed for dependents or on account of the individual's age or blindness.

— A nonresident alien must itemize deductions — that is, he cannot claim the zero-bracket amount. Apart from charitable contributions, deductions are generally limited to those allocable to income effectively connected with the U.S. trade or business.

— A nonresident alien generally cannot file a joint return with his spouse.[8] Not only will he be subject to the harsher limitations and schedules applicable to married individuals filing separate returns, but he cannot limit his tax on personal services income (wages and salary, etc.) to the otherwise applicable maximum rate of 50 percent.

— A nonresident alien may not elect, nor join with others in electing, to have a U.S. corporation in which he is a shareholder taxed according to the rules of Subchapter S. The Subchapter S rules allow a U.S. corporation with 15 or fewer shareholders to elect not to pay tax provided its shareholders include a proportionate share of the corporation's income or loss in their income.

C. Recent changes in Federal income taxation

Taxation of individuals and corporations was changed significantly by the Tax Reduction Act of 1975, the Tax Reform Act of 1976, the Tax Reduction and Simplification Act of 1977, and the Revenue Act of 1978. The overall thrust of the changes in the taxation of individuals was to offset the impact of inflation on effective tax rates, defined as the ratio of personal taxes to income.

With a progressive tax structure, increases in nominal income that move a taxpayer into a different rate bracket can dramatically increase his tax burden. Furthermore, with exemptions and deductions stated in fixed dollar terms, taxable income during a period of high inflation rises more rapidly than the inflation. Real income — the taxpayer's actual purchasing power — may stay the same or actually decline, but his tax liability increases in real terms as a result of the inflation of his income.

Table 1 on the following page shows the impact on real income tax liabilities of the 50 percent inflation of the dollar in the period 1972 to 1979. This table expresses all amounts in 1979 dollars, and assumes that the real incomes of taxpayers stayed the same in this period. The 1972 income tax in column 2 is calculated by applying the 1972 tax laws to the various income levels translated into 1972 dollars; the hypothetical 1979 income tax in column 4 is calculated by applying the 1972 tax laws to the various income levels translated into 1979 dollars. Comparison of columns 2 and 4 shows that, in the absence of changes in the Federal tax laws, inflation would have increased the effective tax rate for individuals in the lowest income levels by at

7. Income Tax Regulations section 1.871-2(b).

8. If a nonresident alien is married to a U.S. citizen or resident, the nonresident alien may elect to join his or her spouse in filing a joint return. If this election is made, the nonresident alien individual is treated as a resident for U.S. tax purposes, and thus the married couple is taxable on its combined worldwide income.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

least 100 percent. At higher income levels, the effective tax rate for individuals would have risen between roughly 15 and 50 percent in the period 1972 to 1979.

Note: Deductible expenses assumed to equal 23 percent of gross income.

1 Equivalent 1972 and 1979 real incomes are derived from the consumer price index: 1972 = 125.3; 1979 (estimated) = 214.15

What the changes in the tax law after 1972 did was to offset the tendency of inflation to subject taxpayers to higher tax rates. The general tax credit of $35 for each taxpayer and dependent (regardless of income), the earned-income credit for low-income individuals (a credit which is refunded to the individual if it exceeds his pre-credit tax liability), increases in the amount of the standard deduction,[9] and, in 1975 only, a rebate of 10 percent of the previous year's taxes up to a limit of $200, were all of particular benefit to low-income individuals. The Revenue Act of 1978 focused its tax reductions on middle-to-upper income taxpayers (who, in turn, were hardest hit by the increased Social Security tax). This Act reduced statutory tax rates, widened tax brackets, and increased the personal exemption from $750 to $1,000 per taxpayer and dependent.

Table 2 compares the impact on effective tax rates of the tax law changes and of inflation. Like Table 1, it expresses all amounts in 1979 dollars. Table 2 shows that for income levels below $15,000, the changes in the tax laws offset roughly 85 percent of the increase in tax liabilities caused by inflation. For income levels of $15,000 or more, the changes in the tax laws offset from 66 percent to 15 percent of the increase in tax liabilities due to inflation, with the lower percentages applicable to the higher income levels. Otherwise stated, effective rates were allowed to rise by between 2 and 5 percent of income at the middle and upper income levels.[10]

A critical implication of Table 2 is that despite the substantial tax reductions made by the 1975, 1976, 1977, and 1978 revenue acts (whose cumulative impact is shown in column 2 of Table 2), the ratio of personal taxes to earned income tended slightly to increase for most real income classes. This point will be developed in Section IV below. It has important implications for the validity of the territories' claims for Federal reimbursement for revenue losses incurred as a result of changes in the Federal income tax.

III. TERRITORIAL INCOME TAXATION AND THE RELATIONSHIP TO FEDERAL TAXATION

A. Virgin Islands

1. Basic tax system

"The income tax laws in force in the United States of America and those which may hereafter be enacted shall be held to the likewise in force in the Virgin Islands, except that the proceeds of such taxes shall be paid into the treasuries of said islands."

With this section of the Naval Appropriations Act of 1922, Congress provided for an income tax in the Virgin Islands. Court interpretations have indicated that this provision created an income tax jurisdiction distinct from that of the United States. The Internal Revenue Code defines the United States to include only the fifty States and the District of Columbia, and defines "domestic" when applied to a corporation to mean organized in the United States. Since the Virgin Islands mirror system substitutes the words "Virgin Islands" for the words "United States" where appropriate, United States residents and corporations are treated as

9. Because middle-to-upper income taxpayers tend to itemize deductions, increases in the standard deduction tend to be of less benefit to them.

10. The increase in 1979 effective tax rates at the upper income levels will in future years be partly offset by the more liberal tax treatment of capital gains provided by the Revenue Act of 1978.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

nonresident aliens and foreign corporations for purposes of Virgin Islands income taxation.

Because the Internal Revenue Code subjects nonresidents aliens to different rules than residents, the Virgin Islands mirror system may result in inequities in the taxation of U.S. persons who derive income from the territory. Some of the specific consequences of the V.I. mirror system for a resident of the United States are that:

— His Virgin Islands "not effectively connected" income is taxed at a flat 30 percent rate on a gross basis;

— He is not allowed to take deductions except to the extent that they are related to income effectively connected with the Virgin Islands trade or business;

— He may take only one personal exemption;

— He is not entitled to file a joint return unless his spouse is a Virgin Island resident; if he is unmarried, he may not use the "head of household" rate schedule.

Although a U.S. resident can claim a foreign tax credit against his Federal tax liability for taxes paid to the Virgin Islands, the above provisions of the Virgin Islands Code could compel a tax in excess of the Federal foreign tax credit limitation.

While the Virgin Islands tax administration and the Internal Revenue Service uphold the mirror system, as described above, two recent court decisions[11] have questioned the validity of the treatment of U.S. persons as foreign for purposes of Virgin Islands taxation. In *Chicago Bridge*,[12] the Third Circuit stated that it would be *contrary* to its understanding of Congress' intent to compel a U.S. taxpayer to pay a higher tax to the Virgin Islands than he would be required to pay on the same income to the United States:

> "The scheme of the statute (the Naval Appropriations Act of 1922) is to impose a tax obligation to the Virgin Islands equivalent to what the United States would collect on the same income, but for the mirror system ... More basically, Congress has aided the Virgin Islands by giving them the same tax, not more, than the United States would otherwise collect on Virgin Islands business."

Administering the territorial tax in order to achieve the result of equivalency would require the law to be changed to treat U.S. citizens, residents, and corporations as domestic, not foreign. It means applying the territorial income tax as if the territory included the United States.

A second basic feature of the Federal law government income taxation in the Virgin Islands is that individuals and corporations which are "inhabitants of the Virgin Islands" satisfy their Federal tax liability by filing a Virgin Islands tax return and paying Virgin Islands tax. The Revised Organic Act of 1954, section 28(a), provides that:

> "the term 'inhabitants of the Virgin Islands' as used in this section shall include all persons whose permanent residence is in the Virgin Islands, and such persons shall satisfy their income tax obligations under applicable taxing statutes of the United States by

Office of the Secretary of the Treasury
Office of Tax Analysis — June 17, 1979

Note: Deductible expenses assumed to equal 23 percent of gross income.

1 Equivalent real incomes are derived from the consumer price index: 1972 = 125.3; 1973 = 133.1; 1974 = 147.7; 1975 = 161.2; 1976 = 170.5; 1977 = 181.5; 1978 = 195.4; 1979 (estimated) = 214.15.

2 The refundable portion of the earned income credit is not included.

11. *Chicago Bridge and Iron Co. v. Wheatley*, 430 F. 2d 973 (3rd Cir. 1970) and *Vitco, Inc. v. Govt. of V.I.*, 560 F. 2d 180 (3rd Cir. 1977). The *Vitco* case is discussed below.

12. The issue in *Chicago Bridge* was whether a U.S. corporation was entitled to use the Western Hemisphere Trade Corporation deduction to reduce its income tax liability to the Virgin Islands. The District Court denied the deduction on grounds that the U.S. corporation was a foreign corporation for purposes of Virgin Islands income taxation. Reversing the lower court decision, the Third Circuit held that "substantive equality of treatment in determining deduction under V.I. mirror system of taxation requires the term 'domestic' to be given the same meaning under V.I. Code as under [the Federal Internal Revenue Code]." Accordingly, the Third Circuit held that the U.S. corporation was entitled to use the WHTC deduction to reduce its Virgin Islands income tax liability.
At the request of the Virgin Islands, Congress provided that for tax years beginning in 1972, neither U.S. nor V.I. corporations are permitted the WHTC deduction in computing their Virgin Islands income tax liability. (Revenue Act of 1971, P.L. 92-178, section 307).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

paying their tax on income derived from all sources both within and outside the Virgin Islands into the Treasury of the Virgin Islands."

Thus, a resident of the Virgin Islands or a corporation deemed to be a V.I. inhabitant does not file a U.S. income tax return or pay tax to the Federal government. However, all other U.S. citizens, residents and corporations which derive income from the Virgin Islands file two tax returns and receive a foreign tax credit to offset their U.S. tax liability with respect to income derived from or effectively connected with the Virgin Islands.

Section 28(a) of the Revised Organic Act has made the Virgin Islands attractive to U.S. corporations seeking to avoid taxation. In the absence of an IRS ruling to the contrary, certain U.S. corporations have apparently interpreted section 28(a) to provide that a U.S. corporation whose principal office is in the Virgin Islands may qualify as an "inhabitant of the Virgin Islands". Under this interpretation, the U.S. corporation would avoid all taxation on income derived from or effectively connected with the United States. This would be possible because, as a Virgin Islands inhabitant, it would not be subject to U.S. tax and, under the mirror system, it would be liable for Virgin Islands tax only on income derived from or effectively connected with the Virgin Islands. Whether or not a U.S. corporation can qualify as an inhabitant of the Virgin Islands, and thereby avoid U.S. tax, is the subject of a pending revenue ruling.

A further means of tax avoidance may be available to the parent corporation of a U.S. corporation which qualifies as a V.I. inhabitant. Dividends paid by such a corporation to its parent would arguably be eligible for a 100 percent dividends-received deduction, and thus be free of U.S. tax. At the same time, the parent corporation could claim a foreign tax credit for any withholding tax paid to the Virgin Islands with respect to such dividends. This foreign tax credit could offset the parent's U.S. tax liability on income sourced in low-tax foreign countries. In such a case, the foreign tax credit would not serve its intended purpose of relieving double taxation.

Current law may not provide for a reasonable solution either to the proper treatment of U.S. corporations under section 28(a) of the Revised Organic Act or to the inequitable treatment of U.S. citizens under the V.I. mirror system. The Virgin Islands has several times expressed interest in legislation which would provide for identical treatment of U.S. and V.I. persons under the mirror system.[13]

2. Tax incentives for investment in the Virgin Islands

The Virgin Islands has a tax-incentive program which rebates to qualifying companies 90 percent of territorial taxes on Virgin Islands-source income. Section 934 of the *Federal* Internal Revenue Code limits such rebates of Virgin Islands taxes to those corporations 80 percent of whose gross income is Virgin Islands-source and 50 percent of whose income is derived from the active conduct of a trade or business in the Virgin Islands. Provisions of the *Virgin Islands* law establish other requirements which a corporation must meet in order to qualify for the tax rebates. The principal requirements are that it:

— invest at least $50,000, exclusive of inventory, in a Virgin Islands industry or business;

— agree in writing to give preference in employment and contracting to Virgin Islands residents and corporations;

— obtain approval from the Commissioner of Labor prior to hiring nonresident workers; and

— conform to ecological standards established by Federal or local law.

In addition to these specific requirements which must be met by an applicant for V.I. tax relief, the Virgin Islands consider applications in light of the following general guidelines:

— the extent to which the proposed enterprise may pollute the environment;

— the applicant's requirements for utilities, social services, and other resources;

— the applicant's capacity to employ Virgin Islands resident labor; and

— the proposed industry's compatibility with existing businesses in the Virgin Islands.

Corporations which are beneficiaries of the V.I. Industrial Development Program may receive rebates of 90 percent of corporate income taxes paid, rebates of 90 percent of customs duties, and/or 100 percent exemptions from the V.I. real property tax, gross recepts tax and/or excise tax. Any particular package of benefits is negotiated between the applicant and the V.I. Industrial Development Commission. Subsidies and exemptions are permitted for 10 years, but the beneficiary under the Industrial Development Program may be granted renewal of those benefits subject to the approval of the Governor of the Virgin Islands.

A corporation which qualifies under section 934 and the V.I. Industrial Development Program for a rebate of 90 percent of its income taxes, pays a maximum income tax rate in the Virgin Islands of 4.6 percent. If the corporation is also deemed to be a V.I. inhabitant under section 28(a) of the Revised Organic Act, then it is not subject to Federal tax. In 1977, nine U.S.-controlled corporations received the benefits of the V.I. income tax rebates and of section 28(a). The income tax subsidy granted these nine corporations amounted to $13.5 million in 1977. This figure is the total amount of

13. A 1975 resolution of the Virgin Islands legislature urged the U.S. Congress to adopt legislation to "eliminat[e] the so called 'mirror system' of taxation in all instances in which said system results in any United States citizen resident in the Virgin Islands or any Virgin Islands corporation being denied any deduction, credit, election or exemption under the Internal Revenue Code of 1954, as amended, by reason of the fact that the Virgin Islands is a separate taxing jurisdiction from the United States."

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Federal taxes foregone as a result of section 28(a),[14] but only a small part of the Virgin Islands taxes foregone as a result of the V.I. tax-incentive legislation. The full amount of V.I. taxes foregone includes the tax relief provided to approximately 57 V.I. corporations, in addition to the nine U.S.-controlled corporations.[15] It also includes the customs tax rebates and exemptions from V.I. property tax, gross receipts tax, and excise tax. Data are not available to estimate the total amount of taxes foregone by the Virgin Islands.

In 1977, the income tax foregone per employee of the nine U.S.-controlled corporations varied between $59,000 for one company and zero in the case of two companies with net losses. The $59,000 figure is five times larger than the average compensation paid to employees of these companies. The average income tax forgiveness per employee was $4,300, or 36 percent of the average compensation of these employees.[16]

3. "Covering over" of Federal and territorial taxes

The Revised Organic Act in section 28(a) provides that:

> "the proceeds of the United States income tax on the inhabitants of the Virgin Islands ... shall be covered into the treasury of the Virgin Islands, ... provided that ... such persons shall satisfy their income tax obligations under applicable taxing statutes of the United States by paying their tax on income derived from all sources both within and outside the Virgin Islands into the treasury of the Virgin Islands."

Since U.S. government employees stationed in the Virgin Islands are considered to be "inhabitants of the Virgin Islands", the Internal Revenue Service pays over to the Virgin Islands treasury U.S. income taxes imposed upon the compensation of U.S. government employees for services performed in the Virgin Islands. The Internal Revenue Service has interpreted section 28(a) also to authorize the covering over of U.S. income taxes withheld on wage income of individuals who were residents of the United States for part of the tax year, but residents of the Virgin Islands as of the last day of the tax year. This latter source of Federal income taxes covered over has amounted to approximately $1 million annually in recent years.

B. Guam

1. Basic tax system

The 1950 Organic Act of Guam provides, in language identical to that with respect to the Virgin Islands in the Naval Appropriations Act, that "The income tax laws in force in the United States of America and those which may hereafter be enacted shall be held to be likewise in force in Guam". From 1950 to 1972, the Guam territorial income tax was administered according to a mirror system similar to that currently applied in the Virgin Islands. Because of the inequities which resulted under the Guamanian mirror system from taxing U.S. citizens not resident in Guam as nonresident aliens, Guam supported the enactment in 1972 of section 935 of the Internal Revenue Code.

(a) Taxation of individuals

Section 935 simplifies the application of the Guamanian mirror system to individuals. Under this section, a U.S. or Guam citizen is required to file only one tax return — with Guam if he is resident there on the last day of the year, with the United States if he is resident in one of the fifty States or the District of Columbia on the last day of the year. Section 935 also provides that for purposes of the Guamanian individual income tax, income from U.S. sources shall be treated as domestic source income; for purposes of the Federal individual income tax, income from Guamanian sources shall be treated as domestic source. Section 935 allows full credit for taxes paid to or withheld by both jurisdictions without regard to the foreign tax credit limitation. Income taxes withheld by one jurisdiction (e.g., the United States) can be claimed as a credit in the jurisdiction where the individual files his return (e.g., Guam) just as if the taxes had been withheld by the jurisdiction of residence (in this example, Guam).

While P.L. 92-606, which enacted section 935, eliminated inequities in the taxation of U.S. citizens subject to the Guamanian income tax, it gave rise to inequities in the division of revenues between the United States and Guam. Section 935 (and its companion section, 7654) apparently replaced the provisions of the Organic Act of Guam relating to the disposition of Guam taxes.[17] The Organic Act provided, in pertinent part, that "Federal income taxes derived from Guam ... shall be covered into the treasury of Guam." The legislative history of section 935 suggests that Congress intended to preserve Guam's exclusive right to tax full-year residents of Guam and citizens of Guam not resident in the United States. Accordingly, Congress provided in section 935 that such persons were "relieved of liability" for the United States income tax. However, the provisions of the 1972 law did not make Federal tax withholding obligations consistent with the liability rules set down in section 935, nor (as an

---

14. In the absence of special Federal provisions, a U.S. corporation deriving income from a territory would have a tax liability to the Federal government as well as to the territorial government equal to 46 percent of its taxable income, less tax credits. To avoid double taxation, the Federal government would ordinarily grant a dollar-for-dollar foreign tax credit for taxes paid to the territory. By relieving territorial source income from Federal taxation, the United States "preserves" the benefit of any tax relief granted by the territory. The amount of the revenue loss to the Federal treasury is the difference between the taxes which would have been paid to the United States in the absence of section 28(a) and the actual tax payment to the territory. Since the territorial income tax system "mirrors" the Federal system, this amount also represents the income tax foregone by the Virgin Islands with respect to U.S.-controlled corporations.

15. Data compiled by the Virgin Islands Commerce Department show that as of December 31, 1978, there were a total of 66 active firms holding grants of tax relief from the Virgin Islands government.

16. For a detailed discussion of the data sources used in estimating the cost of the V.I. tax-incentive program to the Federal treasury, see *The Operation and Effect of the Possessions Corporations System of Taxation, Second Annual Report*, pp. 84-99.

17. Income Tax Regulations section 301.7654-1(a).

© 1980 International Bureau of Fiscal Documentation — BULLETIN

alternative) did they provide a comprehensive mechanism for the Federal government to cover these taxes over to the Guamanian treasury. Inconsistencies exist in three areas:

— The United States withholds (and retains) tax on pension payments to retired military and civil service employees resident in Guam.

— The United States withholds (and retains) tax on compensation paid to citizens of Guam serving in the U.S. armed forces.

— The United States withholds tax on compensation paid to U.S. government employees in Guam. Currently, these withholding taxes are being covered over to Guam. In 1973, the Treasury advised the IRS that it should continue to cover over these withholding taxes as if section 30 of the Organic Act had not been fully superseded.

These three issues have been of concern to both the Treasury and the Administration. The fiscal plight of Guam is increasingly serious and Guam needs to know the amount of Federal tax dollars on which it is entitled to rely. The Treasury Department indicated to the government of Guam that, if necessary, it would be prepared to seek statutory clarification.

(b) Taxation of corporations

Like the Virgin Islands, Guam taxes U.S. corporations as foreign corporations. Similarly, corporations chartered in Guam are considered to be foreign corporations for purposes of U.S. Federal taxation. However, P.L. 92-606 made an exception to this foreign treatment for purposes of the 30 percent withholding tax on interest, dividends, and other fixed or periodical payments. Under the new Code section 881(b), Guamanian corporations are not subject to the withholding tax on U.S.-source interest, dividends, etc. Under the "mirror image" of this provision, U.S. corporations are not subject to the withholding tax on Guam-source interest, dividends, etc.

2. Tax incentives for investment in Guam

Section 936 of the Internal Revenue Code allows a U.S. corporation, 80 percent of whose income is derived from a possession[18] and 50 percent of whose gross income is effectively connected with a trade or business in a possession, to claim a special credit equal to the Federal tax attributable to income from the trade or business and to "qualified possession source investment income". "Qualified possession source investment income" is derived from the reinvestment of income from a trade or business whithin the same territory. The effect of section 936 is to relieve a qualifying U.S. corporation from any Federal tax on income from a possessions trade or business or from qualified investments within the possession in which the trade or business is conducted.[19] Other income (e.g., income earned from a trade of business outside the territory) is subject to the regular Federal income tax.

Dividends paid to a U.S. corporation by a company whose Guam trade or business qualifies it for a section 936 credit must be included in the gross income of the U.S. shareholder. However, such dividends qualify for a 100 (or 85) percent dividends-received deduction, which reduces gross income otherwise subject to Federal tax. Since the dividends-received deduction eliminates most or all of the Federal tax on repatriated earnings, no foreign tax credit is allowed for withholding taxes[20] or income taxes imposed by the territory on the qualified earnings. *The effect of all these provisions taken together is that the only tax imposed on the trade or business income or the qualified possession-source investment income is that imposed by the territory.*

Under Guamanian law, corporations organized in Guam or the United States may qualify for rebates of 75 percent of Guam income taxes. In order to qualify for the rebates, a corporation must meet minimum investment and certain other requirements, such as increasing employment, replacing imports, or creating needed facilities. The rebate is allowed for up to 10 years, but may be renewed.

Section 936 is not a key factor in Guam's industrial development, since few of the tax-exempt companies in Guam are U.S. corporations. In 1977, only four corporations in Guam and American Samoa combined received section 936 benefits, resulting in a total tax saving (Federal tax foregone) of $1.1 million.

3. Newly enacted tax exemption measures

In 1977, the Guam legislature enacted a law (P.L. 14-32) which provides for rebates of 75 percent of Guamanian tax on foreign earned income of U.S. citizens resident in Guam. Foreign earned income is defined to include earned income derived from sources outside the United States and the U.S. territories. Since, under section 935 of the Federal Internal Revenue Code, residents of Guam are free of Federal income tax liability, the effect of this provision is to reduce the effective tax rate on foreign earned income of Guam residents to 25 percent of the rate otherwise applicable to U.S. citizens.

It is an unresolved issue whether Guam has the authority to rebate Guam taxes on foreign earned income. It is clear, however, that this exemption is contrary to the intent of Congress when it provided, in the Organic Act of 1950, that "The income-tax laws in force in the United States of America ... shall be held to be likewise in force in Guam."

---

18. The term "possession" as used in section 936 includes Guam, American Samoa, and Puerto Rico. It does not include the Virgin Islands. However, the Revised Organic Act of the Virgin Islands in section 28(a) provides to "inhabitants of the Virgin Islands" benefits similar to section 936 benefits, since "inhabitants of the Virgin Islands" are relieved of the obligation of paying Federal tax by doing so in the Virgin Islands. It is unclear whether or not the term "possession" as used in section 936 includes the Northern Mariana Islands.

19. A corporation which qualifies for the benefits of section 936 may not join in filing a consolidated Federal tax return.

20. Although this provision is presently irrelevant to Guam, it could become relevant should Guam impose a withholding tax similar to the "tollgate" tax in Puerto Rico.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

4. "Covering over" of Federal and territorial income taxes

Under the method imposed by sections 935 and 7654 of the Internal Revenue Code for the coordination of the U.S. and Guam income taxes, the Federal and Guam treasuries generally keep the taxes withheld by Federal and Guam withholding agents, respectively. Individuals file returns in the jurisdiction where they are resident on the last day of the year, claim a credit for taxes within both jurisdictions, and either pay additional tax or obtain a refund from the jurisdiction where they are resident.

There are three exceptions to the principle of "letting the withholding chips fall where they may:

— Federal taxes withheld on compensation paid to members of the U.S. armed forces stationed in Guam. Under the Soldiers and Sailors Relief Act, the U.S. military generally have no tax liability to Guam. The United States covers these taxes over to Guam pursuant to Code section 7654.

— Federal taxes withheld on compensation paid to civilian employees of the Federal government working in Guam.

These individuals have a tax liability to Guam in the case that they are resident there on the last day of the tax year, but can claim a credit for taxes withheld by the United States on wages which offsets their liability to Guam. As explained above, the Treasury Department would support a statutory clarification of the legal basis for covering over these amounts.

— Federal and territorial taxes on individuals with gross income of $50,000 or more and at least $5,000 in gross income from the jurisdiction in which they are not resident on the last day of the year.

These taxes are split between the Federal and territorial treasuries in proportion to the source of the income. For example, a U.S. resident with $100,000 in gross income, $10,000 of which was derived from Guam, would file a Federal return and pay taxes to the Federal government. If the withholding and estimated taxes paid to Guam represented less than 10 percent of his total tax liability, the Federal treasury would cover over the difference to the Guam treasury; if more than 10 percent had been withheld, the excess would be covered over from the Guam treasury to the Federal treasury. The United States covers these taxes over pursuant to section 7654 of the U.S. Internal Revenue Code.

C. Northern Mariana Islands

1. Basic tax system

The Covenant to Establish a Commonwealth of the Northern Mariana Islands, the pertinent sections of which became effective in January 1979, provides in section 601 that the U.S. income tax laws are in force in the Northern Marianas "in the same manner as those laws are in force in Guam." It also provides that references to Guam in the Federal Internal Revenue Code will be deemed to refer to the Northern Mariana Islands, as well.

Pursuant to section 602 of the Covenant, the Northern Mariana Islands have authority to rebate taxes imposed on local source income. The government is prohibited from rebating taxes on income derived from sources outside the Northern Mariana Islands. The Northern Marianas currently rebate 100 percent of taxes collected under the "mirrored" Internal Revenue Code on Marianas-source income. The Northern Mariana Islands instead impose a tax on gross wages and salaries and a business gross revenues tax. The gross wage and salary tax is levied at progressive rates ranging from zero to six percent. The business gross revenue tax is also a progressive tax, with rates from zero to four percent.[21]

2. Tax incentives for investment in the Northern Mariana Islands

It is an unresolved issue whether U.S. corporations operating in the Northern Marianas may qualify for special tax treatment under section 936 of the Federal Internal Revenue Code.

Under Marianas law, corporations receive rebates of 100 percent of the income taxes paid under the mirror system on Marianas-source income. The only territorial tax to which such income is subject is the business gross revenue tax.

3. "Covering over" of Federal and territorial income taxes

The Covenant of the Northern Marianas provides in section 703(b) that the Federal government will pay to the Marianas treasury all Federal income taxes derived from the Northern Mariana Islands. The specific kinds of taxes covered over by the United States are the same as those enumerated for Guam (see above).

D. American Samoa

1. Basic tax system

Alone of the four territories, Congress granted to the legislature of American Samoa the authority to impose its own income tax. In 1963, the American Samoan legislature adopted the mirror system in the American Samoan Tax Act (Revised Code of American Samoa, Title XVIII, Ch. 18.04). This Act provides that:

> "The income tax laws in force in the United States of America and those which may hereafter be enacted ... are hereby adopted by American Samoa. They shall be deemed to impose a separate territorial income tax, payable to the Government of American Samoa."

U.S. citizens who are resident in American Samoa, unlike those resident in any other territory, are not relieved of the obligation of filing a Federal tax return

21. "Commonwealth of the Northern Mariana Islands Tax Act of 1979", First Northern Marianas Commonwealth Legislature, Second Session, 1978. Chapter 1 of this Act provides for the gross wage and salary tax and the business gross revenue tax. Chapter II provides for a rebate of 100 percent of taxes collected under the "mirrored" Internal Revenue Code on Marianas-source income.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

d paying Federal taxes by doing so in American moa. Instead, U.S. citizens resident in or deriving come from American Samoa file two tax returns — ne with the Federal government and one with merican Samoa. To avoid double taxation, the United ates grants a foreign tax credit against the U.S. tax bility of U.S. citizens for taxes paid on income erived from American Samoa. This treatment puts merican Samoa on an equal footing with foreign untries. It means that U.S. citizens resident in merican Samoa, like U.S. citizens at home and in reign countries, file a Federal tax return and are bject to IRS audit. It means that nationals of merican Samoa are subject to U.S. taxation only in the se that they derive income from the 50 States.

t the present time, the legislature of American Samoa considering ways to simplify its income tax system so at it is more suited to the income levels in American moa. The legislature has stated that it believes that

"everyone should pay something, which, given the level for the earned income credit in the Internal Revenue Code, does not occur under the mirrored or partially mirrored U.S. American Internal Revenue Code."[22]

Tax incentives for investment in American Samoa

.S. corporations operating in American Samoa may ualify for special U.S. tax treatment under section 936 f the Federal Internal Revenue Code in the same anner as domestic corporations operating in Guam. he only tax imposed on the qualified income which ch corporations derive from Amercian Samoa is that nposed by the territory.

merican Samoan law provides that certain corpora- ons are exempt or partially exempt from territorial come taxes. In order to qualify, the corporation must e owned by a resident of American Samoa and employ work force at least 75 percent of which consists of moan residents. The period of tax exemption is for up 10 years, although it may be made to terminate rlier if the cumulative amount of income taxes rgiven equals 100 percent of the net current vestment in American Samoa.

ection 936 and related provisions of the Federal ternal Revenue Code are not a key factor in the dustrial development of American Samoa. In 1977, here were only four corporations receiving section 936 enefits in American Samoa and Guam combined. They ccounted for a total tax saving (Federal tax loss) of 1.1 million.

. Covering over of federal and territorial income taxes

here are no covering over procedures in place between he United States and American Samoa. This imposes a urden on individuals employed by the U.S. ederal government in American Samoa. The tax ability of such individuals on income derived from merican Samoa is to the territory, not to the United tates.[23] Nonetheless, pursuant to section 3401(a)(8) f the Internal Revenue Code, the United States with- olds income tax on compensation paid to these Federal employees. In order to satisfy their American Samoan tax obligations, these individuals must request a refund on their Federal Income tax return of the Federal withholding taxes, and then pay the refund to American Samoa, together with interest if the Federal refund is delayed.

The Internal Revenue Service has proposed a technical amendment[24] to the Internal Revenue Code which would exempt U.S. government employees in the territories from Federal withholding taxes. It would also require the United States, on the request of a territory, to enter into an agreement to withhold *territorial* income taxes on the wages of individuals employed by the U.S. government in the territory.

IV. EVALUATION OF CURRENT SYSTEMS OF TAXATION

The current systems of income taxation in the territories may be evaluated according to three criteria: (A) raising revenue (B) equitable treatment of territorial versus stateside residents, and (C) simplicity of interpretation, administration, and compliance.

A. Raising revenue

Congress intended that the mirror systems provide the territories with local tax revenues for meeting a part of their government expenditures. As the territorial economics grew, it was expected that the revenues collected under the graduated income tax would grow by an even larger amount and provide a source of funds for infrastructure projects as well as government operating expenses.

In fact, Virgin Islands net income tax collections declined from 15.8 percent of gross V.I. product in 1973, to 10.2 percent in 1978 (see Tabel 3). Guamanian net income tax collections declined from 12.9 percent of gross territorial product in 1973, to 7.3 percent in 1977.[25] In dollar terms, the amount of income tax collections, net of rebates, stayed roughly constant in these two territories between 1973 and 1978. This may be compared to the U.S. Federal income tax collections, which in dollar terms increased by 70 percent between 1973 and 1978, and as a percentage of GNP rose from 10.8 percent to 11.4 percent.

Members of the Virgin Islands government have stated that the comparison of the 1973 and 1978 V.I. tax/GNP ratios is misleading because the dramatic rise in the value of oil refined by one tax-exempt company in the

Source: For the territories, income tax data for FY 1976 to FY 1979 are taken from information provided by the U.S. Government Comptrollers for the Virgin Islands and Guam. Income tax data for the earlier years are taken from the chart prepared by Richard Miller for the U.S. Department of the Interior, "Funds Available to the Virgin Islands Government by Source, FY 1970 to FY 1977;" and from **Guam Needs Assessment,** U.S. Department of the Interior, Table II-1. Statistics on the V.I. gross territorial product are taken from "Comparative Growth Statistics," estimated by Jerome McElroy. Statistics on Guam gross territorial product are taken from Russell C. Kreuger and Clara M. Okada, "**The Gross Islands Product of Guam,**" Department of Commerce, Government of Guam.
For the United States, income tax data are taken from **The Budget of the U.S. Government, FY 1980** and **Annual Report of the Secretary of the Treasury on the State of the Finances, FY 1978.** Statistics on the U.S. GNP are taken from the **Survey of Current Business,** U.S. Department of Commerce, various issues.

Virgin Islands swells the gross product estimates, while it has a much smaller effect on taxable income. The Virgin Islands government has also claimed that a major cause of the decline in income tax burdens was the *Federal* revenue acts of 1975, 1976, 1977 and 1978, which reduced individual income tax liabilities. The Virgin Islands accurately points out that the U.S. revenue acts had a greater adverse impact on V.I. tax liabilities than on U.S. tax liabilities because a larger proportion of V.I. taxpayers are in the low tax brackets, which were most affected by the revenue acts. Finally, the Virgin Islands argues that it is not fair to apply effective tax rates calculated for the United States to the Virgin Islands, because "annual increases in wages in the Virgin Islands [since 1970] have averaged about six percent per year, while the states' annual yearly increases have averaged 10 percent per year."[26]

In order to evaluate these last two arguments, the Treasury Department has made a rough estimate of the impact of inflation and tax law changes on effective tax rates in the Virgin Islands. These estimates are based on the assumption that the incomes of V.I. taxpayers rose at an average annual rate of 6 percent, compared to the average annual rate of U.S. inflation of 8 percent in this period. Since U.S. inflation is exported to the Virgin Islands, the assumption of a 6 percent average annual wage increase is tantamount to assuming that the real purchasing power of Virgin Islands taxpayers dropped in this period. Based on this assumption, the average V.I. effective tax rates over all income brackets and filing statuses[27] would be as follows:

Year	Applicable law	Average V.I. effective tax rate on earned income
1973	1973	7.2%
1978	1973	8.9%
1978	1978	6.6%

The table above shows that the post-1973 tax law changes only slightly over-compensated for the effect of inflation. The average effective tax rate over all income tax brackets and filing statuses in the Virgin Islands dropped by only 8 percent between 1973 and 1978, from 7.2 percent to 6.6 percent. This is less than the 14 percent drop in individual income tax collections in this period, from $37.9 million to $32.7 million. The tax law changes thus could not be the sole or even the primary cause for the sharp decline in the ratio of tax collections to gross V.I. product after 1973.

An alternative approach to measuring the impact of Federal tax law changes on V.I. income tax burdens

26. Peter Pflaum, "Changes in Federal Tax Law Adversely Affect Islands"; *Virgin Islands Daily News*, September 12, 1979.
27. The average effective rates are estimated by weighting the effective tax rate for each income level and filing status by the percentage of V.I. taxpayers subject to that rate. The income distribution and filing status data were derived from a sample of 200 individual income tax returns filed with the Virgin Islands for tax year 1977.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ould be to assume that all taxes due the Virgin Islands ere in fact collected. This would mean that income tax llections would equal tax liabilities. Using the ffective V.I. tax rates on earned income for 1973 and 978, it is possible to impute the change in taxable rned income which would have had to occur to nerate the actual change which occurred in income x collections. This calculation gives rise to an timated drop in taxable income of 5.7 percent for the eriod 1973 to 1978, from $526 million to $495 illion.

ear	Individual income tax collections	Average V.I. Effective tax rate on earned income	Amount of imputed personal income
973	$37.9 M	7.2%	$526 M
978	$32.7 M	6.6%	$495 M

his imputed decline in personal income is at variance ith most of the growth indicators for the Virgin lands for this period. For example, it is estimated that ourist expenditures in the Virgin Islands rose by 60 ercent between 1973 and 1978. The same period saw a rowth of 4 percent in the employed labor force.[28]

n summary, the decline of V.I. income tax collections s a percentage of gross product must be attributed rimarily to factors other than changes in the Internal evenue Code. Evidence suggests that the principal actors are (1) deficiencies in tax administration, (2) nsufficient incentives to local tax efforts, and (3) the erritorial tax-incentive programs.[29] These problems are iscussed below with reference to both the Virgin slands and Guam.

. Deficiencies in tax administration

he 1978 report of the Federal Comptroller for the irgin Islands find that the V.I. administration is lax in s tax enforcement and collection activity.[30] According o a 1977 report prepared by IRS personnel at the equest of the Virgin Islands government,

> "The present Tax Division salary scale is unrealistic considering salaries paid for competitive positions in other agencies."
> "... since the proposed tax deficiencies for Fiscal Year 1977 amounted to an average of $705,000 per agent, it is apparent that the Virgin Islands Government could increase its revenues substantially by increasing the Revenue Agent staff and by increasing the agents' salary to attract and retain the best qualified personnel."[31]

he recently released GAO report on Guam tax dministration finds that Guam lacks procedures to dentify individuals and firms which have not filed ncome tax returns or to cross-check information eported on income tax returns with information on ithholding statements. The GAO report also notes that nremitted withholding taxes totaled $3.5 million as of 978, and that Guam has no adequate procedures to nsure the timely collection of these or other delinquent axes. Another problem noted is that the Guam tax dministration has never used the courts to assist in the ollection of taxes due.

2. Insufficient incentives to local tax effort

In the 1970's, Federal aid has filled an ever larger gap between stagnant territorial tax revenues and the growing expenditures of the territorial governments. In addition to the regular channels of Federal aid, the Virgin Islands and Guam have received ad hoc appropriations for capital improvement and other projects and for "tax loss reimbursement." The territories' lack of full autonomy over their income tax helped them convince Congress and the Administration that they should be reimbursed for the reduction in the tax revenues resulting from their "mirroring" of changes in the Federal tax law. Their efforts produced the following results:[32]

	Appropriations for tax loss reimbursement	
	Virgin Islands	Guam
Tax Reduction Act of 1975	$ 8,500,000	$15,000,000
Tax Reform Act of 1976	$14,000,000	
Tax Reduction and Simplification Act of 1977	$ 1,938,013	$ 3,215,399
Revenue Act of 1978	Presidential veto of H.R. 13719, which would have authorized reimbursement for tax losses incurred in CY 1978 through 1982.	

The appropriations for tax loss reimbursement to the Virgin Islands and Guam represented additional Federal aid. The Federal tax changes did not cause a reduction in the well-being of the territories, but only a transfer of funds from the treasuries of the territories to the taxpayers of the territories. If the Virgin Islands and Guam did not want to cut their tax then, they could have increased their own non-income based taxes. As of 1976, in the case of the Virgin Islands, and 1977, in the case of Guam, these territories also could have imposed a 10 percent income tax surcharge. By providing tax loss reimbursements, the Federal government was simply

28. V.I. Commerce Department.
29. A fourth factor applicable to the Virgin Islands is the decision in the *Vito* case (cited on page 15 above) that V.I.-source interest, dividends, and other passive investment income paid to U.S. persons were not subject to the 30 percent V.I. withholding tax. This decision deprived the Virgin Islands of a source of revenues it had first tapped in 1974. It therefore is not a factor which can help to account for the drop in V.I. tax effort between 1973 and 1978.
30. "Financial Condition of the Government of the Virgin Islands of the United States", U.S. Government Comptroller for the Virgin Islands, June 1978, Report No. 541-77-00, p. 10.
31. Report by the Internal Audit Division, IRS, for Fiscal Year 1977, pp. 35 and 43.
32. American Samoa was not authorized to receive reimbursement for tax losses incurred as a result of the 1975 and 1976 Federal tax changes because Congress believed that the continuing authorization to support the American Samoan government was sufficient to compensate for the reduction in territorial income tax liabilities. Congress did authorize American Samoa to receive reimbursement for the reduction in tax liabilities resulting from the Tax Reduction and Simplification Act of 1977, but American Samoa has to date not requested an appropriation.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

making an additional general appropriation to these territories, while allowing territorial taxpayers to enjoy a tax reduction.

3. Territorial tax-incentive programs[33]

Between fiscal years 1973 and 1977, the Virgin Islands rebated $118 million in corporation income taxes to tax-exempt firms. This compares to net corporation income taxes collected in the same period of $87 million. Thus, tax rebates deprived the Virgin Islands government of 57 percent of the $205 million in total corporation income taxes collected in this five-year period.

In Guam, total income taxes and gross receipts taxes rebated in the period FY 1976 to FY 1980 are estimated to be $19.7 million.[34] This represents 10 percent of the total of the gross corporate income taxes plus gross receipts taxes collected in this five-year period.

B. Equitable treatment of territorial versus stateside residents

Despite the fact that Federal statutes provide that "the income tax laws in force in the United States of America are likewise in force" in the Virgin Islands, Guam and the Northern Mariana Islands, U.S. residents who derive income from the Virgin Islands and U.S. citizens resident in Guam or the Northern Mariana Islands are not, in general, subject to income tax burdens comparable to those of other U.S. citizens. As explained above, U.S. residents are treated for purposes of V.I. income taxation as nonresident aliens. This makes them eligible for fewer deductions and, with respect to "not effectively connected" income, subject to possibly higher tax rates than they would be if they were V.I. residents.

In contrast, the tax systems of Guam and the Northern Mariana Islands extend more favorable tax treatment to territorial residents than is available under Federal law to other U.S. citizens. Residents of Guam may benefit from the rebate of 75 percent of their income taxes attributable to foreign earned income. Residents of the Northern Mariana Islands benefit from the rebate of 100 percent of their taxes on Marianas-source income. This forgiveness of territorial income taxes is made effective by section 935 of the Internal Revenue Code, as applied by the United States. This section provides that residents of Guam and the Northern Mariana Islands are not liable for Federal income taxes.

C. Simplicity

In principle, basing the territorial income tax systems on the U.S. Internal Revenue Code should have minimized the problems of tax interpretation, administration, and compliance in the territories. Under the mirror systems, U.S. tax forms, instructions, and other Internal Revenue Service publications do double duty, as do training programs for revenue personnel. Because Federal court rulings are accepted as precedents in the territories, the territorial governments are spared the problems of adjudicating tax cases through their own court system.

In fact, however, the interpretation of the mirror systems raises complex questions, many of which have been answered in different ways by the courts and the Internal Revenue Service, or have yet to be answered at all. The *Vitco* case, cited [on page 15] above, is the most recent example of a shifting understanding of the Virgin Islands mirror system. This case involved the question whether the U.S. income tax regulation which exempts V.I. inhabitants from U.S. withholding taxes should be "mirrored" into the Virgin Islands tax law. The Internal Revenue Service and the V.I. tax administration took the position that V.I. tax law mirrors only the Internal Revenue Code and the regulations which derive from it, and that since the regulation in question[35] does not derive from the Internal Revenue Code, it should not be mirrored into V.I. law. The Third Circuit Court of Appeals rejected this argument. It held that the V.I. mirror system imposes a tax obligation to the Virgin Islands equivalent to what the United States would collect on the same income. This decision is certain to increase tax litigation. It raises many new questions and is at odds with the interpretation of the mirror system held in earlier court decisions.

While the Virgin Islands mirror system is more complicated than that of the other territories, issues of coordination of the Federal tax system with that of Guam and the Northern Mariana Islands also raise difficult questions of interpretation. In Guam, one of the more complex issues is the proper treatment of Federal withholding taxes on the pensions of retired Federal military and civil service employees resident in Guam (see [pp. 22-23] above). With respect to the Northern Mariana Islands, the most recent issue to come before the Treasury Department is whether the reference to "possessions" in section 936 of the Internal Revenue Code includes the Northern Mariana Islands. The law provides no clear guidance on this issue.

In addition to the complex interpretative questions raised by the territorial tax systems, these systems also create severe problems of administration. The Internal Revenue Code is exceedingly complex and the territorial tax administrations do not have the resources to enforce the Code effectively. They also have difficulty keeping abreast of changes in the Federal internal revenue laws. The V.I. tax administration was unaware until 1979 of a provision of the Tax Reform Act of 1976 alleviating a prior "inequity" in the mirror system.[36]

---

33. Data on total income tax subsidies paid by American Samoa and the Northern Mariana Islands are not available.
34. Data on rebates of income taxes alone are not available.
35. U.S. Income Tax Regulations section 1.1441-4(d). This section conforms the Internal Revenue Code (as applied by the United States) to the Revised Organic Act of the Virgin Islands, section 28(a).
36. Internal Revenue Code section 6013(g) allows a married couple, one of whom is a nonresident alien, to elect to file a joint return. Under the mirror system, this provision would seem to allow a couple, one of whom was resident in the Virgin Islands, the other in the United States, to satisfy its U.S. tax liability by filing a joint return and paying taxes in the Virgin Islands.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

With regard to enforcement, a difficulty of the mirror system is that they are easily abused by persons wishing to avoid and evade Federal taxes. Under the mirror systems, a resident of the Virgin Islands, Guam, or the Northern Mariana Islands is relieved of the obligation to report his income or pay tax to the United States. The IRS is not well positioned to prevent the evasion of U.S. taxes by individuals with dubious claims to residence in a territory.

Under the territorial tax rebate programs, U.S. corporations have an incentive to shift profits to the territories. Particularly in the Virgin Islands, the IRS encounters numerous and difficult transfer-pricing problems with respect to transactions between U.S. corporations and their affiliates. U.S. parents commonly lease plant and equipment to their territorial affiliates, which may have the effect of artificially inflating the income subject to a territorial tax rebate.

A further aspect of the complexity of the mirror systems is that they are difficult for taxpayers to comply with. In general, U.S. corporations operating in the territories have not been made aware that they are subject to territorial taxation under the rules applicable to foreign corporations. A sample of U.S. corporate tax returns filed with the Virgin Islands showed that they are typically filing Form 1120 as V.I. domestic corporations, rather than Form 1120F as foreign corporations. Several of the V.I. corporate returns sampled were duplicates of the corporations' U.S. income tax returns, except that a zero was indicated in the space for V.I. tax liability. These corporations apparently took the position that they owed no taxes to the Virgin Islands, perhaps on the theory that as "residents" of the United States, they satisfied their Virgin Islands tax liability by filing a return and paying taxes in the United States — as if Code section 935 applied to corporations in the Virgin Islands. In tax systems which depend as much on voluntary compliance as do the Federal and the territorial income tax systems, these discrepancies between principle and practice should be of concern.

Virgin Islands: Residency

The following United States Revenue Ruling (80-40) describes the case in which a United States corporation is treated as a resident of the Virgin Islands for the application of United States and Virgin Islands income tax law. However this corporation is treated as a domestic United States corporation for purposes of the dividend received deduction.

ISSUES

1. Is a United States corporation that has its principal office in the Virgin Islands and qualifies for certain Virgin Islands tax incentives treated as a Virgin Islands inhabitant so that it satisfies its United States income tax obligation by paying tax on its income from all sources to the Virgin Islands?

2. Is such a United States corporation a "domestic corporation" for purposes of the dividends received deduction of section 243 of the Internal Revenue Code?

FACTS

P, a corporation organized in state *X*, is engaged in manufacturing in state *X*. In order to take advantage of certain income tax incentives offered by the Virgin Islands, *P* organized *S* to carry out part of *P*'s manufacturing operations in the Virgin Islands. *S* is incorporated in state *Y*.

S conducts all of its manufacturing operations in the Virgin Islands and derives 80 percent or more of each taxable year's gross income from Virgin Islands sources, and 50 percent or more of each taxable year's gross income from the active conduct of its business in the Virgin Islands. *S* maintains its principal office in the Virgin Islands. Management and control of *S* is in the Virgin Islands and all policy is made there. Board of directors and shareholders' meetings are held in the Virgin Islands, and all officers and some directors of *S* are Virgin Islands residents. *S*'s corporate receipts are received in the Virgin Islands and deposited in Virgin Islands bank accounts. All disbursements are made from the Virgin Islands and the corporate books and records are maintained and audited there.

LAW AND ANALYSIS – ISSUE (1)

Section 934(a) of the Code prevents the Virgin Islands from reducing by subsidy its income tax on United States source income of a United States corporation. However, section 934(b) provides that in the case of a domestic corporation, subsection (a) shall not apply to the extent such corporation derived its income from sources without the United States: (1) if 80 percent or more of the gross income of such corporation for the 3-year period immediately preceding the close of the taxable year (or for such part of such period immediately preceding the close of such taxable year as may be applicable) was derived from sources within the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Virgin Islands; and (2) if 50 percent or more of the gross income of such corporation for such period or such part thereof was derived from the active conduct of a trade or business within the Virgin Islands.

Section 1.934(b)(3) of the Income Tax Regulations explains how to compute income tax liability incurred to the Virgin Islands and attributable to income derived from sources without the United States by a United States corporate inhabitant of the Virgin Islands. Section 1.934-1(b)(5) explains how to make a similar computation for a United States corporation which is not an inhabitant of the Virgin Islands. Section 934(d) of the Code provides that section 934(b) will only apply to corporations who supply the information required by section 1.934-1(d) and (e) of the regulations.

Section 1.901-1(g)(5) of the regulations states that a United States foreign tax credit is not allowable to persons who are inhabitants of the Virgin Islands.

Authority for income taxation in the Virgin Islands is derived from the Naval Appropriations Act, approved July 12, 1921 (U.S.C. 1937). This Act mirrors the income tax laws of the United States into the Virgin Islands as if the Virgin Islands legislature had adopted the Internal Revenue Code and applied it to United States persons in the same way the United States applies the Code to foreigners.

Under the mirror system the United States and the Virgin Islands are separate and distinct taxing jurisdictions even though their income tax laws arise from an identical statute applicable to each (the Code). *See* Rev. Rul. 73-315, 1973-2 C.B. 225. Thus, the effect of this mirror system of taxation is to require all persons including United States corporations incurring income tax obligations to both the United States and the Virgin Islands under Chapter 1 of the Code (as applicable in each jurisdiction) to file tax returns and pay income tax to both jurisdictions.

Section 28(a) of the Revised Organic Act of the Virgin Islands (R.O.A.), 48 U.S.C. section 1642 (Supp. 1979), makes substantial changes in this system as it affects "inhabitants of the Virgin Islands." Section 28(a) requires inhabitants to satisfy their United States and Virgin Islands income tax obligations arising under Chapter 1 of the Code (as applicable in each jurisdiction) by filing a single return with, and paying to, the Virgin Islands the Virgin Islands territorial income tax (the Code as mirrored into the Virgin Islands) on their income from all sources. *See* Rev. Rul. 60-291, 1960-2 C.B. 407.

Section 28(a) of the R.O.A. defines "inhabitants of the Virgin Islands" as all persons whose permanent residence is the Virgin Islands."

A United States corporation can qualify as an inhabitant of the Virgin Islands because (1) under section 7701(a)(1) of the Code, the term "person" includes a corporation, and (2) in adopting section 28(a), Congress rejected an attempt to limit the definition of "inhabitants of the Virgin Islands" to — "U.S. citizens" instead of "all persons". *See* Conf. Rept. No. 2105, 83rd Cong., 2d Sess. 22 (1954). Also, section 934 of the Code and section 1.934-1(b)(3) of the regulations operate on the assumption that a United States corporation can qualify as an inhabitant of the Virgin Islands. *See* S. Rept. No. 1767, 86th Cong., 2d Sess. 3 (1960).

In the present situation, all of the officers and some directors of *S* are Virgin Islands residents. All significant business operations, shareholder meetings, and Board of Directors meetings are conducted in the Virgin Islands, and *S* meets the percentage tests of section 934(b) of the Code. In addition, *S* is carrying on a trade or business in the Virgin Islands within the meaning of section 864(a). This is sufficient to constitute *S* a permanent resident, and therefore an inhabitant, of the Virgin Islands for purposes of section 28(a) of the R.O.A.

The United States does not tax a foreign corporation on its non-United States source income that is not effectively connected with the corporation's conduct of a trade or business within the United States. See sections 881(a) and 882. Therefore, under an exact mirror system, non-Virgin Islands source income that is not effectively connected with a United States corporate inhabitant's conduct of a Virgin Islands trade or business would escape territorial income tax since the inhabitant is considered a foreign corporation by the Virgin Islands. However, Congress, in section 28(a) of the R.O.A., made it clear that such income of inhabitants of the Virgin Islands would not escape taxation by using the words "paying their tax on *income derived from all sources both within and outside the Virgin Islands* into the Treasury of the Virgin Islands" (emphasis added). Thus, in effect, *S* is taxed as if it were a Virgin Islands corporation and satisfies both its United States and Virgin Islands income tax obligations by paying the Virgin Islands territorial income tax on its income from all sources. If *S* fails to file a return or pay tax on its income from all sources to the Virgin Islands, then *S* does not satisfy its U.S. tax obligations.

LAW AND ANALYSIS – ISSUE (2)

Under section 243 of the Code, a deduction is allowed for dividends received from a domestic corporation that is subject to taxation under Chapter 1 of the Code.

As a domestic corporation, *S* is still subject to taxation under Chapter 1 of the Code as applicable in the United States. Section 28(a) of the R.O.A. merely requires *S* to satisfy this obligation by paying income tax to the Virgin Islands on *S*'s income from all sources. Thus dividends paid by *S* are not excluded from qualifying for treatment under section 243 when received by *P*.

HOLDINGS

1. *S* is treated as an inhabitant of the Virgin Islands and must satisfy its United States and Virgin Islands income tax obligations by paying tax on its income from all sources to the Virgin Islands.

2. *S* is a domestic corporation for purposes of the dividends received deduction of section 243 of the Code.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

TAX GLOSSARY

by H.W.T. PEPPER *

SPORTING TAXES — In the U.S.A. an 11 percent Federal Excise tax is imposed on bows and arrows and associated equipment — in essence, a tax on hunters and sportsmen to help finance wild life preserves. Bows and arrows are increasingly used to hunt game, as being more "sporting", and less likely than firearms to eliminate the game altogether. In the U.K. there was at one time an exemption of participation sports, such as cricket or football, from entertainment tax on admission money, which the tax was, however, levied on other types of entertainment.

SPOUSE ALLOWANCE — In personal income tax systems it is customary to grant larger RELIEFS (q.v.) to married couples than to a single person. Whether a man supports a wife, or the wife is the breadwinner, the higher relief would apply to the joint income. See also INCOME-SPLITTING, RELIEFS.

SPREADING — A number of countries permit the spreading over a limited period of years of exceptional income earned within a short time, e.g. by writers, international sports stars, etc., who may earn high incomes only for a small part of their careers. Canada allows farmers (including racehorse owners and fishermen) to average their incomes over a five-year period, authors who have spent over 12 months on a manuscript may spread income over two or three years, and there are somewhat similar provisions in the U.S.A. and in the U.K.

SPRINKLER TRUST — The term used in the U.S.A. for a discretionary trust, i.e. a trust in which the trustees have absolute discretion to distribute the trust income in any proportions among the beneficiaries. As the beneficiary has no specified income or interest in the trust's assets, special legislation is usually necessary to counter the tax avoidance element in the arrangement.

STAGGERING OF TAX PERIOD — See PAYMENTS, SPREADING OF; SPREADING.

STAMP DUTIES — Duties, formerly — and in some cases still — paid by pre-purchase of Government stamps which are fastened by adhesion to the documents representing the dutiable transaction. Traditionally, stamp duties were charged upon legal documents such as contracts, deeds, receipts, cheques, and the conveyance, or transfer of ownership of property. Many countries have now abolished (a) minor levies on transactions and/or (b) the use of stamps in taxing those transactions which yield worthwhile revenue, although still collecting the duty by more modern methods.
In Italy, which retains many stamp taxes, deeds must be drawn up on specially stamped paper (carta bollata) obtainable from specially licensed shops. (See also FORMS, TAX, and TELEVISION LICENCE FEES.)

STAMP TAXES — See STAMP DUTIES.

STANDARD DEDUCTION — A device in the U.S.A. tax code (and previously used in Canada) whereby a taxpayer instead of detailing various minor deductions could opt instead for a "standard" deduction of 15 percent of gross income, up to a maximum deduction of $10,000, a useful administrative short-cut. The system has now been superseded by the ZERO BRACKET AMOUNT (q.v.). (See also OPTIONAL TAX.)

STANDARD INDUSTRIAL TRADE CLASSIFICATION (S.I.T.C.) — The classification of goods adopted by the United Nations for the compiling of statistics on international trade.

STANDARD RATE — In the U.K. income tax system a "standard rate" of 30 percent is currently (1979/80) applied to a broad band of taxable income in the graduated rate scale of personal income tax, and is also the rate at which ADVANCE CORPORATION TAX (q.v.) is payable, and the rate at which tax is deducted at source from dividends, interest, royalties and other sources liable to withholding.

STATE TAXES — See LOCAL RATES; TAXES.

STATUTE OF LIMITATIONS — In some countries, a general statute of limitations may apply for various purposes in connection with the administration of taxes. In Japan there is a three-year time limit on the tax authorities to determine or make corrections in a company's or an individual's tax liability. In case of fraud the limit is extended by a further two years, and taxpayers have a five-year period in which to claim adjustments. In the U.K. there is a six-year time limit for the Revenue to make additional assessments and for the taxpayer to claim refunds, but the six-year limit does not apply for additional assessments in cases of tax fraud. The position varies from country to country as to the actual time limits for Revenue and taxpayer claims.

STATUTORY BOOKS AND FORMS — For the purpose of administering various types of tax, the tax law may require a taxpayer's books to be kept in a certain prescribed form (in some cases the books have to be purchased from government publishers or produced by private publishers to government specifications) in order to facilitate official checking of the taxpayer's records. The forms on which income, capital, sales, etc., must be declared for tax purposes are almost invariably printed by the relevant tax department for completion by the taxpayer. The exception, since the development of data processing, is that where a business uses some form of such processing it may be permitted to render some of the information required for tax purposes in the form of the output of its mechanical or electronic equipment, which may incidentally, in some instances, be compatible with the input requirements of the tax department's own equipment.

STEUERBELASTUNG — (Germany) Tax burden.

STEUERFLUCHT — (Germany) Tax exile, i.e. removal to another country (e.g., a TAX HAVEN, q.v.) to escape or reduce tax liability in the former country.

---

* With the assistance of the staff of the International Bureau of Fiscal Documentation.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

STEUERGUTSCHRIFT — (Germany) See AVOIR FISCAL.

STEUEROASENLÄNDER — (Germany) Tax havens (tax oases).

STEUERPFLICHT — (Germany) Tax liability.

STEUERPFLICHT, BESCHRÄNKTE — (Germany) Limited tax liability, e.g. for non-residents.

STEUERPFLICHT, UNBESCHRÄNKTE — (Germany) Unlimited tax liability.

STOCK DIVIDENDS — See BONUS SHARES TAX.

STOCK OUTIL — (France, Belgium, Luxembourg) BASE STOCK (q.v.) valuation method.

STOCK RELIEF — Because of the increased cost of financing the holding of business stocks and inventories owing to the impact of monetary inflation, provision has been made, e.g. in the U.K. tax law, for "stock relief". In the U.K. the relief, broadly, consists of a deduction of the increase in stock value over the accounting period, less 15 percent (formerly 10 percent) of the income from trade in that period. Where the value of stocks *diminishes* over any subsequent accounting period there is a RECAPTURE (q.v.) or recovery of relief previously given to the extent of the fall in value, or the unrecovered past relief, whichever is less. The relief is regarded as a deferral of tax, not a permanent reduction in liability.

STOCK VALUATION — The stock-in-trade or inventory of a business has to be valued for tax purposes in accordance with certain rules which usually coincide with those adopted in ordinary commercial practice and in any Companies Act or Commercial Code. Briefly, the main rules are that the same basis should be adopted at the beginning and end of the accounting period, that the stock may be valued at cost or market value, whichever is the lower, and that this basis may be applied to each individual article of stock, that reserves against possible future devaluation of stock cannot ordinarily be allowed, and that the FIFO (first in first out) method of valuation should be used. Some countries allow different bases of valuation, and exceptions to the above rules, but usually only do so on the basis that whatever approved basis is adopted should be applied consistently in subsequent years. Where the value of stock is of importance for sales taxation, similar principles would apply. The quantum and value of stock may also be of significance in a transition from one type of sales tax to another, if the stock in hand has been subjected to the old tax and it is desired to allow a rebate in respect of this tax against the liability under the new tax, which may arise when the goods are sold (see also BASE STOCK, STOCK RELIEF).

STOOL TAX — Small, flat-rate levies on those owing allegiance to a particular chieftain (named after the ceremonial stool, or throne of the chief) to provide the necessary revenue for local administration (see also HUT TAX, GRADUATED POLL TAX).

STRAF (FOR URIGTIG SELVANGIVELSE — (Denmark) Penalty (for false return).

STRAIGHT LINE DEPRECIATION — The method of calculating depreciation for income tax purposes on qualifying assets (in contrast to the REDUCING BALANCE METHOD, q.v.) whereby the annual allowance is based on a percentage of the original cost, ignoring subsequent wear and tear of devaluation of the asset.

STUDENT, WORKING — See WORKING STUDENT.

STUMPAGE — A royalty or other charge made by the owner of standing timber, usually calculated on the volume of usable timber removed from the forest or woodlands by the timber contractor.

SUBPART F — A major anti-avoidance provision in the U.S.A. tax code, relating to the income of foreign corporations which are controlled by United States shareholders. Section 951 provides for the inclusion in U.S.A. tax liability of Subpart F income which includes undistributed income of foreign (controlled) corporations.

SUBSIDY — The term previously used to refer to a tax which produced revenue for the monarch in Britain. "Subsidy" nowadays usually refers to a government grant rather than taxation.

SUBSTITUTE INHERITANCE TAX — The tax charged in some countries on "legal persons" who, not being mortal, are not subject to ordinary death or inheritance taxes. The tax usually takes the form of a small annual tax on capital.

SUBVENTION PAYMENTS — Payments made by one company to an associated company which, because of trading losses or for other reasons, requires financial support. In British tax law such payments may now be deducted by the paying company in computing its profits and will represent income to be brought into the calculation of profits of the receiving company.

SUCCESSIERECHT — (Holland) Succession duty.

SUCCESSION — On the takeover of a business by a new proprietor, the newcomer is usually treated as commencing a new enterprise. In the case of company takeover, however, where the shares change hands but the company remains in existence, the change in ownership may in certain circumstances be disregarded in computing the tax liability of the new proprietors. The matter is of importance in that the business may have incurred losses which may be available to the new proprietors and may thus be a factor in encouraging the salvage of a declining business by new entrepreneurs.

SUCCESSION, DROIT DE — (Belgium, France, Luxembourg) Succession duty.

SUCCESSION DUTIES — Duties chargeable upon assets passing to the successors of a deceased person (see also ESTATE DUTY, LEGACY DUTY). Such duties are usually graduated by reference (a) to the degree of CONSANGUINITY (q.v.) of the heir, and (b) to the size of the inheritance.

SUCCURSALE — (Belgium, France, Luxembourg) Branch establishment.

SUM-OF-THE-YEARS'-DIGITS METHOD OF COMPUTING DEPRECIATION — This method of computing depreciation is one of the options open to taxpayers under the U.S. tax code. the SOYD method concentrates larger allowances in the early years of the working life of an asset. If the life is estimated at ten years, the digits for each of the ten years are added, i.e. 10 + 9 + 8 + 7. . . . + 1 = 55 and the allowance for the first year is 10/55, year 2 allowance is 9/55, and so on to 1/55 for the tenth year.

SUMPTUARY TAXES — Indirect taxation charged upon luxuries.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

fiscalité immobilière; impôts directs locaux. Tome II: impôts directs d'Etat; contrôle, contentieux, pénalités. Paris, Lamy S.A., 1980. 792 + 1022 pp.
Annual publication containing an explanation of French tax legislation. Supplements are issued regularly in order to keep the two volumes up to date. (B. 102.534)

GERMAN FEDERAL REPUBLIC

BETRIEBSAUFSPALTUNG IM STEUERRECHT

2. Auflage. By Helmar Fichtelmann. Cologne, Peter Deubner Verlag, 1979. 59 pp., 19.80 DM.
Second edition of a study which presents a more practical approach to the "Betriebsaufspaltung" (splitting of an enterprise into one company which possesses the fixed assets and another company which runs the current activities). It is mainly based upon the decisions of the West German Supreme Tax Court. (B. 102.520)

BUNDESGESETZ ZUR GRUNDERWERBSTEUERBEFREIUNG

By Ernst Paul Boruttau, Otto Klein, Hans Egly and Heinrich Sigloch. Munich, Verlag C.H. Beck, 1979. 218 pp., 29.80 DM.
Book published in addition to the basic volume on real property transfer tax by the same authors, discussing the 1977 Law on Exemption from Real Property Transfer Tax in the case of acquisition of one-family and two-family dwelling houses, with references to case law and other related laws. (B. 102.518)

DIE GmbH & CO KG IM STEUERRECHT

3. Auflage. By Helmar Fichtelmann. Cologne, Peter Deubner Verlag, 1979. 80 pp., 19.80 DM.
Third edition of a monograph on the civil law aspects and tax aspects of the GmbH & Co KG (limited partnership with a limited liability company as general partner). (B. 102.521)

GRUNDERWERBSTEUERGESETZ

10. Auflage. By Ernst Paul Boruttau, Otto Klein, Hans Egly and Heinrich Sigloch. Munich, Verlag C.H. Beck, 1977. 2014 pp., 178 DM.
Tenth revised edition of a source book providing a major commentary on the German Real Property Transfer Tax Law, with references to case law and implementing regulations, as well as other related laws. An extensive index is appended. (B. 102.517)

INTERNATIONAL

YEAR BOOK OF INDUSTRIAL STATISTICS

1977 Edition. Volume I: general industrial statistics; Volume II: commodity production data 1967-1977. New York, United Nations, 1979. 640 + 750 pp.
Eleventh annual edition of compilations of statistics on world industry. Volume I provides the basic data for each country or area in separate chapters. Volume II contains detailed information on world production of industrial commodities for the period 1968-1977. (B. 102.458)

ITALY

BESTEUERUNG DER UNTERNEHMEN IN ITALIEN

By Siegfried Mayr. Cologne, Bundesstelle für Aussenhandelsinformation, 1979. Schriftenreihe: "Ausländisches Wirtschafts- und Steuerrecht", Band 56. 188 pp.
"Taxation of business enterprises in Italy" explains the company income tax with particular reference to the present tax system in Italy, with emphasis on German business interests. (B. 102.531)

THE NETHERLANDS

FISCAAL MEMO

Januari 1980. Deventer, Kluwer, 1980. 82 pp., 14.75 Dfl.
Revised edition of a work providing practical information in a nutshell concerning tax provisions and such related subjects as social security contributions as of January 1, 1980. (B. 102.486)

FOREIGN INVESTMENTS IN THE NETHERLANDS

Revised January, 1980. The Hague, Fenedex, 1980. 37 pp. (B. 102.487)

OMZETBELASTING

2e herziene druk. By J. Reugebrink. Deventer, Fed, 1979. Fiscale Studieserie No. 6. 360 pp., 69 Dfl.
Second revised edition of monograph on value added tax in the Netherlands comprising two parts: the first deals with the theoretical aspects of turnover tax as a consumption tax; part two deals with the problems arising in practice under the Dutch turnover tax law. (B. 102.524)

NORWAY

TAXES IN NORWAY

Direct taxes. Oslo, Royal Ministry of Finance and Customs, 1979. 42 pp.

Excise tax credit, renter's tax credit, child care expense tax credit, solar energy device tax credit, hot water heater insulation tax credit. Honolulu, State of Hawaii, Department of Taxation, 1180. 31 pp.
Study presenting the different tax credits for Hawaii residents based on tax returns filed in 1979 on 1978 income. (B. 102.512)

IFA NEWS

Meeting of the Austrian and German Branches on May 9 and 10, 1980 in Salzburg (Austria)

The Austrian and German branches of IFA organised on May 9-10, 1980 their third bilateral meeting. Papers were read by:

- Dr. Wenzel (German Federal Republic) on the practical problems resulting from the recent reform of the German VAT system especially with a view to transactions with Austria;
- Dr. Bechinie and Dr. Halpern from Austria and Dr. Willemsen from the German Federal Republic discussed the current tax situation in their countries with Dr. Bechinie paying special attention to the work of the Austrian Tax Reform Committee which completed its task a few months ago;
- Dr. Miehler and Dr. Menck from the German Federal Republic and Dr. Huber from Austria reported on the current situation with respect to the exchange of information between the tax administrations of the two countries.

More detailed information is to be found in the German language in *Internationale Wirtschaftsbriefe* of June 10, 1980 at 343.

National meeting of the Swiss Branch on June 20, 1980 in Zurich

On June 20, 1980 the Swiss Branch of IFA will hold its 30th national meeting in Zurich. Subject of discussion will be the taxation of annual rental value of real property and incentives for the acquisition of owner-occupied dwelling houses.

SCHEDULAR AND GLOBAL SYSTEMS OF INCOME TAXATION:

THE EQUITY DIMENSION

by Sylvain R.F. Plasschaert*

I. INTRODUCTION: DEFINITION OF SCHEDULAR, GLOBAL AND MIXED SYSTEMS

The present paper is part of a broader enquiry into "schedular, global and mixed systems of income taxation", with particular reference to developing countries. Other policy-oriented chapters compare the schedular and global prototypes of income taxation with respect to their likely economic effects and their administrative feasibility and efficiency.

In order to render this paper self-contained, the reader is reminded of the following fundamental concepts.

In a *schedular* income tax system, each of the various *incomes*, such as salaries, dividends or business profits, that flow to a particular taxpayer, is subject to a separate tax. In other words, the schedular system of income taxation consists of a co-ordinated set of separate taxes on various types of *income*.

In a *global* income tax, all (partial) *incomes*, from whatever source derived, that accrue to the same taxpayer, are taxed jointly as a single mass of *income*.

A *mixed or composite* system consists merely of a set of schedular taxes and of a global-type tax. Thus, a mixed frame of income taxation is not original, structurally speaking. In a mixed system, a "complementary" global tax is superimposed on a schedular system.

The separate or aggregate taxation of income carries some implications for the design of the income tax. Thus, in a coherent or "rational" schedular system, in which the basic tenets that underly the schedular approach would be scrupulously adhered to, each type of income ought to be taxed, without any reference to the personal circumstances of the income-recipient. In other words, the schedular tax system essentially has an objective character. Each "schedule" carries a flat or proportional rate; capital incomes are subjected to a higher rate than incomes from labour. In "rational" global-type systems, on the contrary, such reference or personalization is quite appropriate, as are progressive rates.

In actual "empirical", or "historical", tax systems, however, there are numerous deviations from the parameters and rules, that would follow from the uncompromising application of the underlying paradigms of the respective schedular and global systems.

The present paper discusses the equity aspects of the schedular or global tax systems, but contains no analysis of the merits and drawbacks of the mixed or composite system.

II. IN GENERAL: PROGRESSIVE AND PROPORTIONAL FORMULAE

The equity dimension is of overriding significance for any tax system and any particular tax. Explicit or implicit equity standards determine how the tax burden is apportioned over the taxpaying subjects. The latter will only psychologically and politically accept the tax if the overwhelming majority of the citizens view the tax as equitable — unless all opposition or disagreement is forcibly suppressed.

Unfair taxes are morally repulsive. But one must admit that the concept of tax equity is elusive and value-infected and owes more to ethical considerations and political judgements than to unassailable scientific guidelines.

The burden of the income tax is distributed over the taxpaying units, through tax formulae, which are applied to the statutory taxable base. One distinguishes a regressive, proportional or progressive rate — more commonly, a series of rates — according to whether the tax liability rises more slowly, at the same pace or faster than the taxable base. In somewhat simplified form, progressive taxes take an increasing share of income as the latter rises. By definition, in a progressive rate formula and provided progressivity is maintained over the whole range of taxable income, the marginal rate (the tax rate on additional units or brackets of taxable income) exceeds the average rate of income tax. Under those circumstances, the marginal rate will rise (from zero on the first, untaxed bracket) to the top marginal rate, say 60 percent or 80 percent, which is still held applicable.

There is no need to investigate the various conceivable slopes of a set of progressive rates. Suffice it to say that in most actual tax systems, the marginal — and hence, the average — rate does not rise in a steady, but in a discrete or non-continuous fashion: the given marginal rate applies to a given segment or bracket of the income ladder — as explained, a moment ago. Besides, the combination of flat rates with an initial exemption on the first bracket of income results in the so-called Bentham progression. For example, if a 30 percent flat rate applies to taxpayers A, B and C, with an income of respectively $ 2,000, $ 10,000 and $ 30,000, and if all three taxpayers enjoy an initial exemption of $ 2,000, the average tax ratios, as a percentage of the above-mentioned income levels, will amount to respectively zero for A, 24 percent for B and 28 percent for C. This indirect form of progression is also called the "degressive" progression, as the percentage tax "saving" resulting from the initial exemption declines as income increases.[1]

Rate formulae such as progressive rate schedules or proportional rates are only technical parameters. While, conceivably, rates could be assigned at random to various types or levels of income, neither the citizens nor the legislators would accept the resulting chaotic interpersonal distribution of tax burdens. The latter must reflect well-established and widely-accepted tax equity principles which are implemented through appropriate tax formulae.

In schedular tax systems, by definition, each category of income is taxed separately and made subject to a tax rate. Historically, the schedular compartmentalization has been rationalized in the light of the "quantitative discrimination" principle, according to which each schedule should carry a flat rate: those rates, however, must be differentiated according to the nature of each of the incomes, with incomes from capital being subjected to a distinctly higher flat rate than earnings from labor inputs. Global systems, on the other hand, utilize progressive tax formulae.

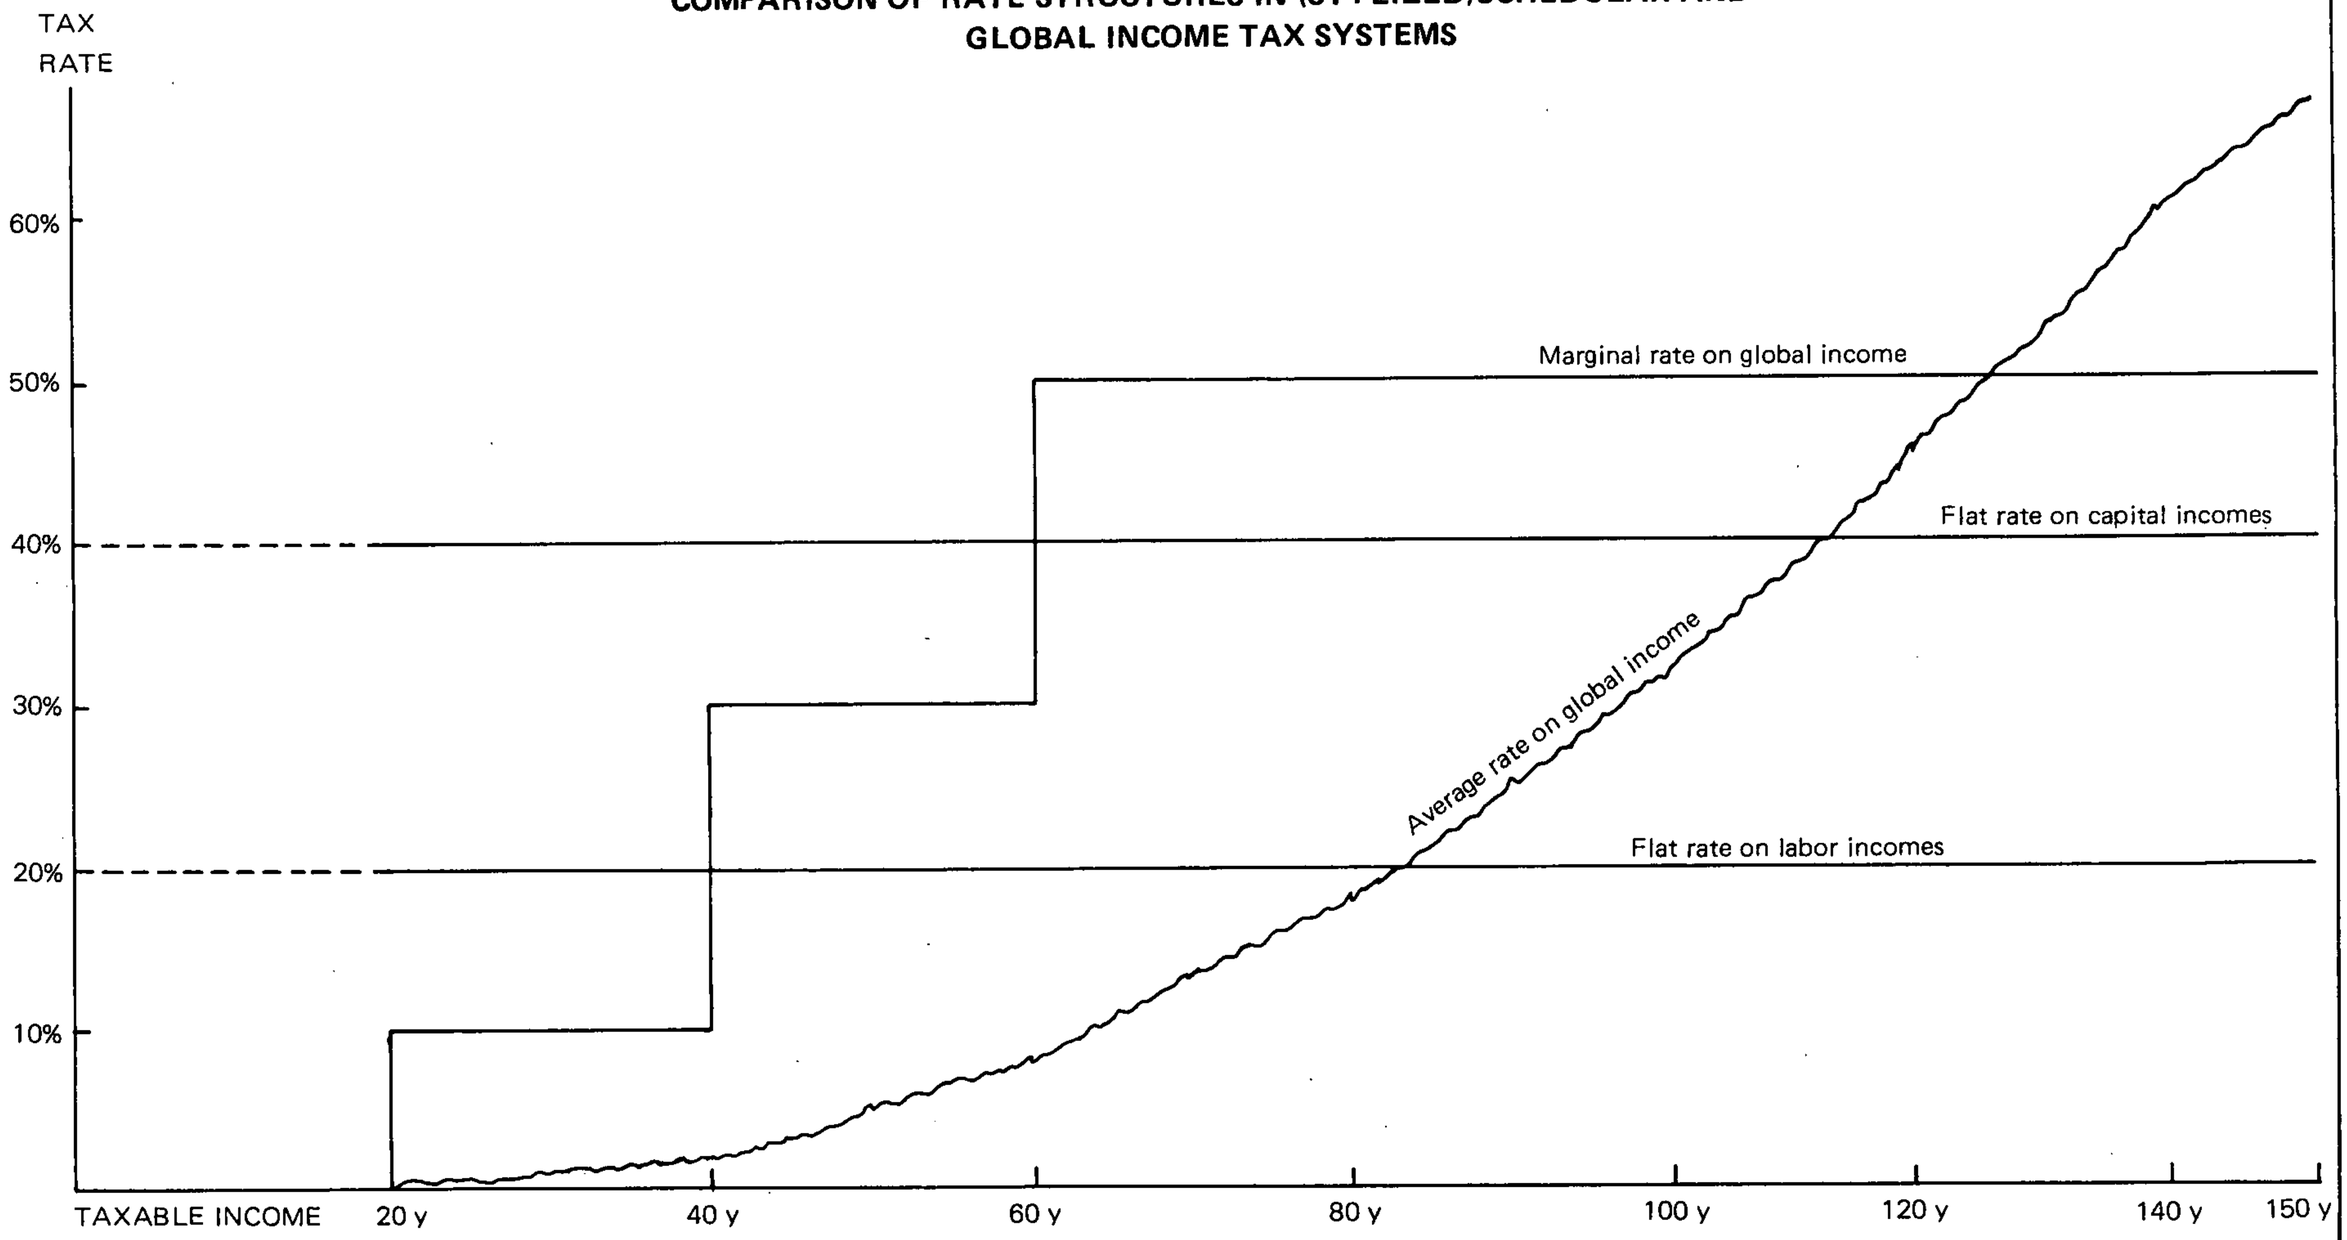
A simplified outline of the diverging distributional pattern of tax burdens over the various taxpayers is shown in Figure 1. The schedular system carries a 20 percent flat rate on labour income, and a 40 percent rate on incomes from capital, whatever the level of such incomes. The global tax carries a discrete progressive formula, whereby there are five brackets. The first slice of income is exempted, or, in other words, is subjected to a zero rate. The (marginal) rate schedule on each of the following brackets of taxable income starts with 10 percent and rises by 20 percent for each of the subsequent brackets of income, to reach a final marginal rate of 70 percent. In progressive formulae the marginal rate rises faster than the average one. A dotted line shows how, in this particular case, the average rate rises over the income spectrum.

This graph is purely hypothetical and highly simplified. Two particular preoccupations should be noted. First, whether the two systems would yield the same amount of revenue would depend on the underlying distribution of incomes. We hypothesize here that such equal-revenue distribution exists; this would probably require that, as in the graph, few exemptions would be granted, not even on labor incomes. Second, in order to avoid some distortions, to be discussed in section VI, theoretically all exemptions for low-income levels in the categories of the schedular tax should be barred; however, the equity arguments in favor of a zero rate on such low-income brackets have proven quite strong in historical tax systems. Hence, the dotted line over the first stretch of the horizontal lines which depict the flat rates, respectively, on capital and labor income.

In this chapter, we first evaluate the basic rationales which have been adduced to support the above-mentioned interpersonal[2] distribution of tax burdens in the two systems.

---

1. In this case, progressivity emerges when the resulting average tax rate is related to "taxable income gross of the allowance". It would be wrong to infer that the tax burden is thereby unjustifiably lowered. The statutory rates must apply on statutory income. Modern income taxes contain a basic allowance. Hence, the tax formula should only hit "income net of the allowance". But an unwarranted decline, in equity terms, in the effective rate, as against the nominal (30 percent) rate, would result if each of the taxpayers were to evade US$ 2,000 of statutorily taxable income.



2. We abstract, in this paper, from the rather complex problem, whether individuals or households must be viewed as proper taxable subjects, and from the impact which a separate tax on corporate net profits may have on the interpersonal distribution of income.

FIGURE 1

COMPARISON OF RATE STRUCTURES IN (STYLIZED)SCHEDULAR AND GLOBAL INCOME TAX SYSTEMS

In section VI, we revert to tax formulae and examine whether progressive rates which would reflect both the ability-to-pay principle and the socially recognized objective of some (relative) redistribution of income can be rationally built into a schedular income tax system.

In section VII, we ascertain whether, to what extent and why, numerous structural "impurities" have emerged in "historical" tax systems.

Finally, we venture some comments as to the question whether the schedular approach, based on the qualitative discrimination doctrine, which is found to be no longer appropriate for present-day developed economies, could be advocated for low-income countries.

III. THE QUALITATIVE DISCRIMINATION THEORY

This theory, which holds that incomes from capital should be taxed at higher (proportional) rates than incomes from labor, was elaborated long ago, especially by Italian scholars of public finance.[3] Equally, Italy is probably the country where the tenets of the doctrine were fairly consistently observed until the mixed system was replaced by a global one in 1974. In principle, the flat rates which apply to the various schedules are arranged in such a way that the tax is higher as a given type of income originates more in capital assets and less in labor inputs.

A look at the Italian income tax system prevailing in the early 1960s may serve as an illustration. There were, first, two separate taxes on the return from land and buildings. The assessment was in essence based on the cadastral system; the flat rates were respectively 10 percent and 5 percent. The most important schedular tax, however, was the "imposta sui redditi di ricchezza mobile", which, in turn, was subdivided into several categories:

— category A: on incomes from financial assets, subject to a 26 percent rate, withheld at the source (dividends, however, were exempted in this category, as they were taxed as part of business profits, in category B);

— category B: on "mixed" incomes, deriving from the inputs of both capital and labor, i.e. basically on business profits. The law distinguished between joint-stock enterprises and unincorporated units. The former carried flat rates of 18 percent for the slice of taxable profits below 10 million lire, and of 24 percent above that cut-off point. Individual business-men, however, enjoyed a personal allowance of 240,000 lire; the rate was 9 percent for the income between 240,001 and 900,000 lire. Above that level, an 18 percent rate applied;

— category C1: on earnings of professionals. The first slice of 240,000 lire was exempted, the 240,001-960,000 lire bracket carried a 4 percent rate and the remainder an 8 percent rate;

— category C2: on wages and salaries. They were subject to withholding at the source at the same rates applicable to the earnings of professionals in category C1;

— income from agricultural activities, accruing to the owner of the land, were taxed, according to the cadastral system, at 10 percent. Those incomes were not entitled to personal allowances (income from tenants was subject to category B).

Preferential treatment of labor income

A number of arguments have been advanced in support of the preferential treatment of incomes from labor over those from capital. The main argument is that labor earnings have less lasting power as, contrary to capital incomes, the flow of labor earnings may be interrupted by layoffs or by illness; even more importantly, the employment period comes to an end. In order to sustain his living during the retirement period or other periods of interrupted income flows, the worker must set aside a reserve fund out of his current income. The income stream from capital assets, on the other hand, is permanent and more regular as to its amount. In other words, nominally equal incomes from capital or labor are not equivalent in the economic sense. Equivalence can be restored, or aimed at, by way of subjecting incomes from labor to a lower (flat) rate — or, what amounts to the same, through surcharges on incomes from capital. It has also sometimes been argued that, objectively, capital embodies more "capacity-to-pay" than labor. Since, however, not objects but persons pay taxes, it appears more appropriate to use the expression "capacity-to-pay" in a more subjective setting, as discussed in the next section.

This argument can easily be faulted in terms both of principle and of present-day circumstances. Whether the stream of labor income is actually more vulnerable than capital income to interruption or termination is basically an empirical question. In *developed countries*, nowadays, almost all salaried employees and workers benefit from a comprehensive scheme of social security. The latter provides cash payments, in case of termination of labor and the payment of pensions in old age; the widow is also entitled to a pension. Medical expenses of some importance are reimbursed; unemployment payments of income compensate loss during periods of involuntary unemployment. The social security systems transcend the principle of personal insurance, whereby each person would only be entitled to benefits on the basis of and in proportion to his own contribution. As a matter of fact, the social security approach pools risks, with subsidies from the government budget frequently filling any shortfall of the contributions made by employers and employees.

It is fair to say that the present situation in developed economies with respect to the termination and inter-

3. One may mention particularly *L. Einaudi, Principi di Scienza della Finanza*, 4th edition (Turin, 1949) and *E. d'Albergo, Economia della Finanza Pubblica*, vol. I (1951). For a brief survey of the arguments involved, see *C. Brasca*, "La discriminazione fiscale a favore dei redditi di lavore", *Rivista internazionale delle scienze sociale*, July-August 1955, pp. 322-40. We do not at all imply, of course, that Italian writers have a monopoly on the subject, which has exercised the minds of many great economists, such as *J. Stuart Mill*, as early as the middle of the previous century.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

ruption of labor income differs completely from that in the second half of the 19th century, when the qualitative discrimination doctrine was being formulated. The benefits, distributed nowadays through the social security system, provide a substantial cushion against the loss of income resulting from the occurrence of the above-mentioned risks. Unemployment is also covered by the system. There is factual evidence that employers, in business cycle downturns, do not easily dismiss workers lest they may have difficulty in hiring them back when the economy picks up again. Besides, in several countries, lay-offs by employers involve substantial severance payments. In sum, incomes from salaried employment have become "funded" to quite an extent. Furthermore, contrary to the assumption implicit in the above main argument in favor of the discrimination principle, employee contributions are almost everywhere tax deductible. Self-employed persons, however, are clearly much less protected by the social security system; for one thing, by definition, they face the risk of periods in which they earn no income, for lack of customers: hence unemployment coverage is inconceivable for them.

It is not quite true that incomes from capital are immune against nominal or real losses. Equity investments, by their very nature, involve the risk of loss of substance; over the last inflation-ridden decade, in many countries, investments in shares appear to have been less well protected against erosion than wages, the more that the latter have widely become index-linked. The share of labor in national income has increased in most developed economies during the 1970s. The yield from fixed-rate financial instruments had trended upwards but the additional nominal yield has usually only partially compensated for the rate of inflation.

Admittedly, in *developing countries* the situation differs significantly from that in high-income countries; there also exists considerable variation amongst countries in the developing world. On the whole there is some tendency towards the extension of social security benefits to a larger number of beneficiaries. Pension benefits have been legislated for in many countries, although mostly only for public sector employees. Coverage of health hazards is rare; large segments of the population, especially in rural areas, may have almost no access to modern health services. Unemployment benefits are also non-existent and, if available at all, restricted to the private modern sector. One must also remember that in developing countries time-honored informal systems of social security exist, whereby extended families, or clans, display a significant degree of solidarity and provide needy persons, such as the elderly or unemployed, with the means to subsist. Thus, the social security system, at best, metes out modest benefits to the workers who happen to be employed in the "organized" industrial sector; a "reserve army" of un- and underemployed threatens the stability of employment in the modern sector and exerts a downward pressure on the wage level. And yet, those workers in the modern manufacturing sector often are better off, both in terms of income and of job stability, than the mass of poor peasants. In any event, the level of per capita income, the structure of employment — with most people in the agricultural sector — and the wide incidence of un- and underemployed persons would render the financing of a modern, comprehensive scheme of social security utterly untenable.

The "lasting power" argument has only limited validity

Is the "lasting power" argument, in favor of the doctrine of qualitative discrimination, still relevant to the developing world of our days? To the extent a general answer is warranted, considering the large divergence in actual circumstances, the case for discrimination between the two sources of income, on the basis of the above argument, is clearly a very weak one. Those who earn a comparatively high income from labor in the modern sector, such as business managers, physicians or upper-rank government officials, have sufficient means to contract insurance against the major risks and to build up a pension for their old age; salaried people in the lower-ranks can also frequently benefit from old-age pensions that are fed by their own contributions and those of their employers. But in both cases, the rationale advanced in support of the lower tax burden on labor incomes, i.e. the need to set aside reserves, which should receive preferential tax treatment, is fulfilled by way of the deductibility of the contributions of employees (and employers). Low-income recipients, such as the large numbers of self-employed peasants, artisans, and unskilled workers in urban areas without security of employment, should, by virtue of the above argument, be entitled to a lower tax burden. Yet, in the light of sound equity and administrative considerations, such low-income recipients of labor incomes remain generally outside the income-tax net in developing countries.

But, even assuming that taxable labor incomes are substantially subject to interruption and/or termination, there is a more fundamental reason why the above line of reasoning is flawed. In order to form a private retirement or unemployment fund, the wage earner must set aside a portion of his current income. Although there is still considerable disagreement among economists about the determinants of savings — which comes as no surprise, considering the variety of the motivations, and of the behavior of households — the level of the overall income of households is obviously a major, and almost certainly the main, determinant of the saving ratio.

It follows that it would hurt generally accepted norms of justice if one were to more heavily impose on an old widow who lives parsimoniously off a small securities portfolio than on the well-paid executive, by virtue of the argument that capital income requires a higher tax rate than on earnings from labor.

In essence, the lower tax urged for the "reserve fund" is predicated upon the same considerations that underly various personal allowances (such as those for dependents) which are nowadays part and parcel of the modern income tax: a portion of current income is not freely disposable but must be set aside to meet pressing, unavoidable outlays and contributions towards the re-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

serve fund qualify for exemption or preferential tax treatment. But, even admitting the above argument, the benefit of a lower tax burden should only be granted to that portion of labor incomes which is required to form the reserve fund, not to the taxpayer's total income from labor, irrespective of the level of the latter.

It also follows that the preferential treatment on labor incomes can technically be accommodated more appropriately, within a global tax system, through a specific allowance for earned income than through a lower flat rate in the relevant category of the schedular tax system. The first approach acknowledges the level of overall income and of the capacity for saving, whereas the latter procedure does not.

Other arguments for qualitative discrimination

Other arguments are also held in support of qualitative discrimination.[4] Thus it is claimed that the earner of income is exposed to more costs of production than the "capitalist" who "lives on his rents". Costs must be incurred to build op professional skills or, in the contemporary parlance of economists, "human capital" must be accumulated before one actually earns income from labor. It is also stressed that labor, although a deep-seated vector of man's creativity, involves effort and toil, whereas the clipping of coupons is a painless act. To obtain earnings from labor, one must exert eight or more hours of work, whereas capital produces a yield "while one sleeps".

Those arguments in favor of labor incomes do not cut much ice, either. Truly, educational costs are involved to build up skills, but, as the Meade Report observes, if one follows that line one should also hold taxable the "rents" and "capital gains" out of improved "human capital".[5]

The reference to the painful character of labor could be construed in welfare-theoretic terms. The person who lives on capital incomes can indulge in leisure, an untaxed component of welfare, whereas leisure is incompatible with the exertion of labor; the lower tax burden on labor income would then somewhat offset the impossibility to enjoy leisure. One must remark, however, that most people probably would prefer activity over permanent idleness; human beings yearn for life's blessings, but are also moved by creative urges.

Is there then no argument that gives sufficiently strong backing to the "qualitative discrimination" theory? And how can one account for the fact that, despite the weak reasons traditionally submitted in support of that doctrine, almost all actual systems, in one way or another, impose capital incomes more stringently than earnings from labor? [6] It would seem to us that a fairly strong case can be constructed along the following lines. First, usually, income from capital is complementary to earnings from labor inputs; few are the people — if one excepts retired ones benefiting from official or private pension plans — who can afford to live without working; the more basic needs of households can, in most cases, be met by the incomes from labor; purchasing power derived from capital assets would then create scope for spending on less essential goods and services. Also, wealth begets income which in turn allows wealth to accumulate. And, apart from income, wealth undoubtedly provides a supplementary yardstick of (subjective) "capacity-to-pay" (taxes). As a matter of fact, if two persons obtain $ 50,000 per year from labor and capital, respectively, the latter is clearly better off; besides enjoying the income flow, he maintains a store of value. Wealth also affords prestige and status; it allows better access to credit facilities. Finally, one must not overlook that wealth typically is not held by widows of little means. Available data on, for example, the United States and France, show that the ownership of shares, and to a lesser extent of bonds and real estate, is heavily concentrated in the upper-income ranges of the income pyramid. It follows that when capital incomes are systematically discriminated against in schedular systems of income taxation, one approximates, albeit in a rough fashion, the vertical interpersonal distribution of tax burdens, which is intended in global-type systems and which subjects income-rich(er) persons to a higher average tax burden than their poor(er) countrymen. The argument, clearly, also has ethical overtones; in this connection, we may notice that the expressions "earned" and "unearned" (incomes) stand for "funded" and "unfunded" incomes, and carry the connotation of respectively "meritorous" and "undeserved".[7]

Those considerations give support to the case for treating incomes from labor more leniently than those from capital. But they do not postulate that income from capital be discriminated against by way of specific tax schedules, carrying different flat rates. Besides, the schedular approach to qualitative discrimination runs into a host of practical difficulties. Capital and, even more, labor are not homogeneous categories of income, neither in developed nor in low-income economies. Hence, more sub-schedules would be required to differ-

4. We have refrained from discussing the argument based on the so-called "double taxation of savings", first as a component of income and, subsequently, when the investment produces a yield. This question has, since J. Stuart Mill, been part of the "qualitative discrimination" issue and has provoked an inordinate amount of learned controversy. The topic, however, is not relevant to our study. The thesis, if accepted, would posit preferential treatment of incomes from capital; it can be adduced as an argument for a tax on expenditures but there is now general recognition that, within the income tax, the yield from the investment is a new income item whose taxability cannot be questioned.

5. "The Structure and Reform of Direct Taxation *(Meade Report*, 1978), p. 39.

6. The higher burden on income from capital as compared to labor earnings in an equal amount is attributable not only to (a) differentiated flat rates, (b) allowances for earned income or surcharges on income from capital, and (c) a separate tax on net wealth but also to the corporate profits tax, the existence of which, alongside an individual income tax, involves an extra burden on income from capital.

7. Marxist views, alleging that the capitalist's income is exploitative and, hence, is undeserved as it appropriates "Mehrwert", produced by the workers, may have contributed towards shaping the connotation of undeservedness of capital income.

entiate between skilled and unskilled labor; self-employed and "other"-employed persons; dividends and interest. Several of those distinctions are actually to be found in schedular tax statutes. Furthermore, the category of business profits presents rather stubborn problems. Especially in family-type, small enterprises, inputs of labor and capital by the same persons are intimately intertwined. Procedures such as those used in Morocco, whereby, for purposes of applying the schedular tax on business profits, a first slice of income is deemed to be derived from labor and is subjected to a comparatively low rate, remain rather rough artifices. Especially in segmented low-income economies, the capital-labor ratios may differ dramatically between, for example, the traditional handloom and the modern textile mill; in strict adherence to the principles of the schedular system, these two classes of business should receive a different tax treatment. Finally, there is no scientifically convincing yardstick which determines to what exact degree capital income should be taxed more severely than earnings from labor of some amount, or, in other words, by how much the flat rate on capital incomes should exceed that on earnings from labor.

In sum, the case for a schedular system, predicated upon the "qualitative discrimination" doctrine, is — or more exactly, has become — particularly weak, especially as far as developed countries are concerned. The basic idea which underpins the "qualitative discrimination" theory, viz., that labor incomes ought to be burdened less, has, however, remained politically forceful. But to implement such a principle, it appears by far preferable to take into account not only the nature of incomes, but also the level of total income; this would advocate the granting of an allowance for earned incomes within global systems. Furthermore, wealth, besides income, provides an additional yardstick of taxable capacity. It follows that a net wealth tax is an appropriate way of reaching the taxable capacity embodied in wealth. In countries where this type of tax is politically not feasible or would not be efficiently implemented, such discrimination against capital incomes as exists in income tax systems may function as a second-best substitute for a net wealth tax.

We reached a rather negative conclusion about the suitability of the schedular system to "qualitatively discriminate" between capital and labor incomes. Besides, the underlying theory clearly cannot possibly provide the only criterion for apportioning the tax load. More specifically it appears advisable to account for the relative levels of total income. Our findings, however, should, at this juncture, not be interpreted as a wholesale indictment of any schedular approach to income taxation. Conceivably, rate discriminations between various categories of income may be consonant with acceptable or advisable tax principles, other than the "qualitative discrimination" doctrine.

IV. THE ABILITY-TO-PAY CRITERION AND THE PROGRESSIVITY ISSUE

The criterion which states that each taxpaying unit must contribute to the goverment's purse in accordance with its relative capacity or ability-to-pay (taxes) has become solidly entranched in tax practice and in tax philosophy. It is also generally claimed that, in order to modulate the interpersonal income tax burden, according to the ability-to-pay, a progressive rate formula is in order. Although the arguments in favor of progressivity remain intellectually somewhat weak and although the issue is readily contaminated by explicit and implicit value judgements, the progressivity tenet apparently no longer evokes strong opposition.[8] Political ideologies have greatly contributed towards the acceptance of the progressivity principle. Socialist parties view progressive taxation as a major instrument of social policy; but also middle-of-the-road parties appear widely to accept moderately-redistributive income taxes as a method for correcting the ("primary") income distribution, resulting from the market processes.

The "ability-to-pay" canon and what looks like its natural companion, viz., the technique of progressive rates, has generated a considerable amount of writing and discussion. We do not intend to rehearse the debate at length, but limit ourselves to highlighting the major facets.

A. Ability-to-pay

In the income tax, the "capacity-to-pay" (such tax) must be related to income. The tax statute must determine which amount and level of income can be considered as representing such ability. In modern income taxes, capacity to pay can be equated with what the Carter Commission in Canada has called "discretionary income", which is viewed as the true expression of the taxpayer's economic power.[9] Not only is the income tax duly based on a net concept and are production costs subtracted from gross income; but, there are also some (first) slices of income which are necessarily earmarked for non-compressible expenses, and which allow the taxpayer to subsist. Accordingly, modern income tax systems grant the deductibility of a personal allowance; they also account, through dependent's allowances, for the size of households. A bachelor has only himself, but the breadwinner of a family of six children has not less than eight mouths to feed. Such statutory provisions "personalize" the income tax, in that they adjust tax liabilities to differential personal circumstances; they can also be viewed as applying the canon of "horizontal equity".

Horizontal equity

Such personalization does not at all guarantee that the statutory allowances accurately reflect the actual outlays, which, say, the average taxpayer incurs in taking

8. In *Theorie und Praxis der modernen Einkommensbesteuerung* (Bern, 1947), pp. 71-73, F. Neumark documents how, in the 19th century, the progressivity criterion was strongly opposed in many circles. It would seem that this is no longer the case, nowadays, in low-income countries.

9. See the so-called *Carter Report*, "Report of the Royal Commission on Taxation", vol. III, Ottawa, 1966.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

care of himself or his dependents. On the level of principles, the issue arises whether the allowances should reflect a physiological minimum level or a more generous amount of expenditures, which is in line with prevailing socio-economic standards of living. The exact amount of the allowance tends to be determined largely by revenue considerations and political expediency. One must remember that whenever progressive rates apply, such allowances result in the rich man saving more tax dollars than his poorer counterpart. Finally, as Musgrave remarks, income is viewed here as the only indicator of taxpaying capacity. This can be challenged. We mentioned already that wealth also embodies capacity to pay taxes. Furthermore, leisure, which goes untaxed, is also a vector of welfare.[10]

B. Progressivity

The "ability-to-pay" principle holds that a person A with ample "discretionary income" should bear more tax than his neighbor B with less scope for compressible outlays. But one must also state to what extent the "rich" person should pay more tax than the "poorer" man. Should the amputation of taxable, discretionary income involve the same amount of dollars? Or the same proportion of taxable income? Or, a higher proportion as income rises? The first two solutions, the regressive and even the proportional ones, are nowadays generally rejected. Prevailing tax philosophy favors the application of progressive formulae to income.

Sacrifice theories

The justification for progressive rates on income has traditionally been cast in terms of "sacrifice theories", which, in essence, apply the marginal utility theory to income and taxation. Additional units of income, it is claimed, afford less utility; or, in other words, as income rises, its marginal utility declines. Proportional rates, applied to discretionary income, would imply that rich men would sacrifice a smaller proportion of their utility than the poor men. Some have argued that the sacrifice lost through the tax should be equal; other authors, more numerous, have contended that fiscal sacrifice should be proportional to the total utility embodied in the taxpayer's (discretionary) income. Depending on the shape of the curve which portrays the declining marginal utility of income, the resulting interpersonal distribution of the tax burden, measured in units of money surrendered by the taxpayer, will be progressive, proportional or even regresssive. However, under the equi-proportional sacrifice standard it is most likely to be progressive.[11]

And yet, the case for progressive taxation has remained "uneasy".[12] On the theoretical level, the sacrifice theories suffer from several weaknesses and lack analytical rigor. First, the search for the proper version of the sacrifice standard readily escalates into the so-called "minimum aggregate sacrifice" version; lopping off, through confiscatory 100 percent marginal rates, income above a certain level would equalize the marginal utilities of all taxpayers; and overall tax sacrifice would be minimized. The concern for an equitable distribution of the tax burdens, then, makes room for the maximization of welfare in society.

But not even the most egalatarian government would dare to redistribute income in such a drastic way, which would no doubt have disastrous effects on the willingness to produce income. Besides, the sacrifice theories assume that utility can be measured in terms of cardinal quantities and that the utility curves of taxpayers are the same. Modern welfare economics holds that neither such cardinal measurement nor meaningful interpersonal comparisons of utility is intellectually acceptable, apart from their utter impracticability. Third, one may wonder whether, once more basic needs have been fulfilled, the utility curve further declines regularly; taxpayers at income levels well above subsistence may not at all perceive their additional outlay as bearing on futile luxuries. In dynamic economies, new wants are constantly being created and social groups and income classes tend to imitate the aspirations and consumption patterns of more affluent groups.

Viewed as theoretical propositions, sacrifice theories are now discredited. But it would be unwise to negate their strong appeal, ethically, politically and, one should add, also in economic terms. The impressive array of critiques against sacrifice theories cannot erase the essential truth embodied in marginal utility theory that the marginal dollar is objectively more useful for the "poor" man than for the "rich" man, as the former will thereby be able to buy more essentials and "basic" goods and services than the latter. This ethical standard emerges clearly when extremes in the income pyramid are compared; as a matter of fact, it would hurt normal sentiments of justice if the pauper were obliged to contribute the same proportion of his income as the Croesus. Besides, the impossibility of interpersonal comparisons of the utility of incomes and of the disutility of taxes, though valid in theory, should not be carried too far. Income tax legislation, as any other enforceable law, cannot be completely tailored to the individual utility profiles and whimsies of all members of society. Laws are applicable to all members or to broadly-defined subgroups of society. The law has to abstract largely from individual characteristics and idiosyncrasies. Pushed to its logical extreme conclusions, the thesis that each individual being has different perceptions of utility postulates that tax liabilities would have to be "individualized", not according to measurable units of money but of individual utility curves.

Considering the theoretical inadequacy of subjective sacrifice theories, a justification or at least an explanation of the progressivity principle has been advanced along other lines. Two decades ago, Groves already noticed the evaluation "towards a social theory of progressivity".[13] Nowadays, most authors basically accept the same view, perhaps more out of despair than conviction. Progressivity, it is claimed, has become widely established as a primary feature in income tax systems because governments and prevailing public opinion in modern societies do not accept as immutable the "primary" distribution of income which emerges from the production process. Tax systems, and particularly income taxes, should be instrumental in vertically redistributing income, by taking away a larger percentage of discretionary income as one moves up the income pyramid scale (subject, somewhere near the apex of that pyramid, to a maximum permissible marginal or/and average rate). The resulting "secondary" redistribution of income represents a step toward that distributional pattern of incomes after taxes which society perceives as optimal. On the theoretical level, reference is often made to a "social welfare function". In the words of Musgrave, "social utilities are assigned to income dollars and optimal tax patterns (or transfer patterns) may be determined on that basis".[14]

This approach, no doubt, reflects reality. It poses the issue of tax formulae and of redistributive aims and effects, essentially in political terms. But it remains vulnerable to serious objections. First, who decides about the social welfare function? The political majority, as elected through democratic "public choice" mechanisms? Or dictators who are usually repressive and only seldom benevolent? Or is this social welfare function to be viewed in the additive sense, i.e. as the aggregation of individual welfare functions, a conception which regains favor with many welfare economists. But how to trace the concrete shape of the progressivity formulae? Such statements as the progressivity slope adopted is the one which society seem to prefer risk being no more than tautological.

A supplementary equity argument in support of progressivity in income taxation is that regressive or proportional distributional features in other types of taxes can thereby be offset, to some extent. Income taxes, or even the tax system as a whole, are not the only channels through which the budget redistributes income. In this respect, in developed countries, in recent years, other conduits have attracted more attention. Social security contributions and subsidies, the inverse of taxes, must also be taken into account. The very fact that, as Okun remarks, in developed countries state budgets nowadays consist predominantly of transfer payments has greatly enlarged the redistributive potential of budget policy.[15] Besides, one should also heed the distributional effects of non-transfer budget expenditures, which are nowadays encompassed in the concept of "tertiary" (re)distribution.

V. REDISTRIBUTION AND (UN)EQUALITY

In this section, we have no intention whatsoever to cover at length the complex problems of the measurement of the economic effects and ideological values connected with the distribution of income and wealth. We select a few comments which are relevant to our enquiry. We first draw attention to some implications that follow from the mechanics of progressive and flat rates. Besides, we wonder whether and in what ways the redistribution of income through the income tax instrument presents different features in low-income as compared to high-income countries. And finally, we indicate that, to a large extent, the "horizontal" functional distribution of tax burdens, which is inherent in the set of flat rates of rational schedular systems, may approximate the "vertical" interpersonal redistributive effects that are achieved through openly progressive formulae in global-type systems. Throughout this section, we further assume that both types of income taxation are implemented in strict adherence to the normative canons of tax-burden distribution discussed in the previous sections. This assumption will be relaxed in section VII to allow for the many structural "imperfections" which characterize empirical systems of income taxation. We should also stress that the expression "redistribution" only refers to the tax ledger of the budget. Reducing the incomes of the rich does not, in itself, improve the position of the poor, in absolute terms. If all revenue collected from the rich were spent to their exclusive benefit, the budget process would not exert any redistributive effect whatsoever.

A. Implications of proportional and progressive rate formulae

It is sometimes overlooked that a proportional rate does have redistributive effects if one looks at the *absolute* distance or "gap" between the "richer" and the "poorer' income recipient within a given schedule or with respect to overall income. A 40 percent flat rate which applies to taxable incomes of respectively US$ 50,000 and US$ 10,000 reduces the after tax, or "disposable", incomes to respectively US$ 30,000 and US$ 6,000. Thus, the gap, in absolute terms, had been substantially narrowed from US$ 40,000 to US$ 24,000. However, under the proportional tax the *relative* distance is unaffected; in our example the post-tax ratio between the incomes of the two taxpayers remains identical to the pre-tax ratio, at 5:1. Progressive taxes, on the contrary, also reduce the relative gap or ratio. If, in our example, the two incomes are subjected to respectively 40 percent and 20 percent, the tax bite would have narrowed the absolute gap to US$ 22,000 and reduced the relative ratio from 5:1 to 3.75:1.

Whether narrowing only the absolute gap or also the relative gap should be the proper principle in pursuing a redistributive policy is a rather involved question which

cannot be kept uncontaminated by value judgements about the fair or optimal state of distribution of income and wealth in a given society. One may contend that one should not go beyond the reduction of substantial absolute gaps in income even if the relative ratio remains constant; in this way socially unacceptable discrepancies in living standards and consumption patterns would already be remedied. But, as already mentioned, modern income tax systems are more maximalist and aim at narrowing the relative gap, by way of progressive rates. Observation of actual social life clearly shows that individuals and social groups are concerned about their relative position, which they are eager to improve. This is evidenced by the fact that in democratic high-income countries, some redistribution of income positions is typically part of government programs, while the same aim figures prominently in the development plans of low-income countries. In both cases, the emphasis upon the principle is often matched by lack of specification as regards the degree of redistribution sought. Consumption patterns of richer households tend to be envied and emulated by people at somewhat lower levels of living when the latter have become exposed to a "demonstration effect". Thus, relative positions and the connected issue of redistribution clearly matter.

It is also worthwhile to point to what we may call the "amplification" effect, which is inherent in the mechanics of progressive rates. When the base of taxable income expands under a progressive rate formula, the average tax liability rises as the additional income is subjected to a marginal rate that exceeds the average one. The converse is equally true: a reduction of the effectively taxed base reduces the average tax burden. We may call this the "split-effect".[16] It also follows that if an allowance of a fixed amount is granted, the tax bill of the rich person will be reduced more, in absolute amounts, than that of the poorer person (whether the relative ratio will shrink depends on the actual figures and parameters involved). Accordingly, taxpayers have an interest in attempting to split the base of taxable income. As a matter of fact, the average tax rate on twice US$ 10,000 may be substantially less than on US$ 20,000.

It also follows that nominal rates may be highly misleading when gauging the real effects of redistributive taxation. Exemptions, deductions and allowances tend to considerably reduce the effective average rate to much lower levels than the nominal average rate would lead us to believe — abstracting even from evasion and avoidance. The effective rate is then calculated with reference to a level of income which, in the light of accepted tax standards, should constitute the taxable base. Hence, there exists a conflict between such "tax breaks" and the aim of secondary redistribution through the tax medium. Contrary to frequent assertions, however, no undesirable erosive effects can be attributed to personal allowances and the like, which are meant to refine the concept of "ability-to-pay" (as represented by "discretionary income") since progressive formulae should be applied on "discretionary income" and not on "net (produced) income".

B. Tentative thoughts about the scope for redistribution in high-income and low-income countries

We should briefly draw attention to a paradox in most countries of the Western world. Their societies have reached an unprecedented level of affluence; comparatively few people can be said to be poor, even if the poverty line is drawn well above a physiological minimum income level; furthermore, those poor are not a homogeneous social group but are scattered over various segments of the population.[17] Thus, one might have expected that the issue of the relative income gaps would come to rest and that there would be few claims to reduce that distance. And yet, the relative dimension draws attention not only in academic circles but, even more, on the political level. Various political parties and trade unions want to reduce the income spectrum to low multiples, mainly by way of narrowing the wage differentials, or, in other words, through intervention in the primary distribution. Well-organized social and pressure groups strive to improve their position: the claims are frequently predicated on references to other groups who are perceived to be in a better but

A paradox: in rich countries a tendency to equalize incomes

undeserved position. Hirsch has addressed himself to the above-mentioned paradox which he attributes to the increasing scarcity of "positional goods" (such as vacations on non-crowded beaches), as "the vast increase in material productivity has pushed the frontier of mass demand into terrain where there is no longer more for all".[18] Scitovsky has also found "rankhappiness" to be relevant to present affluent societies.[19] Whether the strong urge for further redistribution will be a lasting phenomenon or, on the contrary, is symptomatic of a recessionary period cannot easily be prognosticated. Some pointers, such as the growing awareness of the disincentive effects of high tax burdens and even some overt signs of tax revolt, suggest that redistributive policies, particularly through the tax medium, may be widely looked upon with disfavor before long.

In the typical low-income country, the situation is utterly different. Two series of remarks are to the point. First, income inequality is probably in most cases

16. The expression "split" is used here in a general sense, whereas in the tax literature it tends to refer specifically to the treatment of the incomes of spouses.
17. See, for example, P. Taubman, *Income Distribution and Redistribution* (Addison-Wesley, 1978), pp. 22-25. The official poverty line in the U.S.A. is defined as three times an emergency food level and stood at US$ 5,000 in 1974, for an urban family of four. The incidence rate of absolute poverty had declined from 33 percent of the population in the late 1940s to about 11.5 percent today.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

somewhat more pronounced than in present-day affluent societies.[20] Notice a number of qualifications, however. The statistical data are generally of poor quality and cross-sectional comparisons, between countries, require great caution. Much depends on the underlying distribution of assets and of skills, indeed on the social structure, itself. For example, in Latin American countries, with their latifundia [21] the overall inequality is likely to be greater than where, as in South Asia, ownership of land is already highly fragmented. On the whole, economists tend to recognize the "Kuznetz effect", which holds that, in the early stages of growth, inequality widens. There also does not seem to be a clear relationship between the growth rate and the degree and the trend in inequality; much depends on the actual policies followed.[22]

Another feature dominates the profile of income distribution in low-income countries, namely, the widespread occurrence of absolute poverty.[23] In most developing agricultural occupations, the absolutely poor are found predominantly in the rural sector. Even people who, in a vertical-income pyramid, would be situated well above the, say, lowest two deciles do not exhibit any or very little taxable capacity, although they may be three times "better off" than the poorest people. In other words, the connotation of income, well above a minimum, poverty level, which accompanies the expression "middle classes", as used within the context of high-income countries, is not relevant in poor developing countries.

The basic point to be made is that, with respect to such matters as fiscal redistribution and (income) tax policy, the absolute or cardinal dimension of the pattern of income distribution cannot be overlooked. Consequently, the coverage of the income tax in low-income countries tends to be limited to the higher-income ranks and to the modern sector. "The income tax is a class not a mass tax" as the saying goes. Moreover, as in numerous (but not all) low-income countries, the upper strata of taxpayers enjoy a standard of living which is comparable to that of the top-ranked taxpayers in developed countries, steeply progressive taxes would shave off relatively more income than in a developed country. But, again, in countries in which no large "middle class" has yet developed, siphoning off income from the comparatively few "absolutely rich" would yield only little revenue, which, even if spent in favor of the large numbers of the absolutely poor, would only marginally improve the individual lot of the latter. In developed countries, on the contrary, fiscal redistribution is partly made possible because middle classes form the bulk of the population and are subjected to progressive income taxation. The income tax must also be expected to be a relatively less productive generator of revenue than in rich countries; this is confirmed by the actual data.

C. Redistribution in schedular and global tax systems

Assuming that some degrees of redistribution should be achieved, or at least attempted, through the income tax medium, our specific question now is whether such an objective can be reached more easily within schedular or global systems of income taxation, of equal yield and otherwise equal circumstances, by virtue of the distributional formulae which are found in the schedular or global types.

Conclusions with respect to the redistributive impact exerted by flat rates, differentiated per schedule in the schedular system, and progressive rates in global systems are already foreshadowed in the previous analysis. Obviously, progressive rates reduce not only the absolute but also the relative gap between taxpayers at different levels of the income pyramid. Within each category of the schedular tax, a flat rate narrows the distance, in absolute terms, but leaves the relative ratio constant.

As has been clearly established, different levels of overall income involve differences in the compositions of income. Generally speaking the share of income from capital in total income increases when one moves upwards along the income pyramid. This is particularly true with respect to the top-layer incomes, which are most often derived largely from capital assets. Capital assets are usually found to be more unequally distributed than incomes.[24] This holds for developed countries, but also, and perhaps even more, for most low-income countries, although the nature of the income-generating assets will differ, with land holdings being comparatively more important than financial assets. Conversely, and on the same grounds, the progressive rate formula on global income contains a built-in qualitative discrimination against capital incomes, even when the tax statute does not openly specify any such discrimination.

This similarity of redistributive and discriminatory effects, however, is a very crude and an imperfect one. When one looks, statistically, at large numbers, one finds that as income rises, it will tend to be composed relatively more of income from capital. But there are bound to be many deviations of individual cases vis-à-vis such general correlation. To apply the same general rule to such deviating cases would result in unfair treatment. The widow, living on her meager savings, would be taxed at the same flat rate as the rich "capitalist", in the schedular system. Besides, there are many types of capital assets, and their degree of concentration in

21. Or large estates, owned by absentee landowners.
22. See S. Kuznets, "Quantitative Aspects of the Economic Growth of Nations: VIII. Distribution of Income by Size", *Economic Development and Cultural Change*, vol. XI, No. 2, part II, January 1963.
23. See D. Morawetz, "Twenty-five Years of Economic Development: 1950 to 1975", The World Bank, 1977, p. 41. The absolute poverty line for the "destitute" was put in the ILO publication *Employment, Growth and Basic Needs. A One World Problem* (Geneva, 1976) at respectively US$ 90 in Latin America, US$ 59 in Africa and US$ 50 in Asia. 39 percent of the population of the developing market economies were estimated to belong to that category of "destitute" and 67 percent to a broader category of "seriously poor". See p. 22.
24. See, for example, A.M. Okun, op.cit., p. 66.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

high-income brackets is dissimilar; the ownership of government bonds, for example, is known to be broader than that of shares. The schedular system would also imply the same flat rate on the income derived from or attributed to the tiny parcels of land held by the minifundista and to the large estates of the latifundista.

In sum, the object-centered system of schedular taxes, which are predicated on the functional distribution of income, can only inadequately perform the role of a redistributive progressive tax, which is meant to influence the personal distribution of income. The converse does not equally hold. As explained in section III, in progressive systems, allowances, which discriminate in favor of labor incomes, can be inserted. They appear to be even more appropriate techniques than the open rate-discrimination which characterizes the schedular approach to income taxation.

Which system is better?
Global income taxes or schedular schemes?

Should one then conclude, without any reservation, that global income taxes score better than schedular schemes? As a matter of fact, the former allow taxpayers to be subject to progressively distributed tax burdens, in function of the ability-to-pay of each taxpayer and, furthermore, also permit some "hidden" application of the qualitative discrimination principle, to the extent such a canon is deemed relevant. It would seem, indeed, that the above conclusion is warranted; provided, however, that the progressive income tax on global income is implemented in a consistent and effective way. If large components of overall income which, according to basic principles, should be effectively taxed remain outside the tax net, for whatever reason, the logic of the progressivity technique is perverted and its applications eroded and distorted. Let us suppose, in a rather extreme example, that almost all incomes from capital are escaping tax, either as a result of statutory exemptions or because such incomes are not reported. Rich taxpayers would then benefit in a double way: first, because capital incomes are concentrated in high-income echelons; and, second, because, as explained earlier, the non-taxation of a slice of income results in a larger "split effect" or tax savings (in absolute terms) for the rich than for the poor taxpayers. One may conclude that global systems, endowed with progressive rate formulae, are exacting systems, in that they require both a consistent tax design and a tight implementation. Any statutory exceptions to the ability-to-pay principle should be fully justified and the tax should be administered without major leakages and underreporting. Otherwise, the use of progressive rate formulae results in gross inequities and in a parody of sound tax principles. The nominal rates may create the illusion of an equitable and even of a severely redistributive system,[25] but, upon inspection, the distribution of *effective* tax burdens may tell a quite different story.

VI. INCOMPATIBILITY OF PROGRESSIVE RATE FORMULAE WITH SCHEDULAR SYSTEMS

We just concluded that the differentiation in the flat rates within the schedular system is at best a hidden and an imperfect substitute for openly progressive rates — but that the latter call for highly-effective tax administration. The question then arises whether the insertion of progressive rates in schedular systems — about which some authors have hypothesized that it is an easier system to administer — could provide an optimal or, at least, a "satisfactory" solution. In other words, could progressive rate formulae in schedular systems apportion taxes according to the ability-to-pay standard?

As a matter of fact, in historical schedular systems and in the more frequent schedular layers of mixed systems, the category of labor income typically contains elements of progressivity. In a number of countries, especially in Latin America, the schedule which lists the profits of corporations or of enterprises (when no separate corporation tax exists) carries progressive taxes.[26] Other less familiar cases of graduated rates, as on rental incomes in Zaire, can be cited. One could also visualize that, as an indirect instrument of land reform, the rates on income from land would be progressive — although graduated taxes on land property which do not penalize the diligent farmer may be more appropriate to that end.

One can easily demonstrate that the aim of apportioning the income tax burden according to the capacity-to-pay principle can only be achieved within a schedular framework in a consistent way and without distortive effects, provided two conditions are fulfilled, viz. (a) that each taxpayer would only obtain income from a single source, *and* (b) that the formula of progressive rates would be identical in all schedules.

The extent to which taxpaying units obtain income from different sources is essentially an empirical question. Table I contains some data about the U.S.A. and Brazil. The table does not convey a direct frequency distribution of taxpayers, in terms of multi-source income; yet, a comparison of the numbers of salaried and self-employed, as compared to those with other incomes, indirectly provides insights into the occurrence of multiple-source incomes. Earnings from labor may be considered as "core" incomes as most people, in good health and of working age, want to be gainfully active and to employ their "human" capital.

25. The astronomically high top marginal rates, up to, say, 90 percent which are featured in some tax statutes should not create too many illusions, except that they may make believe that the country pursues a vigorous redistributive policy. It may well be that no taxpayer whatsoever is subject to such a confiscatory rate.

26. One tally reveals that, out of 18 Latin American countries, 12 had an extended set of progressive rates on corporate profits. See G.E. Lent, "La politica tributaria en cuanto determinante de la combinación optima de los factores capital y trabajo", in *Reforma tributaria para América Latina. IV La Política tributaria como instrumento del desarrollo*, Organización de los Estados Americanos, Washington D.C., 1973, pp. 328-29.

Source: Internal Revenue Service, Statistics of Income 1976, Individual Income Tax Returns/Annuario economico-fiscal de 1977, Ministerio da fazenda, Secretaria de Receita federal.

On a priori grounds and in the light of the available evidence, one should not overrate the proportion of taxpayers who derive taxable income from more than one source. Incidentally, the fact that a great many taxpayers only derive income from one (labor) source explains why many countries allow a simplified return: dependent labor incomes can be easily taxed at the source; no subsequent adjustments are required when no other taxable income accrues to the taxpayer. The important point, however, is that multiple incomes can be expected to occur more frequently in higher-income echelons, where wealth is known to be concentrated.

Both Brazil and the United States have a global tax system. The statistics detail the entries for each of the different incomes which have been recorded in the returns. One first notices the enormous difference in coverage, i.e. in the ratio of returns to the total population, which works out respectively at 39.4 percent for the U.S.A. and 4.5 percent for Brazil, although Brazil is distinctly a middle-income developing country, with a per capita income of US$ 1,140 in 1976. The number of returns reporting income from agricultural activities is very low in Brazil, although a large proportion of the population poorly lives on farms. This factor may largely explain the low ratio of returns. In both countries, the possibility exists for specified taxpayers — particularly those with only labor income — to file a simplified form.

Comparing the number of "schedular entries", i.e. of different types of income declared, to the number of returns which contain "core" incomes (i.e. from labor, both salaried and self-employed) one finds a ratio of 2.13 in the U.S.A. For Brazil, and looking only at the data for those who file a full report, the ratio stands at 1.47. One should not infer too much from the difference in the ratio as an accurate comparison is difficult, for various reasons. It would appear, however, that even in a developing country, those who must file a return frequently have more than one income source. This comes as no surprise if one recalls that the coverage of the income tax tends to be restricted to those who are comparatively well-off in the modern sector and that wealth and income tend to be more concentrated in developing than in developed countries.

One must expect the number of taxpayers with multi-source income to increase, when: per capita income rises, as whenever essential and non-compressible consumption needs are fulfilled, there is scope for savings; financial investment grows, thus engendering additional income. The extent to which the frequency of multiple incomes shows up in the statistics depends largely on specific arrangements in the actual tax statutes.

Thus, the absolute and relative number of taxpayers with more than one income will increase when:
— imputed rents on owner-occupied homes are held taxable;
— the household is viewed as the proper taxable unit and more persons in the household obtain taxable income. Recent years have witnessed, in Western Europe and in the United States, a growing number of married wives entering into the salaried work force;
— the tax administration becomes more efficient as when, for example, the beneficiaries of income from securities, which are taxed at the source, can be identified;
- the tax legislator brings small incomes within the reach of the income tax. Even small incomes from savings deposits may be taxable, as in the U.S.A., whereas elsewhere they often are exempted, thus considerably reducing the number of households with taxable income from multiple sources.

A real-life illustration of the distortions which progressive rates may cause in some — not all — schedules is given in table II, which reflects the rates in the schedular layer of the mixed system in Portugal, in 1976.

The differential tax burdens for taxpayers with the same overall nominal[27] net income of 1 million Esc. are fairly substantial. Taxpayer B is 16.5 percent below and taxpayer D 18.3 percent above the average tax burden on the 1 million Esc. income. Such divergences could conceivably be rationalized on the basis of the qualitative discrimination theory; but then the higher burden on "pure" labor income, as compared with business income of "mixed" origin, is an obvious anomaly.

27. Abstracting from differential degrees of underreporting.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Technically speaking, global type tax systems could conceivable also be endowed with proportional rates. But rate formulae are no more than technical parameters which can only be called suitable in the light of the accepted standards of equity, a given society wishes to adhere to. As a progressive rate formula is viewed as an appropriate instrument to modulate tax burdens, according to the "ability-to-pay" canon — as discussed in previous sections of this paper — actual global type income taxes are equipped with progressive rates. And, as just stressed, the globalization of the taxable base is a prerequisite, if progressive rates are to be operated in a logical and consistent manner. One must add, as was analyzed in detail in a previous paper,[28] that personalizing devices, such as allowances for dependents, should also refer to overall income. If such personalizing features, which narrow the taxable base, are available in one or in several schedules, taxpayers with the same overall discretionary income would be taxed differently, depending on the source(s) and composition of their incomes.

TABLE II
PORTUGAL – SCHEDULAR LAYER – 1976

Differential nominal tax burdens on hypothetical taxpayers with overall income of 1 mln. Esc. from different sources (in Escudos)

	wages salaries	*business profits*	*rents*	*interest dividends*	*total tax*
A. Income tax	1,000,000 (220,000)				220,000
B. Income tax		1,000,000 (174,000)			174,000
C. Income tax			1,000,000 (240,000)		240,000
D. Income tax				1,000,000 (240,400)	240,000
E. Income tax	800,000 (149,600)		200,000 (31,460)		181,060
F. Income tax		800,000 (139,200)		200,000 (49,280)	188,480
				Average:	208,357

Source: Computed from Portuguese income tax rates.

Above, we noticed that, in order to render progressive rates compatible with rational schedular systems, the same rate formula should be applied in all schedules. But, as already stressed, this condition is only relevant if taxpayers are drawing income only from one source. In the fairly substantial number of cases in which multiple incomes are enjoyed, even identical schemes of progressivity would distort tax burdens amongst taxpayers with the same overall income, but with different components. Besides, some categories of income are not amenable to the imposition of progressive taxes. Thus, the yield from securities in bearer form is often taxed at the source, in a "blind way", without the tax authorities being intent upon identifying the beneficiary; such payments occur at irregular dates and in a fragmented way. Hence, progressive rates, at the time the coupons are cashed, are not feasible. And if the withholding levy were operated as "installment" payments, to be credited against the tax liability which the taxpayer would incur on all his income from securities or on his overall income, subsequently a return would be required from the taxpayer. However, once returns are requested for incomes of one type, the door is opened to have all incomes reported in the annual declaration — a more convenient procedure both for the taxpayer and the tax administration.

VII. FACTS VERSUS PRINCIPLES

So far, we have evaluated the wisdom of alternative canons of equitable distribution of the tax burden which provide the logical underpinnings for the schedular or global types of income taxation. We assumed, somewhat unrealistically, that the two prototypes of income taxation would be designed in strict adherence to their basic distributional canons. We should now briefly descend from the highland of principles into the valley of actual, historical tax systems. In this context, the cases in which given techniques are inserted in a given structural mold, despite the deviations and inconsistencies which they entail, should attract particular attention, as they highlight the strong appeal of particular tax principles.

One fact stands out. In schedular systems, various personalizing features have, over the years, been inserted. This is particularly the case for the "core incomes", i.e. those resulting from the productive use of human labor. Those schedules have usually, to some extent, been equipped with progressive rates; and a basic personal exemption, sometimes complemented by allowances for dependents, has been granted — despite the fact that schedular layers have mostly been capped by a complementary tax, of a global nature, which, by definition, contains a progressive formula and various personalization parameters. Some decades ago, the French author Laufenburger rightly referred to the then prevailing schedular systems as "semi-personalized" ones.[29] Furthermore, in recent years, several countries, including some in the Third World (such as Peru and Bolivia and, in a half-way fashion, Mexico), have converted their mixed systems into global types of income taxation.

Those facts suggest that the ability-to-pay principle and the redistributive aims which the progressive rate formula tends to achieve cannot be ignored, not even in a schedular system, although the latter, on account of its object-centered nature and its fragmented approach, cannot accommodate progressivity without giving rise to

28. See S. Plasschaert, "The Definition of Net Income in Schedular and Global Types of Income Taxation", *32 Bulletin for International Fiscal Documentation* 201 (1978).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

inconsistencies and distortions in tax burden distribution. One should add, however, that the drawbacks associated with the insertion of progressive rates in schedular systems are greatly attenuated by the fact that a large number of taxpayers receive income from only one source, viz. from their labor inputs. Our analysis also allows the conclusion that the qualitative discrimination doctrine is theoretically not convincing and can, to the extent deemed desirable, be implemented within a global scheme without necessitating the schedular technique.

In the light of the arguments advanced earlier this conclusion would also hold in low-income countries. Admittedly, labor incomes are not given the comprehensive protection which they enjoy in the welfare state of modern developed societies. But when incomes from labor are taxed, contributions to voluntary pension reserve funds can easily be made tax-deductible. Besides, the size of taxable income is a more relevant determinant of the capacity for saving than the nature of such income. And, finally, on account of the low per capita income and the large incidence of absolute poverty the income tax covers only comparatively well-to-do classes.

It would be wrong to infer that, in historical global systems, the ability-to-pay canon and the progressivity technique are implemented in a logically consistent way. In actual fact, various portions of income, which according to the above canon would have to be taxable, do escape taxation, with the result that, owing to what we called the "split effect", the progressive distribution of tax burdens is weakened, usually resulting in higher "tax breaks" (expressed in absolute terms), for the rich than for the poorer taxpayer.

Such leakages are due to various causes, and more particularly to:

— some discriminations between classes of taxpayers which result from the way the global tax must be designed. Usually, and for good reasons, the individual income tax of global vintage is accompanied by a flat rate tax on profits of corporations. Thus, enterprises are treated differently according to their legal form;

— some portions of income, while taxable in principle, cannot effectively be taxed because of sheer administrative difficulties; or the government renounces its claims in order to avoid some undesirable side effects. For example, the definition of gross income would call for the taxation of unrealized capital gains enjoyed by individuals. But no country appears in a position to fully comprehend such accretion to economic power, and one must content itself with taxing only realized gains;

— underassessment also results from illegal evasion and its cousin, tax avoidance;

— various tax breaks, which are meant to induce the taxpayer towards the use of his income into desired channels, such as given savings instruments. Those incentives imply a transgression of the ability-to-pay benchmark.

Global income tax superior to schedular tax

At this point, however, one important conclusion emerges from the analysis in this paper. The global type income tax appears as clearly superior to the traditional schedular systems in the light of modern equity standards, but it is an exacting method of taxing income. There should be a high degree of restraint towards granting tax favors, which erode the taxable base. If such breaks are afforded, they should have been carefully reconciled with the goals one wishes to achieve through them. Secondly, the global system calls for effective administration; here again, one should realize that administrative inadequacies, if they cannot realistically be remedied, must be weighted against the loss of equity. In both instances the resulting actual ("effective") distribution of tax burdens may deviate substantially from the intended apportionment, as expressed in the formula of nominal rates. The nominal formula may not be more than a travesty of sound equity rules which masks a large number of undesirable inequities.

THE GROWTH AND TRENDS OF TAX REVENUES IN THE CARIBBEAN*

by Dr. Kempe R. Hope **

INTRODUCTION

In recent times a number of articles have appeared in various international journals pertaining to the role of external borrowing and its changing composition and importance to less developed countries. This taxation article, which is a case study of the Caribbean, was written to demonstrate that, despite the growing significance of external borrowing by the Caribbean countries, the role of tax revenues is still of major importance in the development process and an important fiscal tool. This is so primarily because the nature and rate of taxation are internally controlled and, as such, not subject to developments in the international money markets which are difficult to foresee.

Taxation remains the major fiscal tool on the revenue side. It is that fact that rationally dictates that borrowing should only occur when government expenditures exceed revenues and tax revenues cannot be beneficially increased. This paper assesses the growth, trends, and possible scope of tax revenues, in the Caribbean, in the future.

INDIRECT TAXES

First we look at the indirect taxes in the Caribbean which, as seen in Table 1, constitute the major component of total tax revenues in Guyana and Jamaica. In Jamaica, the indirect taxes have been steadily increasing while the direct taxes have been declining. In contrast, in Guyana, direct taxes have been increasing along with the increases in indirect taxes. Both in Barbados and Trinidad and Tobago the indirect taxes are not the major component of total tax revenues. During the period 1960-75, indirect taxes in Guyana and Jamaica increased significantly. The increases were a little more than 600 percent in each case during that period. After 1975, indirect taxes in both countries exhibited uneven declines.

The indirect taxes are composed primarily of production and sales taxes and international trade taxes as shown in Table 2. In all of the countries the changes in each component of the indirect taxes have been inconsistent. In Trinidad and Tobago, after 1973, trade taxes declined in importance and production and sales taxes became the major source of indirect tax revenues. The increase in production and sales taxes in Trinidad and Tobago has been due to the government's immediate response to the boom in world petroleum prices by overhauling the tax system to tap windfall profits of the petroleum companies. The government enacted a refinery tax on each barrel of oil and instituted a production levy designed to fund a domestic subsidy on petroleum products.

In Jamaica, except during 1974 and 1975, the production and sales taxes have consistently dominated the indirect taxes. The major part of Jamaica's indirect taxes is derived from the bauxite industry which provides approximately 23 percent of Central Government revenues. In 1974, the Jamaican government launched an ambitious plan to (1) increase its share in the profits of the bauxite industry, and (2) extend its control over bauxite and alumina operations. One of the results of that plan was the enactment of a bauxite levy which obliged the bauxite and alumina companies to pay a levy for all bauxite mined in Jamaica. However, since 1976, receipts from the bauxite levy have been declining considerably owing to large declines in production.

In Guyana, until 1976, the trade taxes were the major component of indirect taxes. In 1974 and 1975, there was an increase in the consumption tax revenue and windfall amounts were also collected in those same two years after the imposition of a sugar export levy in 1974. After 1976, however, the output of Guyana's three major industries — bauxite, sugar, and rice — declined considerably as a result of poor weather and labour disputes. This resulted in a decline in indirect tax revenues and in overall government revenues.

---

* This paper is a case study of the more developed Caribbean countries: Barbados, Guyana, Jamaica, and Trinidad and Tobago.

a Includes revenue from fiscal monopolies, business and professional licenses, motor vehicle registrations, and stamps.

Until 1975, Barbados' trade taxes were the major component of indirect taxes. During 1977 and 1978 the Barbadian government took a number of fiscal measures in recognition of the growing precariousness of public sector finances. This resulted in increases in the consumption tax rates on luxury goods and the enactment of an employment levy which considerably boosted government revenues.

The indirect taxes in developing countries tend to work positively, for the most part, by encouraging savings and conserving foreign exchange for the necessary import of capital goods. Such taxes also help to prevent prices from rising too rapidly when ongoing investment is increasing personal incomes faster than the output of finished goods and services is rising. These taxes are popular not only because of their administrative simplicity, but also because they can satisfy the principles of progressivity and built-in stability as well as equity. One additional property of indirect taxes of particular interest to developing countries is their ability to allocate resources to desired areas of development.

Equity is served by exempting necessities and the produce of peasant farmers from taxation while graduated taxes imposed on non-essentials and luxuries, especially if established through scientific studies of family budgets, allow indirect taxes to satisfy the principle of ability-to-pay and the built-in flexibility property. By raising the cost of consumption relative to saving, indirect taxes tend to encourage the latter at the expense of the former. In a system of indirect taxes, saving is stimulated as it virtually escapes taxation and resources are released from consumption to capital formation whose contribution to economic development cannot be overemphasised.

Indirect taxes serve the purpose of industrialisation by diverting resources to desirable activities. On the one

© 1980 International Bureau of Fiscal Documentation – BULLETIN

hand, import duties graduated according to the degree of luxury of imported commodities provide incentives for domestic production. The particular stimulation given to semi-luxury or luxury goods should be dealt with carefully and their local production discouraged at times by heavy sales or excise taxes or even by outright prohibition because resources should be used for the production of more urgently needed commodities.

Indirect taxes imposed on locally produced goods are, on the other hand, designed to divert resources from the production of luxuries to semi-luxuries and necessities, by affecting the rate of return. This goal is not always easy to achieve and its attainment depends, in the final analysis, on the diversionary effect of taxes on particular commodities with different elasticities of supply and demand. If, however, indirect taxes fail to change the allocation of resources and the pattern of investment, other measures affecting relative prices and relative profitability must be employed.

The structure of indirect taxes should be such as not to stifle altogether the production of semi-luxury goods, defined as those widely consumed by people above the subsistence level, but kept at low levels as a stimulant for increased participation in the development process. The favourable tax treatment of necessities should not be taken to mean that the majority of resources released through taxation are used to expand the production of necessities. It is important that the production of necessities increase at least at the same rate as the population growth, but due to the prevailing poverty in the Caribbean, it is easy for income increases to be spent exclusively on consumption. As such, to protect the long-term development interests of the Caribbean countries, part of the increased incomes must be diverted to investment through mass commodity taxation. Indirect taxes have an important role to play in this respect by transferring resources from consumers to the public sector, which in turn uses these resources for investment. Mass commodity taxation is therefore fully justified as it serves to raise the incremental saving ratio.

Taxes are commonly classified according to the kind of action that creates the liability or the nature of the base on which the tax is levied. Taxes on goods and services may include all taxes and duties levied on production, sale, transfer, leasing, and delivery of goods and rendering of services, or in respect of taxes on the use or ownership of goods or permission to use goods or perform activities. [1]

Historically, excise taxation has been associated with domestically produced commodities. Any countervailing duty on goods coming from abroad is incorporated in the importy duty, and sales taxes are levied as general taxes on the sale of goods and services. The scope of coverage emerges as the most useful distinction between excises and sales taxes. Under an excise system, taxable commodities are individually enumerated in the law; while under a sales tax the tax base is typically defined to include all commodities for sale other than those specifically exempted. In Jamaica and Trinidad and Tobago there are no sales taxes while Barbados has a sales tax at the retail level and Guyana has a manufacturers sales tax. With respect to the excise taxes, in Barbados, Jamaica, and Trinidad and Tobago the coverage is extended which means the tax spans almost the whole range of production activities in those countries. In Guyana, the excise tax coverage is limited to specified domestically produced goods and similar goods imported from CARICOM.

While indirect taxes are inadequate, by usual standards, as sole measures of tax capacity, the traditional case for indirect taxes in the Caribbean has been made on the basis of their potential revenue yield and their administrative simplicty when compared to the income tax. It would seem though that the prevailing indirect tax structure is satisfactory from the point of view of the criterion of income elasticity. In order to conform to the criterion of economic stabilisation, indirect taxes should be levied on goods with a high income elasticity of demand. The significance of this criterion lies in the fact that such indirect taxes would be ideally suited for maximum volume of resource mobilisation.

From Table 4, we can see the rate of change of indirect taxes as percentage of total current revenue and Gross Domestic Product during 1960-78. For all of the countries the rate of change was uneven and inconsistent. However, a better gauge of the relevant significance of indirect taxes in the Caribbean can be obtained from examining indirect tax revenues as a ratio of total tax revenue as exhibited in Table 3. In Barbados, after 1973, indirect taxes declined to less than 50 percent. A similar situation prevailed in Trinidad and Tobago and Guyana after 1972 and 1976 respectively, while in Jamaica indirect taxes have never been less than 50 percent during 1960-78 indicating the growing and significant importance attached to indirect taxes as a source of development finance in Jamaica. Moreover, it has been claimed that Jamaican indirect taxes are essentially proportional to both income or expenditure, except in the highest in-

The coefficient of income elasticity of tax revenue indicates by how many percentage points a specific revenue source increases with an increase of one percentage point in income as well as it expresses the ratio between the marginal tax rate and the tax ratio of the earlier period. When the elasticity coefficient is greater than one, taxes are considered to be elastic and regarded as inelastic if the coefficient is less than one. In terms of the individual indirect taxes, the elasticity coefficients are shown in Table 5.

As one might expect, there is considerable variation in the value of the coefficient for the indirect taxes in the four countries. However, both Guyana and Jamaica have elastic indirect taxes while only the production and sales taxes indicate some degree of elasticity in Barbados

a 1960-76.

and Trinidad and Tobago. All of the four countries have relied relatively more on their production and sales taxes than on the international trade taxes, in terms of tax effort, as suggested by the data. These data, therefore, lend some support to the general impression that with the growth and diversification of their economies the developing countries have been turning more effort toward the exploitation of internal taxes with diminishing relative reliance on international trade taxes.

Indirect taxes in the Caribbean have been instrumental in bringing about an allocation of resources to some priority uses. Excise taxes have resulted in the reduction of the production of goods not regarded as essential for development; thus, resources have been channeled into the production of high priority goods under the assumption that demand is not perfectly inelastic. In the context of the growth of industrial production which in many cases means the production of domestic goods as substitutes for foreign imports, excise taxation not only makes up the loss in revenues caused by a fall in the proceeds from import taxes, but also becomes a very productive and expansive source of development finance.

One of the greatest weaknesses of indirect taxes in less developed countries, and the Caribbean is no exception, is their inability to reach high concerntrations of income and wealth as effectively as direct taxes. To that extent, indirect taxes can be regarded as regressive. Under the ability-to-pay principle taxes should bear some relationship to people's capacity to pay them. That is, the amount of taxes should be the same for people in the same economic position (horizontal equity), but different for people in different economic positions (vertical equity). Historically, however, indirect taxes, by their very nature, have never been able completely to satisfy these two criteria both in developed and developing countries.

DIRECT TAXES

As for the direct taxes in the Caribbean, Table 6 indicates that they have been growing as a source of revenue. In all four countries total direct taxes have shown an uneven growth during the period 1970-78. In terms of the relative magnitude of the growth with respect to current revenues, increases in direct taxes as a percentage of current revenues were most pronounced in both Guyana and Trinidad and Tobago. In Guyana, direct taxes were up from an annual average of 32.7 percent of current revenues in 1972-76 to 40.3 percent in 1978, and in Trinidad and Tobago, from 59.7 percent to 70.8 percent.

Sources: Same as for Table 1; Table 1.

Regarding the composition of direct taxes, Table 7 shows that income taxes (personal and corporate) constitute by far the most important form of direct tax revenue. However, only in Trinidad and Tobago did income taxes average more than 50 percent of current revenues while only Barbados had property taxes of more than 4 percent.

The personal income tax is a compulsory payment to government that is imposed by legislation. Income taxes really belong to a fairly advanced stage of economic development yet they are found in operation in a large number of developing nations, the reasons being quite simply that everyone is expected to contribute toward the expenditures that lead to development and this contribution is derived primarily from income.

Taxation of net income in the Caribbean is complicated by many problems relating to permissible business expenses, including treatment of depreciation, exemptions and credits, and capital gains or casual profits. Hence, the measurement of net income for tax purposes is difficult and, as such, requires a high standard of administration for equitable results. However, personal income taxes in the Caribbean have been reasonably effective in reaching wage and salary income, where concealment is difficult.

As a percentage of total tax revenue, direct taxes in Barbados increased after 1973 to more than 50 percent. A similar situation prevailed in Trinidad and Tobago after 1972 and in Guyana after 1976. In Jamaica, direct taxes have always been less than 50 percent of total tax revenues during 1960-78.

Direct taxes, or more specifically income taxation, are a very convenient device for introducing the principle of equity in tax structure. Due to the capacity of income taxation to introduce an element of built-in flexibility in the tax structure, it is regarded even in developed countries as a very important counter-cyclical device for achieving economic stabilisation. Thus, in the analysis of taxation in developing countries, the traditional objectives of progressivity and equity in taxation have pointed strongly to, and have resulted in, more aggressive use of net income and wealth taxation.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Though a highly progressive income tax with high marginal rates on upper income ranges is a very desirable fiscal instrument both on grounds of resource mobilisation for the public sector and redistributive considerations which are very important in less developed countries, it tends to conflict with the criteria of economic efficiency and progress in a context where the growth of savings and investment occupies an important place in the process of economic development, [4] as is the case in the Caribbean. Moreover, except in Trinidad and Tobago, income taxes are relatively elastic as seen in Table 9.

TABLE 9

Income elasticities of direct tax revenues, 1970-76

Country	*Income taxes*	*Property taxes*	*Total direct taxes*
Barbados	1.6	0.3	1.7
Guyana	1.2	0.6	1.1
Jamaica	2.3	22.3	2.6
Trinidad and Tobago	0.9	−0.3	1.2

For the period 1970-76, there is considerable variation in the elasticity coefficients for direct taxes in the Caribbean. In both Barbados and Jamaica, property taxes have a higher than average income elasticity coefficient. Since 1973 Jamaica has been steadily increasing its property tax yield due to increasing property tax rates. However, overall, it may be said that all of the countries have relied relatively more on income taxes. In 1973, the Jamaican government proposed income tax relief for pensioners, payments of mortgage interest, health insurance and medical expenses, and premiums for equity-linked life insurance. But since the advantage of these reliefs are available only to Jamaicans paying income tax, and because the benefit of the reliefs rises with the taxpayer's marginal tax rate, these tax reductions reduce the burdens on upper income households, and therefore weaken the progressivity of the income tax and of the overall Jamaican tax system. [5]

Since 1974 the structure of the tax system has not undergone any major modification in Trinidad and Tobago. Largely because of the unique position of the country's petroleum sector and measures designed to tap the increased petroleum profits, income taxes now account for more than two thirds of total current revenues. In Barbados, the domestic revenue effort has been relatively stable since 1970, except for the strongly recessionary years of 1974-75. The country's income tax effort has shown some improvement due to increases in corporation tax rates and higher wages and salaries.

The increasing importance of the taxation of income and company profits in the Caribbean underline the need, therefore, for encouraging the growth of individual and business savings, and the ploughing back of retained profits of business into the expansion of investment. The tax policy should therefore be directed to further mobilisation of resources for development and allocating them according to development planning priorities.

AN ASSESSMENT

Tax revenues represent the major proportion of all revenues collected in the Caribbean by the Central Government. Current tax revenues averaged about 86 percent of total current revenue in Barbados and Guyana, about 93 percent in Jamaica and about 90 percent in Trinidad and Tobago during 1970-78. Taxes, therefore, constitute an important part of the public finances of the Caribbean economy and as such a very important fiscal tool. The significance of tax revenue in the Caribbean can also be determined by examining the ratio of tax revenues to GDP. Tax revenues averaged 21.5 percent of GDP in Barbados, 26.3 percent in Guyana, 20.8 percent in Jamaica, and 23 percent in Trinidad and Tobago during 1970-78. The yield from taxation seems to indicate the response that migh be expected in a period of growing investment and national income as the countries attempt to move forward on their developmental paths. The tax ratios in the Caribbean are substantially higher than the average ratios in developing nations. The average ratio in developing nations, according to the most recent study, is 16.1 percent. [6]

As a fiscal tool, taxation has to aim at directing productive resources to uses which are necessary for development but which the private sector is unwilling to provide for, as is the case in the Caribbean. Such a direction of resources may be needed at certain times in developed countries also and may be engineered through a system of checks and incentives operating on decision-making units in the private sector. In the less developed nations, however, this may require, in addition, direct participation by government in production and investment activities. The major point being made here is quite simply that if fiscal policy is to make a net contribution to growth, its operations have to be supplemental to whatever can normally be expected to be achieved by the existing constellation of forces in the economy.

The object of both fiscal and development policy, therefore, is not to balance the budget of the public sector, but to balance the economy as a whole. In this respect, budgetary rules are different for governments than for individuals. It is important that governments should feel free to make appropriate use of budget surpluses or deficits, in conjunction with monetary and other policies, to counteract excesses or deficiencies of demand in the rest of the economy. Sources: Same as for Table 1; Tables 1, 2, 6; and United Nations, *Yearbooks of National Accounts Statistics* (Several Years).

In determining the size of the budget, tradition in the theory of public finance takes its cue from welfare economics: it is rewarding to transfer money from the private sector through taxation — and to give up individual decision power in the process — only to the extent that the public authority is presumed to spend the money better, i.e. to the extent that the public services provide better value than would have been derived from spending the money on individual goods and services. [8]

Though some advances in economic thought have conquered sufficient ground for these principles to have been accepted among most policy makers, one of the obstacles to their effective implementation has been the persistence of widespread public suspicion of unbalanced budgets. It is true that, as spending is generally popular and taxation is not, the temptation to political leaders to run budget deficits, not justified by the overall state of the economy, can be great. This can bring about all those consequences of excess demand and inflation, frequently combined with misallocation of resources, which prudent governments would seek to avoid. But no simple predetermined rules for the balancing of budgets can guarantee responsible government. Protection against irresponsible fiscal policy must rest on informed leadership coupled with the development of wide public understanding of the questions at issue. [9] Methods of ensuring that the leadership is adequately informed and public understanding sufficiently developed are, accordingly, subjects to be emphasised.

In light of the currently accepted social goal of an equitable distribution of the national product and on the basis of the above discussion of fiscal policy, the main objectives that should govern tax and budgetary policy in LDC's, such as those in the Caribbean, may be stated as follows: (1) a further increase in the rate of investment by further control over actual and potential consumption, (2) a further encouragement of the flow of investment into channels judged to be most desirable from the point of view of maximum benefit to society, and (3) a regulation of the flow of purchasing power in accordance with the overall pattern laid down in the development plans.

All of these objectives have been advocated and imposed by the International Monetary Fund on most of the Caribbean economies in recent years. These objectives are related to the ultimate goals of rapid increase in national income and of improvement in its distribution. The problem is to design and maintain a tax structure that will be conducive to the accomplishment of these objectives.

Given the level of revenue now derived from taxation, then the tax system in the Caribbean need only be directed increasingly toward meeting the long-term needs of development. This, therefore, implies a tax system with more administrative flexibility, one where incidence can be rationalised, and one which can be used as a means of controlling inflation — a major problem in the Caribbean. One of the major objectives of taxation in the Caribbean should be that of the mobilisation of internal resources to meet development financing requirements. The amount raised by a government is not necessarily linked to the amount it spends in providing services. Public funds come from other sources than taxation, but the power to tax is uniquely a power of government and its exercise is a matter of crucial importance to the economic and social life of a nation.

CONCLUSIONS

It seems that the determining factors of tax structure for the Caribbean are primarily economic. The character of and change in the economic bases to be taxed are more important than the style of taxation. Taxation policies should be viewed in terms of their ability to support the government's needs for capital to finance economic development within the framework of the limits to the sources of the taxes. Excessive taxation may restrict economic incentives and productive efforts and may cause business activity and national income to decline. However, no definite answer can be given to the question of what is the optimum taxation level that could be carried by the Caribbean economies, or any economy for that matter. It seems, however, that given the elastic nature of the total direct taxes in all of the countries, they are prime candidates for increased tax rates. But, of course, these increased tax rates must be considered within the context of increased revenue, encouragement to non-inflationary impact, and administrative feasibility.

The effect of Income Taxes on Capital Budgeting in Nigeria

by A.C. EZEJELUE*

I. INTRODUCTION

Capital budgeting means long-term planning for proposed long-term capital investments and their financing. It is a many-sided activity that includes searching for new and more profitable investment proposals, investigating engineering and marketing considerations to predict the consequences of accepting the investment, and making economic analyses to determine the profit potential of each investment proposal. [1] *Management is often faced with the problem of planning and controlling capital expenditure programmes for adding new facilities, replacement of existing equipment, introduction of new products, and embarking on extraordinary repairs. These are usually long-term propositions involving large outlays of money which may be financed out of working capital, or out of long-term borrowing, or out of share issues.*

Therefore, before getting involved in such a capital expenditure programme it is desirable that management seek assurance that the expenditure will be worthwhile. Worthwhileness is more generally measured in terms of profitability. A number of factors will undoubtedly contribute to the profitability of such expenditure. "The capital budget, itemising the company's capital acquisitions, its appropriations, expenditures, tax shields and grants, will ultimately determine the company's profitability and in addition, its very ability to survive..." [2]

The purpose of this article is not to examine the modern techniques of capital budgeting, but rather to show the impact, if any, on a project's profitability of income taxes and related issues of capital allowances, and/or depreciation deductions and methods in the Nigerian environment. The fact has earlier been highlighted [3] *that the implications of many investment decisions in Nigeria are so far-reaching that some projects considered otherwise as borderline cases may become worthwhile proposals, and therefore full consideration should always be given to the tax savings in every investment proposal.*

II. INCOME TAX EFFECTS

Although a number of other forms of taxes may have some influence on the issue of capital budgeting, we shall limit our discussion here to the effects of company income tax.

Income taxes being cash disbursements are capable of playing an important role in capital budgeting by influencing the quantum and the timing of cash flows. But this depends on the possibility of reduction and/or reallocation of tax payments through non-cash expense deductions such as depreciation and capital allowances. Therefore corporate income taxes *per se*, as the impression is often created, do not always affect the incentive to invest in capital assets. Income taxes may or may not be a factor in evaluating capital expenditure. [4]

Much will depend on the taxing law in operation in the particular environment. If the relevant *lex situs* on taxation makes it possible, through the treatment of depreciation and/or capital allowances, for the tax payment to be reduced or re-allocated so that, in the latter case, the payments could occur at more favourable times, then tax planning becomes an important factor in evaluating capital expenditure even though the total tax bill as measured in monetary units remains the same in the long run.

III. EFFECTS OF DEPRECIATION AND DEPRECIATION METHODS

A. Depreciation deductions

Where depreciation deductions which are non-cash expenses are allowable deductions for tax purposes, then they will afford tax shelters since they will protect an equal amount of earnings generated by the investment from taxation. In this kind of situation, therefore, it becomes financially expedient to introduce income tax effects into depreciation analysis. "[D]epreciation accounting in the absence of income taxes did not affect the investment decision, but the depreciation computed for tax purposes does affect the investment decision." [5] One effect of income tax depreciation accounting analysis is the possibility of improving the cash flow with the income tax saved as a result of treating the depreciation on the investment as a deductible expense for tax purposes.

Since the cost of the investment less its residual value represents a future tax deduction over the useful life of the asset, the present value of the deduction will depend on its specific yearly effects on future income tax payments. [6] In other words, the present value will be influenced not only by the tax rates and the discount rate but also by the depreciation method used.

B. Depreciation method in use

If depreciable assets are the subject of the investment appraisal, the method of calculating depreciation will change the time pattern of the after-tax cash flows. A number of depreciation methods exist, including straight-line method, reducing balance method, sum-of-the-years's-digits method, and revaluation method. If companies have considerable leeway in the choice of depreciation method to write off their assets for tax purposes, any method that is advantageous from a cash position point of view should be adopted in making capital expenditure decisions. For example, in the United States, "Under the internal revenue code, a company has a choice (among other methods) of depreciating a new asset by using straight-line depreciation, sum-of-the-year's digits, or twice straight line on the declining balance... [I]t has frequently been noted that the choice of depreciation method will affect the profitability of the investment." [7]

From the illustration below, it is clear that any of the decreasing-charge methods, such as the sum-of-the-year's-digits or the reducing balance, will accelerate depreciation deductions in the earlier years and therefore maximize the present values of income tax savings. The beauty of the accelerated methods as applied to capital budgeting is that they provide a larger tax shelter by postponing tax outlays to future periods. In view of the time value of money, present tax savings are more advantageous than future tax savings. The motto in income tax planning is: "When there is a legal choice, take the deduction sooner rather than later; and recognise taxable income later rather than sooner." [8]

Illustration I

Chinasa Ltd. has just bought block moulding equipment for ₦40,000. The equipment has a four-year life and no residual value. The minimum desired rate of return, after taxes, is 10 percent. Assuming that the relevant tax law recognises depreciation as a tax deductible expense, show the financial effects of using (i) an accelerated depreciation method, and (ii) a fixed instalment method, given that the tax rate for the period remains at 50 percent.

(i) *Sum-of-the-year's-digits depreciation*

Sum of digits = S = $\frac{n(n+1)}{2}$ (where n = years of estimated life) = $\frac{4(4+1)}{2}$ = 4 x 2.5 = 10

Year	*Multiplier*	*Deduction*	*Income tax effect: tax savings at 50%*	*Present value at 10% factor*	*TOTAL PV*
		₦	N ₦	₦	₦
1	4/10	16,000	8,000	.909	7,272
2	3/10	12,000	6,000	.826	4,956
3	2/10	8,000	4,000	.751	3,004
4	1/10	4,000	2,000	.683	1,366
				TOTAL PRESENT VALUE ...	₦16,598

(ii) *Straight-line depreciation*

Yearly depreciation = ₦40,000 : 4 = ₦10,000

Income tax effect: Savings at 50% = ₦5,000

Present value of ordinary annuity of ₦1.00 at 10% factor = 3.170

Present value of ordinary annuity of ₦5,000 at 10% factor = 3.170 x 5,000 = ₦15,850

The net difference in total present values in favour of using an accelerated method of depreciation is ₦(16,598 — 15,850) = ₦748. It follows therefore that where depreciation is an allowable expense for tax

purposes, the depreciation method used has a major influence on the present value of the stream of tax savings. Although we have assumed a fixed tax rate, tax rates and discount rates also have material influences on the present value of the tax deductions.

C. Tax treatment of depreciation in Nigeria

As we have shown earlier, depreciation computed for tax purposes affects investment decisions only if the relevant tax law treats depreciation as a deductible expense for tax purposes.

The present position in Nigeria is that the relevant tax laws [9] disallow depreciation of any asset, among other deductions, for tax purposes. In its place, the law grants capital allowances [10] on qualifying capital expenditure to companies and businesses. These capital allowances are principally made up of initial and annual allowances. Since in our illustration above we assumed a zero residual value at the end of the estimated useful life of the equipment there will be no balancing adjustment by way of either balancing allowance or balancing charge. However, in order to encourage investment in agriculture, all capital expenditures on plant and equipment incurred in agricultural production attract an investment allowance of 10 percent in addition to the existing capital allowances. [11]

IV. EFFECT OF OUR TAXING POLICY ON INVESTMENT DECISIONS

The total effect of disallowing depreciation for tax purposes in Nigeria is to nullify the financial effect of any selected depreciation method on investment decisions. Therefore depreciation methods in use do not offer any inducement to investment in new capital assets. Rather, the inducements are offered through capital allowances and the investment allowance where applicable.

CURRENT SCHEDULE OF NIGERIAN CAPITAL ALLOWANCES

The current schedule of Nigerian capital allowances is to be found in the Companies Income Tax Decree 1979 (Decree No. 28) Schedule 2 as amended by Section 35 of the Finance (Miscellaneous Taxation Provisions) Decree 1979 (Decree No. 98):

Qualifying expenditure in respect of	*Initial Allowances*	*Annual Allowances*
	Rate %	Rate %
Qualifying building expenditure	5	10
Qualifying industrial building expenditure	15	10
Qualifying mining expenditure	20	12½
Qualifying plant expenditure	20	12½
Qualifying plantation expenditure	25	15

This is unlike in the United States, where the method of depreciation selected by a company has a significant effect on the tax computations. What is relevant for capital budgeting purposes in Nigeria, therefore, are the various capital allowances (investment allowances in some cases) and not depreciation because only the former shelter the company's profits from tax. Thus:

	₦
Accounting profit before taxation	30,000
Add: Depreciation	12,000
Adjusted profit for tax purposes	42,000
Deduct: Capital allowances (tax shield)	15,000
Taxable income	₦27,000

The position appears to be the same in Nigeria as in the United Kingdom. "Taxation would affect the negative cash flow caused by buying and using the machine by virtue of investment grants, writing down allowances and balancing allowances or balancing charges." [12] Therefore, for capital budgeting purposes it is the capital allowances which produce the tax shelter.

Illustration II

Chizoba Ltd. is considering buying breadmaking equipment for ₦20,000. The equipment which will earn ₦5,000 annually will be scrapped for ₦1,000 at the end of its sixth year. Assume that the initial allowance for this kind of asset is 40 percent while its annual allowance is 25 percent. The minimum desired rate of return is 10 percent. Assume also a fixed tax rate of 45 percent. Will the investment be advisable?

Since there is a negative net present value, the desired investment is not worthwhile. This view is also supported by the profitability index which is less than one. The investment could have been acceptable if the net present value $\geqslant 0$ or the profitability index $\geqslant 1$. So long as the net present value $\leqslant 0$, which suggests a rejection of the proposal, the profitability index may be superfluous. However, the profitability index tends to make the present value approach more appreciable to management and would be more meaningful for making a choice among conflicting proposals.

The above illustration shows how our capital allowance and not depreciation constitutes a tax shelter to a company. It does this by its offsetting effect against earnings, thereby legally reducing or avoiding tax liability. A going concern has no choice either in the rates of capital allowances or in the way or ordering capital allowances claims to any greater advantage.

7	—	—	—	—	—	(1,703)	(1,703)	.513	(874)
Total present value									18,749
Net present value ₦(20,000 – 18,749)									(1,251)

Profitability/Desirability index: $\frac{\text{Present value of net cash benefits}}{\text{Present value of outlays}} = \frac{E}{C} = \frac{19623}{(20000 + 874)} = \frac{19623}{20874} = 0.940$

* The lag factor applied in tax payment is due to the application of the preceding year basis (PYB) of assessment.

** At the end of year six, a balancing adjustment is made. The loss on disposal of ₦1,215 = (2,215 — 1,000) at the end of year six is deducted from the earnings of year six and charged to tax in year seven. The loss constitutes a balancing allowance. There is nil annual allowance in the year of disposal. The adjustment, i.e. the merging of earnings and loss on disposal in year six, is necessary for the purposes of present-value computation.

Although the rates are subject to change, they are matter for the tax law which must be adhered to by all concerned.

It is occasionally obliquely implied [14] that even in a place such as Nigeria where depreciation is not tax deductible that the effect of the depreciation method selected could affect a capital budgeting decision if (as is often the case) the depreciation deductions used for prudent accounting purposes are greater than the capital allowances used for tax purposes.

This conception appears to be erroneous for the simple fact that once depreciation is non-tax deductible, it has no place in the capital budgeting analysis. Out tax law *simpliciter* does not admit it, and therefore we need not include it when discussing non-cash items that provide tax shelters in capital budgeting. Any depreciation deduction made as may be necessitated by prudent accounting is added back for tax purposes, thereby making it ineffectual in providing a tax shelter. Since governments use tax laws to influence the level of capital investments, capital expenditure decisions are expected to be consistent with the relevant tax laws of the particular environment.

However, where it becomes possible in future for our tax law to incorporate an option for companies to choose an annual rate considered suitable to them for calculating the annual allowances, then it becomes intelligible, as in the case of the depreciation method selected, for companies to talk of an accelerated or reduced rate as it affects their tax-sheltered items.

Where there is zero or inadequate earnings to take care of the capital allowances claims, they may be carried to a future year with higher earnings. For the purposes of present value, however, the tax shelter should be phased into the period in which tax becomes payable.

When the asset is scrapped, sold, or disposed of it attracts either a balancing allowance or a balancing charge. [15] Where the proceeds or a sale or disposal exceed the residual value of the assets (arrived at after deducting the cumulative capital allowances to the date of disposal) there will be a balancing charge. The reverse effect attracts a balancing allowance. For capital budgeting purposes, a balancing charge incurs a tax liability for a company while a balancing allowance provides a tax shield.

13. It is assumed that the basis period for the first year of assessment is a period of not less than one year — otherwise the annual allowance would be proportionally reduced. See provisos to paragraph 7 of Schedule 2 to Companies Income Tax Decree 1979 and to paragraph 8 of Fifth Schedule to Income Tax Management Act 1961.

14. See, for example, F.O. Okafor, *Analysis of Financial Statements*, Monograph, April 1980.

15. See paragraph 9 and 10 of Schedule 2 to Companies Income Tax Decree 1979 and paragraphs 10 and 11 of Fifth Schedule to Income Tax Management Act, 1961.

V. POSSIBLE TAX ADVANTAGE THROUGH CAPITAL ALLOWANCE MANOEUVRABILITY

We have said earlier that a going concern cannot manoeuvre capital allowance claims to any special advantage. However, this kind of manoeuvrability is possible in the case of new Nigerian businesses.

Our tax laws [16] allow a new company the option to elect to be assessed for its second and third years of operation on the actual profits of those years instead of being assessed for those years on the special rules for new trades or businesses. The implication of this is that the exercise of this option by a company will accelerate the claiming of capital allowances in respect of any assets bought within the first three financial years. [17] Thus:

Illustration III

Chidinma commenced business on January 1, 1974 and makes up its account to December 31 of each year. The following assets qualifying for initial allowance were bought:

January 1, 1974 ...	₦3,000
May 1, 1974 ...	₦4,000
September 1, 1975 ...	₦2,000
February 27, 1976 ...	₦1,500

The initial allowances will fall to be claimed as follows:

Date bought	*Cost Naira*	*Where no option is exercised*	*Where option is is exercised*
Jan. 1, 1974	3,000	1973 - 74	1973 - 74
May 1, 1974	4,000	1974 - 75	1974 - 75
Sept. 1, 1975	2,000	1976 - 77	1975 - 76
Feb. 27, 1976	1,500	1977 - 78	1975 - 76

(*Source:* A. C. Ezejelue, "Nigeria: Tax Considerations for Investment and Business Decisions", 33 *Bulletin for International Fiscal Documentation* (1979), p. 405.

From the capital budgeting point of view the accelerated claiming of capital allowances has the same effect as the accelerated depreciation deductions in the earlier years, that is to say, maximizing the present values of income tax savings because it provides a larger tax shield by postponing tax outlays to future periods.

VI. SUMMARY

Capital budgeting usually involves a large investment outlay of funds in one time period with a promise to obtain a net funds inflow in a future time period. The impact of such huge outlay on the profitability and continued existence of any organization is so far reaching that it is not a matter to toy about with. Therefore all available merits of the investment must be analysed before embarking on the investment proposal.

Nowadays, the effects that taxation will have on cash flows is of much relevance in appraising the merits of any capital expenditure. In fact, the forces of taxation are too large to ignore, and the analyst must recognize them, giving particular attention to the options his firm faces that may permit lessening the adverse effects of the tax claim on the project he is studying. [18]

The present value of a project will depend on the quantum and the timing of the cash flows occasioned by the project. The Nigerian government attempts to stimulate capital investments through granting of capital and investment allowances rather than depreciation which is employed purely for prudent accounting purposes. Decreasing the total amount of taxes to be paid during the life of the asset has an inducement effect of increasing the present values of the benefits expected from the investment proposals. Alternatively, it decreases the present values of the expected expenditure proposals.

Since the Nigerian tax laws grant liberal capital and investment allowances to stimulate investments, managers should not only have a wide appreciation of their possible tax effects on capital budgets but will seek expert advice and analysis where necessary. This is particularly urged because no capital allowance shall be granted to any company unless claimed by it or where the tax board is of the opinion that it would be reasonable and just to grant it. [19] The possibility of the latter appears to be remote.

Nigeria:
BUDGET 1980

Extract of a statement made by the Federal Minister of Finance, Professor S.M. Essang, on March 31, 1980.

. . . .

2. As you are aware, this is the first budget, which the new Civilian Administration has prepared since it came into office on the 1st of October, 1979. Moreover, an important feature of this Budget is that this fiscal year will run for only 9 months as against the normal 12 months because of the change over to calendar year which runs from January to December.

3. As an elected Government which was voted to office to carry out the promises it made to the electorate, our proposals differ in emphasis from those in the previous years. Accordingly, various measures I will announce to you now are designed to achieve the present Administration's policy objectives which consist of:

(i) rationalisation of existing fiscal measures with a view to removing unwarranted impediments in the areas of production and trade;
(ii) diversification of the Government revenue base;
(iii) facilitating the dispersal of industries;
(iv) encouraging the manufacturing sector to increase the use of local raw materials and thereby local value added;
(v) facilitating vigorous and relentless implementation of government's priority programmes in the areas of agriculture, housing, industrialization, etc.;
(vi) increasing the availability of essential food items to the generality of our people;
(vii) reduction of the level of unemployment by increasing the tempo of economic activities;
(viii) reduction of the rate of inflation by increasing local production through a combination of the foregoing measures and supplementing local production with imports of essential items as well as by appropriate combination of fiscal and monetary measures;
(ix) ensuring a more equitable distribution of output and incomes in the economy.

FISCAL MEASURES

4. The Federal Government has made a critical review of the various fiscal measures adopted by the previous Administration since 1975 with a view to determining a new direction of policy and in order to achieve the objectives stated above. As you are aware, the policy of imports liberalisation which characterised the 1975/76 and 1976/77 budgets had to be reversed in the subsequent budgets in order to avoid disaster. There was a swing of the pendulum to the other extreme of severe import restrictions which imposed considerable hardship on both consumers and entrepreneurs in the economy. For example, even though the rationale behind import restriction was to maintain a healthy external reserve and protect local industries, yet the severity of those restrictions led to higher domestic prices, higher rate of smuggling and under-utilisation of port facilities. It is against this background that the present Administration has decided to adopt a combination of policies that will produce a self-reliant economy and at the same time bring about a healthy balance of payments position. However, we are aware that frequent changes in fiscal policy tend to generate an atmosphere of uncertainty, which militates against investment decisions. Therefore, I wish to caution that the mere fact that we are currently experiencing rising crude oil prices should not be taken as a signal for pursuing the kind of import liberalisation policy of 1975 to 1977.

Agriculture

5. In addition to the existing incentives granted in previous years, and because of the importance attached to agriculture by this Administration, import duty on fishing vessels is abolished in order to bring the concession in line with free import duty on agricultural machinery and equipments.

Manufacturing Industry

6. The industrial policy of this Administration is to promote geographical spread of industries in order to achieve even industrial development throughout the whole country. To this end, concessions on a sliding scale in the form of approved user scheme will be granted to industries located in the hinterland which import their raw materials. The farther inland and away from the port the smaller the duty payable and vice versa. To encourage the use of local raw materials the higher the local value added the less excise duty shall be payable.

(i) *Commercial vehicle assembly/manufacturing plants*

To protect the local assembler/manufacturer of commercial vehicles the duty or CBU (completely built up) vehicles is raised from 20 percent to 35 percent. To take account of differences in location, the following differential rates of duty are introduced on CKD parts imported by local commercial vehicle assemblers/manufactureres:

(a) approved assemblers/manufacturers in Lagos 20 percent;
(b) approved assemblers/manufacturers in Ibadan 18 percent;
(c) approved assemblers/manufacturers in Enugu 15 percent;
(d) approved assemblers/manufacturers in Kano 10 percent;
(e) approved assemblers/manufacturers in Bauchi 5 percent.

(ii) *Electric fans*

To protect local assemblers/manufacturers of ceiling fans;

(a) import duty is raised from 50 percent to 75 percent;
(b) duty on motors is reduced from 331/3 percent to 10 percent.

(iii) *Galvanized flat sheet*

The duty on flat galvanized iron sheet is raised from 20 percent to 25 percent to protect local industry. Because of excess local capacity, an import licence shall not be granted without a letter of release.

(iv) *Lamp shades*

To protect local industry, import duty on lamp shades is raised from 40 percent to 50 percent.

(v) Duty has also been revised upwards for such items as tarpaulin, paper napkins, musical instruments, brass bed ornaments, wheel barrows to protect local industries and to raise revenue.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

(vi) To correct some anomalies in the existing rates of duty whereby raw materials imported for further processing attract the same duty with the finished products, changes have been introduced on some raw materials such as bentonite and barite, artificial resins, raw materials for dumpers, brake lining and disc pad.

(vii) *Cement*

Duty has been removed on paper bags and selected spare parts of the machinery used by cement factories.

Excise duty

7(i) Excise duty has been reduced on the following items:

(a) margarine	10 to 5 percent
(b) toothpaste	25 to 15 percent
(c) perfumery products	25 to 15 percent

(ii) Excise duty has been imposed on umbrellas and metal crown corks at the rates of 25 kobo each and 5 percent respectively.

Import prohibition

8(i) In order to encourage and protect local industries, the following items have been added to the import prohibition list:
(a) bicycle tyres and tubes in sizes 28 x $1^{1}/2$; 26 x $1^{3}/8$; 26 x $1^{3}/8$ and 26 x $1^{1}/2$ x $1^{1}/8$;
(b) concentrated malt extract;
(c) jute bags;
(d) fabrics for furniture.

(ii) To facilitate early resettlement and as a gesture to Nigerians returning home after a prolonged stay abroad to bring with them their personal effects, cars of engine capacity of 2,500cc and above brought by Nigerians who have stayed abroad for a period of not less than 9 months and for which foreign exchange transfer is not involved are removed from the import prohibition list. Such cars, will, however, attract 500 percent import duty.

Import licence

9. To encourage sporting activities and for safety consideration of industrial workers the following items have been removed from prohibition list and placed under import licence:
(a) sporting equipment not manufactured locally — football boots, spike shoes, boxing boots, cycling shoes, hockey boots, basketball boots, golf shoes, football jerseys and track suits;
(b) Industrial protective footwear, disciplined forces footwear, gloves and apparel are to be imported under approved user licence.

Open general licence

10. In addition to the items already on open general licence the following items have also been placed on open general licence:
(a) stockfish;
(b) louvre frames;
(c) insulated electric wire;
(d) plastic pipes;
(e) linoleum of all types in rolls;
(f) ceramic products such as sinks, wash hand basins, water closets, urinals and bidets.

The removal of these building materials from import restriction is to facilitate the implementation of the Federal and state governments' housing programme as well as to encourage the construction of individual owner-occupied houses.

TAXATION

11. **Changes in the accounting year of government and its consequential effect on assessment years and basis periods**

The accounting year of government is now from 1st January to 31 December and consequently the annual assessment year for tax purposes shall also be from 1st January to 31st December. In respect of the year of assessment which under the existing procedure will be 1980/81, the assessment year will now be "1980 Assessment Year" and shall be for the period 1st April, 1980 to 31st December, 1980. All assessments and payment of tax shall be completed between nine months instead of the usual twelve months. As from 1981, the normal 12 months assessment year shall commence on 1st January, 1981.

12. **Basis period for assessment**

(a) The existing procedure of assessing on income of the previous year remains unchanged.

(b) Basis period for assessment year 1980 in respect of income of individuals (other than employment income) therefore remains 1/4/79 — 31/3/80, while employment income will continue to be treated on current year basis. However, for the assessment year 1981, the basis period for individuals (other than employment income) shall be for the nine months ended 31/12/80.

(c) In respect of companies to which the Companies Income Tax Decree 1979 is applicable, the following distinctions have been made:
(i) those who make up accounts for accounting years ending between 1st April to 31st December:
(ii) those who make up accounts for accounting years ending between 1st January and 31st March;
(iii) petroleum producing companies;

In respect of companies of business in category (i), the normal preceding year basis will apply without change in 1980, 1981 and future years. For those in category (ii) it has been decided that for the assessment year 1980, the basis period will be the period beginning from the commencement of their accounting year up to 31st December, 1979. For example, if a company makes up its annual accounts up to 28th February, the basis period for 1980 year of assessment will be 1st March, 1979 — 31st December, 1979. This means the basis period will be less than 12 months. For the assessment year 1981, the basis period will be from 1st January, 1980 up to the end of the accounting year. In the case of the company in the above example, the basis period for the year 1981 will be 1/1/80 — 28/2/80.

13. The normal procedures in commencement and cessation cases will continue to apply, provided where taxpayers' options are exercised in accordance with the Companies Income Tax Decree 1979 for assessment on actual basis in the 1980 assessment year, the profits of the full 12 months are to be computed where necessary on pro-rata basis.

14. Provisions as to payment of tax on receipt of notice of assessment remain unchanged, except payments of tax have to be completed between 1st January and 31st December instead of 1st April and 31st March of the following year. In this connection, "21st day of March" as contained in S.58 of the Company Income Tax Decree will now read 14th December.

15. In the case of Personal Income Tax, existing dates will be related and converted appropriately to equivalent dates in the new assessment year, e.g. 1st December in the old system will become 1st September in the new assessment year and 1st April becomes 1st December and 31st March becomes 31st December, etc. Taxpayers are expected to clear with relevant tax authorities, if in doubt. Petroleum producing companies will continue to pay tax on current year basis as usual from 1/1/80 — 31/12/80 without change.

16. The present system of regarding a Company and its shareholders as two distinct persons for income tax purposes will continue. Companies will therefore continue to pay Companies Income Tax at the rate of 45 percent while shareholders will in addition pay tax on the dividends or similar distributions from companies.

17. However, where dividends are paid by one Nigerian company to another, in order

© 1980 International Bureau of Fiscal Documentation — BULLETIN

to ensure that such dividends or such other distributions are not subjected to double taxation, the following procedure will be introduced this year:

(a) A company which is resident in Nigeria will be required to account to the Federal Board of Inland Revenue for income tax on the profits of the company and for income tax in respect of dividends paid or credited and other similar distributions made by it.

(b) A company, on paying or crediting a dividend or making any other payment which is a distribution in respect of which it is required to account for income tax, is authorised to deduct out of the distribution an amount equal to the income tax for which it is liable to account. In the case of dividends paid or credited by one company to another, the tax to be accounted for shall be at the rate of 45 percent and in the case of individuals the amount of tax to be accounted for shall be at the rate of 12½ percent.

(c) Dividends and other such distributions received by a company resident in Nigeria from another resident company on which the paying company is liable to account for income tax should be described as "franked investment income" of the recipient company. The recipient company is not charged to further income tax on such "franked investment income" but unless otherwise specifically exempted from tax, it is not entitled to repayment of the income tax accounted for by the paying company.

(d) In the case of a company or a non-resident individual, the tax deducted shall be accounted for to the Federal Board of Inland Revenue, and in all other cases to the relevant tax authority in which the individual is resident.

(e) In accounting for tax so deducted to a tax authority, the company shall state in writing the following particulars, that is to say:
  (i) the gross amount of the dividend or such similar distributions to each shareholder;
  (ii) the name and address of such recipient;
  (iii) the period of the accounting year in respect of which the dividend or distribution is paid;
  (iv) the amount of tax deducted and accounted for.

18. Distribution of profits after tax

Companies may distribute as dividends either a maximum of 60 percent of profits after tax or 25 percent of the paid-up capital, whichever is higher, provided such distributions are made out of current year profits.

19. Tax deduction at source on rents paid by companies

For the avoidance of doubt, the existing practice which was approved by government last year is as follows:

(i) Where any rent becomes due or payable by one company to another company or from one company to an individual, the Company paying such rent shall at the date when the rent is paid or credited, whichever first occurs, account to the Federal Board of Inland Revenue, or to a relevant State Tax Authority, income tax at the rate of 12½ kobo for each Naira.

(ii) A company, on paying any rent in respect of which it is required to account for income tax, shall deduct out of the rent paid or credited an amount equal to the income tax for which it is liable to account.

(iii) In accounting for the tax so deducted to the Federal Board or to any State Tax Authority, the company shall state in writing the following particulars, that is to say:
  (a) the gross amount of rent paid, credited per annum;
  (b) the name and address of the company to whom the rent has been paid or credited and the period in respect of which such rent has been paid or credited; and
  (c) the address or accurate description of the location of the property on which the rent is being paid.

20. In respect of payments of rent from one company to another, or from one company to a non-resident individual, the tax so deducted shall be remitted to the Federal Board of Inland Revenue. In all other cases, tax deducted shall be remitted to the relevant tax authority of the State in which the beneficiary of the rent is resident.

COPYRIGHT ROYALTIES:

Conventions for the avoidance of double taxation

The International Conference of States convened jointly by the UNESCO and the World Intellectual Property Organization (WIPO) in Madrid in November-December 1979 adopted the final text of a Multilateral Convention for the Avoidance of Double Taxation of Copyright Royalties, to which was annexed an optional Model Bilateral Agreement on the same subject. In 33 *Bulletin for international fiscal documentation* 382 (1979) Prof. J. van Hoorn Jr. made some critical observations with respect to the draft model multilateral treaty. In this issue the final text — which deviates from the draft — is reproduced together with the proposed draft bilateral treaty.

MULTILATERAL CONVENTION FOR THE AVOIDANCE OF DOUBLE TAXATION OF COPYRIGHT ROYALTIES

The Contracting States,

Considering that the double taxation of copyright royalties is prejudicial to the interests of authors and thus constitutes a serious impediment to the dissemination of copyrighted works, which is one of the basic factors in the development of the culture, science and education of all peoples,

Believing that the encouraging results already achieved by action against double taxation, through bilateral agreements and domestic measures, whose beneficial effects are generally recognized, can be improved by the conclusion of a multilateral convention specific to copyright royalties,

Being of the opinion that these problems must be solved while respecting the legitimate interests of States and particularly the needs specific to those where the widest possible access to works of the human mind is an essential condition to their continuing development in the fields of culture, science and education,

Seeking to find effective measures designed to avoid double taxation of copyright royalties where possible and, should it subsist, to eliminate it or to reduce its effect,

Have agreed on the following provisions:

CHAPTER I
DEFINITIONS

Article 1
Copyright royalties

1. For the purposes of this Convention and subject to the provisions of paragraphs 2 and 3 of this Article, copyright royalties are payments of any kind made on the basic of the domestic copyright laws of the Contracting State in which these royalties are originally due, for the use of, or the right to use, a copyright in a literary, artistic or scientific work, as defined in the multilateral copyright conventions, including such payments made in respect of legal or compulsory licences or in respect of the "droit de suite".

2. This Convention shall not, however, be taken to cover royalties due in respect of the exploitation of cinematographic works or works produced by a process analogous to cinematography as defined in the domestic copyright laws of the Contracting State in which these royalties are originally due when the said royalties are due to the producers of such works or their heirs or successors-in-title.

3. With the exception of payments made in respect of the "droit de suite" the following shall not be considered as copyright royalties for the purposes of this Convention: payments for the purchase, rental, loan or any other transfers of a right in the material base of a literary, artistic or scientific work, even if the amount of this payment is fixed in the light of, the copyright royalties due or if the latter are determined, in whole or in part, by that of the said payment. When a right in the material base of work is transferred as an accessory to the transfer of the entitlement to use a copyright in the work, only the payments in return for this entitlement are copyright royalties for the purpose of this Convention.

4. In the case of payments made in respect of the "droit de suite" and in all cases of the transfer of a right in the material base of a work referred to in paragraph 3 of this Article and independently of the fact that the transfer in question is or is not free of charge, any payment made in settlement of or as a reimbursement for an insurance premium, transport of warehousing costs, agent's commission or any other remuneration for a service, and any other expenses incurred, directly or indirectly, by the removal of the material base in question, including customs duties and other related taxes and special levies, shall not be a copyright royalty for the purposes of this Convention.

Article 2
Beneficiary of copyright royalties

For the purposes of this Convention, the "beneficiary" of copyright royalties is the beneficial owner thereof to whom all or a part of such royalties is paid, whether he collects them as author, or heir or successor-in-title of the author, or whether he collects them in application of any other relevant criterion as agreed to in a bilateral agreement concerning double taxation of copyright royalties.

Article 3
State of residence of the beneficiary

1. For the purposes of this Convention, the State of which the beneficiary of the copyright royalties is a resident shall be deemed to be the State of residence of the beneficiary.

2. A person shall be deemed to be a resident of a State if he is liable to tax therein by reason of his domicile, residence, place of effective management or any other relevant criterion as agreed to in a bilateral agreement concerning double taxation of copyright royalties. But this term does not include any person who is liable to tax in that State in respect only of income from sources in that State as capital he possesses there.

Article 4
State of source of royalty

For the purposes of this Convention, a State shall be deemed to be the State of source of copyright royalties when such royalties for the use of, or the right to use,

© 1980 International Bureau of Fiscal Documentation – BULLETIN

a copyright in a literary, artistic or scientific work are originally due:

a) by that State or by a political or administrative subdivision or local authority of that State;
b) by a resident of that State except where they result from an activity carried on by him in another State through a permanent establishment or from a fixed base;
c) by a non-resident of that State, where they result from an activity carried on by him through a permanent establishment or from a fixed base.

CHAPTER II
GUIDING PRINCIPLES FOR ACTION AGAINST DOUBLE TAXATION OF COPYRIGHT ROYALTIES

Article 5
Fiscal sovereignty and equality of rights of states

Action against double taxation of copyright royalties shall be carried out, in accordance with the provisions of Article 8 of this Convention, with due respect for the fiscal sovereignty of the State of source and the State of residence, and due respect for the equality of their right to tax these royalties.

Article 6
Fiscal non-discrimination

The measures against double taxation of copyright royalties shall not give rise to any tax discrimination based on nationality, race, sex, language or religion.

Article 7
Exchange of information

In so far as it is necessary for the implementation of this Convention, the competent authorities of the Contracting States will exchange reciprocally information in the form and under the conditions which shall be laid down by means of bilateral agreement.

CHAPTER III
IMPLEMENTATION OF THE GUIDING PRINCIPLES FOR THE ACTION AGAINST DOUBLE TAXATION OF COPYRIGHT ROYALTIES

Article 8
Means of implementation

1. Each Contracting State undertakes to make every possible effort, in accordance with its Constitution and the guiding principles set out above, to avoid double taxation of copyright royalties, where possible, and, should it subsist, to eliminate it or to reduce its effect. This action shall be carried out by means of bilateral agreements or by way of domestic measures.

2. The bilateral agreements referred to in paragraph 1 of this Article include those which deal with double taxation in general or those which are limited to double taxation of copyright royalties. An optional model of a bilateral agreement of the latter category, comprising several alternatives, is attached to this Convention of which it does not form an integral part. The Contracting States, while respecting the provisions of this Convention, may conclude bilateral agreements based on the norms that are most acceptable to them in each particular case. The application of bilateral agreements concluded earlier by the Contracting States is in no way affected by this Convention.

3. In case of adoption of domestic measures, each Contracting State may, notwithstanding the provisions of Article 1 of this Convention, define copyright royalties by reference to its own copyright legislation.

CHAPTER IV
GENERAL PROVISIONS

Article 9
Members of diplomatic or consular missions

The provisions of this Convention do not affect the fiscal privileges of members of diplomatic or consular missions of the Contracting States, as well as of their families, either under the general rules of international law or under the provisions of special conventions.

Article 10
Information

1. The Secretariat of the United Nations Educational, Scientific and Cultural Organization and the International Bureau of the World Intellectual Property Organization shall assemble and publish relevant normative information concerning taxation of copyright royalties.

2. Each Contracting State shall communicate, as soon as possible, to the Secretariat of the United Nations Educational, Scientific and Cultural Organization and to the International Bureau of the World Intellectual Property Organization, the text of any new law, as well as all official texts concerning the taxation of copyright royalties, including the text of any specific bilateral agreement on the relevant provisions on the said subject contained in any bilateral agreement dealing with double taxation in general.

3. The Secretariat of the United Nations Educational, Scientific and Cultural Organization and the International Bureau of the World Intellectual Property Organization shall furnish to any Contracting State, upon its request, information on questions, relating to this Convention; they shall also carry out studies and provide services in order to facilitate the application of this Convention.

CHAPTER V
FINAL CLAUSES

Article 11
Ratification, acceptance, accession

1. This Convention shall be deposited with the Secretary General of the United Nations Organization. It shall remain open until October 31, 1980, for signature by any State that is a member of the United Nations, any of the Specialized Agencies brought into relationship with the United Nations or the International Atomic Energy Agency, or is a party to the Statute of the International Court of Justice.

2. This Convention shall be subject to ratification or acceptance by the signatory States. It shall be open for accession by any State referred to in paragraph 1 of this Article.

3. Instruments of ratification, acceptance or accession shall be deposited with the Secretary-General of the United Nations.

4. It is understood that, at the time a State becomes bound by this Convention, it will be in a position in accordance with its domestic law to give effect to the provisions of this Convention.

Article 12
Reservations

The Contracting States may, either at the time of signature of this Convention or at the time of ratification, acceptance or accession, make reservations as regards the conditions of application of the provisions contained in Articles 1 to 4, 9 and 17. No other reservation to the Convention shall be permitted.

Article 13
Entry into force

1. This Convention shall enter into force three months after the deposit of the tenth instrument of ratification, acceptance or accession.

2. For each State ratifying, accepting, or acceding to this Convention after the deposit of the tenth instrument of ratification, acceptance or accession, this Convention shall enter into force three months after the deposit of its instrument.

Article 14
Denunciation

1. Any Contracting State may denounce this Convention by a written notification addressed to the Secretary General of the United Nations.

2. Such denunciation shall take effect twelve months after the date of receipt of

© 1980 International Bureau of Fiscal Documentation – BULLETIN

the notification by the Secretary General of the United Nations.

Article 15
Revision

1. After this Convention has been in force for five years, any Contracting State may, by notification, addressed to the Secretary-General of the United Nations, request that a conference be convened for the purpose of revising the Convention. The Secretary-General shall notify all Contracting States of this request. If, within a period of six months following the date of notification by the Secretary-General of the United Nations, not less than one-third of the Contracting States, provided the number is not less than five, notify him of their concurrence with the request, the Secretary-General shall inform the Director-General of the United Nations Education, Scientific and Cultural Organization and the Director General of the World Intellectual Property Organization, who shall convene a revision conference with a view to introducing into this Convention amendments designed to improve action against double taxation of copyright royalties.

2. The adoption of any revision of this Convention shall require an affirmative vote by two-thirds of the States attending the revision conference, provided that this majority includes two-thirds of the States which, at the time of the revision conference, are parties to the Convention.

3. Any State which becomes a party to the Convention after the entry into force of a new Convention wholly or partially revising this Convention shall, failing an expression of a different intention by that State, be considered as:

a) a party to the revised convention;
b) a party to this Convention in relation to any State which is a party to the present Convention but is not bound by the revised convention.

4. This Convention shall remain in force as regards relations between or with the Contracting States which have not become parties to the revised convention.

Article 16
Languages of the convention and notifications

1. This Convention shall be signed in a single copy in Arabic, English, French, Russian and Spanish, the five texts being equally authoritative.

2. Official texts shall be established by the Director-General of the United Nations Educational, Scientific and Cultural Organization and the Director General of the World Intellectual Property Organization, after consultation with the interested Governments concerned, in the German, Italian and Portuguese languages.

3. The Secretary-General of the United Nations shall notify the States referred to in Article 11, paragraph 1, as well as the Director-General of the United Nations Educational, Scientific and Cultural Organization and the Director General of the World Intellectual Property Organization of

a) signature of this Convention, together with any accompanying text;
b) the deposit of instruments of ratification, acceptance or accession, together with any accompanying text;
c) the date of entry into force of this Convention under Article 13, paragraph 1;
d) the receipt of notifications of denunciation;
e) the requests communicated to him in accordance with Article 15, as well as any communication received from the Contracting State concerning the revision of this Convention.

4. The Secretary-General of the United Nations shall transmit two certified copies of this Convention to all States referred to in Article 11, paragraph 1.

Article 17
Interpretation and settlement of disputes

1. A dispute between two or more Contracting States concerning the interpretation or in the matter of application of this Convention, not settled by negotiation, shall, unless the States concerned agree on some other method of settlement, be brought before the International Court of Justice for determination by it.

2. Any State may, at the time of signing this Convention or depositing its instrument of ratification, acceptance or accession, declare that it does not consider itself bound by the provisions of paragraph 1. In the event of a dispute between that State and any other Contracting State, the provisions of paragraph 1 shall not apply.

3. Any State that has made a declaration in accordance with paragraph 2 may at any time withdraw it by notification addressed to the Secretary-General of the United Nations.

IN WITNESS WHEREOF, the undersigned, being duly authorized, have signed this Convention.

DONE at Madrid on December 13, 1979.

Model bilateral agreement for the avoidance of double taxation of copyright royalties

PREAMBLE OF AGREEMENT

The Government of (State A) and the Government of (State B),

Wishing to apply the principles set out in the Multilateral Convention for the Avoidance of Double Taxation of Copyright Royalties and thus to eliminate such double taxation or to reduce its effect,

Have agreed on the following provisions:

I
SCOPE OF THE AGREEMENT

Article I
Persons and royalties covered

1. This Agreement shall apply to persons who are residents of one or both of the Contracting States.

2. This Agreement shall apply to copyright royalties when they arise in one Contracting State and their beneficiary is a resident of the other Contracting State.

Article II
Taxes covered

Alternative A

1. This Agreement shall apply to compulsory taxes or deductions imposed on behalf of each Contracting State, (of its political subdivisions or its local authorities), irrespective of their description, their kind and the manner in which they are levied, provided that they are imposed on copyright royalties and are assessed on the amount of royalties, excluding taxes of a fixed nature calculated without reference to the amount of the royalty.

2. The existing taxes to which the Agreement shall apply are in particular:

a) in (State A)
   (i) [income tax applicable]
   (ii) [other taxes applicable]
   (iii) . . .
b) in (State B)
   (i) [income tax applicable]
   (ii) [other taxes applicable]
   (iii) . . .

3. This Agreement shall apply also to future taxes identical [or substantially similar] to those referred to in paragraph 1, which are imposed after the date of signature of this Agreement in addition to, or in place of, existing taxes.

4. The competent authorities of Contracting States shall communicate [at the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

beginning of each year] any changes in their respective laws and their application [made during the preceding year].

Alternative B

1. This Agreement shall apply to taxes imposed on behalf of each Contracting State [of its political subdivisions or its local authorities], irrespective of their description or the manner in which they are levied, provided that they are imposed on copyright royalties and are assessed on the amount of the royalties.

2. The taxes to which this Agreement shall apply are:

a) in (State A)
   (i) [total income tax]
   (ii) [other income taxes]
   (iii) . . .
b) in (State B)
   (i) [total income tax]
   (ii) [other income taxes]
   (iii) . . .

3. The competent authorities of Contracting States shall communicate [at the beginning of each year] any changes in their respective tax laws and their application [made during the preceding year].

II
DEFINITIONS

Article III
General definitions

For the purposes of this Agreement, unless the context otherwise requires:

a) the terms "a Contracting State" and "the other Contracting State" shall, depending on the context, refer to (State A) or (State B);
b) the term "person" includes an individual, a company and any other body of persons;
c) the term "company" means any body corporate or any entity which is treated as a body corporate for tax purposes;
d) the terms "enterprise of a Contracting State" and "enterprise of the other Contracting State" mean respectively an enterprise carried on by a resident of a Contracting State and an enterprise carried on by a resident of the other Contracting State;
e) the term "nationals" means:
   (i) all individuals possessing the nationality of a State;
   (ii) all legal persons, partnerships and associations deriving their status as such from the law in force in a State;
f) the term "competent authority" means:
   (i) in (State A), ... and,
   (ii) in (State B), ... ;
g) the term "copyright royalties" shall be interpreted in accordance with the definition given in Article 1 of the Multilateral Convention for the Avoidance of Double Taxation of Copyright Royalties;
h) the term "beneficiary of copyright royalties" shall be interpreted in accordance with the definition given in Article 2 of the Multilateral Convention for the Avoidance of Double Taxation of Copyright Royalties;
i) the term "State of source of royalties" shall be interpreted in accordance with the definition given in Article 4 of the Multilateral Convention for the Avoidance of Double Taxation of Copyright Royalties;
j) the term "State of residence of the beneficiary" shall be interpreted in accordance with the definition given in Article 3 of the Multilateral Convention for the Avoidance of Double Taxation of Copyright Royalties completed by Article IV of this Agreement.

Article IV
Resident

1. For the purposes of this Agreement, a person shall be deemed to be a resident of a State if he is so considered in application of the provisions of Article 3, paragraph 2, of the Multilateral Convention for the Avoidance of Double Taxation of Copyright Royalties.

2. Where by reason of the provision of paragraph 1 an individual is deemed to be a resident of both Contracting States, then his status shall be determined as follows:

a) he shall be deemed to be a resident of the State in which he has a permanent home available to him. If he has a permanent home available to him in both States, he shall be deemed to be a resident of the State with which his personal and economic relations are closer (centre of vital interests);
b) if the State in which he has his centre of vital interests cannot be determined, or if he has not a permanent home available to him in either State, he shall be deemed to be a resident of the State in which he has an habitual abode;
c) if he has an habitual abode in both States or in neither of them, he shall be deemed to be a resident of the State of which he is a national;
d) if he is a national of both States or of neither of them, the competent authorities of the Contracting States shall settle the question by mutual agreement.

3. Where by reason of the provisions of paragraph 2 a person other than an individual is deemed to be a resident of both Contracting States, [it shall be deemed to be a resident of the Contracting State in which its place of effective management is situated] [the competent authorities of the Contracting States shall settle the question by mutual agreement].

Article V
Permanent establishment — fixed base

1. For the purposes of this Agreement, the term "permanent establishment" means a fixed place of business through which the business of an enterprise is wholly or partly carried on.

[2. The term "permanent establishment" includes especially:

a) a place of management;
b) a branch;
c) an office;
d) an industrial installation;
e) a store or other sales outlet;
f) a permanent exhibition at which orders are received or solicited;
g) the furnishing of services, including consultancy services, by an enterprise through employees or other personnel, where activities of that nature continue, for the same or a connected project, in the territory of the same State [for . . . . months].

3. Notwithstanding the provisions of paragraphs 1 and 2, a "permanent establishment" shall not be deemed to include:

a) the use of facilities solely for the purpose of storage or display of goods belonging to the enterprise;
b) the maintenance of a stock of goods belonging to the enterprise solely for the purpose of storage or display;
c) the maintenance of a stock of goods belonging to the enterprise solely for the purpose of processing by another enterprise;
d) the maintenance of a fixed place of business solely for the purpose of purchasing goods, acquiring rights or collecting information for the enterprise;
e) the maintenance of a fixed place of business solely for the purpose of advertising, for the supply of information, for scientific research or for similar activities which have a preparatory or auxiliary character, for the enterprise.

4. Notwithstanding the provisions of paragraphs 1 and 2, a person acting in a Contracting State on behalf of an enterprise of the other Contracting State — other than an agent of an independent status, to whom paragraph 5 applies — shall be deemed to be a "permanent establishment" in the first-mentioned State:

a) if he has, and habitually exercises in that State, an authority to conclude contracts in the name of the enterprise, unless his activities are limited to the purchase of goods, or to the acquisition of rights, for the enterprise; or
b) if he has no such authority but habitually maintains in the first-mentioned

© 1980 International Bureau of Fiscal Documentation — BULLETIN

State a stock from which he regularly delivers merchandise on behalf of the enterprise.

5. An enterprise of a Contracting State shall not be deemed to have a permanent establishment in the other Contracting State merely because it carries on business there through a broker, general commission agent, literary agent, or any other intermediary of an independent status, where such persons are acting in the ordinary course of their business. However, when the activities of such an intermediary are devoted exclusively or almost exclusively to that enterprise for more than . . . consecutive months, he shall not be deemed an agent of an independent status within the meaning of this Article.

6. The fact that a company which is a resident of a Contracting State controls or is controlled by a company which is a resident of another Contracting State, or which carries on business in that other State (whether through a permanent establishment or otherwise), shall not in itself constitute such a company as a permanent establishment of the other].

7. In this Agreement, the term "fixed base" means a place of residence and of work, or a place of work, where an individual habitually carries on a part at least of his activities of an independent nature.

III
RULES OF TAXATION

Article VI
Taxation methods

1st Alternative

Article VI A
Taxation by the State of residence subject to the existence of a permanent establishment or fixed base in the other State

1. Copyright royalties arising in a Contracting State and paid to a resident of the other Contracting State shall, subject to the provisions of paragraph 2, be taxable only in that other State if such resident is the beneficial owner of the royalties.

2. The provisions of paragraph 1 shall not apply with respect to taxes on income if the beneficiary of the royalties carries on an industrial or commercial activity in the other Contracting State in which the royalties arise, through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the right, activity or property in respect of which the royalties are paid is effectively connected with such permanent establishment or fixed base. In such a case, the royalties may be taxed solely in the State where the permanent establishment or the fixed base is situated, but only to the extent that these are attributed to that establishment or that base.

3. In each Contracting State, the royalties that the beneficiary might have been expected to collect if he had created a distinct and separate enterprise or if he had installed a distinct and separate place of work engaged in the same activities under the same or similar conditions independently of the centre of activity of which this enterprise or this place of work constitutes a permanent establishment or a fixed base, shall be attributed to that permanent establishment or that fixed base. There shall be allowed as deductions expenses directly connected with the copyright royalties and incurred for the purposes of the permanent establishment or fixed base, including executive and general administrative expenses so incurred, whether in the State in which the permanent establishment or the fixed base is situated, or elsewhere. The royalties attributed to the permanent establishment or the fixed base shall be calculated by the same method year by year, unless there is good and sufficient reason to the contrary.

[4. If a royalty is more than the normal, intrinsic value of the rights in respect of which it is paid, the provisions in paragraphs 1 and 2 may be applied only to that part of the royalty corresponding to this normal, intrinsic value].

2nd Alternative

Article VI B
Allocation of taxation between the State of residence and the State of source with the same tax ceiling in both Contracting States

1. Copyright royalties arising in a Contracting State and paid to a beneficial owner who is a resident of the other Contracting State shall be exempt in the first-mentioned State from the taxes covered under paragraph[s] 2(a)(ii) [and 2(a)(iii)] of Article II in the case of (State A) or under paragraph[s] 2(b)(ii) [and 2(b)(iii)] of Article II in the case of (State B).

2. Where royalties are subject to income tax in the Contracting State of source according to the law of that State and in the Contracting State in which the beneficial owner is resident, the tax so charged may not exceed "x"% of the amount of the royalty in the State of source and "y"% of the gross amount of the royalty in the State of residence.

3. The provisions of paragraphs 1 and 2 shall not apply if the beneficiary of royalties, being a resident of a Contracting State, carries on an industrial or commercial activity in which the royalties arise through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the right, activity or property in respect of which the royalties are paid is effectively connected with such permanent establishment or fixed base. In such a case the royalties may be taxed solely in the State where the permanent establishment or the fixed base is situated, but only so much of them as is attributable to that permanent establishment or fixed base.

4. In each Contracting State, the royalties that the beneficiary might have been expected to collect if he had created a distinct and separate enterprise or if he had installed a distinct and separate place of work engaged in the same or similar activities under the same or similar conditions independently of the centre of activity of which this enterprise or this place of work constitutes a permanent establishment or a fixed base, shall be attributed to that permanent establishment or that fixed base. There shall be allowed as deductions expenses incurred for the purpose of the permanent establishment or fixed base, including executive and general administrative expenses so incurred, whether in the State in which the permanent establishment or the fixed base is situated, or elsewhere. The royalties attributed to the permanent establishment or the fixed base shall be calculated by the same method year by year, unless there is good and sufficient reason to the contrary.

[5. If a royalty is more than the normal, intrinsic value of the rights in respect of which it is paid, the provisions in paragraphs 1, 2 and 3, may be applied only to that part of the royalty corresponding to this normal, intrinsic value].

3rd Alternative

Article VI C
Allocation of taxation between the State of residence and the State of source with different tax ceilings in each Contracting State

1. Copyright royalties whose source is in a Contracting State and paid to a beneficial owner who is a resident of the other Contracting State shall be taxable in both Contracting States. They shall, however, be exempt from the taxes covered by paragraph[s] 2(a)(ii) [and 2(a)(iii)] of Article II in the case of (State A) or in paragraph[s] 2(b)(ii) [and 2(b)(iii)] of Article II in the case of (State B).

2. Where such royalties are subject to income tax in the Contracting State in which they have their source, according to the law of that State, and in the Contracting State of which the beneficiary is a resident, the tax so charged may not exceed:

© 1980 International Bureau of Fiscal Documentation – BULLETIN

a) in the case of royalties whose source is in (State A) and paid to a resident of (State B) "x" percent of the gross amount of the royalties in the case of the tax levied in (State A) and "x" percent of the gross amount of the royalties in the case of the tax levied in (State B).
b) in the case of royalties whose source is in (State B) and paid to a resident of (State A) "y" percent of the gross amount of the royalties in the case of the tax levied in (State A) and "y" percent of the gross amount of the royalties in the case of the tax levied in (State B).

3. The provisions of paragraphs 1 and 2 shall not apply if the beneficiary of the royalties, being a resident of a Contracting State, carries on business in the other Contracting State in which the royalties arise, through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the right, activity or property in respect of which the royalties are paid is effectively connected with such permanent establishment or fixed base. In such a case the royalties may be taxed solely in the State where the permanent establishment or the fixed base is situated, but only so much of them as is attributable to that permanent establishment or fixed base.

4. In each Contracting State, the royalties that the beneficiary might have been expected to collect if he had created a distinct and separate enterprise or if he had installed a distinct and separate place of work engaged in the same or similar activities under the same or similar conditions independently of the centre of activity of which this enterprise or this place of work constitutes a permanent establishment or fixed base, shall be attributed to that permanent establishment or that fixed base. There shall be allowed as deductions expenses directly connected with the copyright royalties and incurred for the purposes of the permanent establishment or fixed base, including executive and general administrative expenses so incurred, whether in the State in which the permanent establishment or the fixed base is situatied, or elsewhere. The royalties attributed to the permanent establishment or the fixed base shall be calculated by the same method year by year, unless there is good and sufficient reason to the contrary.

[5. If a royalty is more than the normal, intrinsic value of the rights in respect of which it is paid, the provisions in paragraphs 1, 2 and 3, may be applied only to that part of the royalty corresponding to this normal, intrinsic value].

4th Alternative

Article VI D
Taxation by the State of source

Copyright royalties whose source is in a Contracting State and paid to a resident in the other Contracting State are taxable exclusively in the State of source of the royalties.

5th Alternative

Article VI E
Allocation of taxation between the State of residence and the State of source with the tax ceiling in the State of source

1. Copyright royalties arising in a Contracting State and paid to a resident of the other Contracting State may be taxed in that other State.

2. However, such royalties may also be taxed in the Contracting State in which they arise and according to the laws of that State, but if the recipient is the beneficiary of the royalties, the tax so charged shall not exceed "x" percent of the gross amount of the royalties. The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of this limitation.

6th Alternative

Article VI F
Allocation of taxation between the State of source and that of residence with the tax ceiling in the State of residence

1. Copyright royalties whose source is in a Contracting State and which are paid to a beneficial owner resident of the other Contracting State, shall be taxable in the State of source of the royalties.

2. However, said royalties may also be taxed in the Contracting State where the beneficial owner of the royalties resides, but not to exceed x percent of the gross amount of the royalties.

IV
ELIMINATION OF DOUBLE TAXATION

Article VII
Methods for avoidance of double taxation

1st Alternative

Article VII A
Exemption method

1st Alternative: Article VII A (i) — Ordinary exemption

Where a resident of a Contracting State receives royalties which, in accordance with the provisions of Article VI, may be taxed in the other Contracting State, the first-mentioned State shall exempt such royalties from the tax on the income of this resident and shall not take them into account in calculating the amount of this tax.

2nd Alternative: Article VII A (ii) — Exemption with progression

Where a resident of a Contracting State receives royalties which, in accordance with the provisions of Article VI, may be taxed in the other Contracting State, the first-mentioned State shall exempt such royalties from the tax on the income of this resident. Such State may nevertheless take into account the exempted royalties in calculating the amount of tax on the other income of this resident and may apply the same rate of tax as if the royalties in question had not been exempted.

3rd Alternative: Article VII A (iii) — Exemption maintaining taxable income

Where a resident of a Contracting State receives royalties which, in accordance with the provisions of Article VI, may be taxed in the other Contracting State, the first-mentioned State shall allow as a deduction from tax on the income of that resident, that part of the tax which is applicable to the royalties received from the other Contracting State.

2nd Alternative

Article VII B
Credit method

1st Alternative: Article VII B (i) — Ordinary credit

1. Where a resident of a Contracting State receives royalties which, in accordance with the provisions of Article VI, may be taxed in the other Contracting State, the first-mentioned State shall allow as a deduction from the tax on the income of that resident, an amount equal to the income tax paid in the other Contracting State. Such deduction shall not exceed that part of the income tax, as computed before the deduction is given, which is attributable to the royalties which may be taxed in the other Contracting State.

2. For the purposes of this deduction, the taxes referred to in paragraphs 2(a)(i) and 2(b)(i) of Article II shall be deemed to be income tax.

2nd Alternative: Article VII B (ii) — Full credit

1. Where a resident of a Contracting State receives royalties which, in accordance with the provisions of Article VI, may be taxed in the other Contracting State, the first-mentioned State shall allow as a deduction from the tax on the income of that resident an amount equal to the tax paid in the other Contracting State.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

2. For the purposes of this deduction, the taxes referred to in paragraphs 2(a)(i) and 2(b)(i) of Article II shall be deemed to be income tax.

3rd Alternative: Article VII B (iii) — Matching credit

1. Where a resident of a Contracting State receives royalties which, in accordance with the provisions of Article VI, may be taxed in the other Contracting State, the first-mentioned State shall allow as a deduction from the tax on the income of that resident, an amount equal to .... percent of the gross amount of such royalties, whether or not the amount deducted in the State where the royalties arise equals this percentage.

2. For the purpose of this deduction, the taxes referred to in paragraphs 2(a)(i) and 2(b)(i) of Article II shall be deemed to be income tax.

4th Alternative: Article VII B (iv) — Tax sparing credit

1. Where a resident of a Contracting State received royalties which, in accordance with the provisions of Article VI, may be taxed in the other Contracting State and benefit there from special tax relief, the first-mentioned State shall allow as a deduction from the tax on the income of that resident, who is the beneficiary of royalties, an amount equal to the total sum which, without this relief, would have had to be paid in that other State as tax on such royalties.

2. For the purposes of this deduction, the taxes referred to in paragraphs 2(a)(i) and 2(b)(i) of Article II shall be deemed to be income tax.

V
MISCELLANEOUS PROVISIONS

Article VIII
Non-discrimination

1. In accordance with the principle of non-discrimination set out in Article 6 of the Multilateral Convention for the Avoidance of Double Taxation of Copyright Royalties, the nationals of a Contracting State shall not be subjected in the other Contracting State to any taxation assessed on the amount of a copyright royalty or any requirement connected therewith, which is other or more burdensome than those to which nationals of that other State in the same circumstances are or may be subjected. Notwithstanding the provisions of Article I, this principle also applies to persons who are not residents of one or both Contracting States.

2. Stateless persons who are residents of a Contracting State shall not be subjected in either Contracting State to any taxation on copyright royalties or any requirement connected therewith, which is other or more burdensome than the taxation and connected requirements to which nationals of the State concerned in the same circumstances are or may be subjected.

3. The taxation on copyright royalties to which a permanent establishment of an enterprise of a Contracting State is subjected in the other Contracting State shall not be less favourably levied in that other State than the taxation on the same kind of copyright royalties to which enterprises of that State having the same status for tax purposes and carrying on the same activities are subjected. This provision shall not be construed as obliging a Contracting State to grant to residents of the other Contracting State any personal allowances, reliefs and reductions for taxation purposes on account of civil status or family responsibilities which it grants to its own residents.

4. Subject to the provisions of [paragraph 4 of Article VI A] [paragraph 5 of Article VI B or VI C], the royalties paid by an enterprise of a Contracting State to a resident of the other Contracting State shall, for the purpose of determining the taxable profits of such an enterprise, be deductible under the same conditions as if they had been paid to a resident of the first-mentioned State.

5. Enterprises of a Contracting State, the capital of which is wholly or partly owned or controlled, directly or indirectly, by one or more residents of the other Contracting State, shall not be subjected in the first-mentioned State to any taxation assessed on copyright royalties or any requirement connected therewith, which is other or more burdensome than the taxation and connected requirements to which other similar enterprises of the first-mentioned State are or may be subjected.

6. The provisions of this Article shall, notwithstanding the provisions of Article II, apply to taxes of every kind and description.

Article IX
Mutual agreement procedure

1. Where a person considers that the actions of one or both of the Contracting States result or will result for him in taxation not in accordance with the provisions of this Agreement, he may, irrespective of the remedies provided by the domestic law of those States, present his case to the competent authority of the Contracting State of which he is a resident or, if his case comes under Article VIII (1), to that of the Contracting State of which he is a national. This case must be presented within three years from the first notification of the action resulting in taxation not in accordance with the provisions of the Agreement.

2. The competent authority shall endeavour, if the objection appears to it to be justified and if it is not itself able to arrive at a satisfactory solution within a period of .... or such extended period as may be communicated by it to the competent authority of the other State, to resolve the case by mutual agreement with the competent authority of the other Contracting State, with a view to the avoidance of taxation which is not in accordance with this Agreement. Any agreement reached shall be implemented notwithstanding any time limits in the domestic law of the Contracting States.

3. The competent authorities of the Contracting States shall endeavour to resolve by agreement any difficulties or doubts arising as to the interpretation or application of the Agreement. They may also consult together for the avoidance of double taxation in cases not provided for in this Agreement.

4. The competent authorities of the Contracting States may communicate with each other directly for the purpose of reaching an agreement in the sense of paragraphs 1, 2 and 3. When it seems advisable in order to reach agreement to have an oral exchange of opinions, such exchange may take place through a Commission consisting of representatives of the competent authorities of the Contracting States.

Article X
Exchange of information

1. The competent authorities of the Contracting States shall exchange such information as is necessary for carrying out the provisions of this Agreement or of the domestic laws of the Contracting States concerning taxes covered by this Agreement in so far as the taxation thereunder is not contrary to the Agreement. The exchange of information is not restricted by Article I of this Agreement. Any information received by a Contracting State shall be treated as secret in the same manner as information obtained under the domestic laws of that State and shall be disclosed only to persons or authorities, including courts and administrative bodies, involved in the assessement or collection of, the enforcement or prosecution in respect of, or the determination of appeals in relation to the taxes covered by this Agreement. Such persons or authorities shall use the information only for such purposes. They may disclose the information in public court proceeding or in judicial decisions.

2. In no case shall the provisions of paragraph 1 be construed so as to impose on a Contracting State the obligation:

a) to carry out administrative measures at variance with the laws and administrative practice of that or of the other Contracting State;
b) to supply information which is not

© 1980 International Bureau of Fiscal Documentation – BULLETIN

obtainable under the laws or in the normal course of the administration of that or of the other Contracting State;

c) to supply information which would disclose any trade, business, industrial, commercial or professional secret or trade process, or information, the disclosure of which would be contrary to public policy (ordre public).

Article XI
Members of diplomatic or consular missions

Nothing in this Agreement shall affect the fiscal privileges of members of diplomatic or consular missions of the Contracting States as well as of their families, either under the general rules of international law or under the provisions of special conventions.

Article XII
Entry into force

1. This Agreement shall be ratified and the instruments of ratification shall be exchanged at ..... as soon as possible.

2. The Agreement shall enter into force upon the exchange of instruments of ratification and its provisions shall have effect:
a) in (State A) .....
b) in (State B) .....

Article XIII
Termination

This Agreement shall remain in force until terminated by a Contracting State. Either Contracting State may terminate the Agreement, through diplomatic channels, by giving notice of termination at least six months before the end of any calendar year after the year . . . . . In such event, the Agreement shall cease to have effect:
a) in (State A) .....
b) in (State B) .....

Article XIV
Interpretation

As regards the application of this Agreement by a Contracting State, any term not defined therein shall, unless the context otherwise requires, have the meaning which it has under the Multilateral Convention for the Avoidance of Double Taxation of Copyright Royalties or, failing this, under the law of that State.

Article XV
Relations between this Agreement and other treaties on double taxation

In the event of any difference between the provisions of this Agreement and those of another treaty on double taxation concluded by the Contracting States, the provisions of this Agreement shall take precedence in the relations between these States in matters relating to the taxation of copyright royalties.

TAX GLOSSARY

by H.W.T. PEPPER *

SUPERSNAKE — The European currencies involved in the earlier agreement (see SNAKE IN A TUNNEL) were the German mark, Belgian franc, Austrian schilling, Dutch guilder, Swiss franc, and Luxembourg franc. The proposed European Monetary System (EMS), sometimes known as SUPERSNAKE, would embrace members of the EEC and a few other countries, would involve fixed exchange rates between members, the institution of a Common Market currency called the ECU, and the establishment of a Common Market fund which would be used to support exchange rates which came under pressure, although by joining the members would gain strength for their currencies against those of non-members.

SUPER TAX — A tax charged in addition to income tax. The term was formerly used to refer to the tax charged in Britain (from 1909 to 1927) subsequently known as surtax, and has also been used in a similar context, e.g. in India.

SUPPLEMENTARY TAX — A tax charged in addition to income tax, particularly in a country with a schedular tax system which charges tax at flat rates on certain types of income. The supplementary tax is usually charged at graduated rates on those with incomes above a certain limit. (See also RESIDENTS' TAX.)

SURCHARGE — A tax which is often levied as a percentage addition to existing taxes, usually on a temporary basis. If the additional charge is required upon a more permanent basis, the surcharge will usually be superseded in due course by a revision of the substantive rates of tax. Recent examples of the imposition of surcharges have arisen in the U.S., where a ten percent surcharge was applied to the federal income tax rates (raising the maximum from 70 to 77 percent) during President Johnson's term of office, and an import surcharge imposed in 1971 by President Nixon — both these surcharges having been subsequently cancelled. In Britain, there has also recently been an import surcharge and there is power under the CUSTOMS REGULATOR (q.v.) (a provision which has to be renewed annually by Parliament) by means of which the Treasury may make an order increasing or decreasing the principal revenue duties by up to 10 percent. Holland has similar powers (see REGULATOR TAX).
Two recent examples of further uses of this term in connection with taxation are (a) the surcharge imposed in West Germany in 1970 and 1971, which was actually in the form of a "LOAN" LEVY (q.v.) which the Government pledged would be refunded before 1973; and (b) the additional charge on investment income in Britain from 1973 with the abolition of EARNED INCOME RELIEF (q.v.).

SURRENDER OF LOSS — Under U.K. tax law, a company in a GROUP (q.v.) (where one company is a 75 percent subsidiary of another, or both are 75 percent subsidiaries of a third company) or a CONSORTIUM (q.v.), which makes a trading loss may surrender the loss in favour of a "claimant company" in the same group.

SURTAX — In the U.K., surtax (formerly called SUPER TAX, q.v.) was applied to income taxpayers with incomes above a certain limit during the period 1909 to 1973. Somewhat different rules applied for the calculation of income for surtax purposes. Both income tax and surtax were replaced by UNIFIED TAX (q.v.) from 1973/74. In the U.S.A. corporations' incomes are subject to NORMAL TAX (q.v.) at 22 percent and to surtax where the income exceeds $250,000 at rates which in recent years have varied from 26 to 30 percent.

T

TADPOLE LEASE — A tax avoidance device whereby an entrepreneur owning business premises grants a lease thereof for a long period, say 60 years, to another person in return for a large premium and a small annual rent. The entrepreneur then rents the premises back on a sub-lease for rental payments which are very high in the first few years (constituting more or less the return of the premium). The object is to obtain enhanced tax deductions in respect of the high initial sub-rents while avoiding tax (or paying only at capital gains tax rates) on the premium received. Anti-avoidance measures in the U.K. have largely countered this device. (See also LEASE-BACK).

TAKE-HOME PAY — An employee's net remuneration after deductions for income tax and other compulsory levies, such as Social Security Contributions (e.g. National Health Insurance) and pension contributions.

TALENT TAX — The term was used in the U.K. with regard to moves by the Inland Revenue Department to tax awards made by the Arts Council and other bodies to authors, artists, and poets. It was argued that a tax on such awards was a tax on talent. Such talent awards had not previously been regarded as taxable provided they had not been solicited by the recipient and were not made in return for work done by the recipient for the donor.

TANGIBLES — Tangible business assets such as factories, machinery (in Italy *all* fixed assets except land) in general qualify for capital allowances if used in the production of business profits, whereas intangibles in general do not (exceptions may include patent, copyright, or mineral rights). In Holland's V.A.T. law, goods are defined (section 5) as "all *tangible* objects".

TANTIEME — Percentage (of profits), bonus, commission, or profits.

TAX AGENT — The term "tax agent" may either mean (as, for example, in Australian parlance) a tax adviser who assists the taxpayer to perform his duties under the taxing acts, or may mean the person charged under the taxing acts with collecting tax either by deduction or withholding at source, in the case of an income tax, or as the person required to register and pay the tax in the case of sales taxation.

TAX AVOIDANCE — See AVOIDANCE.

TAX BASE — See TAXABLE BASE.

CHINA (PEOPLE'S REPUBLIC OF)

CHINESE ECONOMIC PLANNING

Translations from Chi-hua Ching-chi. Edited with an introduction by Nicholas R. Lardy. Translated by K.K. Fung. Folkestone, Dawson Publishing; New York, M.E. Sharpe, Inc., 1978. 268 pp., £14.
Compilation in English of a series of articles from the periodical "Economic Planning" published during the First Five-Year Plan in the 1950s dealing with economic planning techniques in China. (B. 51.505)

ORDNUNGSPRINZIPIEN IM INDUSTRIALISIERUNGS-PROZESS DER VR CHINA

Planung — Organisation — Unternehmenskonzept. By Wolfgang Klenner. Hamburg, Verlag Weltarchiv, 1979. 364 pp., 42.50 DM.
Study of the management of industrial development in the People's Republic of China with reference to both Chinese and other language publications. (B. 51.508)

SITUATION UND PERSPEKTIVEN DER CHINESISCHEN WIRTSCHAFT

Verschuldungsnotwendigkeit und Finanzierungsspielraum. By Armin Gutowski, Wolfgang Klenner and Kurt Wiesegart. Hamburg. HWWA-Institut für Wirtschaftsforschung, 1979. 148 pp.
Study of the present and future economy of the People's Republic of China. (B. 51.506)

FRANCE

CODE CIVIL

79th Edition. Paris, Jurisprudence Générale Dalloz, 1979-1980. 1375 pp.
Annotated text of the French civil code with references to other publications for further study. (B. 102.533)

DROIT FISCAL DES AFFAIRES

By François Goré and Bernard Jadaud. Paris, Dalloz, 1980. 951 pp.
Monograph describing French taxation of business enterprises including related matters in the judicial, administrative and accounting fields. (B. 102.532)

DROIT FISCAL INTERNATIONAL

Pratique française. Second edition. By Gilbert Tixier, Guy Gest and Jean Kerogues. Paris, Librairies Techniques (LITEC), 1979. 330 pp.
Second edition of study on international tax law, considered from the standpoint of French tax legislation. (B. 102.569)

LAMY SOCIAL

Edited by F. Jullien. Paris, Lamy S.A., 1980. 1531 pp.
Annual publication containing an explanation of French labour and social legislation; supplements are issued regularly in order to keep the material up to date. (B. 102.557)

MANUAL DE DROIT FISCAL

3e Edition. By Bernard Brachet. Paris, Librairie Générale de Droit et de Jurisprudence, 1979. 238 pp.
Introductory book on French taxation law (income and profits taxes, value added tax, gift and death duties). (B. 102.556)

LES RELATIONS FISCALES FRANCO-SUISSE

By Patrick Michaud and Michel Saillant. Paris, Etudes Fiscales Internationales, 1977. 520 pp.

Study of the Swiss income taxation of individuals and companies, followed by the tax aspects arising from the French-Swiss double taxation treaty. (B. 102.558)

GERMAN FEDERAL REPUBLIC

ABC VERLUSTVORTRAG VERLUSTRÜCKTRAG

2., neu bearbeitete Auflage. By Heinz Richter. Cologne, Peter Deubner Verlag, 1980. 75 pp.
Second edition of a book explaining the most important aspects of loss compensation (carry-back, carry-forward) in the German income tax system. (B. 102.514)

DAS BETRIEBSRENTENGESETZ IN DER PRAXIS

By Peter Ahrend and Jochen Rühmann, Wiesbaden, Arbeit und Alter Verlag, 1979. 53 pp.
Booklet explaining the most significant features of the German law on private old age pensions and the effects thereof in practice. (B. 102.388)

FAMILIENSTIFTUNG IM STEUERRECHT

By Heinz Schrumpf. Cologne, Peter Deubner Verlag, 1979. Steuerwissenschaft, Band 5. 148 pp.
Thesis analyzing various aspects with respect to the taxation of a family foundation in the Federal Republic of Germany. (B. 102.571)

PRAXIS DER STEUERBEGÜNSTIGTEN KAPITALANLAGEN

Band I: Grundlagen, Negative Kapitalkonten, Rechtsschutz des Zeichners, mit Formularanhang. By Fritz Eggesiecker, Jürgen Pelka, Dieter Quast and Heinz Richter. Cologne, Peter Deubner Verlag, 1180. 206 pp., 98 DM.
Practice-oriented analysis of the basis and the tax consequences of tax favorable capital investments, such as the so-called negative capital account in the case of limited partnerships. The authors also discuss the new proposed legislative action to reduce any abuse of such capital investment. (B. 102.513)

UMSATZSTEUERGESETZ 1980

By Karl-Heinz Mittelsteiner. Cologne, Peter Deubner Verlag, 1979. 414 pp., 39.80 DM.
Compilation of documents and other materials relating to the new German Value Added Tax Law, which adapts the law of the requirements of the 6th Directive on VAT, including a comparison with the similar provisions under the old law. (B. 102.523)

VEREINBARUNGEN UNTER FAMILIENANGEHÖRIGEN UND IHRE STEUERLICHEN FOLGEN

By Dieter Schulze zur Wiesche. Cologne, Peter Deubner Verlag, 1979. 168 pp., 32 DM.
Monograph discussing the various possibilities of concluding contracts according to civil law and the tax consequences of such contracts, e.g. divorce, alimony, old age pensions, establishing a company, transfer of real property. (B. 102.515)

DER ZINSFUSS ALS BEWERTUNGSFAKTOR IN DER ERTRAGSTEUERBILANZ

By Bernd Wassermann. Cologne, Peter Deubner Verlag, 1979. Schriftenreihe "Steuerwissenschaft", Band 6. 304 pp., 79 DM.
Study on the influence of the interest rate on the valuation and capitalization of business assets shown on the annual balance sheet, with numerous references to case law and other literature. (B. 102.519)

GREECE

BUSINESS OPERATIONS IN GREECE

By George N. Stathopoulos. Washington, Tax Management Inc., 1979. 200 pp.
Book providing information on the establishment of business operations in Greece. The Greek tax system is discussed, with English translation of relevant statutes appended. (B. 102.536)
