IFA-NEWS 336

Brief report on the activities of some national branches, particularly those of Hong Kong and the United States and on a joint seminar on VAT and international services held by the Belgian–Luxembourg and French branches of IFA.

Rapport succinct sur les activités de quelques groupements nationaux, notamment ceux de Hong Kong et des Etats-Unis et sur une journée d'étude consacrée au régime de la TVA relatif aux services internationaux et organisée par les groupements belgo-luxembourgeois et français de l'IFA.

Kurzbericht über die Tätigkeiten einiger Landesgruppen, vor allem derjenigen in Hong Kong und den USA und über eine gemeinsame Tagung der belgisch-luxemburgischen und französischen Landesgruppen der IFA über internationale Dienstleistungen und Mehrwertsteuer.

THE CONGRESS OF PARIS 337

Alun G. Davies, President of IFA, introduces the subject to be discussed at the 34th Congress of IFA in Paris.

LE CONGRES DE PARIS

Alun G. Davies, Président de l'IFA, introduit les sujets à étudier au cours de 34ème Congrès de l'IFA à Paris.

DER KONGRESS IN PARIS

Alun G. Davies, der Präsident der IFA, stellt die Themen vor, die anlässlich des 34. IFA-Kongresses in Paris diskutiert werden.

Maurice Papon:

QUELQUES ASPECTS ORIGINAUX DE LA FISCALITE FRANÇAISE 339

Le Ministre du Budget français présente — à l'occasion du 34ème Congrès de l'IFA — les principales particularités de la législation fiscale française mettant l'accent sur quelques mesures nouvelles d'adaptation de fiscalité aux nécessités économiques.

SOME ORIGINAL ASPECTS OF FRENCH TAXATION

The French Minister for the Budget presents — on the occasion of the 34th Congress of IFA — the main points of the French tax system. He emphasizes some new measures which have been taken to adjust taxation to the needs of the economic situation.

EIGENARTEN DES FRANZÖSISCHEN STEUERRECHTS

Der französische Haushaltsminister stellt anlässlich des 34. IFA-Kongresses die wichtigsten Eigenarten des französischen Steuerrechts vor. Er legt dabei besonderen Nachdruck auf die kürzlich eingeleiteten Massnahmen, die darauf abzielen, die Besteuerung den wirtschaftspolitischen Notwendigkeiten anzupassen.

D.A. van Waardenburg:

FRANCE: A SURVEY OF ITS TAX SYSTEM 345

Discussion of some points of interest of the most significant French taxes, including the individual and corporate income tax, payroll taxes, value added tax and succession and gift taxes.

FRANCE: ETUDE DE SON SYSTEME FISCAL

Etude de quelques points intéressants des impôts français les plus importants, y compris l'impôt sur le revenu des personnes physiques et des sociétés, les différentes taxes dues par les employeurs, la taxe sur la valeur ajoutée et les droits de succession et sur les donations.

FRANKREICH: EIN ÜBERBLICK ÜBER DAS STEUERSYSTEM

Untersuchung einiger interessanter Aspekte der wichtigsten französischen Steuern wie z.B. der Einkommen- und Körperschaftsteuer, der Lohnsummensteuer, der Mehrwertsteuer sowie der Nachlass- und Schenkungsteuer.

SELECTED BIBLIOGRAPHY ON FRENCH TAXATION 353

Bibliography listing a number of important books and articles on French taxation in the French, German and English languages.

BIBLIOGRAPHIE SELECTIONNEE SUR LA FISCALITE FRANÇAISE

Bibliographie énumérant un certain nombre de livres et articles importants (en langue française, allemande et anglaise) sur la fiscalité française.

AUSGEWÄHLTE BIBLIOGRAPHIE ZUM FRANZÖSISCHEN STEUERRECHT

Diese Bibliographie enthält eine Reihe von wichtigen Büchern und Artikeln zum französischen Steuerrecht, die in französischer, deutscher und englischer Sprache erschienen sind.

Edison Gnazzo and Enrique Piedrabuena:

LEGISLATION IN LATIN AMERICAN COUNTRIES AND CRITERIA APPLICABLE FOR THE TAXATION OF INCOME (WITH A FOREWORD BY RAMÓN VALDÉS COSTA) 359

Paper presented on the occasion of the 34th Congress of IFA in Paris summarizing the income tax situation in 18 Latin American countries. The structure of the income tax systems is discussed as well as the scope of the income taxes and the extent to which expenses may be deducted. Special emphasis is placed on expenses incurred abroad and services rendered abroad.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

LEGISLATION DANS LES PAYS D'AMERIQUE LATINE ET CRITERES APPLICABLES A L'IMPOSITION SUR LE REVENU (AVEC UN AVANT-PROPOS DE RAMÓN VALDÉS COSTA)

Etude présentée à l'occasion de 34ème Congrès de l'IFA à Paris et résumant la situation de l'impôt sur le revenu dans 18 pays d'Amérique Latine. La structure des systèmes d'imposition sur le revenu est étudiée ainsi que le champ d'application des impôts sur le revenu et la mesure dans laquelle les dépenses peuvent être déduites. Une attention particulière est donnée aux dépenses encourues et prestations de services réalisées à l'étranger.

DIE GESETZGEBUNG IN DEN LÄNDERN LATEINAMERIKAS UND RELEVANTE MERKMALE DER EINKOMMENSBESTEUERUNG (MIT EINEM VORWORT VON RAMÓN VALDÉS COSTA)

Dieses Dokument, das anlässlich des 34. IFA-Kongresses in Paris vorgelegt wird, fasst die Situation der Einkommensbesteuerung in 18 Ländern Lateinamerikas zusammen. Es wird sowohl die Struktur der Einkommensteuersysteme als auch deren Umfang untersucht. Berücksichtigung findet ferner die Frage, in welchem Ausmass Aufwendungen als abzugsfähige Ausgaben geltend gemacht werden können. Besondere Aufmerksamkeit is den Problemen im Zusammenhang mit im Ausland getätigten Aufwendungen und im Ausland geleisteten Diensten gewidmet.

Dr. J.F. Pick:

ISRAEL: THE GABBAY REPORT 383
A proposal for inflation-adjusted taxation of income in Israel

The author discusses the report of a committee of experts appointed by the Israeli Finance Minister to solve the tax problems connected with inflation which in August 1979 approached 100 percent.

ISRAEL: LE RAPPORT GABBAY
PROPOSITION D'UNE IMPOSITION SUR LE REVENU EN ISRAEL ADAPTEE A L'INFLATION

L'auteur étudie le rapport du comité d'experts désigné par le Ministre des Finances israélien pour résoudre les problèmes fiscaux liés à l'inflation qui a approché 100 pour cent en août 1979.

ISRAEL: DER GABBAY-BERICHT
VORSCHLAG FÜR EINE INFLATIONSBEREINIGTE EINKOMMENBESTEUERUNG IN ISRAEL

Der Verfasser untersucht den Bericht eines Expertenausschusses, der vom israelischen Finanzminister eingesetzt wurde, um die Probleme im Zusammenhang mit der Inflation zu lösen, die sich im August 1979 auf nahezu 100 Prozent belief.

Nathan Boidman:

INTERPRETATION OF TAX TREATIES 388

This article focuses on the manner in which Canadian courts interpret tax treaties, with comparative comment respecting the approach of the judiciary in other countries, especially the United States.

INTERPRETATION DES TRAITES FISCAUX

Cet article met l'accent sur la façon dont les cours canadiennes interprètent les traités fiscaux; un commentaire comparatif montre l'approche judiciaire d'autres pays et notamment des Etats-Unis.

AUSLEGUNG VON DOPPELBESTEUERUNGSABKOMMEN

Dieser Artikel beschäftigt sich insbesondere mit der Art und Weise, in der kanadische Gerichte die Bestimmungen der Doppelbesteuerungsabkommen auslegen, wobei ständig Vergleiche mit der Entwicklung der Rechtsprechnung in anderen Ländern angestellt werden, hauptsächlich den U.S.A.

DEVELOPPEMENTS FISCAUX EN AFRIQUE
ACTIVITES DE LA COMMISSION ECONOMIQUE DES NATIONS UNIES POUR L'AFRIQUE

Les activités suivantes sont entre autres mentionnées: la réunion de documents avec l'aide du Bureau International de Documentation Fiscale; l'organisation de conférences, cours de formation professionnelle et groupes de travail, les activités consultatives et de recherche. Une mention spéciale a trait à la Conférence qui s'est tenue à Monrovia en février 1980 et pendant laquelle l'Association des Administrateurs Fiscaux Africains fut formellement établie.

ENTWICKLUNGEN AUF DEM GEBIET DES STEUERRECHTS IN AFRIKA

Aktivitäten der Wirtschaftskommission der Vereinten Nationen für Afrika

Die folgenden Aktivitäten werden unter anderem vorgestellt: die Aufstellung einer Dokumentation mit Unterstützung des Internationalen Steuerdokumentationsbüros, die Organisation von Konferenzen, das Veranstalten von Schulungskursen sowie Beratungs- und Forschungstätigkeiten. Besondere Aufmerksamkeit ist der Konferenz gewidmet, die im Februar 1980 in Monrovia stattfand, und während der die Vereinigung afrikanischer Steuerverwalter formell gegründet wurde.

COMMONWEALTH ASSOCIATION OF TAX ADMINISTRATORS
TECHNICAL MEETING ON THE COLLECTION OF TAXES AND TRAINING OF COLLECTION PERSONNEL 413

Subjects discussed included: tax delinquency and its causes and effects; the collection organization and the relation with other work areas of the revenue department; enforced collection; training of tax officers; and publicity programs to raise social conscience to encourage compliance with the law.

L'ASSOCIATION DES ADMINISTRATEURS FISCAUX DU COMMONWEALTH BRITANNIQUE
REUNION TECHNIQUE SUR LA PERCEPTION DES IMPOTS ET LA FORMATION PROFESSIONNELLE DU PERSONNEL DE LA PERCEPTION

Les sujets étudiés comprennent: la délinquance fiscale, ses causes et ses effets; l'organisation de la perception et les relations avec les autres divisions du département des revenus; le commandement; la formation du personnel fiscal et les programmes de publicité destinés à élever la conscience sociale afin d'encourager l'application de la loi.

VEREINIGUNG DER STEUERVERWALTUNGEN DES COMMONWEALTH
ARBEITSTAGUNG ZUR STEUERERHEBUNG UND AUSBILDUNG DES ZUSTÄNDIGEN PERSONALS

Die behandelten Themen umfassten u.a.: Steuervergehen — Gründe und Auswirkungen; der Aufbau einer Steuererhebungsbehörde und ihr Verhältnis zu anderen Arbeitsbereichen der Finanzverwaltung; Steuereintreibung; Ausbildung der Steuerinspektoren sowie Öffentlichkeitsarbeit im Hinblick auf ein ausgeprägteres Rechtsempfinden in Sachen Steuermoral.

Kailash C. Khanna:
INDIAN BUDGET 1980/81 418

Brief evaluation of the Indian Budget 1980/81 discussing, inter alia, the proposals regarding tax holidays and retrospective legislation which the Indian Government intends to introduce to the detriment of the taxpayer.

BUDGET DE L'INDE POUR 1980/81

Evaluation rapide du Budget de l'Inde pour 1980/81 étudiant, entre autres, les dispositions concernant les suspensions d'imposition et la législation à effet rétroactif que le gouvernement indien a l'intention d'introduire au détriment du contribuable.

DER INDISCHE HAUSHALT 1980/81

Diese kurze Stellungnahme zum indischen Haushalt 1980/81 befasst sich unter anderem mit den Vorschlägen bezüglich einer zeitweisen Steuerbefreiung und mit gesetzlichen Vorschriften, die die indische Regierung mit rückwirkender Kraft zum Nachteil der Steuerpflichtigen einführen will.

Kailash C. Khanna:

CUMULATIVE INDEX 427

INDEX RECAPITULATIF

FORTGESCHRIEBENES INHALTSVERZEICHNIS

© 1980 International Bureau of Fiscal Documentation — BULLETIN

IFA NEWS

Many national branches of IFA organise meetings throughout the year, sometimes jointly. In past issues of the BULLETIN papers have been published which had been discussed during such meetings and which are of interest to people outside the branches concerned. See, for instance, the issue of February-March, 1980 for papers discussed by the U.S. branch.

U.S. Branch

This issue contains a paper which Mr. Nathan Boidman, member of the Canadian branch, presented to the fourth annual meeting of the U.S. branch on the interpretation of tax treaties.

Hong Kong Branch

The following is a report on the activities of this youngest branch of IFA which was officially admitted during the 33rd Congress held in Copenhagen, September 1979:

February 1, 1980:
Executive Committee meeting followed by a talk delivered to the branch by Prof. J. van Hoorn Jr. on the use of double taxation agreements.

March 24, 1980:
Executive Committee meeting followed by a moot (debate) on the relevance of an English court decision (Sharskey v. Wernher 36TC 275 (HL)) in the Hong Kong context.

June 10, 1980:
Executive Committee meeting followed by four talks on the subject of "The current situation relating to the utilisation from overseas of the principal treaty links as it applies to (name of country)".
The four speakers were all visitors to Hong Kong and members of an international tax group and were, in order of speaking:

John Avery Jones:	U.K.
Raoul Lenz:	Switzerland
Maarten Ellis:	Netherlands
Sanford Goldberg:	U.S.A.

In addition to the above, the branch has also made a representation to the Hong Kong Government relating to the introduction of a piece of retrospective legislation.

Belgo-Luxembourg and French Branches

On March 7, 1980 the members from Belgium, France and Luxembourg met in Brussels to discuss the implication of Article 9 of the Sixth VAT Directive of May 17, 1977. This provision deals with the important issue of the place where, for VAT purposes, services are deemed to be rendered.

The time needed for the preparation of this special Congress issue of the BULLETIN did not allow for a publication not only of the papers submitted by members from the three countries but also of a summary of the discussions. It was felt that all these should be published together. This will be done in the next (October) issue of the BULLETIN, in French, with résumés in English, and preceded by a foreword of Professor Paul Sibille.

FUTURE CONGRESSES

Berlin — The 35th Congress will be held in West-Berlin from September 21 to 25, 1981. The main discussion themes will be: I — *Mutual Agreement — Procedure and Practice*; II — *Unilateral Measures to Prevent Double Taxation.*

Montreal — Canada will host the 36th Congress to be held from September 12 to 16, 1982. Subject I is *The Tax Treatment of Interest in International Economic Transactions.* The title of the second main subject is *Taxation of Transportation of Passengers and Goods in International Traffic.*

Venice — The Italian branch of IFA has decided to hold the 37th Congress in Venice, probably from October 10 to 14, 1983. The subjects for this Congress are under consideration.

Buenos Aires — Dates and subjects for the 38th Congress to be organised by the Argentinian branch have not yet been fixed.

EUROPEAN TAXATION

Articles by the Bureau's team of international tax specialists, and its network of local tax experts.

- Developments and trends in European tax law
- News in brief; court rulings; case notes
- EEC tax developments

The Congress of Paris

ALUN G. DAVIES
President of IFA.

It is a great pleasure to introduce the Congress of Paris 1980 to the members of IFA through the pages of the IFA Bulletin which, as Dr. Mitchell Carroll said in the Bulletin in 1950 (Vol. 4, No. 1), is the organ of the association as a whole. (The more is the pity that more members of the association don't subscribe to it; it is excellent value for the money.) It is my fervent wish that the International Bureau of Fiscal Documentation, a daughter organisation born out of IFA, should work more closely with IFA. The Bureau has immense resources in the fiscal field, and it is obvious that its formidable battery of fiscal expertise and documentation should be more extensively used by IFA members for their own benefit.

This is the second occasion that Paris has been the venue for the annual congress of IFA, and I feel sure that the Parisian setting will have all the elegance and éclat that we have learned to expect from our French friends. Not even the fact that we are gathered at Paris to discuss some of the esoteric mysteries of the fiscal world will make the ambience of Paris less attractive.

When I first heard that the first subject to be discussed at the Paris Congress was "*the dialogue between the tax administration and the taxpayer up to the filing of the tax return*", my heart fell. I felt like the prophet Ezekiel when he had the vision of the Valley of Dry Bones. Like Ezekiel, I saw a valley full of bones, and they were very dry. I said to myself, can these bones live? Can breath be entered into them, and can sinews and flesh be put upon them? My base expectations have been upset. Monsieur Delorme has breathed upon the dry bones and brought life into them. "*And they stood up upon their feet, an exceedingly great army.*" M. Delorme, formidably backed up by some very good national reports, has introduced life into what could have been a very barren subject indeed. I am intrigued that he should have referred to the relationship between the taxpayer and the fisc as a dialogue. I regret to say that it has often seemed to me to be a dialogue between two deaf persons. The taxpayer has often not wished to hear the words, not perhaps of comfort, but of explanation, from the fisc. He has imagined that the words issuing from the fisc are not "*come unto me all ye that are heavy laden with taxes, and I will help you with your burdens*" but something more tiberian like "*render unto Caesar*".

Apart from this unfortunate lack of liaison, there are many, many in the Valley of Dry Bones who are tax-wraiths, unable and unwilling to participate in any kind of dialogue with the fisc, suspecting, if I may change the metaphor, that the Judas-lamb they are invited to follow will lead them into a tax slaughterhouse, rather than to the promised land. I refer of course to the vast numbers of taxpayers who are members of the black economy, who wish for nothing better than total ignorance of the fisc and its propensity to invite them to participate voluntarily in the process of extraction.

The British national report is itself something of a surprise, because it is written in collaboration between a high official in the Board of Inland Revenue and one of the leaders of the accounting profession in the United Kingdom. The opening words of the British report, quoting Edmund Burke as saying "*to tax and to please... is not given to men*" summarises only too well the minefields which exist in this controversial area.

The second subject at Paris "*the rules for determining income and expenses as domestic or foreign*" is poles apart from the first subject. The problems of the determination of source, and the subsequent tax treatment of a source, are fundamental in many national tax systems. The variations in the concept of source from country to country bring in their trail two unfortunate consequences, the first is that double taxation is likely to ensue, and the second is that the variations are a natural and fertile source of tax avoidance. The purpose of international tax treaties is a twin one, to avoid double taxation and to prevent tax avoidance. They have not wholly succeeded on either count.

Apart from the two subjects which have been published in the Cahiers of the Paris Congress, and which will form the basis of our discussions, there are two seminars. The first is on a subject which attracts debates in so many

© 1980 International Bureau of Fiscal Documentation – BULLETIN

tax conferences, like moths attracted to a candle — *the use and abuse of tax havens.* I would have thought that we had heard the last words on this subject, but no, we come back to it again with the addiction of an alcoholic to the bottle. This is not to say that the subject is without its fascinations. It certainly has, and we shall play with it again, like children playing with fire.

The second seminar, on the *French fiscal system*, should be very fascinating. The French have given the European Community the imputation system in direct taxation, and the TVA in the world of indirect taxation. It is an achievement for the French to have won acceptance for both the main instruments of taxation in the direct and indirect taxation fields. I must confess that when the French Government introduced imputation in 1965 just as the British Government dumped it after a century and a half, I had a strange foreboding that one of them was very wrong. Well, the British returned to imputation in 1972 and the classical system walls of the British fiscal Jerusalem built by James Callaghan in 1965 were destroyed by the successor parliament. The prophecies of the British equivalent of Tobias and Sanballat proved to be too true.

Our French hosts are offering a fiscal feast at the Congress of Paris. I hope it will be as acceptable as the gastronomical delights of the city undoubtedly will be.

Quelques Aspects Originaux de la Fiscalité Française

PAR MAURICE PAPON

La présentation de l'ensemble d'un régime fiscal nécessiterait de trop longs développements qui n'auraient pas leur place dans les dimensions d'un article sauf à procéder à des "raccourcis" par trop simplificateurs. C'est pourquoi il m'a semblé que c'étaient les aspects originaux de notre législation qui étaient les plus susceptibles d'intéresser les lecteurs étrangers. La France, en effet, a souvent joué un rôle novateur en matière fiscale puisque, par exemple, dans deux domaines essentiels — la taxe sur la valeur ajoutée et l'avoir fiscal — les règles mises au point dans notre pays tendent à se généraliser dans la plupart des Etats européens.

Après avoir rappelé la spécificité de la structure de nos prélèvements obligatoires, je m'attacherai aux principales particularités de la législation française. Je mettrai enfin l'accent sur quelques mesures nouvelles d'adaptation de la fiscalité aux nécessités économiques.

1) EVOLUTION ET STRUCTURE DES PRELEVEMENTS OBLIGATOIRES EN FRANCE

La France, comme tous les pays industrialisés, a connu ces dernières années une croissance sensible des prélèvements obligatoires. Toutefois, cette croissance globale recouvre des évolutions assez différentes voire divergentes selon la nature des prélèvements qui reflètent la multiplication des interventions publiques et des opérations de transfert nécessitées par la situation économique.

a) Progression globale des prélèvements obligatoires moins rapide que celle de ses partenaires

De 1975 à 1980, l'ensemble des prélèvements obligatoires français est passé de 37,4 pour cent du Produit intérieur brut (P.I.B.) à 41,6 pour cent. Cette augmentation a cependant été nettement moins rapide que dans beaucoup d'autres pays. En effet, en 1965, la France venait au 3ème rang des pays de l'O.C.D.E. après la Suède et les Pays-Bas, pour l'importance de ses prélèvements obligatoires par rapport à son P.I.B. Selon le même critère, elle n'était plus qu'en 6ème rang en 1976 et au 8ème rang en 1977-1978.

Malgré cette évolution, la France continue à présenter un poids de prélèvements obligatoires supérieur à celui

MAURICE PAPON,
Ministre du Budget

Né le 3 septembre 1910, à Gretz (Seine-et-Marne), M. Maurice PAPON après des études supérieures de droit, d'économie et de sciences politiques et de sociologie (Diplôme d'études supérieures de droit public et d'économie politique, Diplôme de l'Ecole Libre des Sciences Politiques), est entré en 1935 au Ministère de l'Intérieur.

Nommé Préfet en 1944, les principales étapes de sa carrière sont les suivantes:

Préfet des Landes (1944), de la Corse (1947), de Constantine (Algérie 1949), Secrétaire Général du Protectorat du Maroc (1954-1955), Igame de la région de l'Est Algérien, Préfet de Constantine (1956-1958), Préfet de Police de Paris (Mars 1958 à décembre 1966). M. PAPON a également à diverses reprises assumé des fonctions dans des cabinets ministériels.

En 1967-1968, il est Président Directeur Général de Sud-Aviation.

Elu député du Cher (3ème circonscription: Saint-Amand) en juin 1968 il sera constamment réélu depuis (mars 1973 et mars 1978). Il est Maire de Saint-Amand Montrond depuis 1971. A l'Assemblée Nationale où il siège, M. Maurice PAPON est inscrit au Groupe de l'Union des Démocrates pour la République (U.D.R.), mouvement dont il fut le Trésorier National, puis au Groupe du Rassemblement pour la République (R.P.R.).

Après avoir été Président de la Commission des Finances de l'Assemblée Nationale (1972), il est Rapporteur Général de cette Commission de 1973 à 1978.

Il est, depuis le 5 avril 1978, Ministre du Budget dans le 3ème Cabinet de M. Raymond BARRE.

Ouvrages publiés:
"L'Ere des responsables" — 1954.
"Vers un nouveau discours de la méthode" — 1965.
"Le Gaullisme ou la loi de l'effort" — 1973.

de ses principaux partenaires commerciaux, ainsi qu'en témoigne le tableau suivant:

Total des prélèvements obligatoires en pourcentage du produit intérieur brut en 1978

France	*Allemagne fédérale*	*Etats-Unis*	*Italie*	*Royaume-Uni*
39,4	38	30,4	34,5	35,2

b) La structure des prélèvements obligatoires

La fiscalité ne représente en France qu'un peu plus de la moitié des prélèvements obligatoires. Le poids des cotisations sociales est en effet un des plus élevés des pays de l'O.C.D.E. et, au cours des années récentes, ce sont ces cotisations qui ont été responsables de la croissance des prélèvements obligatoires. Leur montant est passé de 12,9 pour cent du P.I.B. en 1970 à 18 pour cent en 1980. Cette particularité explique pour partie la relative faiblesse de la part de l'impôt sur le revenu en France, par rapport à de nombreux pays étrangers, puisque les cotisations sociales peuvent être assimilées à un impôt direct assis sur les rémunérations et prélevé par voie de retenue à la source.

Au cours de la même période 1970-1980, le prélèvement fiscal global est resté de l'ordre de 23 pour cent du P.I.B. Encore faut-il observer que cette stabilité de la fiscalité recouvre elle-même deux phénomènes de sens opposé: une diminution d'un point du P.I.B. de la fiscalité d'Etat, de 1970 à 1980, qui a été compensée par une augmentation équivalente de la fiscalité locale.

c) Le rééquilibrage entre impôts directs et indirects

Enfin, à l'intérieur des impôts d'Etat, le partage entre fiscalité directe et indirecte a beaucoup évolué depuis une quinzaine d'années, la part de ces derniers ne cessant de diminuer.

Certes, par rapport à plusieurs de ses principaux partenaires commerciaux, la France reste un pays à forte fiscalité indirecte. Le tableau qui suit montre cependant l'ampleur du rééquilibrage intervenu:

	1962	*1970*	*1975*	*1979*
Impôts directs	28,5	33,3	34,9	37,2
Impôts indirects	71,5	66,6	65,1	62,8
Total de recettes fiscales d'Etat	100	100	100	100

Au total, la taxe sur la valeur ajoutée fournit encore à l'Etat français la moitié de ses recettes; toutefois, plusieurs abaissements de ses taux ont déjà permis de réduire sensiblement la part de cet impôt dans les recettes fiscales. Ainsi, début 1973, le taux normal de la T.V.A. passait de 23 pour cent à 20 pour cent et le taux réduit de 7,5 pour cent à 7 pour cent. Début 1977, le taux normal était ramené de 20 pour cent à 17,60 pour cent. En outre, le taux applicable à plusieurs produits de consommation courante a été abaissé: les produits pharmaceutiques et les transports en commun de voyageurs ont ainsi pu bénéficier de taux réduit de T.V.A.

En dehors de cette action volontariste, la réduction des impôts indirects trouve aussi son origine dans l'absence d'indexation systématique, sur le niveau général des prix, de certains droits indirects fixés en valeur absolue. Or, d'une part, il est difficile de demander chaque année au Parlement de relever les barèmes de certaines accises. D'autre part, lorsqu'un relèvement intervient, il ne s'agit généralement que d'un rattrapage, avec un certain retard, de l'indice général des prix.

En sens inverse, l'impôt sur le revenu a connu une très forte croissance puisqu'il représente 25,4 pour cent des recettes fiscales de l'Etat en 1980 contre 18,1 pour cent en 1970. Sans doute cette augmentation est-elle pour partie imputable à une sous-indexation volontaire des tranches les plus élevées du barème. Mais, en dehors de toute sous-indexation, la progression de l'impôt sur le revenu a surtout correspondu, au cours de la décennie écoulée, à la croissance du revenu réel des français.

En effet, du fait de la progressivité de l'impôt, toute augmentation du revenu se traduit par un accroissement plus que proportionnel de l'impôt. La structure du barème français est telle que le produit de l'impôt croît en moyenne deux fois plus vite que les revenus déclarés.

2) QUELQUES PARTICULARITES DE LA LEGISLATION FRANÇAISE

Si la structure des prélèvements obligatoires demeure en France assez différente de ce qu'elle est dans les pays voisins, le législation fiscale comporte également des particularités.

Je retiendrai tout d'abord les principales originalités de l'impôt sur le revenu français: quotient familial et absence de retenue à la source. Puis j'aborderai les modalités spécifiques d'imposition des petites ou moyennes entreprises et je présenterai enfin les pouvoirs dont dispose l'administration française pour lutter contre la fraude et les garanties données aux contribuables.

a) Les originalités de l'impôt sur le revenu

(i) Le quotient familial

La Déclaration des Droits de l'Homme et du Citoyen de 1789 proclame le droit à l'égalité des citoyens devant l'impôt, selon leurs facultés. Le système français d'impôt sur le revenu considère que cette faculté contributive doit être appréciée au niveau de chaque cellule familiale. L'impôt s'applique donc aux revenus globaux d'un foyer, mais sa progressivité est atténuée par le jeu du quotient familial qui consiste à appliquer le barème au revenu moyen dont dispose chaque membre de l'unité familiale.

Ce mécanisme procure des avantages appréciables aux familles ayant la charge d'enfants et il constitue d'ailleurs l'un des principaux instruments de la politique familiale.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Ce n'est toutefois pas son unique objet puisque le quotient familial est également un quotient conjugal. La France ignore, sauf exception, l'imposition séparée des époux.

En pratique, le revenu total imposable du foyer fiscal est divisé par un nombre de parts qui réflète les charges de famille ou la situation particulière du foyer. [1] Chacune de ces parts de revenus est imposée selon le barème progressif. L'impôt total exigible correspond à la somme des impôts applicables à chaque part.

Prenons l'exemple d'un ménage comprenant 4 enfants et ayant donc droit à 4 parts de quotient familial qui a perçu 80.000 Fr.Frs. de revenus nets imposables en 1979.

Le barème progressif de l'impôt est appliqué au revenu global divisé par le quotient familial, soit 20.000 Fr.Frs., ce qui donne un impôt par part de 1.710 Fr.Frs.

L'impôt total dû part le ménage sera donc de: 1.710 x 4 = 6.840 Fr.Frs., ce qui équivaut au total des impôts que devraient payer 4 célibataires ayant perçu chacun 20.000 Fr.Frs. de revenus, mais ce qui est largement inférieur aux 24.293 Fr.Frs. d'impôt dûs par un célibataire ayant eu des revenus de 80.000 Fr.Frs.

(ii) La perception de l'impôt par voie de rôle

La seconde caractéristique assez originale de l'impôt sur le revenu français tient à son mode de perception. A la différence de nombreux pays étrangers, la France ne recouvre pas, en règle générale, l'impôt par voie de retenue à la source.

Même s'ils ne perçoivent que des salaires, les contribuables français doivent eux-mêmes déclarer chaque année leurs revenus de l'année précédente et acquitter l'impôt correspondant qui est calculé par l'administration fiscale.

En raison du délai nécessaire pour accomplir ces diverses opérations, il existe un décalage important entre l'encaissement des revenus et le versement de l'impôt correspondant.

Ainsi, quel que soit le système de versement adopté par les contribuables, ce n'est en principe pas avant septembre-octobre 1980 que les revenus perçus en 1979 seront effectivement imposés.

En revanche, les cotisations sociales, dont l'importance a été soulignée au début du présent article, sont retenues à la source par les employeurs.

b) Les modalités d'imposition des petites ou moyennes entreprises

La France a toujours cherché à préserver ses petites ou moyennes entreprises qui maintiennent une vie économique dans les 36.000 communes du territoire national. Mais elle le fait d'autant plus volontiers depuis le début de la crise que ce sont les entreprises de taille modeste qui s'avèrent les plus capables de créér des emplois.

Les principales originalités de la législation fiscale concernent le régime du forfait et certaines mesures récentes destinées à améliorer la gestion des petites entreprises.

Le régime du forfait industriel et commercial s'applique aux contribuables dont le chiffre d'affaires annuel est inférieur, en principe, à 500.000 Fr.Frs. Alors que les régimes réels d'imposition obligent les contribuables à déclarer à l'Administration leurs résultats calculés à partir d'une comptabilité complète, le régime du forfait se caractérise par une intervention a priori de l'Administration dans l'évaluation du bénéfice. Celui-ci est fixé lors d'une négociation avec le contribuable qui n'est tenu de fournir qu'une déclaration très simplifiée comportant essentiellement les achats. La négociation a pour objet de déterminer la marge nette applicable à ces achats, compte tenu des marges habituellement pratiquées par la profession et des particularités éventuelles de l'entreprise.

Le forfait a le mérite de permettre aux plus petites entreprises de payer l'impôt sans sujétion excessive ni pour le contribuable ni pour l'Administration. Il concerne encore actuellement plus d'un million de contribuables, mais ce nombre tend à diminuer sous les effets conjugués du non relèvement des limites de chiffres d'affaires, fixées voici plus de dix ans, et des incitations offertes pour l'adoption d'autres régimes d'imposition.

En effet, bien que des recoupements aient démontré que le régime forfaitaire permet globalement de cerner d'assez près les résultats réels, il n'exige pas la tenue de documents comptables suffisants pour assurer une gestion correcte.

C'est pourquoi les pouvoirs publics ont mis en place, depuis 1974, un système qui permet aux entrepreneurs individuels et aux travailleurs non salariés de bénéficier d'avantages équivalents à ceux réservés auparavant aux salariés tout en améliorant la gestion de leur entreprise. Les salaires sont en effet imposés après un abattement de 20 pour cent qui est justifié par la bonne connaissance de ce type de revenus qui est déclaré par des tiers. Un tel avantage ne pouvait être accordé aux petits entrepreneurs en raison de l'imprécision qui entachait jusqu'ici la connaissance de leurs revenus. Afin de rapprocher les conditions d'imposition des salariés et des non salariés, ces derniers ont été autorisés à adhérer à des organismes agréés par l'administration fiscale. Ces organismes, appelés centres de gestion agréés, apprécient la sincérité de la comptabilité de leurs adhérents qui doivent obligatoirement être soumis à un mode réel d'imposition.

Ces diverses obligations permettent d'accorder aux adhérents un abattement de 20 pour cent sur leur bénéfice imposable, équivalent à celui dont bénéficient les salariés. D'une façon plus générale, toutes les professions dont les revenus sont déclarés ou contrôlés par des tiers possèdent désormais des avantages analogues.

Enfin, l'aide aux petites et moyennes entreprises revêt également la forme de systèmes devant faciliter la création d'entreprises nouvelles.

---

1. En règle générale: 1 part pour chaque conjoint + 1/2 part par enfant à charge. Un célibataire a donc une part, un ménage sans enfant 2 parts, et, par exemple, un ménage avec 4 enfants 4 parts.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Les petites et moyennes entreprises peuvent ainsi se voir accorder une exonération totale de leurs bénéfices réinvestis au cours de l'année de leur création et des deux années suivantes.

Elles peuvent aussi bénéficier — mais cette mesure ne se cumule pas avec la précédente — d'un abattement limité au tiers de leurs résultats, pour l'année de leur création et les quatre années suivantes.

c) Les moyens de lutte contre la fraude et les garanties des contribuables

L'équité d'un système fiscal n'exige pas seulement que les règles d'établissement de l'impôt soient justes, mais encore qu'elles soient respectées. Le contrôle de l'impôt constitue donc un des objectifs essentiels de l'administration fiscale française qui se voit reconnaître par la loi des pouvoirs très importants.

L'évolution de ces dernières années a été marquée par un double mouvement:

— en renforcement des moyens de lutte contre la fraude,
— et un renforcement des garanties des contribuables.

(i) Des moyens de lutte renforcés

En premier lieu, le droit de communication de l'administration française est très étendu, il porte sur tous les documents comptables et pièces annexes des industriels et commerçants et de la plupart des professions libérales. Ce droit de communication est assorti des restrictions nécessaires à la protection de toutes les informations couvertes par le secret professionnel telles que celles que peuvent détenir des médecins sur leurs malades. Cette communication a pour objet, non de contrôler l'entreprise qui détient ces documents, mais d'obtenir des informations sur les opérations réalisées par des tiers.

En outre, tous les établissements financiers ont l'obligation de déclarer à l'administration les ouvertures et clôtures de comptes. Cette formalité peut être désormais accomplie de façon automatisée, par la simple communication de bandes magnétiques, ce qui est un gage de rapidité et d'efficacité. Sur requête des fonctionnaires de l'administration fiscale, les établissements bancaires doivent également présenter le détail des opérations réalisées par certains de leurs clients. L'administration peut ainsi, à partir des opérations financières réalisées par un contribuable, déterminer quelles ont été ses dépenses et ses recettes et tenter de reconstituer ce que fut son revenu réel.

Afin de restreindre encore davantage les possibilités de fraude lors de paiements par chèque, une loi récente a assujetti les carnets de chèques non barrés et endossables à un droit de timbre spécial. Surtout, l'administration fiscale peut désormais obtenir à tout moment communication de l'identité des personnes auxquelles les formules de chèque non barrées ont été délivrées. Enfin, les adhérents de centres de gestion et associations agréés sont tenus d'accepter le paiement par chèques non endossables rédigés à leur nom et ils doivent informer leur clientèle de cette obligation.

Les contribuables dont le train de vie est manifestement disproportionné par rapport aux revenus qu'ils déclarent peuvent se voir imposés soit d'une façon forfaitaire, en fonction d'un barème appliqué aux principaux "signes extérieurs" de leur richesse (résidence, automobiles, bateaux, domestiques), soit d'après leurs dépenses notoires. Cependant, cette procédure doit revêtir un caractère exceptionnel et elle n'est utilisée par l'administration qu'en cas de forte présomption de fraude, ce qui représente cependant plusieurs centaines de cas chaque année.

Les services fiscaux disposent également de moyens substantiels pour combattre la fraude des entreprises. Plusieurs mesures ont pour objet de limiter le gonflement des frais généraux. Les entreprises doivent fournir chaque année à l'administration un relevé détaillé de certaines catégories de frais qui comprennent notamment les rémunérations les plus importantes, les frais de réception, les frais de voyage et les cadeaux. De plus, c'est à l'entreprise qu'il appartient de démontrer que toutes ces dépenses ont été engagées dans l'intérêt direct de son exploitation.

Mais la lutte contre la fraude doit de plus en plus prendre la mesure des aspects internationaux. Là aussi un net renforcement des moyens vient renforcer le développement de la coopération internationale.

L'administration française peut ainsi refuser la déduction de toute somme versée à une personne physique ou morale établie dans un paradis fiscal au titre de licences, brevets ou services rendus lorsque l'entreprise française n'apporte pas la preuve que ces dépenses correspondent à des opérations réelles et qu'elles ne présentent pas un caractère exagéré.

Enfin, deux mesures récentes devraient entraver certaines formes d'évasion fiscale internationale. L'une permet à la France d'imposer les bénéfices réalisés par certaines entreprises sous le couvert de filiales ayant leur siège dans un paradis fiscal; l'autre assouplit les conditions permettant de soumettre à l'impôt français des sommes versées à l'étranger au titre de services rendus en France.

(ii) Des garanties accrues pour les contribuables

Mais, ainsi que Montesquieu l'observait fort justement: "C'est une expérience éternelle que tout homme qui a du pouvoir est porté à en abuser: il va jusqu'à ce qu'il trouve des limites. . . Pour qu'on ne puisse abuser du pouvoir, il faut que, par la disposition des choses, le pouvoir arrête le pouvoir". Le renforcement des moyens dont dispose l'administration fiscale pour prévenir et sanctionner la fraude a donc été parallèlement complété par un développement des garanties accordées aux contribuables. Les conditions permettant la taxation d'office ont été précisées; c'est à l'administration qu'il appartient désormais de prouver le caractère intentionnel d'une fraude; un certain nombre de pouvoirs ont été transférés de l'administration fiscale aux tribunaux.

Par ailleurs en 1976, a été créée la charte du contribuable vérifié qui rappelle aux contribuables tous leurs droits et leur est envoyée avec l'avis de vérification.

Surtout, depuis 1978, les contribuables ne peuvent plus

© 1980 International Bureau of Fiscal Documentation – BULLETIN

être poursuivis pénalement pour fraude fiscale que sur avis conforme d'une commission indépendante de l'administration fiscale. En outre, un comité, composé de hauts magistrats, supervise le contentieux fiscal et, en particulier, émet un avis sur toutes les remises de pénalités excédant un certain montant.

Ceci résulte de la loi sur les garanties des contribuables (1971) qui contient de nombreuses autres mesures notamment pour ce qui est des rectifications d'office, des notifications préalables indispensables.

Ce double mouvement — moyens renforcés et garanties accrues — peut apparaître contradictoire. Il est en fait dans mon esprit, parfaitement complémentaire. L'administration doit être mise à même de disposer des moyens pour faire face à des agissements qui s'apparentent au vol. L'immense majorité des citoyens qui ne fraudent pas ne doit pas avoir à pâtir de ces pratiques puisque ce sont eux qui sont appelés à compenser ces défaillances.

Les garanties renforcent l'impact psychologique de la lutte contre la fraude. Elles évitent tout phénomène de rejet et lui permettent donc de se dérouler efficacement. En quelque sorte, il faut peu à peu arriver à un système où le contrôle devient normal et la fraude anormale.

3) L'ADAPTATION DE LA FISCALITE AUX BESOINS DU DEVELOPPEMENT ECONOMIQUE

L'ampleur de la crise économique que connaît le monde développé a suscité, en France comme ailleurs, diverses mesures d'adaptation de la fiscalité aux nouveaux besoins de l'économie.

Les dispositions les plus originales introduites dans notre législation concernent le soutien de l'investissement et le développement de l'épargne affectée au financement du secteur productif.

a) Le renforcement des mesures en faveur de l'investissement

La législation fiscale française est de manière permanente favorable à l'investissement, tant par l'existence d'un système d'amortissement dégressif que par une appréciation très libérale des durées d'amortissement. Les nécessités de la conjoncture ont cependant conduit à renforcer l'incitation à l'investissement.

Dès 1975, pour compenser les effets dépressifs de la première flambée des prix du pétrole sur le volume des investissements, les pouvoirs publics ont institué une aide fiscale égale à 10 pour cent du prix des nouveaux équipements. Certes, ce type de mesure a souvent été pratique à l'étranger, mais généralement sous la forme d'une déduction opérée en fin d'année sur les bénéfices. Au contraire, l'aide de 1975 était immédiatement imputable sur la taxe sur la valeur ajoutée due par les entreprises.

Toutefois, s'appliquant à tous les investissements commandés entre avril 1975 et janvier 1976, cette aide présentait l'inconvénient de bénéficier à de nombreux équipements qui auraient été acquis, en tout état de cause. Son efficacité n'était donc pas à la mesure de son coût.

Tirant les conséquences de cette expérience, une loi de juillet 1979 a institué un nouveau dispositif de soutien à l'investissement qui constitue, semble-t-il, une première mondiale.

Ce mécanisme permet en effet aux entreprises de bénéficier d'une déduction fiscale, non plus sur la masse totale de leurs nouveaux équipements, mais sur l'accroissement net de leurs investissements par rapport à l'année précédente. Cette aide a ainsi permis aux entreprises de déduire de leurs résultats 10 pour cent de l'excédent de l'investissement net réalisé en 1979, par rapport à l'investissement net de 1978, et elle s'applique de la même façon en 1980.

D'autre part, les coefficients qui permettent de passer de l'annuité d'amortissement linéaire à l'annuité d'amortissement dégressif sont utilisés à des fins conjoncturelles et structurelles. C'est ainsi que les coefficients ont été majorés d'un demi point pour les biens acquis ou fabriqués en 1977. Cette majoration a été rendue permanente pour les matériels permettant soit de lutter contre la pollution, soit de récupérer ou d'économiser l'énergie et les matières premières.

Enfin, depuis 1979, les matériels affectés à la recherche acquis par les petites et moyennes entreprises peuvent faire l'objet la première année d'un amortissement exceptionnel de 50 pour cent, la valeur résiduelle étant au cours des années suivantes amortie selon le mode dégressif.

b) Une panoplie étendue de mesures en faveur de l'épargne

Le nombre des mesures fiscales en faveur de l'épargne dépasse la vingtaine, ce qui constitue certainement en soi une originalité.

La simple lecture du tableau suivant, qui ne comprend que les principaux avantages, rendra compte de la diversité de ces mesures et du coût important qu'elles représentent pour le budget de l'Etat en tant que "moins values" fiscales.

Cependant, il est apparu que la plupart de ces mesures, dont plusieurs parmi les plus coûteuses pour le budget de l'Etat, bénéficiaient à l'épargne courte et au logement, et non pas à l'épargne longue orientée vers le secteur productif.

Or, l'insuffisance des fonds propres constitue en France l'un des obstacles les plus importants au développement des entreprises et, par suite, à la promotion de l'emploi.

Le législateur français s'est donc efforcé, depuis plusieurs années de réorienter les avantages fiscaux accordés à l'épargne en réduisant ceux bénéficiant au logement ou à l'épargne courte et en développant parallèlement ceux favorisant l'épargne longue.

Ce redéploiement a notamment consisté à réduire la déduction forfaitaire applicable aux revenus des immeubles et à majorer sensiblement les taux du prélèvement libératoire d'impôt sur le revenu applicable aux produits de placements à revenu fixe.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

PRINCIPAUX AVANTAGES FISCAUX ACCORDES A L'EPARGNE

Nature de la mesure	*Estimation du coût de la mesure en 1980, au titre des revenus de 1979 (en millions de Fr.Frs)*
EPARGNE OU A COURT TERME	
o Exonération des intérêts correspondant aux sommes déposées sur certains livrets et comptes (caisses d'épargne, Crédit Mutuel etc. . .)	6.650
o Prélèvement libératoire sur les produits des placements à revenu fixe	1.120
EPARGNE LONGUE	
o Prélèvement libératoire sur les produits de placements à revenu fixe	830
o Avoir fiscal attaché aux dividendes de sociétés françaises (personnes physiques)	1.900
o Abattements sur les produits de certains placements	1,160
o Détaxation du revenu investi en actions de sociétés françaises	1.600
o Déduction des primes d'assurance-vie	1.200
LOGEMENT	
o Aide fiscale accordée par l'Etat aux propriétaires qui logements donnés en location:	
— déduction forfaitaire sur les revenus fonciers	1.000
— déduction des frais divers liés à ces logements	2.400
o Aide fiscale accordée par l'Etat aux propriétaires qui se logent eux-mêmes:	
— déduction de certaines charges concernant l'habitation principale (intérêts d'emprunt, dépenses d'isolation thermique. . .)	3.700

En contrepartie, une loi de juillet 1978 a institué plusieurs mesures originales destinées à orienter l'épargne vers le financement des entreprises.

D'une part, cette loi permet aux sociétés cotées en bourse qui se constituent ou qui procèdent à des augmentations de capital entre le 1er janvier 1977 et le 31 décembre 1981 d'inclure dans leurs charges d'exploitation les dividendes versés aux actions ainsi émises, pendant 7 exercices s'il s'agit d'actions ordinaires et pendant 10 exercices s'il s'agit d'actions à dividende prioritaire sans droit de vote. Cette disposition équivaut, d'une façon certes temporaire, à un avoir fiscal de 100 pour cent pour les actions ainsi émises.

D'autre part, la loi encourage les épargnants à acquérir des actions puisqu'elle permet aux contribuables ayant un domicile fiscal en France de déduire de leur revenu imposable, sous certaines conditions, les sommes nouvellement investies en actions dans la limite annuelle de 5.000 Fr.Frs., majorable en fonction des charges de famille.

Le marché financier français bénéficie d'un net regain d'intérêt depuis la mise en oeuvre de cette loi.

* * *

L'exposé de quelques particularités de notre système fiscal montre qu'imagination et fiscalité peuvent faire bon ménage. Ainsi que je l'ai montré, il ne s'agit pas uniquement d'un legs du passé puisque nous avons continué à introduire de nombreuses innovations dans notre législation au cours des dernières années.

Cependant, il convient maintenant de s'attacher à une bonne application de la législation plutôt que d'ajouter de nouvelles réformes à celles qui n'ont pas encore eu le temps d'être parfaitement assimilées.

Une pause fiscale paraît souhaitable.

Celle-ci doit revêtir un double aspect.

Elle doit tout d'abord consister à stabiliser le poids des prélèvements obligatoires qui ne pourrait continuer à s'accroître au rythme de ces dernières années sans risquer de susciter des réactions de rejet de l'impôt analogues à celles qu'ont connues certains pays dans un passé récent.

En second lieu, il convient de marquer une halte dans le foisonnement législatif qui a apporté chaque année une cinquantaine de dispositions nouvelles au code général des impôts. Cette instabilité législative s'oppose en effet à une bonne compréhension du système fiscal par les contribuables et à sa bonne application par l'administration.

Pour autant, cette pause fiscale ne doit pas être synonyme d'immobilisme. J'entends, en particulier, que l'administration fiscale française mette à profit ce répit législatif pour développer, notamment tant sur le plan interne qu'en coopération avec les administrations étrangères, la lutte contre la fraude et l'évasion fiscales.

Dans la période difficile que traversent nos économies, l'acceptation des efforts demandés à l'ensemble de la population exige en effet une répartition equitable du prélèvement fiscal.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

FRANCE: A Survey of Its Tax System

by D.A. van Waardenburg *

I. INTRODUCTION

In the preceding article the French Minister of the Budget, Mr. Maurice Papon, explains the originality of a number of aspects of French tax legislation.

The present article, written on the occasion of the 34th congress of IFA in Paris, describes some of these aspects as they appear in the most important French taxes, with a view to giving our non-French readers a bird's eye view of the French tax system as it is today. It is largely based on information published in our loose-leaf publication, SUPPLEMENTARY SERVICE TO EUROPEAN TAXATION. Of course, a brief survey is necessarily incomplete so that the reader who wants more detailed information is referred to the books and articles listed in the selected bibliography published at the end of this article. French taxes are generally categorized in the following manner:

I. Direct taxes

A. Individual income tax.
B. Corporate income tax.
C. Miscellaneous taxes levied by the Central Government, mostly payroll taxes.
D. Local taxes, including various real property taxes and the business tax.

II. Indirect taxes

A. Value added tax.
B. Excise on, inter alia, alcoholic beverages, wine, theatrical performances, etc.
C. Miscellaneous taxes (on bank credits, forestry products and the "para-fiscal" taxes).

III. Registration and stamp taxes

These include taxes levied at the transfer of real property, capital contribution tax at the creation of a company and inheritance and gift tax.

INVESTMENT INCOME RELIEF

Individual taxpayers receive important incentives for investment. The most important are:

(a) Dividends received from a French corporation entitle the shareholder to a credit (avoir fiscal) of one-half of the dividend.
(b) Dividends received from French corporations are exempt up to an amount of 3,000 Fr.Frs. provided that the recipient's taxable income does not exceed 180,000 Fr.Frs.
(c) Interest in an aggregate amount of 3,000 Fr.Frs. received on bonds issued by French or foreign entities is exempt provided that the bonds are quoted on a French stock exchange and that they are not subject to an index clause.
(d) Persons owning the house in which they live are not subject to income tax with respect to the annual rental value of the house; they may, however, within certain limits, deduct interest paid on loans contracted for the construction or important repairs of the house and expenses connected with the resurfacing of stonework.
(e) Interest and dividends received under certain long-term saving schemes (minimum duration 5 years) are within certain limits exempt.
(f) Interest on the first savings bank book with the Postal Services and interest on savings accounts for housing construction and some other purposes are exempt.
(g) Any excess of purchases over sales of certain French shares during the period between June 1, 1978 and December 31, 1981 may be deducted from income provided no use is made of the deduction under (b) and the exemption under (e). The maximum deduction is 5,000 Fr.Frs. increased by 500 Fr.Frs. for each of the first two dependent children and 1,000 Fr.Frs. for each next dependent child.

II. INDIVIDUAL INCOME TAX

A. Residents

1. Domicile and scope

Individuals — whether French nationals or foreigners — who have their domicile in France are subject to individual income tax (impôt sur le revenu) on their worldwide income. A taxpayer is deemed to have his domicile in France:

(i) if he has his home or principal place of abode in France; or
(ii) if he performs personal services in France either as an employee or independently, unless he can prove that these services are of a subordinate importance; or
(iii) if he has his center of economic interests in France.

Note, however, that tax treaties may have an important impact on a taxpayer's tax liability. Special relief provisions apply to employees who are sent abroad but who retain their domicile in France.

2. Taxable base

A resident taxpayer's taxable base is composed of the following elements:

* Executive director of the International Bureau of Fiscal Documentation.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

(i) net income from industrial, commercial and handicraft activities;
(ii) net real property income;
(iii) net agricultural income;
(iv) net employment income, pensions and annuities;
(v) net income from non-commercial activities;
(vi) net income received by directors of limited liability companies;
(vii) certain net capital gains;
(viii) certain net gains derived from real property.

The sum total of these net incomes is called the *gross total income (revenu global brut).* In order to arrive at the *taxable income* a number of deductions may be taken.

One of the most important rules is that any deficit in one of the above income categories may be deducted from gross total income. If the taxable income is *negative* the loss may be carried forward and deducted from gross total income of the next five years. Note, however, that this is only a *general* rule and that there exist important exceptions which considerably limit the possibility to offset losses.

Other deductions which may be taken from gross total income include: interest on loans for the acquisition, construction and repair of the taxpayer's principal residence as well as expenses incurred to save energy, alimony, social security premiums, gifts to charities, savings used for construction of dwellings, life insurance premiums and certain investments in shares. Note that these deductions are only allowed if a number of conditions have been fulfilled and that they are generally limited in some way or other.

3. Rates

Individuals are generally subject to a progressive rate of income tax. The tax table is determined at the end of the tax year, i.e. the tax table on 1980 income will be fixed by the Finance Law 1981 which will be published at the end of December 1980. Thus, the most recent tax table applies to 1979 income, as follows (single persons):

Taxable income	*1980 (on 1979 income) (%)*
0 — 8,725 Fr.Frs.	0
8,725 — 9,125 Fr.Frs.	5
9,125 — 10,825 Fr.Frs.	10
10,825 — 17,125 Fr.Frs.	15
17,125 — 22,275 Fr.Frs.	20
22,275 — 28,000 Fr.Frs.	25
28,000 — 33,875 Fr.Frs.	30
33,875 — 39,075 Fr.Frs.	35
39,075 — 65,125 Fr.Frs.	40
65,125 — 89,575 Fr.Frs.	45
89,575 — 105,950 Fr.Frs.	50
105,950 — 125,050 Fr.Frs.	55
In excess of 125,050 Fr.Frs.	60

The rates are applied to each successive slice of income.

Where a taxpayer is married his income and that of his spouse are added together with that of their children under 18 years of age. Relief is given by dividing the aggregate income by a coefficient (depending on marital status, number of dependents, their health situation etc.). The income tax table is then applied to the result and the income tax thus computed is subsequently multiplied by the same coeffieient. [1]

In some cases individuals are subject to a flat rate of income tax. Some of the most important cases are:

— 15 percent on capital gains derived from the sale of a substantial participation in a company (generally a shareholding exceeding 25 percent) and gains derived from major transactions (generally totaling more than 150,000 Fr.Frs. annually) connected with shares or bonds with a regularly quoted price;
— 25 percent of interest from bonds and other negotiable debt instruments (the taxpayer may opt for an exemption of income tax);
— 30 percent on gains derived from habitual stock exchange transactions (generally if borrowed money is used or share options are involved or if the total amount involved during a year exceeds 1.6 times the value of the securities owned by the taxpayer at the end of the preceding year and provided further that total sales exceed 10,000 Fr.Frs. during the year);
— 38 or 40 percent on interest from savings deposits, current accounts (40 percent on interest accrued before January 1, 1980) (the taxpayer may opt for an exemption from income tax);
— 38 or 42 percent on interest from certain treasury bonds (42 percent if the recipient is not disclosed);
— 33 1/3 percent on gains derived by persons who improve real property with a view to its sale if they sell completed dwelling houses (this privilege is limited to 400,000 Fr.Frs. per four years).

B. Non-residents

Non-residents, i.e. persons who do not have their domicile in France, are subject to French income tax with respect to income from French sources covered by the categories of income listed above. Non-resident aliens who possess one or more residences in France are subject to tax on a minimum income of three times the annual rental value of their residence(s) in France. This provision does not apply to non-resident French citizens and citizens of countries which have concluded a tax treaty with France containing a non-discrimination clause.

The general rule is that the taxable income of non-residents is computed in the same manner as for resident taxpayers and that the same income tax rates apply. However, for a non-resident — whether a French national or an alien — a minimum rate of 25 percent is applicable unless he can show that the overall rate of French income tax on his world-wide income would be lower than 25 percent in which case the lower rate applies. If the income tax levied at 25 percent does not exceed 2,000 Fr.Frs. it will not be collected.

---

1. See for a detailed explanation and computation examples, SUPPLEMENTARY SERVICE TO EUROPEAN TAXATION, Section B : France.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

There are a number of exceptions to the above rule of which the most significant are discussed below.

Non-resident taxpayers are subject to a graduated withholding tax with respect to their French-source employment income. Its rates on an annual basis are:

up to 25,800 Fr.Frs.	nil
from 25,800 — 76,100 Fr.Frs.	15 percent
in excess of 76,100 Fr.Frs.	25 percent

The rates are applied to each successive slice of income and apply to *1980* income. The taxable base is the *net* income after deduction of expenses (see box). This withholding tax is a final tax for that part of the employment income which does not exceed 76,100 Fr.Frs. provided that the recipient of the income is either a French national or a person possessing the nationality of a country with which France has concluded a tax treaty containing a non-discrimination clause. The remainder is also subject to the individual income tax but the withholding tax may be credited against the individual income tax. However, a refund is not given.

A flat-rate 33 1/3 percent withholding tax applies to gross income from non-commercial activities exercised in France or to French-source royalties connected with copyrights, patent rights and other industrial property, provided that the debtor of the income is established in France and the creditor does not have a fixed base in France. The withholding tax may be credited against the individual income tax but it is never refunded.

In a number of cases there is a withholding tax levied at a flat rate which replaces the graduated individual income tax, for instance:

- 25 percent on dividends distributed by French companies;
- 25 percent on interest from French bonds and certain other negotiable loan instruments, and at varying rates (33 1/3, 38, 40 or 42 percent) on other interest;
- 33 1/3 percent on certain taxable capital gains (for instance, French-situs real property capital gains);
- 50 percent on certain French-situs real property gains in case of speculation or building construction.

III. CORPORATE INCOME TAX

A. Resident corporations

1. Residence and scope

Corporations resident in France are with respect to their "active" income (income from business operations) subject to corporate income tax (impôt sur les sociétés) on income earned or deemed to have been earned in France. With respect to their "passive" income (investment income such as dividends, interest and royalties), the tax is levied on world-wide income. Resident corporations are those corporations which have been incorporated in France or which have their seat (siège social) in France.

Foreign-source "active" income, i.e. income earned through a foreign-situs permanent establishment, or representative established abroad or through the completion of a cycle of commercial activity abroad is generally exempt. Under certain circumstances, subject to the approval of the tax authorities, a French corporation may consolidate its income with that of its foreign permanent establishments or even its foreign subsidiaries. French corporate income tax is then imposed on the aggregate income of the French corporation, its permanent establishments and subsidiaries and any foreign income and withholding tax may be credited against French corporate income tax.

Recent legislation introduced an anti-tax avoidance measure under which — if a number of conditions have been satisfied — a French parent corporation may receive an additional corporate income tax assessment for a proportional share of income earned by a foreign subsidiary in which it holds at least a 25 percent interest, provided that the foreign subsidiary is established in a low-tax area. In this event there is no consolidation of income, so that any foreign losses are disregarded. Foreign income or withholding taxes may be credited against French corporate income tax assessed on the foreign subsidiary's income or dividend contributions. [2]

Double tax treaties may allocate income items to France for taxation which thus become part of a corporation's taxable income even in those cases where the income would under the French national rules have been exempt. This is particularly significant for income derived through the completion of a commercial cycle abroad which would otherwise not be subject to income tax at all. Another deviation from the rule that French corporate income tax is only imposed on French-source business income is that a provisional deduction is available with respect to initial losses incurred for (i) the installation of a foreign sales office, (ii) a foreign information office or (iii) a foreign office to conduct research either through a foreign permanent establishment or, indirectly, through a foreign subsidiary. Similarly, a provisional deduction is allowed with respect to certain industrial investment in developing countries (see *reserve for investment abroad*, infra).

2. Taxable base

Some significant factors which determine the computation of the taxable base for corporate income tax purposes are discussed below:

a. *Depreciation of business assets*

Depreciation may be taken on all tangible assets, fixed or movable, owned by and used in the business, which necessarily diminish in value over time and whose useful life exceeds one year. Patents and relating manufacturing rights can also be depreciated. Other intangible rights such as good will, copyrights, trademarks, secret processes, etc. and land may, however, be the object of provisions where the value of the business as a whole is

2. See D.A. van Waardenburg, "France: Finance Law 1980", in 20 EUROPEAN TAXATION 113 (1980).

EMPLOYMENT INCOME RELIEF

The French "tax climate" is particularly mild for wage earners, who generally only pay income tax on 72 percent of their net salary income.

They may take the following deductions:

(a) old age pension premiums;
(b) from the remaining amount, the taxpayer may deduct the greater of either 10 percent of that amount, or a lump sum amount of 1,800 Fr.Frs. or actual expenses (hereinafter referred to as "ordinary deduction"); for 1979 income the maximum deduction is 40,000 Fr. Frs.;
(c) the balance is further reduced by an "extra deduction" of 20 percent on the first 360,000 Fr.Frs.; this deduction is reduced to 10 percent for persons who hold directly or indirectly more than a 35 percent interest in a company with respect to salaries in excess of 150,000 Fr.Frs. which they receive from that company.

For special categories of employed persons (e.g. journalists, artists) a supplementary deduction is allowed at percentages varying from 5 percent to 30 percent up to a maximum of 40,000 Fr.Frs. (1979 income) or 50,000 Fr.Frs. (1980 income). This deduction is applied after the ordinary deduction of 10 percent is made.

reduced and a substantial fall in profits is demonstrated. [3]

In principle both the straight-line and declining balance methods of depreciation are permitted. However, whereas straight-line depreciation is always applicable, the field of application of the declining balance method is narrower since it may not be used with respect to buildings (with the exception of hotel buildings and light construction whose maximum life does not exceed 15 years). Also, second-hand assets are generally excluded from declining-balance depreciation, with the exception of renovated assets, assets used for construction abroad and second-hand ships.

The rate of straight-line depreciation is computed by dividing the expenditure by the estimated number of years of its life. The rate of declining balance depreciation is computed by multiplying the rate of the straight-line depreciation by a certain coefficient prescribed by law:

— 1.5 if the life of the asset is 3 or 4 years;
— 2.0 if the life of the asset is 5 or 6 years;
— 2.5 if the life of the asset exceeds 6 years.

Deviations from the main rule:

(i) *Assets acquired between June 30, 1974 and July 1, 1975*

Reduction of the coefficients to 1, 1.5 and 2.

(ii) *Assets acquired or manufactured in 1977 (when purchased the order must have been placed before June 1, 1977)*

Increase of the coefficients to 2, 2.5 and 3.

The above increase coefficients also apply to energy-saving equipment acquired from January 1, 1977 onwards; to equipment-saving raw materials used from January 1, 1978 onwards; and to assets used in energy-saving projects from January 1, 1979 onwards.

In some cases depreciation on the basis of "unit of production" has been permitted, thus adapting depreciation to the intensity of use in case of double or triple shift work (e.g. in steel factories).

Deduction of depreciation is compulsory up to the amount of straight-line depreciation, which means that depreciation must also be taken in loss years. However, in such a case any loss corresponding to the amount of depreciation may be carried forward indefinitely to later years and is not limited to five years as would normally have been the case.

A change-over from declining-balance to straight-line depreciation is permitted when the depreciation deduction computed according to the declining balance method is less than the deduction computed by dividing the net depreciable balance by the remaining years of useful life.

b. *Accelerated depreciation*

Accelerated depreciation is only possible in a limited number of cases specifically regulated by the law. It consists mostly in an initial deduction ranging from 25 to 100 percent and straight-line depreciation with respect to the residual value (if any) of the asset. The following initial deductions are available:

(i) 25 percent for investment in certain industrial and commercial real property in certain development areas under Government approval, provided that their construction was started before December 31, 1977;
(ii) 50 percent for buildings for scientific or technical research and for certain buildings for the prevention of water or air pollution, which have been completed before January 1, 1981; also for subscription to shares of Government-approved research companies and "financial innovation" companies;
(iii) 50 percent of the cost price of assets for scientific or technical research, to be defined in a decree, provided that the investment is effected in France. Enterprises which employ more than 2,000 persons do not qualify nor do companies more than half of whose shares are directly or indirectly owned by companies whose stock is listed at the stock exchange;
(iv) 100 percent for subscription of shares in Government-approved companies for the development of agriculture, industry and commerce.

c. *Investment deduction*

The following investment deductions are available:

3. This definition appears in THE TAXATION OF COMPANIES IN EUROPE, Chapter France at 79. See generally: "France: Part II of a comparative analysis of fiscal depreciation and investment allowance facilities available to corporate entities in the Common Market", in 11 EUROPEAN TAXATION I/186 (1971).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

(i) 10 percent of *additional* investment (investment in excess of preceding year's investment) made in 1979 and 1980. Qualifying assets are depreciable tangible assets utilized in France. A number of enterprises are excluded from this relief such as insurance companies, real property companies, most financial institutions and in general those enterprises the cost price of whose depreciable tangible assets qualifying for declining-balance depreciation is less than 2/3 of the cost price of total depreciable tangible assets (not including buildings).

(ii) Enterprises publishing newspapers and certain magazines which are to a large extent devoted to the dissemination of political information are granted relief for the acquisition of business assets (excluding land and participations). This measure, which has been changed numerous times, provides for 1980 that 65 percent of income from daily newspapers and 40 percent of income from other publications may be used or placed in a reserve free of income tax. Only 90 percent of the cost price of assets for daily newspapers and 55 percent of the cost price of assets for other publications may be financed through this provision.

(iii) Enterprises employing more than 100 employees must participate in a profit sharing scheme on behalf of their employees. For this purpose they must make an annual contribution to a special reserve of 50 percent of their adjusted taxable income times a coefficient which is based on the ratio between the payroll and the value added. This contribution may be deducted from the taxable income of the subsequent year and the enterprise may, in addition, place an amount equal to a certain percentage of the amount entered in the reserve for the profit sharing scheme in a tax free reserve, to be used within 12 months, for the acquisition of fixed assets.

d. *Depletion deduction*

A depletion deduction is available to companies which are engaged in the search for and exploitation of gas or oil or in the extraction of certain specified solid minerals. The amount deducted from taxable income must be reinvested within five years. For gas and oil, the deduction amounts to the lower of 23.5 percent of turnover or 50 percent of the profit resulting from this turnover. For qualifying minerals the deduction is the lower of 15 percent of turnover or 50 percent of the profits resulting from the pertinent turnover.

e. *Reserves*

(i) *Reserve for investment abroad*

Companies investing abroad through a foreign branch office or through a foreign subsidiary company may during the first five years after the investment enter certain amounts in a tax free reserve, provided Government approval has been obtained. A distinction is made between investment in *commercial* and *industrial* enterprises.

If investment takes place in a *commercial* enterprise in a Common Market country (other than France) the amounts placed in the tax free reserve may not exceed the lesser of (i) the accumulated losses of the first five years and (ii) the accumulated amount of the investment. If investment is made in a non-Common Market country, the full amount of the investment may be placed in the tax free reserve, but Government approval is generally only available if investment takes place in a developing country.

If investment takes place in an *industrial* enterprise abroad an amount not exceeding 50 percent of the investment may be placed in the tax free reserve, but generally only investment in a developing country qualifies for this privilege.

A recent law has extended the above privilege to banks and other enterprises participating in foreign commercial and industrial ventures in support of a French company investing abroad.

The amounts thus deducted from taxable income must after five years be added back to income in five equal annual installments.

(ii) *Reserve for commodity market fluctuations*

A reserve for commodity market fluctuations may be created by resident corporations whose main business is the processing of certain raw materials (including gold, silver, certain textiles and oil seeds, rubber, cocoa, etc.) to take account of world commodity market fluctuations and, for some other raw materials, French commodity market fluctuations connected with the world market.

(iii) *Reserve for price increases*

A reserve for inventory price increases may be created in any year in which, on an item by item basis, the unit price has increased by more than ten percent during a period which may not exceed two accounting years. The reserve must be added back to taxable income within a period of six years.

f. *Inventory valuation*

Inventory is valued at either cost or current sales price, whichever is less. With respect to inventory determination some form of the FIFO system (first in, first out) or an average cost method is used. LIFO (last in, first out) is generally not permitted unless it reflects actual practice of the enterprise.

g. *Deductibility of taxes paid*

Generally only income taxes are non-deductible This rule also applies to foreign income taxes pertaining to foreign exempt income. Foreign income taxes pertaining to income subject to French corporate income tax are, absent tax treaty provisions to the contrary, deductible. Examples of deductible taxes are: registration and stamp taxes, payroll taxes, business tax and excises. However, the value added tax is not normally deductible since it is not an effective burden on the company.

h. *Deductibility of dividends received (parent-subsidiary relationships)*

Dividends received are generally included in taxable income for purposes of corporate income tax grossed up by the 50 percent "avoir fiscal" (special credit) to which the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

recipient corporation is entitled. However, dividends received from either a resident or non-resident corporation are exempt for 95 percent of their amount (sometimes less) provided that the participation is:

- at least 10 percent of the distributing corporation's share capital (or less, if the participation percentage drops below 10 percent merely as a result of the increase of the capital of the subsidiary *and* the cost price of the participation at the moment of its acquisition was at least 2,000,000 Fr.Frs.); or
- was acquired for at least 10,000 Fr.Frs.; or
- the shares were acquired in a merger operation.

Other conditions for the deduction are: (i) the parent corporation must have acquired the shares in exchange for its contribution to the subsidiary's capital or it must be bound to hold the stock for at least two years and (ii) it must hold the shares in registered form or the shares must be deposited in an approved organization.

Dividends received from resident and non-resident subsidiaries (in case of dividends distributed by resident subsidiaries grossed up to include the 50 percent "avoir fiscal") are exempt in the hands of the qualifying parent corporations for 95 percent of their net amount. If the parent corporation proves that its expenses incurred from the participation are less than 5 percent of the amount of the dividends, the exempt proportion of 95 percent may be increased accordingly.

If a French parent corporation re-distributes to its own shareholders exempt dividends received from its foreign or domestic subsidiary, it is subject to an additional 50 percent tax [4] — the so-called "précompte" — with respect to those dividends. With respect to dividends received from a domestic subsidiary the "précompte" is completely offset by the "avoir fiscal". This is not the case, however, with dividends received from a foreign subsidiary. The "précompte" is refunded to shareholders of the French parent corporation who are resident in a country with which France has concluded a tax treaty.

i. *Deductibility of dividends distributed*

Dividends distributed by a French corporation are not normally deductible for purposes of the corporate income tax. However, in order to stimulate the French economy, such deduction is permitted to French corporations which are created or which increase their capital between January 1, 1977 and December 31, 1981. They may, during the first seven years (for shares with preferential dividend, ten years) following such creation or increase, deduct the dividends they distribute with respect to the newly issued shares, provided that the contributions were made in cash and that the shares were quoted on the stock exchange within three years. The latter condition has been waived for shares issued between June 1, 1978 and December 31, 1981. The deduction is limited to 7.5 percent of the capital contributed.

This deduction is also applicable to dividends distributed on shares at the conversion of certain loans into share capital with the provision that these loans must have been granted for a period of at least twelve months by shareholder-directors of the corporation and that after the capital increase less than 50 percent of the voting power is held by one or more corporations.

j. *Relief for small and medium-sized industrial businesses*

Small and medium-sized industrial businesses (PMI's) created between June 1, 1977 and January 1, 1981 may either (i) deduct in the year that they are created and in the four succeeding years, from their taxable income before deduction of losses carried over from preceding years, one third of this taxable income, or (ii) they may benefit from a tax holiday under which their undistributed income of the year of their creation and the next two years is exempt from corporate income tax, provided that:

(i) their turnover does not exceed 30,000,000 Fr.Frs. and their staff does not exceed 150 employees; and
(ii) the total acquisition cost of the assets which qualify for declining-balance depreciation equals at least two thirds of the total acquisition cost of all tangible depreciable assets (exclusive of buildings); and
(iii) other companies do not directly or indirectly hold more than 50 percent of the voting rights.

Where a company opts for the tax holiday it must in addition convert the exempted income into capital.

K. *Losses*

The general rule is that losses may be carried forward to be set off against the profits of the next five years. However, losses corresponding to depreciation may be carried forward indefinitely. Where a corporation has created a long-term capital gain reserve (see below under 3. Rates), this reserve may be used to offset ordinary losses irrespective of their age and long-term capital losses of the following ten years. Long-term capital losses may also be deducted from long-term capital gains of the following ten years.

3. Rates

The normal rate of corporate income tax is 50 percent. The balance of long-term capital gains and long-term capital losses (generally connected with business assets held for at least two years) is subject to a tax at a reduced rate of 15 percent (or 25 percent for the sale of building lots). The capital gains less the amount of tax due must be placed in a reserve; on distribution, the gains are taxed at the normal rate of corporate income tax but the tax already paid is creditable. An additional 50 percent [5] tax (précompte) is due at the distribution of income exempt from French corporate income tax (or subject to a rate less than 50 percent). This is, for instance, the case with income derived from a foreign branch office or dividends received from a subsidiary (see h. Deductibility of dividends received (parent-subsidiary relationships), above). The "précompte" is also imposed on income which has been retained for more than five years.

---

4. The rate is 50 percent if related to the net dividend distributed, but it is 33 1/3 percent if related to the income *before* dividend.
5. Id.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Corporations are also subject to an annual lump sum tax of 3,000 Fr.Frs. This tax is creditable against corporate income tax payable in that tax year and the next two tax years. Newly created corporations are exempt from this tax for three years, provided that at least 50 percent of their capital was contributed in cash.

B. Non-Resident Corporations

Non-resident corporations are subject to French corporate income tax at the rate of 50 percent with respect to income derived from business activities in France through either:

- a permanent establishment in France; or
- a permanent representative in France; or
- a "complete cycle of commercial activity" in France.

This income less the corporate income tax due is also subject to a substitute withholding tax of 25 percent, so that foreign corporations are normally subject to a rate of 62.5 percent. If it can be proved that the total income actually distributed by the foreign corporation within twelve months following the tax year is less than the French branch's net distributable income, an appropriate refund of the substitiute withholding tax is made. This will also be the case where it can be demonstrated that the foreign corporation made dividend distributions to shareholders resident or established in France. Under tax treaty provisions the substitute withholding tax is usually reduced or even waived.

A non-resident corporation receiving French-source non-business income such as rentals from French-situs real property is only subject to the standard 50 percent rate of corporate income tax. French-source dividends are only subject to a withholding tax at the rate of 25 percent, whereas interest is subject to withholding tax at varying rates (23, 33 1/3, 38, 40 or 42 percent). Royalties are subject to a 33 1/3 percent withholding tax which may be credited against the corporate income tax due. Tax treaties generally reduce these rates.

A 33 1/3 percent rate of corporate income tax is imposed on accessory income from housing construction by foreign corporations which are financial institutions or which appoint a representative in France. To be recognized as "accessory" the income must not exceed 25 percent of the foreign corporation's total income.

IV. PAYROLL TAXES

The following payroll taxes are levied:

A. Taxe sur les salaires

The salary tax (taxe sur les salaires) is not due where the taxpayer is subject to value added tax on at least 90 percent of his turnover.

1. Taxable base

The taxable base is the goss amount of salaries and wages paid during a calendar year including payments in kind. Social security payments due by the employer are generally not included in the taxable base.

2. Rates

The normal rate is 4.25 percent. This rate is increased to:

- 8.5 percent for that part of individual salary which exceeds 32,800 Fr.Frs. but does not exceed 65,600 Fr.Frs.; and
- 13.6 percent for that part of individual salary which exceeds 65,600 Fr.Frs.

B. Taxe d'apprentissage

The purpose of the apprenticeship tax (taxe d'apprentissage) is to finance apprenticeship schemes and technical training. Partial or total exemption from this tax can be obtained if the enterprise has an internal training program or apprenticeship scheme for its minor personnel or if the enterprise voluntarily contributes to schools and organizations serving such purposes.

1. Taxable base

The taxable base is generally the same as for the salary tax.

2. Rates

The normal rate is 0.5 percent. In the departments of Haut-Rhin, Bas-Rhin and Moselle the rate is 0.1 percent. The tax is temporarily increased by a surtax of 0.108 percent of 1979 payroll.

C. Participation des employeurs au financement de la formation professionnelle continue

Every employer domiciled or established in France employing at least 10 employees is required to invest annually a certain amount in training programs for his personnel or applicants for work. If he does not contribute to such training programs he must pay an equal amount to the Treasury.

1. Taxable base

The taxable base is generally the same as for the salary tax. Enterprises which in 1979 or in 1980 become liable to this tax for the first time receive a reduction of the tax in that their taxable base is reduced: by 360,000 Fr.Frs. for the first year, by 240,000 Fr.Frs. for the second year and by 120,000 Fr.Frs. for the third year.

2. Rate

The rate is 1.1 percent.

D. Participation obligatoire des employeurs à l'effort de construction

Every employer domiciled or established in France employing at least 10 employees is obliged to invest a certain amount in the construction of dwelling houses.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

This may be effected in the form of granting loans to employees to assist them to finance their housing.

1. Taxable base

The taxable base is generally the same as for the salary tax, except that salaries paid in the *preceding* calendar year are taken. Enterprises which in 1979 or 1980 become liable to this tax for the first time receive a reduction of the tax in that their taxable base is reduced by 360,000 Fr.Frs., 240,000 Fr.Frs. and 120,000 Fr.Frs. respectively in the first, second and third years of their existence.

2. Rate

The rate is 0.9 percent, but upon failure to meet its obligation the enterprise must pay a penalty of 2 percent of the taxable base to the Treasury.

E. Social security contributions

The total of social security contributions an employer has to pay for each employee can be broken down as follows:

For illness	8.95% on C^1
	+ 4.5 % on total salary
For old age	8.2 % on C^1
For child benefits	9 % on C^1
For housing aid	0.1 % on C^1
For unemployment	2.76% on C^2
For salary guarantee	0.25% on C^2
For supplementary pensions	
executives	2.64% on C^1
	+ 6.18% on $C^2 - C^1$
non-executives	2.64% on $C^2 - C^1$

Where C stands for the maximum amount per employee subject to social security contribution:

C^1	=	60,120 Fr.Frs.
C^2	=	240,480 Fr.Frs.
$C^2 - C^1$	=	180,360 Fr.Frs.

Note that in various branches of business different social security contributions apply, in particular with respect to accident insurance. Special levies are imposed on employers in the Paris area to finance transportation (2 percent on C^1 plus 23 Fr.Frs. per employee).

V. BUSINESS TAX

1. Scope

The business tax (taxe professionnelle) is imposed on all taxpayers carrying on commercial, industrial or certain types of professional activities.

2. Taxable base

The taxable base consists of two elements:
(i) the annual rental value of buildings and equipment used for the taxable activities; and
(ii) one fifth (sometimes one tenth) of payroll.

It is the Government's intention to replace this twofold taxable base by a single one: the value added by the enterprise.

3. Rate

Since the business tax is a local tax, rates differ from municipality to municipality.

VI. VALUE ADDED TAX

1. Scope

The value added tax (taxe sur la valeur ajoutée (VAT)) is a non-cumulative tax, imposed at each stage of the production and distribution cycle. An entrepreneur may credit the VAT invoiced to him (input tax) against the VAT which is due on his sales (output tax). The tax is levied on the sale of goods, the rendering of services and the importation of goods.

2. Taxable base

The taxable base is the price charged or, in case of importation, the customs value, excluding the VAT.

3. Rates

Standard rate	:	17.6 percent
Reduced rate for essentials	:	7 percent
Luxury rate for certain sales and services deemed to have luxury character	:	33 1/3 percent

Reduced rates may also apply in special cases, for instance, 2.1 percent for daily newspapers.

VII. REGISTRATION TAXES

Some of the most significant registration taxes are:

A. Registration tax at the sale of real property

The sale of real property is normally subject to registration tax increased by a number of local surtaxes. However, the sale of new buildings is subject to VAT and exempt from registration tax.

1. Taxable base

The taxable base is generally the sales price of the sales value of the property whichever is higher.

2. Rate

The aggregate rate of the registration taxes varies between 16.6 and 18.2 percent depending on the region where the property is situated. A reduced rate varying between 5.4 and 7 percent applies to sales of dwelling houses.

B. Creation of a company

At the creation of a company a fixed registration tax of

© 1980 International Bureau of Fiscal Documentation – BULLETIN

75 Fr.Frs. is due in addition to the registration tax which is due on the value of the contribution.

1. Taxable base

The amount of cash contributed or, in case of contribution in kind, the fair market value of the contribution.

2. Rates

Cash contributions are subject to a 1 percent rate whereas contributions in kind (real property, shares representing real property, good will, clientele, leasehold rights (or options thereon) and shares of "transparent" real estate companies) if made by a person not subject to corporate income tax are subject to 11.4 percent registration tax. However, if such contributions are made by an entity subject to corporate income tax the rate will also be 1 percent.

C. Succession and gift tax

When an individual domiciled in France (see for the concept of "domicile" the discussion of the individual income tax, supra) dies, his total estate wherever situated is subject to succession tax. The tax is imposed on the share each inheritor receives. Similarly, where a person domiciled in France donates property wherever situated, such donation is subject to gift tax. Persons domiciled abroad are only subject to French succession or gift duty with respect to French-situs property. Donations for which there is no need of registration (hand to hand gifts of cash) are not subject to gift tax but will become taxable at a later registration or eventually on the death of the donor.

1. Taxable base

Generally the fair market value of any property except cash. An exemption of 175,000 Fr.Frs. applies between spouses and between persons in the direct line of consanguinity.

2. Rates

Table 1
Transfers in the direct line of consanguinity except inter vivos gifts to descendants (donations-partages)

Value received (Fr.Frs.)	*Rate of tax (%)*
0 - 50,000	5
50,000 - 75,000	10
75,000 - 100,000	15
in excess of 100,000	20

Table II
Inter vivos gifts to descendants (donations-partages) and transfers between spouses

Value received (Fr.Frs.)	*Rate of tax (%)*
0 - 50,000	5
50,000 - 100,000	10
100,000 - 200,000	15
in excess of 200,000	20

Table III
Other transfers

Degree of consanguinity Transfer between:	*Rate of tax (%)*
Brothers and sisters	
0 - 150,000 Fr.Frs.	35
in excess of 150,000 Fr.Frs.	45
Persons up to and including the fourth degree	55
Others	60

Foreword

The report we here introduce has the great interest of offering a complete and up to date view of the legislative situation in the 18 Latin American countries. It is fundamental for considering Subject II of the 34th IFA Congress, to which it is closely related. In the Scientific Committee, and taking into account the interest that a single report about the Latin American position implied, I proposed to assign it an official character and subsequently to include it in the CAHIERS. Because of regulations, especially with regard to the national character the reports submitted to the IFA Congress must have and the concern it would not follow the Instructions, it was decided to publish it in the BULLETIN FOR INTERNATIONAL FISCAL DOCUMENTATION, accepting Prof. J. van Hoorn's kind proposal.

The report shows the significant heterogeneity of Latin American domestic law and the resulting differences with (i) the continental doctrine, (ii) the solutions so radically held in the Model Treaties and — even more important — (iii) the treaties signed to date with the developed countries which do not follow these positions.

The doctrine, through several meetings of the Latin American Tax Law Institute which took place from 1956 (Montevideo) up to 1975 (Caracas), was to diminish and adjust the traditional concept of the source, as an exclusive criterion of taxing power. The conclusion reached in the last meeting constitutes the most authoritative expression of this Doctrine. It notes the source principle, but as a priority criterion and not as an exclusive one; it settles rules for the location of the income; it admits that taxation must be imposed on the basis of the net income and that tax treatment of linked enterprises must follow the general rules applied to independent corporations. [1]

The Model Tax Conventions drafted in Latin America, carefully analyzed in these last years at the international, non-European level, [2] *establish the traditional concept of the source as an exclusive criterion of taxation, making them (the Model Treaties) inapplicable in practice, even as a basis or starting point in the negotiation of the few treaties signed to date. The most eloquent example of a rejection of the above Model Treaties is shown by the treaty signed by Ecuador and Germany on July 22, 1977 — not yet ratified — which follows the OECD Model, leaving aside the Andean Pact Model, which was officially passed by Ecuador in 1971, effective from January 1, 1979.*

The other treaties follow the same trend, accepting the concept of permanent establishment, so resisted in Latin America, co-participation in the taxation of dividends, interest and royalties, and, what is worst for the source theory, accepting a limitation in the rates which is not applicable for the co-contracting countries.

The domestic legislation, as stated above and also clearly shown in the report, has a great heterogeneity and differences with the mentioned precepts. Some points must be noted, for example, the fact that eight countries adopted world income as a taxation criterion, which means a broadening of the source concept which approaches the domicile concept. Colombia, Chile, Honduras, Mexico and Peru adopted it, either for corporations or for individuals; Brazil, El Salvador and Uruguay, when individual income tax was the rule in that country, only applied the concept for this last income tax; Mexico, wholly leaving aside the source principle, also adopts the nationality criterion. From another point of view, Uruguay, in 1974, largely abandoned the source principle, as dividends and interest earned in the country and paid to persons domiciled outside the country are not taxed and royalties are

1. The text of this conclusion, substantially in agreement with that of the 29th IFA Congress which took place later on at London, is published in English, in *30 Bulletin for International Fiscal Documentation* (1976), p. 16, and in Spanish in the official publication of the Meeting (Caracas, 1976, p. 15) and in *Revista Tributaria* (Montevideo, T.II, p. 36).

2. The subject was thoroughly discussed at the XIX Technical Conference of CIAT at Curaçao (Netherlands Antilles) in September 1977. The reports submitted to the meeting may be read in *Documents and Reports* (Costa Rica 1977). The reports we submitted, "Criteria for the allocation of the power of taxation among the different tax jurisdictions according to the type of income, assets, and taxable goods (OECD, UN Experts Group, Andean Pact and LAFTA solutions)" and "Current Status of Studies and Work on Tax Treaties", were reproduced in *32 Bulletin for International Fiscal Documentation* (1978), p. 12 and 453 and in *Estudios de Derecho Tributario Internacional*, Montevideo, 1978, p. 175 and 193.
The Andean Pact Model was especially studied in the Seminar held at the IFA Congress in Mexico in 1974, under Prof. Stanley Surrey's direction. The reports submitted were published by the International Bureau of Fiscal Documentation, in a volume entitled *Fiscal Harmonization in the Andean Countries* (Amsterdam, 1975). Our report is reproduced in Spanish: "Régimen Impositivo de las Rentas derivadas de inversiones de capital en el Modelo de Tratado del Pacto Andino", in *Rev. Derecho Fiscal* (B. Aires), t.XXIV, p. 818; in *Rev. Tributaria* (Montevideo), T.I. p. 19; and in *Estudios . . .*, op. cit. p. 117; and under the title "The treatment of investment income under the Andean Pact Model Convention. The Andean view", in *29 Bulletin for International Fiscal Documentation* (1975) T. XXIX, p. 91.
The Model of the "Basin of the River Plate" (formed by Argentina, Bolivia, Brazil, Paraguay and Uruguay) was passed at the Foreign Affairs Minister's level in December 1978 and published in *Rev. Tributaria* (Montevideo) T.V., p. 513, with the notes of a member of the working committee, D. Dentone.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

partially taxed. Nine countries, Uruguay included, in opposition to the source principle, consider that know-how (technical assistance) received from outside is taxable for mere fiscal reasons. Thus, they follow the heterodox criterion of the "paying source" which assimilates the source to the place where the payment is made, as established in LAFTA meetings, as a result of a Brazilian suggestion but, according to the report, also followed by Mexico. In conclusion, some countries, like Chile and Ecuador, have to an extent accepted the concept of permanent establishment.

This panorama allows one to declare that the source principle — sustained by Latin America at the international level as an exclusive tax criterion since the meeting of the Fiscal Committee of the League of Nations at Mexico in 1943, and emphatically ratified in the Models of the Andean Pact in 1971, in the "Criteria" passed by LAFTA in 1977 and lately in the Model of the "Basin of the River Plate" in 1978 — is in crisis.

It has been lessened and adjusted by the most authoritative continental doctrine, rejected in the Treaties approved — even by countries of the Andean Pact — with the developed countries and broken by domestic legislation which presents heterogeneous solutions without other fundamentals in view than fiscal interests, leading to the conclusion that, at present, there is no Latin American position, unless at the level of the laws in force. Thus, a question is raised about the new treaties in which the developed countries seem to be so interested.

Ramón Valdés Costa

INTRODUCTION

Through the analysis of legislation in 18 countries, the present document attempts to summarize the current Latin American tax situation concerning the criteria of taxation applicable in each region.

For a better presentation of the study, it has been structured in the following way:

A. Summary of the legislation in the countries included in the contents, giving details in each case:
  I. Structure of the income tax.
  II. Binding criteria applied, i.e. the elements or characteristics that the tax regulations take into consideration to define its scope of application.
  III. General considerations on the admission of deductible expenses to determine the taxable income of taxpayers, with special emphasis on the expenses incurred abroad and services rendered abroad.

B. General conclusions on each of the points mentioned in A. above (with additional information in Tables 1, 2, 3 and 4).

C. Conclusions regarding the treatment of income derived from international activities (transport, insurance, news, films). See Tables 5 and 6.

In each case, information has been obtained from the legislation in force as of November 30, 1979.

A. SUMMARY OF INCOME TAX LEGISLATION IN 18 LATIN AMERICAN COUNTRIES

ARGENTINA

I. TAX STRUCTURE

The "Impuesto a las ganancias" is imposed on the total annual income of individuals and companies. Companies are taxed at a fixed rate of 33 percent and individuals on a progressive scale between 7 and 45 percent. Permanent establishments, whether commercial, industrial or of any other type, belonging to companies or entities constituted abroad, or to individuals resident abroad, pay 45 percent. When dividends are remitted to beneficiaries abroad, a final tax of 17.5 percent is paid. This tax is also applicable to beneficiaries resident in the country unless they disclose their identity, in which case they must then compute the dividends in their personal return; otherwise a final withholding of 17.5 percent is applied.

II. BINDING CRITERIA

The tax is applied to earnings of Argentinian source.

The law determines that in general "income of Argentinian source is that derived from assets located, placed

© 1980 International Bureau of Fiscal Documentation – BULLETIN

or utilized economically in the Republic, from carrying out in the territory any act or activity susceptible to profitability, or acts performed within the country, not taking into consideration nationality, domicile or residence of the owner or of the parties intervening in the operations, nor of the place in which the contract is agreed upon". Notwithstanding the aforementioned, the legislation taxes "income derived from activities carried out occasionally abroad by persons resident in the country", adding that these persons "shall compute as payment, in advance of the tax, the amounts effectively paid in the place where such activities are carried out. This credit can only be computed up to the amount of the tax on the income incorporated from abroad."

At the same time the law qualifies as income of Argentinian source the profit derived from guaranteed loans "in rem" when the respective assets are located in the Argentine Republic. However, interest derived from debentures is fully considered of Argentinian source when the issuing entity has been incorporated or located in the Argentine Republic.

In addition, the compensation paid to members of company boards and other entities incorporated in Argentina, even for work performed abroad, is considered of Argentinian source, as well as the fees and other remuneration derived from technical, financial or other assistance provided from abroad.

In connection with the exemptions granted by the Argentinian legislation and the treatment of these exemptions in the legislation of other countries (mainly in relation to the "tax sparing" clause), the law establishes that these exemptions will not be effective as long as they are not recognized in the country of origin of the investment to the extent that a transfer of revenue to foreign treasuries could arise from these exemptions. This provision is not applicable in cases which are expressly governed by tax treaties. In this respect, it is convenient to point out that the network of tax treaties to which Argentina is a signatory has been extended since 1976, the following treaties existing to avoid double taxation on income and capital:

- Bolivia, approved in 1976, to be ratified shortly;
- Chile, signed in 1976, not yet ratified;
- Germany, Federal Republic, signed in 1978, already ratified, only the exchange of ratification documents is still missing;
- France, agreed on in 1979, not yet ratified;
- Sweden, agreed on in 1962, not yet ratified;
- Austria, Belgium, Canada, Italy, Russia, Spain, the United States, Finland and the Netherlands, negotiations are in course.

The regulations establish that expenses incurred abroad are deemed to have originated in profits of foreign source, but the Tax Administration is empowered to authorize the deduction if the taxpayer proves that these expenses have been made in order to obtain profits of Argentinian source.

In the case of permanent establishments of foreign entities, the local accounting must be kept separately from head office accounting. In addition the law states that the contract agreed upon between a foreign-owned local entity and entities domiciled abroad, controlling directly or indirectly the local company, will be considered as a transaction made between independent parties, when the economic considerations and conditions are in accordance with the normal practices of the market between independent entities (arm's length principle) with the following limitations:

- Loans: Provided that the transaction has not been rejected by the Central Bank, which must occur within 30 days of the communication of the transaction.
- Contracts governed by the law of technological transfer: In accordance with Law 21,167 of 1977, in contracts between a foreign-owned local entity and the foreign company that controls it directly or indirectly, royalty payments will not be admitted for the utilization of trademarks, and the payments made by the local entity cannot be expressed in lump sums; in addition, the payments will be deemed to accrue in annual periods coinciding with the end of the financial year and will have to be paid after such date.

In addition it is established that the compensation or salary paid to the members of the Board of Directors of a company or other entities abroad, as well as fees and other compensations paid for technical assistance from abroad, will be deductible provided these compensations do not exceed the following limits:

- 3 percent of the sales or receipts, established as the payment in the contract;
- 5 percent of the amount of the investment actually made on the basis of the technical assistance.

On the other hand, the deduction on compensation paid to a member of the Board of Directors, or to other entities incorporated or domiciled abroad who rendered the services abroad, cannot exceed the following limits:

- up to 2.5 percent of the trading profits of the entity provided that such profits have been distributed as a dividend;
- up to 2.5 percent of the trading profits of the entity when dividends are not distributed. This percentage will be increased in proportion to any distribution made, up to a limit of 12.5 percent.

The Tax Administration is empowered to determine other percentages in special cases.

BOLIVIA

I. TAX STRUCTURE

The income tax is applied on the basis of progressive rates (between 4 and 48 percent) in the case of individuals and a flat rate of 30 percent in the case of companies; the tax rate can be reduced by 30, 40 and 50 percent on profits that the companies reinvest in certain priority activities established by the law.

Companies have the obligation to withhold in the case of payments to beneficiaries domiciled abroad:

a) 30 percent as the only and final tax on the gross income in the case of remittance of profits, dividends of nominative shares, interest on loans, and from other securities;
b) in the case of individuals, the withholding is made in accordance with the progressive scale rates as the only and final tax.
In the special case of rents and other income from movables and in the case of professional fees, the withholding is made on 85 percent of the amount paid.

II. BINDING CRITERIA

The tax is applied to Bolivian-source earnings obtained by the taxpayers, independently of the place of domicile or incorporation. In addition, and as an extension of the source principle, the following profits are considered of Bolivian source:

- interest on loans utilized in the country, granted by creditors from abroad to persons or entities domiciled in the country;
- interest on loans guaranteed by assets placed or registered in Bolivia;

© 1980 International Bureau of Fiscal Documentation – BULLETIN

— compensation received by members of the Board of Directors performing activities abroad in relation to enterprises domiciled in Bolivia;
— fees or compensation received or accrued for technical assistance or any other similar assistance rendered from abroad when the assistance relates to assets situated in Bolivia or profits from Bolivian source;
— interest on bonds or debentures when the issuing entity is domiciled in the country.

Profits derived from exports are fully considered as Bolivian-source income whilst profits from imports are considered to be foreign-source income.

The law establishes special rules for rectifying the value of exports or imports when a substantial difference with the market value is evident. In such a case an economic tie is deemed to exist between buyer and seller or vice versa.

As regards permanent establishments of foreign entities, the Internal Revenue Service is empowered to determine the net profit of these on the basis of separate accounting.

III. DEDUCTIBLE EXPENSES

As a general principle, the law establishes that expenses incurred abroad are for the production of income of foreign source, unless it is proved that these expenses are related to the production of Bolivian income. In the case of royalties, whatever the name given by the parties, including technical assistance, as well as in the case of fees and other compensation for advice, management or services rendered in the country or abroad, the deduction of the expense is authorized.

BRAZIL

I. TAX STRUCTURE

Individuals are subject to tax based on progressive rates applicable to the total income. Legal entities are subject to a flat rate of 35 percent on the effective income. An additional tax rate of 5 percent is also applied during the fiscal years 1979-1981 on profits exceeding 30 million cruzeiros a year. However, there are lower rates for public utility companies (6 percent and 17 percent), for agricultural enterprises (6 percent), and others. On the other hand, there is a notional income system ("lucro presumido") applicable to small and medium size enterprises.

Taxation of dividends and profits distributed by companies domiciled or incorporated in Brazil is, briefly, as follows:

Dividends and profits of corporations distributed to individuals domiciled in the country.

Bearer shares without identification of the recipient; final withholding (25 percent: SACC — closed corporation; 15 percent: SACA — open corporation).

Nominative shares and bearer shares when the shareholder is disclosed; the beneficiary can opt between no withholding and incorporate the dividend in his personal tax return or he can have tax withheld (25 percent SACC and 15 percent SACA) and then include the dividends in his personal tax return, either taking the withholding as a credit or not including such dividends in which case the withholding becomes final.

Dividends and profits remitted to beneficiaries domiciled abroad.

A final withholding of 25 percent which may be reduced to 15 percent if the beneficiaries reinvest the profits in Brazil in industrial equipment of the enterprise. In addition a final withholding of 12 percent is applied on the profits and dividends remitted abroad if the average of remittances over three years exceeds 12 percent of capital and reserves invested in Brazil.[1]

II. BINDING CRITERIA

In the case of individuals resident or domiciled in the country, the tax is applied on world-wide income, with a credit for the income tax paid abroad, subject to reciprocity. Legal entities and individuals not resident in the country are subject to tax only on Brazilian-source income, but the distribution is subject to the tax on dividends.

III. DEDUCTIBLE EXPENSES

In general only costs and expenses incurred in the country can be deducted. Depreciation of fixed assets is only admitted in relation to assets located in the country; as regards provisions, only those related to activities located in Brazil can be constituted.

In connection with the payment made abroad of royalties, trademark licenses, and fees for technical assistance, it must be pointed out that the technological transfer regime has been regulated by Law No. 15 of September 11, 1975, which establishes the obligation to register all contracts of this nature with the National Institute of Industrial Property (Instituto Nacional de la Propiedad Industrial), as a basic requirement for fiscal purposes. Following this line, the payment of royalties, trademark licenses or fees for technical assistance can be accepted as a deductible expense if the following conditions and limits are fulfilled:

— there is sufficient proof of the respective expenses;
— the deductions are made during the first five years of operations of the company or when the introduction of a special production process occurs;
— registration of the contract with the INPI;
— these expenses cannot exceed 5 percent of the gross[2] income of the manufactured products or of the proceeds of the products sold;
— the expenses cannot exceed the percentage coefficients given by the Finance Ministry in relation to the respective type of product.

Payments are subject to a final withholding of 25 percent on the gross amount paid. It must be added that royalties and technical assistance payments made by a subsidiary or a branch to its home office are not deductible. However, the treaties to avoid double taxation to which Brazil is a signatory establish a maximum withholding rate of 15 and 10 percent in certain cases, while on the other hand the country of residence of the recipient establishes a matching credit between 20 and 25 percent.

CHILE

I. TAX STRUCTURE

The income tax is applied on a schedular basis and there is also a surtax. The structure of the system is as follows:

---

1. According to a recent Law, No. 1725, of December 7, 1979, the reduction of tax in the case of interest, commission, expenses and discounts remitted abroad is now 95 percent of the 25 percent tax rate. This change reduces the effective rate of 12.5 percent at present (50 percent of 25 percent) to 1.25 percent (5 percent of 25 percent).
2. In accordance with a recent Decree-Law, No. 1730 of December 14, 1979, this percentage will be applied in the future on the net proceeds.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Schedular taxes

First category: It comprises income from capital and from mercantile, manufacturing, mining and other enterprises. There is a normal general tax rate of 10 percent, whilst corporations and joint stock companies incorporated in the country pay in addition a tax rate of 40 percent. Lottery prizes are only subject to a tax of 15 percent.

Second category: It comprises all compensation for personal services at progressive rates between 3.5 and 60 percent. The scale brackets are expressed in monthly tax units (which are readjusted periodically). In the case of compensation of members of the Board of Directors and university professionals, the tax is 7 percent. Income obtained by non-resident foreign individuals is exempt from this tax but an additional tax is applied instead.

Additional tax: A 40 percent additional tax is applied on Chilean-source income received or accrued in favour of individuals, whether nationals or foreigners, without residence or domicile in the country and by legal entities incorporated abroad with a permanent establishment in the country.

If certain royalties and technical assistance are considered unproductive or not necessary for the economic development of the country, the President of the Republic, based on a report of the "Corporación de Fomento de la Producción" and of the "Comité Ejecutivo del Banco Central de Chile", is empowered to increase the rate from 40 percent up to 80 percent.

The amounts remitted abroad to foreign producers or distributors in respect of film and television material will be subject to this tax at the rate of 20 percent. Compensation for personal services received by foreign individuals connected with scientific, technical, cultural and sport activities, when the service is carried out in Chile, will also be taxed at the rate of 20 percent.

Payments made by national airline companies to persons not domiciled or resident in Chile are exempt if they are made for technical assistance, services, interest or any other reason related to the normal activities of the company and if certain conditions are fulfilled.

Surtax: This tax is applicable to individuals resident or domiciled in Chile according to a progressive scale of rates between 3.5 and 60 percent of the net income determined on the basis of annual tax units (readjusted periodically). The gross income is arrived at by adding the taxable income of the different categories; from this income can be deducted the schedular taxes and 40 percent of the amounts distributed by corporations and joint stock companies, as well as 10 percent of one annual tax unit.

As a consequence, dividends and profits of corporations are distributed to nationals or foreign beneficiaries without any withholding. When the recipients are domiciled in the country, they must include the dividends in the surtax return, but they have a right to credit against the tax 40 percent of the dividends incorporated in the income.

It is important to point out that first category tax is fully subject to an annual monetary correction through the adjustment of the assets, liabilities and capital. Income and monthly expenses of professionals and independent workers who are subject to the second category tax are also adjustable.

II. BINDING CRITERIA

As a general principle, all persons domiciled or resident in Chile pay income tax on a world-wide basis whether the source of income is located within the country or abroad, but persons not resident in Chile are subject only to tax on Chilean-source income. However, the foreigner who becomes domiciled or resident in the country for the first time will be subject to tax on Chilean-source income only for the first three years of permanency in the country. This period can be extended in special cases.

Income is considered to be of Chilean source if derived from assets located in the country or from activities performed in Chile wherever the domicile or residence of the taxpayer may be. Royalties, payments for the utilization of trademarks and other similar compensation derived from the exploitation in Chile of industrial or intellectual property are also considered to be Chilean-source income. The shares of a company incorporated in Chile are deemed to be located in Chile. In the case of loans, the source of the interest is deemed to be located in the domicile of the debtor.

When foreign-source income has to be computed, only net profits will be subject, excluding those that are not available for reasons of force majeure or act of God or by legal provisions of the country of origin.

The Chilean-source income of agencies, branches or other forms of permanent establishments of foreign enterprises doing business in Chile will be determined on the basis of the actual results obtained in the country. When such results cannot be determined from the accounting records, the Regional Tax Bureau is empowered to determine the taxable income on the basis of applying to the gross receipts of the agency the proportion between the net world income and the gross world income of the head office. The net income may also be determined by applying to the total assets of the agency the proportion existing between the world net income and the total assets of the head office.

III. DEDUCTIBLE EXPENSES

The following rules are applied:

(a) Compensation for personal services rendered abroad is accepted as expenses provided that it is supported with sufficient documentation and when, in the judgement of the Regional Tax Bureau, its amount and nature are necessary and convenient for producting the income in Chile.

(b) Remittance abroad of royalties and technical assistance are deductible but the corresponding additional tax must have been paid.

It is important to point out, finally, that the President of the Republic is empowered to enact legislation according to international agreements and international provisions in order to avoid international double taxation or to diminish its implications,

COLOMBIA

I. TAX STRUCTURE

The "Impuesto sobre la Renta y Complementarios" covers the following taxes:

- Income tax on individuals, death duties and corporate tax;
- Supplementary tax on occasional gains of individuals;
- Wealth tax on individuals;
- Tax on transfers abroad of income, applicable to individuals and legal entities.

The income tax on individuals is applied on the basis of progressive rates between 10 and 56 percent. A 40 percent tax rate is applied on Colombian-source income obtained by foreign individuals without residence in the country and who are not obliged to appoint a representative in Colombia.

The tax rate applicable to corporations and companies in general is 40 percent. Foreign corporations also pay this 40 percent on taxable income. Limited liability companies and the like pay a tax rate of 20 percent.

Dividends and profits distributed to individual beneficiaries domi-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ciled in the country are subject to a withholding on account of the final personal income tax applicable. It must be added that individuals whose wealth does not exceed 4 million pesos (approximately US$ 95,000) have the right to discount against the tax a special credit of 20 percent of the first 10,000 pesos paid as dividends. The withholding on account of the general tax is 5 percent in the case of interest paid by corporations.

The income and wealth tax rates are readjusted annually.

Occasional gains are taxed at half the rate applicable to ordinary income and if the tax so calculated is lower than 10 percent, tax will be assessed at the rate of 10 percent.

On dividends and profit transfers to home offices abroad two taxes are applied: the normal income tax and the supplementary tax on remittances, both being provisional and susceptible to reassessment. The regime is as follows:

1. Income tax

— The tax rate on dividends received by companies and other foreign entities is 20 percent. However, when the country under which legislation the foreign company was incorporated taxes dividends at a rate lower than 30 percent and when more than 25 percent of the total stock of the company receiving the dividends is owned by individuals resident in Colombia, whether nationals or foreigners, the applicable tax rate is 40 percent.

— Tax rate applicable to other profits, 40 percent.

2. Supplementary tax on remittances abroad

— Taxes applicable on the nominal amount of the remittance:
  - general rate, 12 percent;
  - special rate, 20 percent on the profits obtained by companies and other foreign legal entities without a permanent establishment in Colombia.

  Exemption: Dividends and interest on short term loans for imports or exports of merchandise, capital assets or raw materials, and other loans registered with the exchange authorities are exempted from this tax.

— Remittances for the payment of technical assistance rendered abroad are only subject to the supplementary tax on remittances if the following conditions apply:
  - that the beneficiary of the payment is not resident or domiciled in the country, and that he is not obliged to appoint a representative in Colombia;
  - that the technical assistance services are not available in the country;
  - that the technical assistance services are rendered only at the preoperating stage of a project.

  The General Directorate of National Taxes (Dirección General de Impuesto Nacionales), with the prior authorization of the Royalty Committee referred to in Article 6 of Decree-Law 688 of 1967, will determine in each case the technical assistance services that are not available in the country.

II. BINDING CRITERIA

Individuals resident in the country, whether nationals or foreigners, are subject to tax on their ordinary income and on occasional gains on a world-wide basis, but in the case of the wealth tax only on the wealth located within the country.

Foreign individuals resident in Colombia are only subject to tax on foreign-source income after four years of residence in the country. Individuals, whether nationals or foreigners, without residence in the country are only subject to tax on income and occasional gains of Colombian source and only on wealth located within the country.

Companies incorporated in Colombia are taxed on a world-wide basis whilst companies incorporated abroad are taxed only on Colombian-source income.

Income deemed to be Columbian-source is, inter alia:
— interest produced by local loans or economically connected with the country (interest on temporary loans for the import of merchandise and bank overdrafts is exempted);
— profits from the rendering of technical assistance services, whether rendered abroad or in the country;
— dividends and participations derived from Colombian companies domiciled in the country;
— dividends and participations received by Colombian residents, derived from companies or foreign legal entities which have business or investment in Colombia, directly or indirectly.

The Colombian taxpayer who receives foreign-source income and who is subject to income tax in the country of origin of the income has a right to credit against the Colombian tax the tax paid abroad on such profit, up to the limit of the Colombian tax applicable.

III. DEDUCTIBLE EXPENSES

Expenses incurred abroad are deductible as long as they are related to the production of Colombian-source income, provided that the taxpayer can support with documentary evidence the expenses and the withholding of taxes in Colombia when applicable. The deduction of expenses incurred abroad for the production of income of Colombian source cannot exceed, in general, ten percent of the net income with the sole exception of expenses subject to withholding and other cases expressly determined by the law.

Payments made by corporations to individuals economically connected to them will be considered to be a distribution of profits except in the case of salaries, as well as rents and interest within certain limits.

COSTA RICA

I. TAX STRUCTURE

Tax is applied on the total income on the basis of progressive rates for both individuals (between 5 and 50 percent) and legal entities (between 5 and 45 percent).

Distribution of dividends and profits is subject to the following withholding, applicable on the gross amount.

(a) Distribution of dividends and profits from companies to beneficiaries situated in the country is subject to withholding on the gross amount distributed:
  — 5 percent as final tax in the case of individuals domiciled in the country (except in the case of stock dividends);
  — 5 percent on account of the general tax when paid to companies incorporared in the country (except stock dividends).

(b) Distribution of dividends and income in general to beneficiaries domiciled abroad is subject to withholding tax as follows:
  — 10 percent on payment of certain Costa Rican-source interest to legal entities domiciled abroad (e.g. on bank loans);
  — 10 percent on payments connected with the production or distribution of films (except for certain special cases) made to individuals or legal entities domiciled abroad;

© 1980 International Bureau of Fiscal Documentation – BULLETIN

— 10 percent on payments for personal services made to individuals or legal entities domiciled abroad;
— 15 percent on dividends and profits distributed to persons domiciled abroad (except stock dividends);
— 20 percent on payments to persons abroad for news and audiovisual programs and on patents, trademarks and royalties;
— 30 percent on compensation to members of Boards of Directors acting abroad, for technical assistance rendered abroad or to persons not domiciled in the country and for interest in general.

In the case of dividends, company participations and personal compensation, the Tax Administration is empowered to grant total or partial exemption from the withholding tax when it is proved that the beneficiaries are not granted a credit or deduction for the tax withheld in Costa Rica or when the credit granted is lower than the tax applicable in Costa Rica, in which case only the difference will be exempt. Corporations with bearer shares will pay annually a tax of 3 percent on the net capital, which tax cannot exceed 20,000 colones (approximately US$ 2,200).

II. BINDING CRITERIA

The taxes are applied according to the source principle, the income obtained within the country whether by a taxpayer domiciled in the country or abroad being taxed.

III. DEDUCTIBLE EXPENSES

In general, all the expenses necessary to produce the income can be deducted, including payment for technical assistance rendered abroad and fees for the utilization of patents and royalties paid to persons domiciled abroad.

DOMINICAN REPUBLIC

I. TAX STRUCTURE

The Dominican Republic is one of the few countries where a schedular tax is applied according to the origin of the income and then a surtax with progressive rates between 3 and 70 percent on the total annual income of individuals. The schedular tax is applied as follows:

— *First category:* income from real estate, 6 percent.
— *Second category:* income from movable capital (royalties, interest, etc.), 8 percent; when the income is remitted or credited to a foreign person, a final tax of 18 percent.
— *Third category:* profits of legal entities, progressive rates between 10 and 38 percent; when the profits are remitted or credited to a foreign person a final withholding tax of 18 percent is payable.
— *Fourth category:* income from independent services, 2 percent.
— *Fifth category:* income from dependent services, 2 percent.

Dividends are subject to second category tax at the rate of 8 percent and then are subject to surtax, but the tax withheld under the second category may be credited against the surtax.

Individuals are not subject to third category tax but they have to compute these profits, as well as any from participations in companies, in their surtax.

II. BINDING CRITERIA

The Dominican Republic only follows the territoriality principle. For these purposes the law states, in general, that Dominican-source income is that derived from capital, assets or rights situated, placed or economically utilized in the country, that obtained from carrying out commercial, industrial, agricultural, mining and similar activities or from personal services, the exercise of any profession as well as income from loans and rentals, without taking into consideration nationality, domicile or residence of the parties intervening in the transaction or the place of entering into contracts.

Income derived from occasional activities carried out in the country and that derived from occasional activities performed abroad by Dominican residents is also subject to tax.

Compensation paid to teachers, public speakers, scientists, artists and the like, staying in the country not more than 12 months on cultural programs, educational or technical exchange, with international bodies, other Governments, universities or private institutions, is exempted.

There are special regimes for determining the source of income and the tax applicable in the case of exports and imports, insurance, transport and communications.

Income derived from exports and imports is determined as follows:

(a) Income derived from the export of merchandise produced, manufactured, wholly or partially, or bought in the country is deemed to be of Dominican source, even though such transactions are carried out by means of subsidiaries, branches, representatives, purchase agents or other intermediaries of individuals or legal entities resident abroad. The income is determined by deducting from the wholesale price at the place of destination the cost of the merchandise, transport and insurance expenses, commissions and sale expenses, as well as those incurred in the Republic as necessary for obtaining the income subject to tax. When no price is fixed or the declared price is lower than the wholesale price effective at the place of destination, it will be deemed, except if proved to the contrary, that there is an economic connection between the parties. In this case the wholesale price at the place of destination will be taken as the basis for determining the value of the products exported.

(b) Income obtained by foreign exporters on the mere introduction of the products into the Republic is deemed to be of foreign source.

However, when the sale price in the Republic is higher than the effective wholesale price at the place of origin, plus insurance and transport expenses, it will be deemed, except if proved to the contrary, that there is an economic connection between the parties. In this case, the difference between both prices will be considered Dominican-source income and both parties will be responsible for the respective tax.

When applying the previous ruling, if the wholesale price in the country of origin is not known or if a doubt exists that this price corresponds to the same or similar imported merchandise or there is any other circumstance that makes the comparison difficult, the determination of the income of Dominican-source will be based on the margins obtained by independent entities devoted to the same or similar activity.

In the absence of such identical or similar activity the Tax Administration will establish a net percentage on the basis of businesses that are analogous with the tested case.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

III. DEDUCTIBLE EXPENSES

As a general rule, all necessary expenses for obtaining, maintaining and keeping the income or the source are deductible.

For these purposes, the following considerations apply:

(a) All expenses incurred in the country are deductible and those incurred abroad only if they are incurred to obtain, maintain or keep the income or the source of income in the country.

(b) Royalties are defined as compensation whether in cash or in kind for the transfer of ownership, use of assets or for the transfer of rights when the value is determined in relation to production, sale, exploitation or similar units, whatever the denomination given. Royalties paid abroad can be deducted as expenses if they fulfill the general rules and the beneficiaries are empowered to deduct additionally 20 percent as expenses, but the Tax Administration can apply a different percentage and even not admit any expense at all.

(c) Financial statements of branches and subsidiaries of foreign entities will be determined for tax purposes on the basis of separate accounting records, the Tax Administration being empowered to introduce the necessary corrections in order to reflect the actual effective profits of Dominican source. When from the accounting records of the entity the profit obtained in the country cannot be determined easily and accurately, the net income of Dominican source will be determined on the basis of results of independent entities devoted to the same or similar activities. The Tax Administration is empowered to adopt other indices for tax purposes when circumstances so require, and consider that the branch or subsidiary constitutes, with the head office, an economic unit. Based on this assumption they may determine the net taxable income.

The Tax Administration is empowered to request the necessary details or statements, duly certified, which may be necessary to clarify the commercial relations between the local entity and the foreign head office, as well as to determine reciprocal purchase and sale prices, values of fixed assets and any other data that they may require.

In the cases required by the Tax Administration, branches, agents and representatives of foreign entities in the country are obliged to file the following documents with the tax return:

— a copy of the balance sheet and of the profit and loss statement of the head office in accordance with the requirements in the country of origin for tax purposes or for distribution of dividends in the case of corporations;

— a certified copy of the contract between the head office and its representative in the country permitting the latter to intervene as such and of any other document establishing the procedure to determine the income participation of the agent or representative;

— a detailed account of original costs of products or merchandise imported into the country;

— any other document necessary to determine the taxable income or to expedite in any way the tax audit.

All pages of the above-mentioned documents have to be signed by authorized persons. The signatures have to be legalized before the respective Dominican Consul.

ECUADOR

I. TAX STRUCTURE

The tax on individuals is applicable on the basis (1) of progressive rates on global income, (2) a flat rate on certain categories of income as well as (3) a tax on business profits. There are also several additional taxes applicable to certain legal entities.

The progressive tax rates range between 10 and 50 percent. Earned income, whether of employees or from the exercise of a profession, in excess of 120,000 sucres annually (approximately US$ 4,000) is subject to a tax of 6 percent. Earned income obtained with the investment of capital also is subject to a 6 percent tax and profits derived from capital without personal work are subject to a tax of 18 percent.

Companies incorporated in Ecuador pay 20 percent on their profits. Permanent establishments of foreign companies pay 40 percent on the Ecuadorian-source profits.

Companies distributing dividends to individuals or to legal entities, whether nationals or foreigners, resident or non-resident in the country, have to withhold as follows:

— 20 percent on the dividends of shares (nominative shares according to a decision of the Andean Pact);
— 40 percent on dividends of nominative shares remitted to foreign shareholders resident abroad.

Profits obtained in the country by companies incorporated abroad and remitted to their head office are subject to a final tax of 40 percent.

Interest, royalties and other profits remitted abroad are subject to a final tax of 40 percent on the income considered to be Ecuadorian-source.

There is a special regime applicable to hydrocarbon companies.

II. BINDING CRITERIA

The tax is applicable to Ecuadorian-source income and to foreign-source income in special cases established by law.

Profits derived from independent professional activities by foreign individuals or legal entities resident abroad who occasionally work in Ecuador are taxed; the tax is applied on 60 percent of the total gross amount received or credited to them, provided that they are in the country less than one year. If they are in the country for more than one year the tax is computed on 100 percent of the amount received or credited, but in this case normal rules are applied for the determination of taxable income. Also considered Ecuadorian-source income is 80 percent of compensation received for professional services rendered abroad by individuals or legal entities, whether nationals or foreigners.

In general, technical assistance expenses are deductible providing the services are rendered directly, not through third parties, and that the services are actually rendered. Rentals paid for equipment, machinery, ships, or any type of transport vehicle utilized in economic activities in the country, belonging to individuals or legal entities resident abroad whether the contracts are entered into within or outside of the country, are considered to be income of Ecuadorian source.

A permanent establishment of a foreign enterprise is deemed to exist if there is a fixed place for carrying out the business activities of the enterprise in Ecuador, whether total or partially, including research and consulting, and other establishments of a productive nature. In this sense the law refers expressly to branches, agencies, offices, warehouses, mines, oil wells, plantations, forests, factories, workshops, research establishments, consulting agencies and other permanent places of business of the foreign enterprise. On the other hand the regulations establish that a permanent establishment is deemed to exist when the foreign enterprise maintains in the country a fixed place of business or has for more than 12 months a place to carry out technical services and when its agent has the power to conclude contracts on behalf of the foreign enterprise or when he is under a labour

© 1980 International Bureau of Fiscal Documentation – BULLETIN

contract and habitually carries out commercial transactions on behalf of the enterprise, has usually in deposit assets for sale and delivery, and principally if the administrative expenses (in particular the rental of the offices) are paid for by the foreign company.

The income will also be considered to be of Ecuadorian source if it is:

- compensation obtained by Ecuadorians or foreigners resident in Ecuador from international bodies or foreign bodies and Governments;
- compensation received by Ecuadorians or by foreigners living abroad and working for the Government or for national bodies or enterprises or for foreign enterprises domiciled in Ecuador;
- compensation of Ecuadorians and foreigners for occasional services rendered abroad provided they are paid by public national bodies or by enterprises domiciled in Ecuador.

In the three above-mentioned instances a credit is granted for the tax paid abroad according to the certificates of the respective tax authorities.

- compensation received by foreigners who are working in Ecuador for foreign enterprises when they remain in the country for more than six months;
- fees and compensation paid to Ecuadorian professionals by national or foreign bodies or individuals or legal entities, domiciled or not in the country;
- in the case of compensation paid to professionals for services rendered abroad to national bodies or enterprises or to permanent establishments of foreign enterprises, 80 percent of the compensation is considered to be Ecuadorian-source income.

For foreign-source profits which are not subject to tax based on the source principle or in the case of exempt income, a tax credit according to the regulations will be granted.

When foreign enterprises distribute dividends from foreign-source profits to companies incorporated in the courntry, a tax credit is granted subject to reciprocity, but the credit so granted cannot exceed the amount of the Ecuadorian tax on such dividends.

III. DEDUCTIBLE EXPENSES

Commissions and other expenses paid abroad can be deducted as expenses under certain conditions, as well as fees for professional services provided abroad. Commissions and other expenses will be determined according to the contract; in the absence of this, it is deemed that the expenses do not exceed 2 percent of the income obtained from export or sales abroad.

EL SALVADOR

. TAX STRUCTURE

There is a general income tax based on progressive rates (between 2.5 and 15 percent for legal entities and between 2.85 and 60 percent for individuals).

There are also two special taxes on the profits of companies ncorporated in the country: on profits which are capitalized (as a final tax and on the basis of progressive rates between 5 and 12 percent), and on retained earnings (a provisional tax applied on the basis of progressive rates between 4 and 13 percent).

Finally there is a wealth tax ("De Vialidad Seria A") applicable on the capital of individuals and legal entities on the basis of progressive rates.

A 20 percent tax is applied on individuals and legal entities not domiciled in El Salvador and the same tax is applicable as a final withholding on dividends remitted abroad. In relation to the profits distributed by companies incorporated in the country to shareholders domiciled in El Salvador, the amounts distributed or accrued are not subject to withholding but they must be taken up in the personal tax return.

II. BINDING CRITERIA

Individuals domiciled in El Salvador, whether nationals or foreigners, pay income tax on a world-wide basis. Individuals not domiciled in El Salvador, whether nationals or foreigners, only pay tax on national-source income.

Legal entities, whether national or foreign, domiciled or not in the country, pay tax on the total income obtained within the national territory.

Income is deemed to be obtained in El Salvador if it is derived from assets located or from activities carried out in the country even though it is received or paid abroad and also includes compensation paid by the Government, municipalities or official bodies to their employees abroad. For these purposes:

- loans are deemed to be located in the domicile of the debtor;
- industrial and intellectual property and similar rights of an economic nature that authorize the carrying out of certain activities according to the law are deemed to be located where they are officially registered;
- concessions are deemed to be located where they have been legally granted.

Regulations define royalties as any amount paid whether in cash or in kind, determined in relation to a unit of production, sale or exploitation, whatever the denomination given in the contract may be; they are deemed to be of national source when they are derived from assets located in the country.

Taxpayers who have to include income of foreign source in their tax return can credit against their income tax the tax of a similar nature paid abroad.

The amount of the credit will be computed on a country by country basis. The credit against the national tax, in relation to any income tax paid in any Central American country, will not exceed the proportion existing between the net income of the taxpayer derived from such country and the total net income of the taxpayer in the same tax year. Income of foreign source cannot exceed the total net income. In relation to any other foreign country, the credit will not exceed 85 percent of the amount computed or explained in this paragraph for the purpose of calculating the limit of the credit and the net income will be determined without any deduction for personal consideration or children. Any amount of credit not utilized in a given year can be used in others.

When in accordance with the legislation of a Central American country persons domiciled in one of these countries are not obliged to pay tax on the income of Salvadorian source, the persons domiciled in El Salvador do not have to include in their tax return the income obtained in these other countries.

The taxpayer who applies this reciprocity principle must prove the existence and application of the respective foreign legislation, justifying its text, duration and sense by means of a certficate of two lawyers in professional exercise in the respective country, which certificate must be presented duly legalized.

III. DEDUCTIBLE EXPENSES

As a general principle the net income is determined by deducting from the gross income the necessary expenses for producing and maintaining the income; as a special rule, branches may deduct up to 5 percent of the income as well as a proportion of the general expenses of the head office.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

GUATEMALA

I. TAX STRUCTURE

An annual tax is applied on the total income obtained by individuals and legal entities. For these purposes there is a progressive scale between 5 and 48 percent applied to all taxpayers. There is in addition a 10 percent surcharge if the total taxable income exceeds 10,000 quetzales (same value as American dollars).

In addition there is the "Impuesto masivo" on remittances abroad. Under this tax, royalties, rents, commissions, interest and fees are taxed at a general rate of 12.1 percent by means of withholding when the remittances during the tax year exceed 10,000 quetzales and 11 percent if lower than this figure in which case it is a final tax.

Dividends are not taxed when distributed by companies incorporated in the country to beneficiaries domiciled in Guatemala; when remitted abroad, they are subject to a final withholding of 10 percent.

II. BINDING CRITERIA

Income of Guatemalan source is taxed whatever may be the nationality, residence or domicile of the recipient or of the parties intervening in the transaction or wherever the place of agreement of the contract. In general income is deemed to be of Guatemalan source if it is derived from tangible or intangible assets located, utilized or situated in the country, or derived from any activities carried out in the Republic. Compensation derived from personal work performed occasionally abroad by persons resident in the country which are paid from the Republic are also deemed to be income of Guatemalan source. Interest derived from loans from abroad is also considered to be of Guatemalan source, wherever the contract, the domicile of the parties or place of payment of interest or of the principal may take place.

Pensions from abroad, received in Guatemala by foreign residents not carrying out in the country any profitable activity, are not considered income of Guatemalan source.

In the case of branches and subsidiaries of foreign entities, the tax will be assessed on the basis of the accounting records of such branches or subsidiaries and the Tax Administration will make the necessary reassessment in order that the above-mentioned enterprises pay taxes on actual profits of Guatemalan source.

Compensation paid by international bodies to their employees who come to the country to render services on behalf of such bodies will not be subject to tax, except when the employee resides in Guatemala for more than six months prior to his recruitment and also when the employees are of Guatemalan nationality.

Interest on loans from abroad is exempt when the obligation to repay the loan is originally agreed and effectively repaid after 18 months (this provision does not cover loans granted by a bank operating in Guatemala through an agency or branch).

III. DEDUCTIBLE EXPENSES

In general, expenses incurred abroad are deductible from gross income under certain conditions which are as follows:

(a) Payments for technological research will be deductible provided that they are connected with the activity of the taxpayer and do not exceed 20 percent of paid-up capital and reserves at the beginning of the tax period, and they can be amortized during a period of up to five years.

(b) Payments for advice of foreign professionals rendered in the country are deductible provided that the taxpayer has obtained authorization of the Ministry of Labour to contract such services and it is proved to the Tax Administration that the foreign advice is connected with the activity of the taxpayer and its amount is less than 1 percent of the gross receipts of the taxpayer, except when they are considered start-up expenses.

(c) Commissions and consulting fees paid to head offices by branches or subsidiaries domiciled in Guatemala are deductible up to an amount of 1 percent of the gross receipts of the tax period; salary and compensation paid as participations or expenses for controlling or supervising branches are not deductible except in the case of salaries paid from abroad to employees working in the country and subject to Guatemalan income tax.

(d) Royalties will be deductible provided they have been authorized by the Ministry of Economy and do not exceed 15 percent of the annual gross sales connected with such royalties.

(e) All expenses incurred in travelling abroad are deductible in the case of legal entities but within certain limits and conditions determined by regulations.

HONDURAS

I. TAX STRUCTURE

The tax is applied on the total net income obtained during the tax year by individuals and legal entities based on a progressive scale between 3 and 40 percent, applicable for both individuals and legal entities. Dividends distributed by companies incorporated in the country are subject to a final withholding of 10 percent and those distributed as stock dividends, 5 percent. Profits and dividends remitted abroad are subject to a final withholding of 15 percent.

II. BINDING CRITERIA

The tax is applied on a world-wide basis in the case of individuals and legal entities whatever their nationality may be, when they are domiciled or resident in Honduras, independently of the place where income is distributed or paid. Persons not resident or domiciled in Honduras are subject to tax on income of Honduran source, derived from assets situated in Honduras, from services rendered in the national territory or from business carried out by persons domiciled or resident in the Republic, even though the payments are made or credited to the recipient by persons resident or domiciled in the country or abroad.

For the purposes of determining the tax on Honduran-source income applicable to non-resident or non-domiciled persons, the tax will accrue at the moment of the remittance abroad or when the payment is credited or made available to the beneficiary and the tax will be calculated according to the type of income as follows:

— Royalties	10 percent
— Interest	5 percent
— Personal compensation, in general	15 percent
— Dividends and profits	15 percent
— Rentals of movables or real estate	10 percent

For the purposes of the source concept and in the case of income derived from capital, it will be deemed that the income is of Honduran source when the assets constituting the capital are situated in Honduras. In the same way gains derived from the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

transfer of shares or securities issued by companies constituted under Honduran law are deemed to be of Honduran source. In the case of earned income it will be deemed that it is of Honduran source when the services are rendered or the work is performed in Honduras. However, when the services are rendered abroad, the source of income will be deemed to be of Honduran source if it is paid from Honduras. When the income is obtained by the joint use of capital and personal services, the location of the source will be determined in the same way as for income derived from capital, already explained.

Income derived from export is totally of Honduran source. When there is no value assigned or when the export value is lower than the wholesale price in the place of destination it will be deemed, except if proved to the contrary, that there is an economic connection between the exporter and the importer; in this case the wholesale price at the place of destination will be taken for purposes of determining the value of the exported products and the corresponding final profits.

Persons who are temporarily in the Republic and carry out activities of any nature or render services producing taxable income have the right to file a tax return before leaving the country and to ask for the corresponding assessment.

Merchant ships are also subject to tax under the following conditions:

— that they operate under Honduran license or flag;
— that they habitually navigate in territorial waters or receive income of Honduran source.

III. DEDUCTIBLE EXPENSES

The law and regulations allow, in general, the deduction of all expenses duly proved and that have been paid or incurred for the production of the income.

MEXICO

I. TAX STRUCTURE

There are two general income taxes:

— tax on corporate income
— tax on individual income

Tax on corporate income

The law taxes all types of income, whether in cash or in kind or merely accrued, derived from commercial, industrial, agricultural, stock raising or fishing activities, obtained by individuals or legal entities. For purposes of the tax, the law distinguishes the "causantes menores", that is, individuals earning less than 1,500,000 pesos a year (approximately US$ 68,000), and the "causantes mayores", that is, all the remainder of individuals and legal entities.

(a) The progressive scale of rates ranges between 5 and 42 percent and applies:
   — on the total annual income of the "causantes mayores", with special rates for agricultural, industrial and publishing activities;
   — on the total income of the "causantes menores" assessed on the basis of profitability coefficients according to the type of activity.

(b) The tax is also applied on the gross income of foreign individuals resident abroad and foreign enterprises domiciled abroad who earn the following income of Mexican source:
   — Rentals from movables, and under certain conditions interest paid by persons resident in the country, dividends or profits paid by foreign enterprises resident abroad if the recipient receives them as a partner or shareholder and opts not to accumulate the dividends ..... 21 percent
   — Interest in certain cases, profit on distribution of foreign publication and technical assistance and royalties if the taxpayer opts not to accumulate them ..... 10 percent
   — Reinsurance premiums or reguarantees transferred by Mexican companies if in the country of the residence of the reinsurers or reguarantors reciprocity does not exist, and income from public spectacle enterprises acting in a given place less than a month ..... 4 percent
   — Interest in certain cases ..... 42 percent

(c) In the case of royalties paid by persons resident in the country for publicity or for exploitation of patents, industrial or commercial designs, technical assistance or technological transfer and for professional services, the tax will be applied to the gross income but on the basis of the progressive scale of rates mentioned above.

Tax on income of individuals

A tax is applied on the annual income of all individuals on the basis of progressive rates ranging between 3.1 and 55 percent. During the tax year the taxpayers pay taxes on account of the final tax or by means of a withholding, as follows:

— withholding on salaries and for the rendering of dependent personal services	progressive scale ranging between 3.1 and 55 percent
— fees and compensations for rendering of independent personal services	fixed rates and 20 percent as a general rate
— real estate rentals	idem
— capital gains	general scale, on 30 or 40 percent of the gains depending on the cases
— acquisition of assets (donations, etc.)	20 percent on the gross
— profits of business enterprise	tax on corporate income
— dividends and distributions of profits	the recipients can credit certain percentages on a part of the tax paid by the company
— interest	21 percent on the gross as a final tax and a provisional 15 percent in respect of residents holding nominative securities

II. BINDING CRITERIA

(a) The following taxpayers pay tax on world-wide income:
   — individuals and legal entities of Mexican nationality;
   — foreign individuals resident in Mexico and legal entities of foreign nationality established in the country;
   — agencies and branches of foreign companies established in Mexico.

(b) The following taxpayers pay tax only on income of Mexican source:
   — foreign individuals resident abroad and legal entities of foreign nationality incorporated and established abroad.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

In general, income is deemed Mexican source when it is obtained from persons resident in the country. In the case of transfer of shares, bonds, certificates of financial institutions, loans, mortgage bonds, and certificates of participation (mutual funds) it is deemed to be Mexican-source when the securities have been issued in Mexico.

In the case of compensation paid to members of Boards of Directors and similar bodies, it is deemed to be Mexican-source when these compensations are paid in the country or abroad by resident companies.

In the case of interest derived from transactions with registered foreign financial institutions, the source is deemed to be located abroad when that interest is paid by financial institutions or by branches of foreign banks authorized to carry out business in Mexico.

In all the previous cases, when it is foreign-source income, the taxpayer can credit against the Mexican tax the tax paid abroad but up to the limit of the tax that would have been paid in Mexico. For these purposes tax exemptions granted abroad are included in the credit against Mexican tax as if they had been paid (tax sparing).

III. DEDUCTIBLE EXPENSES

In determining the net taxable income of companies, it is possible to deduct the necessary expenses connected with the business, provided they are in reasonable proportion with the transactions of the taxpayer.

In the case of payments for technical assistance to persons resident abroad, it must be proved to the Tax Administration that the services are rendered directly and not through third parties, that the services are actually provided and that the contract is duly registered in the "Registro Nacional de Transferencia de Tecnología".

Legal entities of foreign nationality resident abroad that carry out business occasionally in the country must account for the taxable profit in respect of each operation by deducting from the gross income the cost and the necessary expenses incurred in the operation. In these cases, the purchaser has to withhold provisionally 20 percent of the total proceeds but the Tax Administration is empowered to authorize a lower withholding based on a justified petition of the seller.

NICARAGUA

I. TAX STRUCTURE

The total net income obtained in the tax year by individuals and legal entities is subject to tax. For these purposes a scale based on progressive rates is applied to both individuals and legal entities, ranging between 6 and 50 percent but in no case may the total payable exceed 40 percent of taxable income. In the case of legal entities, only the entity is subject to tax and therefore the partners or shareholders do not include in their tax return dividends and profits received; neither is a withholding tax applied to such income whether paid to beneficiaries domiciled in the country or abroad.

II. BINDING CRITERIA

The tax is applied only to income of Nicaraguan source which is income derived from assets located in the country, services rendered in the territory or business carried out or producing effects in the Republic, whatever the place of payment of the income may be.

Profits derived from the export of goods produced, manufactured, processed or bought in the country are of Nicaraguan source.

Any remittance abroad of goods produced, manufactured, processed or bought in the country, done through subsidiaries, branches, representatives, purchase agents or other intermediaries of individuals or foreign legal entities, is considered to be an export.

Profits obtained by foreign exporters, by merely introducing the goods into the Republic, are of foreign source. However, when the sale price is higher than the wholesale price in the place of origin of the merchandise, plus transport and insurance costs, it will be deemed, except if proved to the contrary, that the parties involved are economically connected, the difference being considered income of Nicaraguan source and both parties are jointly liable for the payment of the tax.

III. DEDUCTIBLE EXPENSES

All the expenses effectively paid and necessary or proper for the production or for the maintenance of the source of income are deductible. However, the law establishes that the amounts paid or credited to persons not domiciled in Nicaragua will not be deductible, unless the payer has withheld and paid the corresponding tax.

PANAMA

I. TAX STRUCTURE

A general tax is applicable on the income of individuals and legal entities. The progressive scale for legal entities ranges between 20 and 50 percent, and in the case of individuals, between 2.5 and 56 percent. In the case of legal entities only the entity is subject to tax and the partners or shareholders do not have to include dividends or profit participations in their tax return. However, the distributions, whether to beneficiaries domiciled or not in the country, are subject to a final withholding tax of 10 percent.

Remittances abroad of other Panamanian-source income are subject to the progressive scale of rates for individual(for individuals or legal entities as the case may be) on:
- 100 percent of payments for personal services;
- 50 percent of royalties, rentals and any other payments.

II. BINDING CRITERIA

The tax is applied on the total net annual income of Panamanian source, notwithstanding the nationality, domicile or residence of the taxpayer or the place of entering into the contract, including, inter alia, income derived from real estate located in the country, profits produced by assets, capital, securities or rights situated, invested or economically utilized in the Republic and those originated by civil, commercial, industrial or similar activities and for the exercise of any profession and for the performance of any service within the territory. However, income derived from the following is not deemed to be of Panamanian source:

- invoicing for a higher value than that invoiced to Panama from an office established in Panama for the sale of merchandise, provided that such merchandise does not enter into Panama;
- directing, from an office established in Panama, transactions to be implemented or which have effect abroad;
- distributing dividends or profit participations from legal entities, when such distributions do not derive from income of Panamanian source;

© 1980 International Bureau of Fiscal Documentation – BULLETIN

— interest, financial commissions and the like, derived from loans and financial transactions carried out with legal entities, independently of the place of domicile or incorporation, provided that those entities receive or accrue only income of foreign source.

Income derived from exports, carried out by companies established in Free Zones within the Republic, has a special treatment and is exempted from the 10 percent tax on dividends and profits distributed by such companies provided it proceeds from export transactions.

III. DEDUCTIBLE EXPENSES

As a general rule, all the expenses incurred for the production of the income or for the maintenance of the source of income are deductible. As regards expenses incurred abroad, they are deductible if it is proved that they were actually incurred and fulfill the previously mentioned rule.

PARAGUAY

I. TAX STRUCTURE

Tax is applied on the total net income obtained by taxpayers. There is a progressive scale ranging between 5 and 30 percent in the case of individuals, and between 25 and 30 percent in the case of legal entities.

As a general rule, income from personal services and from agricultural activities is not subject (in the latter case a substitutive tax on the transfer of cattle is applicable). Neither is a tax applied on the distribution of dividends or profits to beneficiaries domiciled in the country.

II. BINDING CRITERIA

The tax is applied only on income of Paraguayan source.

When any income of Paraguayan source is paid or credited to persons not domiciled in the country, a withholding tax will be applied as an only and final tax at the following rates:

(1) Dividends and profits, 10 percent on the gross amount. However, dividends and profits reinvested in enterprises of the country are exempted from this tax.
(2) Compensation or salaries of members of Boards of Directors or similar bodies acting abroad, 30 percent on the total gross payments.
(3) Fees, commissions, interest, rentals and any other income not mentioned under (1) and (2), 30 percent on 85 percent of the gross amount (on 90 percent in the case of royalties).

Domicile

For the purposes of withholding, persons will be considered domiciled in the country in the following cases:

— individuals whether nationals or foreigners who have stayed in Paraguay more than 180 days, continuously or not, during the tax year or in the last 12 months;
— branches, agencies, subsidiaries, correspondent agencies and any other form of representation in Paraguay of individuals or legal entities not domiciled in the country, if they are registered with the Tax Administration;
— legal entities incorporated in Paraguay with the sole exception of their agencies or branches established abroad.

III. DEDUCTIBLE EXPENSES

All expenses and payments made abroad, duly justified and approved by the Tax Administration, may be deducted from gross income if they are connected with the activity of the taxpayer provided they do not exceed 5 percent of the annual taxable income.

In the case of interest remitted abroad, payments made to the head office are not a deductible expense.

Enterprises or legal entities are subject to tax on all income of Paraguayan source. The Tax Administration will assess the taxable income of branches, agencies and subsidiaries of foreign enterprises on the basis of separate accounting records but they are empowered to introduce the necessary corrections to determine the actual results of Paraguayan source. In the absence of sufficient accounting records or when these do not show accurately the net profit of Paraguayan source, the Tax Administration may consider that the subsidiary or the branch and the head office constitute one economic unit in order to assess the net income.

PERU

I. TAX STRUCTURE

The total net income obtained by the taxpayer is subject to tax. In the case of individuals a progressive scale is applicable, the rates ranging between 5 and 65 percent. In the case of legal entities the progressive scale ranges between 20 and 55 percent. The tax applicable on individuals domiciled in the country cannot exceed 40 percent on taxable income from dividends. As a general rule, legal entities have to withhold 25 percent on dividends distributed to beneficiaries in the country. The shareholders compute the dividends in their tax returns and take as a credit against the final tax the 25 percent withheld.

Individuals not domiciled in the country are subject to the following rates:

— dividends ..... 30 percent
— profits of branches and agencies in the country available for remittance abroad ..... 30 percent
— compensation for personal services rendered in the country (the general progressive rates for individuals are applicable) .....
— compensation for personal services rendered abroad and other income ..... 40 percent

Legal entities not domiciled in the country are subject to the following rates:

— dividends, general rate ..... 40 percent
— profits of branches available for remittance abroad .. 30 percent
— interest ..... 10 percent
(However, tax at the rate of 40 percent is applicable in the case of enterprises economically connected.)
— royalties
(They are subject to the progressive scale of rates applicable to legal entities, plus a 30 percent tax on the income available for remittance abroad.)

II. BINDING CRITERIA

Persons domiciled in the country are subject to tax on a worldwide basis. Persons not domiciled in the country are subject only on income of Peruvian source.

Income of Peruvian source

In general and whatever the nationality or domicile of the parties

© 1980 International Bureau of Fiscal Documentation – BULLETIN

to the transaction and the place of agreement or fulfillment of the contract, income will be considered of Peruvian source on:

(a) profits derived from properties located in the territory;

(b) profits derived from capital, assets or rights located or economically placed in the country; and

(c) profits derived from personal services and from civil and commercial activities of any nature carried out in the territory.

In addition, the law also considers as income of Peruvian source:

(a) interest derived from loans granted abroad to individuals or legal entities domiciled in Peru, even though the payment of the interest or the amortization of the capital is made abroad (for the application of this provision it does not matter where the contract is entered into);

(b) interest from loans guaranteed in rem when the assets guaranteeing the transaction are located in the country;

(c) interest from bonds, when the issuing entity is domiciled in the country wherever the bonds may be issued or the assets guaranteeing the transaction are located;

(d) salaries or any kind of compensation paid by enterprises domiciled or incorporated in the country to members of Boards of Directors or similar bodies acting abroad;

(e) fees or compensation for technical advice or similar assistance provided from abroad to individuals and legal entities domiciled in the country; however, fees and compensation for technical, economic, financial or similar assistance provided from abroad by governmental entities or international or financial institutions are not subject to tax.

According to the general rule, compensation for personal services fully rendered abroad is not considered income of Peruvian source, and therefore the respective payments are not subject to withholding.

The cases mentioned under (d) and (e) above are exceptions to this provision. We would point out that the expression "similar assistance" in paragraph (e) does not refer to the compensation. That is, the provision does not affect any payment for services rendered abroad but only technical assistance or the like. This has been confirmed by regulations when they point out indirectly that the assistance can be of an economic or financial nature.

Activities rendered partially in the country and partially abroad

There is a presumption "juris et de jure" that is not rebuttable that net profits obtained by taxpayers domiciled abroad, for activities carried out partially in the country and partially abroad, are arrived at by deducting from the gross profits the percentages established by law. When the activities are carried out by taxpayers domiciled in the country it is presumed "juris et de jure" that the income obtained is all of Peruvian source, except in the case of branches and agencies of foreign enterprises whose profits will be determined according to the rules already mentioned.

The previous provisions include transport and communication activities between the Republic and other countries, providing of news by international agencies, insurance, reinsurance and retrocession transactions, and the rental or any other form of exploitation of films, magnetophonic tapes, master copies and other equipment used for projecting or reproducing images and sounds.

Taxpayers domiciled in the country will add the profits and losses of Peruvian source obtained from different activities. They will treat foreign-source profits in the same way, but only if such transactions abroad give a positive result will they be added to the net income of Peruvian source. Net losses of foreign source cannot be set off for purposes of determining the taxable income.

III. DEDUCTIBLE EXPENSES

The following principles apply as regards deductible expenses:

(a) As a general rule all expenses necessary for the production or maintenance of the source of income of the business or activity subject to tax are deductible, unless there is an express prohibition by law.

(b) Royalties are defined as any compensation in cash or in kind derived from the transfer of ownership, use of movables or for the transfer of rights, whether definitive or temporary, when the amount is established in relation to production, sale, exploitation or any other units used as reference. Royalties, fees and other compensation for assistance, directing or for services rendered abroad can be deducted. As regards fees and other compensation for assistance, the deduction is admissible provided that the payments do not exceed 1 percent of income or 3 percent of the amounts invested; however, in special cases higher percentages may be accepted. Beneficiaries of royalties domiciled abroad who habitually perform research and incur expenses to obtain assets which can produce such royalties can deduct 5 percent from the gross royalties.

(c) As regards expenses incurred abroad it is presumed, unless it can be proved to the contrary, that such expenses have been incurred for the production of income of foreign source.

(d) Commissions originated abroad for purchase or sale of merchandise or any kind of goods can be deducted but only up to the percentage usually paid for such commissions in the country where they originate.

(e) Interest paid to foreign entities economically connected with the debtor as a general rule is not deductible in the amount that the rate exceeds the limits established by regulations in relation to the type of transaction, nor is interest on credits or loans deductible if it exceeds four times the paid-up capital of the debtor.

URUGUAY

I. TAX STRUCTURE

The "Impuesto a las Rentas de la Industria y el Comercio" is applied on profits derived from industrial, commercial and similar activities carried out by individuals and legal entities. Individuals are not subject in general to income tax except when they obtain profits from commercial, industrial or similar activities, produced by the joint utilization of capital and personal services in normal profitable activities. The rate of the tax is 25 percent.

In addition, individuals and legal entities domiciled abroad are taxed on rentals, transfer of ownership or the use of trademarks and patents, payments for technical assistance rendered abroad and distributions of profits of companies and branches remitted abroad, except dividends. Profits obtained in Uruguay by persons resident abroad are subject to two cumulative taxes:

— 25 percent;
— 20 percent on profits remitted abroad.

A wealth tax is also applicable on individuals and legal entities.

II. BINDING CRITERIA

Only income of Uruguayan source is taxed, i.e. income derived from activities carried out in Uruguay, from assets situated or rights utilized in the country, whatever the nationality, domicile or residence of the parties intervening in the transactions or the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

lace of entering into the contract. As an exception, payments or technical assistance rendered abroad are also taxed.

As regards withholding applicable to income remitted abroad, the ules are as follows:

- rentals, transfer of ownership or of the use of trademarks, patents, models, secret formulae or processes, exclusive information or technical assistance, 25 percent on the gross income;
- profits of commercial enterprises, 25 percent plus 20 percent on the income remitted abroad;
- other income, 25 percent on 30 percent of the income.

II. DEDUCTIBLE EXPENSES

The following rules apply to deductible expenses:

a) As a general principle, all necessary expenses for producing and maintaining the income are admissible if duly justified.

b) Expenses incurred abroad are deductible as long as they are necessary to obtain the income of Uruguayan source, providing the amounts are judged reasonable by the Tax Administration.

c) Net income of Uruguayan source of branches or agencies of foreign entities is determined on the basis of separate accounting records, the Tax Administration being authorized to introduce the necessary corrections to appraise the actual profits of such establishments. When the accounting records do not accurately reflect the net profits of Uruguayan source, the Tax Administration will determine the taxable income on the basis of the volume of business and adequate indices for these purposes.

The Tax Administration is empowered to request the necessary details or statements, duly certified, which may be necessary to clarify commercial relations between the local entity and the foreign head office and to determine reciprocal purchase and sale prices, values of fixed assets and other data which could be considered necessary.

d) Expenses incurred by the head office to produce and maintain income of Uruguayan source are always accepted provided that their origin and nature are duly proved. For these purposes it will be necessary to file documentation certified by independent auditors of the country of origin, duly translated and legalized, certifying the amounts and including a breakdown of the ratio of expenses between the different agencies and branches and the head office, in order to appraise the amount incurred for the production of income of Uruguayan source. The above-mentioned certificate must establish that expenses attributed to the branch in Uruguay have not been deducted in any other foreign tax assessment.

e) The deduction for interest paid or credited cannot exceed the rate applicable by the Central Bank according to Law 14,095 of November 7, 1972. In the case of interest on loans granted abroad, the rate will also be limited to the current rate used in the borrower's market.

VENEZUELA

. TAX STRUCTURE

Different progressive rates of tax are applied on legal entities and oint ownerships on one hand and individuals on the other. Additional taxes are applied to taxpayers obtaining profits deved from extractive, mining and hydrocarbon industries, and there is a 32 percent tax on occasional gains derived from lottery premiums, race courses and such.

Applicable rates are as follows:

1. **Mining**

Enterprises devoted to the exploitation of mines and connected activities, such as refining, purchase and transport, are taxed at a rate of 60 percent on the profits obtained.

2. **Hydrocarbon enterprises**

Enterprises devoted to the exploitation of hydrocarbons and connected activities such as refining, transport or acquisition of hydrocarbons and their derivative products for export purposes pay tax at the rate of 67.7 percent.

3. **Individuals**

The total annual income of individuals carrying out any activity other than mining is taxed at a progressive rate scale between 4.5 and 45 percent.

In the case of individuals not resident in the country, the tax applicable is as follows:

- compensation derived from dependent services..... 20 percent
- professional fees derived from independent non-commercial services..... 30 percent
- dividends distributed, including stock dividends.....20 percent

4. **Corporations**

Corporations carrying out any activity other than mining and hydrocarbon exploitation are taxed at progressive rates between 18 and 50 percent.

5. **Special tax rates**

They are applied in the following cases:

- limited liability companies;
- interest from loans granted by foreign financial institutions not domiciled in the country is taxed at the rate of 10 percent;
- lottery prizes, racecourse winnings and similar gains, obtained by any person or joint ownership, are taxed at the rate of 32 percent, which can be reduced in certain cases to 16 percent.

Dividends are taxed on distribution by a withholding of 7 percent and then incorporated in the personal tax return; on the other hand, dividends distributed to foreign persons are taxed by means of a final withholding of 20 percent and the same tax is applicable in general to any remittance of profits abroad made by branches to their head offices.

II. BINDING CRITERIA

The tax is applied on income of Venezuelan source, that is, on profits derived from economic activities carried out in the country or assets situated in the territory.

Profits are those arising from econmic activities performed in Venezuela or from assets situated in the country, when any of the factors giving rise to the income occurs within the national territory, whether these refer to the exploitation of the soil or of the sub-soil, the transfer, exchange or ceding of the use or possession of movables or inmovables, tangibles or intangibles, or services rendered by persons domiciled, resident or transitorily in Venezuela, as well as compensation, fees or payments for techni-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

cal assistance or technological services utilized within the country.

Official activities abroad of public servants of the National Administration, States or municipalities, as well as representatives of autonomous official bodies or from State enterprises to whom functions or research are entrusted outside the country, are deemed to be performed within the territory provided that the respective income is exempted in the place of accrual.

The Executive is empowered to exempt from the tax, inter alia, fees, salaries and other compensation paid to technicians or experts sent by foreign non-profitable institutions or foundations to render technical assistance in relation to projects previously approved by the National Government, as well as compensation and similar payments for technical assistance or technological services utilized in the country for the benefit of the public or private sector. However, income subject to tax abroad will only be exempted in the country as long as it means an effective advantage to the taxpayer.

- Income obtained by taxpayers rendering technical assistance or technological services from abroad to persons or joint ownerships that utilize them in the country or transfer them to third parties will be taxed at a percentage determined by regulations, whatever the method of payment or denomination may be. The percentage will be fixed taking into account the nature and complexity of the technical process contributed.

  When, as agreed by the parties, the income is derived from technical activities developed partly abroad and partly in the country, the Venezuelan-source income will be deemed, on the basis of the percentage fixed by Regulations, and this will be taxed after deducting costs and expenses permitted by Law.
- Net profits of taxpayers importing to the country merchandise on consignment will be 25 percent of gross receipts. These receipts will be based on the proceeds of the sales in Venezuela.
- Net profits of taxpayers not resident or domiciled in the country derived from professional non-commercial activities will be based on 90 percent of gross receipts.
- The transportation expenses of exported merchandise up to the foreign port of destination will be deductible, when the taxpayer computes as gross income the effective price of the exported merchandise in the foreign port of destination.
- In the case of exports of goods manufactured in the country or the rendering of services abroad of Venezuelan source, all the normal and necessary expenses incurred abroad with reference to these exports or activities may be deducted, such as travelling expenses, advertising, office expenses, exhibitions or fairs, including the transportation of the goods to be exhibited in such events.

III. DEDUCTIBLE EXPENSES

For determining profits the law allows the deduction from gross income, as a general rule, of all the normal and necessary expenses incurred in the country.

Among the deductions accepted, royalties and similar payments are allowed, as well as compensation, fees and similar payments for technical assistance or technological services utilized within the country; for this purpose the withholding will be applied on 90 percent of the respective payments.

B. GENERAL CONCLUSIONS ON THE STRUCTURE OF INCOME TAX IN 18 LATIN AMERICAN COUNTRIES

B.1. Conclusions concerning the structure of income tax effective in 18 Latin American countries

Table 1, on the tax structure of 18 Latin American countries, gives rise to the following conclusions:

1. There are 14 countries applying a tax on the income of taxpayers (basically individuals and legal entities). Among them, there is one country (Paraguay) in which the major part of income derived from personal services and from agriculture is not subject. El Salvador applies, in addition, taxes on capitalized profits or on retained earnings of corporations.
2. There are three countries (Chile, the Dominican Republic and Ecuador) maintaining a mixed system, under which a schedular tax is applied on certain categories of income and then a progressive surtax on the total income of individuals.
3. There is one country (Uruguay) that does not apply income tax on individuals, except if they carry out commercial or industrial activities employing jointly capital and personal services. However, a tax is applied on the potential income of land (agriculture).
4. Eleven of the 14 countries mentioned above apply a global tax, with different rates on both legal entities and individuals, whilst in only three countries (Guatemala, Honduras and Nicaragua) is there a common progressive scale applicable to both taxpayers.
5. According to Table 2, there are seven countries applying a flat rate on companies, whilst the remaining 11 countries apply progressive rates.
6. Among the 18 countries under study, it can be seen that:
   - *four countries* (Guatemala, Nicaragua, Paraguay and Uruguay) tax only profits of the entity without taxing distributed dividends. Among them, there are two countries (Nicaragua and Uruguay) that also do not tax dividends remitted abroad (see Table 3);
   - *two countries* (Chile and Mexico) tax the profit of the entity and not dividends distributed but it is obligatory to include them in the total income of the beneficiary and a credit is granted for the tax already paid by the company. In addition, Chile also does not apply tax on dividends remitted abroad (see Table 3);
   - the other countries apply the traditional system of taxing at the same time the profit of the entity and the distributed dividends under various methods of a provisional or final withholding.
7. There are six countries applying different types of wealth tax (Argentina, Colombia, Costa Rica, El Salvador, Peru and Uruguay).

B.2. Conclusions concerning the binding criteria applied by Latin American countries

According to Table 4:

1. All the countries concerned, without exception, tax the income obtained in the country by individuals or legal entities, domiciled or incorporated in the country.
2. All the countries concerned tax the income of national source in the case of individuals or legal entities domiciled or incorporated abroad; among them, Mexico also taxes the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

income obtained by Mexicans wherever the income may be obtained.

3. There are five countries (Colombia, Chile, Honduras, Mexico, and Peru) that basically apply the world-wide income principle to taxpayers (legal entities and individuals) domiciled or resident in the country (in other words, to these taxpayers they apply in addition to the source principle the domicile principle); on the other hand, Mexico applies additionally the nationality principle and taxes Mexican taxpayers domiciled abroad within certain limits. As a general rule, Mexico follows the principle of the source of payment as a criterion to establish the Mexican source of income.

   There are two countries (Brazil and El Salvador) that apply the world-wide income criteria only in respect of individual taxpayers domiciled in the country.

4. All the previously mentioned seven countries that apply the world-wide income criteria, except Honduras, have regulations for taking the tax paid abroad as a credit against the tax to be paid in the country and there is also one country — Mexico — which accepts the credit of the tax exempted abroad (tax sparing) except in the case of capital gains tax.

5. The remaining 11 countries basically apply the source principle or territoriality and some special circumstances can be noted:

   (a) Uruguay only taxes income of individuals when derived from industrial, commercial or similar activities, whilst Paraguay does not tax, in general, income from personal or professional services even if they are dependent services, or agricultural income.

   (b) Some countries (Argentina, Bolivia, the Dominican Republic and Guatemala for instance) tax occasional profits obtained abroad by persons domiciled in the country.

   (c) Some countries (Argentina, Bolivia, the Dominican Republic, Honduras and Nicaragua, for instance) regulate or limit the concept of foreign source in the case of imports, with the purpose of protecting the tax interests of the country.

   (d) Various countries (Argentina, Bolivia, Colombia, Ecuador, Honduras, Costa Rica, Guatemala, Uruguay and Peru, for instance) consider as national source income payments for technical assistance provided from abroad (principle of payments source).

   (e) Some countries (Bolivia, Costa Rica, Mexico, Paraguay and Peru, for instance) consider as national-source income compensation paid to members of Boards of Directors resident abroad, and in the case of Bolivia, also interest paid to persons domiciled abroad.

   (f) In the case of Ecuador, income obtained in the country by persons who have stayed less than six months in the country is not considered to be of national source and if they have stayed between six months and one year only 80 percent of the income is considered of Ecuadorian source. In addition, the income obtained by foreigners domiciled in Ecuador in respect of compensation paid from abroad by foreign bodies or enterprises is considered to be income of Ecuadorian source.

   (g) Panama adheres to a strict concept of income that is limited or restricted in certain special cases.

   (h) In practice all the countries concerned exempt the income obtained in the country by foreign diplomats derived from the exercise of their official function. In the majority of the cases reciprocity is required.

   (i) In order to determine income of national source of agencies and branches of foreign enterprises, Argentina, Bolivia, Chile, Guatemala, Paraguay and Uruguay, for instance, require the maintenance of separate accounting records.

   (j) The concept of "permanent establishment" is applied to enterprises domiciled abroad, in the case of Chile and Ecuador, for instance.

Regarding this particular matter, one must remember that the member countries of the Cartagena Agreement, commonly known as the Andean Pact (at present: Bolivia, Colombia, Ecuador, Peru and Venezuela) approved, in 1971, Decision No. 40, under which Model Conventions to avoid double taxation on income and wealth taxes were approved, among the member countries and in relation to countries outside the Region.

The Agreement has been ratified by all the member countries and became fully effective as from January 1, 1979.

The Agreement admits, as a general principle, taxation at source, which has been covered in Article 4 as follows: "Independent of the nationality or domicile of persons, income of any nature obtained by them will only be taxed in the member country in which such income has its productive source, except in the exceptional cases foreseen in this Agreement."

In the following provisions the concept of productive source is determined for different types of income and certain exceptions are made under which persons domiciled in a member country are not taxed on:

— income derived from the rendering of personal services or from the exercise of professional activities and technical assistance in other Contracting States of the Andean Pact;

— income such as dividends, interest, royalties and rentals from other Contracting States of the Andean Pact.

In the same way, it is established that transport enterprises of one Contracting State are not subject in any other Contracting State.

As regards taxation criteria, it must be pointed out that in the Latin American area ample doctrine has been produced by the Latin American Tax Institute and by the group of experts of the Latin American Association of Free Trade (ALALC). In both cases, the prevailing tendency has been to claim the right to apply the jurisdictional criterion of the territorial source as taxation criterion, which fits more with the reality of international business and with the sovereignty principle. In this respect, the member countries of ALALC (Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Mexico, Paraguay, Peru, Uruguay and Venezuela) have agreed at the expert level and as a recommendation, on a set of provisions or guides to orient the eventual negotiation of tax treaties among the member countries and among them and other countries. The recommendation, which is not yet obligatory and has not been approved officially by the Governments of member countries, follows substantially the rules established in the Andean Pact Models, containing, however, certain innovations in order to make the application of the source principle more flexible.

B.3. Conclusions concerning deductible expenses

As a general rule, all the pertinent legislation admits the deduction of expenses incurred, duly supported, necessary to produce or to maintain the source. There are, however, certain provisions which are worthwhile to cite in relation to expenses incurred abroad and to certain types of remittances abroad which are as follows:

1. It is deemed that expenses incurred abroad are made for the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

production of income of foreign source (Argentina, Bolivia, Brazil, the Dominican Republic and Peru), but this assumption is not absolute and admits proof to the contrary. In all the other cases, deduction of such expenses is allowed, as a general rule, if they fulfill the general principle of "necessity" and the quantitative limits established in certain legislations (for example, Colombia, El Salvador, Paraguay and Peru).

2. Expenses for royalties and technological transfers are deductible if they fulfill the various express requisites in the case of Argentina, Brazil, Guatemala and México. The payment of royalties from branches to the head office is not allowed by Brazil. There is wide scope for the payment of these items in the case of Bolivia, Chile, Costa Rica, Honduras, Nicaragua, Panama, Uruguay and Venezuela.

As regards deductible expenses, it may be added as a matter of interest that the member countries of the Cartagena Agreement (Bolivia, Colombia, Ecuador, Peru and Venezuela) approved in 1970 Decision No. 24 which establishes a common regime for the treatment of foreign capital and for trademarks, patents, licenses and royalties, determining, inter alia, that:

"*Article 2* — All foreign investors that want to invest in any of the Contracting States have to file an application before the competent national body, which, based on a prior evaluation, will authorize it if it complies with the priorities of development of the recipient country. The application must observe guidelines contained in Annex 1 of the regime. The Commission, at the request of the 'Junta', can approve common criteria for the evaluation of foreign investment in the member countries.

. . . . . .

Article 5 — All direct foreign investment will be registered with the competent national body together with the Agreement determining the conditions of the authorization. The amount of the investment will be registered in freely convertible currency.

. . . . . .

Article 14 — External loans require prior authorization from the competent body and must be registered with them.

Global limits of external borrowing may be authorized for specific periods. Loan contracts within such global limits must be registered before the competent body.

. . . . . .

Article 16 — Remittances by enterprises in payment of the principal and interest of external credit, will be authorized based on the terms of the registered contract.

In the case of contracts for external credit between subsidiaries and their parent or with other subsidiaries, the effective annual rate of interest cannot exceed by more than three points the rate of interest effective for blue chip securities in the financial market of the country of origin of the currency in which the transaction has been registered. For contracts for external credit other than those already mentioned, the effective rate of interest payable by enterprises will be determined by the competent national body, the rate having to be closely related with the rate prevailing in the financial market of the country where the financing has been obtained.

For the purposes of this Article, the effective interest will be the total cost payable by the debtor for the utilization of the loan, including commissions and any kind of expenses.

. . . . . .

Article 18 — All contracts for import of technology and for patents or trademarks must be examined and submitted for the approval of the competent body of the respective member country, which body must evaluate the effective contribution of the imported technology by estimating the probable profits, the price of the goods incorporating such technology and other specific methods for quantifying the effects of the imported technology.

. . . . . .

Article 21 — Intangible technological contributions give the right to the payment of royalties, if previously authorized by the competent national body, but they cannot be contributed as capital.

When these contributions are provided to the enterprise by its parent or by other subsidiaries of the same parent, payments of royalties will not be authorized and deduction for tax purposes will not be allowed.

. . . . . .

Article 45 — The capital of corporations must be represented by nominative shares.

The bearer shares existing at present shall be converted into nominative shares within a term of one year as from when this regime becomes effective."

C. CONCLUSIONS CONCERNING THE TREATMENT OF INCOME DERIVED FROM INTERNATIONAL ACTIVITIES

The great majority of Latin American countries have established express provisions to determine the taxable income of enterprises domiciled or incorporated abroad and carrying out activities in each national territory. The well known cases are transport and communication enterprises, news agencies, insurance and reinsurance companies, and companies exhibiting or distributing cinematographic films and the like.

As mentioned when referring to the binding criteria, the great majority of the countries apply the tax on income of national source in the case of taxpayers domiciled abroad. In the case of enterprises devoted to international activities as those already mentioned, formulae have been established in each country to determine first the income of national source and then income subject to tax. Table No. 5 has been prepared on this basis, giving rise to the following conclusions:

1. As regards transport enterprises and as may be seen from the summary in Table No. 6, there are six countries in which the taxable income can be determined on the basis of percentages of gross income from transportation between the country and another (however, in Uruguay and the Dominican Republic there is the option of proving the effective income). There are four countries where taxable income may be determined on the basis of percentages of operations or sales within the country and there are two countries which allow taxable income to be determined on the basis of percentages of operations between countries (notwithstanding, Panama gives the option to determine the income on an effective basis). Finally, five countries authorize other formulae (basically on the basis of a proportion of world-wide income to local income).

2. In the case of insurance, in practice all the countries take as national-source income the revenue from transactions covering risks in the country, while in various countries a percentage of the income of national source is taken as taxable income.

3. In the case of international news agencies and the exhibiting and distributing of films, the gross amount received by the beneficiaries is taken as income of national source and the taxable income is fixed, also as a general rule, by applying percentages on such income (between 15 and 80 percent depending on the country).

ISRAEL:

The Gabbay Report

A proposal for inflation-adjusted taxation of income in Israel

By Dr. J.F. Pick

The dilemma of choosing between accuracy and practicability continually accompanies the discussion about tax adjustments for inflation.

A comprehensive inflation adjustment of the taxable income in any of its possible versions may be theoretically the best solution for taking inflation into account in the collection of income tax in high inflation countries. But those trying to work out a good system of such adjustment and to put it into practice will soon become aware of the difficulties involved. Because of these difficulties the majority of countries which have decided to make some adjustment for inflation in their income tax system have restricted themselves first of all to relatively simple ad hoc measures, in most cases in the field of inventory relief or accelerated depreciation. These measures almost always grant relief which is not in proportion to the loss suffered from inflation because the loss depends also on the way of financing; except for some South American countries, tax relief for effects of inflation has not been accompanied by a "monetary adjustment", i.e. an allowance for the loss of the creditor and the gain of the debtor from inflation. That so-called monetary adjustment appears to be the most important element in a system of full inflation adjustment.

The committee of exports appointed by the Israeli Minister of Finance in August 1979 (when the annual rate of inflation in Israel approached 100 percent) to recommend methods for solving the taxation problems connected with inflation and especially those concerning:

(a) the real value of depreciation allowances for tax purposes
(b) the impact of inflation on inventories in the different economic branches; and
(c) the treatment of the effect of inflation on the own funds of the business;

proposed in its report submitted to the Minister of Finance in March 1980 to go the hard way of full inflation adjustment. It expressed the view that Israel has reached a rate of inflation which demands such adjustment, among other reasons, because the distortions which partial adjustments for inflation by way of ad hoc measures would create are acceptable only at much lower rates of inflation.

The report of the committee refers expressly to the incentive to invest in real assets and the encouragement to work with borrowed capital which are inherent in a tax system based on nominal value and which adversely affect the economic system.

The main point in the proposal of the GABBAY Committee, named after its chairman *Joseph Gabbay*, the deputy director of inland revenue, is the creation of a "capital maintenance reserve" deductible from taxable income.

The amount to be transferred to the maintenance reserve has to be calculated once a year and is composed of five elements:

(1) The main element is an extended monetary adjustment. It consists of the adjustment by the rate of inflation of the current year on the net sum of "erosible assets" at the beginning of the year. "Erosible assets" is the surplus of monetary claims with the addition of inventories, most machinery and some securities over monetary liabilities. The report explains in detail the inclusion of machinery in that item. Because of the high allowance given under this method in the first two years — a full inflation adjustment for the cost of machinery in addition to depreciation at historical cost — the total tax allowance is granted more quickly than by an adjustment of the annual depreciation allowance; although over the life time of the machinery almost the same allowance — in real terms — is granted.

(2) The second element is an adjustment of depreciation on "non-erosible" assets, especially factory and hotel buildings. That adjustment is in addition to historical cost depreciation based on the rise of the cost of living index from the time the building was acquired or erected until the end of the current year of business. The "non-erosible" assets group also includes securities not traded on a stock exchange, patents, prepaid expenses, loans granted and tax payments. However, buildings seem to be the main item in this group calling for an adjustment of depreciation.

(3) The "erosible assets" group includes securities traded on the Tel Aviv stock exchange. The third element in the calculation of the transfer to the capital maintenance reserve is the deduction from that transfer of the sum of book profits and realised profits on those traded securities. Profits on traded securities are tax free and the deduction of these profits is necessary for reasons of symmetry because the inclusion of traded securities in the non-erosible assets group would otherwise give holders of such securities twofold tax relief, by way of deduction of the profits from those securities from the taxable income and by an allowance, within the capital maintenance reserve, for the loss of value of the amount invested in traded securities.

(4) The calculation of the first element on the basis of the position at the beginning of the business year would in many cases result in a distortion of the amount transferred to the capital maintenance reserve unless there is an adjustment for changes in the amount of capital employed and in the composition of assets during the year. Therefore, the fourth element contains an adjustment for changes during the year, among them the inflow of new share capital, distribution of cash dividends, the acquisition or erection of buildings, the purchase of patent rights or non-traded shares or the sale of "non-erosible assets".

(5) By an adjustment for the effects of inflation on the value at the end of the year of the "real profits" of the

© 1980 International Bureau of Fiscal Documentation — BULLETIN

year the fourth element is somehow supplemented. Just as monetary assets available at the start of the business year lose value in the course of the year, profits made at the beginning of the year lose at almost the same rate. The fifth element of adjustment is an allowance for the effect of inflation on the profits made during the year. That adjustment amounts to 20 percent of the "real profits" of the year multiplied by the rise of the index. The calculation is based on the assumption that the profit is made gradually during the year (arriving at 50 percent); tax at a rate of 60 percent is deducted from 50 percent of the profit. A negative "real profit" is not taken into account in the calculation of the transfer to the capital maintenance reserve.

In the view of the authors of the report the transfer from profit to the capital maintenance reserve achieves fairly correctly the aim of a changeover from nominal to real profits.

In case the transfer as calculated by summing up the five elements arrives at a negative balance the authors propose the deduction of that balance from the finance costs allowed for tax purposes. In case the negative balance exceeds the amount of finance costs the excess should be deducted from the (tax free) inflationary element of a capital gain made during the same year or from the transfer to the capital maintenance reserve of a related enterprise or should be set off against past losses. Negative balances which cannot be used for one of the above mentioned purposes have to be carried forward to the next year and will be considered a monetary liability in the calculation of next year's transfer to the capital maintenance reserve.

Except for industrial enterprises, the committee proposes the calculation of the capital maintenance reserve on the basis of only 90 percent of the rise of the cost of living index or that part of the rise which exceeds 10 percent (the lower of the two).

Somehow in contrast to the exact method of calculating the transfer to the capital maintenance reserve, the committee proposes a further device for reducing the cost of inflation adjustment by restricting the transfer to the capital maintenance reserve to 50 percent of the profit subject to tax before that transfer. Any excess over that 50 percent has to be carried forward of the following year as an "erosible asset".

Regarding the application of the new system, the committee suggests its introduction for a limited period of three years.

The system should be compulsory for all taxpayers who must then keep a complete set of books of account on accrual basis, with special regulations for taxpayers reporting on cash basis.

The calculation of the capital maintenance reserve by corporate bodies has to be examined by auditors.

The report deals to some extent also with specific problems of certain economic branches, e.g. livestock in agriculture and the stock of land held by building contractors. Going into these details would exceed the framework of this report. But it appears important to mention that the report refers to the specific problems of inflation adjustment in the tax accounts of financial institutions. Dealing with these problems has been entrusted to a subcommittee which has not yet submitted its report.

Although in Israel a few hundred industrial companies with foreign participation are already entitled to submit an inflation adjusted tax calculation on the basis of the RONAL Amendment (Amendment 15 to the Law for the Encouragement of Capital Investment) of March 1977, the proposal of the GABBAY committee is the most far-reaching plan prepared in Israel, and probably one of the most far-reaching plans anywhere, for an adjustment of tax accounts for inflations. The system appears logical and comprehensive and though various details may require change or improvement, the proposals form a complete and symmetric entity. The members of the committee deserve much credit for their work.

The GABBAY proposals aim to move as far as possible from the taxation of nominal profits to the taxation of real profits. In fact, the tax account model worked out in the proposals is based on historical cost accounts adjusted for general price level changes.

Inflation adjustment as such would not require a changeover of accounting methods to current costs but without it accounts do not show real values. The relationship between price level adjusted accounts based on historical cost and accounts based on replacement cost or current values depends on the different trends of price changes for different materials and goods and also on technological changes.

The GABBAY committee rightly restricted itself to price level changes. It would appear almost impossible to achieve a changeover to current cost accounting for the large number of small and medium sized enterprises in Israel. Even if achievable, such an adjustment may be considered unnecessary within an inflation adjustment of the income liable to tax.

In December 1979 the Institute of Public Accountants in Israel adopted Opinion 23 requiring all firms the turnover of which exceeded in 1979 IL 300 million and all companies the shares or bonds of which are traded at the Tel Aviv Stock Exchange to add to the notes to their financial statements from 1980 onward a statement on the effect of inflation on the profit and loss account. That statement on the effect of inflation calculates those effects on the basis of general price level changes and in the main on a general concept similar to that of the proposals of the GABBAY committee but there are many differences of detail. It would appear that in case the GABBAY proposals are to be put into effect a harmonisation of the accounting principles between financial accounts and inflation adjusted tax accounts would be of great assistance.

There appear to be three main problems involved in the decision concerning a possible implementation of the proposals:

(1) *the administrative difficulties;*

(2) *the restriction of the tax advantage presently enjoyed by certain economic branches, mainly manufacturing;*

© 1980 International Bureau of Fiscal Documentation – BULLETIN

(3) *the choice of the methods for restricting the effect of inflation adjustments on total tax collection.*

(1) An examination of the proposals from the point of view of their administrative implementation is bound to reveal the most difficult problem. It would require a large degree of imagination to envisage the adjustment of all changes during the year (element 4) — in capital employed and in the distribution between "erosible" and "non-erosible" assets — of the large number of small and medium sized firms or companies covered by the proposal.

Even the RONAL Amendment, which was tailored for a few hundred companies only, provides for an easier method of calculating the transfer to the capital maintenance reserve than the GABBAY proposals which are intended for application to some hundred thousand taxpayers.

It would appear that similar to the RONAL adjustment method the calculation of the transfer to the capital maintenance reserve should be based on only two elements — the adjustment of the effect of inflation on the balance of erosible assets at the beginning of the year and the adjustment of depreciation on the non-erosible assets. Even such an adjustment would strain to the hilt the professional manpower in the tax administration and in the economy.

Some adjustments for changes during the year may be kept in reserve as a right of the tax administration to ask for more details and to demand adjustments for such changes in cases of execessive tax planning or special circumstances. The adjustment of the real profit becomes less important if the adjustment for changes during the year is dispensed with and traded securities may be transferred to the "non-erosible assets" group if only for the sake of saving administrative work.

(2) During most of the period of the existence of the State of Israel special tax advantages and other incentives have been granted to certain economic branches, mainly to manufacturing industries. These incentives have been part of a policy aiming to achieve economic independence by fostering industrial exports. Though the aim has not been fully achieved because of the great security requirements of Israel, the substantial increase of industrial exports can certainly to some extent be ascribed to these incentives.

The GABBAY report proposes on the whole a neutral application of the new measures retaining only very slight advantages for industry by adjusting for 100 percent (instead of 90 percent) of the rise of the index and by treating machinery as "erosible assets" which has a certain pro-industry bias. Against that, the accelerated depreciation and the inventory relief granted in the tax years 1978 to 1980 which gave manufacturing industry considerable tax incentives are to be abolished.

While the move towards more "neutrality" in tax laws would in principle be a highly desirable development, legislators would have to ask themselves whether a reduction of incentives to industry would hamper the achievement of the goal of increasing industrial exports.

(3) The letter of appointment of the committee by the Minister of Finance of 14 August 1979 aked the members to take into account the "fiscal limitations" which would affect the implementation of their recommendations. Out of these considerations the committee proposed:

(a) *to adjust "erosible assets" for 90 percent only of the rise of the index;*
(b) *to deduct any negative balance of the equity maintenance allowance from finance expenses allowed for tax purposes;*
(c) *to restrict the transfer to the capital maintenance reserve in any year to 50 percent of the taxable profit before that allowance.*

(a) The restriction of the adjustment to the excess of the rate of inflation over 10 percent seems the most reasonable of these measures. Taxpayers in other countries with inflation at an annual rate of around 10 percent also suffer taxation of inflationary profits at that rate.
Furthermore, if full tax relief for the effect of inflation cannot be granted, an equal proportional reduction of the relief to all taxpayers appears the most appropriate way for reducing the cost to government.

(b) The deduction of a negative capital maintenance reserve balance from finance expenses appears reasonable and logical because such negative balance represents generally a debtor's gain from the decline of the value of his debts in times of inflation.
There may be certain problems related to the proposed treatment of that item. Because long term credit in Israel is extremely restricted the main cases of a negative capital maintenance reserve (an excess of monetary liabilities over the sum of monetary assets, inventories and machinery) are probably manufacturers and hotels which financed their buildings with direct credits which they obtained as an incentive for increasing exports (including tourist trade treated as export). These enterprises will now be charged with the full debtor's gain on their long term debt, i.e. its decline in value due to inflation while in respect of the building acquired with that loan they will obtain tax relief by way of an adjustment of the amount of depreciation at a much slower pace. The GABBAY report explains that this disadvantage is in fact taking away an advantage that until now existed in these cases because the enterprises concerned can presently write off linking differences on their loans currently as they accrue and more quickly than the loans are repaid, thus resulting in a certain tax deferment. Nevertheless, their suggestion that the above problem should be solved in the field of financing and not by fiscal methods may be difficult to achieve. It would appear that the disadvantage of an immediate full charge for the debtor's gain as against the very gradual adjustment of depreciation of the assets financed by those debts should be partly cured by a certain tax deferment. Otherwise the inflation adjusted tax system would, in view of the financing problems prevailing under conditions of high-rate inflation, create an anti-investment bias which may be as harmful as the present pro-investment bias referred to in the GABBAY

© 1980 International Bureau of Fiscal Documentation – BULLETIN

report which, however, in recent years did not prove strong enough to maintain productive investment at the desired level.

(c) The restriction of the transfer to the capital maintenance reserve to 50 percent of the taxable profits before that transfer appears to be the main flaw in the GABBAY committee proposals. It is surprising that such an unbalanced and regressive adjustment device found its way into the report which in most of its other parts is highly consistent and careful to maintain maximum symmetry. If the annual rate of inflation amounts to 80 percent an enterprise earning 200 percent on its own funds would, under the 50 percent rule, pay tax only on its very substantial real profit but no tax on its nominal inflationary profit. Another enterprise which earned only 50 percent on its own funds, which at that rate of inflation means a real loss, would nevertheless have to bear tax on 50 percent of its unreal profit. In that way the restriction of the transfer of the capital maintenance reserve to 50 percent of the profit before that transfer would hit hardest taxpayers with real losses or with relatively small real profits, while those with high real profits remain unaffected.

From all points of view it would appear preferable to achieve a reduction of the tax relief granted by way of an equal abatement of the relief granted instead of applying the regressive 50 percent rule which hits hardest those taxpayers with real losses.

If the proposal can be changed in the directions here indicated the GABBAY report could form the basis for an experiment in inflation-adjusted taxation of income which should be studied with interest also outside the State of Israel.

LE TRAITE DE DROIT ECONOMIQUE ET FISCAL MONEGASQUE

De Monsieur André Thrioreau

Faisant suite à son ouvrage de vulgarisation "*Dispositions financières et fiscales caractérisant la Principauté de Monaco*" qui a connu un grand succès d'estime et de librairie, s'adresse aux praticiens, experts-comptables, juristes, chefs d'entreprises, cadres, administrateurs de sociétés, chargés d'affaires en Principauté et à toutes les personnes soucieuses de la bonne gestion de leur patrimoine ou qui sont intéressées par le particularisme du droit économique et fiscal en vigueur dans la Principauté de Monaco.

Cet ouvrage important, *dont la mise à jour constante sera assurée par l'auteur* selon une périodicité qui sera fonction de l'actualité juridique et fiscale, et aux plus justes conditions de rémunération.

Il constituera un instrument de travail unique et indispensable

Monsieur André Thrioreau se tient à la disposition de toutes les personnes qui désireraient, préalablement à leur engagement de souscription, avoir davantage de précisions ou prendre connaissance de l'ouvrage.

Prix réduit pour les membres du Bureau International de Documentation Fiscale.

PRENTICE~HALL,INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

Prentice Hall Announces:

The most strikingly different new tax guide ever published for taxpayers with income from foreign sources.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Continuously Supplemented. . . . . Always Up - to - Date

This outstanding new Service is created specifically to help save money for:

U.S. INDIVIDUALS
with investments and/or earned income from a foreign source

U.S. CORPORATIONS
with income from foreign sources

FOREIGN CORPORATIONS
with income earned or taxable in the U.S.

NONRESIDENT ALIENS
receiving income from, or taxable in the U.S.

If you fit any of these categories — or if you counsel, advise, or in any way service any of these categories — U.S. TAXATION OF INTERNATIONAL OPERATIONS will be an invaluable new tool for you.

It will deliver management benefits — operations benefits — tax benefits.

In clear, direct language, backed up by practical, tested practices of acknowledged experts in international business operations, the new work spells out how the taxpayer can best take full advantage of every popular, every sophisticated, and every little-known tax-saving device.

Authoritative, specific guidance from one source devoted exclusively to this kind of vital help has been non-existent — until now.
With the first 1972 publication of the innovative U.S. TAXATION OF INTERNATIONAL OPERATIONS this important need is now fulfilled. And bi-weekly "Report Bulletins" will keep the guide as new and up to the minute as the day you receive it.

Personal response to this new publication has been even more enthusiastic than our most optimistic projections. Subscriptions are now being accepted by mail for $ 231 a year.

Address your request to Dept. S-RR-103, Prentice-Hall Inc., Englewood Cliffs, N.J. 07632 and specify U.S. TAXATION OF INTERNATIONAL OPERATIONS, 1-year introductory charter subscription.

Annual payment is not due until 20 days after receipt of the new, ready-for-reference volume.

Nathan Boidman:*

INTERPRETATION OF TAX TREATIES IN CANADA

A. AN OVERVIEW OF THE PROBLEMS OF INTERPRETATION

One might expect to glean profound wisdom from the following comments on treaty interpretation because they are based on an extensive review of most reported income tax treaty cases in Canada to date and a fair number of cases in other countries. [1] *Presumably, they reflect a coherent body of interpretative principles, developed and applied on a consistently evolving basis, and providing, therefore, sound guidelines as to the manner in which we might expect a treaty to be interpreted and applied and as to how treaty cases will be dcided in the future. However, there are two reasons why one may well be disappointed if such are one's expectations.*

AUTHOR'S NOTE

This Article is an edited version of the text of a paper presented to the International Fiscal Association, U.S.A. Branch, at its Fourth Annual Meeting in Philadelphia, 17 - 18 January 1980, on "New Developments In Tax Treaties". The paper focuses on the manner in which Canadian Courts interpret tax treaty cases, seeking to identify the extent, if any, to which there is a consistent and/or coherent body of rules of interpretation, with comparative comment respecting the approach of the judiciary in other countries, particularly the U.S. The underlying research was carried out for purposes of a book on treaty interpretation in Canada, scheduled to be published by the Canadian Tax Foundation.

1. The mix between domestic and international rules

First, Courts often tend to interpret treaties in much the same manner as they would domestic tax statutes, only hesitantly bringing into play rules which are particularly apt for a treaty issue. The result is an unpredictable mix between the use of purely domestic rules of interpretation in some cases and a blend of domestic and treaty rules in other cases, making it difficult to foresee the resolution of a future treaty issue.

The problem is accentuated by the predilection of Courts to conscientiously propound the need to adopt broader rules of interpretation while in fact failing to wrest themselves from the more restrictive framework in which domestic tax issues are resolved.

The basic principle of treaty interpretation in Canada was stated by the Tax Appeal Board in *Saunders* v. *M.N.R.:*

> *"The accepted principle is to be that a taxing act must be construed either against the Crown or the person sought to be charged, with perfect strictness, so far as the intention of Parliament is discoverable. Where a tax Convention is involved, however, the situation is different and the liberal interpretation is usual in the interest of the comity of nations. Tax Conventions are negotiated primarily to remedy a subject's tax position by the avoidance of double taxation rather than to make it more burdensome. This fact is indicated in the preamble to the Convention. Accordingly, it is undesirable to look beyond the four corners of the Convention and Protocol in seeking to ascertain the exact meaning of a particular phrase or word therein."* [2,3]

On the other hand, Mr. Justice Cattenach in the Federal Court, Trial Division wrote in *Stickel* v. *Her Majesty The Queen:*

---

* NATHAN BOIDMAN, C.A., B.C.L., LL.B., Tax Consultant to Courtois, Clarkson, Parsons & Tétrault, Advocates, Barristers & Solicitors, Montreal, Canada. *Educational & professional affiliations:* McGill University, B. Com., 1962; Admitted to the Order of Chartered Accountants of Quebac, 1964; Admitted to the Order of Chartered Accountants of Ontario, 1977; McGill University Bachelor of Civil Law (B.C.L.) 1980; McGill University Bachelor of Common Law (LL.B.) 1980. *Professional history:* Public practice in accountancy, 1964-1974; Tax Consultant to Verchere, Noel & Eddy, Montreal, 1974-1979 and Verchere & Eddy, Toronto, 1978-1979; Tax Consultant to Courtois, Clarkson, Parsons & Tétrault Attorneys, Montreal, 1980.

1. This research was carried out for purposes of a book on treaty interpretation in Canada, scheduled to be published by the Canadian Tax Foundation. It reflects court decisions to Janaury 15, 1980.
to January 15, 1980.
2. 54 DC 524, at 526.
3. This statement of judicial policy has been referred to in several subsequent decisions, such as, *Canadian Pacific Limited* v. *Her Majesty the Queen* 76 DTC 6120, *Vauban Productions* v. *Her Majesty The Queen*, 75 DTC 5371 and *Shahmoon* v. *M.N.R.* 75 DTC 275.

2. Inconsistency of application
   (a) The U.S. experience in treaty abuse cases

B. The problem of inductive versus deductive processes of interpretation and broadly stated canons of interpretation

1. Inductive v. deductive analysis
   (a) The deductive approach
      (i) Characterization or qualifying the transaction
      (ii) Applying principles or rules of tax treaty interpretation
      (A) A Treaty should not expand the ambit of taxation
      (B) Eliminating double taxation
      (C) Counteracting tax evasion or avoidance
      (D) Achieving reciprocity of taxation
      (E) Avoiding abuse of treaty
      (F) The use of extrinsic aids
      (G) Interpretation as a contract
      (H) The influence of international law
      (I) The question of strict versus liberal interpretation
   (b) The inductive approach
2. The problem of broadly stated canons or dicta of interpretation

C. The problem of strict versus liberal interpretation

1. Overview: Canada versus U.S.
2. The Canadian situation
3. Examples of strict interpretation
4. Examples of liberal interpretation

D. The quest for clear treaty provisions – and some comments on the business profit exemption article in treaties

1. General considerations
2. Problems of interpreting Article I of the U.S.-Canada Convention
   (a) What are "industrial and commercial profits"?
      (i) Bank loan interest?
      (ii) Recent developments respecting loan guarantee fees
   (b) "Enterprise" for the purpose of Article I

E. The interpretation of a treaty as a contract: comment respecting unilateral interpretations

F. Concluding comment

"The consensus of all writers is that treaties are to be construed in the most liberal spirit provided, however, that the sense is not wrested from its plain and obvious meaning.

In my view, the duty of the Court is to construe a treaty as it would construe any other instrument public or private, that is, to ascertain the true intent and meaning of the contracting States collected from the nature of the subject matter and from the words employed by them in their context. In this I am assisted by the preamble of this particular Treaty which states that two of the overall aims are the avoidance of double taxation and the prevention of fiscal evasion in the case of income tax." [4]

It is seen that Mr. Justice Cattenach would substantially restrict the object of liberal interpretation of treaties by conventional rules of interpretation, and his decision in *Stickel* [5] could fairly be considered to be within the constraints of domestic revenue law interpretation.

2. Inconsistency of application

Secondly, there is the old domestic problem of inconsistency of selection or application of conflicting or competing rules or methods of interpretation. This problem is a recurring theme in this paper (see, in particular, section B).

As one cynic (so self described), an eminent international tax lawyer who will grace our podium at this meeting, said in a letter to me, commenting on the first draft of my book: [6]

> "I have completed reading your Treatise on interpreting Canada's income tax treaties and feel that you are undertaking an impossible task. I am quite cynical about the Court's analysis. I believe that in most cases, the Courts decide an answer to the problem and then adopt the appropriate rationale."

(a) The U.S. experience in treaty abuse cases

Perhaps our cynic had in mind the difficulty of reconciling some of the more renowned U.S. treaty cases: the decisions in *Perry Bass* v. *C.I.R.*, [7] on the one hand, and as a group those in *Compagnie Financière de Suez et de l'Union Parisienne* v. *U.S.*, [8] *Johansson et al* v. *U.S.* [9] and *Aiken Industries Inc.* v. *C.I.R.* [10] The latter cases suggest that the U.S. Courts are quite prepared to disregard a taxpayer's compliance with formalism and adherence to specific requirements of a treaty exemption or to seek out defects in documentation or formal inadequacy in order to give effect to an overriding principle that a treaty should be interpreted such as to assure its prime purpose of avoiding double taxation and the converse thereof, that it not be interpreted so as to allow the avoidance of all taxation (or taxes in more than one country) or what can be preceived as an undue, abusive or unintended avoidance of taxes which might otherwise become due. On the other hand, *Perry Bass* [11] can reasonably be regarded as standing for the proposition that attention to detail, formal adequacy or observation of the legal niceties can provide success in a treaty case regardless of the rupture of the underlying purposes of double tax agreements. As you well know, in *Perry Bass* [12] the taxpayer effectively reduced his overall tax burden by interposing a Swiss corporation between himself and various investments in the United States, succeeding on the basis of the "viability" principle, that is, the company looked and acted like a real corporation having been very carefully adorned with all

the accoutrements of an ongoing enterprise. The Court was of the view that it ought to disregard "the personal purpose of a taxpayer in creating a corporation", provided that substantive business functions are carried out. Compare, however, *Johansson* [13] and *Suez.* [14]

In *Johansson*, [15] the Court, in holding the taxpayer's scheme to be untenable, stated:

> *"The primary objective of our Treaty with Switzerland, as well as those with more than 20 other countries, is the elimination of the impediments to international commerce resulting from the double taxation of international transactions."* [16]

The Court went on to find that the attempt by Johansson to shelter the prize money he would earn from his heavyweight championship boxing match with Floyd Patterson by utilizing a Swiss company should not succeed for the reason, inter alia, that such tax relief was not necessary for the purpose of eliminating impediments to international commerce.

> *"Scanart, S.A. had no legitimate business purpose but was a device which was used by Ingemar Johansson as a controlled depository and conduit by which he attempted to divert, temporarily, his personal income, earned in the United States, so as to exempt taxation thereon by the United States."* [17]

The Court rejected strict or mechanical interpretation and cited *Maximov* v. *U.S.:* [18]

> *"In determining whether the taxpayer in a given case is protected by the terms of a treaty, abstract and desultory definitions of such terms as 'residence' and 'legitimate business purposes' are of limited, if any, assistance. 'To give the strict word of the treaty a meaning consistent with a genuine shared expectation of the contracting parties, it is necessary to examine not only the language but the entire context of the agreement.'"* [19]

Then, dealing with the proper locus of taxation in relation to the purpose and operation of a double tax agreement:

> *"Thus, as a general rule, the income from services is taxable when the services are rendered . . . Where, as here, services are performed in the United States, and the compensation for them is drawn from the wealth of the United States, this is the country of primary economic impact and consequently, the appropriate taxing locus. There are, however, a number of potential exceptions in the general 'economic impact' rules. Among them is a view that a business enterprise engaged in international commerce ought not to be subject to taxation in every country in which he may transact some business. Although such an enterprise does draw upon the wealth of the various countries with which he comes into contact, the overall objective of encouraging international commerce, as well as the practical necessities of business planning are better satisfied by a centralized regime of taxation at the enterprise's business seat or permanent establishment. The business seat exception is found in Article III of the Swiss Treaty. Elements of this exception are also found in Article X. Typical of what have become known as "commercial traveller provisions" in the international tax conventions, the Article is designed to assure business establishments in each of the contracting States that they may freely send their agents and employees into the other Contracting State without thereby subjecting those employees to the latter's taxes. Like Article III, it is an exception to the 'economic impact' rule, carved out in the interest of facilitating international trade. Where the practical reasons for the exception do not obtain, however, the general rule must apply. Thus, while Johansson may have brought himself within the words of the Swiss Treaty by his 'residence' in Switzerland and his 'employment by a Swiss enterprise', he has failed to establish any substantial reasons for deviating from the treaty's basic rule that the income from services is taxable where the services are rendered. International trade will not be seriously encumbered by a refusal to grant special tax treatment to one only marginally if at all Swiss resident and only technically if at all employed by a paper Swiss corporation."* [20]

In *Suez* [21] the Court expressed its views on the proper and improper use of treaty provisions in the following words:

> *"Ultimately this case also turns on the intent and purpose of the Convention as agreed upon by the signatories. The purpose and intention of the tax Convention between the U.S. and France was to avoid double taxation and to alleviate the problems arising from it. The parties, to a bilateral agreement, are 'primarily' concerned with removing an obstacle to a flow of trade and investment between the two countries. . . . The fact is that the plaintiff is not confronted with the problem of double or burdensome taxation that the Treaty is designed to alleviate or eliminate. There is no double tax on the income of the plaintiff since it is not taxed in France. There is no obstacle to trade or commercial intercourse in the context of this case."* [22]

The Court dealt with "unintended" treaty benefits:

> *"We cannot read the Treaty to accord unintended benefits inconsistent with its words and not compellingly indicated by its invocation. Our interpretation affords every benefit negotiated for by the parties to the Convention on behalf of their respective residents and prevents an intended tax default to a private party."* [23]

The Court also considered the issue in terms of allocation of jurisdiction to levy tax:

> *"The plaintiff claims based on the Treaty that an adverse decision would violate the rules of comity. This is not so because the only tax authority involved*

is that of the United States. If the United States surrendered its authority in accordance with the plaintiff's claim, it would gain nothing for which it negotiated under this Treaty. Also, France has no interest in this matter because its authority to tax is not in dispute. France disclaimed its right to tax the income in dispute. United States' interests and benefits are the only ones involved relative to the Convention, therefore a result unacceptable to the plaintiff, either based on the Convention or indirectly structured to it, an unfavorable choice of law in no way violates the principle of comity. The decision merely protects the principle of the Convention, avoidance of double taxation." [24]

B. The problem of inductive versus deductive processes of interpretation and broadly stated canons of interpretation

I encountered two particularly thorny problems in trying to identify a coherent theory and underlying body of rules of interpretation for tax statutes and treaties, problems which are probably inherent in any legal analysis.

1. Inductive v. deductive analysis

Tax Courts tend to vacillate between, on the one hand, the desire to methodically apply in a purley deductive manner prevailing principles and rules of interpretation and, on the other hand, the tendency to inductively (or perhaps intuitively) draw conclusions from a maze of available data (the facts, the law and the rules of interpretation and application), hopefully factoring in the deductive analysis required.

The latter approach appears to be a natural response to the difficulties raised in tax avoidance cases, such as the U.S. cases noted earlier where the judicial concern is to avoid decisions which ignore or overlook underlying purposes of the relevant statute or treaty.

It is my own view that the inductive approach gives rise to inconsistency and incompleteness of reasoning and that the problem is accentuated by broadly worded canons or dicta of interpretation (more on the latter below).

(a) The deductive approach

The deductive approach should involve a two-step process:

- First, the transaction at issue should be characterized or qualified as to its true or substantive nature for tax assessment purposes—
- Then, the relevant law or statute can be applied or interpreted in relation thereto.

(i) Characterizing or qualifying the transaction

The first issue is whether we are dealing with a transaction which is carried out without regard to tax law, including treaties; or is it one which was structured with tax law in mind, for example, *Johansson*; [25] or, is it one which had no purpose other than to yield a tax benefit,[26] such as *Aiken*,[27] where an existing debt relationship between a Bahamian and U.S. corporation was restructured to obtain advantage of the then existing Honduras-U.S. Treaty.

In the first category we simply have the question of applying or interpreting the treaty provision in relation to the factual situation. In the second category we must make an initial determination (before interpreting or applying the treaty provision) of the true substance or commercial effect of the particular transaction, overall, bringing into play doctrines of step transaction, substance over form, etc. In the third category the question of categorization and qualification of the transaction becomes all important with the ultimate sanction that the transaction will be ignored in its entirety on the basis of sham or lack of business purpose, or that the alleged taxpayer is a mere agent, as was the reasoning in *Aiken*.[28]

The point is, that the interpretative process is one-dimensional in the first type of situation and multi-dimensional in the second and third categories.

If there is a failure to recognize the necessity of first qualififying the true substance of a transaction, the objective of consistent interpretation (particularly where there are competing, alternative rules of interpretation) may be compromised. For example in Canada, as I will comment on in more detail below, there still remains an uncertainty as to whether a revenue statute should be interpreted strictly (literally) or broadly bringing into play the intent of the legislator and other (extraneous) factors.[29] Such a determination should not be made by reference to the particular nuance or circumstances surrounding the issue at hand; however, where the Court has failed to first deal specifically with the question of categorization, it may tend to use an interpretation rule based not on a consistent policy within that country or Court in relation to the particular law under consideration, but, rather, one which provides a desirable or equitable result in the particular case. For example, if it is common ground that a treaty provision is to be interpreted contextually a Court should not apply a strict or literal reading simply because the result thereof would accord more with the apparent policy or purpose of the

24. Supra note 8, at 83515.
25. Supra note 9.
26. These three different types of transactions or issues are referred to below as "categories".
27. Supra note 10.
28. Supra note 10.
29. In the 1930s, the United States abandoned the strict rule of interpretation, in *White* v. *U.S.*; (1938) 305 U.S., 281 and adopted the "business purpose test" in *v. Helvering* v. *Gregory*, 60 F. 2d 809, aff'd (1935), 293 U.S. 465 and *Wellard* v. *Commissioner*. The doctrines of "agency" and "sham" can be seen in *Barthel* v. *Birmingham*, 332 U.S. 126 (1947, 1847-2 C.B. 174); *Ringling Brothers, Barnum & Bailey* v. *Higgins*, 189 F. 2d 864 (2nd Circuit) 1950; *Filipidis* v. *United States*, 71-1 U.S. c. 85 828 (M.D.) 1970 (confirmed); Curin, 71-2 U.S. T.C. 87 830 (4th Circuit 1970) 14; *Richard Rubin*, 56 T.C. 1155, 1159-60 (1970), affirmed 46 DF 2D 1216 (2nd Circuit) 1972; *Moline Properties Inc.* v. *Commissioner*, 319 U.S. 436, 438-439 (1943), 1943 C.B. 1011; *Floyd Patterson* T.C. 1966-329, affirmed 1968 - 2 U.S. T.C. 87, 623 (2nd Circuit 1968).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

particular treaty provision. Rather, the task of negating matters such as a lack of business purpose in a transaction should be left to the initial characterization process; the animus of the transaction should not influence or compromise consistent and logical selection and application of rules of interpretation.

Treaty cases in Canada have yet to involve the second and third category situations. The main reason is that until 1976 there was no difference between treaty rates and domestic rates on most forms of passive investment withholding tax levies, being perhaps the area most prone to abusive planning. In addition, for whatever reason, perhaps lack of detection, issue has not been made of situations where certain treaty countries have been utilized as a base for carrying on business in Canada without permanent establishments, claiming business profit treaty exemption in circumstances where the substantive aspect of the activity was foreign to the base (treaty) country used.

There is a tendency, of course, for modern treaties to contain specific anti-abuse provisions which effectively codify or formalize what I perceive as the first process otherwise necessary in a treaty issue determination. For example, under Article XXVII (2) of the yet to be ratified, renegotiated, Canada-United Kingdom Treaty:

> *"Where under any provision of this Convention any person is relieved from tax in a Contracting State on certain income and, under the law in force in the other Contracting State, that person is subject to tax in that other State in respect of that income by reference to the amount thereof which is remitted to or received in that other State, the relief from tax to be allowed under this Convention in the first-mentioned State shall apply only to the amounts so remitted or received."*

This, of course, is meant to deal with non-domiciled U.K. residents who can avoid U.K. tax on unremitted foreign source income.

(ii) Applying principles or rules of tax treaty interpretation

Once the transaction has been characterized (as well as applying or perhaps ignoring the principle enunciated in *Suez* [30] and *Johansson* [31] that a treaty cannot be simply utilized at the discretion of a taxpayer) consideration can then be given to what I prefer to consider the true or strict questions of interpreting tax treaties. The following is a brief summary of how Canadian and some other Courts have used the possible principles or rules of interpretation.

(A) *A treaty should not expand the ambit of taxation*

In Canada the dicta in *Saunders* [32] cited above have been construed to extend or expand the liability for tax which would arise in the absence of the treaty. I believe this is a fairly universal rule with the exception of France, where a treaty can apparently serve to increase the ambit of taxation (Article 4 bis-2, 165 bis and 209 G.C.I.). Another possible exception to this rule may be discerned in a decision under the Germany-Luxembourg Treaty referred to in the *International Tax Treaty Service* [33] at page 11 of the section on Article XIV.

(B) *Eliminating double taxation*

Hopefully a treaty is to be interpreted in light of the purpose of avoiding double tax. This is the third of the three schools of tax treaty interpretation identified by Fitzmaurice: the "aims and objects" school.[34]

However the majority of cases indicates that this rule of interpretation is usually subordinated to the first two schools of interpretation identified by Fitzmaurice: the "Founding Fathers School" or the "Ordinary Meaning of the Words School".[35]

Cases where the purposes of treaties have been manifestly observed include *Appleby* v. *M.N.R.*,[36] *Reeder* v. *M.N.R.*[37] [38] On the other hand, there are far more cases where the basic purposes of treaties are not determinative in the decisions: *Stickel* v. *M.N.R.*,[39] *Fletcher* v. *M.N.R.*,[40] *A.G. Munich (Jr.)* v. *M.N.R.*,[41] *C.J. Crawford* v. *M.N.R.*,[42] *Furness Pacific Ltd.* v. *M.N.R.*,[43] *Joe Snell* v. *M.N.R.*,[44] *A.P. Hilton* v. *M.N.R.*,[45] *Maximov* v. *U.S.*,[46] *Mathewson* v. *M.N.R.*,[47] *Hurd* v. *M.N.R.*[48]

Lord Donovan of the House of Lords in *Imperial Chemical Industries Ltd.* v. *Caro*[49] expressed this rule this way:

> *"It is true that this may produce an anomaly. . . but in this particular appeal which deals with different*

31. Supra note 9.
32. Supra note 3.
33. Michael Edwardes-Ker, *The International Tax Treaties Service*, In-Depth Publishing Ltd., Dublin, 1978. Another example is the 1979 decision of the Privy Council in *Hock Heng Co. (1979)* STC 291 as reported in *The International Tax Strategy Service*, In-Depth Publishing Ltd., Dublin, 1978, in 1979 Bulletin No. 5, page 7. The Council rejected an attempt by the Malaysian tax authorities to deny a deduction to a Malaysian company for losses of a Singapore branch, as is permitted under Malaysian domestic tax law, on the basis that the treaty between Malaysia and Singapore would have exempted the Malaysian company from tax on such profits and therefore losses therefrom should be denied. A finding to this effect would have permitted a treaty to expand the ambit of taxation and the decision is therefore consistent with the general rule noted.
34. As summarized by David Ward in *Principles To Be Applied In Interpreting Tax Treaties* (1977) 25 Can. Tax. J., 263.
35. The first school is also referred to as the "intentions of the parties school", the second school as the "textual" school and the third as the "teleological" school. Fitzmaurice's first school can also be thought of as the liberal or contextual approach while the second school is closer to the strict or literal approach dealt with below. It would seem that the "aims and objects" school plays an important role only in abuse of treaty cases such as the four U.S. cases dealt with earlier.

taxes levied in different countries on different lines, protection in any system of double taxation relief must almost be impossible to achieve."

Lord Upjohn said:

"It very frequently happens, owing to the complexity of modern taxation, that anomalies and hardship do arise. There is only one safeguard, and that is, to give effect to the plain meaning of the words which Parliament has thought fit to use." [50]

(C) *Counteracting tax evasion or avoidance*

Should a treaty be interpreted in light of the purpose of combating tax evasion or avoidance? This certainly seems to be the view of the U.S. Courts in *Burbank* [51] where the exchange of information article of the U.S.-Canada Convention was given broad application in respect to co-operation between the taxing authorities, in contrast to many European, particularly Swiss, decisions.

(D) *Achieving reciprocity of taxation*

Should a treaty be interpreted in light of the purpose of providing reciprocity of taxation between the two taxing jurisdictions? This principle, in part, underlay the dicision in *Johansson:*

"The primary objective of our Treaty with Switzerland, as well as those with more than 20 other countries, is the elimination of the impediments to international commerce resulting from the double taxation of international transactions. The basic mechanism of these treaty arrangements is the establishment of standards for determining the single most appropriate locus of the taxation of any given transaction. *Although some treaty provisions are inevitably the result of political compromise, the dominant criterion for determining the appropriate taxing locus is economic impact" (emphasis added).* [52]

A similar objective can also be seen as underlying the permanent establishment and enterprise cases under the U.S.-Canada Convention, in *Rutenberg* v. *M.N.R.,* [53] *Abed* v. *M.N.R.,* [54] *Consolidated Premium Iron Ores Ltd.* v. *Commissioner of Internal Revenue,* [55] *Number 473* v. *M.N.R.,* [56] *McMahon* v. *M.N.R.,* [57] *Number 630* v. *M.N.R.,* [58] *Donroy Ltd.* v. *U.S.,* [59] and *Johnston* v. *C.I.R.,* [60] all referred to below.

(E) *Avoiding abuse of treaties*

Should a treaty be interpreted so as to prevent it from being a means of avoiding tax? This idea was dealt with in the opening portion of the paper, being an issue which has come up before the U.S. Courts but not yet before the Canadian Courts.

(F) *The use of extrinsic aids*

In interpreting treaties may reference be had to extrinsic aids? Canada has traditionally been more conservative in this area than, I believe, the U.S. The basic rule in Canada is that "travaux préparatoires" and legislative history of a statute are not admissible as evidence in the interpretation of a statute *(Attorney General of Canada* v. *Readers Digest Association).* [61] I understand the contrary rule was adopted in 1896 in the *United States* v. *Freight Association.* [62] Perhaps Article XXXII of the *Vienna Convention on Treaties*, 1969, which advocates the admissibility of "travaux préparatoires", will eventually be followed by Courts in Canada. Similarly, it remains to be seen whether commentaries on the OECD Model would be referred to by a Canadian Court, as was the procedure adopted by the U.S. Court in *Burbank.* [63]

(G) *Interpretation as a contract*

The question of interpreting a treaty as a contract and not as a statute is considered separately below with particular reference to the propriety of unilateral acts of interpretation by administrative officials and the effect thereof before the Courts.

(H) *The influence of international law*

What is the influence of rules of international law, relations and concepts on the interpretation of treaty cases? As seen above, the Canadian Courts generally refer to the desirability of more liberal interpretations in a treaty issue. Consideration is given elsewhere to the

50. In a recent New Zealand case, D1 (1979 4 NZ TC, Taxation Review Authority, February 19, 1979) as reported in *International Tax Strategy 1979*, Bulletin No. 3, page 14, a U.S. citizen, retired in New Zealand, failed in his attempt to invoke the New Zealand-U.S. Income Tax Treaty to avoid paying New Zealand tax on pension benefits under the U.S. Social Security Program. The gist of the taxpayer's argument was that Article 18 should be construed to avoid double taxation, being the result, in a sense, of the pension having been derived from contributions which had been made on a non-deductible basis. Article 18 provided as follows:
"When a person shows proof that the action of the revenue authorities of the Contracting Governments has resulted or may result in double taxation in his case in respect of any of the taxes to which the present Convention relates, he shall be impelled to lodge a claim with the Government of which he is a citizen or in whose territory he is resident. If the claim should be deemed worthy of consideration, the taxation authorities of such Government may consult with the taxation authorities of the other Government to determine whether the double taxation in question may be avoided."
In rejecting this argument, the court said:
"There is no mandatory provision that double taxation must be avoided. The terms of the Agreement are permissive only and confer no absolute right on a taxpayer to insist that such consultation be held. In equity, however, I have no doubt that in appropriate cases proper consultation would be had between the revenue authorities of the two countries."

OECD Model and commentaries and the Vienna Convention on treaties. In a Rhodesian case,[64] the Chief Justice, Beadle, spoke of "an international language" requiring wide and broad interpretation in order that the purposes of tax treaties be achieved. The Federal Court of Canada in *Canadian Pacific* [65] was prepared to accept an administrative interpretation (of the U.S. Treasury) to achieve avoidance of the double tax while the Tax Review Board in *Number 630* [66] referred to the persuasive influence of the U.S. decision in *Johnston* [67] in deciding a permanent establishment case under the U.S.-Canada Convention. These instances of the Canadian Courts looking to foreign decisions augur well for an international approach to treaty interpretation in Canada. In the U.S. the reliance in *Burbank*[68] on the OECD commentary is an important breakthrough in internationalizing the interpretation of treaty issues.[69] [70]

(I) *The question of strict v. liberal interpretation*

This is considered separately below.

(b) The inductive approach

There are times when the deductive approach considered above is short circuited and fused into what I have labelled the inductive approach in the sense that either the transaction is not fully characterized or qualified, as a first step, or consideration is not given to the full range of rules or principles of interpretation.

Ideally, the Court should consider the full range of interpretative principles which may be relevant to applying a treaty provision and apply them consistently within a reasonable overall theory of treaty, as opposed to domestic tax statute, interpretation.

2. The problem of broadly stated canons or dicta of interpretation

Uncertainty sometimes is created by broadly worded canons or dicta of interpretation: Consider the words of Domoulin, J. in *Western Electric Company Inc.* v. *M.N.R.*

> "*... dealing, as I must, with a measure of exception, expressly enacted by the contracting parties to limit the extent of their own national laws and to devise special rules governing special cases of mutual interest, I feel bound to adhere closely to the current and ordinary meaning of the Treaty terms, ever more so than to provisions of any other statute.*" [71]

Is this in the spirit of the broad rule of interpretation advocated in *Saunders*,[72] or does it suggest a restrictive approach to granting alleviation under tax treaties. It would appear that either view is possible, the former on the basis that the second part of the statement is merely reformulation of the statement in *Saunders* that:

> "*Accordingly, it is undesirable to look beyond the four corners of the Convention and Protocol when seeking to ascertain the exact meaning of a particular phrase or word therein.*"

The latter view can be argued on the basis that the first part of the statement contemplates that the extent to which the contracting parties intend to limit the extent of their own national laws is to be narrowly construed.

The point is that the Courts as well as the legislator or treaty negotiator should speak as clearly and unambiguously as possible.

C. THE PROBLEM OF STRICT VERSUS LIBERAL INTERPRETATION

1. Overview: Canada v. U.S.

It is important to point out that my observations of the Canadian experience in treaty interpretation are probably not too helpful a guide to treaty interpretation in the United States. This is because of the substantial difference between the two countries in basic domestic revenue statute interpretation. As far back as 1938 the United States rejected the concept of strict or literal interpretation of revenue statutes adopting the liberal or contextual intent of the legislator doctrine (see *White* v. *U.S.*[73]).

---

64. Aktiebolaget Tetra Pak, Appellante Division, (1966) S.A. 198. Reported at page 17 under Article VII of the *International Tax Treaties Service*, supra.
65. *Canadian Pacific Limited* v. *The Queen*, 76 DTC 6120, Walsh, J. at page 6135: "*While it is true that this Court has the right to interpret the U.K.-Canada Tax Convention and Protocol itself and is in no way bound by the interpretation given it by the United States Treasury, the result would be unfortunate if it were interpreted differently in the two countries when this would lead to double taxation. Unless, therefore, it can be concluded that the interpretation given in the United States is manifestly erroneous it is not desirable to reach a different conclusion and I find no compelling reason for doing so.*"
66. Supra note 58.
67. Supra note 60.
68. Supra note 51.
69. Canadian Courts have rarely relied specifically on international instrumentalities or rules of interpretation in treaty cases although the underlying interpretative process often is the same. For example, the reasoning in *Tara Exploration and Company Limited* v. *M.N.R.* 72 DTC 6288 respecting the meaning to be given "permanent establishment" (see below) and the commentary to Article IV of the OECD Model Treaty which advocates that the objective is to determine a "degree of permanence" in the activity carries on and to this end "factors should be examined first, singly and then as a whole, and whether examined in the latter fashion or in the former fashion, the ultimate test of permanency is to be kept in mind as well as the related criteria of whether the activities carried on are of a profit making nature or are, instead, of an auxiliary or preparatory nature."
70. See also the recent development in *Hunter Douglas* v. *The Queen* 79 DTC 5340 where reference is made to the Vienna Convention on the Law of Treaties. In the 1979 decision in *Fothergill* v. *Monarch Airlines Ltd.* (1979) 3 WLR 491 (C.A.), the English Court of Appeal in a case involving an international convention on law respecting carriage by air objected to the use of "travaux préparatoires" with a strong dissent by Lord Denning. However, the influence of an international approach was seen in the decision of the Supreme Court of the Netherlands, BNB 1979/116, March 14, 1979 (as reported in *International Tax Strategy 1979* Bulletin No. 6, page 10) which involved references to the Commentary of the OECD 1977 Model and decisions in other European countries.

In *Helvering* v. *Gregory*,[74] Judge L. Hand advocated that the Court should be given discretion to, in effect, round out the law as it would in a decision or issue involving a private contract.

Such an approach more readily accommodates the more progressive rules of interpreting treaties described above.

For example, in *London Display Company NV* v *U.S.*,[75] a case under the Netherlands Antilles-U.S. Tax Treaty, the Court had little difficulty in deciding that the provision in the Treaty dealing with industrial and commercial profits should prevail over the provision dealing with the leasing of artistic works in relation to a contract of lease, in respect of wax figures, by a company specializing in provision of display materials and props to a U.S. enterprise to be used in commercial display.[76]

2. The Canadian situation

On the other hand, in Canada, we have yet to resolve in a definitive fashion the conflict between strict and liberal interpretation in revenue statutes generally. This notwithstanding that section 11 of the *Interpretation Act of Canada* which governs the manner in which all Canadian statutes are to be interpreted specifically provides for liberal interpretation:

> *"Every enactment shall be deemed remedial and shall be given such fair, large and liberal construction and interpretation as best insures the attainment of its object."*[77]

For example, the Supreme Court of Canada in *Stickel*[78] held that a visiting American professor was eligible for an exemption under Article VIII A on earnings derived from teaching on a temporary basis in Canada notwithstanding that the Court had noted that the taxpayer had, in all probability, not paid any tax in the U.S. and thereby would benefit unduly from the decision by avoiding all tax. However, because Mr. Stickel came within the four corners of the exemption, his application was upheld.

That the Supreme Court of Canada came to its decision by reference to the words of the Convention, strictly construed, rather than perhaps its manifest purpose, may be demonstrated as follows:

> *"I am not overlooking the fact that the respondent paid no tax in the United States on the income in question here. There is evidence that the United States tax authority has treated him as a non-resident in respect to this income. Although the evidence is scanty, I am prepared to infer that this might have been the result of some representation made by the respondent to the United States tax authority. Our problem is whether he comes within the treaty giving him exception from Canadian tax on his Canadian income and on this issue I agree with the Federal Court of Appeal that he does and on both grounds given by the Courts."*[79]

The decision of the Federal Court, Trial Division in 1979 in *British Columbia Railway Co.* v. *The Queen*[80] is a recent illustration of strict interpretation. In that case a federal sales tax was held to have no effect because of absence of certainty as to when the tax was to be levied.

The problem is particularly acute in cases of relatively clear, unambiguous statutory language (more on this below).

Often the result is that Canadian judges, conditioned by such an ambiguous and ambivalent approach to domestic tax cases, bring a mixed bat of strict versus liberal interpretation to treaty cases. This is so notwithstanding the expressed preference for "liberal" interpretation in treaty cases (see *Saunders*, etc. supra).

The underlying conflict is further complicated by a real dichotomy in the manner in which the strict versus liberal principle is applied in cases of clear statutory language as opposed to ambiguous, unclear provisions. In the latter circumstances the approach has tended to be more towards that adopted in the U.S. since the 1930s, with the Courts tending to accept the responsibility of seeking out the legislative intent;[81] accordingly, in treaty cases involving ambiguous or conflicting provisions there is a better chance that the decision will be grounded in a suitable application of relevant underlying rules of interpretation.

The problem is substantial in the former category (that is, situations of apparently straightforward and clear statutory language) where the Canadian Courts in treaty

---

74. Supra note 29.
75. 46 T.C. 511.
76. The principle of liberal interpretation in tax treaty cases in the U.S. was stated as follows by the Supreme Court of the United States in *Geofroy* v. *Riggs* (1890 133 U.S. 642 at 646):
"It is a general principle of construction with respect to treaties that they should be liberally construed so as to carry out the apparent intention of the parties to secure equality and reciprocity between them. As they are contracts between independent nations, in their construction words are to be taken in their ordinary meaning, as understood in the public law of nations and not in any artificial or special sense impressed upon them by local law, unless such restricted sense is clearly intended. And it has been held by this court that where a treaty admits of two constructions, one restrictive of the rights which may be claimed under it and the other favourable to them, the latter is to be preferred."
77. The theory of literal or strict interpretation in Canada sprang from a famous U.K. decision in the 19th century, *Partington* v. *The Attorney General* (1869) LR HL 100, at page 122; *"As I understand the principle of all fiscal legislation it is this: If the person sought to be taxed comes within the letter of the law he must be taxed, however great the hardship may appear to the judicial mind to be. On the other hand, if the Crown, seeking to recover the tax, cannot bring the subject within the letter of the law, the subject is free, however apparently within the spirit of the law the case might otherwise appear to be. In other words, if there be admissible in any statute, what is called an equitable construction, certainly such a construction is not admissible in a taxing statute, where you can simply adhere to the words of the statute."*
78. Supra note 6.
79. Supra note 6, at 6269.
80. 79 DTC 5020.
81. However, as recently as last year, in a domestic case, the Federal Court, Trial Division, in *Harmon* v. *M.N.R.* 79 DTC 5037, chose, in the case of an ambiguous statutory provision, to rely on a strict rule of construction, namely, that an ambiguity in a taxing provision is to be construed against the tax collector.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

as well as domestic cases show a propensity to interpreting on a liberal or strict application of the words regardless of the apparent conflict with interpretations which would be derived from a balanced application of the overall body of interpretation suitable for double tax treaties.

3. Examples of strict interpretation

As noted in *Stickel*,[82] Article VIII A of the U.S.-Canada Treaty was at issue and the Supreme Court of Canada found that its terms clearly required only that the purpose and intention at the time of coming into Canada be to stay for only two years in a teaching capacity. Provided this requirement could be considered factually to have been met the professor was entitled to the exemption regardless of actual subsequent events and, as noted, regardless of other ancillary considerations such as taxation in the U.S.

The 1977 decision of the Tax Review Board in *Sydney S. Fletcher* v. *M.N.R.*[83] is a good, recent example of the strict interpretation in treaty manners. The startling aspect in this case is that the Canadian taxpayer was able to claim reduction of Canadian tax by invoking a provision of the U.K.-Canada Treaty (Article IX, dealing with dividends paid by a Canadian company) which one would have thought was available only for the benefit of residents of the U.K. The language of Article IX, literally construed, had direct application to the Canadian taxpayer but only, apparently, as an anomalous result.

For examples of strict interpretation in the U.K. see *Nothman* v. *Cooper*[84] and *Oppenheimer* v. *Cattermole*.[85]

In the United States the U.S. Supreme Court decision in *Maximov*[86] may also be considered to be of a restrictive type. In that case, a U.K. resident did not qualify for the exemption granted under the U.S.-U.K. Treaty with respect to capital gains derived in the U.S. by a U.K. resident for the reason that the interest of the U.K. resident was held in a trust, the trustees of which were resident in the U.S. with the capital gains being accumulated. The reasoning was that the scheme of the Internal Revenue Code was to treat a trust as a separate person and that the claim by the taxpayer was "too remote" and would require an unwarranted rewriting or refashioning of the provisions of the domestic U.S. law in order to grant the exemption. This would seem to sacrifice the objects of a tax treaty to formalities of domestic law construction.[87]

4. Examples of liberal interpretation

In contrast to these examples of strict interpretation is a recent decision of the Tax Treaty Board of Canada in *Appleby* v. *M.N.R.*[88] where the language of the U.K.-Canada Treaty was liberally stretched in order to grant relief against an apparant case of double tax as between the payer and the recipient of alimony payments.

Tara Exploration and Company Limited v. *M.N.R.*[89] and *Consolidated Premium Ores Ltd.*[90] are good examples of contextual-liberal interpretations in Canada and the U.S., respectively, in the case of the rather clear words of a treaty. In each case, the taxpayer corporation had maintained a relatively inactive, norminal office in another country, did not carry on any substantial business activities in or as a result of that office and was held not to have a permanent establishment, notwithstanding the plain words of the treaty involved. *Tara* involved the Canada-Ireland Treaty and *Consolidated Premium* the Canada-U.S. Income Tax Convention. In both cases the Courts decided that the intent clearly was to identify as "permanent establishments" places where real and continuous business activities were carried out. In *Tara* the Supreme Court of Canada stated:

> *"Although the respondent maintained a bank account in Toronto, most decisions with regard to the writing of cheques on this account emanated from the president of the respondent who was resident and domiciled in Ireland at all material times. An employee of the respondent's accountant in Toronto, in charge of accounts payable, had authority to co-sign cheques without obtaining approval from Ireland for routine administrative accounts. On such occasions, approval was obtained from the respondent's solicitor in Toronto, who in turn obtained the requisite approvals from Ireland. I doubt whether the office in Toronto was a "permanent establishment" within the definition of that term contained in the Treaty. It seems to have been little more than an office maintained to enable the respondent to comply with the requirements of the Corporations' Act."*[91]

In *Consolidated Premium* the Sixth Circuit Court approved the judgement of Judge Van Fossan of the Tax Court of the United States which included the following passage:

> *"Premium had no real office in the United States; no officers, directors or employees here; no bank account or books of account; no telephone listing; its name did not appear on any door or office; it had no employee or agent established here who had 'general authority to contract for the employer or principal', such authorization being one of the definitive tests of a 'permanent establishment' under the Treaty.*
>
> *The term 'permanent establishment' and the term 'engaged in trade or business' both imply a place for*

87. *Hunter Douglas Ltd.* v. *The Queen*, supra note 70, where a Canadian company which had moved its central management to the Netherlands was held to be exempt from Canadian withholding tax on dividend payments made by it to shareholders in various countries, pursuant to the specific language of Article IV(5), is another decision of the strict interpretation variety. Clearly, there can be some doubt as to whether such third country shareholders, in the circumstances of the case, were intended to benefit from the Netherlands-Canada Treaty.

carrying on a trade or business in the United States. Although the two terms are not synonymous, both relate to the same concept and apply the same general conditions . . . . Respondent contends, in effect, that the procuring of a license from the State of Ohio and the printing of a letterhead with the same address as Otis and Company, coupled with certain isolated acts of Eaton and Aly, demonstrated that the petitioner had a 'permanent establishment' in the United States. The fact is that the petitioner made returns to the State of Ohio each year, stating that it had not done ultimately, surrendered the license. It is also clear that there was no agent or officer at such address authorized to do business for the petitioner: . . . the term 'permanent establishment' normally interpreted suggests something more substantial than a license, a letterhead and isolated activities. It implies the existence of an office, staffed and capable of carrying on the day to day business of a corporation and its use for such purpose or it suggests the existence of a plant or facilities equipped to carry on the ordinary routine of such business activity. The descriptive word 'permanent' in the characterization 'permanent establishment' is vital in analyzing the treaty provisions. It is the antithesis of temporary or tentative, it indicates permanence and stability."[92] [93]

There will be times where departures from strict interpretation are justified by the so called "golden rule of interpretation", comprising the concept that departure from literal interpretation is justified in circumstances where the results of the latter would be manifestly absurd and occasionally on the wider grounds of the "intention" of Parliament. (See for example, *Home Oil Company Ltd.* v. *M.N.R.*,[94] *Allied Farm Equipment Ltd.* v. *M.N.R.*[95] and *Sunbeam Corporation (Canada) Ltd.* v. *M.N.R.*[96]). There really is no basis to predict which of these obviously conflicting rules of interpretation will be invoked by the Canadian Courts, either in a domestic or treaty context — leaving the predictability of results highly uncertain.

D. THE QUEST FOR CLEAR TREATY PROVISIONS - AND SOME COMMENTS ON THE BUSINESS PROFIT EXEMPTION ARTICLE IN TREATIES

1. General considerations

The inherent difficulty in tax treaty interpretation was aptly expressed as follows by D.P. O'Connell:

"It is said that where a treaty clause is clear and unambiguous it is not required to be interpreted. However, it may be doubted if a clear and unambiguous cause has ever been divised."[97]

I think what he was saying is simply that no particular sentence or article in a tax treaty can alone import to the reader all that is required in determining whether or the manner in which it will apply to a particular transaction.[98] And I say this in really two respects. First, I have in mind the problem of categorization or qualifying of a transaction of the category two or three type I referred to above, that is, where all formal requirements of the particular treaty exemption sought have been complied with, but where the overall substance of the matter is that the taxpayer was not intended to benefit from the treaty, considered from an intuitive approach. Secondly, I have in mind the issues which will arise when due weight is given to each particular word of a seemingly straightforward provision. Consider, for example, Article 1 of the Canada-U.S. Convention which reads as follows.

"An enterprise of one of the contracting States is not subject to taxation by the other contracting State in respect of its industrial and commercial profits except in respect of such profits allocable in accordance with the Articles of this Convention to its permanent establishment in the latter State."

2. Problems of interpreting Article I of the U.S.-Canada Convention

Certainly the concept, purpose and generally intended operation of Article I are straightforward. However, just about each word gives rise to definitional problems which cause much uncertainty as to the overall applicability. We are all used to the question of when does a permanent establishment exist and the excellent judgments on that issue in cases such as *Consolidated Premium*[99] and *Tara*.[100]

92. Supra note 55, at 1161, 2.
93. A decision of the Lower Court of Amsterdam (No. 1106/76 M11) June 20, 1978, as reported in *International Tax Strategy 1979*, Bulletin No. 9, page 7 is a good example of a decision consistent with *Consolidated Premium* and *Tara*. The substance of the arrangement was an ongoing permanent representation and precense of a Swiss company in the Netherlands which was held to be a permanent establishment notwithstanding that the arrangement apparently skirted the strict language of the treaty. In other words, the real substance of the arrangements in relation to the basic purpose of the treaty provision prevailed.

96. 62 DTC 1390.
97. D.P. O'Connell, *International Law*, Second Edition (1970), page 253 as quoted in the *International Tax Treaties Service*, supra.
98. The problem is, of course, magnified when there is an apparent obscurity or conflict within the terms of the treaty. For example, it is understood that the Japanese are now considering the case of whether a German bank can charge a profit on financing its Japanese branch banking operation with the uncertainty stemming from the conflict between the applicable treaty provison based on Article 7, Paragraph 2, and Article 7, Paragraph 3, of the OECD Model. Paragraph 2 provides that the operations of a branch are to be accounted for on an arm's length basis, thereby imparting the notion of profit margins on intra-company transactions. On the other hand, Paragraph 3 suggests that deductions in computing the profit of a branch are restricted to an allocation of actual direct or indirect head office expenses. A similar type of dispute could arise under some of Canada's treaties aside from those under the OECD Model; consider for example, Article III of the Canada-U.S. Convention.

(a) What are industrial and commercial profits?

The question of industrial and commercial profits brings into operation the restrictions inherent in Article II, [101] giving rise to conceptionally difficult questions of reconciling the resulting strict limitations of Article I with the overall substance of certain situations.

(i) *Bank loan interest*

For example, bank loan interest income earned in the other country is strictly speaking ruled out by the exclusion of the Article II type. Although we have seen no jurisprudence, to my knowledge, under the Canada-U.S. Convention with respect to a bank interest situation, the similar issues in cases like *Western Electric* [102] and *Canadian Pacific* [103] and the restrictive interpretation in the Australian bank loan interest case of *E.J. and A. Bank Ltd.* [104] does not augur well for how Canadian Courts, at least, would view such an issue.

In *Western Electric* [105] the U.S. taxpayer supplied know-how to a Canadian manufacturer and was denied the protection of Article I because the arrangement was excluded by Article II and instead governed by the royalty provisions of the Convention. The issues in *Western Electric* were twofold:

- Were payments made by Northern Electric Company Ltd. of Canada to Western Electric Company Inc. of the U.S. as fees for technical information (with the fees computed as a percentage of sales of Northern) to be included as "royalties" within the meaning of paragraph 6(a) of the Protocol?
  and
- If they were so included would the rule of Article II, that royalties are excluded from the exempt income contemplated by Article I (industrial and commercial profits), prevail so that withholding tax of 15 percent could arise under provisions of the treaty?

The findings with respect to the second issue are of particular interest for these purposes. It was held that since it could properly be said that the payments were "royalties", that the provisions of Article II were mandatory and, therefore, the payments could not qualify as industrial and commercial profits for the exemptive provisions of Article I. The question which arises is whether, in the context of the purposes and overall scheme of the treaty, Article I should in certain circumstances override the express provisions of Article II? Although the finding in relation to the facts in *Western Electric* [106] would appear to be within the spirit of the treaty (which was strictly applied), it is the absence of any examination of the interaction of Articles I and II which may be open to question.

The application of the decision in *Western Electric* [107] to the question of bank loan interest would, on the basis of the similar exclusion in Article II of "interest" as "industrial and commercial profits" (for the purpose of Article I), require a finding that a bank does not qualify for the exemption contemplated by Article I. Although, as noted, this issue has not come before either the U.S. or Canadian courts, it is the express position of the tax authorities in both countries.

However, where it was to the advantage of Revenue Canada, as in the case of *Canadian Pacific Ltd.*, [108] the converse was argued. That case involved a claim by Canadian Pacific for credit under section 126 of the Income Tax Act for taxes paid in the U.S. on rentals ("per diem") received on railway cars temporarily on U.S. rail tracks where the U.S. authorities had adopted the interpretation of Articles I and II in *Western Electric* [109] and had claimed and exacted a tax on that basis. The Canadian authorities sought to deny a credit on the basis that taxes should not have been paid in the U.S. because of Article I. The Federal Court found for Canadian Pacific (and this in accordance with the *Western Electric* interpretation) but primarily on the ground that, in the circumstances, consistency by the tax authorities on both sides would be more in keeping with the spirit of the treaty.[110]

The Court did in passing raise the possibility that a strict reading of Articles I and II could be derogated from if it could be shown that the activities of Canadian Pacific with respect to earning those rentals had been of an active nature; however, this point was not pursued by the Court but raised merely as a possibility. It would be interesting to see whether the comment by Walsh, J. at page 6135, that:

> *"While these receipts have certain aspects of both — industrial and commercial profits — as already stated, Canadian Pacific Ltd. did nothing to advance or promote this source of revenue which is the usual badge of a commercial or industrial enterprise"*

would serve as a basis for a claim by a bank, in the circumstances postulated for an Article I exemption.

It should be noted that in the Australian case of *E.S. and A. Bank Ltd.* [111] where there was a genuine ambiguity in that the expression "industrial and commercial profits" referred to activities of banking while the same term was defined not to include interest, the Australian Court held that the claimant bank did not qualify for exemption; if this approach were to be employed by the Canadian Court in respect to Articles I and II of the U.S.-Canada Treaty where the words are clear and, against the bank, strictly construed, then there would not be much hope for a departure from a literal construction. It is to be hoped that the courts would be more inclined to follow the opening provided

101. "(Rentals, royalties, interest, dividends, management charges and capital gains.) For the purpose of this Convention, the term 'industrial and commercial profits' shall not include income in the form of rentals and royalties, interest, dividends, management charges, or gains derived from the sale or exchange of capital assets.
Subject to the provisions of this Convention such items of income shall be taxed separately or together with industrial and commercial profits in accordance with the laws of the Contracting States."

by Walsh, J. in *Canadian Pacific* [112] in resolving the issues. It should be noted that a viable solution to the problem arises under the provisions of the Model OECD treaty, which by virtue of the inter-connected wordings of Articles 7 and 11 should serve to eliminate the type of problem that now exists under treaties featuring the type of wording in Articles I and II of the Canada-U.S. Convention.

The somewhat arbitrary results which arise in these types of international transactions, turning on particular and perhaps unintended differences in wording in treaties, can be seen by comparing the decision in *E.S. and A. Bank* [113] to that of *Twentieth Century Banking Ltd.* [114] involving the same issue under the U.K.-Jersey tax treaty. Because in that treaty the term "industrial and commercial profits" was not restricted by the type of definition in Article II of the U.S.-Canada Treaty, the Court had little difficulty in concluding that interest earned in the context of an ongoing banking operation was clearly industrial and commercial profit and thereby eligible for the usual permanent establishment — industrial and commercial profit exemption.

The *Rhodesian case* [115] held similarly with respect to rentals received on moveable property being leased in the ordinary course of a leading business. There seems to be little conceptual difference between these conflicting cases, challenging the Courts to seek common determinations regardless of the differences in which similar treaty provisions are worded.

(ii) *Recent developments respecting loan guarantee fees*

In *Associates Corporation of North American* v. *Her Majesty The Queen*, [116] a case heard before the Federal Court, Trial Division in early 1980, Revenue Canada went so far as to contend that loan guarantee fees are not eligible for Article I on the basis that they are really part of interest for the purposes of Article II, notwithstanding:

(1) that only specific deeming provisions in the Canadian Income Tax Act (section 214(15)) provide for such an assimilation;
(2) that the terms of the U.S.-Canada Convention are not required to be interpreted by reference to the law of the country claiming tax; and
(3) the very real difference between the earning of interest and the nature of a guarantee fee.

The Federal Court decided for the taxpayer.

(b) Enterprise for the purpose of Article I

Article I can have other surprises for the unwary, as straightforward as it may seem on a quick reading. Last November the Federal Court of Canada upheld a decision of the Trial Division in the case of *Rutenberg* [117] where a U.S. individual was denied the protection of Article I in respect of certain land trading activities in Canada although not necessarily carried out through a permanent establishment. The grounds for disqualification were that Rutenberg's activities did not comprise an "enterprise of one of the contracting States" within the meaning thereof in the protocol. The protocol definitions were construed to require that not only must the business be carried on by a person resident of the United States but, in addition, the activities in some substantial part must be carried on in the United States (see the requirement of "American enterprise" within paragraph 3(d) for the purposes of being considered "an enterprise of one of the Contracting States" within the meaning of paragraph 3(c) of the Protocol).

I take no issue at all with the decision in *Rutenberg* [118] but, having regard to a contrary finding by the Federal Court, Trial Division in *Masri* [119] in similar circumstances, I merely wish to make the point that it is difficult to disagree with D.P. O'Connell that there are very few treaty provisions which can be applied without the possibility of interpretative controversy. [120]

120. The Canadian decision of *Number 473*, supra note 56, *Number 630*, supra note 58 and the U.S. decisions in *Johnston*, supra note 60, and *Donroy Ltd.*, supra note 59, are excellent examples of the uncertainties which can arise where a provision like Article I and related definitions suggest results on its plain words which are out of context with the domestic tax law which the treaty has been negotiated to modify. In each of these cases the taxpayer was a member of a partnership carrying on business in the other country and sought exemption from tax either in his own country or the country where the activities took place on the theory that the U.S.-Canada Convention establishes separate status for partnerships, thereby providing a shield for the partners against the domestic tax law otherwise applicable. In both the U.S. and Canada the tax treatment of partnerships is the same, with the activities and income of the partnership being effectively attributed to the partners who are then liable for tax on their distributive or proportionate share. The U.S. and Canadian courts in these cases had little difficulty in piercing the partnership veil sought to be created, rejecting the claim for Article I exemption which would have been clearly unwarranted in the circumstances — definitely good examples of contextual interpretations of treaty provisions, unfettered by the precise language employed in the treaty. For example, in *Number 630* a resident of the U.S., a partner in a Canadian partnership, had sought exemption from Canadian tax on the basis of Article I. The Tax Review Board stated:
"What he (the taxpayer) did submit, however, was that under the Convention, already referred to, a partnership was an 'enterprise', therefore, by virtue of the Convention alone, could be regarded as an entity separate and distinct from the various partners. This argument is interesting and ingenious, but I do not think it can prevail. . . . in my comprehension and the meaning of this paragraph, 'enterprise' refers primarily to the work, endeavour, contract and task undertaken by some entity rather than to the entity itself. True, the word 'enterprise' is used rather loosely, perhaps not always consistently in paragraph 3(f) for instance, but all in all I think it was intended to have the meaning I have indicated. Furthermore, I do not think that the Convention nor Protocol is to be interpreted as though in conflict with the basic law of either of the contracting States by which the Convention was ratified."
The case of *Number 630* (as well as that of *W.C. Johnston*

E. THE INTERPRETATION OF A TREATY AS A CONTRACT; COMMENT RESPECTING UNILATERAL INTERPRETATION

I wish to conclude my remarks by dealing briefly with the question of interpreting a treaty as a statute as opposed to a contract or vice versa and I would like to look in particular at the very real difference between the Canadian and U.S. judicial approaches in respect of the effectiveness and relevancy of unilateral acts of interpretation or administration by the competent authorities of each country.

In Canada the judiciary jealously guards its right to interpret law and certainly in that context a tax treaty agreement is considered as much law as any other domestic tax statute. [121] For example, the Courts regularly dismiss out of hand any reference by a tax collector or taxpayer to Governmental interpretation of tax law in Interpretation Bulletins, Information Circulars or published tax rulings.[122]

Secondly, Canada, unlike the U.S., has only one type of regulation; in U.S. terms these would be called "legislative regulations". That is, the Government may make regulations where specifically authorized by statute and then within constraints of the principle that the regulation may not exceed the scope of the authority granted. The result of these particular features of our judicial and legislative system is that it is quite difficult for Revenue Canada or any administrative body to effectively change the provisions of Canada's tax treaties on a unilateral basis — which could be considered consonant with the requisites or principles of a contract.

On the other hand, it appears that the Treasury or the I.R.S. finds more sympethatic reception in the U.S. Courts for its interpretations of tax law generally including double tax agreements. For example, interpretative regulations (resting on the general authority granted by the Internal Revenue Code) are usually upheld on the grounds of presumptive validity unless the particular Court has sympathies to the contrary, in which case it might suddenly lose its presumptive validity. At one time there was a series of Treasury regulations made to assist in the interpretation or application of U.S. double tax treaties; such regulations are no longer issued. These regulations, even if outside the specific authority granted by the treaty, have frequently been accepted by U.S. Courts. For example, in *Jules Samann* v. *The Commisioner*, [123] a case involving the authority to be given a U.S. Treasury regulation respecting the Swiss-U.S. Treaty under the authority of Article 19 of the Treaty (whereby, "The two contracting States may prescribe regulations necessary to carry into effect the present Convention within the respective States"), the United States had made an interpretation of Article 8 which at the request of the Swiss Government had been submitted to Switzerland before being proclaimed in the U.S. As no objection was raised, it was thus considered by the Court that the Swiss Confederation had, at least tacitly, approved the regulation and acquiesced in it. The Court stated:

---

and *Donroy)* confirm the rule that a permanent establishment of a partnership is attributed to a partner for the purposes of Article I:

"It appears to me that the four partners of which the appellant was one, had set up a head quarter, or whatever one may wish to term it, in Ontario, where the office premiums used by the partnership were to be found. I have the greatest difficulty in considering that office not to be the office of the appellant also and, in fact, cannot do so. It appears to me that the office premises of the partners collectively, were also the office premises of any one partner."

121. A tax treaty has no effect in Canada until it has been enacted by Parliament, in the same fashion as any other statute.

In both Canada and the U.K. there is strong jurisprudence tending to view a treaty as a statute at least in respect of the right of the Sovereign Parliament of a Contracting State to unilaterally change its terms. See, for example, The House of Lords decision in *I.R.C.* v. *Colloco* 39 TC 509 (HL) where Viscount Simonds stated at page 548:

". . . neither comity nor rule of international law can be invoked to prevent the Sovereign State from taking what steps it thinks fit to protect its own revenue laws . . . ."

Section 34(1) in the Interpretation Act RSC 1970, C.I-23, of Canada, provides that:

"Every Act shall be so construed so as to reserve to Parliament the power of repealing or amending it and of evoking, restricting or modifying any power, privilege or advantage thereby vested in or granted to any person."

Section 34(1) must be read having regard to the fundamental rule that a tax treaty in Canada does not have force of law unless enacted by statute: See *Attorney General for Canada* v. *Attorney General for Ontario* (1937) AC326, at page 346:

"Within the British Empire there is a well established rule that the making of a treaty is an executive act, while the performance of its obligations, if they entail alteration of the existing domestic law, requires legislative action. Unlike some other countries, the stipulations of a treaty duly ratified do not within the Empire, by virtue of the treaty alone, have the force of law. If the national executive, the Government of the day, decides to incur the obligations of a treaty which involves alteration of law they have to run the risk of obtaining the assent of Parliament to the necessary statute or statutes."

See also J.G. Castel, *International Law Chiefly As Interpreted And Applied In Canada, Toronto, Butterworths,* 1976, at page 938:

"There are two situations which require Parliament's intervention before an agreement can be ratified. First, when the agreement itself provides that it must be submitted to the legislative authority of each of the contracting powers. Secondly, when the provisions of the agreement run counter to the statutes of Canada and when its implementation within the country necessitates an amendment to our statutory laws. Only the Parliament of Canada can amend any statutes and bring them into harmony with provisions of the agreement involved."

Finally, in this respect it should be noted that a statute enacting a tax treaty generally has a conflict rule which provides that the provisions of the tax treaty will render inoperative any competing or conflicting domestic tax rule. However, such a constraint is itself the creature of Parliament and can be amended.

The U.S. situation is presumable the same. See, for example, the pending legislation respecting foreign investment in U.S. real estate which would nullify conflicting treaty provisions after a five-year renegotiation delay.

122. Such interpretation will be given no greater weight than other knowledgeable (but non-binding) commentary on the law; see *Harmon*, supra note 81, *B.C. Railway*, supra note 80, *Bruster* v. *The Queen*, 76 DTC 6046, *Stickel*, supra note 4 and *Canadian Pacific*, supra note 3. However, see the Supreme Court decision in *Harel* v. *Deputy Minister of Revenue of Quebec* 77 DTC 5438 where federal tax administrative practice was held to be persuasive in interpreting a provincial taxing statute.

123. 313 F. 2d 461; 36 T.C. 1011.

"A regulation . . . is endowed with the presumption of validity . . . . No offense is done our understanding with the Swiss when, with their consent, we imbue the terms of the exemption with the meaning they import in the tax language of the U.S. . . . ."

See also *Maximov*, [124] *Lewenhaupt* v. *Commissioner* [125] and *Simenon* v. *Commissioner* [126] where the U.S. Court said:

"It is well settled that a regulation of long standing . . . promulgated by the Department charged with the enforcement of a statute, is entitled to great weight and will be followed unless unreasonable or inconsistent with the statute involved."

F. CONCLUDING COMMENT

If there is a message to be extracted from the foregoing and the other papers presented at this meeting, it is that there are sufficient problems in the tax treaty area to keep us coming to I.F.A. meetings for the foreseeable future.

TAX GLOSSARY

by H.W.T. PEPPER *

TAX BURDEN — The tax burden, or tax ratio, in a country is computed by taking the total tax payments for a particular fiscal year as a fraction or percentage of the G.N.P. or national income for that year.

TAX CLEARANCE CERTIFICATES — In some countries "tax clearance" certificates have to be obtained from the income tax department to indicate that the individual has no income tax arrears. The certificate must be shown to the Emigration or Customs authorities on leaving a country. Without it the individual may be prevented from leaving. In a few countries such a certificate has to be obtained for other purposes, e.g., as pre-requisite to tendering for a government contract, or obtaining a driving licence.

TAX COMPLIANCE — The term refers to the degree to which taxpayers respond to their statutory duty to declare their incomes and provide the information required for the calculation of their income tax, sales tax, etc., and pay on time the tax due from them.

TAX-COMPOUNDED — A system whereby Building Societies in Britain pay interest to their depositors in "tax-compounded" from is described under BUILDING SOCIETY ARRANGEMENT (q.v.). Interest and other income paid in this form do not normally involve the recipient in further tax liability (although in Britain the compounding relates only to the standard rate of income tax and the recipient incurs a liability to higher tax rates if his total income is above certain limits). The tax payable by the recipients as a body is accounted for by the body or organisation which pays out the income in tax-compounded form.

TAX CONSCIOUSNESS — The degree to which an individual is aware of his duties under taxing laws and/or of the amount of tax he eventually bears in one form or another. (See, by contrast, UNMERKLICHKEIT.)

TAX CREDITS — Where, under an income tax system, a taxpayer has borne tax by deduction or withholding on certain items of income which are included in his aggregate assessment, a credit may be due on such tax against the tax computed on the aggregated income. In the case of value added taxation, a credit may be due for tax charged to a trader by other traders from whom he has obtained his supplies. In a transition from one type of sales tax to another where old tax has been borne by goods in hand at the commencement of the new tax, a credit may be due, when computing the new tax on disposal of the stock in hand at its commencement. (See, however, BUFFER RULE.)

TAX DECLARATION — See DECLARATION, TAX.

TAX DEPOSIT ACCOUNT — An account held by a U.K. company to accumulate cash with which to pay MAINSTREAM CORPORATION TAX (q.v.). Interest is credited by the Inland Revenue Department, but where cash is withdrawn from the account for a purpose other than tax payment the rate of interest allowable is reduced.

TAX EFFICIENCY — There are often various different ways of undertaking commercial transactions and the tax treatment may vary according to the manner in which things are done.
For example, it may be a marginal decision whether or not to incorporate a small business, whether to rent premises and equipment or purchase them. A company has to decide what proportions of its working capital requirements should be in equity, fixed interest debentures, bank overdraft; etc.
Other factors are, of course, involved in making the decision but if other things are equal, the decision producing the most favourable tax position will be the most "tax-efficient" one.

TAX EQUALITY — See EQUITY, DOMESTIC TAX EQUALITY, and GRADUATION.

TAX EVASION — See EVASION.

TAX-EXCLUSIVE BASE — See TAX-INCLUSIVE BASE.

TAX-EXCLUSIVE PRICE — See TAX-INCLUSIVE PRICE.

TAX EXIT CERTIFICATE — See TAX CLEARANCE CERTIFICATE.

TAX "FARMING" — The system of appointing persons to collect a tax imposed by the monarch or the central government, often by the establishing of a series of quotas or sums required in total yield from different regions, the tax farmers being given discretion as to how they achieve the quota or target set. The system has many drawbacks, the chief among which is that tax farmers normally collect excessive amounts from those that they are able successfully to dun and retain an undue proportion of the gross yield. The system was used in Roman times, to some extent in medieval Britain, and in many other countries in other epochs, but is not nowadays regarded as an equitable method of tax administration.

TAX FINANCE — A term sometimes used to refer to the process by which provision is made by a business for payment of tax liabilities of which it must take account, e.g., in its balance sheet and in cash flow computations.

TAX FORMS — See FORMS, TAX.

TAX-FREE — The term "tax-free" is sometimes used, when strictly, the term "tax-exempt" should be applied, to mean that an item of income or a transaction is *exempt* from tax. The term is also used to mean that someone else is paying the tax and the recipient is thus "free" of any liability to *pay tax* although the tax is borne by him. See also TAX-FREE PAY.

TAX-FREE PAY — In the calculation of the amounts to be deducted or withheld by way of income tax on employees' remuneration under P.A.Y.E. schemes, it is usual to supply official tables which, under some systems, enable the tax to be ascertained at a glance after deducting from total pay the "tax-free" pay, i.e., the various deductions and personal reliefs to which the tax-payer is entitled for the

---

* With the assistance of the staff of the International Bureau of Fiscal Documentation.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

period of the deduction. The tables apply the operative graduated rates to the (taxable) balance of the income.

TAX-FREE SHOPS — Shops which are usually situated within the boundaries of an airport or sea-port from which outgoing passengers may purchase goods which are free of sales taxes and other indirect taxation, since the purchases are clearly destined for export. In some countries *incoming* tourists may acquire a personal allocation of liquor or tobacco from duty-free shops before entering the Customs area of the country in which the airport is situated.

TAX-FREE ZONE — An area within the territory of a country may be designated a "tax-free zone" in which customs duties and other indirect taxation are not applied, partly because the area may be used in connection with entrepot trade or export industries based on imported raw materials where, if indirect taxation were applied, it would mostly have to be refunded. Sometimes income tax exemptions or abatements are also allowed in respect of profits from activities within the zones. Where goods pass from the zone into the remainder of the country the normal duties and taxes are usually applied. Examples of tax-or-duty-free zones include the Kaohsiung "export processing zone" in Taiwan, the Shannon airport zone in Eire, and designated areas in many of the world's large ports within which goods may be imported and re-exported without entering the general customs area of the country as a whole.

TAX FROM TAX — This term is sometimes applied to the "invoice system" of V.A.T., under which the trader who is liable to pay value added tax on his sales may deduct therefrom the tax charged to him by his suppliers. The term also applies in income tax systems where double tax relief in respect of tax paid in other countries on the income assessed in the taxing country takes the form of a deduction for the foreign tax against the local tax.

TAX HAVEN — A country with low tax rates on income (or no direct taxes at all). The term also includes countries with normal tax systems but whose income tax codes provide some "shelter" (see TAX SHELTER) or exemption for particular types of income which makes them attractive to non-residents. The relief from income tax is normally partly offset by sundry initial and annual registration fees which form an important source of revenue for the tax haven country.

Because of ever more tortuous and artificial devices being contrived by tax advisers to avoid taxation in countries with high tax levels, tax havens have tended to fall into disrepute. They are tending to seek respectability by exercising a little more control over the type of person operating therein and the nature of the business (including offshore banking) conducted. See also FINANCIAL CENTRE, OFFSHORE BANKS, COMPANIES, TRUSTS, SHIPPING CENTRE.

TAX HAVEN, ART — A tax measure, unique to the Republic of Ireland, exempts from income tax earnings from original and creative work, having cultural or artistic merit, by established writers, artists, etc. Introduced in 1969 to halt the "intellectual drain", or "brain drain" from Ireland, the exemption has attracted foreign writers, artists and others to set up residence in the country, which for other taxpayers has an orthodox fiscal system.

TAX HOLIDAY — A tax holiday is generally understood as the period of exemption from income tax for new industries, granted by certain countries, as a method of trying to develop or diversify their industries. The exemption is usually given for a term of years to "pioneer" or "infant" industries (see also PIONEER INDUSTRY). Countries which tax all income for income tax purposes in the year after it accrues, or is received, are sometimes said to operate a "one year tax holiday" system although, of course, the "holiday" merely defers the tax liability which deferral nevertheless provides a welcome benefit in cash flow terms.

TAX-INCLUSIVE BASE — Under a sales tax regime the tax may be calculated on the actual sale prices of goods and services. Since the entrepreneur has to charge prices to consumers which include the sales tax element, to charge tax on the total sales proceeds not only involves taxing the tax-exclusive prices of the goods but also the tax element in their prices, so that there is a levy of "tax on tax". The levy of sales tax on the tax-inclusive price is fairly normal for a retail tax (the State retail taxes in the U.S. are an exception, being charged on tax-exclusive prices), but with manufacturers' and wholesalers' taxes it is more usual to levy the tax on a price or value which excludes tax — this is the position, for example, with regard to the Canadian manufacturers' tax. As regards V.A.T., some systems tax the tax-inclusive price but the current trend is to charge the tax on the tax-exclusive price. At least in theory, application of sales taxes to the tax-exclusive price should be less likely to involve price ESCALATION (q.v.) or pyramiding since the price of the goods and the tax element are separately indentifiable. See also TAXABLE BASE.

TAX-INCLUSIVE PRICE — The price of goods or services which includes indirect taxation thereon. Where such tax is excluded from the price quoted, that price is said to be the tax-exclusive price (see also TAX-INCLUSIVE BASE).

TAX INVOICE — See INVOICE, STATUTORY.

TAX LAW — Apart from the statute by which a tax or duty is imposed, the law which is relevant to the incidence and computation of tax includes decisions of tax tribunals set up under the tax legislation, and also the decisions of the Courts where matters of interpretation, etc., have been taken for rulings. In addition, there may be statutory rules and orders made by the legislature in a manner less formal than the amendment or extension of the basic statute law. The incidence of the tax may be partly regulated also by double tax treaties with other countries. In addition, agreements, particularly between governments and concerns exploiting mineral or forests, or providing public utilities, such as cable, wireless and telephone services, the production of electricity, etc., are sometimes made which contain clauses governing the application of taxation to the entrepreneur, which may wholly or partially supersede some of the tax laws.

TAX-LOSS COMPANY — Where a company has been making losses in its trade which have not been allowed for income tax purposes, the losses may have attractions for another company which is in a position to take over the unsuccessful company because the former may be able to put the losing company on a profitable basis and thus obtain the benefit of the losses, which will reduce or eliminate the tax liability in the early years of profitability. Accordingly, a tax-loss company may have a value in respect of its accumulated losses which may even exceed the value of its more tangible assets. To prevent tax avoidance through "trafficking" in tax losses, the tax law will commonly have some provision that the losses cannot be allowed on a change of ownership

© 1980 International Bureau of Fiscal Documentation – BULLETIN

unless the original business is continued in identifiable form.

TAX LOTTERY — See LOTTERIES for CONSUMERS.

TAX, MAXIMUM — See MAXIMUM TAX.

TAX, MINIMUM — See MINIMUM TAX, TAX PREFERENCES.

TAX NEUTRALITY — See NEUTRALITY.

TAX ON TAX — Tax may be levied on tax in an income tax context where an employer undertakes to pay an employee's remuneration "tax-free". The term usually means that the employer will be responsible for the tax in this instance and that the remuneration which the employee receives will represent his "take-home pay" as far as income tax is concerned. The employer then has to account for tax on a figure for gross remuneration which, after being subjected to income tax, would leave a net payment equal to the tax-free remuneration. To compute this gross figure, however, it is clearly not sufficient to calculate tax on the net remuneration and then add these two figures together, because the tax on a gross figure thus obtained would clearly be greater than the tax on the net remuneration. Accordingly, a GROSSING-UP (q.v.) operation is required in order to determine tax not only on the net remuneration but on the tax which the employer is to pay. As regards sales tax, "tax on tax" relates to the charging of tax on TAX-INCLUSIVE PRICES (q.v.).

TAX-OPTION CORPORATION — Under U.S. Internal Revenue legislation, a tax-option corporation is a corporation (company) which is entitled to opt for various forms of special tax treatment under Sub. Chapter 5 (Sections 1371-1377) of the Code. (See also SMALL BUSINESS CORPORATION.)

TAX PERFORMANCE — This term, which is equivalent to "tax burden" and "tax ratio", refers to the "performance" of the Government in mobilising a country's resources for defraying government expenditure by taxation and is usually expressed as a percentage which total tax receipts bear to G.N.P. or national income.

TAX PERIOD, STAGGERING OF — See PAYMENTS, SPREADING OF.

TAX PLANNING — The term may in some cases be merely a euphemism for tax avoidance, but may also be more than that. It is important for a business to take tax into account when making decisions on how it shall conduct its affairs, and hence that it should try to find the most tax-efficient way of doing things. See TAX EFFICIENCY.

TAX POINT — This term refers to the point or stage at which indirect taxes are levied; for example, in V.A.T. schemes the tax usually arises upon delivery of the goods or the issue of the invoice, whichever event is earlier. In the Brazilian V.A.T. scheme (I.C.M.), the tax is payable when goods are moved from the premises of the seller (see also TAXABLE EVENT).

TAX PREFERENCES — A term used in the U.S.A. in connection with MINIMUM TAX (q.v.) which is levied at the rate of 10 percent (previously 15 percent) on the amount by which the preferences exceed $30,000 plus the income tax for the year. "Preference" items in the case of a corporation include such things as:

(a) excess of accelerated depreciation over straight-line depreciation;

(b) excess of percentage depletion over adjusted cost basis depreciation.

There are broadly similar provisions in respect of tax preferences granted to individuals.

TAX, PREFERENTIAL STATUS OF DEBTS FOR — Because taxes are a debt to the State and thus, in a sense, to the general public, it is usual to provide in tax laws or commercial codes that debts for tax should take preference over other debts, for example, in a bankruptcy of an individual, or the winding up of a company, as well as in the administration of the estate of a deceased person.

TAX PUSH — One of the causes of monetary inflation is the increase of prices occasioned by an increase in the cost of factors of production, e.g., labour. Inflation cuased by increased wages and salaries is sometimes known as "Wage-push" inflation. Where the cause is increased taxation (especially indirect taxation on commodities and services) the term "tax push" inflation is used.

TAX RATES — The rate of tax is usually expressed either as a percentage, or in terms of currency, e.g., as so many pence in the pound, cents in the dollar, as far as taxes on capital and income are concerned. As regards indirect taxation, ad valorem duties and taxes are also usually charged at a percentage rate on the sale of goods and services. Graduated rates are commonly applied where the capital or income of individuals in being taxed, and flat rates are used in applying indirect taxes. (See also CORPORATION TAX, GRADUATION, SCHEDULAR TAXES, and, by contrast, SPECIFIC DUTIES.)

TAX RATIO — The ratio which the total tax yield of a country bears to G.N.P. or national income. (See also TAX BURDEN.)

TAX, REGULATOR — See REGULATOR, TAX.

TAX RESERVE CERTIFICATES — Certificates which were formerly on sale in the U.K. as a means of prepaying income tax, etc. The certificates bore tax-free interest and could be bought in advance of the due date of taxes and then presented in payment therefor. See, also, TAX DEPOSIT ACCOUNTS.

TAX, RESOURCE — See RESOURCE TAX.

TAX SECURITY — See SECURITY FOR TAX.

TAX SHADOWING — The term applied to the process of the "matching", by one country the tax imposed in another country, on income which is taxable in both, so as to avoid the frustration of double taxation relief which could arise where income is computed on different bases by the two countries concerned. The term also covers the TAX-SPARING PRINCIPLE (q.v.) whereby one country gives relief for PHANTOM TAX (q.v.) resulting from tax holiday legislation in the other.

TAX SHELTER — The term is used in the U.S.A. to mean tax relief or exemptions generally, and includes items such as oil depletion allowances, the exemption from tax of the interest on certain municipal bonds, relief for large charitable donations.

TAX SHIFTING — See SHIFTING OF TAXES.

Zambia: Tax Changes in the Budget for 1980

by A.B.C. Emmanuel

As far as Income Tax is concerned the 1980 Budget brought no significant changes except for two concessions in regard to capital allowances. The Minister of Finance had promised to make some changes to some of the taxes imposed in the 1979 Budget and these have now been implemented by the Income Tax Admendment Act No. 6 of 1980.

Rates of tax

(a) The rates of tax on individuals and companies remain the same.
(b) The rates of tax for withholding taxes also remain the same.

The changes

1. Capital allowances

(a) The limitation of the allowable cost of vehicles for capital allowances purposes to K 4,000 has now been increased to K 6,000.
(b) The ceiling allowed for the purpose of capital allowance on low cost housing has been raised from K 4,000 to K 8,000.

2. Donations

Section 41 of the Income Tax Act has been amended to include donations to "funds of a public character wholly and inclusively established for the use of the Republic".

Donations to the Bridges Reconstruction Fund would come into this category.

3. Undistributed profits tax

Under the provisions of Section 95(1) of the Income Tax Act 1966 (as amended) the Commissioner of Taxes had the power to treat a company's profits or a proportion thereof as distributed to its shareholders. This deeming was applicable to certain classes of companies and it was left to the discretion of the Commissioner to deem the amount of the distribution without causing detriment to the company's business.

In the 1979 Budget this section was repealed and replaced by a new Section 95. Under this regulation the Commissioner would not deem a distribution but would charge a tax of 35 percent on the undistributed profits of a company in addition to the corporate tax of 48 percent.

This tax would be charged on all companies except those which are controlled directly or indirectly by:

(a) the Government, i.e. mostly companies controlled by ZIMCO Ltd.;
(b) quoted companies, i.e. companies whose ordinary share capital may be bought or sold on a stock exchange market.

The Commissioner then imposes the tax using a formula to decide the quantum of the undistributed profits. The formula is A — (B + C + D) in which:

A = the amount of the profits
B = (i) 30% of the *industrial profits*
(ii) 20% of the *trading profits*
(iii) 10% of *rent* or *income in respect of professional services*
C = the amount of tax charged for the year
D = the amount distributed as dividends within the "specified period"

"Industrial profits", "trading profits", "specified period", "profits" have all been defined for the purposes of this section.

This regulation did not come into force due to criticisms made by various bodies on the grounds chiefly that:

(a) the section has been badly drafted; some of the definitions were very vague and left the taxpayer in a state of uncertainty as to what was to be included or excluded in the calculation of the undistributed profits;
(b) the formula was too rigid and left no room for expansion and reinvestment, and did not consider the liquidity position of the companies;
(c) the Commissioner has been given too much discretion and wide powers and the concept of detriment was no longer applicable now, unlike in the previous section.

The International Bureau of Fiscal Documentation is pleased to publish an article on the Zambian Budget for 1980 by its correspondent for Zambia, Mr. A.B.C. Emmanuel.

Mr. Emmanuel, who is currently Tax Manager of Price Waterhouse & Co. in Lusaka (Zambia), graduated in 1945 from the University of Ceylon where he received his B.A. (Hons) Econ. In 1946 he joined the Income Tax Department (now Inland Revenue Department) of Sri Lanka where, after a scholarship in 1961 to the United Kingdom to study taxation at Somerset House, he was in 1963 promoted to Assistant Commissioner. In 1973 he joined the Department of Taxes of Zambia where he was in charge of the Withholding Tax District through 1978. In 1979 he joined Price Waterhouse & Co.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

The Minister did not do away with this regulation but in his 1980 budget speech promised to bring about changes that would make it more flexible and allow for more expansion in business, keeping in mind reinvestments, reasonable reserve levels and other safeguards for the business.

The Minister's proposals have now been put into effect by the Income Tax Amendment Act No. 6 of 1980. Sec. 95 states "Sec. 95 of the Principal Act is amended by the deletion of subsections (1), (2) and (3) and the substitute thereof of the following subsections:

"(1) For the purposes of this section:
'taxed profits' means the balance of a company's trading and profit and loss accounts after any adjustments thereto as determined by the Commissioner and after subtraction therefrom of the tax charged under the other provisions of this Act;
'Undistributed profits' means such part of the taxed profits of a company as remains undistributed as dividends after nine months starting from the end of the charge year or, as the case may be, from the end of the period for which the accounts prepared by such company are accepted by the Commissioner in accordance with the provisions of Section 62.

(2) Subject to the provisions of subsection (3) a company shall be charged additional tax at the rate of 35 percent of the amount of its undistributed profits.

(3) In determining the amount of undistributed profits of a company for the purposes of this section, the Commissioner may take into account such of the company's expansion or other needs as, to his satisfaction, are normal business practice and reasonable in the particular circumstances."

This new amendment does not clear the debts and uncertainties that arose in the 1979 amendment. The number of definitions has of course been reduced but the two new ones still leave the taxpayer in a state of uncertainty. Besides, there is now no formula for the Commissioner to determine the quantum of the undistributed profits and it is left to the discretion of the Commissioner who is given wide powers. The successful implementation of this new regulation will depend on the good intentions of the officials of the Department of Taxes, because in trying to find out what are "taxed profits" one has to see what the "adjustments" are which the Commissioner would make and in quantifying the amount of "undistributed profits" one has to see that the Commissioner in his *discretion* takes into account "such of the company's expansion or other needs as, to his satisfaction, are normal business practice and reasonable in the particular circumstances".

The Commissioner of Taxes has fortunately now issued a *Practice Note* laying down the Department's interpretation of this Section and also outlining the Department's practice in relation to this Section. The Department "recognises that the paramount considerations in determining distribution of profits as dividends, that might be made by companies, is the financial requirements of the business." But it is also aware that there are some companies which do not plough back some of their profits into the business for expansion purposes, nor distribute them adequately to their shareholders. This new regulation will therefore be used by the Commissioner, in his discretion, as a regulatory measure keeping in mind the welfare growth and expansion of the business.

In arriving at the "taxed profits" the Commissioner of Taxes would make the "adjustments" that are normally made for income tax purposes under the Income Tax Act 1966 (as amended). As a preliminary basis the Department will consider using the following formula to determine the amount of undistributed profits.

Profits as per accounts			A
Add Disallowable items such as Depreciation of capital expenditure and expenditure specifically prohibited as deductions			B
			C
Deduct			
Capital allowances and items specifically allowable	D		
Tax charged	E		
Dividend declared	F		G
Undistributed Profit			H

However the amount at H may be further reduced, completely or partially, provided the taxpayer can submit a detailed expansion or reinvestment plan supported by documentary evidence as acceptable to the Commissioner. To help the taxpayer who may be liable to this tax, the following "allowances" on their own *or in conjunction* with detailed expansion and reinvestment requirements, as mentioned above, may be used to reduce the amount arrived at as "H". These are:

(a) in the case of *industrial profits*, the maximum amount of the allowance may be equal to 30 percent of such net profits;
(b) in the case of *trading profits*, the maximum amount of the allowances may be equal to 20 percent of such profits;
(c) in the case of profits falling in neither of the abovementioned two categories, the maximum aount of the allowance may be equal to 10 percent of such net profits.

For the purposes of calculating these "allowances" the Department has decided that *industrial profits* "would include so much of the profits of a company adjusted for income tax purposes as is attributed to:

(i) the construction of buildings, plant and machinery, roads, bridges, water conservation or other operations deemed by the Commissioner to be of a like nature; or
(ii) farming; or
(iii) mining; or
(iv) manufacturing; or
(v) the carriage of passengers or goods; or
(vi) hotel keeping; and the

Trading profits would include so much of the profits of a company as adjusted for income tax purposes as are not attributed to:

(i) industrial profits; or

© 1980 International Bureau of Fiscal Documentation – BULLETIN

SUMMARY OF SOME IMPORTANT TAX RATES

Income tax on companies	48 percent
Income tax on individuals:	
First K 1,000	5 percent
Next K 1,000	10 percent
Next K 2,000	20 percent
Next K 2,000	30 percent
Next K 2,000	45 percent
Next K 2,000	55 percent
Next K 2,000	65 percent
Balance	70 percent
Withholding taxes on payments to non-residents:	
– dividends	20 percent
– interest	30 percent
– royalties	30 percent
– public entertainment fees	30 percent
– management and consultancy fees	30 percent
– real property rentals	30 percent
– payments to contractors for construction or haulage operations (transportation of persons or merchandise)	25 percent

See for a comprehensive description of the Zambian tax system our publication: *African Tax Systems/Systèmes fiscaux africains.*

(ii) rents; or
(iii) professional services.

Once the amount of undistributed profits has been determined by the Commissioner, he would then issue an assessment in the form of a directive stating the amount of the undistributed profits and the tax thereon. The provisions in Part viii and xi of the Income Tax Act 1966 (as amended) relating to collections, recovery of refunds, objections and appeals will apply to all such directions.

The Commissioner has also decided that where the *pre-tax* adjusted profits of a company are K 3,000 or less, an Undistributed Profits Tax assessment would not be made. This decision, purely for administrative reasons, is to relieve the department of spending time on small cases.

It should be noted that most of the concessions given in the Commissioner's Practice Note were in fact part of the law in the 1979 budget. These open the door for negotiations with the Commissioner since each company now has to put up its case for expansion and reinvestment in order to avoid the necessity of paying this tax. But before putting its case, in arriving at 'H' the Commissioner states that "expenditure" specifically prohibited will be added back and only items specifically allowable would be deducted. "Expenditure incurred in the production of income" is allowed for tax purposes under Sec. 29, but then what of losses which are dealt with in Section 30 of the Income Tax Act? It would appear unfair for a company which has large carry forward losses, but a profit in a particular year, to be liable to U.P.T. Many companies have repayments of outstanding loans which tend to eat into their liquidity position. Such repayments are not "allowable expenditure" in computing profits. It is hoped that the Commissioner of Taxes will consider these when looking into the detailed expansion and reinvestment plan and granting the "allowances" to each company.

Another fear is whether the Department is sufficiently equipped and geared to deal with each case without causing hardships and delay in determining each case. With so much "discretion" being given to the tax officials it is hoped that they will consider the welfare of the company and use this provision as a regulatory measure rather then a penal one.

Job credits

This concession which was introduced but not put into effect in 1979 has now been changed by the Income Tax Amendment Act No. 6 of 1980. The former Sec. 90 A has been repealed and replaced by the new one which states that the Minister "may by a statutory order provide for the granting of job credits in such amounts, for such periods and for such employees of such business as may be prescribed therein."

We now await the publishing of the statutory order.

Industrial Development Act

Frequent reference has been made in recent months by the Minister of Finance to the Industrial Development Act. This Act was passed in 1977 to supersede the Pioneer Industries (Relief from Income Tax) Act 1965. The purpose of the Pioneer Industries Act was to encourage the establishment of new industries, to strengthen and diversify the economy of the country, provide additional avenues of employment of labour and act as an incentive for the investment of capital.

The nature of the incentive was relief from income tax for a period of two to five years depending on the amount of capital put into the new project. It is important to note that the relief was limited to new industries or to those which are not being carried on at present on substantial commercial fashion.

The new Industrial Development Act was intended to go further than the Pioneer Act. The Act was to "provide for the licencing and control of manufacturing enterprises to provide incentives for investment, to regulate the making of contracts relating to the transfer of foreign technology and expertise to enterprises operating in Zambia and to provide for matters connected with or incidental to the foregoing".

Although it was passed in 1977 it has not proved helpful to industry and investment. The Minister has therefore agreed to pass regulations which will provide clear guide-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

lines for investors and also provide fuller details of the incentives that are available to them.

The Industrial Development Act does not specify any period for or time limit to the reliefs but states that "relief from Income Tax, Sales Tax, S.E.T. for *such period, and in such manner* as the Minister responsible for the administrative thereof may prescribe". Similarly for customs duties, tariffs, import licences, rebates, etc., all such reliefs depend on the Minister responsible provided certain stipulated conditions are fulfilled.

It is now hoped that regulations will be passed specifying the actual working of the reliefs and the conditions to be fulfilled.

These regulations, it is hoped, will provide clear guidelines for investors and with the added incentives offered by the job credits facility, the Minister of Finance hopes that the business community would help in expanding the economy of the country.

SERVE THE LORD AND SAVE TAXES -- THE ULTIMATE TAX H(E)AVEN

(from our ecclesiastical correspondent)

A few months ago, the Financial Times reported that the export of Bibles from Britain had suffered a serious cut. U.K. publishers may well find an enlarged market in the United States if a new project develops well.

Religion has always been considered a serious matter in that country. As was, not so very long ago, taxation. It was, until recently, only the Bible where the relationship between religion and taxes was set out (e.g. "Render unto Caesar what is Caesar's etc."). This relationship has now received a new momentum as a result of the activities of a new profession: tax advising ministers. The following is an extract from an advertisement which appeared in the December 1979 issue of SIE — Sophisticated Investor, page 118, and of an article in the Western Law Journal, January/February 1980, page 1.

Assembly of Hope

This organisation, appropriately located at One Chapel *Road, Helmetta, N.J. makes an offer to the reader — at a* very *low cost — to become a Minister ($10) and/or to start one's own Church (also $10). The advantages are not small. Not only can one conduct "Holy Rites, Sacraments and Rituals. . . Advise, Treat, Inspire, Marry, Bury. . . Exorcise, Pardon, Bless. . .", BUT one benefits from tax exemption on a large scale. The advertisement gives a detailed example which we shall not reproduce here. It ends with the slogan* Become a Minister and start your own Church now! *The lower part of this full page ad. is a registration form to apply for one's "own personal ID card that will command instant recognition and respect for your new responsibilities".*

Universal Life Church, Inc.

This competing organisation is located at Modesto, *California. Mr. Steve Goolian, a journalist, reports on it under the title:* How do you spell tax relief? — C-H-U-R-C-H. *One can, also for not more than $20, become a minister of this church provided that one "follows the church's only tenet: Do that which is right". Apparently, the promoters of this tax avoidance scheme think that it is right to set up a mail order system to sell their ministries for the purpose of avoiding tax. As one of the promoters according to Mr. Goolian has said — "a large market probably existed for such church-financial planning". Together with a friend he established his own "Church of Universal Harmony" which belongs to the Universal Life Church. They claim to have ordained "more than seven million" (!) ministers into the church.*

This seems a good business at $20 each. No wonder the Internal Revenue Service are trying to stop this, unsuccessfully as they lost a case in 1973. "The IRS never appealed and refuses to say why", writes Mr. Goolian.

Indeed, there seems to be great reluctance to interpret such sections of the Internal Revenue Code as 107, 170 and 501 in a sense which would sustain their original spirit without introducing a new spiritual aspect. One may well wonder why other tax avoidance schemes are more easily contested (or, even, recognized as such) and whether in other countries tax (avoidance) and religious ideas would be so generously treated.

Over the years there have been serious discussions and fierce debates between priests on the question of whether it is ethical or moral to dodge taxes which are imposed on the basis of regular laws. As far as we know, the arguments used never included profit-making mail order schemes. In Mr. Goolian's article, the United States Commissioner of the Internal Revenue Service, Mr. Jerome Kurtz, is quoted as having said: "Those interested in protecting the preferences for churches must agree that the IRS has an obligation to be vigorous in stopping such schemes. The protection of church preferences requires that such preferences not be distorted". There will be few besides the promoters of new "ministers" and "churches", be they tax collectors or taxpayers, who will not wholeheartedly agree. On the other hand, one wonders whether all this is not a "mene tekel" in a world where more and more people are trying to get out of the increasing burden of taxes and other public charges. The many ways in which they do so show that they become desperate to a degree which is frightening. With regard to this "ultimate (tax) h(e)aven" the sky seems to be the limit. . .

Développements Fiscaux en Afrique

Activités de la Commission Economique des Nations Unies pour l'Afrique

Tax Developments in Africa

Activities of the U.N. Economic Commission for Africa

J. van Hoorn Jr.

La Commission Economique des Nations Unies pour l'Afrique (C.E.A.) dont le siège se trouve à Addis Abéba avait déjà, en 1965, organisé une conférence fiscale à laquelle participaient des personnalités de haut rang appartenant à un grand nombre de pays africains. La réunion était bilingue (anglais et français) offrant ainsi, pour la première fois, la possibilité aux responsables fiscaux, anglophones ou francophones, de se rencontrer et d'être confrontés aux autres systèmes fiscaux et politiques de développement économique. La préoccupation principale de la conférence concernait la politique et l'administration fiscales. Des rapports nationaux servaient de base à la discussion.

As early as 1965 the United Nations Economic Comission for Africa (E.C.A.), with headquarters in Addis Ababa, convened a tax conference in which top-ranking officials from a large group of African countries participated. The meeting was bilingual (English and French) and thus offered for the first time the possibility to English and French speaking tax officials of meeting each other and becoming acquainted with each other's tax systems and policies for economic development. The main emphasis was on tax policy and tax administration. Country reports served as a basis for discussion.

Il est apparu au cours de cette réunion que l'on connaissait très peu des systèmes fiscaux nationaux des autres pays d'Afrique et que ce manque de connaissance et d'information n'était pas dû, du moins essentiellement, à une barrière linguistique. Il était intéressant de noter avec combien d'attention les participants écoutaient et discutaient les expériences de leurs collègues. Il n'est donc pas surprenant qu'il y ait eu un sentiment unanime en faveur d'une propagation d'informations concernant les développements fiscaux en Afrique.

During the meeting it became apparent that little was known about national tax systems in other African countries and that this lack of knowledge and information was not, at least, not primarily, due to language barriers. It was interesting to note with how much attention the participants listened to and discussed the experiences of their colleagues. It is not surprising, therefore, that there was a unanimous feeling that more should be done to disseminate information concerning tax developments throughout Africa.

La première conséquence de la conférence a été la demande, par la C.E.A., au Bureau International de Documentation Fiscale de rassembler une documentation complète sur la législation fiscale des pays d'Afrique. Le résultat a non seulement été la réunion unique, dans la bibliothèque, de matériaux classés systématiquement sur la quasi totalité de cet immense continent africain mais aussi la publication, par le Bureau, d'un ouvrage sur feuilles mobiles intitulé *Systèmes Fiscaux Africains*, accompagné de son édition parallèle en anglais: *African Tax Systems*; ces deux ouvrages étant régulièrement mis à jour. Ces ouvrages servent de base à une coopération plus profonde dans le contexte africain.

The first action undertaken by E.C.A. was to request the International Bureau of Fiscal Documentation to prepare a comprehensive documentation on the tax legislation of African countries. The result has been, not only that the Bureau's library contains a unique set of systematically arranged materials on practically every country in the huge African continent, but also that the Bureau published a large loose-leaf work under the title *African Tax Systems* with a parallel edition in French: *Systèmes Fiscaux Africains*, regularly updated. This work serves as the foundation for further cooperation within the African context.

Au cours de la décade suivante, la C.E.A. a organisé d'autres conférences importantes ainsi qu'un grand nombre de cours et groupes de travail, certains couvrant une région ou une sub-région. L'un des résultats de ces activités a été la formulation d'un certain nombre de principes et d'obstacles liés à la participation sans cesse grandissante de l'Afrique dans l'économie mondiale. Ceci a même conduit à un projet non-officiel d'une convention multilatérale tendant à éviter les doubles impositions accompagnée de notes explicatives se rapportant aux différentes dispositions.

In the following decade or so, E.C.A. organised other large conferences as well as numerous training courses and workshops, some of which covered a region or a sub-region. One of the results of these activities has been the formulation of a number of principles for, and pitfalls in connection with, Africa's increasing participation in the world economy. This even led to an unofficial draft for a multilateral tax treaty together with explanatory notes to the various provisions of it.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

LES ACTIVITES CONSULTATIVES ET DE RECHERCHE DE LA C.E.A.

Pendant de nombreuses années la C.E.A. a aidé des pays membres sous la forme d'envoi de missions consultatives et de conduite de groupes de travail locaux dans des domaines tels que *la politique, la législation et l'administration fiscales* aussi bien que celui de *la gestion budgétaire et financière* — tout ceci étant réalisé à la demande des états intéressés.

Les membres de la C.E.A. ont en outre effectué des études et rapports divers. Les études traitant de *l'utilisation des techniques d'imposition forfaitaire dans le régime fiscal des petits commerçants et des professionnels en Afrique* ainsi que *le contrôle des dépenses publiques* ont été entreprises récemment; les deux sujets présentent un intérêt tout particulier pour les pays en voie de développement.

La C.E.A. se penche spécialement sur le manque de possibilités de formation professionnelle et de recherche en Afrique. Actuellement, un projet sur la création et le développement de centres régionaux pour la formation professionnelle et la recherche en matière fiscale est en progrès. Ce projet est à mettre en parallèle avec des idées similaires qui ont cours dans d'autres parties du tiers-monde et surtout dans l'Asie du Sud-Est. Bien que l'assistance d'experts étrangers soit vraisemblablement nécessaire, du moins dans un premier stade, il est important de constater que des initiatives ont été prises dans des régions où les pays en voie de développement sont majoritaires et que le travail est tout d'abord entrepris par des experts locaux connaissant mieux que personne quels sont les problèmes posés dans des pays en voie de développement ayant une base culturelle souvent très particulière.

L'un des plus récents groupes de travail, traitant de la politique, législation et administration fiscales, a eu lieu en Eté 1979. A cette occasion les premières mesures ont été prises pour achever la création d'une association d'administrateurs fiscaux africains.

L'ASSOCIATION D'ADMINISTRATEURS FISCAUX AFRICAINS

La réunion d'Addis Abéba a été suivie de celle de Février 1980 qui s'est tenue à Monrovia. La réunion inaugurale de l'A.A.F.A. a eu lieu dans cette ville en la présence du Ministre des Finances libérien, Son Excellence, l'Honorable Ellen Johnson-Sirleaf, et présidé par M. Philip T. Bowen, Secrétaire d'Etat pour les recettes du Libéria.

La Constitution de l'Association a été adoptée au cours de cette réunion; il a également été décidé que des comités sub-régionaux seraient établis comme suit:

Afrique du Nord: Algérie, Egypte, Jamahiriya Arabe Lybienne, Maroc, Soudan, Tunisie.

Afrique de l'Ouest: Bénin, Côte d'Ivoire, Gambie, Ghana, Guinée, Guinée-Bissau, Haute Volta, Libéria, Mali, Mauritanie,

E.C.A.'S ADVISORY AND RESEARCH ACTIVITIES

For may years E.C.A. has been busy assisting member countries in the form of sending advisory missions and conducting local training workshops on such areas as *Tax Policy, Legislation and Administration* as well as on *Budgetary and Financial Management.* All this was done at the request of the countries involved.

In addition, E.C.A.'s staff carried on various studies and surveys. Recently, a start was made with studies on *Use of Presumptive Tax Assessment Techniques in Taxation of Small Traders and Professionals in Africa* and on *Expenditure Control,* both subjects which are of particular interest to developing countries.

E.C.A. is especially concerned about lack of training and research possibilities in Africa. Currently, a project on the creation and development of regional centres for tax training and research is in progress. This project runs parallel to similar ideas in other parts of the "Third World", above all, in South East Asia. Though assistance of outside experts is likely to be required, at least in the first stage, it is significant that initiatives are being taken within the regions where developing countries are in the majority and the work is to be primarily undertaken by indigenous experts who know better than anyone else what the problems in developing countries, with their often very special cultural background, are.

One of the most recent workshops, dealing with tax policy, legislation and administration, was conducted in the Summer of 1979. On that occasion, the first steps were taken to achieve the creation of an association of African tax administrators.

ASSOCIATION OF AFRICAN TAX ADMINISTRATORS

The Addis Ababa meeting was followed up in Monrovia in February 1980. In this city the inaugural meeting of the A.A.T.A. took place in the presence of the Liberian Minister of Finance, Her Excellency, the Honourable Ellen Johnson-Sirleaf, and chaired by Mr. Philip T. Bowen, Deputy Minister for Revenues of Liberia.

During the meeting the Constitution of the Association was adopted. It was also decided that sub-regional committees be established as follows:

North Africa: Algeria, Egypt, Libyan Arab Jamahiriya, Morocco, Sudan, Tunisia.

West Africa: Benin, The Gambia, Ghana, Guinea, Guinea Bissau, Ivory Coast, Liberia, Mali, Mauritania, Niger, Nigeria, Senegal, Sier-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Niger, Nigéria, Sénégal, Sierra Léone, Togo.

Afrique du Centre: Angola, Cameroun, République Centrafricaine, Congo, Guinée Equatoriale, Gabon, Tchad, Zaïre.

Afrique de l'Est: Botswana, Comores, Djibouti, Ethiopie, Kenya, Lesotho, Madagascar, Malawi, Ile Maurice, Mozambique, Ouganda, Seychelles, Somalie, Swaziland, République Unie de Tanzanie, Zambie.

Il faut remarquer que la compisition de ces comités est fondée sur la situation géographique des pays et non pas linguistique.

Un Comité Exécutif provisoire a été nommé et comprend six membres, y compris les représentants des comités sub-régionaux. Le Président de l'Association est M. Bowen, son Vice-président M. Soulémane Abdoulaye, Directeur Général des Impôts au Togo.

Les membres de l'Association sont les pays membres de la Commission Economique des Nations Unies pour l'Afrique (C.E.A.) et de l'Organisation de l'Unité Africaine (O.U.A.). Chaque membre a droit à un vote mais est représenté par 2 personnes désignées par le Ministre des Finances. L'Association sera financée par les contributions des pays membres en fonction de leur capacité économique avec un minimum de 0,5 pour cent et un maximum de 10 pour cent; il a été décidé d'adopter l'index de l'O.U.A. à cet effet.

PROGRAMME DE L'ASSOCIATION

Les sujets suivants ont été retenus pour être étudiés à la réunion de l'Assemblée Générale qui aura lieu en Février 1982:

- Evasion et fraude fiscale
- Information sur la conscience fiscale
- Fiscalité et développement
- Techniques de législation fiscale
- Amélioration et consolidation de l'organisation et gestion fiscales.

On s'est par ailleurs mis d'accord sur le fait que les comités sub-régionaux établiraient leur propre programme et que chaque comité organiserait au moins un cours de formation professionnelle ou un séminaire en 1981.

L'Assemblée Générale [1] a accepté de demander à la C.E.A. de préparer à la demande de l'Association une liste des experts fiscaux africains. L'Assemblée Générale a également demandé à l'E.C.A. "d'écrire aux pays membres pour que ceux-ci soumettent régulièrement des copies de leurs codes fiscaux au Bureau International de Documentation Fiscale à Amsterdam". [2]

1. D'après l'article 20 de la constitution, ce document entrera en vigueur dès que 10 pays auront accepté d'être membre et signé la constitution. Ceci ayant été le cas, l'Assemblée Générale de l'Association a été déclarée établie.
2. Rapport de la Réunion Inaugurale de l'Association des Administrateurs Fiscaux Africains et d'un Groupe de travail sur la politique, la législation et l'administration fiscales, Monrovia 11-19 Février 1980, Para. 26, p. 8.

ra Leone, Togo, Upper Volta.

Central Africa: Angola, Cameroon, Rep. of Central Africa, Congo, Equatorial Guinea, Gabon, Chad, Zaire.

East Africa: Botswana, Comoros, Djibouti, Ethiopia, Kenya, Lesotho, Madagascar, Malawi, Mauritius, Mozambique, Seychelles, Somalia, Swaziland, Tanzania United Republic, Uganda, Zambia.

It is worth noting that the composition of these committees is based upon the geographical situation of the countries and not at all on language.

A provisional Executive Committee was nominated consisting of six members including representatives of the sub-regional committees. The chairman of the Association is Mr. Bowen, its vice-chairman Mr. Soulémane Abdoulaye, Director-General of Taxation of Togo.

The Association's members are the countries which are members of the U.N. Economic Commission for Africa (E.C.A.) and of the Organisation of African Unity (O.A.U.). Each member has one vote but is represented by two persons designated by the Minister of Finance. The Association is financed by contributions from the member countries established according to their economic capability with a minimum of 0.5 and a maximum of 10 percent; it was decided to adopt the O.A.U. index for this purpose.

PROGRAMME OF THE ASSOCIATION

The following subjects were selected for discussion in the General Assembly meeting to be held in February, 1982:

- Tax fraud and evasion
- Information on tax awareness
- Taxation and development
- Techniques of tax legislation
- Improvement and strengthening of tax organisation and management.

Furthermore it was agreed that the sub-regional committees should draw up their own programme and that each committee should organise at least one training course or seminar in 1981.

The General Assembly [1] agreed to request the E.C.A. to prepare on behalf of the Association a roster of qualified African tax experts. The General Assembly also "requested E.C.A. to write to member countries to submit copies of their tax codes to the International Bureau of Fiscal Documentation in Amsterdam on a regular basis". [2]

1. According to Article 20 of the Constitution, this document becomes effective as soon as ten countries have accepted membership and signed the Constitution. This being the case, the General Assembly of the Association was declared established.
2. Draft Report of the Inaugural Meeting of the Association of African Tax Administrators and a Workshop on Tax Policy, Legislation and Administration, Monrovia, 11-19 February 1980, Para. 26 at p. 8.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

GROUPE DE TRAVAIL SUR LA POLITIQUE, LA LEGISLATION ET L'ADMINISTRATION FISCALES

A l'occasion de la création de l'Association des Administrateurs Fiscaux Africains, un group de travail s'est penché sur cette matière. Six sujets principaux ont été discuté à Monrovia, à savoir:

(i) imposition des sociétés multinationales et transnationales;
(ii) les causes de la double imposition internationale et les mesures pouvant l'éviter;
(iii) directives pour la négociation de conventions tendant à éviter les doubles impositions, avec une référence particulière au modèle de conventions de double imposition entre les pays en voie de développement d'Afrique et les gouvernements des pays du siège des investisseurs étrangers;
(iv) le régime fiscal du secteur agricole avec une référence particulière aux pays africains en voie de développement;
(v) planification de réforme fiscale; et
(vi) considérations essentielles liées à l'organisation et à la gestion des Sections responsables de l'Impôt sur le revenu.

Le document mentionné à la note 2 reprend certains points des discussions rapportées comme ayant été conduites à un haut niveau permettant "au groupe de travail de reconnaître les points essentiels et atteindre une majorité d'opinion sur des solutions proposées ou soumettre ultérieurement à l'étude certains de ces points". [3] Le manque de place ne nous permet pas de donner ici plus d'informations. Les personnes intéressées peuvent demander (gratuitement) une copie du résumé préparé par la C.E.A. sur ses sujets.

NOTE:
Le *Bulletin* a déjà rapporté, dans le passé, des développements fiscaux ayant eu lieu dans un grand nombre de pays, y compris différentes parties du monde en voie de développement. Ces rapports contiennent des informations sur des activités exercéès par des organisations internationales.

La Rédaction a l'intention de publier régulièrement des rapports sur ces organisations afin de permettre à la communauté fiscale internationale d'être systématiquement informée de l'actualité.

3. Rapport (note 2, supra), appendice rose, p. 1.

WORKSHOP ON TAX POLICY, LEGISLATION AND ADMINISTRATION

On the occasion of the creation of the Association of African Tax Administrators, a workshop was conducted under this title. Six main topics were discussed in Monrovia, viz.:

(i) Taxation of multinational and transnational corporations;
(ii) The reason for international double taxation and measures for its avoidance;
(iii) Guidelines for negotiation of tax treaties especially with reference to the model on double taxation treaties between African developing countries and the governments of foreign investors' home countries;
(iv) Taxation of agricultural sector especially with reference to African developing countries;
(v) Tax reform planning; and
(vi) Vital considerations involved in organization and management of Income Tax Departments.

The document referred to in note 2, contains a review of the discussions which are reported as having been conducted at a high level enabling " the workshop to identify major issues and to reach a consensus of opinion on solutions or further consideration to be given to these issues". [3] Space limitations prevent the giving of details here. Those interested are invited to request (free of charge) a photocopy of the summary prepared by E.C.A. on these subjects.

NOTE:
In the past, the *Bulletin* reported on tax developments in a large number of countries, also in various parts of the developing world. These reports included information on activities carried on by international organisations.

It is the intention of the Editors to publish reports on these organisations on a regular basis so as to keep the international tax community systematically informed on what is going on.

3. Draft Report (note 2, supra), pink appendix, p. 1.

The Commonwealth Association of Tax Administrators (C.A.T.A.)

TECHNICAL MEETING ON THE COLLECTION OF TAXES AND TRAINING OF COLLECTION PERSONNEL

Elsewhere in this issue mention is made of the establishment of the Association of African Tax Administrators earlier this year. In several respects it was modelled on another intergovernmental organisation established as long ago as 1967: CIAT — the Interamerican Centre of Tax Administrators, with headquarters in Panama City.

C.A.T.A. is an organisation of a similar nature, but it is not restricted to a specific region or continent. It was conceived in 1976 and was formalized by a constitution adopted in 1978. C.A.T.A., with headquarters in London, England, currently links the tax administrators in 31 Commonwealth states and dependencies. They are: Australia - Bahamas - Bangladesh - Barbados - Botswana - Canada - Cook Islands - Cyprus - Fiji - The Gambia - Ghana - Grenada - India - Jamaica - Kenya - Malawi - Malaysia - Malta - Mauritius - New Zealand - Nigeria - Papua New Guinea - Singapore - Sri Lanka - Swaziland - Tanzania - Tonga - Trinidad & Tobago - United Kingdom - Western Samoa - Zambia.

The basic objective of C.A.T.A. is to promote the improvement of tax administration in all its aspects within the Commonwealth with particular emphasis on developing countries. This is accomplished by promoting the improvement of tax administration of members through the exchange of experiences and the dissemination of information and technical knowledge. In complying with these objectives, C.A.T.A. periodically convenes conferences on specific aspects of tax administration and holds a triennial general meeting in which its members participate.

From April 14 to 18, 1980 a Technical Meeting of C.A.T.A. took place in Swaziland. It was attended by tax officials of the rank of Commissioner or Deputy-Commissioner of the following 19 countries: Bangladesh, Botswana, Canada, Cook Islands, Cyprus, Jamaica, Kenya, Malawi, Malaysia, New Zealand, Nigeria, Papua New Guinea, Sierra Leone, Sri Lanka, Swaziland, Tanzania, United Kingdom, Western Samoa and Zambia.

Responsible for coordinating this Technical Meeting was Mr. W.A. Stoneham from Canada.

The following is a report of the proceedings of this Technical Meeting.

The second technical meeting of C.A.T.A. member states took place at the Yen San Hotel in Mbabane, Swaziland during the week of April 14 to April 18, 1980. The meeting was hosted by the Kingdom of Swaziland and the technical co-ordination for content as well as conduct of the proceedings was the responsibility of the Canadian delegation.

In order to identify areas of primary concern to the member countries intending to participate in the conference, all members were asked several months prior to the meeting to submit papers covering the following 3 aspects:

1. The most serious problems affecting collection of taxes in their country.
2. Details on any formalized tax collection training program administered by them.
3. Description of any significant strengths in their system which provide assistance in the collection of taxes.

From the submissions received from 19 of the member-countries, seven major areas were identified as being of interest to all.

These main topics were each addressed by 1 or 2 speakers in terms of how these matters affect the tax collection operation in their country and how their respective administrations handle them. The presentations were followed by either workshops or round table discussions, which expanded these topics or aspects thereof, as they applied to the other countries represented at the conference. Topics of slightly lesser importance although of considerable interest to all were allocated to the last day of the conference for round table discussions. Time permitting, the round table discussions were to be extended to any other topics raised from the conference floor. All conference participants were informed in advance of all the agenda topics selected and were requested to come prepared to contribute to the workshop and round table discussions.

The conference opened on schedule on the morning of April 14 with 33 delegates from 18 countries in attendance. After the opening exercises, Mr. J.A.R. Felix, Commissioner General of Inland Revenue,

Mr. W.A. STONEHAM

Mr. Stoneham joined the Canadian Department of National Revenue, Taxation in 1965 following a career in the private sector and presently is the Assistant Director, Policy and Enforcement, Accounting and Collections Division.

Sri Lanka addressed the conference on the first topic: Tax Delinquency: Causes and effects today; setting out the theme and indeed the principal reasons for which this conference of Commonwealth Tax Administrators had been convened.

I. Tax delinquency: Causes and effects today

In his opening remarks the speaker stressed the importance for every government of building public confidence in its programs in general and its ability to collect taxes to finance such programs as an important factor in curbing tax delinquency.

Mr. Felix broke down the problem of tax delinquency into three different areas:

a. under reporting of income and tax,
b. non-reporting of income,
c. non-payment of tax on declared or assessed income,

© 1980 International Bureau of Fiscal Documentation – BULLETIN

indicating that all three are a direct result of the public attitude toward compliance and that the latter is influenced by such items as:

1. Fairness of the tax system.
2. Fairness and impartiality of administration.
3. Efficiency and thoroughness of tax administration.
4. Chances of delinquency being detected.
5. Severity of penal action upon detection and frequency of application of penal action.
6. The taxpayer's confidence in and loyalty to the Government and his sense of duty to pay the correct amount of tax.
7. Degree of taxpayer's understanding of his duties and obligations.
8. Degree of public information available to create tax consciousness.
9. Number of administrative measures used to withhold tax at source such as on dividends, interest, and employment earnings.
10. "Red tape" and physical difficulties involved in making payments.

Mr. Felix further referred to the effect of economic conditions such as: Commercial interest rates being substantially higher than penalty payable for non-payment, lack of cash-flow in a stagnant economy, government policies which adversely affect taxpayer's sources of income and lack of or slowness in compensation, and payment of prior year taxes out of current income subject to current economic influences.

He recommended that tax administrators orchestrate legislation and procedures beginning with preventative aspects like withholding taxes and ending with an arsenal of legal sanctions to encourage compliance in filing returns and paying taxes assessed. Publicity via all available media should be used to indoctrinate taxpayers with such requirements and the possible consequences of not complying.

The speaker advocated the use of Electronic Data Processing equipment as an effective means to identify and categorize nonfilers as well as to provide an up-to-date collection accounting system, which would allow early compliance action and thus serve to create a better tax consciousness by dispelling public lethargy in this area. Additionally he recommended publicity seminars and consultations with tax practitioners to clarify apparent difficulties in public understanding of certain complicated taxing provisions.

Mr. Felix cited the intelligent use of estimated assessments, of tax clearances as well as the acceptance of arrangements from taxpayers to pay their tax arrears over a period of time in line with their verified ability to pay, as useful compliance tools. He emphasized the importance of controlling tax delinquency in regard to the nations's economy by relating delay in collection to increased losses to the the government treasury which in turn result into greater budget deficits and increased government borrowing. Tax delinquency further has an inflationary effect in that these tax monies, not available to the Treasury, are being diverted to purchase of consumer goods. This further creates serious inequities for the compliant taxpayer, who, besides not having their tax money to spend are carrying the total tax burden, while the tax evaders enjoy all the benefits provided by the state without paying their share.

In subsequent round table discussions the plenary expressed general agreement with Mr. Felix's observations. On the topics of tax amnesty and tax clearances raised, there appeared to be agreement on the former's overall negative effect and that it thus is rarely used, while the latter procedure is used selectively by many member countries with good results. Further, while there are presently few or no tax collection treaties in existence, substantial compliance benefits were envisioned by the delegates from the existance of such treaties in the future.

II. The Department's collection organization, the purpose, the activities and the relation with other work areas of the Revenue Department

Two papers were presented on this topic, the first by Mrs. Eugene Heather, Technical Officer, Inland Revenue Department, Western Samoa, and the second by Mr. M.U. Ahmad, First Secretary (Taxes) National Board of Revenue of the People's Republic of Bangladesh.

The organizational structure of the Samoan Revenue Department provided for a distinctly separate Collection (or Accounts) Section responsible for the collection and collection accounting functions only. The section's staff is supplemented periodically by assessing staff to provide extra manpower for ledger balancing exercises, etc. but in all other aspects the two functions are totally separate.

This contrasted sharply with the approach taken by the National Revenue Board of Bangladesh which has combined the assessment and collection recovery functions under the Deputy Commissioner of Taxes (formerly Income Tax Officer). While separation of these two functions has been recommended staffing constraints up to this point have not allowed such separation.

Subsequent discussions by the plenary indicated that the majority of delegates favoured a separate collection function for better results. Instances of close cooperation by both audit and collection sections in exacting payment of taxes assessed at time of assessment or shortly thereafter were illustrated by two of the member states. This pertained especially to situations where prompt action appeared necessary to avoid losses. In the subsequent workshops the three groups arrived at the following observations and recommendations:

Separating collections from other functions provides the following advantages:

1. Better collection results due to greater concentration of effort in a single area.
2. Staff obtains greater in-depth knowledge of collection procedures.
3. Speedier recovery of delinquent taxes reducing likelihood of potential losses.
4. Less likelihood of employee becoming susceptible to offers for collusion.
5. Less training time required to make employee effective in one function.
6. Staff will progress from handling simple accounts to handling more complex accounts with additional experience and training.
7. This sytem still allows for rotation of staff into other areas such as assessing and audit to provide opportunities for career development and job satisfaction.

The integrated system (staff working in 2 or more functions simultaneously) also has certain advantages:

1. Provides greater all round experience and knowledge to staff.
2. Permits rapid shifting of staff resources into areas of greatest need.
3. Staff has a better overview of the entire operation, resulting in less unproductive work. (e.g. assessments which are uncollectible at time of assessment etc.)
4. May provide greater job satisfaction and opportunity for promotion.

The consensus appeared to lean toward the non-integrated approach with provision for staff rotation, as being the most desirable, although many of the participants operated under an integrated system.

III. Enforced collection of delinquent taxes, judicial vs. administrative procedures

This topic was addressed by the delegates of 2 countries Mr. J.B. Sweeting, Director, Collection Procedures, of the Board of Inland Revenue for the United Kingdom, and Mr. H.W. Ramien, programs officer, Accounting and Collections Division, Revenue Canada.

Mr. Sweeting after briefly outlining the responsibility areas of the Inland Revenue Department in respect to the collection of all direct taxes on income and capital as well as the National Insurance contributions, indicated that all enforced collection work is initiated in the 250 local collection offices under the supervision of the local Collector in Charge. Their collectors most frequently use the administrative distraint procedure, available under authority of the tax statute, which permits

© 1980 International Bureau of Fiscal Documentation – BULLETIN

seizure and sale of goods of the defaulter. The simple initiation of this process is in the majority of cases sufficient to motivate delinquent taxpayers to comply (in 1979 only .2 percent of all distraint calls resulted into eventual sale of assets). Care and discretion is utilized in the application of this procedure to avoid potential abuse.

Mr. Sweeting then referred to the judicial processes available. Depending on the amount of the tax debt, the Department uses the Magistrate's Court or County Court, with only debts over £2000 being brought before the High Court. The courts upon granting judgement can provide enforcement instruments for seizure of goods and monies, as well as such measures as enforced as bankruptcy or liquidation. The only disadvantage to these processes arises from the invariable delays encountered in the two higher courts.

The speaker stated, that these processes, coupled with department's policy of collecting taxes promptly, with the least amount of friction and through efficient use of personal visits and telephone calls has brought good results.

Canada also uses administrative procedures extensively, with its collectors issuing Demands on Third Parties under authority of the Income Tax Act to intercept incomes or seize bank accounts of the defaulting taxpayer. If this procedure proves ineffective, Mr. Ramien stated that Senior Head Office officials can issue a certificate under the Act which upon registration in the Federal Court of Canada has the same force and effect as a judgement. Based on this certificate writs and other enforcement instruments to seize and sell goods, lands as well as monies and securities can be obtained promptly.

Another provision under the Act allows the Canadian Income Tax Department to assess and collect from a transferred spouse the tax owing by the transferror spouse up to the value of the property transferred. The transferree is subject to all collection actions possible under the Act.

The speaker emphasized that there is a constant awareness by management and staff of the formidable extent of these available powers and that continual guidance and control is exercised by supervisory and management staff to prevent any possible abuse of these powers.

In the subsequent workshops the delegates selected the following administrative provisions as particularly successful and desirable:

1. Interest and penalty provisions.
2. Instalment provisions.
3. Withholding provisions on income from employment, dividends, royalties, and any other sources possible.
4. Interception or attachment of incomes and bank accounts.
5. Tax clearance certificates for individuals leaving the country or other specific situations.
6. Distraint procedures.
7. Right to offset tax refunds against prior year tax debts.
8. Right to offset funds payable by other Crown Departments to the delinquent taxpayer.
9. Making directors and managers of companies personally responsible for company tax arrears.

The need for judicial processes would still exist, but with most or all the provisions above adapted where necessary to the particular needs of each country, the frequency for using such judicial processes would be considerably reduced.

IV. Identification of training needs and the design and implementation of a training package to meet those needs

Mr. R. Adair, District Commissioner of the Department of Inland Revenue for New Zealand provided the delegates with an overview on how his Department came to develop its present comprehensive Training Program.

He commenced with an outline of the qualities required in senior revenue staff, such as the need to be effective communicators, the ability to interpret complex legislation competently, as well as being well versed in accounting and commercial practices. Additionally they must have the capacity to adapt to continually changing conditions.

Training, therefore, is considered an ongoing process, and must be geared to the employees present duties as well as toward potential future management positions.

A major review of his Department's training system in 1970 revealed that training at the district level was dependent on the degree of enthusiasm of local management and that it varied considerably between offices. Planned programs were often discontinued due to workloads or if training was given it was frequently poorly prepared. The review committee also recognized the need for finding or developing replacements for the majority of senior managers over the next decade and that well coordinated training plans were needed to accomplish this.

These findings resulted in establishment of the centralized Staff Training Council comprised of the Department's senior functional managers. This council approves the National Training Program, as well as the priorities for all courses, both district and centralized, including all financial and other requirements for the latter.

The council is assisted by the Head Office Training Section, which is responsible for conducting centralized courses as well as the evaluation of training results nationwide and the review of course content, as well as the maintenance of up-to-date personal training records for all staff.

Mr. Adair stated that district office level training is conducted by a local Staff Training Officer who spends at least 60 percent of his time in this function and is usually in this function for a 2 year period. The districts are further provided with programmed learning training manuals and centralized courses are made available to the district office staff.

The speaker emphasized that training programs must be continuously evaluated in order that they can meet the needs of both staff and management, and he suggested that this be done, by having employee and management evaluate the course material and the employee's performance respectively on an on-going basis. Only constant involvement by management in providing feed-back on how the training measures up to what they want or expect from the program, will ensure the success of such programs.

In discussions following his presentation Mr. Adair indicated that his department uses the employee's overall performance and competence as recorded in the annual performance review together with related work experience as a basis for promotion. He also indicated that in his opinion the fully trained employees leaving the department for the private sector may actually benefit the department in the long run by promoting better communications with the private sector.

From the workshop groups, the following observations and recommendations were raised:

1. Specialized training for collection officers was with few exceptions deficient or non-existent. Generally such training consisted of on-the-job training only.
2. The groups agreed on the need for strong support from top management for training programs. Such programs should be centrally controlled and directed to ensure uniform application of the law country-wide.
3. Smaller countries, in as far as their different systems allowed, might pool their resources and set-up a central training facility.

V. Initial collection procedures

Mr. Charles Mwangi, Principal Collector of Income Taxes for Kenya addressed this topic, giving considerable background on the manual accounting procedures employed by his department.

He indicated that one central collection office collects all assessments raised in

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Kenya's 9 Assessing Districts. After assessments are outstanding beyond the due date and no payment is received, penalty and interest are added to the amount and an Overdue Notice is sent to the taxpayer requesting the total amount by a specific date. If the taxpayer agains fails to pay, enforced collection action is commenced after the due date has elapsed. The only exception arises in cases where the taxpayer appeals and the responsible assessor issues a "Stand Over Order". In such cases collection action ceases until the appeal has been dealt with.

In the subsequent round table discussions various procedures were brought out by the delegates, ranging from a series of notices and letters issued either manually or by computers, the use of telephones, as well as the use of partial payment procedures controlled by collection personnel or computers. Although there appeared to be a great variance in procedures, it was felt that an efficient approach at this early stage can eliminate many future collection enforcement problems.

VI. Publicity programs, a means of raising the public's social conscience and of promoting taxpayer education in an effort to encourage compliance with the law

Mr. W.A. Stoneham, Assistant Director, Enforcement and Policy, Accounting and Collections Division, Revenue Canada, presented this topic.

In an effort to make the public aware of the taxation process and to gain the public's confidence and voluntary compliance Mr. Stoneham referred the delegates to Canadian Taxpayer Education Programs, such as the "Teaching Taxes" manual used in schools, as well as to taxpayer assistance programs implemented through public relations officers, toll-free telephone service available to taxpayers for assessing inquiries, the issuance of Tax Information Pamphlets, as well as the ongoing serialized publications such as the Interpretation Bulletins, Information Circulars and Income Tax Rulings.

The foregoing provides the general public and especially the tax practitioners in the private sector with essentially the same large body of technical and practical information on departmental interpretations and procedures, as is available to Departmental staff. Revenue Canada further trains community volunteers to assist taxpayers who are in any way incapacitated to file their own returns.

These programs, coupled with periodic media campaigns and a limited number of high quality films shown in movie-houses across Canada have achieved an effective two-way communication between the Department and the public. The resultant confidence of the taxpayers in the fairness of the tax system is reflected in the highest degree of voluntary compliance which exists in Canada today.

In discussions following the delegates agreed with Mr. Stoneham that under the self-assessment system more information must be made available to the public to gain the desirable degree of compliance. At the same time, they agreed that certain procedural processes or information contained in internal manuals on assessment or write-off procedures must not be made public.

The workshops' objectives on Publicity efforts and methodologies to be used to support such effort were, on the delegates' request, expanded to also include recommendations in regard to implementation of training programs.

The workshop findings and recommendations on the publicity objectives were as follows:

1. Publicity on the role and purpose of the tax department, to create better public understanding of its role, is essential to reducing the Department's administrative workload.
2. Publicity efforts should be directed at school children in progressive steps to generate an early understanding of taxation and the creation of a future tax conscience. Children in turn can also educate their parents in tax matters.
3. Mass media such as Radio, T.V., newspapers and publications as well as public speakers should be used to provide publicity on the Department's programs, including filing and payment and instalment requirements etc.
4. Public Relations Officers should be trained and used to provide information to the press on high-profile situations creating positive publicity for the Department. (Investigations, prosecutions, interviews on filing of returns etc.)
5. In remote areas politicians or other individuals such as chiefs of tribal councils etc. could be used to provide basic tax information to the populace in their area.
6. Departmental staff must display proper conduct at all times, must be courteous and well groomed, and their mode of living must be exemplary as often a single employee forms the taxpayer's concept of what the tax department is like.
7. Use of questionnaires was advocated to obtain feed-back from the public on what areas, of interest to them, were not sufficiently covered by existing publications.
8. The delegates advocated the use of simple language in all publications aimed at the general public.
9. One country is in the process of creating a central one-stop centre providing information on all government services, which will include the tax department.
10. It was suggested that C.A.T.A. should assist on the technical side in the creation of a film which would highlight the various positive aspects of taxation, and which could be distributed to C.A.T.A. member countries for public showings.
11. During peak seasons temporary offices can be set up to provide public information to taxpayers in their home areas.

The workshop findings on the Establishment of Training Programs provided the following:

1. There is, in the majority of member countries, a distinct lack of resources for training programs, especially for collection personnel.
2. To alleviate this condition, it was suggested that the countries pool their resources, and attempt to standardize their training programs to the extent possible. The delegates further recommended that central training centres should be created under the auspices of C.A.T.A. where all general training is given to staff of participating members.
3. If financial restraint did not permit sending all the staff to such a centre, senior personnel should be sent, who upon their return home, could pass this training on to more junior staff and at the same time amend it as necessary for local conditions.
4. It was suggested that C.A.T.A. set up a systematic training program for training senior collection personnel, and that this course be periodically improved on the basis of evaluation questionnaires completed by course participants.
5. If the foregoing suggestion was not feasible, C.A.T.A. could prepare a general staff training manual for use by member countries, which could be adapted to local requirements.
6. Lack of training in enforcement procedures and especially court action constitutes a serious problem in a number of the member countries.

There was consensus among the delegates that while training presented a considerable expense, it nevertheless also presented the key to succcessful execution of the departmental programs. The long term benefits derived, therefore, return value worth many times the expense incurred in training staff.

Similarly, it was felt that, if the taxpaying public gains a better understanding of the role of the tax department in relation to the nation's economy, and each taxpayer becomes aware of, or can be made to feel part of, a nationwide effort to create or maintain a country in which he can be happy and proud to live, the effort and expense of publicity programs is returned many-fold.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

VII. Policies and procedures dealing with the deletion of uncollectible debts and small accounts

Presentations on this topic were given by Mr. S. Sivalingam, Deputy Director General Department of Inland Revenue, Malaysia and Mr. H.W. Ramien, Programs Officer, Accounting and Collections Division, Revenue Canada.

Mr. Sivalingam emphasized the importance of tax administrators examining the causes for write-offs and taking steps to eliminate such uncollectible amounts promptly from the Department's Receivables.

He detailed various causes for accounts becoming uncollectible among them extended payment arrangments, poor collection follow-up, unrealistic estimated assessments and disappearance of taxpayer's assets, and he stated that his Department's policy of reviewing uncollectibles with a view toward improving its policies and procedures has been effective and has resulted into only a fraction of 1 percent of the taxes assessed being written off.

While both remission and write-off procedures are available to delete assessed amounts very few situations qualify for the former and the majority of deletions takes place in the form of Write-off of Irrecoverable Tax in accordance with General Treasury Instructions.

Once it can be proven that all reasonable attempts for recovery have been made and the balance cannot be collected and there is no evidence of departmental negligence, the accounts so identified are submitted to the Secretary-General Treasury with full explanation for write-off approval. Upon approval the accounts are deleted from the ledger.

Canada while using very similar criteria uses its computer facilities to remove accounts of nominal size and accounts with poor collection potential from the collector's workload. These accounts are monitored by computer for several years and any activity such as returns filed, changes of address or refunds becoming available will either return these accounts to the collector or will result into refunds being offset or both. In cases of continued inactivity for several years the accounts will eventually be written off.

Accounts qualifying for write-off either after having gone through the foregoing procedure or meeting pre-set write-off criteria are reviewed by a committee of Senior Head Office and District Office officials, who will approve or reject such accounts based on the facts provided. This committee also examines the accounts to determine whether they are uncollectible because of particular departmental programs or procedures.

The write-offs are finally examined and approved at 3 different levels depending on amounts, ranging from the Minister to Treasury Board or Parliament, and only after such final approval are they deleted from the ledger.

In the subsequent round table discussion all delegates agreed on the importance of removing uncollectible accounts from the Department's receivable ledger as soon as their uncollectibility is established, so that Revenue receivables are reflected realistically.

The Plenary raised the point that the amount of work required to substantiate a write-off often discourages staff, who will rather turn their attention to accounts which can still be collected.

Artbitrary (provisional) assessments were cited as a frequent cause for write-off, with the assessments often being unreasonably high and for that reason being impossible to collect. The delegates favoured New Zealand's approach which requires their assessors to substantiate all default assessments as being reasonable.

Several delegates indicated that their departments wrote off the tax balance only, and simply reversed interest and penalty.

The round table discussions following the final presentation were subject to close time constraints and resulted into the comments and recommendations recorded below on the following topics.

1. *Appeals and the effect on collection*

This presented a problem in several, if not most, of the member-countries. While many of the tax statutes required payment in full despite any appeal or objection, in many cases collection action on the amount under dispute was curtailed. This delay in collection in some countries increased the total taxes outstanding considerably and resulted into losses to Treasury when such amounts became irrecoverable because of changes in the taxpayer's financial circumstances. The Canadian approach of requiring the taxpayer appealing his assessment to pledge realizeable security in lieu of payment, was noted with some interest as an alternative which could eliminate such losses.

2. *Ways and means of improving compliance in remote areas*

The delegates advocated the use of radio programs to improve public understanding and acceptance of taxation.

Some countries indicated that setting up local workshops or group discussions, as well as training classes on basic business procedures and bookeeping has had a positive impact, but that it was a slow process to change the population's generally negative attitude in regard to taxation.

Requiring tax clearances for renewal of business licenses, administered locally by village leaders or police, has resulted into improved compliance in several countries.

3. *Recruitment and retention of trained collection personnel*

The consensus was that it was difficult to attract personnel to the collection function, as the career possibilities are relatively narrow within this area. To improve this, the delegates recommended that rotation into other areas should be made available to the staff. Also an appropriate payscale must exist for collectors' jobs to attract individuals with the proper motivation and personality. Such individuals must be self-motivated, conscientious and resourceful in performing their duties. The delegates agreed on the importance of providing the employees with a detailed job description, to ensure they are aware of the scope of their duties, and also to allow proper evaluation of their performance by management.

Discussion arose on the aspect of evaluation and the various approaches used, which varied from "on-the-job" praise or criticism to self-assessment by an employee of his performance with subsequent in-depth discussion with supervisor of specific performance areas, as well as the employee's future aspirations and potential for advancement. In the latter procedure the results are recorded and are reviewed by different levels of management to identify potential candidates for future senior position.

Several countries indicated, that much time and resources had been allocated to the development of an efficient system of staff evaluations, as the latter constitutes an important factor in motivating staff, providing specific training, as well as identifying future potential which can be developed to the administration's and the employee's benefit.

4. *Computer application to tax collection*

It was pointed out by the delegates of countries using computers on a larger scale, that computers do not present the solution to all problems. They stated that a computer system must be preceded by an effective manual system, which can then be adapted. A number of member-countries are presently using computers and have done so for some time, others (a total of 12 countries) are in the process of setting up taxpayer master records, accounts receivable and other accounting processes, with such programs as the issuance of assessments and initial collection follow-up procedures to follow at a later state.

Several of the countries indicated difficulties in developing such programs, and it was suggested that in order to develop a system which will meet the needs for a particular administration, it is essential that the administration's management be well versed in the systems area. Only with such knowledge can the "computer people" be directed into developing programs and systems which will effectively handle specific functions and procedures.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Kailash C. Khanna:

INDIAN BUDGET 1980/81

Expectations of a major corrective exercise in the direct tax structure were built around the Indian Budget for the year 1980/81, particularly because in the immediately preceding year there had been an estimated drop of 3 percent in GNP at 1970/71 prices, a rise in the price level of about 16.8 percent and a general deceleration in industrial capacity utilisation with an expected cost escalation. Regrettably, the Finance Minister, Mr. Venkataraman, has suggested only minor adjustments with crumbs of tax relief thrown here and there. The surcharge on personal income-tax will be reduced from 20 to 10 percent, thereby lowering the maximum marginal rate from 72 to 66 percent. The tax benefit will be insignificant having regard to the prevalent inflation. The eminent Jurist, and until recently India's Ambassador to the United States of America, Mr. N.A. Palkhivala, has strongly advocated indexation of the tax rates to counter inflationary trends.

In the sphere of corporate taxation, the Finance Minister has suggested a continuance of the "tax holiday" with a change in the basis of computation of the taxable income. In the case of companies, 25 percent of the taxable income derived from a new industrial undertaking will be exempt from tax for a period of seven years. However, in computing the quantum of "tax holiday" profits, the losses, depreciation and investment allowance of earlier years in respect of the new industrial undertaking will be taken into account even though these might have been set off against the profits of the taxpayer from other sources. The Finance Minister's reasoning for the proposed change is that the existing "tax holiday" benefit favours capital intensive industry whereas the need is to stimulate investment in labour intensive industry. The proposed quantum of tax-free profits is lower than the existing benefit, and it may not be feasible for a new undertaking to earn adequate profits in its formative years. There is no provision for carry forward of the unabsorbed tax benefit and in many cases the proposed "tax holiday" may be a still-born incentive. It has been suggested that the percentage figure should be raised to 45 and the holiday period extended to ten years.

An otherwise innocuous Budget, it has generated considerable heat and controversy because of suggested retroactive changes in legislation especially in two areas of importance to the corporate sector, a short reference to which has been made in paragraph 85 of the Budget speech. The existing "tax holiday" profits are determined with reference to the capital employed. In 1972 the Central Board of Direct Taxes notified a rule saying that borrowed funds would not be included in the computation of capital employed. The taxpayers contended that since the Income-tax Act used the words "capital employed" without any restriction or limitation, the expression must be understood in its general or commercial sense and that the exclusion of borrowed funds from capital through a notification was beyond the rule-making powers of the Central Board. Several High Courts have decided in favour of the taxpayer. In order to nullify the effect of the Court rulings, the Finance Minister has suggested an amendment of law with retroactive effect as of the year 1972. Another proposal seeks to give retroactive effect as of the year 1968/69 to a change in law to counter a ruling of the Supreme Court. Under an existing provision, barring few cases, 60 percent of intercorporate dividend income is exempt from tax. The relevant provision states that where a domestic company receives "any income by way of dividends", a deduction of 60 percent shall be allowed from such income. Taxpayers contended that the deduction of 60 percent should be calculated with reference to the gross income from dividends and not the net. To clarify, if a company received a dividend of 100 it would straightaway deduct therefrom 60, leaving a dividend income of 40, from which it would further deduct expenses, interest and bank charges, if any, and pay tax only on the balance. The tax authorities, on the other hand, argued that the deduction of 60 percent should be calculated with reference to the net dividend income arrived at after subtracting interest and expenses from the total dividend received. The matter was taken up to the Supreme Court which held that the expression "income by way of dividends" described only the nature of the income and did not relate to the quantification thereof. In order to negate the effect of the Supreme Court's judgement, the Finance Minister has now proposed retroactive legislation stretching back to the year 1968/69.

Chambers of Commerce and other associate bodies have strongly represented against the proposed retroactive amendments on the ground that these are unethical and against the generally accepted principle of retroactive legislation; moreover, these will detract from the sanctity of court judgments and erode the taxpayer's confidence in the stability and finality of tax assessments. If implemented, the changes will upset innumerable completed assessments, both of companies and their shareholders. During the current debate in Parliament, a Member described the proposed retroactive legislation as an attempt to collect taxes "more by crook than by hook". The Finance Minister has not relented so far but his proposed action raised the important question, whether, in the absence of an emergency or exceptional situation, retroactive legislation to remove ambiguities resulting from bad drafting and bureaucratic ineptitude can be justified as a matter of sound fiscal policy.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

HIGHLIGHTS OF THE INDIAN CENTRAL BUDGET FOR 1980-81

The following are the main proposals of the 1980 Budget presented by the Union Minister, Mr. R. Venkataraman, on June 18, 1980 before the Lok Sabha:

A. INCOME TAX

1. CORPORATE TAXATION

a) *Rate of tax*

No change is proposed in the existing corporate tax rate structure.

b) *Tax holiday on profits of a new industrial undertaking*

Under the present law five-year tax holiday is available on new industrial undertakings set up before 1st April, 1981, and this relief is calculated at 7.5 percent of the capital employed in the undertaking. It has now been proposed that this tax holiday will be extended upto March 31, 1985, but the calculation of this tax holiday will not be on the capital employed in the undertaking but on the profits of the new industrial undertaking as under:

In case of companies
— 25 percent of the profits derived from the new industrial undertaking during the relevant year.
In other cases
— 20 percent of the profits derived from the new industrial undertaking during the relevant year.

This tax holiday will be available for a period of seven years and will apply to those undertakings which qualify for the tax holiday under the existing law.

It has also been proposed that the profits of the new industrial undertaking for the purpose of this claim will be computed after taking into account losses, depreciation and investment allowance if any of earlier years in respect of the new industrial undertaking.

The basis of computation of the capital employed in the new industrial undertaking for determining the tax holiday available upto March 31, 1981 is proposed to be incorporated in the Income Tax Act itself (instead of the Income Tax Rules) wherein it has been made clear that in computing such capital borrowings will not be included. This amendment will be applicable with retrospective effect from 1972/73 assessment onwards, if approved.

c) *Additional depreciation on plant & machinery in certain cases*

It has been proposed that additional depreciation at 50 percent of the normal depreciation allowance (excluding extra shift allowance) will be available on new plant and machinery installed after March 31, 1980 but before April 1, 1984. This will be available only in the year of installation.

Additional depreciation will be taken into account in calculating the written down value of the plant and machinery.

Additional depreciation will not be available on ships, aircraft, road transport vehicles, office appliances, machinery or plants installed in any office premises or in residential accommodation or in guest houses etc.

Additional depreciation will also not be allowed on any plant and machinery the whole of the actual cost of which is allowed as deduction.

d) *Expenditure on scientific research*

To encourage in-house research and development activities it has been proposed to allow a weighted deduction equal to 1 1/4 times of the expenditure incurred in approved in-house research and development or carrying out any research programme approved by the prescribed authority. The proposed deduction will not be allowed on expenditure incurred in acquiring land or construction of buildings.

e) *Expenditure on advertisement, publicity and sales promotion*

Under the existing law there are certain restrictions on advertisement, publicity and sales promotion expenses; it has been proposed to withdraw the restrictions.

f) *Export market development allowance*

It has been proposed to amend the Income Tax Act to clarify that the weighted deduction for export market development allowance will be available only on the following expenditure:

(i) advertisement or publicity outside India in respect of the goods, services or facilities dealt in or provided by the taxpayer in the course of his business;
(ii) maintenance outside India of a branch, office or agency for the promotion of the sale outside India of such goods, services or facilities;
(iii) travelling outside India for the promotion of the sale outside India of such goods, services or facilities, including travelling outward from and return to India.

2. PERSONAL TAXATION

a) *Surcharge*

The rate of surcharge on income-tax has been reduced from 20 percent to 10 percent. This will mean that the top slab rate will now come down from 72 to 66 percent.

b) *Raising of exemption limit*

The exemption limit in the case of individuals is proposed to be raised from Rs. 10,000 to Rs. 12,000. However, there has been no change in the slab rates.

c) *Deduction in respect of Life Insurance Premium, contributions to Provident Fund etc.*

The existing rates at which deduction is allowed is:

On	first Rs. 5000	100%
	next Rs. 5000	35%
	balance	20%

© 1980 International Bureau of Fiscal Documentation – BULLETIN

It has been proposed to increase the rates as under:

On	first Rs. 5000	100%
	next Rs. 5000	50%
	balance	40%

d) *Interest credited to member's account in the Provident Fund*

Under the existing law interest credited to a member's account in a recognised Provident Fund in excess of 8.25 percent or in excess of 1/3rd of his salary is liable to be taxed in his hands.

It has been proposed in this budget that the second condition that is interest exceeding 1/3rd of the salary being liable to tax in the hands of the employee should be abolished.

e) *Standard deduction to pensioners*

Under the existing law standard deduction in respect of expenses incidental to employment is allowed against salary income of an employee. The standard deduction is allowed at the rate of 20 percent of the salary upto Rs. 10,000 and 10 percent of the salary in excess thereof, subject to a maximum of Rs. 3,500,—. This deduction is allowed irrespective of whether any expenditure incidental to employment is actually incurred by the employee or not.

It has been proposed that the standard deduction will also be allowed on pensions.

B. WEALTH TAX

(i) It has been proposed to raise the exemption limit for wealth tax purposes from Rs. 100,000 to Rs. 150,000.
(ii) There is no change in the rates of tax.

C. INDIRECT TAXATION

1. CUSTOMS DUTY

Revision in the rates of import duty has been proposed in some cases. A few examples are given below:

a. on all dutiable articles imported as personal baggage the rate is increased from 120 percent ad valorem to 150 percent;
b. on computers and computer peripheral units rate increased from 10 percent ad valorem to 20 percent;
c. on cinematograph films rate increased from 50 paise to Re 1/- per liner metre;
d. full exemption from import duty has been proposed for steel tubes imported for use in the manufacture of industrial gas cylinders of certain specifications;
e. reduction in the import duty has been proposed on certain machineries and testing instrument for printing industry; also for certain other items of machinery and testing instruments.

2. EXCISE DUTY

It is proposed to revise the rates on the following items as under:

a. soda ash raised from 10 to 15 percent ad valorem;
b. caustic soda and caustic potash raised from 10 to 15 percent ad valorem;
c. acids raised from 10 to 15 percent ad valorem;
d. synthetic rubber raised from 5 to 10 percent;
e. on cheaper varieties of toilet soaps reduced from 10 to 5 percent, on toothpaste from 20 to 10 percent;
f. cigarettes which are at present exempt from special excise duty will be levied duty at the rate of 1/10th of the basic duty;
g. excise duty on cheaper television sets reduced from 15 to 10 percent and duty on other television sets reduced from 30 to 25 percent;
h. licence fees abolished on single and two-band radio sets and transistors;
i. cycles and cycle parts as well as sewing machines totally exempted from excise duty;
j. duty on pressure cookers reduced from 15 to 10 percent;
k. it has been proposed that 30 specified life saving drugs will be fully exempted from excise duty;
l. it has been proposed to raise the special excise duty from 1/20th to 1/10th of the basic excise duty on specified items. It has been also proposed to levy special excise duty at the rate of 1/20th of basic duty on some items which are now exempt from such levy.

3. POSTAL TARIFF

a) Postal tariff on letters increased from 30 p to 35 p. but no increase is proposed on inland letters and postcards; postal parcel increased from Rs. 1.50 to Rs. 2 per 500 gms; and
b) Higher charges will be made for shifting and installing telephones. Local telephone calls beyond 5000 in a quarter to be charged at 50 p. per call against 40 p. at present.

D. OTHERS

The Finance Minister has indicated that a Bill will be introduced in the current session of the Parliament to levy a new tax at 15 percent on gross receipts of hotels in which the minimum tariff for a single room is Rs. 75/- per day. This new levy is proposed to be made effective from 1st September, 1980.

It is proposed to levy a tax at 7 percent on interest income of banks and financial institutions which will be allowed to be passed on to the borrowers thereby raising the cost of borrowed funds.

INDIA:

Budget Speech 1980

Extracts from the Budget Speech 1980 pronounced on June 18, 1980 by the Finance Minister Mr. R. Venkataraman.

With respect to the taxation proposals the Finance Minister said the following:

I now turn to my proposals in the field of direct taxes. In framing these proposals, I have borne in mind certain broad considerations, namely, that the rates of direct taxes should be such as to promote voluntary compliance, that the farmers, workers and the middle class should be afforded some relief in pursuance of the commitment in our party's manifesto and some stimulus should be provided for raising the level of savings and investment in the national economy. At the same time, a concerned attempt should be made to counter certain widely prevalent devices for tax avoidance through fragmentation of income and wealth.

The middle class is among the worst hit by the rise in prices in recent years. As hon'ble members are aware, even skilled workers in the organised sector are now liable to income-tax, at the present level of exemption. In order to afford a measure of relief to this class of persons I propose to raise the exemption limit for income-tax on personal incomes from Rs. 10,000 to Rs. 12,000. With a view to keeping the sacrifice of revenue within management limits, the nil rate slab of income is being retained at Rs. 8,000. As a result, in cases where the taxable income exceeds Rs. 12,000 the incidence of income-tax, excluding surcharge, will remain at the existing levels, subject to the grant of marginal relief in cases where the taxable income exceeds the exemption limit by a small margin. This proposal will benefit more than six lakhs * of income-tax payers.

Reduction of surcharge

Hon'ble members will recall that the rates of income-tax on the personal incomes were reduced in 1974 on the basis of a recommendation of the Direct Taxes Enquiry Committee and this process was taken one step further in 1976 when these rates were again lowered. The reduction in rates had largely fulfilled the expectation that it would lead to better tax compliance. Unfortunately, the movement in this direction was reversed under the Janata government and the rates of income-tax were increased in stages. I am of the view that the position in this regard should be set right. I accordingly propose to reduce the surcharge on personal incomes in the case of all categories of non-corporate tax payers from 20 percent to 10 percent. This will not only bring down the maximum marginal rate of tax from 72 percent to 66 percent but will benefit tax payers in all slabs of income.

Reduction of wealth tax

In view of the somewhat steep rise in prices of assets, I also propose to raise the exemption limit for wealth tax from Rs. 1 lakh to Rs. 1.5 lakhs with effect from the current assessment year. In cases where the taxable wealth exceeds this limit, the tax burden will, however, be retained at existing levels, subject to the usual marginal relief.

Government hopes that these concessions will provide the necessary inducement to the vast majority of our tax payers for current declaration of their incomes and wealth.

I propose to counter some of the more commonly used devices for tax avoidance.

Hindu undivided family

As hon'ble members are aware, the separate treatment accorded to Hindu undivided family in tax laws has been widely used for avoidance of proper tax liabilities. I accordingly propose to de-recognise partial partitions of Hindu undivided families both for income and wealth taxation. Partial partitions made on or after 1st January, 1979, will not be recognised for tax purposes and taxes will continue to be levied on the basis that the existing Hindu undivided family had continued to remain joint.

At present, Hindu undivided families having one or more members with independent income exceeding the exemption limit are charged to income-tax at rates which are somewhat higher than those applicable in the case of individuals. In order to further restrict the use of Hindu undivided family for the purposes of tax avoidance, I propose to raise the rates of income-tax in the case of such Hindu undivided families. The maximum marginal rate of 66 percent will now apply on the slab of income over Rs. 50,000 and rates on some of the lower slabs will also be raised to somewhat higher levels. With these two changes in regard to tax treatment of Hindu undivided families, hope that the urge for forming multiple Hindu undivided families merely for the fragmentation of income and reduction of tax liability will be weakened.

Discretionary trusts

Hon'ble members will recall that the government had in 1970 taken several measures to prevent the use of private discretionary trusts as a device for tax avoidance. Experience, however, shows that these measures have not been fully effective and the proliferation of such trusts has not been curbed to the desired extent. I, therefore, propose to tighten the provisions in respect of private trusts.

At present, discretionary trusts are taxed at a flat rate of 65 percent of their income and 1.5 percent of their wealth, or at the rates applicable in the case of an individual, whichever is higher. Under my proposal, such trusts will be charged to income-tax at the maximum marginal rate and the wealth-tax at the flat rate of 3 percent or at the appropriate rate applicable in the case of an individual, whichever is higher. I also propose to make several other provisions in relation to taxation of private trusts with a view to plugging some loopholes which have come to the notice of government. All these provisions will take effect from the current assessment year.

Charities

Charitable and religious trusts are sometimes used for acquiring or maintaining control over business or industry for private ends. In 1975, we have laid down a pattern for investment of funds of charitable or religious trusts if they were to continue to enjoy the tax exemption. With a view to enabling such trusts to change over to the new pattern of investment in a smooth and gradual manner, the law provided that the new pattern may be adopted before 1st April, 1978. This date was subsequently extended to 1st April, 1981. Such trusts have, therefore, been given ample time to adjust to the new policy. I want to put them on notice that this time limit will not be extended.

---

* One lakh = 100,000; one crore = 100 lakhs (10 million).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Long-term savings

Our tax laws have always sought to encourage long-term savings through life insurance, provident funds and other similar instruments. Unfortunately, the efficacy of the provisions for encouraging savings was impaired last year when the incentives for savings were drastically reduced. Hon'ble members should be glad to know that I propose to restore incentives for such savings to the pre-1979 budget levels.

The taxpayers will thus be entitled to 100 percent deduction in respect of the first five thousand rupees of the qualifying savings, 50 percent in respect of the next five thousand rupees and 40 percent of the balance.

As further measure for promoting savings in the household sector, I propose to give an option to income-tax payers to retain moneys in their compulsory deposit accounts beyond the due dates on payment of interest at the existing rate applicable to such deposits. Further, I propose to liberalise the tax exemption in respect of interest on balances with recognised provident funds. At present, interest on such funds is exempt from income-tax to the extent it does not exceed one-third of the salary income of the employee. I propose to remove this ceiling limit.

Tax incentives

It is essential to promote new investment in industry. At the same time, the fiscal system should not lead to a bias in favour of capital-intensive techniques. Keeping these twin objectives in view, I propose to continue the tax holiday in respect of new industrial undertakings, ships and hotels but in a modified form.

Under my proposal, tax holiday will be available in respect of new industrial undertakings, ships or approved hotels with reference to a specified percentage of the income derived from these sources. In the case of companies, 25 percent of the profits derived from these sources will be exempted for a period of seven years. In the case of non-corporate taxpayers the percentage of exempted profits will be 20 percent.

In the case of co-operative societies, the tax holiday will be available for a period of ten years as against seven years in the case of other categories of taxpayers. This concession will be available in the case of all small-scale industrial undertakings which go into production after 31st March, 1981, but before 1st April, 1985, that is, till the end of the new five-year plan period. For other industrial undertakings, the concession will apply only where they do not produce articles or things listed in the Eleventh Schedule to the Income-Tax Act. The concession will also be available in the case of approved hotels which start functioning or new ships which are acquired during that period.

It is necessary to encourage new investment particularly in view of shortages in several key sectors of the economy. As a special stimulus for new investment, I propose to allow in the year of installation, an additional depreciation in an amount equal to 50 percent of the normal depreciation on new machinery or plant installed during the new plan period. The proposed additional depreciation will not be admissible in respect of ships, aircraft, road transport vehicles, office appliances or machinery or plant installed in office premises or residential accommodation.

There is a widespread feeling of frustration among the scientific community. This government is keenly aware of the contribution which our scientists and technologists can make to the economic regeneration of India and is determined to promote research and development activities in a big way.

I, therefore, propose to allow a weighted deduction in an amount equal to 125 percent of the actual expenditure incurred on scientific research in any in-house R and D facility where such expenditure is incurred on a programme approved by the prescribed authority having regard to the social, economic and industrial needs of India. In addition, I propose to extend, the scope of the existing provision for a weighted deduction on the expenditure incurred in scientific research under sponsored programmes in approved laboratories so as to cover the expenditure similarly incurred in in-house R and D facilities of public sector companies. I have no doubt that the hon'ble members will welcome these concessions.

Advance tax

At present, income-tax payers are required to pay advance tax during the financial year on the basis of their own statements or estimates.

Where the estimated advance tax is likely to fall short of the tax on current income by more than 33-1/3 percent of the estimate, the taxpayers are required to make an upward revision of the estimates. I propose to reduce this margin from 33-1/3 percent to 20 percent in the case of companies. There will be no change for other taxpayers. This change will enable us to realise a larger share of the tax due as advance tax and thus have a favourable impact on government's ways and means position in 1980-81.

Employment of handicapped

In order to encourage the employment of blind and handicapped persons in business and industry, I propose to provide for a weighted deduction of one and one-third times the salary paid to such persons by employers where such salary does not exceed twenty thousand rupees in a year. Further, I propose to enhance the deduction currently available in computing the taxable income of blind and handicapped persons from five thousand rupees to ten thousand rupees.

Pensioners

At present, standard deduction in computing the salary income is not available in the case of pensioners. With a view to affording some relief to pensioners who are amongst the worst hit by the rise in prices, I propose to extend the benefit of standard deduction in their case as well.

Sportsmen

In order to encourage our sportsmen to compete in international events, I propose to allow a deduction, equal to 25 percent of their foreign earnings if these are brought into India in foreign exchange. This provision will apply in relation to the current assessment year and onwards. I also propose to allow higher deduction in respect of savings made by sportsmen through life-insurance and provident funds etc., as currently available in the case of authors, playwrights, artists, musicians and actors. Sportsmen will thus be entitled to deduct contributions made to life insurance and provident funds up to 40 percent of their professional income and 30 percent of the remaining income, subject to a maximum of Rs. 50,000.

Publicity

In 1978, certain restrictions were placed on the deductible amount of expenditure on advertisement, publicity and sales promotion. These restrictions have particularly hurt small and medium business. I, therefore, propose to do away with these restrictions.

Agriculture

At present, income from poultry and dairy farming and livestock breeding is exempt from income-tax up to 33-1/3 percent of such income or ten thousand rupees, whichever is higher. I feel that time has come when persons deriving income from these sources should also contribute a little more to the national exchequer. I accordingly propose to restrict the deduction in respect of such income to one-third of such income or fifteen thousand rupees, whichever is less.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

At present, agricultural property is included in the taxable wealth for the purposes of the levy of wealth-tax. At the time when agricultural property was brought within the tax net, it was hoped that it would be a potent instrument for mobilising resources from the affluent section of agriculturists. But our experience of over the last decade has been most disappointing. The amount realised as wealth-tax on agricultural property has generally been less than Rs. 1 crore per annum. The valuation of agricultural land has posed difficulties leading to complaints of harassment. As this tax has clearly failed to achieve its original objective, I propose to discontinue the levy of wealth-tax on agricultural property except in the case of owners of tea, coffee, rubber and cardamom plantations. I am sure that this measure will be widely welcomed by our farmers.

Other measures

I also propose to make certain amendments in the Income-Tax Act to counteract certain court decisions which have resulted in unintended benefit to taxpayers. The Finance Bill further contains certain proposals for the amendment of direct taxes which are of minor significance. I will not take the valuable time of the House in explaining the same.

The reduction in rates and other concessions in respect of direct taxes should ordinarily involve loss of revenue. However, I am of the view that reduction in rates will lead to significantly improved compliance with tax laws. The legislative amendments made for countering tax avoidance devices and the changes in the provisions in regard to advance tax should result in larger accretion of revenue. On a broad judgement of the overall impact of all the proposals relating to income-tax and wealth-tax, I am not assuming any loss of revenue. I recognise, however, that there may be need for some adjustment in the inter-se shares of Centre and states under income tax. Such adjustments will be made in the course of the year in the light of trends in collections.

An upward adjustment of leading rates should moderate the inflationary pressures in the economy. I accordingly propose to revive interest-tax in relation to interest earned by scheduled commercial banks after 30th June, 1980. The scope of the levy is being extended to cover also interest received by the larger all-India industrial finance institutions, namely, IDBI, ICICI, IFCI and IRCI. The tax will be levied at the rate of 7 percent on the chargeable amount of interest as in the past. This measure will yield Rs. 217 crores in a full year and about Rs. 108.5 crores in the year 1980-81.

With a view to checking lavish expenditure incurred on accommodation and entertainment in luxury hotels, I propose to introduce a bill in the current session to levy a new tax at 15 percent on gross receipts of hotels in which the minimum tariff for a single room is 75 rupees per day. The new levy is proposed to be made effective from 1st September 1980. This will yield about Rs. 12 crores in a full year and the revenue during 1980-81 will be of the order of Rs. 5 crores.

Indirect taxes

I shall now turn to my proposals on indirect taxes. In framing my proposal I have kept in view the following objectives: to the extent additional resource mobilisation is inescapable, this should be done in such a way as not to enhance the burden on any commodity significantly. Subject to this consideration, the small segment of our industry should be encouraged. Industries with significant employment and export potential should be provided encouragement through suitable adjustment of duty structure. The duty burden on some articles of common consumption should be reduced or totally removed.

At the outset I would like to put the hon'ble members at ease by pointing out that my proposals are modest. I have tried to avoid the usual device of picking out selected items for new or increased levies at relatively high rates.

For this year, I have sought to spread the effect of the additional taxation thinly on a wide range of products, taking care to leave out articles of common consumption. I propose to achieve this objective through the special excise duty which is even now leviable on all excisable goods at 1/20th of the basic excise duty, but from which a number of commodities have been exempted.

Under my proposal, the special excise duty will be levied on those items which are at present exempt from the levy, at the rate of 1/20th of the effective basic excise duty rates applicable. Certain commodities will, however, continue to be totally exempt from the levy. Thus there will be no special duty on motor spirit including naphtha, kerosene, high speed diesel oil, light diesel oil and liquefied petroleum gas or on coal or electricity.

Again, the special excise duty will not be levied on matches, or on vanaspati, or on goods falling under tariff item 68. Where special excise is already leviable at 1/20th of the effective basic duty, I propose to increase this to 1/10th of the effective basic duty.

This increase will not, however, apply to furnace oil, asphalt, bitumen and tar, petroleum products not otherwise specified and calcined petroleum coke. Sugar and processed vegetable non-essential oils will also not be subjected to the increased levy.

Cigarettes, which are at present totally exempt from special excise duty, will be subjected to special excise duty at 1/10th of the basic excise duty rates. These proposals would yield a revenue of Rs. 197.71 crores in a full year. The impact of these proposals relating to special excise duties will also yield sum of Rs. 16.75 crores in the shape of countervailing duties on imported goods.

Soda ash and caustic soda command a sizable premium in the market on account of persistent shortages. I propose to mop up a part of this premium by raising the excise duty on these products from ten percent to fifteen percent ad valorem. I also propose to increase the excise duty on starch from ten percent to fifteen percent ad valorem.

This step will bring these chemical products on a par with other chemical products, which, in general, bear excise duty at 15 percent ad valorem. Synthetic rubber at present bears duty at the very low level of five percent ad valorem.

As a revenue measure, I propose to raise the excise duty on synthetic rubber from five percent to ten percent ad valorem. Similarly, the rate of excise duty on specified acids is being raised from ten percent to fifteen percent ad valorem. These measures would fetch in a full year, additional revenue of Rs. 18.93 crores.

On revenue considerations, I propose to subject molasses to a specific duty of Rs. 30 per metric tonne under a separate item in the central excise tariff instead of eight percent under item 68 of the central excise tariff as at present. The levy is, however, proposed to be restricted to molasses produced in vacuum pan sugar factories. Molasses produced in khandsari sugar units, which go inter alia for edible purposes, are proposed to be exempted. The revenue yield as a result of this proposal is estimated to be Rs. 4.24 crores in a year.

Protection of industry

I now come to proposals which are designed to provide a higher degree of protection to certain sectors of indigenous industry. The first proposal related to audio frequency amplifiers, an item reserved for the small-scale sector.

In view of the adverse effect of imports of this item, I propose to increase the customs duty on imports from 75 percent to 120 percent ad valorem.

My other proposal relates to imported unexposed colour positive cinematograph films, in respect of which the basic customs

© 1980 International Bureau of Fiscal Documentation – BULLETIN

duty is proposed to be raised from 50 paise to Rs. 1 per linear metre to enable the indigenous public sector unit to withstand competition from imports. I also propose to increase the countervailing duty on imported computers from ten percent to 20 percent ad valorem as a measure of affording protection to the indigenous computer industry.

These measures are designed to yield additional revenue of about Rs. 1.83 crores in a full year.

I have only one more revenue proposal in the field of indirect taxes. This relates to passengers' baggage. As hon'ble members are aware, baggage allowances were substantially liberalised in 1978 and, for the generality of Indian passengers going abroad for short visits, the allowances consist of Rs. 1,000 worth of duty-free goods and Rs. 2,000 worth of goods on payment of duty. Despite this liberalisation, goods in the nature of baggage continue to be imported by many passengers in quantitites substantially higher than the permissible limits.

This is mainly due to the prevailing craze for foreign goods and the high margin of profits on the sale of these goods in India. Such cases of import of baggage items in excess of the permissible limits necessitate initiation of adjudication proceedings which generally have the effect of slowing down the tempo of passenger clearance in out international airports.

I have given thought to this problem and I am making two proposals in this regard. The first is a pure revenue measure of increasing the effective rate of duty on baggage articles in excess of the free allowances from 120 percent ad valorem to 150 percent ad valorem. This measure is to come into force immediately and is expected to yield an additional Rs. 20 crores in a full year.

The second measure to be brought into force shortly, provides for the levy of duty at a flat rate of 320 percent on baggage imported in excess of the permissible limits, that is, in excess of what can be passed free or on a duty of 150 percent.

At present, such articles would be treated as unlicensed imports, resulting in confiscations, fines and penalties, designed to wipe out any profit on their sale.

The increased rate of duty is intended to replace these fines and penalties, without having to go through the time-consuming process of adjudication. Goods which are obviously in the nature of trade goods will, however, still attract penal action.

Rationalisation measures

I have a few other proposals which are essentially in the nature of rationalisation measures.

The first one relates to aerated waters. In the interest of simplification, it is proposed to do away with the existing distinction between aerated waters containing caffeine and those not containing caffeine for the purpose of excise duty.

Instead, it is proposed to levy on all flavoured aerated waters a uniform duty at 40 percent ad valorem. The revenue effect of the proposal is expected to be negligible.

I have given considerable thought to the problems thrown up as a result of the changes made in the 1979 budget in the excise duty structure applicable to the match industry.

While the duty advantage enjoyed by the cottage sector obviously needs to be maintained, the non-mechanised middle sector should not be allowed to make inroads into the cottage sector.

In order to ensure that the benefit of the lower rate of duty accrues only to the genuine cottage sector units, I propose to confine the duty concession to match boxed bearing approved labels and sold to or marketed through the KVIC, state agencies and registered cooperative societies.

At the same time, I do not find justification for the continuance of the existing limits placed on the clearances of matches by the cottage sector at the concessional rate of duty. I, therefore, propose to abolish the existing limit on production by the cottage sector units. I am confident that this package of measures will result in accelerated growth of the cottage sector of the match industry.

There have been complaints of malpractices in the biri industry by manufacturers who have been taking advantage of the liberal exemption limit applicable to the unbranded sector which is at present 60 lakhs of biris per manufacturer per year.

With a view to reducing the possibilities of malpractices, I propose to lower this exemption limit to 30 lakhs of unbranded biris per manufacturer per year, which will still leave out of the excise net the really small manufacturer and the self-employed manufacturer. This is not designed as a revenue measure.

Some of the provisions in the Finance Bill are aimed at rationalisation or clearer definition of certain central excise tariff items to remove doubts or difficulties which have come to notice. The details of these measures may be found in the budget papers.

Concessions

I shall now turn to concessions in the area of indirect taxes. The small manufacturer plays a significant role in our economy. I would like to improve his competitive position vis-a-vis the large manufacturer and thus widen the entrepreneurial base of our economy.

Only in this way can we check concentration of economic power. There is already a scheme of excise duty concessions applicable to manufacturers of 70 excisable commodities, under which clearances upto Rs. 5 lakhs in value in a year have been exempted from duty.

I now propose to liberalise this concession in two respects. First I propose to include two more groups of commodities under the scheme. These are chemicals, namely, sodium, bi-chromate, bleaching powder, calcium carbide and artificial and synthetic resins and plastic materials. Besides, the coverage is being widened in respect of paper and paper boards. But the second and more important concession which I propose to introduce is that in respect of all the commodities covered by the scheme, clearances between Rs. 5 lakhs and Rs. 15 lakhs will bear only three-fourths of the applicable rate of excise duty as against the normal duty at present. This measure should benefit a large number of small manufacturers. The revenue sacrifice will be of the order of Rs. 6.50 crores in a full year.

Last year's budget made a change which affected a substantial number of small manufacturers of goods falling under the residuary item 68 of the Central Excise Tariff. Hon'ble members will recall that the quantum of duty-free clearances was reduced from Rs. 30 lakhs to Rs. 15 lakhs. I had opposed this change then.

As a measure of undoing the hardship caused to such small manufacturers, I propose to provide for complete exemption from duty for clearances up to Rs. 30 lakhs per annum. In other words, small manufacturers of goods falling under item 68 of the Central Excise Tariff, whose capital investment on plant and machinery does not exceed Rs. 10 lakhs, will be eligible for complete exemption from duty on their first clearances of goods up to Rs. 30 lakhs in a financial year. The quantum of clearances eligible for full exemption from duty will be fixed at a correspondingly lower figure. This concession is expected to cost Rs. 2.4 crores in a full year.

Paper and allied products are in short supply in the country and new investment in this sector has not been readily forthcoming. Much can be done by smaller units to help in filling the production gap. To encourage them, I propose to extend a concessional rate of duty of 20 percent ad valorem as against the present rate of 30 percent to paper and paper board produced by small manufacturers whose clearances in

© 1980 International Bureau of Fiscal Documentation – BULLETIN

the preceding financial year did not exceed 300 tonnes of paper and paper board. This concession will cost a little less than Rs. 1 crore in a full year.

The electronics industry has considerable employment and export potential. We have the necessary skills and expertise and these should be harnessed through appropriate fiscal incentives for development of the electronics industry in a big way.

This is a field which offers great scope to small-scale manufacturers. I am, therefore, proposing some duty concessions in respect of the industry.

There will be a reduction in customs duty on specified items of capital goods such as machines and instruments required by the electricals industry and not produced within the country. The customs duty on such items will be reduced from the present levels of duty (which in some cases are as high as 89 percent ad valorem) to a total of 25 percent ad valorem.

Similarly, I also propose to reduce the customs duty on specified raw materials and components required for the electronics industry from their present levels (which in some cases are higher than 200 percent ad valorem) to 45 percent ad valorem plus countervailing duty where an excise duty is leviable under item 68. These two concessions will cost the exchequer Rs. 4.7 crores in a full year.

The experience of other countries shows that the growth of consumer electronics facilitates in due course the development of other sophisticated lines of production in electronics.

Television is a powerful medium of communication and education. With a view to enabling a larger number of people to get the benefit of this medium, I propose to reduce the excise duty on cheaper priced TV sets from 15 percent to 10 percent ad valorem, and to effect a corresponding reduction in the duty on other TV sets from 30 percent to 25 percent ad valorem. These concessions would entail a revenue sacrifice of Rs. 1.5 crores in a year.

Radio is an equally powerful instrument of education and entertainment and is more widely in use. Government considers that single and two band radio sets should be popularised particularly in rural areas. The licence fee on such sets has proved to be irksome and inhibits purchase of radio sets by the rural folk. It is, therefore, proposed to abolish the fee in respect of single and two band radio sets including transistor sets. This measure, which I am sure will be widely welcomed, will cost government about Rs. 4 crores.

Our computer industry is still in its infancy, compared with those of other countries. In order to provide an additional incentive for indigenous production and improvement, I propose to reduce the excise duty on indigenously manufactured computers from 25 percent to 20 percent ad valorem.

Ship building

Ship building is a high priority industry and has an important part to play in promoting economic self-reliance. The Indian ship building industry is finding it increasingly difficult to face competition from foreign shipyards. I, therefore, propose to extend full exemption from excise duty to ocean going vessels built in Indian shipyards. This relief would cost about Rs. 5 crores in the current financial year.

Hon'ble members would be aware that government has been following the practice of bringing down the import duty on selected machinery items having no indigenous angle to 25 percent ad valorem as a measure of reducing capital costs in industries.

Other industries

Carrying this process further, I propose, this year, to reduce the import duty to 25 percent ad valorem on twelve more items of capital equipment. These include five items of machinery used in the printing industry, such as high speed letter press rotary and off-set rotary printing machines, mono lino type casting machines etc. These concessions would entail a revenue sacrifice of Rs. 1.84 crores in a full year.

The cost of high pressure gas cylinders constitutes a significant portion of the total capital outlay required by the glass industry. With a view to reducing, at least in part, this capital outlay, I propose to extend complete exemption from customs duty on steel tubes imported for fabrication of high pressure gas cylinders. I also propose to reduce the excise duty on such cylinders from the existing level of 15 percent to 8 percent ad valorem, which is the duty level applicable under item 68. These two measures, taken together, are estimated to cost Rs. 1.89 crores in a full year.

I have a proposal of general application, which is intended to facilitate manufacturers of excisable goods, using inputs on which excise duty is leviable. In order to give relief in such cases, two procedures are in vogue at present. One is what is called the set-off procedure. The other is the proforma credit procedure under Rule 56A of the Central Excise Rules.

The proforma credit procedure is generally recognised to be more beneficial and less irksome to the manufacturers. I, therefore, propose to replace the existing concessions based on the set-off procedure by similar concessions based on the proforma credit procedure. I am sure that this measure will be welcomed by industry.

Consumption goods

It is a little painful for me to remind hon'ble members that last year's budget had increased excise duty on a number of articles of common consumption to a significant extent. I propose to reverse this trend. Thus —

— specified life-saving drugs, 30 in number, will be fully exempted from excise duty. The list will be kept under periodical review with a view to adding more items as may be warranted.

— controlled cloth is meant for the weaker sections of society and its cost should be as low as possible. I, therefore, propose to exempt controlled cloth from excise duty.

— cotton and cotton-viscose blend hosiery consisting of items like banians are of relatively low value and these are now subject to excise duty at 8 percent. I propose to exempt them fully from excise duty.

— cycles are the poor man's conveyance. I, therefore, propose to totally exempt cycles and cycle parts falling under item 68 from excise duty.

— sewing machines, which are indispensable to the housewife and also enable the weaker sections to earn a living, will also be fully exempt from excise duty.

— pressure cookers which take the drudgery out of the housewife's daily tasks and save fuel now attract duty at 15 percent. I propose to reduce it to 10 percent.

I also propose to make substantial reductions in excise duty on some other items of everyday use, accordingly—

— excise duty on cheaper varieties of toilet soap will be reduced from 10 percent to 5 percent.

— excise duty on tooth paste will be reduced from 20 percent to 10 percent.

— vacuum and gas-filled bulbs not exceeding 60 watts will have the duty reduced from 15 percent to 10 percent.

I am sure these substantial concessions, which would cost the exchequer approximately Rs. 15 crores in a full year, will be welcomed by Parliament and by the public. I also hope that industry and trade will play fair by the consumer and pass on the benefit of these duty reductions to the consumer.

Transportation

Our party's election manifesto has referred to the need to encourage dieselisation of taxis. In fulfillment of this commitment and with a view of giving an incentive for taxi-owners to go in for dieselisation, I propose to extend full excise duty exemp-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

tion to diesel engines used for conversion of petrol-driven taxis.

My second proposal is aimed at giving relief to the cycle rickshaw drivers. Powered cycle rickshaws are already exempt from excise duty. To encourage motorisation of non-powered cycle rickshaws, I propose to extend full duty exemption for internal combustion engines used for this purpose. I am sure hon'ble members will welcome this measure, as a visible sign of our keenness to reduce physical strain and at the same time encourage this relatively cheap means of transport.

New tribunal

Before I leave the field of indirect taxes, I have a major decision of policy to announce. For the past couple of decades, there has been a persistent public demand for the setting up of an independent appellate tribunal for customs and Central Excise matters, somewhat similar to the set-up on the direct taxes side.

This demand has recently been endorsed by the Estimates Committee of Parliament. Government has, in the past, not been in favour of such a system, as it was felt that it would not be appropriate in the case of indirect taxes, and that the present departmental machinery was in fact adopting an objective approach.

I think a time has come when we should gracefully accept the common view, which is based on the dictum that justice should not only be done but should also seem to be done. It is in this spirit that provision has been made in the Finance Bill for setting up an appellate tribunal to hear appeals in respect of customs, Central Excise and gold control matters.

This tribunal will be independent of the executive machinery charged with the responsibility of day-to-day administration of revenue laws. I have no doubt that this measure will meet with the whole-hearted approval of Parliament and of trade and industry.

My taxation proposals will yield a sum of Rs. 223.22 crores in a full year in Central Excise duties and Rs. 39.58 crores in customs duties. The reliefs I have announced add up to Rs. 34.75 crores on the Central Excise side and Rs. 7.93 crores on the customs side.

The net yield is, therefore, Rs. 188.47 crores from Central excise duties and Rs. 31.65 crores from customs duties. The accrual to the Central exchequer in a full year will be Rs. 144.85 crores and the share of the states will be Rs. 75.27 crores.

Where changes are proposed to be made by notifications, effective from the 19th June, 1980, copies of such notifications will be laid on the table of the House in due course.

TVA ET PRESTATIONS DE SERVICES

Journée d'études franco-belgo-luxembourgeoise
du 7 mars 1980

For an English translation of this Introduction and English summaries of the other French texts, see at the end of this Article.

INTRODUCTION

Par Prof. Dr. Paul Sibille

Plusieurs groupements nationaux de l'Association Internationale de Droit Fiscal (I.F.A.) entretiennent depuis plusieurs années l'excellente coutume de rencontres bilatérales au cours desquelles des rapports sont présentés et des discussions engagées sur des thèmes et des questions qui intéressent particulièrement leurs pays.

C'est ainsi que, pour faire pendant à la journée d'études tenue à Paris en mai 1978, le groupement français et le groupement belgo-luxembourgeois ont organisé une journée d'études à Bruxelles le 7 mars 1980.

Cette journée a été consacrée à l'étude des difficultés d'application de l'article 9 de la 6ème directive du Conseil des Communautés européennes du 17 mai 1977 relatif au lieu où une prestation de services est considéré comme exécutée et donne ouverture à la T.V.A. et des solutions qu'il y a lieu d'y apporter (compte tenu de la directive no. 8 relative aux modalités de remboursement de la taxe sur la valeur ajoutée aux assujettis non établis à l'intérieur du pays, qui vient d'être adoptée par le Conseil des Ministres de la Communauté européenne).

L'expérience acquise depuis le 1er janvier 1978, date à laquelle la directive no. 6 du Conseil des Communautés européennes est entrée en vigueur, au moins dans certains pays de la Communauté, fait en effet apparaître que l'article 9 de la directive pose des problèmes dont la solution est, dans l'état actuel de la législation des divers pays concernés et des instructions administratives correspondantes, lorsqu'il en existe, loin d'être evidente, quand elle ne varie pas de pays à pays.

Les problèmes qui ont été spécialement étudiés au cours de cette journée d'études furent les suivants:

a) définir de façon concrète les services énumérés à l'article 9 de la directive, qui sont soustraits par celle-ci au régime de la taxation dans le pays du domicile de l'auteur de la prestation;

b) comment le prestataire de services, débiteur d'une T.V.A. dans un pays où il n'est pas établi et n'a pas d'établissement, peut-il faire pour s'acquitter de ses obligations sans difficultés excessives *sur le plan administratif ou financier?*

c) comment l'utilisateur d'une prestation de services qui a supporté la charge afférente à ces services peut-il la récupérer sans difficultés excessives *lorsque, remplissant les conditions voulues pour obtenir cette récupération, il n'est pas établi dans le pays où la T.V.A. a été payée par le prestataire de services?*

Les séances de travail ont été présidées par M. Henri LEVY MORELLE, Président de la section belgo-luxembourgeoise de l'I.F.A., chargé de cours à L'U.L.B. La co-présidence était assurée par M. Georges EGRET, Secrétaire général du groupement français de l'I.F.A., en l'absence de son Président M. Max LAXAN.

L'organisation de cette journée d'études a pu être menée à bonne fin grâce, pour la partie scientifique, à MM. Jean de LONGUEVILLE et Guy van FRAYENHOVEN, respectivement Président et Membre du Comité scientifique du groupement belgo-luxembourgeois, et, pour la partie matérielle, à M. Jacques AUTENNE, Maître de conférences à l'U.C.L., Secrétaire du groupement belgo-luxembourgeois.

Le groupement belgo-luxembourgeois se félicite d'avoir trouvé auprès du Bureau International de Documentation Fiscale, à Amsterdam, l'occasion de publier les travaux de cette journée d'études, comportant les rapports, les parties essentielles des exposés et les résumés des débats.

Le rassemblement de ces matériaux a pu être réalisé grâce aux notes recueillies et retranscrites par Madame Marie-Cécile van GRIEKEN, assistante à l'Ecole Supérieure des Sciences Fiscales, sous la Direction du Professeur P. SIBILLE, Directeur de l'Ecole.

La présente publication constituera sans nul doute un guide précieux pour les juristes et experts fiscaux et pour les entreprises qui sont confrontées continuellement avec l'un des problèmes les plus complexes en matière de T.V.A. dans les relations internationales.

INCORPORATION DE LA SIXIEME DIRECTIVE SUR LA T.V.A. DANS LES LEGISLATIONS NATIONALES

Les pays membres des Communautés Européennes ont adapté leur législation relative à la T.V.A. en vertu de la 6ème directive. Les modifications ont pris effet aux dates suivantes:

Belgique	— le 1er janvier 1978
Danemark	— le 1er octobre 1978
France	— le 1er janvier 1979
Irlande	— le 1er mars 1979
Italie	— le 1er avril 1979
Luxembourg	— le 1er janvier 1980
Pays-Bas	— le 1er janvier 1979
République Fédérale Allemande	— le 1er janvier 1980
Royaume-Uni	— le 1er janvier 1978

SUJET I: Lieu des prestations de services

Exposé

BELGIQUE: Localisation des opérations imposables*

par Jacques Malherbe **

LIVRAISONS DE BIENS

Aux termes de la directive (art. 8.1.b)) comme du Code belge, la livraison d'un bien a lieu à l'endroit où se trouve ce bien au moment de la livraison.

La directive prévoit que, si un bien est transporté ou expédié, la livraison a lieu au point de départ du transport. S'il fait l'objet d'une installation ou d'un montage, la livraison a lieu à l'endroit où ces travaux se font (art. 8.1.a)).

Le Code belge édicte les mêmes règles en situant au départ du transport ou à la fin de l'installation le moment de la livraison (art. 15, §1, al.2, 1o). Le lieu de celle-ci étant déterminé par la localisation du bien au moment de la livraison, le résultat est identique.

PRESTATIONS DE SERVICES

La 6ème directive situe le lieu d'une prestation de services au siège de l'activité économique du prestataire ou de l'établissement stable rendant la prestation et, subsidiairement, du domicile ou de la résidence du prestataire (art. 9.1). Il abandonne le critère du lieu d'utilisation du service, introduit par la 2ème directive (art. 6.3) et repris par la réglementation belge (Code, art. 21 ancien et arrêté royal no. 5 du 6 février 1970, relatif au lieu d'utilisation des prestations de services en matière de T.V.A.). L'article 21 nouveau du Code s'aligne sur la directive (§1).

Il adopte également les nombreuses exceptions au critère principal établi par la directive:

a) Les services se rattachant à un immeuble sont localisés au lieu de situation du bien (directive, art. 9.2.a) et Code, art. 21, §3, 1o). Ils comprennent non seulement les travaux immobiliers, mais:
   - les prestations des agents immobiliers comme intermédiaires et des experts;
   - les travaux d'étude ou de contrôle des architectes, géomètres et ingénieurs;

   comme prévu la directive, et en outre:
   - la mise à disposition d'emplacements de parcage de véhicules, d'entreposage de biens, de logements meublés, d'emplacements de camping;
   - la location d'immeubles ou de coffres-forts;
   - la gestion d'immeubles (Code, art. 21, 1o et arrêté royal no. 5 du 27 décembre 1977 concernant les services relatifs à un immeuble par nature en matière de T.V.A.).

b) Les prestations de transport sont rattachées au lieu de transport en fonction des distances parcourues (directive, art. 9.2.b) et Code, art. 21, §3, 3o).

c) L'endroit où les prestations sont matériellement exécutées sert à localiser:
   - les activités culturelles et assimilées, y compris celles de leurs organisateurs et les services accessoires;
   - les activités accessoires au transport, telles que chargement et manutention;
   - les travaux portant sur des biens meubles corporels, y compris les expertises (directive, art. 9.2.c)). En ce qui concerne ces derniers, le Code belge les localise à l'endroit où se situe le bien (art. 21, §3, 2o). Cet endroit coïncide normalement avec le lieu d'exécution du travail.

d) La location de biens meubles corporels, autres que des moyens de transport, est localisée à l'endroit de leur utilisation. Si le loueur est établi dans la CEE, encore faut-il que le bien soit exporté dans l'Etat d'utilisation (directive, art. 9.2.d); Code, art. 21, §3, 5o).

e) Le siège de l'activité économique du preneur ou de l'établissement stable pour lequel la prestation de services est rendue et, subsidiairement, le domicile ou la résidence du preneur, est considéré comme lieu de prestation des services suivants:
   - cession ou concession de droits intellectuels, auxquels le Code ajoute les monopoles de vente ou d'achat et le droit d'exercer une activité professionnelle;
   - publicité;
   - travaux intellectuels des conseillers, ingénieurs, bureaux d'études, experts comptables, à l'exclusion, en Belgique, pendant la période transitoire, des avocats;
   - l'engagement de ne pas exercer une activité professionnelle ou un droit intellectuel;
   - les opérations bancaires et financières, autres que la location de coffres-forts, les opérations d'assurance étant exonérées;
   - la mise à disposition de personnel;
   - les services des intermédiaires autres, précise le Code, que les commissionnaires qui sont réputés acheteurs ou vendeurs, intervenant dans la fourniture des prestations énumérées ici (directive, art. 9.2.e); Code, art. 21, §3, 7o).

I. INTRODUCTION
II. DEFINITION DU LIEU DE LA PRESTATION
III. LES OBLIGATIONS DU PRESTATAIRE DES SERVICES
IV. PROCEDURE DE DEDUCTION DE LA TAXE EN AMONT ET PROCEDURE DE REMBOURSEMENT PREVUE PAR LA 8ème DIRECTIVE

I. INTRODUCTION

La sixième directive du Conseil des Communautés Européennes en matière de TVA s'est traduite au Grand Duché de Luxembourg par une loi du 12 février 1979, qui est entrée en vigueur le 1er janvier 1980.

En théorie cette modification législative a apporté des changements importants dans la taxation des prestations de services effectués par des assujettis à la TVA, les prestations de services étant définis par la loi comme opération ne constituant ni une livraison de biens ni une importation, et l'assujetti étant défini comme toute personne, résidente ou non, effectuant de façon indépendante et à titre habituel des opérations relevant d'une activité économique quelconque. Conformément à l'article 2 de la loi organique de la TVA, sont soumises à la taxe les prestations effectuées à titre onéreux à l'intérieur du pays.

En l'occurrence ces changements sont le résultat d'une optique fondamentalement différente que la sixième directive a imposée dans la définition du lieu d'une prestation de service. D'autres changements paraissent plutôt de nature pratique, les principes afférents étant comparables à ceux ayant déjà existé sous l'ancienne législation. Tel est notamment le cas pour certains des services énumérés à l'article 9 de la directive.

Le système antérieurement en vigueur a paru simple, mais son application donnait lieu à des difficultés notamment en raison des interprétations divergentes dans les différents pays-membres de la CEE.

En effet, conformément à l'article 17 (ancien) de la loi organique de la TVA, le lieu de la prestation de service était réputé se situer à l'endroit où le service rendu était utilisé ou exploité. Ce principe prévoyait en conséquence l'assujettissement à la taxe des prestations de service facturées par des étrangers à des résidents du Grand Duché, à moins qu'il ne pouvait être prouvé que ces services étaient effictivement utilisés ou exploités en dehors du territoire grand-ducal.

En ce qui concerne les assujettis établis dans le Grand-Duché de Luxembourg, il existait une exonération correspondante en ce que les prestations de service effectuées pour le compte des commettants étrangers pour les besoins de leur entreprise, se trouvaient exonérées.

La difficulté principale consistait à déterminer le lieu de l'utilisation, et la tendance de certaines administrations fiscales de localiser l'utilisation du service dans leur pays a entraîné des désavantages certains pour beaucoup de preneurs assujettis.

C'est pour atteindre une harmonisation plus poussée des législations et de leur interprétation que le critère du lieu d'utilisation du service a été abandonné.

En conformité avec la sixième directive, la loi du 12

© 1980 International Bureau of Fiscal Documentation – BULLETIN

février 1979 a posé comme principe que, sauf exception, toutes les prestations exécutées ou réputées exécutées à l'interieur du territoire sont soumises à la TVA, étant entendu qu'en principe le lieu de la prestation du service est le lieu de l'établissement stable à partir duquel le service est rendu. La sixième directive est ainsi plus proche du principe retenu par la loi allemande aux termes duquel un service est presté à l'intérieur du pays si l'entrepreneur y déploit son activité de facon prépondérante (par. 3 al. 10 UStG.), mais elle a introduit la présomption irréfragable que, sauf exception, ce qu'elle prévoit, l'activité est exercée au siège économique ou dans l'établissement stable du prestataire. Au Grand-Duché, l'établissement stable n'est pas défini dans la loi organique de la TVA. Il faut donc se référer à la législation sur les impôts directs (loi d'adaptation fiscale paragraphe 16).

Les exceptions sont énumérées à l'article 9 de la directive qui prévoient un régime s'inspirant du principe de l'article 6 al. 3 de la seconde directive (lieu d'utilisation effectif du service) qui avait été repris par l'ancien article 17 de la loi, même si cela ne ressort pas des travaux préparatoires de la directive.

Il est toutefois indéniable que ces nouvelles dispositions considèrent des services effectivement prestés à l'intérieur du pays comme étant prestés à l'étranger, et d'autres services effectivement prestés à l'étranger comme ayant été prestés à l'intérieur du pays. La différence fondamentale entre la nouvelle et l'ancienne loi est en conséquence l'introduction de critères précis définissant le lieu où la TVA est à payer.

II. DEFINITION DE LIEU DE LA PRESTATION

Le lieu de la prestation d'un service pour les besoins de la législation sur la TVA n'est pas nécessairement le lieu où le travail est matériellement exécuté.

En effet, la loi pose des présomptions irréfragables (article 17 nouveau de loi) suivant lesquelles sont considérés comme lieu de la prestation de service:

a) en principe le siège ou l'établissement stable à partir duquel le service est rendu,
b) par dérogation les lieux définis par l'article 17.

Ces dérogations concernent les services énumérés à l'article 9 de la directive qui sont soustraits au régime de la taxation dans le pays du siège ou de l'établissement stable de l'auteur de la prestation:

A. Services se rattachant à un immeuble déterminé

Il importe de préciser que les prestations qui ne se rattachent pas à un immeuble déterminé, comme par exemple la confection de plans d'architecture standardisés, obéissent à la règle générale. Sont visés:

1. Les services tendant à préparer ou à coordonner l'exécution de travaux immobiliers, y compris ceux des architectes, des bureaux d'études et des bureaux de surveillance.
2. Les opérations d'entretien effectués à un immeuble, dans la mesure où elles ne constituent pas des livraisons de biens au sens de l'article 5 (par. 5.1) de la VIe Directive (art. 12f) de la loi luxembourgeoise du 12.2.1979.

Lieu de l'imposition
lieu de la situation de l'immeuble

Ce dernier assimile à une livraison la délivrance d'un travail immobilier, y compris celui comportant l'incorporation d'un bien meuble à un bien immeuble, à l'exclusion toutefois des opérations d'entretien courant. Constitueraient p.ex. des travaux immobiliers les réparations portant sur des immeubles.

3. Les prestations de services des agents immobiliers et des experts en immeubles.
4. Plus généralement tous les services en relation avec l'acquisition ou la cession d'immeubles, tels que ceux des notaires, autres services de conseils visés sous E ci-après, tels des services de publicité.
5. Les locations d'immeubles, de chambres d'hôtel, d'emplacements de parcage et de coffres-forts.
   Il y a lieu de noter que la règle s'applique à toutes les locations immobilières généralement quelconques, y comprises celles exclues de l'exonération prévue par la loi pour les locations immobilières telles que le logement passager de personnes, de stationnement passager de personnes, de stationnement passager de véhicules (v. art. 13, B, b) de la VIe Directive et art. 44.1. g) de la loi luxembourgeoise).
6. Le magasinage de biens dans un immeuble.

B. Les prestations de transport

Pour les transports internationaux ce lieu n'est réputé se situer à l'intérieur du pays que pour la partie du transport qui y est effectivement réalisée. Signalons qu'en règle générale, les transports internationaux sont des services exonérés.

Contrairement à l'ancienne législation cette exception ne concerne pas la location de moyens de transports auxquelles s'applique la règle générale.

Lieu d'imposition
lieu où s'effectue le transport

Toutefois dans le cas où une agence de voyage a contracté en son propre nom avec un voyageur pour l'organisation d'un voyage incluant une prestation de transport effectué par un autre assujetti, le service de l'agence, même dans la mesure où il constitue l'exécution d'un contrat de transport, est taxé au siège ou établissement de l'agence. En l'occurrence la prestation en question n'est plus considérée par la loi comme opération de transport, mais comme une partie d'une prestation sui generis.

C. Les prestations de services ayant pour objet:

1. Des activités culturelles, artistiques, scientifiques, sportives, enseignement, de divertissement ou des

© 1980 International Bureau of Fiscal Documentation – BULLETIN

activités similaires, y compris les prestations de services des organisateurs de telles activités et les prestations de service accessoires à de telles activités.
2. Des activités accessoires au transport telles que le chargement, le déchargement et la manutention ainsi que des activités similaires.

Lieu d'imposition

lieu où la partie essentielle de chaque service est matériellement exécutée

3. Des expertises de biens meubles corporels.
4. Des travaux portant sur des biens meubles corporels.

Dont à comprendre parmi les prestations sous 3 et 4 entre autres les simples réparations de voitures automobiles et d'autres biens meubles ainsi que les expertises y relatives (p. ex. en cas de panne).

D. Les prestations de services ayant pour objet:

la location de biens meubles corporels que le prestataire, en vue de leur utilisation dans le pays de destination, a exportés ou importés d'un pays membre des C.E. vers un autre pays membre.

Il résulte du texte de loi que la dérogation n'est pas applicable:

a) lorsque c'est le preneur qui a exporté le bien loué d'un Etat membre vers un autre pour l'y utiliser;
b) lorsque soit le preneur soit le louer exportent le bien loué ou à louer à partir d'un pays tiers ou dans un pays tiers;
c) lorsque la location a pour objet un moyen de transport généralement quelconque dans ces trois hupothèses;

Lieu d'imposition

lieu où les biens sont utilisés

Dans ces quatre hypothèses le lieu de la location se détermine conformément à la règle générale (pays du loueur) sous réserve d'éventuelles mesures particulières à prendre sur base de l'habitation prévue à l'article 17 par. 3 de la loi luxembourgeoise.

En effet, cet article prévoit que le lieu de prestation pourra être fixé par référence au critère de l'utilisation ou de l'exploitation du service pour des cas où le régime décrit dans ce chapitre mène à des cas de double imposition, une non-imposition ou des distorsions de concurrence.

On constate que le texte en question ne reconnaît le critère du lieu d'utilisation que dans un cas particulier alors que dans des situations économiquement identiques le critère général reste curieusement applicable.

E. Les prestations de services ayant pour objet:

les activités énumérées ci-après, lorsque les prestations ne sont pas visées sous A et C ci-dessus, et qu'elles sont effectuées pour le siège d'activité d'un preneur assujetti (ou de son établissement stable) établi en dehors du pays du prestataire, que ce soit dans un Etat membre ou dans un pays tiers:

1. La cession ou la concession de droits d'auteurs, de brevets, de droits de licences, de marques de fabrique et de commerce et d'autres droits similaires;
2. la publicité, y compris les prestations de services des intermédiaires en publicité agissant en leur propre nom;
3. les activités d'avoué, d'avocat, de conseiller, d'expert comptable, d'ingénieur, d'un bureau d'études ou d'activités similaires;

Lieu d'imposition

lieu du siège d'activité économique du preneur (ou de son établissement stable)

4. le traitement de données et la transmission d'informations;
5. les opérations bancaires, financières, d'assurance et de réassurance à l'exception de la location de coffres-forts;
   Signalons que les opérations de banque et d'assurances proprement dites sont exonérées.
6. la mise à disposition de personnel;
7. les prestations de services consistant dans l'obligation de ne pas exercer, entièrement ou partiellement, une activité professionnelle ou un droit visé ci-dessus sous 5;
8. les prestations de services des intermédiaires qui agissent au nom et pour le compte d'autrui et qui interviennent dans les prestations de services visées ci-dessus sous 5.

F. Les prestations de services:

énumérées sous E ci-dessus, qui ne sont pas visées sous A et C et qui sont effectuées pour les besoins d'un preneur *non assujetti* domicilié ou résident habituellement *en dehors des C.E.*

Remarques quant aux positions 5 et 6 ci-dessus:

Il résulte implicitement du texte que:

1. les mesures dérogatoires énumérées sous 5 et 6 ci-dessus sont primées par celles figurant sous 1 et 3. Il y a lieu de signaler qu'elles peuvent être modifiées ou complétées par des dispositions particulières sur base de l'habilitation contenue dans la loi.
2. dans l'hypothèse où le prestataire et le preneur sont établis dans le même pays le lieu des prestations sous 5. est fixé d'après le principe général (lieu d'établissement du prestataire)
   Il en est de même lorsque le preneur non assujetti a son domicile ou sa résidence habituelle à l'intérieur des C.E.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Lieu d'imposition
lieu du domicile ou de la résidence du preneur

3. En d'autres termes et en résumé:
   (a) C'est le lieu d'établissement du preneur qui détermine le lieu de la prestation
   (i) dans tous les cas où le preneur est établi dans un pays tiers
   (ii) en cas d'établissement à l'interieur des C.E., seulement lorsque le preneur est un assujetti et que le siège de son activité ou son établissement stable se trouve dans un pays-membre autre que celui du prestataire, peu importe que ses activités soient possibles ou non de la TVA.
   (b) Au contraire le lieu d'établissement (d'activité) du prestataire sera considéré comme lieu de la prestation lorsque
   (i) le preneur et la prestataire sont établis dans le même pays
   (ii) le preneur est un non assujetti ayant son domicile ou sa résidence dans un autre pays membre des C.E.

   Pour éviter les cas de non-imposition, le par. 3 de l'article 17 habilite le Gouvernement à déroger aux dispositions des par. 1er et 2 (positions 1 à 6 ci-dessus) en ce qui concerne la location de biens corporels, y compris les moyens de transport, et les prestations visées sous 5 et 6 ci-dessus, en fixant le lieu de ces prestations par référence au critère de l'utilisation ou de l'exploitation.

III. LES OBLIGATIONS DU PRESTATAIRE DES SERVICES

A. Services effectués au lieu du siège ou d'un établissement stable

Pour le prestataire dont les services sont réputés avoir été rendus à l'intérieur du pays, en raison de l'existence à l'intérieur du pays du siège d'activité ou d'un établissement stable, le régime d'importation n'a pas changé. Le prestataire devra être immatriculé auprès de l'administration compétente et déposer ses déclarations comme par le passé.

Il est indéniable que le principe de la taxation au lieu du siège ou de l'établissement, à partir duquel le service est presté, simplifie beaucoup la perception de la taxe en ce que les opérations ne seront désormais plus exonérées dans le pays du siège du prestataire et plus soumises à la TVA dans le pays où le service est utilisé.

B. Services énumérés à l'article 9 par. 2 sous (E) de la Directive

En ce qui concerne certains services énumérés plus spécialement à l'article 9 par. 2 sous (E) de la Directive, l'article 21 de celle-ci a prévu un système simplifié:

En effet, pour:
— les cessions ou concessions de droits d'auteurs, brevets, licences, marques de fabriques ou de commerce et droits similaires,
— la publicité,
— les activités d'avoué, d'avocat, de conseiller d'expert comptable, d'ingénieur, d'un bureau d'études et les activités similaires,
— le traitement de données et la transmission d'informations,
— les opérations bancaires, financières, d'assurance et de réassurance (excepté la location de coffre-forts),
— la mise à disposition de personnel,
— l'obligation de ne pas exercer une activité professionnelle ou un droit quelconque visé ci-dessus,
— les prestations d'intermédiaire agissant au nom et pour le compte d'autrui et intervenant dans les prestations ci-dessus,

la directive prévoit que le preneur de la prestation sera le débiteur de la taxe, tandis que le prestataire peut être rendu solidairement responsable.

Puisque le preneur en question doit nécessairement être assujetti à la taxe dans son pays, cette solution a le mérite de sembler pouvoir s'appliquer sans difficulté: en effet le preneur sera obligé de déclarer la prestation de service dans ses propres déclarations, et par voie de conséquence devrait normalement pouvoir procéder à la déduction de la taxe ainsi déclarée.

Toutefois, le degré de difficulté dans l'application de ce principe devient plus élevé lorsqu'il faut demander des déclarations à des milliers d'assujettis non immatriculés ne faisant que des prestations exonérées.

Au Grand-Duché, pareille obligation du preneur n'est pas encore inscrite dans un texte formel. En effet, l'article 26 de la loi nouvelle prévoit qu'un règlement grand-ducal pourra disposer que la taxe sera due par le preneur du service sous la responsabilité solidaire du prestataire. A ce jour aucun règlement n'a été pris en ce sens.

C. La pratique administrative

En pratique, à défaut de texte règlementaire pris sur base des habilitations prévues par la loi, rien n'est changé dans la procédure de taxation des services censés effectués au Grand-Duché par des assujettis étrangers par rapport à la taxation des services antérieurement effectués à l'étranger et utilisés au Grand-Duché.

La première obligation du prestataire est celle de la déclaration de l'opération. En principe une déclaration doit être faite dès le commencement de l'opération (article 61 al. 1 de la loi organique) et une autre déclaration indiquant le montant de la taxe due, doit être déposée dans les quinze jours du deuxième mois suivant celui lors duquel l'opération a été faite (où en cas de paiements de la rémunération par acomptes pour une opération prolongée dans les 15 jours du mois suivant l'établissement de la facture afférente à chaque acompte). Il y a lieu de signaler que par toute opération faite avec un contractant assujetti, le prestataire doit délivrer une facture mentionnant le montant de la taxe due dans les 25 jours du mois suivant celui où l'opération a été faite.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

La première déclaration est généralement faite par information écrite à l'Administration de l'Enregistrement à Luxembourg. Cette information est transmise au bureau d'imposition X chargé de la récupération des taxes dues par des prestataires étrangers. Le functionnaire compétent se met alors en rapport avec l'assujetti pour définir la façon appropriée de procéder. En cas de services purement occasionnels, l'assujetti étranger n'est pas immatriculé mais déclare le service par simple lettre. L'Administration peut aussi convenir avec lui de se mettre en rapport avec le preneur pour que celui-ci déclare à décharge du prestataire.

Après réception d'une déclaration pour service purement occasionnels, l'Administration établit un titre de recette sur base duquel la taxe est perçue.

En cas de services occasionnels, il arrive assez fréquemment que le preneur fasse la déclaration à décharge du prestataire et se charge lui-même de l'acquittement de la taxe. Le prestataire pourra également demander à son cocontractant de se charger de ces formalités, ce qui toutefois n'a un intérêt que si le preneur est effectivement tenu de déposer des déclarations, s'il fait donc lui-même des opérations non-exonérés. En effet, vis-à-vis de l'Administration le prestataire reste celui qui est personnellement tenu de déposer les déclarations, et en cas d'oubli du cocontractant, le prestataire s'expose aux sanctions.

Il appartient au receveur compétent de vérifier si la prestation a un caractère occasionnel. Dans le cas contraire, il procédera à l'immatriculation du prestataire. En cas de prestations de services importants et continuels, il demandera la nomination d'un représentant responsable (qui souvent est le preneur solidairement responsable) ou plus généralement un cautionnement.

Les obligations du représentant responsable sont celles d'établir les déclarations, de détenir aux fins de contrôle les copies des factures et toutes pièces nécessaires à cette fin. Par ailleurs, il garantit solidairement le paiement de la taxe et des amendes. Toutefois, c'est le prestataire qui établit les factures indiquant le montant de la taxe dont il devra transmettre une copie au représentant responsable.

Par arrêté grand-ducal du 22 décembre 1979 pris sur base de l'article 63 2 sous (E) de la loi organique, l'administration est autorisée à demander le dépôt d'un cautionnement auprès de la Caisse de Consignation ou une garantie bancaire destinée à assurer le paiement de la taxe. Les montants sont fixés par le préposé en fonction de l'importance présumée des opérations imposables et de la créance de l'Etat. Cette pratique est généralement préférée à celle de la nomination de représentant responsable.

IV. PROCEDURE DE DEDUCTION DE LA TAXE EN AMONT ET PROCEDURE DE REMBOURSEMENT PREVUE PAR LA 8E DIRECTIVE

La 8ième directive adoptée par le Conseil prévoit l'introduction par les Etats-membres d'un texte permettant le remboursement de la taxe à des preneurs de services assujettis non établis dans le pays qui a perçu la taxe.

Il y a d'abord lieu de signaler que le texte en question ne s'applique que dans le cas où l'assujetti concerné ne fait pas lui-même d'opération imposable dans le pays où la taxe a été prélevée. Dans le cas contraire, il pourra récupérer la taxe ayant grevé des services qui lui ont été rendus par le biais de la déduction de la taxe en amont et éventuellement la restitution de l'excédent de la taxe en amont. Il faut toutefois que l'assujetti ait lui-même fait la déclaration de ses propres prestations, et il ne pourra récupérer la taxe en amont s'il a demandé au preneur de déclarer à décharge. En pratique le texte nouveau ne visera donc que des cas exceptionnels. A cette fin, la loi organique a habilité le gouvernement à introduire cette procédure par voie de règlement.

Alors que la directive a défini le modèle de la demande de remboursement à remplir pour l'assujetti concerné et les pièces et attestations qui sont à joindre, et en raison de la centralisation des services de l'Administration au Grand Duché le nouveau texte devra pouvoir s'appliquer sans difficultés.

Il y a lieu de rappeler que la directive prévoit que l'assujetti étranger devra justifier sa qualité d'assujetti par une attestation de son administration locale et joindre les originaux des factures ou documents d'importation. La demande sera à adresser à l'Administration avec les pièces à l'appui définis ci-haut.

Eu égard aux expériences pratiques que l'on a pu faire dans les rapports avec l'Administration de l'Enregistrement, il est à prévoir que l'assujetti ayant rempli ces formalités simples, ne rencontrera pas de difficultés pratiques pour récupérer le montant de la taxe, qui lui sera viré normalement dans les quelques semaines suivant le dépôt de la déclaration.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

COMMUNAUTE EUROPEENNE:

Monsieur GUIEU

L'orateur commence par retracer la genèse des travaux de la Commission sur la taxation des prestations de services en disant que c'est une lourde tâche d'essayer d'indiquer tous les méandres des discussions qui ont abouti à ce texte de compromis de la 6ème directive qui a pu rallier l'adhésion de tous les Etats membres. Il s'agit bien d'un texte de compromis qui peut-être présente certaines difficultés d'application au plan national.

Dans le cas des prestations de services, il existait des situations fort différentes. Lorsqu'on a adopté la 2ème directive T.V.A. en avril 1967, on avait cru qu'au plan communautaire (six pays à l'époque), la solution idéale et uniforme avait été trouvée en prévoyant que le lieu de la taxation de services serait le lieu d'utilisation. On espérait pouvoir éviter les doubles impositions et les non-impositions qui s'étaient présentées dans les situations précédentes.

Malheureusement ce critère d'utilisation avait un champ très restreint puisqu'il ne s'appliquait que pour les prestations de services énoncées dans l'annexe B de cette deuxième directive et c'étaient les prestations de services qui théoriquement étaient le plus souvent incorporées dans le prix des marchandises, qui avaient donc les influences dans les relations internationales; d'autre part, les Etats membres avaient encore la possibilité d'exonérer ces prestations de services, bien que citées dans l'annexe B.

Il faut ajouter qu'en raison de situations différentes de pays à pays, il y avait aussi un correctif: l'annexe accordait aux Etats membres la possibilité de déroger à ce principe de la taxation dans le lieu de l'utilisation, mais sous réserve d'éviter les cas de double imposition.

Autre difficulté constatée: certains Etats membres ont interprété d'une façon différente la notion d'utilisation. Pour des raisons pratiques, certains pays ont estimé que le lieu d'utilisation était le lieu du prestataire de services: dès que le prestataire rendait sa prestation, il y avait commencement d'utilisation. D'autres pays, au contraire, se référaient au lieu du preneur, c'est-à-dire au lieu où le preneur recevait la prestation. Dans un troisième groupe de pays, ce n'étaient ni le lieu du preneur, ni le lieu du prestataire, mais le lieu d'utilisation réelle: là où le bien était réellement utilisé.

Il en résultait que l'application brutale de ces principes devait conduire à des cas de double, voire de triple imposition, ou à des cas de non-imposition.

Mais pour éviter ces inconvénients, chacun des Etats membres avaient établi toute une série de dérogations de sorte que les législations traitant notamment de la détermination du lieu de taxation des prestations de services étaient très compliquées et nullement comparables de pays à pays.

En fonction de cette situation de fait qui avait évolué sur un texte communautaire — et l'on pensait que la question était résolue — les services de la Commission se sont mis au travail. Après de longues discussions avec les experts, la Commission avait essayé dans sa proposition de 6ème directive d'écarter la notion d'utilisation pour se concentrer uniquement sur la notion du prestataire de services.

Dans les propositions présentées au Conseil, on avait demandé aux Etats membres de prévoir que le lieu de la prestation de services était, pour toutes les prestations de services, le lieu du prestataire de services.

Mais il fallait un correctif pour éviter des cas de double imposition si la prestation de services était utilisée par un preneur assujetti dans un autre Etat membre avec une notion d'exportation de services: à ce moment-là, bien que l'assujetti soit le prestataire, il y avait, comme pour les marchandises, une notion d'exportation et de taxation dans le lieu de l'obtention dans le chef du preneur.

On avait ainsi un système parallèle à celui existant pour les marchandises et, avantage le plus important, une unicité du lieu de la prestation de services quelle que soit la situation de l'utilisateur.

A ce critère du prestataire de services, il y avait malheureusement deux exceptions: l'une pour les immeubles, et c'était le lieu de la situation de l'immeuble, l'autre pour les transports, c'était le lieu de la prestation de services en fonction du parcours du transport.

Dans le texte retenu de la 6ème directive, on a toujours le principe général de l'art. 9/1, qui prévoit la taxation auprès du prestataire de services. Cela permet de régler déjà toutes les prestations de services rendues à des non assujettis ou à des particuliers. On est ainsi assuré d'un lieu unique de taxation, sans possibilité d'y échapper et en évitant toute double taxation.

Par contre, si les Etats membres ont accepté de conserver l'exception prévue pour les immeubles et les transports, ils ont ajouté de nouvelles dérogations à ce principe pour notamment les activités culturelles, les activités accessoires au transport, les expertises portant sur les biens meubles corporels et surtout sur les travaux portant sur les biens meubles corporels en prévoyant que pour ces prestations de services, le lieu de la prestation était l'endroit où était matériellement exécutée cette prestation de services.

C'était déjà là une dérogation assez substancielle au principe du lieu du prestataire de services.

Il y a eu enfin une autre dérogation qui aboutit dans les faits au résultat que l'on avait recherché dans la notion d'exportation de services, c'est l'art. 9/2 litt.e, où il est prévu que pour toutes les prestations de services, qui sont incorporées dans le prix des biens en principe, comme les concessions et droits d'auteur, les prestations de publicité; les obligations de ne pas exercer une activité, les opérations financières, etc..., le lieu de la prestation devenait le lieu du preneur lorsque le preneur dans la Communauté était un assujetti; il en était de même si le preneur était situé hors de la Communauté (assujetti ou non). De sorte que pour ces prestations de services nous risquons d'avoir deux lieux de la prestation de service selon la situation du preneur.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

En régime normal, à l'intérieur d'un Etat membre, pour ces prestations de services, le lieu de la prestation de services est toujours situé auprès du prestataire; c'est lui qui va facturer, c'est lui qui va transmettre la taxe à son preneur, et c'est lui qui est redevable de la taxe; par contre, si le preneur est un assujetti communautaire, mais qui est situé dans un autre pays, le prestataire se trouve hors du champ d'application de la T.V.A. et c'est le lieu du preneur qui prévaut. Ceci entraîne pour une même opération rendue par un prestataire de service deux lieux de la prestation de services.

Dommageable intellectuellement, cette situation est valable au point de vue économique, puisque ces prestations de services sont taxées auprès du preneur, au taux du preneur et permettent, surtout au preneur, de déduire la taxe pour éviter toute rémanence de taxe. On arrive ainsi à éviter des doubles impositions.

Cette conception dualiste des prestations de services énumérées à cette disposition a paru néanmoins fort regrettable aux instances communautaires.

Un correctif a cependant été apporté en ce qui concerne les prestations de services qui sont rendues à des assujettis hors communauté et dont le lieu de la prestation de services est situé auprès de ce preneur. La conception de l'utilisation a été introduite pour éviter prestations de services, les Etats membres peuvent demander qu'une autre personne soit également redevable de la taxe: un représentant fiscal ou le client preneur.

Par contre, pour toutes les prestations de services qui sont fixées à l'art. 9/2,e (toutes les opérations pour lesquelles le lieu de la prestation de services est le lieu du preneur), il n'y a qu'une seule personne qui est redevable de la taxe, c'est le preneur.

En ce qui concerne les moyens de récupérer ou de rembourser cette taxe, le mécanisme qui a été instauré par la 6ème directive aboutit pratiquement dans tous les cas à la récupération totale de la taxe. Ou bien le redevable de la taxe est le preneur et il est mis en cause comme redevable soit à titre subsidiaire, soit à titre principal. A ce moment-là, il est évident qu'il peut utiliser les dispositions de l'article 17 pour déduire la taxe qui a frappé la prestation de services et par conséquent, dans son chef, il ne peut pas y avoir de rémanence de taxe. Par contre, si le prestataire est également redevable de la taxe étant donné qu'il a des opérations imposables, il a le droit également de déduire la taxe qui a frappé ses opérations en amont.

Selon l'orateur, l'article 17/4, c'est-à-dire le remboursement de la taxe à un assujetti étranger et la 8ème directive ne sont valables que si le prestataire établi à l'étranger a recours à des fournisseurs dans le pays de la taxation pour sa propre prestation de services. Il estime que la 8ème directive ne joue pas pratiquement dans le contexte de la prestation de services et du lieu de la prestation de services tels que définis dans l'art. 9 de la 6ème directive.

Il conclut en disant que ce texte de la directive résulte d'un compromis, mais aboutit quand même au résultat recherché qui est d'éviter des cas de non-imposition et de double imposition. Il rend parfois les situations un peu complexes et mériterait qu'on réfléchisse par la suite pour essayer de regrouper sur la notion du lieu du prestataire de services certaines opérations qui sont à l'heure actuelle au lieu du preneur ou à l'endroit où les prestations sont matériellement exécutées.

Il convient de remarquer que si ces règles se sont, au fil des discussions, un peu compliquées, cela provient également de la différence du niveau de taxation des prestation de services. Certaines délégations, à juste titre parfois, ont eu la crainte de voir des détournements de prestations de service vers des pays qui avaient un niveau plus bas si on prévoyait uniquement la règle de la taxation dans le chef du prestataire de services.

BELGIQUE:

M. CAPPELLEMAN

Après les exposés très clairs de M. Guieu et de M. Le Brun, l'orateur essaiera de décrire les quelques problèmes que l'on a en matière d'application de l'article 9 de la 6ème directive en suivant la présentation qui est faite à ce sujet dans le Code belge de la T.V.A.

En Belgique, on a suivi d'assez près le libellé de la 6ème directive encore qu'avant le 1er janvier 1978 déjà, le critère selon lequel la taxe est perçue dans le pays du preneur (art. 21) ait connu de nombreuses applications.

Dans son paragraphe 1er, cet article précise qu'une prestation de services a lieu dans le pays lorsque le lieu où elle est réputée se situer conformément aux paragraphes qui suivent se trouve dans le pays, ce qui n'est peut-être pas des plus clair ou qui est peut-être trop clair mais qui en toute hypothèse en soi ne résoud rien.

Les critères, on les rencontre à partir du paragraphe 2, et ici se trouve le critère principal, le critère du lieu du prestataire.

En fait le lieu du prestataire, ce n'est peut-être pas nécessairement le lieu où est établi le prestataire mais en fait c'est l'endroit où le prestataire de services a établi le siège de son activité professionnelle ou un établissement stable à partir duquel la prestation de services est rendue. Dans la pratique, l'application de ce critère n'a pas donné lieu à des problèmes majeurs.

Dans le cas cité par M. Le Brun, on peut se demander où se situe le lieu à partir duquel la prestation de services est rendue: est-ce là où en fait le matériel est importé, est-ce là où le matériel est régulièrement donné en location à partir d'un lieu donné en France? On peut effectivement se demander si le lieu où le matériel se trouve ou le lieu où il rentre régulièrement en vue d'être donné en location ne peut pas constituer un lieu pour la prestataire de services qui y a établi un siège d'activité. C'est effectivement une question. Si la proposition de 10ème directive était réalisée, ce problème serait résolu mais cette proposition n'est pas réalisée, je n'oserais même pas dire qu'elle sera réalisée dans un proche avenir.

Voilà le critère principal: le lieu du prestataire.

Il y a une série d'exceptions: d'abord l'endroit où est situé l'immeuble lorsqu'il s'agit d'une service qui est

© 1980 International Bureau of Fiscal Documentation – BULLETIN

relatif à une immeuble par nature, auquel cas le lieu du service est le lieu où se trouve l'immeuble.

Les cas d'application de ce critère sont fixés dans l'arrêté royal no. 5 et une énumération très rapide nous démontre qu'en fait il s'agit de tout travail immobilier, c'est-à-dire tout travail de construction, de démolition, d'entretien d'immeuble, etc., également tout travail d'étude et de contrôle qui relève de l'activité habituelle des architectes, des ingénieurs et des géomètres, toute expertise portant sur un immeuble par nature, toute mise à disposition d'emplacement ou parking, ou pour l'entreposage de biens, toute prestation d'hôtellerie en tant que mise à disposition d'une chambre, toute mise à disposition d'emplacement sur un terrain de camping. Il en est encore ainsi de toute location de coffres-forts qui sont immeubles par nature ou de toute location de biens immeubles par nature; on sait qu'en Belgique, uniquement ce qu'on appelle le leasing immobilier est soumis à la T.V.A., mais non les locations ordinaires d'immeubles.

Il existe une nouveauté par rapport à la situation qui existait auparavant: toute intervention comme intermédiaire lors de la constitution, de la cession d'un droit réel ou de jouissance sur un bien immeuble par nature, toute intervention d'une agence immobilière en tant que courtier dans la location ou de vente d'un immeuble est soumise à la T.V.A. en Belgique, dès que l'immeuble donné en location ou vendu se situe en Belgique.

Enfin toute gestion d'un bien immeuble par nature situé en Belgique est également soumise à la T.V.A.

Deuxième dérogation: l'endroit où se trouve le bien lorsqu'il s'agit d'un travail, y compris l'expertise, portant sur un bien meuble. Cela signifie que tous les travaux à effectuer sur des biens meubles se trouvant en Belgique sont soumis à la T.V.A. en Belgique.

Bien sûr, lorsqu'un bien est importé en Belgique en vue d'être travaillé à façon et ensuite réexporté (perfectionnement actif), en principe ce travail est soumis à la T.V.A. belge, sauf exonération lorsque le bien travaillé est réexporté ou est exporté par le travailleur à façon dans les conditions prévues pour l'exonération en cas d'exportation par le fournisseur du service.

Pour l'expertise, si elle est effectuée sur un bien meuble qui se trouve en Belgique, la T.V.A. est due en Belgique. On s'est déjà interrogé sur la question de savoir, quand on parle de travail, si on ne vise que les travaux matériels, ou également les travaux intellectuels. Quand on compare le texte belge avec la directive, on constate dans la directive qu'il est question de travaux, et l'orateur se pose la question de savoir si le mot travail veut dire travail matériel ou s'il a une signification plus large en fait.

La troisième dérogation concerne les transports, le lieu d'une prestation de transport et donc le lieu où le transport est effectué et en fonction des distances parcourues. Rien de particulier quant à cette dérogation.

La quatrième dérogation précise que le lieu du service c'est l'endroit où la prestation de services est matériellement exécutée lorsque cette prestation a pour objet des activités culturelles, artistiques, sportives, scientifiques, d'enseignement, de divertissements ou similaires. M. Le Brun, en ce qui concerne le lieu du service, a fait état d'une question relative à la taxation de prestations de services ayant pour objet la formation de personnel qui allait de pair avec une vente de matériel à exporter, enseignement qui est donné par le fournisseur de ce matériel. Selon l'orateur, il est clair que le lieu du service est le lieu où cet enseignement est donné et ce, sur base du texte; mais comme il y avait exportation du matériel, auquel cet enseignement se rapporte, on considère que cet enseignement est exonéré pour des raisons d'exportation. C'est une solution qui parait tout à fait compatible avec la 6ème directive encore qu'en Belgique on ne va pas aussi loin semble-t-il, étant donné que le texte en matière d'exportation énumère limitativement les prestations de services qui sont exonérées comme se rapportant à des biens exportés, texte dans l'énumération duquel on ne retrouve pas ce genre de prestations.

Selon M. Cappelleman, si une situation pareille devait se produire en Belgique, on devrait dire que la T.V.A. est due en Belgique. Mais ceci ne veut pas dire que si la T.V.A. belge est portée en compte par le fournisseur du bien prestataire d'enseignement à une société étrangère, que celle-ci doive supporter cette T.V.A. définitivement; la société étrangère peut récupérer la T.V.A. belge dans des conditions que l'on va pouvoir exposer dans le courant de l'après-midi.

Les prestations des restaurateurs, des cafetiers se situent également là où le cafetier et le restaurateur se trouvent. Lorsqu'il s'agit de prestations accessoires au transport, c'est également le lieu du service qui est le lieu où la prestation est matériellement exécutée.

On s'était interrogé au sujet de certaines prestations accessoires au transport, c'est-à-dire essentiellement des opérations de chargement et de déchargement; mais il y en a encore d'autres qui ont été citées par M. Le Brun, notamment le jaugeage et le pesage. Là aussi on applique le critère du lieu où la prestation est matériellement exécutée.

En Belgique, on s'était demandé s'il fallait suivre le même critère pour ce qu'on appelle la réception des marchandises, réception qui consiste assez souvent en un contrôle quantitatif ou qualitatif des marchandises, ou une prise d'échantillons, prestations confirmées par un bordereau de réception de marchandises. On a décidé, dans ce cas, qu'on doit appliquer le critère qui vaut pour la prestation accessoire au transport, mais il faut ajouter que dans ce domaine il y a généralement exonération lorsqu'il s'agit de prestations qui se rapportent à des marchandises exportées ou importées.

Le critère suivant est l'un des plus contesté, à savoir le critère concernant la location.

Lorsqu'il s'agit d'un bien meuble autre qu'un moyen de transport, le critère à suivre, c'est le lieu du prestataire sauf, selon le Code belge, lorsque le bien est donné en location par un loueur qui est établi dans la Communauté et qui exporte le bien dans un autre pays de la Communauté, où le bien sera utilisé. On voit bien apparaître ici la notion d'utilisation et cette disposition est tout à fait conforme à la 6ème directive; et, deuxième exception, ce n'est pas le lieu du prestataire, c'est le lieu de l'utilisation lorsque le bien est donné en location par un

© 1980 International Bureau of Fiscal Documentation – BULLETIN

loueur qui est établi hors de la Communauté européenne.

En fait, le lieu du prestataire connaît une double exception: cas du bien exporté par le loueur dans un autre pays du Marché Commun où le bien serait utilisé, et cas où le loueur est établi hors de cette Communauté.

Quelques problèmes ont surgi en Belgique en raison de l'application de la 6ème directive. On est conscient de ce que le résultat obtenu n'est pas toujours équitable. Mais si on veut précisément éviter des doubles impositions ou des non impositions, il semble nécessaire d'appliquer pratiquement à la lettre les dispositions de la 6ème directive à ce sujet.

Cela peut parfois conduire à des situations assez curieuses. On a par exemple, en Belgique, un cas dans lequel une société néerlandaise achète aux Pays-Bas du matériel qu'elle donne en location à une société belge et dès lors ce matériel est exporté par le fournisseur du matériel à la demande du loueur directement des Pays-Bas en Belgique. Dans ce cas, le lieu de la prestation de services, ce n'est pas les Pays-Bas étant donné que le matériel est exporté par le loueur ou sur son ordre des Pays-Bas en Belgique, et la T.V.A. est due en Belgique. Mais malheureusement ce n'est pas tout. Ce même loueur achète également du matériel en Belgique qui sera donné en location en même temps que le matériel qui est importé des Pays-Bas, et pour compliquer les choses, la location se fait pour un prix unique.

Pour la première partie, à savoir pour le matériel qui est envoyé des Pays-Bas en Belgique, on l'a dit, le lieu du service est la Belgique, étant donné que l'on se trouve dans la première exception: matériel qui est exporté par le loueur à destination d'un autre pays du Marché Commun où le matériel sera utilisé. Pour la deuxième partie, il s'agit de marchandises qui sont achetées en Belgique et qui restent en Belgique: il n'y a donc pas de déplacement de la marchandise d'un pays vers un autre: dès lors il faut appliquer le critère normal, c'est le lieu du prestataire, et on devrait dire que la T.V.A. est due aux Pays-Bas.

L'orateur signale que la décision n'est pas sortie, mais croit savoir que si la Commission avait été consultée, la réponse aurait été que, compte tenu de la proposition de 10ème directive, la taxation devrait avoir lieu en Belgique. Mais tant qu'il s'agit d'une proposition de directive, il semble que l'on doive s'en tenir au texte pour le moment, même si le texte conduit à une solution baroque.

Autre exception à la règle: le critère relatif aux moyens de transport.

Selon la 6ème directive, le lieu du service est le lieu du prestataire, c'est-à-dire le lieu à partir duquel en fait la prestation de services est effectuée.

Mais la 6ème directive, notamment en ce qui concerne les locations de biens meubles, permet de déroger à cette règle fondamentale mais seulement dans deux cas: le premier cas, est celui dans lequel le lieu du service se situe à l'intérieur de la Communauté mais où l'utilisation du bien se fait en dehors de la Communauté: dans ce cas, on aura évidemment toute faculté de déroger à la règle principale; le deuxième cas, c'est exactement l'inverse: si, selon la règle principale de la directive, le lieu de la prestation se trouve en dehors de la Communauté et s'il y a en fait utilisation effective du bien dans la Communauté, les Etats membres ont la faculté de situer le lieu là où s'exerce l'utilisation.

En Belgique, le législateur a fait usage directement de cette faculté, en disposant que pour la location de moyens de transport, si la règle principale est le lieu du prestataire, il y a une double exception, savoir: (1) le lieu du service c'est le lieu d'utilisation lorsque le moyen de transport est donné en location par un loueur qui est établi dans le pays; et (2) le lieu du service est seulement situé là où s'exerce l'utilisation dans la mesure où le moyen de transport est utilisé en dehors du Marché Commun. Ce n'est d'ailleurs que dans ces limites là que les Etats membres peuvent faire usage de la faculté laissée par la 6ème directive.

Voici un exemple concret: si l'on prend en location en Belgique un véhicule pour faire un voyage en Europe, en principe la T.V.A. est due en Belgique sur le loyer total; mais dans la mesure où la voiture est utilisée en dehors du Marché Commun, le loyer n'est pas imposable en Belgique. Il n'est pas facile de dire au départ dans quelle mesure le véhicule sera utilisé à l'intérieur du Marché Commun ou à l'extérieur du Marché Commun.

Les Etats membres qui n'ont pas fait usage de cette faculté s'y retrouvent peut-être plus facilement, parce que dans ce cas le loyer peut être taxé intégralement.

D'autre part, si le véhicule est donné en location par un loueur établi hors de la Communauté, le lieu d'utilisation se situe là où le véhicule est utilisé. Si jamais un touriste qui a pris en location un véhicule en dehors du Marché Commun, pénètre avec ce véhicule en Belgique, il est probable que l'on aurait quelques problèmes pour percevoir la T.V.A. à concurrence de l'utilisation du véhicule dans le pays.

Revenons à une dernière exception à la règle principale (lieu du prestataire), exception selon laquelle le lieu du service est le lieu du preneur dans les cas déjà décrits par MM. Guieu et Le Brun, c'est-à-dire seulement lorsque le preneur est établi en dehors de la Communauté ou lorsqu'il est établi dans la Communauté, dans un autre pays que la Belgique, bien entendu, et lorsqu'il agit pour les besoins de son entreprise.

Ceci demande un mot d'explication: la directive parle d'un assujetti, à propos de la distinction entre le preneur établi en dehors de la Communauté et le preneur établi dans la Communauté mais qui a alors la qualité d'assujetti. Or dans le Code belge, on ne parle pas d'assujetti mais d'un preneur qui agit pour les besoins de son entreprise. La raison en est qu'en Belgique un assujetti est celui qui supporte effectivement le poids des formalités en matière de T.V.A.; dès l'introduction de la T.V.A., on a eu des réticences pour décider qu'une entreprise exonérée, par exemple, était assujettie à la T.V.A.

En Belgique, la qualité d'assujetti est donc réservée aux entreprises qui, effectivement, ont des obligations en matière de T.V.A., des obligations actives. Pour la directive, ce n'est pas le cas: une clinique, un institut d'enseignement, etc. sont des assujettis. Or l'expression contenue dans le texte belge "le preneur qui agit pour les besoins de son entreprise" doit se comprendre dans le

© 1980 International Bureau of Fiscal Documentation – BULLETIN

sens d'assujetti selon la 6ème directive et c'est bien dans ce sens là que cette disposition est appliquée.

Le lieu des services est au lieu où est établi le preneur, lorsqu'il s'agit de concessions, droits d'auteur, concessions de clientèle, travaux de publicité. On interprète ceux-ci dans un sens très large en Belgique: on y comprend par exemple les annonces faites en vue de la vente d'un immeuble ou en vue de recrutement du personnel, on ne fait pas de distinction. Pour les annonces qui sont faites en vue de la vente d'un immeuble, on s'était bien demandé si on ne devrait pas dire qu'il s'agit d'une prestation de services se rapportant à un immeuble. C'est une question, mais puisque les travaux de publicité sont nommés expressément, on a estimé qu'il fallait les comprendre ici dans cette catégorie.

Il faut encore citer les travaux de nature intellectuelle fournis dans l'exercice de leur activité habituelle par les conseillers juridiques ou autres, les experts comptables, les ingénieurs, les bureaux d'études, etc. C'est une disposition qu'on applique d'une façon assez large également aux études de marché, par exemple à la communication de renseignements commerciaux tels la communication de listes de clients possibles. On applique cette disposition d'une manière assez large parce que normalement ce genre de services est commandé par des assujettis pour les besoins de l'entreprise. Si on ne devait pas appliquer ce critère et si on devait donc taxer dans le pays du prestataire il y aurait tout de même lieu à récupération de la T.V.A. par le biais de l'art. 17, 4°: un assujetti étranger peut toujours récupérer la T.V.A. en Belgique, du moment qu'il prouve qu'il a fait des dépenses pour l'exercice de son activité d'assujetti. Dans le doute, on préfère dire qu'on ne perçoit pas pour éviter la procédure de restitution qui peut être assez longue.

Enfin le lieu du preneur sert de critère pour les services des banques et des autres organismes financiers, toujours dans les mêmes limites quand il s'agit de prestations de services faites pour des preneurs établis en dehors du Marché Commun ou établis dans un autre pays du Marché Commun, mais qui agissent pour les besoins de leur entreprise. Il en est de même pour la mise à disposition de personnel ou pour les services fournis par les courtiers mandataires qui interviennent dans des opérations déjà énumérées, c'est-à-dire dans les concessions de brevet, dans la publicité, dans les travaux de nature intellectuelle, etc. Là aussi il y a en Belgique par rapport à la situation précédente un changement assez fondamental.

M. Cappelleman termine son exposé en disant qu'il croit ainsi avoir situé la question dans certains cas et qu'à sa connaissance on ne connaît pas trop de problèmes avec l'article 21 du Code belge.

FRANCE:

MONSIEUR LEBRUN

L'idée de base de la Commission est une idée née de la constatation des difficultés qui résultaient du concept d'utilisation des services. Il était en effet relativement satisfaisant pour l'esprit de se tourner vers une notion différente, vers une notion juridique, la notion du preneur ou la notion du prestataire.

L'inconvénient est que les notions juridiques collent parfois mal avec la réalité de ce que doit être un impôt sur la consommation. L'on ne doit jamais oublier qu'en la circonstance, les entreprises sont, certes, redevables de l'impôt mais que le poids final se porte sur le consommateur. C'est en quelque sorte cette approche réaliste et nécessairement fiscale — dans le sens de moyens de financement du budget — qui était la préoccupation des Etats.

En guise d'exposé introductif, l'orateur explique les raisons pour lesquelles les délégations n'ont pas toujours pu suivre la Commission dans son approche théorique et pourquoi elles ont contribué à ce que Monsieur GUIEU peut appeler un compromis.

L'on n'a pas toujours pu suivre la Commission dans les propositions dont la valeur et l'articulation ne sont pas contestables. D'autre part, on se trouvait en présence de difficultés dès lors que les prestations encourues sont des prestations qui peuvent non seulement être juridiquement établies au nom de prestataires ou de preneurs établis dans la Communauté, mais également au nom de prestataires ou de preneurs établis dans des pays hors Communauté. Cette préoccupation n'était pas négligeable.

Au plan pratique, comment les administrations ont-elles réagi devant un certain nombre de difficultés?

Le premier problème, c'est la définition de certains services énumérés à l'article 9 de la directive qui ne sont pas imposables à la taxe sur la valeur ajoutée dans le pays où le prestataire est établi.

Essentiellement, de quels services s'agit-il? Il s'agit des locations de biens meubles corporels, des services se rattachant aux immeubles, des services se rattachant aux transports, d'un certain nombre de prestations intellectuelles et des opérations portant sur les cessions ou concessions de droit d'auteur notamment.

En ce qui concerne les locations de moyens de transport, on n'a pas rencontré de difficultés fondamentales. On est peut-être en face, à l'heure actuelle, d'une difficulté qui est liée, elle, à la définition du domicile de l'assujetti, de l'établissement stable.

On est souvent interrogé et amené à s'interroger sur la situation dans laquelle une location de moyens de transport effectuée d'une manière définitive en France par une entreprise établie dans la Communauté doit être ou non imposable en France.

Les circonstances de fait qui caractérisent cette situation sont déterminantes: l'importation définitive du moyen

© 1980 International Bureau of Fiscal Documentation - BULLETIN

de transport en France, son rattachement en permanence à un point situé sur le territoire français, sa location multiple et de courte durée à partir de ce point situé en France, et même la mise à la disposition du client par une société de gestion française.

En la circonstance, la notion d'établissement semble devoir être appréciée non seulement au sens juridique du terme mais également en tenant compte des circonstances de fait propres à la matière sur laquelle on est éventuellement interrogé.

Sur ce point des locations des moyens de transport et sous réserve de ce qu'a dit, à juste titre, Monsieur GUIEU, à propos des intentions dites de la 10ème directive, il ne semble pas que l'on ait rencontré des problèmes trop difficiles à résoudre et qui méritent de retenir l'attention de l'auditoire.

Ensuite, voici un deuxième cas d'exception: les prestations de services se rattachant à un immeuble se situant en France.

A cet égard, l'approche a été une approche de réalisme, une nouvelle fois, c'est-à-dire que l'on a considéré que les opérations taxables du chef des immeubles sont, non seulement, bien entendu, les travaux immobiliers et les prestations réalisées en vue de la construction de l'immeuble, mais ce que l'orateur appellerait toute la périphérie technique et commerciale, c'est-à-dire aussi bien les opérations techniques préalables à la construction que les commissions on honoraires de gestion par les promoteurs pendant la période de construction, ou les opérations des intermédiaires qui s'entremettent pour l'achat, la souscription ou la vente des immeubles et, bien entendu, les prestations des experts relatives aux travaux de construction.

C'est donc l'idée que toute ce qui se rattache à un immeuble est imposé dans les mêmes conditions que l'imposition afférente à cet immeuble; il est clair, en effet, que s'il n'en était pas ainsi, on aboutirait à des situations absurdes suivant lesquelles une partie des prestations serait taxée dans un pays et l'autre dans un autre: ce serait peu conforme à l'esprit même de simplification qu'a voulu la directive.

C'est un peu autour des mêmes notions qu'ont été traités les problèmes de transport et les prestations accessoires, c'est-à-dire qu'on ne limite pas la notion: on entend non seulement appréhender le transport lui-même mais également les operations qui l'entourent, c'est-à-dire le chargement et le déchargement, la manutention de la marchandise, ou son déchargement, son dosage, son pesage, enfin toutes les opérations qui peuvent être adjointes, y compris les locations de matériel pour le chargement et le déchargement, les gardiennages, les transbordements, les opérations d'assistance aux passagers.

La quatrième dérogation a trait aux opérations culturelles, artistiques, sportives, scientifiques, éducatives, récréatives et les prestations accessoires. Pour celles-ci, l'orateur estime qu'essentiellement la difficulté rencontrée est relative à la formation du personnel étranger, étant donné que dans un certain nombre de cas, les formations de personnel étranger sont liées à des opérations d'exportation: on exporte un matériel déterminé, et on envoie dans les pays producteurs de ce matériel le personnel destiné à utiliser cet appareil et à recevoir la formation ad hoc.

Il est tout à fait conforme, selon lui, et à la volonté de la Communauté et à la situation de fait qu'en la circonstance, cette formation de personnel étranger soit assimilée à une opération relevant d'une activité de conseil en formation et également fasse l'objet d'un traitement identique à celui des exportations.

Les prestations culturelles et autres pour l'essentiel sont le plus souvent exécutées par un assujetti établi dans le pays où la prestation est exercée. Cela est vrai dans un certain nombre de cas, mais cela peut poser des problèmes, non pas de principes, mais des problèmes d'administration, car il est clair que si quelqu'un vient rapidement effectuer une prestation de caractère culturel ou artistique même, il vient, il s'en va, il peut y avoir quelque difficulté pour l'appréhender. Déjà du côté des impôts directs, le même problème a été fréquemment rencontré. Mr. LEBRUN souligne à cet égard, simplement comme une incidente, que les problèmes qui se posent ne sont spécifiques ni à l'harmonisation, ni à la taxe sur la valeur ajoutée; ce sont purement et simplement des problèmes que l'on rencontre dès lors que des opérations sont susceptibles de s'effectuer à travers des frontières, sans perdre de vue que pour un certain nombre d'entre elles, il n'y a même pas de support matériel.

C'est la raison pour laquelle on doit dire que dans l'approche faite par les délégations sur ce sujet, chaque fois qu'il y avait la possibilité, en quelque sorte, d'appréhender ou de saisir physiquement une prestation de services, on a demandé qu'il soit fait retour au principe de l'utilisation; c'est le résultat auquel on aboutit dans la pratique.

Une deuxième catégorie de problèmes: ceux relatifs aux cessions et concessions de caractère intellectuel, aux droits d'auteur, aux prestations de publicité, aux prestations de conseillers. En cette circonstance, un certain nombre de difficultés ont surgi auxquelles on a apporté les premières réponses. On applique en France la directive depuis un an. Au passage, l'orateur félicite la délégation belge de la promptitude avec laquelle elle a mis en vigueur ce texte difficile et déclare battre sa coulpe devant le fait qu'il ait fallu un an de délai pour obtenir le même résultat en France. Il est persuadé que ses amis belges ont, dans un certain nombre de cas, des réponses beaucoup plus pertinentes aux problèmes qui se sont posés, en France.

Il y a eu quelques difficultés concernant les prestations de publicité. Il faut savoir où s'arrête en quelque sorte la notion de prestation de publicité et il est apparu, en la circonstance, que la fourniture des éléments nécessaires à la réalisation de l'opération de publicité devait être assimilée à celle-ci, mais que, en revanche, la distribution d'articles publicitaires, etc. . . , ne représente pas la même notion. Ce n'est pas très facile à délimiter; c'est un domaine dans lequel on sera appelé à plusieurs titres à se concerter davantage.

Pour les autres types de conseils, on a placé dans cette notion de conseils, aussi bien les conseils en brevet d'invention que les conseils en informatique, en recrute-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ment, en organisation, en matière d'études de marchés, en ingéniérie. Il n'est pas certain, en définitive, que chacun d'eux ait spécifiquement toujours le titre de conseil mais il est évident que l'on se trouve bien dans un domaine où il y a fourniture par le prestataire de services d'un conseil où le bon sens l'entend, même si, dans un certain nombre de cas, il peut y avoir des arguties sur le sujet.

On a également été affronté avec le problème des fournitures d'information. La notion de fourniture d'information pose quelques difficultés, et voici comment on les a résolues, sans pour autant prétendre détenir la sagesse universelle. On a considéré que relevait du traitement de données, de la fourniture d'information, la prestation qui consistait en l'utilisation d'un ordinateur pour émettre des billets ou donner des informations touristiques, ou pour les terminaux des compagnies aériennes et des agences de voyage, la fourniture d'informations radiodiffusées on télévisées de programme culturel, la transmission d'émissions télévisées par satellite: c'est à peu près les problèmes sur lesquels on a été conduit à s'interroger.

Enfin, il y a quelques opérations relatives aux intermédiaires, de commissions étrangères pour le compte d'inventeurs français, par exemple, et en la circonstance, il est apparu que l'opération effectuée par le commissionnaire était imposable en France dès lors que le bénéficiare était un assujetti établi dans ce pays.

L'orateur déclare avoir fait ce panorama technique des problèmes qu'il a rencontrés en France parce qu'il croit que cela répond au souci de ce colloque et peut servir de base pour les échanges d'informations pratiques permettant de développer progressivement les applications communautaires du texte de la directive.

D'autres problèmes de caractère pratique se posent également: le premier, c'est la notion de siège de l'activité de l'établissement stable: l'orientation utilisée par l'Administration française en a été fournie déjà: à côté évidemment des concepts juridiques qui le définissent, il lui paraît que le réalisme fiscal impose que soit appréhendé comme tel tout centre d'activité où l'assujetti effectue de manière régulière des opérations.

Une deuxième notion qui peut causer des difficultés est la notion de bénéficiaire dans le cadre de l'article 9, 2c de la 6ème directive: il faut entendre par là le client direct du prestataire, sinon on risque d'entrer dans un mécanisme de sous-traitance.

Egalement le problème de la définition de l'assujetti est un cas d'application pratique entre les Etats mais qui, d'après l'orateur, devrait intéresser moins les membres de l'assemblée.

Enfin, on peut avoir des problèmes relatifs à la définition même de l'exécution d'une prestation, mais il n'y a rien de nouveau dans la directive par rapport à ce qui existait antérieurement.

LUXEMBOURG:

MAITRE PRUSSSEN

L'orateur déclare que n'étant pas un représentant de l'Administration fiscale luxembourgeoise, il a moins d'expérience sur la question d'autant plus que le texte légal luxembourgeois date seulement du 12 février 1979 et n'entre en vigueur que le 1er janvier 1980. L'expérience que l'Administration luxembourgeoise a pu avoir avec ce texte est donc relativement limitée. Il y a également beaucoup moins de règlementation qu'il y en a à l'heure actuelle en Belgique.

Le texte luxembourgeois contient de nombreuses délégations de pouvoirs au gouvernement en vue de prendre des mesures d'exécution.

En principe, le lieu de la prestation est le lieu du siège d'activité ou de l'établissement stable ou, à défaut, le domicile, car il se pourrait en effet qu'une personne accomplisse des prestations de services alors qu'elle n'a pas de véritable siège d'activité.

La notion d'établissement stable doit être interprétée selon la législation applicable en matière d'impôts directs, la loi sur la T.V.A. ne contenant pas de définition. Il est donc fait application de la loi d'adaptation fiscale, la définition de service tombant sous ce critère doit être recherchée par rapport aux services qui sont expressément énumérés dans la directive.

Pour ce qui est de la dérogation relative aux travaux immobiliers, l'orateur estime qu'il n'est pas toujours facile d'appliquer le critère sur lequel tout le monde s'accorde: il peut arriver en effet qu'un immeuble situé dans un pays déterminé donne lieu à des travaux exécutés dans un autre pays pour le compte d'un preneur localisé dans un troisième pays, et qu'en fin de compte, l'immeuble n'est pas acheté. Voici un exemple vécu: des consultants anglais ayant un bureau à Paris ou à Bruxelles, ont été amenés à donner un avis au sujet d'un immeuble situé à Francfort, pour le compte d'une firme japonaise établie à Londres. Si l'on imagine que l'immeuble n'est pas acheté, la T.V.A. sera due à Francfort.

Deuxième dérogation: le lieu où la partie essentielle du travail est matériellement exécutée d'après la législation luxembourgeoise.

Des difficultés pourront se présenter, car qu'entend-on exactement par la partie essentielle du travail. Ce peut être le cas notamment de l'expertise, celle-ci pouvant parfaitement se situer dans des pays différents: l'expert se rendra sur les lieux, puis rentrera dans son pays pour étudier le cas et rédiger son rapport: quel sera alors le lieu de la taxation? Le pays où le contrat aura été passé? Celui où est situé le bien qu'il aura examiné? Celui où il se sera entretenu avec son client? Ou enfin le pays dans lequel il aura le plus longuement réfléchi à l'affaire?

Ce deuxième critère concerne donc, outre les expertises sur biens meubles dont il vient d'être question, les activités culturelles, artistiques, scientifiques, sportives, d'enseignement, de divertissements, etc... L'orateur

© 1980 International Bureau of Fiscal Documentation – BULLETIN

estime que la formation de personnel doit également rentrer dans cette catégorie. Il s'agit aussi d'une activité accessoire au transport, les travaux sur meubles corporels.

Le troisième critère est celui de l'utilisation du bien. Ici le problème du transport se pose d'une façon un peu différente au Grand Duché de Luxembourg parce que le texte dit ceci: "le lieu des prestations de services ayant pour objet la location de biens meubles corporels que le prestataire, en vue de leur utilisation dans le pays de destination, a exportés de l'intérieur du pays vers un autre Etat membre". Le pays extérieur de la Communauté n'est pas pris en considération dans cette dérogation, et le texte poursuit: "ou importé d'un autre Etat membre vers l'intérieur du pays et l'endroit où lesdits biens sont utilisés". Le texte ajoute: "cette dérogation n'est pas applicable à la location des moyens de transport." On constate finalement que l'on a utilisé une seule hypothèse: mais il y a de multiples hypothèses qui économiquement seront identiques et où le principe général sera applicable, c'est-à-dire où la location du bien sera imposable au siège d'activité du prestataire.

En ce qui concerne le lieu du domicile du preneur, l'orateur se réfère à l'énumération de services qui en a été faite précédemment.

Il précise que si une telle activité, parmi celles citées à l'article 9-2, litt.e de la directive est effectuée en relation avec un immeuble, c'est la situation de l'immeuble qui prime.

Quel est le cas du preneur résidant en dehors de la communauté, en ce qui concerne les mêmes services, qui y dispose d'un siège d'activité ou d'un établissement ou simplement d'un domicile?

On distingue, comme dans les exposés précédents, les preneurs assujettis qui sont résidents de la C.E.E. et les preneurs assujettis ou non, résidant en dehors de la C.E.E. Pour les travaux intellectuels visés à l'article 9-2 litt.e de la directive, le lieu de la prestation est réputé se situer au domicile ou au lieu d'activité du preneur.

Débats

Remarque préliminaire: tous les orateurs parlent en leur nom personnel sans aucun préjugé quant à la solution qu'ils pourraient être amenés à prendre, ou leur administration, dans un cas particulier.

Question (M. Richou, France)

L'art. 15, 13 de la 6ème directive exonère: "les prestations de services, y compris les transports et les opérations accessoires, mais à l'exception des prestations de services exonérées conformément à l'art. 13, lorsqu'elles sont directement liées au transit, à l'exportation de biens ou aux importations de biens bénéficiant des dispositions prévues à l'art. 14, par. 1 sous b) etc. et à l'art. 16, par. 1.
En France, cette disposition a été reprise sous l'art. 262, §1 du Code général des impôts, qui exonère de la T.V.A. les exportations de biens meubles corporels ainsi que les prestations de services qui leur sont directement liées.
L'Administration a précisé dans ses instructions que ces exonérations s'appliquaient notamment à la location des moyens de transport, des contenants, et des matériels pour la protection des marchandises exportées; aux prestations de formation dispensées aux membres du personnel d'une entreprise étrangère, dans la mesure où ces prestations sont liées à la vente de matériel exporté.
Les autres états de la communauté interprètent-ils de la même façon les dispositions de l'art. 15, 13 de la 6ème directive?

Réponse

1) Location des moyens de transport
Mr. GUIEU: Tous les Etats membres appliquent le taux zéro. C'est considéré comme une exportation. Il n'y a apparamment pas de difficultés de ce côté là, mais interprétation uniforme de la directive.

2) Formation de personnel d'une entreprise étrangère liée à la vente de matériel exporté
Mr. GUIEU: Il y a une divergence d'approche selon les administrations. L'Administration française place ces prestations de service sous la catégorie 9, §2, e; tandis que l'administration belge la classe pour partie dans le 9, §2, c et les taxe avec la possibilité de demander le remboursement par le biais de la 8ème directive (délais et formalités à accomplir, mais le résultat économique est le même).
En ce qui concerne les autres pays, la question n'a pas pu être prospectée.

M. CAPPELLEMAN: Fait preciser par M. Lebrun que dans l'hypothèse visée la prestation de formation a lieu en France et non au lieu du preneur, mais est exonérée pour cause d'exportation.
Pour la situation belge, la prestation de formation est fournie en Belgique aux membres du personnel d'une entreprise qui a acheté en Belgique du matériel qui doit être exporté; dans ce cas, pour nous, la prestation se situe en Belgique et il est parfaitement concevable que cette prestation soit exonérée pour des raisons d'exportation, mais nous n'appliquons en tout cas pas le critère de l'art. 9, §2,e de la 6ème directive.

M. LEBRUN: En effet l'Administration française a analysé cette opération comme une opération de conseil en formation, partie de cette idée que lorsqu'on apprenait à des gens à se servir d'un matériel déterminé, c'était une formation de ce personnel sur le matériel en cause et les conséquences que l'on en tire sont conformes d'une certaine manière à la directive. La seule chose, c'est qu'à partir du moment où elles sont liées également à une opération d'exportation, il nous a paru que pour des raisons pratiques évidentes il était préférable d'avoir une situation d'exportation "classique", sans avoir le sentiment de tirer sur la ficelle, dans la mesure où le résultat

© 1980 International Bureau of Fiscal Documentation – BULLETIN

est dans les deux cas une opération qui ne doit pas laisser de taxes à la charge des entreprises auxquelles appartiennent les personnels en cause.
Les analyses auxquelles se sont livrées la France et la Belgique ont finalement les mêmes conséquences et atteignent toutes les deux les objectifs fixés par la Commission; qu'il n'y ait ni double imposition, ni double exonération.

Question (M. Richou, France)

Les règles de territorialité relatives aux locations de moyens de transport sont elles les mêmes dans tous les Etats de la Communauté?

Réponse

M. GUIEU: Après étude des législations des Etats membres, en ce qui concerne les locations de moyens de transport, il ne semble pas y avoir de divergences: c'est toujours le lieu du prestataire.
Cependant trois pays, la France, la Belgique et l'Allemagne, ont fait usage de la faculté prévue à l'art. 9, §3, c'est-à-dire que s'il y a utilisation faite hors de la C.E.E., il y a quand même détaxation; ce n'est donc plus le lieu du prestataire de services; par contre, s'il y a un véhicule qui vient de l'extérieur mais qui est utilisé à l'intérieur de leurs pays, il y a taxation, bien que le prestataire soit situé hors communauté.
En résumé donc, tous les Etats membres appliquent la règle du prestataire de services avec utilisation de la faculté, pour la Belgique, la France et l'Allemagne.

M. PRUSSEN: Au Grand Duché, il n'y a pas encore de dispositions dérogatoires, mais il y a une habilitation prévue dans la loi. Par voie de règlement cette faculté peut être appliquée.

Question (M. van Roye, Belgique)

Quel est le lieu de la prestation de services pour la location de wagons citernes? En ce qui concerne la prestation de services ayant pour objet la location d'un moyen de transport, le lieu de la prestation est réputé se situer à l'endroit où le moyen de transport est utilisé lorsqu'il est donné en location par un loueur qui est établi dans le pays et ce dans la mesure où ce moyen de transport est utilisé hors de la Communauté, ou bien par un loueur établi hors de la C.E.E.

Réponse

M. CAPPELLEMAN: La règle principale est le lieu du prestataire, mais avec une double exception selon la législation belge; c'est le lieu d'utilisation lorsque le moyen de transport est donné en location en vue d'être utilisé hors du Marché Commun, c'est alors à concurrence de l'utilisation en dehors du Marché Commun que le lieu du service est situé en dehors du Marché Commun: ou, deuxième exception, quand il s'agit d'un moyen de transport donné en location par un loueur établi hors de la C.E.E.
Ces exceptions sont ainsi limitées car à l'art. 9 de la 6ème directive, on ne parle même pas de moyens de transports et en tant que tels, c'est la règle principale du lieu du prestataire qui s'applique avec la faculté laissée à l'art. 9/3 aux Etats membres de situer le lieu du service dans l'Etat d'utilisation lorsque le lieu du service se situe selon la règle principale en dehors du Marché Commun et qu'on peut établir qu'il y a eu utilisation dans le Marché Commun ou, inversément, lorsque selon la règle principale, le lieu du service se situe dans le Marché Commun et que l'utilisation effective a lieu en dehors. Le Code belge fait usage de l'art. 9/3, mais ne peut aller au-delà.

Même Question concernant la location de palettes (support plat servant à transporter des marchandises)

Réponse

M. CAPPELLEMAN: Ceci rentre dans les locations de biens meubles corporels autres qu'un moyen de transport.
Que les palettes soient ou non des moyens de transport peut déjà donner lieu à discussion. Si elles en sont, voir réponse supra; si elles n'en sont pas, c'est à nouveau le lieu du prestataire qui est le lieu du service, sauf lorsque le prestataire exporte le bien d'un pays du Marché Commun dans un autre pays du Marché Commun où il doit être utilisé, ou sauf lorsque le bien est donné en location par un loueur qui est établi hors C.E.E.: où dans les deux cas le lieu du service est le lieu d'utilisation.
Dans les cas de locations de palettes ou de wagons si la T.V.A. est due en Belgique d'après les règles énoncées, il peut y avoir exonération, pour des raison d'exportation s'il s'agit de matériel utilisé en trafic international.

Question (Mme. Villalong, France)

Une société établie en Suisse a effectué pour le compte d'une société française, bureau d'Etudes Immobilières, des opérations de prospection immobilière. Quel est le sort fiscal de ces opérations de prospection à l'égard de l'art. 259 du C.G.I. selon que ces opérations aboutissent à un marché de travaux immobiliers ou n'aboutissent pas.

Réponse

M. LEBRUN: En principe, c'est une opération concernant les immeubles et donc est taxée en France. Si l'opération n'aboutit, j'aurais tendance à penser que dès lors que c'étaient des opérations dont la réalisation éventuelle devait s'effectuer en France, le bon sens implique que ce soit en France que l'imposition soit établie et supportée.

Intervention d'un participant (M. Leroy)

La réponse de M. Lebrun me semble contradictoire avec celle qu'a donnée M. Cappelleman tout à l'heure. Pour M. Cappelleman, quand on fait de la publicité pour la vente d'immeubles, on applique la règle relative aux opérations de publicité, et on applique le lieu de l'établissement du preneur. En revanche, quand il s'agit d'une opération immobilière, dit M. Lebrun, même si ça n'est pas dénoué, c'est une prestation de service relative à un immeuble, donc on applique le lieu de situation de l'immeuble.
Ce sont donc là, pour l'intervenant, deux règles dérogatoires qui sont appliquées distributivement par les diffé-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

rentes administrations, ce qui n'est guère satisfaisant. De plus, quelle est la dérogation qui prime l'autre? Celle relative aux immeubles ou celle relative à la nature des services?

M. LEBRUN: La question relative à la publicité reçoit sa réponse dans la directive elle-même, peu importe qu' elle soit relative à des immeubles ou non. Pour la question relative aux opérations de prospection, sa réponse a été un peu rapide tout à l'heure: il lui apparaissait qu' elles se situaient à l'intérieur du champ des opérations immobilières.
Il y ajoute que si l'on veut poursuivre l'analyse à partir du moment où l'opération ne s'est pas réalisée, l'on peut considérer qu'il s'est agit en réalité d'opérations de recherche et qu'à ce titre et au titre de l'art. 9, §2,e, le lieu d'imposition est le même.

M. CAPPELLEMAN: Est sur la même longueur d'ondes que M. Lebrun. Pour les prestations de publicité, en Belgique, on applique le critère propre aux prestations de publicité et on ne suit pas le critère relatif aux immeubles.
Quant aux opérations de prospection d'un marché immobilier, si l'affaire aboutit, c'est une prestation se rapportant à un immeuble, et c'est le lieu de l'immeuble qui est pris en considération. Si l'affaire n'aboutit pas, ce dont il n'a pas l'expérience depuis le 1/1/78, on ne considère pas qu'il s'agit d'une affaire qui se rapporte à un immeuble mais on a affaire à une étude de marché, et c'est le lieu du prestataire, mais avec le critère du pays du preneur le cas échéant (art. 9, §2,e).

L'intervenant: Ne critique pas la solution mais estime invraisemblable que l'on retienne le critère de l'aboutissement ou non de l'opération pour savoir comment la taxer. C'est oublier que le bureau d'études techniques doit être payé avant, on doit envoyer des factures, des acomptes, sur lesquelles il doit demander une T.V.A., mais laquelle? Et une fois la T.V.A. demandée, si on ne réalise pas l'opération de bureau d'études, est ce qu'on va lui restituer la T.V.A.? Non, parce qu'il l'a mentionnée sur les factures, et dans cette affaire on paiera deux fois la T.V.A.

M. GUIEU: Ne peut que lire les textes communautaires et confirme les interprétations des délégations belge et française.
Pour lui, il est clair que lorsque dans la directive, il y a une qualification d'une prestation de services qui a été citée, c'est ce lieu qui prévaut. Ainsi pour la publicité, c'est toujours le 9, §2,e, ainsi que pour les assurances et les opérations financières. Si l'on prend un crédit pour son immeuble, c'est le 9, §2,e qui joue. Par contre, pour les autres prestations relatives à l'immeuble, il y a une finalité, il faut que l'opération se concrétise.
Si elle ne se concrétise pas, c'est la nature de l'opération qui réapparaît, et c'est le lieu de l'opération qui réapparaît. Il y a peut-être des régularisations à effectuer, mais on ne peut agir différemment, c'est le législateur qui a voulu cela.

Question (Mme. Villalong, France)

Une société française transmet à sa maison mère, établie hors C.E.E., certaines données comptables de base. La maison mère tire de ces données comptables certains ratios ou certains documents de gestion. Ces documents ne ressortent pas de façon caractéristique de la profession d'expert-comptable (la maison mère n'exerce pas cette profession), il serait à priori excessif de parler de traitements de données. Où la prestation est-elle taxable?
Dans l'hypothèse la maison mère facture à sa filiale le coût de cette "assistance" administrative, de ce travail de pure gestion. Dans quel sens, large ou restreint, entend on le traitement des données?
Dans un groupe dependant d'une société mère située hors de la communauté, la société mère dispose des moyens, informatiques et autres, qui lui permettent de fournir des services de gestion à ses filiales, en exploitant les données économiques et comptables que les filiales lui transmettent, services qui leur sont facturés.

Réponse

M. LEBRUN: Pense que ces opérations doivent se placer sous l'art. 9, §2,e/fournitures d'informations et traitement de données. Donc imposabilité en France en la circonstance, dans le chef du preneur. Au point de vue communautaire, il y aurait pu avoir en plus la garantie du 9, §3 (utilisation du service), mais elle n'est pas utilisée en France.

M. CAPPELLEMAN: Suppose que la société mère et la société filiale ont une personnalité juridique distincte. Car sinon il n'y a pas de T.V.A., mais simple échange entre divisions sans personnalité juridique distincte et donc de prestations de services facturés. Il marque son accord avec M. Lebrun.

Question (M. Gossiaux, Belgique)

Une succursale belge d'une société de droit américain vend à un société française du même groupe des marchandises au même prix que cette société française les revend à ses clients en France; pour couvrir les frais encourus par la société française et pour lui assurer une marge bénéficiaire, la succursale belge accorde à la société française un pourcentage minimum de commission.
Le contrôleur français prétend qu'il y a lieu d'appliquer sur la note de commission la T.V.A. française, et que par la suite la succursale belge pourra au moyen d'un représentant responsable en France récupérer cette T.V.A.
Cette T.V.A. française est-elle due ou non?
La succursale belge lui paie donc une commission qui permet de couvrir les frais de la société française et de lui donner un léger bénéfice.

Réponse

M. LEBRUN: Dans une opération de cette nature, il constate d'abord que il y a une opération par laquelle quelqu'un est devenu propriétaire de marchandises donc il n'y a pas de situation de commission.
Deuxièmement, une analyse sur le plan français interne, en ne franchissant pas de frontières, et en analysant les rapports entre deux sociétés, il considérerait qu'il y a une réduction de prix. Mais en tenant compte du fait qu'il y a un franchissement de frontières, il y a une recette complémentaire en quelque sorte, qui est attribuée à la société française.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Cette recette est une recette imposable, en quelque sorte à titre de complément de rémunération, et elle est imposable en la circonstance en France. Ici il ne s'agit pas d'une prestation de nature intellectuelle.
Il semble donc qu'il y a, quelle que soit la dénomination qui lui est donnée, une recette "complémentaire" de l'entreprise française. Celle-ci reçoit un prix de son client qui est celui auquel elle vend le bien, elle reçoit de l'entreprise belge une rémunération pour la vente de ce produit.

M. CAPPELLEMAN: Réagit de la même façon que M. Lebrun, mais ajoute une hypothèse: Si la société belge agit comme courtier de la société française, en principe le lieu du service de la société belge en tant que courtier serait la Belgique; mais la T.V.A. ne serait pas due en Belgique si le courtier intervient dans la réalisation d'une opération qui a lieu à l'étranger, par exemple d'Amérique en France. La T.V.A. n'est pas due en Belgique sur le courtage, quand elle se rapporte à une exportation ou à une opération se déroulant à l'étranger.

Question (M. Thielemans, Belgique)

Pourquoi, dans la 6ème directive, n'a-t-on pas retenu comme critère principal le lieu du preneur (critère utilisé en Belgique avant 1978)?

Réponse

M. CAPPELLEMAN: Le lieu du preneur est le bon critère car automatiquement on replace la perception dans le pays du preneur qui a normalement droit à la déduction: il y a récupération de T.V.A. qui est portée en compte par le prestataire établi dans un pays étranger. Mais ce critère ne peut non plus être appliqué de façon générale, notamment en ce qui concerne les services qui sont effectués pour le compte de personnes privées ou pour le compte de personnes qui n'ont pas droit à déduction (ex: les prestations de coiffeurs). Il faut donc, quand on accepte le critère du preneur, prévoir une série d'exceptions. Une autre exception est celle qui concerne les immeubles. On en a parlé.

Question

Quelles sont les prestations de services qui se rapportent à un immeuble?

Réponse

M. CAPPELLEMAN: On a reproché, peut-être avec raison, que le système développé supra était de nature à créer des complications chez les assujettis, étant donné qu'au moment du paiement de l'acompte, il fallait savoir si la T.V.A. était due ou non, ou dans quel pays cette T.V.A. était due.
M. Cappelleman en profite pour insister sur un point: si on dit que la T.V.A. n'est pas due en Belgique parce que le lieu du service n'est pas en Belgique, on ne peut en inférer que la T.V.A. n'est pas due du tout. Or pour les prestations qui sont visées à l'art. 9, §2,e, si la T.V.A. n'est pas due en Belgique, c'est qu'elle est due dans un autre pays du Marché Commun.
Pour revenir à la question, si une étude est faite pour savoir si tel immeuble peut être exploité comme magasin à grande surface ou non, normalement on est tenté de dire que le lieu du service est celui où se trouve l'immeuble, mais d'autres pourraient considérer qu'il s'agit d'une étude de marché aussi longtemps qu'on n'a pas la conclusion. On tourne donc un peu en rond. Et on peut se demander si le critère de la situation de l'immeuble ne doit pas être réservé aux seuls cas où il est tout à fait sur qu'une prestation se rapporte à un immeuble, par exemple les prestations matérielles de construction, de démolition, d'intervention dans la vente de tel immeuble, etc.

La Belgique n'a pas encore du se prononcer et n'a pas encore de solution à cette question pour le moment.

M. LEBRUN: L'analyse de Mr. Cappelleman est tout a fait judicieuse. Il est sur que quand nous sommes dans une opération de cette nature il y a des difficultés d'application pratique.

Si, par exemple, une entreprise anglaise demande à une entreprise Suisse de rechercher en France un terrain sur lequel elle pourrait effectuer une opération de promotion immobilière, d'après les schémas communautaires, cette opération est imposable en France; mais si elle ne se concrétise pas, c'est à priori une opération imposable en Angleterre.

Garantir que derrière l'application de ces principes, il y a une réalité fiscale totale, serait présumer des forces des administrations. C'est un phénomène classique de prestations ternaires.

Les Etats membres ont, en matière de territorialité des prestations de service, presque toujours un possibilité de solution pour les opérations dans lesquelles il y a des relations binaires, c.à d., la Belgique et la France, la France et l'Allemagne, etc.

A partir du moment où intervient un troisième pôle dans l'opération, aucune administration, dans quel que système de taxes indirectes que ce soit, n'est en état de garantir l'application des principes qu'elle peut avoir posé en matière d'imposition.

C'est peut être quand même l'avantage du système de l'imposition dans le pays du lieu de l'immeuble à savoir que s'il y a réalisation, à ce moment là il y aura un intérêt fiscal pour un des opérateurs, à éventuellement dégrever de taxe ce qui aura concourru à la réalisation de l'opération en cours; encore faut-il que cette opération soit soumise à la taxe?

Dans des opérations de cette nature, M. Lebrun est d'un scepticisme absolu et défie la Commission et toute administration de pouvoir proposer une solution qui, si elle n'est pas respectée, puisse être véritablement contrôlée. La faiblesse des hommes et des textes sont incommensurables.

Question (M. Gossiaux)

Une société de droit français fait de la publicité en France, la T.V.A. française lui est facturée. La société refacture cette publicité à une société belge ayant une personnalité juridique distincte de la sienne. Le contrôleur français prétend qu'il y a lieu d'appliquer sur cette deuxième facture une T.V.A. française. Ceci pa-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

raît à l'intervenant en contradiction avec l'art. 21, §3, 7o, c.

Réponse

M. CAPPELLEMAN: Tel est aussi son avis. Si une société française porte des frais de publicité en compte à une société belge, et que tout cela se passe en nom propre de la société française, c'est une prestation de publicité pour laquelle le lieu du service est le lieu du preneur lorsque le preneur est établi dans un Etat membre autre que celui du prestataire.
Pour des services qui sont donnés en cascade, il faut voir chaque relation et non voir la solution finale.
Entre la société française et la société belge, ce n'est pas la T.V.A. française qui est due, mais la T.V.A. belge.

M. LEBRUN: D'accord avec M. Cappelleman.

Question

Comment le prestataire sera-t'il assuré que le preneur établi à l'étranger est assujetti, lorsque l'assujettissement est un facteur déterminant de la localisation de service? Sera-t'il responsable si la déclaration du preneur s'avère fausse?

Réponse

M. GUIEU: Suppose qu'il s'agit des prestations de services visées à l'art. 9, §2,e (taxation au lieu du preneur)? Quelle est la preuve qu'il faut apporter pour montrer qu'on est un assujetti communautaire?
Par tous moyens de preuve, y compris par une attestation de l'administration fiscale nationale du pays du preneur envers le prestataire.
D'après l'art. 21, §1,b; dans ce contexte là, les Etats membres peuvent prévoir que le prestataire est solidairement tenu responsable d'acquitter la taxe s'il y a eu fraude. C'est une question de contrôle, d'intendance administrative plus que de principes.

Un intervenant (Me. de Longueville): On ne peut quand même pas imaginer que chaque fois que quelqu'un va faire un achat dans un autre pays, il se promène avec en poche une attestation à jour de son administration locale. Est-il d'ailleurs prévu? Une carte d'identité d'assujetti pour dans les différents pays? Pas à sa connaissance. Or les contrôles se font quatre ans plus tard. Que se passe t'il s'il y a eu un abus de l'intéressé qui a produit de faux papiers? Déjà sur le plan national le prestataire n'a aucun moyen de contrôle, mais sur le plan international encore moins!
Y a-t'il quelque chose de spécifiquement prévu pour éviter cette situation?

M. GUIEU: C'est exact. Il n'y a pas encore de carte d'identité fiscale et j'espère qu'il n'y en aura pas de sitôt. Mais il y a système d'attestation prévu par la 8ème directive pour le remboursement de la taxe à des assujettis étrangers. Ce moyen pourrait être utilisé déjà. Le prestataire qui va prester quelque chose à un preneur étranger doit quand même savoir à qui il va faire sa prestation car il a une responsabilité non seulement vis-à-vis de lui même pour en recevoir le paiement, mais également vis-à-vis de l'administration puisqu'il peut être solidairement responsable. C'est donc à lui de s'entourer de certaines garanties de preuve. Il pense que ce sont des situations marginales, mais qui peuvent exister. Laisse aux administrations nationales le soin d'indiquer ce qu' elles demandent sur base de ces textes communautaires.

Question (Me. de Longueville)

En Belgique, le problème se pose pour l'instant pour des centaines de millions, avec notamment des assujettis, entrepreneurs de travaux qui sont rayés sans que personne ne la sache. Cela bouleverse toute la technique de perception de l'impôt sous la responsabilité du payeur, lequel est obligé pour avoir un minimum de sécurité, même s'il connait très bien son entrepreneur, de téléphoner à son contrôleur, qui lui répond qu'il n'en sait rien, ou écrire et recevoir une réponse trois mois plus tard. Et quant aux listes, elle ne sont pas à jour, c'est d'ailleurs une impossibilité technique. Mais en attendant vous avez reçu des fournitures et vous payez la T.V.A. irrégulièrement sans le savoir.
Comment pense-t-on résoudre ce problème sur le plan international, car la qualité d'assujetti entraine des conséquences très importantes sur le plan de la taxation, déplace les responsabilités. Comment peut on avoir ses apaisements au moment même où on traite, pour savoir si le preneur est vraiement assujetti dans son pays.

C'est un grave écueil du système mis sur pied par la 6ème directive que de faire dépendre de la qualité d'assujetti un régime fiscale particulier.

Réponse

M. CAPPELLEMAN: Dans le cadre du lieu de prestation des services, l'art. 22 de la directive contient une possibilité de faculté pour les Etats membres de prendre toutes les mesures destinées à éviter la fraude.
L'Administration belge a donc tiré la couverture à soi en disant qu'en matière de prestations de services, dès qu'une des parties en cause est établie en Belgique, selon une présomption légale la T.V.A. est due jusqu'à preuve du contraire.
C'est donc au prestataire de service qui n'a pas imposé sa prestation de service de démontrer qu'il avait une raison pour ne pas imposer. Ainsi, du côté belge nous n'avons pas trop de problèmes.

M. LEBRUN: Apporte une nuance; dans la pratique, la situation en cause doit être appréciée au moment où les faits se sont produits c.à d. qu'il faut tenir compte du caractère de certitude que pouvait avoir la situation invoquée pour le redevable en cause au moment où les faits se sont produits.
D'autre part, ceci peut être corroboré par les contacts qu'on peut avoir entre administrations. Si l'administration étrangère fait savoir que la personne en cause était régulièrement inscrite et n'a été radiée qu'à partir d'une certaine date, la bonne foi peut être admise. Ce sont des situations de fait dans lesquelles jouent par définition toutes les imprécisions et toutes les incertitudes éventuelles d'appréciation d'une bonne foi. Si un avocat tient à ce que cette bonne foi profite à la personne poursuivie, l'administration de son côté doit s'entourer de toutes les garanties et de prendre tous les éléments de contrôle qu'elle peut avoir pour en apprécier le degré.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

C'est la seule réponse possible face à une situation de fait.

Question

Est-ce qu'il ne serait pas possible d'envisager un formulaire unifié qui serait tamponné par le représentant de l'administration néerlandaise, ou belge, qui serait adressée au prestataire français ou allemande et qui apporterait la preuve. C'est tout le problème du document probant.
Ne pourrait-il pas y avoir un formulaire européen qui dit tel preneur est assujetti?

Réponse

M. GUIEU: Nous avons prévu un tel formulaire dans le cadre de la 8ème directive. Ce formulaire est communautaire dans les différentes langues de la communauté, pour un échange facile entre les administrations de langues différentes. Cette attestation pourra être utilisée le cas échéant. Mais il ne faut pas les multiplier pour chaque opération sinon on risque d'encombrer et les administrations de base pour viser celles-ci, et les administrations d'arrivée avec des masses de papier énormes. Il faut donc avoir une tolérance et des mesures à date avec la connaissance des assujettis qu'ont les services locaux. La mise en place va se faire.

Question

Est-ce que l'apport en société d'un brevet est une opération taxable?

Réponse

M. GUIEU: Il faut voir deux opérations dans cette affaire. Un brevet est considére comme une prestation de service quand il y a une contrepartie. Quand c'est un apport en capital, cela rentre dans le patrimoine social de la société à qui on apporte un brevet. Il ne pense pas qu'à ce moment là il y ait taxation.

M. CAPPELLEMAN: Il faut savoir qui fait l'apport. Est-ce quelqu'un qui le fait de manière occasionnelle parce qu'il a inventé quelque chose, ou est-ce quelqu'un qui fait cela dans le cadre de son activité professionnelle?
Si c'est une société qui dans le cadre de son activité normale peut exploiter un brevet et qui fait apport de ce brevet soit en propriété, soit en concession, elle fait une prestation de services qui est taxée comme toute autre prestation de service.

SUJETS II ET III: Assujettis étrangers et leur droit de récupérer la T.V.A.

Exposé

BELGIQUE:
Régime applicable aux assujettis établis à l'étranger

par J. Autenne*

Sommaire

I. NOTION D'ASSUJETTI

II. ASSUJETTIS ETRANGERS QUI ONT EN BELGIQUE UN ETABLISSEMENT STABLE
- A. Notion d'établissement stable
- B. Régime applicable
  1. Principe
  2. Immatriculation de l'assujetti étranger
  3. Sort des opérations réalisées dans l'intervention de l'établissement stable

III. ASSUJETTIS ETRANGERS QUI N'ONT PAS D'ETABLISSEMENT STABLE EN BELGIQUE
- A. Principe
- B. Régime normal: désignation d'un représentant responsable :
  1. Nature des opérations réalisées en Belgique qui rendent nécessaire la désignation d'un représentant responsable
  2. Agréation du représentant responsable
  3. Obligations et droits du représentant responsable
  4. Création d'un établissement stable
- C. Régime général d'exception: dispense de l'agréation d'un représentant responsable
  1. Cas dans lequel l'assujetti étranger est dispensé de désigner un représentant responsable
  2. Mode de la perception de la taxe
  3. Mode d'exercice d'un droit à remboursement de la TVA en amont
- D. Régimes particuliers d'exception

I. NOTION D'ASSUJETTI

En vertu de l'article 4 du Code de la TVA, ci-après dénommé "CTVA", est un assujetti toute personne dont l'activité consiste à effectuer d'une manière habituelle et indépendante, à titre principal ou à titre d'appoint, avec ou sans esprit de lucre, des livraisons de biens ou des prestations de services visées par ce code.

Il résulte de cette définition très large que la qualité d'assujetti belge n'est nullement conditionnée par la nationalité ou le domicile d'une personne.

Par ailleurs, il a été précisé dans les travaux préparatoires lors de l'examen du projet de loi créant le Code de la TVA que, pour déterminer si une personne réalise des opérations de manière habituelle, il y avait lieu de prendre en considération non seulement son activité exercée en Belgique, mais également son activité exercée à l'étranger.

Il en résulte qu'une société commerciale établie à l'étranger deviendra assujetti belge pour une seule opération qu'elle réaliserait en Belgique (livraison de biens ou prestation de services) lorsque son activité exercée à l'étranger lui donnerait la qualité d'assujetti belge.

Si cette activité est exercée en Belgique, le régime applicable aux assujettis étrangers est fondamentalement différent selon que ces personnes ont ou non en Belgique un établissement stable.

Nous examinerons donc successivement le régime applicable aux assujettis étrangers selon cette distinction et ce, à la lumière des précisions données par une circulaire de la TVA, de l'enregistrement et des domaines no. 30 de 1975, qui remplace la circulaire no. 105 de 1970.

II. ASSUJETTIS ETRANGERS QUI ONT EN BELGIQUE UN ETABLISSEMENT STABLE

A. Notion d'établissement stable

La circulaire No. 30, du 5 décembre 1975, point 8, précise que pour l'application de la TVA, un assujetti établi à l'étranger est considéré comme ayant en Belgique un établissement stable, lorsque les deux conditions suivantes sont réunies:

1) L'assujetti a dans le pays un siège de direction, une succursale, une fabrique, une usine, un atelier, une agence, un magasin, un bureau, un laboratoire, un comptoir d'achat ou de vente, un dépôt ou toute autre installation fixe;
2) Cet établissement est géré par une personne apte à engager l'assujetti envers les fournisseurs ou les clients.

B. Régime applicable

1. Principe

L'assujetti étranger qui a en Belgique un établissement stable est traité comme un assujetti établi dans le pays.

Il peut exercer les mêmes droits, tels les droits à déduction et au remboursement de la TVA en amont et est soumis aux mêmes obligations, telles notamment celles:

* Conseiller fiscal de la FIC; Maître de Conférences à l'UCL.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

— de déposer une déclaration de commencement d'activité lors de son installation en Belgique et de déposer une déclaration lors d'un changement ou d'une cessation éventuelle d'activité exercée en Belgique.
(Lorsque l'activité est complètement abandonnée, l'immatriculation de l'assujetti est radiée. Si l'activité se poursuit sans établissement stable, les règles décrites au III ci-après sont applicables);
— de délivrer, sauf exceptions, des factures ou documents en tenant lieu conformément aux dispositions de l'arrêté royal No. 1 et de tenir une comptabilité prévue par cet arrêté, comptabilité qui peut être simplifiée lorsque le chiffre d'affaires de l'établissement ne dépasse pas 15 millions de francs belges;
— de remettre, chaque mois ou chaque trimestre, selon le cas, une déclaration à la TVA (la déclaration peut être trimestrielle lorsque le chiffre d'affaires de l'établissement ne dépasse pas 15 millions de francs belges) et d'acquitter, dans les délais prévus, la TVA ou les acomptes de TVA pour les assujettis soumis à la déclaration trimestrielle dont ils sont redevables;
— de remettre, chaque année, un listing des opérations réalisées avec des clients assujettis, etc.

En ce qui concerne la facturation, il y a lieu de remarquer que celle-ci doit comporter le numéro d'immatriculation à la TVA de l'assujetti étranger et l'adresse de l'établissement stable établi en Belgique.

L'administration admet, toutefois, que les factures soient établies à l'étranger et expédiées de l'étranger, pour autant, bien entendu, que les doubles de ces documents soient conservés en Belgique à l'appui de la comptabilité.

2. Immatriculation de l'assujetti étranger

L'assujetti étranger doit se faire immatriculer à la TVA et dépend du contrôle du ressort duquel est situé l'établissement.

Lorsque l'assujetti possède plusieurs établissements, l'office compétent sera celui de l'établissement principal où d'ailleurs devra être tenue centralisée la comptabilité des divers établissements.

3. Sort des opérations réalisées sans l'intervention de l'établissement stable

En principe, les opérations que l'assujetti étranger réalise sans l'intervention de son établissement stable en Belgique ne doivent pas être reprises dans la comptabilité tenue en Belgique ni dans les déclarations à la TVA.

Toutefois, si, parmi ces opérations, se trouvaient des livraisons de biens ou des prestations de services qui sont réalisées en Belgique, qu'elles soient ou non soumises à la taxe, et à l'égard desquelles, pour un assujetti étranger sans établissement stable, la désignation d'un représentant responsable est requise, ces livraisons de biens ou ces prestations de services doivent être reprises dans la comptabilité de l'établissement stable et sont soumises aux mêmes règles que les opérations réalisées par l'établissement stable en ce qui concerne la débition de la TVA.

III. ASSUJETTIS ETRANGERS QUI N'ONT PAS D'ETABLISSEMENT STABLE EN BELGIQUE

A. Principe

Nous avons vu que lorsque des personnes établies à l'étranger réalisent des opérations en Belgique, même isolées ou exceptionnelles, ces personnes acquièrent la qualité d'assujettis belges si, en raison de leur activité exercée à l'étranger, elles répondent aux conditions de l'article 4 du CTVA.

Lorsque ces entreprises ne réalisent pas ces opérations par le canal d'un établissement stable, elles doivent, avant de réaliser des opérations en Belgique, faire désigner un représentant fiscal responsable.

Nous verrons toutefois que ces personnes sont, dans de nombreux cas, dispensées de cette formalité.

B. Régime normal: désignation d'un représentant responsable

La réalisation des opérations en Belgique doit se faire par le canal d'un représentant fiscal responsable.

1. Nature des opérations réalisées en Belgique qui rendent nécessaire la désignation d'un représentant responsable

En principe, seule la réalisation d'opérations qui répondent à la définition de livraison de biens au sens des articles 9 et suivant du CTVA (vente de marchandises, etc.) ou de prestation de services au sens de l'article 18 du CTVA (exécution de travaux, cession, concession de droits incorporels, location de meubles, transport, etc.) nécessite la désignation d'un représentant fiscal responsable.

Il importe peu d'ailleurs que ces livraisons de biens ou prestations de services soient imposées à la TVA ou exonérées en vertu des articles 39 à 43 du CTVA (exportation, transit, etc.).

Il faut cependant remarquer qu'en cas d'importation, lorsque la personne établie à l'étranger déclare la marchandise en consommation en se portant destinataire, il y a tout lieu de croire qu'elle revendra la marchandise en Belgique et réalisera donc une livraison de biens imposable.

C'est la raison pour laquelle elle est tenue de désigner un représentant responsable avant l'importation.

Par contre, aucun représentant fiscal ne devrait être désigné si le destinataire et un co-contractant ou lorsque la marchandise n'est pas déclarée en consommation mais bien en transit, en entrepôt ou en franchise temporaire.

2. Agréation du représentant responsable

a. Conditions à remplir par le représentant responsable

En vertu de l'article 2 de l'arrêté royal no. 31, le représentant fiscal responsable doit être non seulement domicilié ou établi en Belgique, mais en outre être capable de contracter et présenter une solvabilité suffisante pour assumer les obligations prévues par le code

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ou en exécution de celui-ci et avoir accepter la représentation.

Il y al lieu de noter que l'agréation peut notamment être accordée à une société avec laquelle l'assujetti établit un courant d'affaires et n'est pas limitée aux organismes de crédit, agences en douane, fiduciaires, etc.

b. Procédure d'agréation

L'agréation requiert:

- qu'une demande d'agréation, sur un formulaire préétabli, soit introduite par l'assujetti établi à l'étranger ou par le représentant qu'il compte désigner agissant en son nom et pour son compte, au Bureau Central de la TVA pour assujettis étrangers: rue Van Orley, no. 15 à 1000 Bruxelles (tél. 02/218.44.40). (Le représentant responsable relèvera de ce bureau de TVA);
- que la demande soit accompagnée par une déclaration de commencement d'activité prescrite par l'article 50, paragraphe 1 du CTVA et par l'article 1 de l'arrêté royal no. 10, et pour les personnes morales par une copie de l'acte de constitution de la société ou de l'association avec, le cas échéant, copie des actes modificatifs;
- que le représentant responsables accepte expressément sur un formulaire préétabli la représentation qui lui est confiée.

c. Etendue de l'engagement pris par le représentant responsable

(i) *Principe*

En vertu de l'article 55 du CTVA, le représentant responsable est substitué à l'assujetti étranger non seulement pour tous les droits accordés à celui-ci (droit à déduction ou à remboursement de la TVA), mais également pour toutes les obligations imposées à celui-ci (facturation, dépôt de déclarations, paiement de la TVA).

Il est solidairement tenu, avec son commettant, au paiement de la taxe des intérêts et des acomptes dont les opérations en Belgique entraînent la débition.

Il résulte de ce texte général que la responsabilité du représentant peut être très étendue.

Aussi, est-il intéressant de voir quand et comment cette responsabilité pourrait, le cas échéant, être limitée?

Ce problème fera l'objet des points (ii) et (iii) ci-après.

(ii) *Limitation de l'engagement à des opérations déterminées*

La responsabilité du représentant peut, à sa demande, être limitée à des opérations déterminées ou fixées jusqu'à concurrence d'un montant à déterminer d'un commun accord avec l'Administration.

Cette demande de limitation de l'engagement peut être introduite soit lors de la demande d'agréation, soit plus tard, mais alors uniquement pour l'avenir ultérieur.

Il y a lieu de noter que l'assujetti étranger ne peut faire agréer qu'un seul représentant responsable en Belgique.

Il en résulte que l'assujetti étranger ne pourra réaliser en Belgique d'autres opérations pour lesquelles son représentant n'est pas engagé qu'à la condition qu'il soit dispensé pour ces opérations de désigner pareil représentant.

Dans la négative, il y aurait lieu de demander la levée de la limitation de la responsabilité du représentant ou de lui substituer une autre personne.

En tout état de cause, en cas de limitation de responsabilité du représentant, celui-ci ne sera substitué à l'assujetti étranger que pour les droits et obligations qui concernent les opérations couvertes par son engagement.

D'autre part, le bureau central de TVA pour assujettis étrangers peut, dans des cas exceptionnels, limiter la responsabilité de l'engagement financier du représentant à un certain montant qui ne peut être inférieur à 100.000 FB et qui doit couvrir en moyenne le montant de taxe due ou qui sera due pendant trois mois par l'assujetti étranger.

(iii) *Limitation de l'engagement dans le temps*

En principe, le représentant reste responsable jusqu'à la date de cessation d'activité en Belgique de l'assujetti étranger ou jusqu'à l'agréation d'un nouveau représentant responsable.

Il en résulte que le représentant ne peut, en principe, démissionner que s'il notifie par écrit, à l'Administration, soit la cessation de l'activité de l'assujetti étranger, soit l'introduction par l'assujetti étranger de l'agréation d'un nouveau représentant responsable.

Toutefois, l'Administration, consciente du fait qu'une personne ne pouvait être liée indéfiniment pour les opérations accomplies par une personne établie à l'etranger qui continue à avoir une activité en Belgique sans accepter de pourvoir au remplacement de son représentant qui le demande, accepte de prendre en considération la renonciation de celui-ci à sa mission s'il établit avoir fait tout le nécessaire pour assurer son remplacement.

L'assujetti étranger, même après son remplacement ou la cessation d'activité de son commettant étranger, reste tenu, pendant le délai de recouvrement prévu par l'article 81 du CTVA, de la TVA, des intérêts et des acomptes se rapportant aux opérations effectuées sous sa responsabilité.

L'Administration a toutefois admis que le représentant était délié de toute responsabilité des irrégularités:

- lorsque, dans les six mois de la date de retrait de son agréation, le représentant a demandé qu'un contrôle approfondi des opérations traitées par lui soit effectué;
- lorsque ces irrégularités, qui seraient découvertes ultérieurement, ne résultent pas du fait du représentant ou d'une collution entre lui et son commettant étranger.

3. Obligations et droits du représentant responsable

a. Principe

Le représentant responsable remplit en lieu et place de l'assujetti étranger toutes les formalités imposées par le

© 1980 International Bureau of Fiscal Documentation – BULLETIN

CTVA pour les opérations que ce dernier effectue dans le pays.
On consultera pour la liste des principales obligations, B (1) ci-avant.

b. Dispositions particulières applicables en matière de facturation

(i) *Mode de facturation*

(1) Règle générale:

— L'assujetti étranger, pour les livraisons de biens ou les prestations de services qu'il a réalisées en Belgique, envoie à son représentant responsable la facture à adresser au cocontractant en ayant soin de ne pas indiquer, sur cette facture, le montant de la TVA due.
— Le représentant responsable établit, en double exemplaire, le document où figurent outre la mention de son identité, de son adresse et d'une référence en sa qualité de représentant, la date de délivrance du document, le nom et l'adresse du commettant, le numéro d'immatriculation à la TVA qui a été attribué à ce dernier, le numéro d'inscription du document au facturier de sortie qu'il tient au nom et pour le compte du représenté, le montant de la TVA due et les autres mentions exigées par l'article 2 de l'arrêté royal no. 1.
— Le représentant responsable adresse l'original du document visé à l'alinéa précédent au cocontractant de l'assujetti étranger, après y avoir annexé la facture reçue de l'étranger. Le double de ce document est conservé par lui.
(Article 4, paragraphe 2 de l'arrêté royal no. 31).

(2) Exception:

L'Administration admet que la procédure visée au point 1 ci-avant ne soit pas suivie et soit remplacée par la manière de procéder décrite ci-après:

— L'assujetti étranger adresse à son représentant la facture destinée à son cocontractant sans indiquer le montant de la TVA due ainsi que deux copies de la facture originale ainsi établie.
— Le représentant mentionne sur les deux copies de facture son identité, son adresse et sa qualité de représentant responsable, la date de délivrance, le numéro d'immatriculation à la TVA de l'assujetti étranger, le numéro d'inscription de la facture au facturier de sortie qu'il tient au nom et pour le compte de l'assujetti étranger, le montant de la TVA due ainsi que les mentions prescrites par l'article 2 de l'arrêté royal no. 1 qui ne figuraient pas sur la facture originale.
— Le représentant responsable adresse l'une des copies de facture ainsi complétée au cocontractant de l'assujetti étranger après y avoir annexé la facture originale; il conserve l'autre copie.

(3) Comptabilisation de la facture par le cocontractant de l'assujetti étranger:

Le cocontractant, s'il peut enregister en comptabilité la facture originale, ne peut toutefois exercer son droit à déduction que sur base du document visé au point 1 ci-avant ou d'une copie de la facture visée au point 2 ci-avant.

(ii) *Délai de facturation et de paiement*

En vertu de l'article 1 de l'arrêté royal no. 1, la facture doit être délivrée au cocontractant au plus tard le cinquième jour du mois qui suit celui au cours duquel le bien est livré, le service est achevé ou la taxe est due.

L'Administration a admis que le représentant responsable peut, lorsqu'il n'est pas en mesure de délivrer le document dans le délai prescrit, le délivrer encore valablement jusqu'à la fin du mois au lieu du cinquième jour ouvrable de ce mois.

Il va de soi que, dans ce cas, la TVA due peut être encore valablement reprise dans la déclaration suivant celle de la période au cours de laquelle elle aurait dû être reprise.
En compensation, le cocontractant assujetti se voit reporter d'une mois dans l'exercice de son droit à déduction.

c. Dispositions particulières en matière de déduction

Pour pouvoir opérer la déduction, les assujettis doivent normalement détenir l'original de la facture qui leur a été adressé par le cocontractant ou le document d'importation qui a été levé à la frontière.

Pour tenir compte du fait que très souvent l'original de la facture doit être comptabilisé au lieu d'établissement de l'assujetti étranger, l'Administration admet que la déduction soit opérée au vu de photocopie de facture pour autant que les conditions suivantes soient remplies:

— L'assujetti étranger doit justifier à l'Administration l'obligation légale que lui impose le pays où il est établi, de détenir les factures originales au siège de l'entreprise.
— Les photocopies doivent porter la mention, apposée par la société étrangère et certifiée par elle, qu'elles sont conformes à l'original; cette mention doit être paraphée par le représentant responsable qui en prend la responsabilité.
— L'assujetti étranger doit s'engeger par écrit à mettre temporairement les factures originales à la disposition du représentant responsable, à la demande de l'Administration pour les besoins du contrôle (Code, art. 61).

4. Création d'un établissement stable

Lorsqu'un assujetti étranger avait désigné un représentant responsable en Belgique et créé ensuite un établissement stable, il conserve son numéro d'immatriculation mais change d'office de contrôle pour dépendre de celui dans le ressort duquel est situé l'établissement stable.

Dans ce cas, une déclaration de changement d'activité doit être établie.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

C. Régime général d'exception: dispense de l'agréation d'un représentant responsable

1. Cas dans lequel l'assujetti étranger est dispensé de désigner un représentant responsable

L'assujetti étranger est dispensé de faire agréer un représentant responsable:

- pour les prestations de services de caractère intellectuel qu'il effectue dans le pays (travaux d'étude et de contrôle, études de marché, entreprises de publicité, cession ou concession de droits intellectuels, tels que brevets, marques de fabrique et de commerce, droits d'auteur);
- pour les prestations de services de caractère matériel qu'il effectue occasionnellement en Belgique;
- pour les opérations, de caractère occasionnel, comportant la revente, dans le pays, de biens qu'il y a achetés ou importés;
- pour les livraisons de biens et les prestations de services effectuées dans le pays mais exemptées de la taxe en vertu des articles 39 à 42 du Code (par exemple, les transports internationaux de marchandises).

Le point de savoir si l'assujetti étranger effectue habituellement ou occasionnellement des opérations en Belgique est évidement délicat.

L'Administration a précisé à ce sujet qu'il y avait lieu de considérer que les opérations réalisées en Belgique avaient un caractère répété lorsqu'elles auraient entraîné l'assujettissement de la personne qui les réalise, si celui-ci était établi en Belgique.

Il faut toutefois remarquer que bien qu'une opération puisse juridiquement être considérée comme isolée, elle nécessitait la désignation d'un représentant responsable lorsqu'elle impliquait la réalisation de grands travaux de génie civil (construction de routes, ponts, usines, etc.).

Il faut enfin noter que l'assujetti peut avoir intérêt à désigner un représentant responsable et renoncer à la dispense. Tel sera notamment le cas de l'assujetti qui veut déduire immédiatement la taxe dans sa déclaration, qui désire bénéficier du régime de report de paiement de la TVA à l'importation (Article 4, paragraphe 3 de l'arrêté royal no. 7) ou qui désire réaliser des importations temporaires de matériel destinées à l'exécution de travaux de toute nature (voir à ce sujet circulaire no. 9 de 1978 de l'Administration de la TVA, de l'enregistrement et des domaines).

2. Mode de perception de la taxe

a. L'assujetti étranger accomplit des opérations autres que des prestations de transports internationaux de personnes

(i) *L'assujetti a exercé le droit à remboursement de TVA belge en amont*

En vertu de l'article 5 de l'arrêté royal no. 31, la TVA due sur les opérations réalisées en Belgique est acquittée par l'apposition et l'annulation de timbres fiscaux.

A cette fin, l'assujetti étranger établit une facture, en double exemplaire, portant les mentions prescrites par l'article 2 de l'arrêté royal no. 1. Il appose et annule la partie supérieure des timbres sur la facture qu'il délivre à son cocontractant et la partie inférieure de ces timbres sur le double de la facture qu'il conserve.

L'annulation de chaque partie des timbres est faite en caractères très apparents, soit par une mention manuscrite, au moyen d'une encre indélébile, comprenant la date de l'annulation et la signature de l'assujetti étranger, soit par l'emploi d'une griffe reproduisant à l'encre grasse, outre la date, le nom patronymique, la dénomination ou la raison sociale de l'assujetti étranger. La date doit seule être reproduite entièrement sur la partie du timbre annulée; la signature doit être complète, mais elle peut déborder (v. arrêté royal no. 31, art. 5, al. 3).

L'apposition et l'annulation des timbres fiscaux peuvent être opérées, non seulement par l'assujetti établi à l'étranger, mais également par un correspondant ou un mandataire agissant pour son compte en Belgique, et notamment par son cocontractant établi dans le pays.

(ii) *L'assujetti étranger n'a pas à exercer de droit à remboursement de TVA belge en amont*

Dans cette hypothèse qui se rencontrera surtout lorsque l'assujetti étranger effectue de simples prestations de services de nature intellectuelle (cession ou concession de brevets, travaux d'études, etc.), la TVA belge ne droit pas être acquittée par l'assujetti étranger.

En effet, le cocontractant de l'assujetti étranger payera la TVA en lieu et place de son fournisseur étranger. S'il est assujetti, il le fera par inscription au cadre V. a) ou à la case 31 ou 32 selon qu'il dépose une déclaration mensuelle ou trimestrielle.

Lorsque le cocontractant n'est pas assujetti, il acquitte la taxe en apposant ou annulant des timbres fiscaux entiers sur la facture reçue de l'étranger ou à défaut de facture, sur un document qu'il crée à cette fin.

Cette obligation doit être remplie dans les 10 jours consécutifs au 5me jour ouvrable du mois qui suit celui au cours duquel le bien a été livré, le service a été achevé ou la TVA est devenue exigible.

La facture ou le document en tenant lieu doit contenir les mentions prescrites à l'article 2, 2me à 6me alinéas de l'arrêté royal no. 1, ainsi que la date de sa délivrance ou de son établissement et éventuellement le numéro d'ordre sur lequel il est inscrit au facturier d'entrée.

L'annulation se fait comme cela a été décrit ci-avant (voir point (i)), sous la seule réserve que les deux parties du timbre doivent restées adhérentes et que la mention ou la griffe doit être apposée dans le sens de la plus large dimension du timbre (article 6, 2° de l'arrêté royal no. 31).

b. L'assujetti étranger accomplit des prestations de transports internationaux de personnes

Le transport rémunéré de personnes autre qu'un transport maritime ou un transport aérien international est soumis à la TVA dans la mesure où le transport est effectué dans le pays.

Les transporteurs de personnes, à défaut d'établissement

© 1980 International Bureau of Fiscal Documentation – BULLETIN

en Belgique, doivent normalement avoir un représentant responsable dans le pays. (L'existence de ce représentant est justifiée par la production à la douane d'une lettre d'agréation ou d'un certificat en tenant lieu, délivré par le Bureau Central de TVA pour assujettis étrangers.)

L'Administration admet cependant que les transporteurs étranger qui n'ont pas de représentant responsable, puissent être admis dans le pays pour des transports internationaux de personnes, en acquittant à la douane les sommes forfaitaires suivantes, moyennant dépôt d'une quittance no. 258:

— Transport de personnes par service non régulier:
  - véhicule carrossé pour transporter au maximum 6 personnes, outre le chauffeur: 30 F;
  - véhicule carrossé pour transporter plus de 6 personnes et au maximum 10 personnes, outre le chauffeur: 75 F;
  - autocar carrossé pour transporter plus de 10 personnes et au maximum 20 personnes, outre le chauffeur: 150 F;
  - autocar carrossé pour transporter plus de 20 personnes, outre le chauffeur: 300 F;
  - bateau: 300 F.
— Transport de personnes par service régulier (autobus ou bateau): 600 F.

Pour autant que la quittance no. 258 comporte le numéro de la plaque d'immatriculation du moteur et du châssis et soit présentée à la douane, le véhicle peut pénétrer plusieurs fois par jour en Belgique.

3. Mode d'exercice d'un droit à remboursement de la TVA en amont

a. Conditions mises au remboursement

L'assujetti étranger peut obtenir le remboursement des taxes grevant ses entrées pour autant qu'il fournisse au Bureau Central de TVA pour assujettis étrangers le double, dûment revêtu des timbres, des factures délivrées à son cocontractant conformément à l'article 5 de l'arrêté royal no. 31.

Le remboursement ne peut porter que sur les taxes grevant les biens et les services qu'il justifie avoir utilisés pour l'exécution des opérations ainsi facturées. Une comparaison des factures d'entrée ou des documents d'importation — qui doivent être produits à l'appui de la demande — et des factures de sortie est ainsi nécessaire, ce qui implique une rédaction précise de ces factures, notamment en ce qui concerne la désignation des biens et des services et des quantités achetées et vendues.

Le remboursement des taxes en amont peut également être accordé à l'assujetti établi à l'étranger:

— lorsqu'il prouve que les biens et les services grevés des taxes belges ont été utilisés pour l'exécution d'opérations exemptées de la taxe en vertu des articles 39 à 43 du Code (exportations, transports internationaux de marchandises, ventes à des ambassades, fournitures de biens ou de services à des assujettis titulaires d'une autorisation délivrée en application de l'article 43 du Code, etc.);
— lorsqu'il prouve que les biens ou les services grevés des taxes belges ont été utilisés pour l'exécution d'opérations effectuées par lui à l'étranger et qui auraient été imposées si elles avaient été effectuées en Belgique;
— lorsqu'un transporteur étranger de personnes établit qu'il a acquitté la taxe, à la douane, selon les règles prévues ci-avant.

b. Procédure de remboursement

Les demandes en remboursement doivent être accompagnées d'un relevé récapitulatif des factures d'entrée et des documents d'importation ainsi que des factures de sortie constatant les TVA dues.

Dans l'hypothèse où les factures de sortie sont exonérées de TVA en raison d'une exportation, l'assujetti doit également transmettre les documents qui justifient la cause de l'exemption tels par exemple les documents d'exportation.

Les remboursements sont normalement effectués dans les trois mois de l'introduction de la demande. Lorsque la demande de remboursement est justifiée par des opérations exonérées de la taxe parce que afférentes à l'exportation, non soumises à la taxe parce que réalisées à l'étranger ou soumises à la taxe mais sujettes au régime particulier du paiement examiné ci-avant pour un transport de personnes, celle-ci n'est prise en considération que si elle porte sur un montant de TVA qui atteint 65.000 F. ou 25.000 F. selon que le chiffre d'affaires annuel réalisé en Belgique dépasse ou est inférieur à 15 millions. En tout état de cause, la demande peut être retenue en fin d'année civile, pour autant que le montant de TVA à rembourser atteint 300 F.

Le paiement est effectué par virement au compte courant postal ouvert en Belgique ou à l'étranger au nom du créancier ou de son mandataire, ou par transfert à une banque établie en Belgique, à un organisme visé à l'article 1er, alinéa 2, 1°, de l'arrêté royal No. 185 du 9 juillet 1935, sur le contrôle des banques et le régime des émissions de titres et valeurs, à une entreprise visée à l'article 1er, alinéa 2, 3°, du même arrêté, à une association de crédit agréée par la Caisse Nationale de Crédit Professionnel ou à une caisse de crédit agréée par l'Institut National de Crédit Agricole.

Lorsque le paiement doit être fait en mains d'un mandataire, une procuration doit être jointe à la demande de remboursement. Les signatures doivent être légalisées par l'agent diplomatique ou consulaire belge et par le Ministère des Affaires étrangères de Belgique, si l'acte est dressé à l'étranger, sauf en ce qui concerne les actes publics qui ont été établis sur le territoire d'un Etat contractant de la Convention supprimant l'exigence de la légalisation des actes publics étrangers, faite à La Haye le 5 octobre 1961. Dans ce cas, la seule formalité qui puisse être exigée pour attester la véracité de la signature, la qualité en laquelle le signataire de l'acte a agi et, le cas échéant, l'identité du sceau ou timbre dont cet acte est revêtu, est l'apposition de l'apostille définie à l'article 4 de ladite Convention, délivrée par l'autorité compétente de l'Etat d'où émane le document. Pour les actes sous seing privé établis en Belgique, les signatures doivent être certifiées authentiques par un notaire belge. Les procurations établies dans une langue autre que le

© 1980 International Bureau of Fiscal Documentation – BULLETIN

français, le néerlandais ou l'allemand doivent être accompagnées d'une traduction.

Si le bénéficiaire du remboursement n'est pas titulaire d'un compte courant postal en Belgique ou à l'étranger, ni d'un compte auprès d'un des organismes financiers précités, le paiement a lieu par assignation postale. Les frais d'encaissement de cette assignation sont à la charge du bénéficiaire du remboursement.

Le bureau central renvoie à l'assujetti étranger les documents qui ont justifié sa demande. Ceux-ci doivent être conservés par l'assujetti étranger pendant cinq ans.

D. Régimes particuliers d'exception

Des régimes particuliers sont prévus par la circulaire No. 2 du 11/1/79 pour les ventes par filières avec l'intervention occasionnelle d'assujettis établis à l'étranger et par la circulaire No. 4 du 14 février 1979 sur les importations de biens avec montage.

FRANCE: Documentation

Conséquences de la territorialité des prestations de services: moyens mis à la disposition du prestataire étranger non établi en France, débiteur d'une T.V.A. française, pour lui permettre de s'acquitter de ses obligations

MINISTERE DU BUDGET

Service de la Législation Fiscale
Sous-Direction D *Paris, le 15 janvier 1980*
Bureau D2

Direction Générale des Impôts
Service de l'Administration Générale
Sous-Direction III C
Bureau III C 2

Monsieur le Chef de Service,

Vous avez appelé l'attention sur le régime applicable, en matière de taxe sur la valeur ajoutée, aux prestations de caractère immatériel désignées à l'article 259 B du Code général des Impôts, rendues par des prestataires étrangers à des preneurs assujettis en France.

Faisant observer que les prestataires étrangers ignorent généralement la réglementation en vigueur dans ce domaine et ne facturent pas la taxe sur la valeur ajoutée, vous demandez que soient précisées, dans ce cas, les modalités de déclaration, de paiement et de déduction de la taxe par les bénéficiaires des prestations.

Conformément aux dispositions de l'article 259 B du Code général des Impôts, les prestations figurant à cet article sont imposables en France lorsqu'elles sont effectuées par un prestataire établi hors de France et lorsque le bénéficiaire est établi et assujetti à la taxe sur la valeur ajoutée en France.

Par ailleurs, aux termes de l'article 283-2 du Code, la taxe exigible sur ces prestations doit être acquittée par le bénéficiaire. Toutefois, le prestataire est solidairement tenu avec ce dernier au paiement de la taxe.

En outre, pour les mêmes prestations, les articles 289-I et 289-A-II du Code font obligation au prestataire d'une part, d'établir la facture et d'autre part, de désigner, à défaut du paiement de la taxe par le preneur, un représentant établi en France qui remplit les formalités incombant au redevable et acquitte la taxe.

Lorsque la taxe est acquittée par le bénéficiaire, il est admis que le prestataire étranger ne fasse pas mention de cette taxe sur la facture ou le document en tenant lieu (note de frais, note d'avoir. . .) qu'il adresse à son client français.

Celui-ci annote alors cette facture ou ce document de la mention "Prestation désignée à l'article 259 B du Code général des Impôts — Taxe sur la valeur ajoutée due par le bénéficiaire" et du montant de la taxe dont il est redevable.

La taxe correspondante est ensuite déduite du cadre III de la même déclaration pour son montant réel (ligne 11) ou forfaitairement (ligne 12).

L'imprimé CA12 (ou CA12 E) ne permettant pas d'individualiser les prestations énumérées par l'article 259 B, le bénéficiaire doit indiquer dans le cadre réservé à la correspondance, qui figure au bas de la première page, ou sur une note annexée, la base d'imposition correspondant à ces opérations ainsi que la date d'exigibilité de la taxe sur la valeur ajoutée.

BELGIQUE:

M. CAPPELLEMAN

Description du régime auquel sont soumis les assujettis étrangers en ce qui concerne d'une part leur obligation d'acquitter une T.V.A. étrangère, d'autre part le droit de récupérer la T.V.A. qui leur est portée en compte conformément aux prescriptions de la 8ème directive récemment publiée au Journal Officiel

Lorsqu'il s'agit d'assujettis étrangers (établis à l'étranger) qui font en Belgique certaines opérations, on peut faire une triple distinction.

1) Les assujettis étrangers qui ont en Belgique un établissement stable ou un siège d'exploitation.
   Ils sont tenus en Belgique pour les opérations qu'ils y font aux mêmes obligations que les assujettis belges, sans aucune distinction.
2) Les assujettis étrangers qui effectuent en Belgique des opérations soumises à la T.V.A., sans y avoir un siège d'exploitation ou un établissement stable.
   Ces assujettis sont en principe tenus d'avoir en Belgique un représentant responsable qui, en fait, remplit au nom et pour le compte de l'assujetti étranger les obligations des assujettis belges en général et qui exerce également les mêmes droits. C'est donc par ce représentant responsable que la T.V.A. due est payé et que la T.V.A. à déduire est récupérée.
3) Mais dans certains cas, l'assujetti étranger est dispensé d'avoir un représentant responsable.
   Tel est le cas lorsque l'assujetti étranger effectue en Belgique des opérations qui tombent dans le champ d'application de la T.V.A., mais qui ne sont pas soumises effectivement à la T.V.A., parce qu'il y a exonération pour raisons d'exportation ou parce qu'il s'agit d'opérations tout à fait isolées, ou encore et surtout parce qu'il effectue en Belgique des prestations de services qui sont taxables dans le pays du preneur (art. 9, §2 de la 6ème directive ou l'art. 21, §3, 7º du Code belge).

Dans cette situation où l'assujetti étranger n'a pas de siège d'exploitation ou d'établissement stable en Belgique , la T.V.A., lorsqu'elle est due, doit être payée directement par le preneur. L'assujetti ne la devra éventuellement que par application des règles de solidarité.

Si l'assujetti étranger a exposé en Belgique des dépenses grevées de T.V.A., en relation avec ces prestations de service qui sont imposées directement à charge du preneur, il pourra récupérer cette T.V.A. qui lui a été portée en compte sur ses dépenses sous forme de restitution.

Il en est de même lorsque l'assujetti étranger effectue en Belgique des opérations qui sont exonérées pour des raisons d'exportation.

Tout cela sous la réserve qu'un assujetti belge aurait pu récupérer la T.V.A. dans les mêmes conditions.

Il y a certaines limitations du droit à déduction en Belgique, notamment pour les véhicules, pour le transport de personnes où la déduction ne peut jamais dépasser 50 pour cent de la T.V.A. qui a été payée. En ce qui concerne les biens d'investissement, nous avons une disposition "temporaire" qui existe depuis 1970 et qui maintient une limitation de 5 pour cent, sauf lorsqu'il s'agit d'investissements complémentaires ou créateurs d'emploi.

Tel que ce régime fonctionne en Belgique depuis 1971, les assujettis étrangers ont toujours pu récupérer les T.V.A. qui ont été payées, dans les circonstances décrites ci-dessus. Ce régime de restitution va même au-delà de ce qui est prévu dans la 8ème directive, étant donné que celle-ci oblige les Etats membres à rembourser aux assujettis étrangers la T.V.A. qu'ils ont supportée sur leurs dépenses, uniquement dans les cas où les assujettis étrangers n'effectuent pas dans un autre Etat membre des opérations soumises à des taxes, par exemple quand un industriel français participe à une foire commerciale en Belgique où il ne vend pas et ne fait qu'exposer sa marchandise; mais une T.V.A. lui est portée en compte pour des frais d'électricité, de publicité, etc. . .

La 8ème directive dit encore que la T.V.A. doit être remboursée aux assujettis étrangers qui effectuent dans un autre Etat membre des opérations exonérées de transport (trafic international de marchandises surtout).

Autre cas: lorsqu'un assujetti étranger effectue dans un autre pays membre des prestations de services, pour lesquelles la T.V.A. doit être payée exclusivement par le preneur du services.

D'après le contenu de la 8ème directive les assujettis étrangers qui font en Belgique des dépenses grevées de T.V.A. peuvent depuis 10 ans déjà récupérer cette T.V.A. à condition de prouver qu'il s'agit de dépenses qui ont été faites dans le cadre d'une activité permettant la déduction. Mais à partir du 1er janvier de l'année prochaine en tout cas, les autres Etats membres devraient accorder aux assujettis belge la restitution de la T.V.A. que ces derniers auront payée dans les autres Etats membres pour effectuer les opérations qui viennent d'être décrites.

La législation belge nécessite-t-elle beaucoup d'adaptation au regard de la 8ème directive? En fait, non. Tout au plus certaines formalités seront-elles à adapter, ou certains délais ou le plafond de restitution, car actuellement on ne restitue que sur la base d'une demande trimestrielle et pour autant que le montant de T.V.A. à restituer atteigne au moins 25.000 Fr.Frs.; or, il faudra l'accorder dès qu'on atteint 200 unités de compte Européens (+ ou — 8000 FB).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

FRANCE:

MONSIEUR LEBRUN

L'orateur partage la conclusion de Monsieur CAPPELLEMAN sur les bienfaits de la 8ème directive, car la mise en oeuvre de cette directive apportera en France une situation qui a été demandée par beaucoup d'assujettis étrangers. Il croit donc qu'elle apportera également dans les relations économiques internationales quelques avantages.

Si l'on s'en tient à la situation antérieure (avant la mise en oeuvre de la 8ème directive) on peut dire qu'en ce qui concerne les modalités dans lesquelles un prestataire redevable de la taxe en France s'acquitte de ses obligations, qu'elles sont essentiellement les suivantes: lorsqu' il s'agit du prestataire, on applique l'article 259a, pour les entreprises établies en France, et l'article 259c, pour les entreprises établies hors de la Communauté. Les modalités sont claires: la nécessité pour ces entreprises de faire accréditer auprès de l'Administration française un représentant qui s'engage à remplir les formalités incombant au redevable et à acquitter la taxe en ses lieu et place.

Ce représentant fiscal doit être une entreprise établie en France et connue à ce titre de l'Administration fiscale. Il doit accomplir exactement toutes les obligations qui incomberaient à une entreprise établie en France et conduisant en France ses activités, c'est-à-dire notamment la tenu de la comptabilité de l'opération.

Un point particulier: c'est la facturation. Normalement, la facturation des opérations est établie par le représentant fiscal qui doit mentionner qu'il agit en qualité de représentant de l'entreprise représentée, indiquer son nom et son adresse, mais on a également admis que l'entreprise représentée puise faire la facturation avec l'obligation inverse, c'est-à-dire qu'elle indique qu'elle est représentée en France par telle et telle personne.

Le représentant fiscal bénéficie de l'ensemble des dispositions applicables à tous les redevables établis en France. Il en bénéficie et en supporte aussi les conséquences, c'est-à-dire qu'il peut avoir à réparer les omissions ou les insuffisances qu'il aurait commises pour le compte de l'entreprise étrangère.

En ce qui concerne les prestations de services imposables du chef du preneur, imposables au titre de l'article 259b, on note qu'en la circonstance il y a accomplissement de ces formalités par le bénéficiaire du service et que l'on a établi une solidarité entre le bénéficiaire et le prestataire. Il est admis que lorsque le prestataire est étranger, il ne fasse pas mention de la taxe sur les factures ou les documents en tenant lieu qu'il adresse à son client français, à condition de noter sur cette facture qu'il s'agit d'une prestation visée à l'art. 259b, du Code général des impôts, taxe sur la valeur ajoutée, due par le bénéficiaire. Cette solution est de nature à imposer un minimum d'obligations aux entreprises étrangères puisque dans cette hypothèse, l'entreprise étrangère est simplement solidaire du prestataire établi en France.

Sur les modalités de récupération de la taxe par une entreprise étrangère non établie en France, taxe qui lui a été facturée par un prestataire français, l'orateur déclare que l'Administration française appliquera dans son entièreté, la 8ème directive à compter du 1er janvier 1981.

LUXEMBOURG:

MAITRE PRUSSEN

Si un assujetti étranger a un siège d'exploitation ou un établissement stable au Grand-Duché, c'est le même système qu'en Belgique avec quelques petites différences, pour autant qu'on veuille appliquer l'art. 21 de la directive qui prévoit le paiement de la taxe par le débiteur en cas de services visés par l'art. 9/2.

En effet, au Grand-Duché, on a simplement prévu une habilitation dans la loi et aucun règlement n'est intervenu à l'heure actuelle, de façon que le prestataire de services reste le débiteur. L'application de cet article 21 de la directive ne se fera pas sans difficultés.

L'on aura des preneurs qui sont assujettis, mais qui feront eux des opérations exonérées et qui devront déposer des déclarations pour des services qui leur ont été facturés.

Tous les médecins, tous les hôpitaux, tous ceux qui ne déposent pas de déclaration devront le faire dans le futur, sous l'empire de l'art. 21.

C'est peut-être là la raison pour laquelle l'Administration n'a pas encore réglementé et peut-être considère-t-on que le système où le prestataire fait lui-même la déclaration est plus simple.

Declaration et garanties

En pratique, le prestataire de services étranger qui fait une opération à Luxembourg, est obligé de la déclarer. Il n'est pas nécessairement obligé d'avoir un représentant fiscal, tel que c'est le cas en Belgique.

Mais s'il est obligé de déclarer, il peut être obligé par l'Administration d'avoir un représentant fiscal. On peut également demander d'autres garanties. En principe la déclaration se fait assez simplement; un seul bureau à Luxembourg est compétent, c'est le bureau no. 10. Le préposé du bureau en question se met en rapport avec le prestataire pour fixer une entrevue et voir quel régime on pourrait appliquer. En effet, le régime varie selon la multiplicité des services et le nombre des clients.

La manière est donc assez souple. On demande aux prestataires de faire une déclaration par voie de lettre. Un dossier fiscal sera ouvert mais sans numéro d'immatriculation.

S'il s'agit d'opérations multiples auprès d'un client unique, on peut convenir que ce sera le preneur, tenu solidairement en vertu de la législation interne, qui fera la déclaration à décharge et paiera également la décharge. Sinon on demandera au prestataire de faire les déclarations mensuelles ou trimestrielles, ou annuelles; cela dépendra du nombre de service prestés.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Mais l'Administration demandera le cas échéant des garanties. Ces garanties peuvent consister en la nomination d'un représentant fiscal ou un cautionnement à la Caisse de consignation ou une garantie bancaire.

En principe, le préposé du service fixera le montant du cautionnement en raison de la créance estimée du Trésor, mais toujours est-il que le prestataire peut demander et peut toujours fournir un représentant fiscal qui assumera alors l'obligation de garantie solidaire et qui assumera certaines obligations, lesquelles toutefois ne vont pas aussi loin qu'en Belgique.

Il faudra détenir le double des factures et toutes les pièces nécessaires pour la déclaration et le contrôle. C'est le prestataire qui établira les factures et non le représentant fiscal. Les taux étant relativement simples et facilement identifiables, il ne se posera pas tellement de problèmes aux prestataires en question.

Le prestataire aura immédiatement eu des rapports très personnels et très directs avec l'Administration, il discutera lui-même avec le préposé responsable de la manière la plus appropriée, compte tenu des services prestés, pour faire la déclaration en question.

Sous la législation actuelle donc, c'est toujours le prestataire qui est obligé en principe de faire la déclaration et ce n'est pas le preneur de la prestation, même dans le cas de différents services, l'art. 21 de la directive le prévoyant.

Déduction et remboursement

Alors quid de la procédure de la déduction et du remboursement?

L'assujetti pourra récupérer la taxe par le biais de la déduction de la taxe en amont, s'il fait des opérations imposables dans le pays qui prélève la taxe. Mais c'est lui qui aura dû faire la déclaration de ses propres prestations et demander au preneur de faire la déclaration à décharge.

Le texte de la 8ème directive est très clair en ce qui concerne les remboursements. Il prévoit comment il faut faire la demande de remboursement.

En principe, aucune difficulté n'est à prévoir à condition que la demande soit accompagnée des factures originales et de l'attestation de l'Administration.

Je dois préciser que la 8ème directive ne s'applique pas aux cas où le preneur fait lui-même des opérations imposables dans le pays puisque dans ce cas il pourra lui-même obtenir le remboursement par restitution ou par déduction de la taxe en amont ou par restitution de l'excédent de taxe. Mais il faut dire qu'à l'heure actuelle, la pratique administrative est telle qu'on demande au prestataire de faire lui-même les déclarations parce qu'on estime que s'il ne le fait pas lui-même ou qu'il n'exécute pas lui-même les obligations qui sont à sa charge et qu'il laisse par exemple le preneur déclarer à décharge, il ne remplit pas ses obligations, auquel cas l'excédent de taxe ne lui est pas remboursé.

Cette pratique administrative n'a pas encore été soumise jusqu'à présent au Tribunal. Elle sera adaptée au moment où le Gouvernement décidera effectivement de prendre le règlement qui concernera les services plus spécialement énumérés à l'art. 9/2,e.

Sauf exception, il ne devrait pas se poser de discussion à Luxembourg pour le preneur de services pour obtenir le remboursement d'une façon ou d'une autre.

Débats

Question

La question est relative au cautionnement et au représentant responsable au Luxembourg.
M. Prussen avait dit dans son exposé que l'Administration, d'après un texte récent, peut, avant la réalisation d'une opération imposable par un assujetti qui n'a pas d'établissement stable au Luxembourg, faire agréer un représentant responsable. Il a ajouté que l'Administration pourrait exiger en lieu et place dudit représentant responsable la fourniture d'un cautionnement approprié par un institut financier établi au Grand-Duché de Luxembourg.
L'Administration ferait valoir que le régime en question est instauré pour des raisons pratiques et de facilité, mais elle empêcherait dans certains cas, en raison de l'importance du cautionnement bancaire, certaines entreprises belges à obtenir des crédits pour les besoins de leur trésorie.

Voici la question: Est-ce que les membres du groupe connaissent dans leur secteur des difficultés similaires? Dans l'affirmative, la charge financière du système de cautionnement a-t-elle été réellement excessive? N'estime-t-on pas que l'obligation de cautionnement est en contradiction avec le texte même de l'article du règlement qui dispose que le cautionnement est applicable sans préjudice des dispositions des art. 66 et 67, si ce sont des articles qui ont trait au représentant permanent.

Réponse

M. PRUSSEN: L'interprétation qui est donnée par l'Administration à ce texte est que, pour des raisons pratiques, il est possible, pour un entrepreneur étranger qui n'a pas de base fixe à Luxembourg, de donner un cautionnement soit en versant une some à la Caisse des consignations, soit — ce qu'il fait généralement — en présentant une caution bancaire en lieu et place d'un représentant parce qu'on estime que, peut-être à tort, il est parfois plus difficile de trouver une personne qui accepte d'assumer toutes les obligations.

C'est une solution de rechange. Le texte doit être interprété de cette façon que l'on peut donc exiger ce cautionnement et que le prestataire peut toujours proposer et faire agréer un représentant responsable en lieu et place du cautionnement. Si ce cautionnement ne peut pas être fourni ou si l'Administration, pour d'autres raisons, l'estime nécessaire, elle peut exiger de tout façon un représentant responsable. Si l'entreprise en question estime que les charges financières sont trop élevées, elle a toujours la possibilité de s'adresser par exemple à son

© 1980 International Bureau of Fiscal Documentation – BULLETIN

preneur pour demander à celui-ci d'être le représentant responsable.

Question

Les Administrations compétentes savent-elles qu'une rémunération est demandée normalement par le représentant responsable professionnel?

Réponse

M. CAPPELLEMAN: Je dirais personnellement: non. Mais je suppose qu'il y en a une.

Question

Les Administrations compétentes savent-elles si les formalités imposées en fait aux redevables étrangers sont, en frais financiers et en perte de temps, incompatibles avec le fonctionnement normal du commerce international et une transparence aussi grande que possible des frontières spécialement pour les petites et moyennes entreprises et pour les professions libérales?

Réponse

M. CAPPELLEMAN: Je voudrais bien insister sur le fait que si notamment en Belgique on exige qu'un assujetti étranger qui effectue des opérations soumises à la taxe ait un représentant responsable, ce n'est pas pour le seul plaisir d'avoir un représentant responsable, c'est surtout en vue d'assurer l'exacte perception de l'impôt, d'avoir des garanties quant à l'application normale de la T.V.A. et d'avoir également des garanties de recouvrement. Nous comprenons fort bien que l'on insiste sur la grande transparence des frontières, mais nous devons assurer un contrôle aussi exact que possible et aussi fermé que possible. Il existe encore un phénomène que l'on appelle fraude en matière de T.V.A. Le système T.V.A. n'est pas hermétique, malheureusement. Et l'on constate tous les jours que le système T.V.A. permet certaines fraudes. C'est pourquoi l'on ne peut pas enlever aux Administrations nationales les moyens de lutter contre la fraude.

Nous n'ignorons pas qu'un représentant responsable, cela demande du temps et des formalités, mais nous estimons que c'est une nécessité. Je voudrais ajouter que le représentant responsable ne doit pas être nécessairement une personne tout-à-fait étrangère à l'opération conclue. Il est admis en Belgique que si une société étrangère fait une opération isolée avec une entreprise belge, c'est ce client qui se porte le représentant responsable, auquel cas des frais supplémentaires sont évités. Le représentant responsable entraîne une charge, sans doute, surtout pour les entreprises qui font régulièrement des opérations en Belgique avec des clients différents.

M. GUIEU: Nous sommes très conscients évidemment qu'il y a de la fraude en matière de T.V.A. et qu'il faut essayer, par tous les moyens, de l'éviter ou du moins de la prévenir.

Mais il faut essayer de trouver aussi des mécanismes qui évitent l'utilisation du représentant fiscal. Et justement, en matière de prestations de services, notamment celles visées à l'art. 9,2°,e, si on avait suivi l'opinion de la Commission, à savoir "taxation auprès du prestataire avec la notion d'exportation du service" on aurait peut-être évité tout un champ d'application du représentant fiscal. Il est regrettable que nos propositions n'ont pas abouti; nous avons eu des contacts avec les professionnels et ils nous indiquent tous qu'un représentant fiscal ou une caution coûtent fort cher aussi bien pour la société que pour l'économie générale de l'entreprise. Il faut donc essayer par tous les moyens de limiter autant que faire se peut, cette utilisation du représentant fiscal.

On est donc obligé de l'utiliser, mais on a déjà essayé dans le cas de la 8ème directive, de supprimer le représentant fiscal et l'on a pu atteindre ce but de tout façon pour tous les assujettis étrangers qui peuvent obtenir un remboursement dans le pays étranger sans l'intervention d'un représentant fiscal. C'est une amélioration sensible par rapport à la situation ancienne. Les efforts ne doivent pas se ralentir, il faut essayer de trouver des mécanismes évitant de telles interventions, tout en évitant bien entendu les fraudes.

M. LEBRUN: Les réponses de mes deux prédécesseurs indiquent qu'il y a une préoccupation de l'Administration et, de l'autre côté une préoccupation plus économique. Cette dualité a été en fait au coeur de nos débats. Je ne pense pas trahir un secret en disant que lorsque nous avons discuté une proposition de la Commission sur la 8ème directive, celle-ci conduisait en France à l'abandon de la notion de représentation fiscale. Mais elle a été accompagnée en réalité de l'adoption de deux directives relatives à l'assistance fiscale des états pour le recouvrement en matière de droit des douanes et en matière de taxe sur la valeur ajoutée. On a donc été conscient qu'il existait des problèmes de d'administration.

D'autre part, la notion de représentant fiscal ne doit pas être totalement condamnée, ne serait-ce que parce que dans un certain nombre de cas elle permet d'assurer une égalité entre les différents pays concernés; j'ajoute aussi qu'il n'est pas en soi condamnable que quelqu'un effectuant des opérations imposables en France, par exemple, soit astreint dans certaines conditions d'avoir une représentation fiscale. Mais la notion de représentation fiscale, on doit s'efforcer de la circonscrire afin de libérer davantage les échanges. Je partage également et entièrement les préoccupations de mon collègue M. Cappelleman au sujet des phénomènes qu'il a mis en avant.

Question (M. Autenne)

Lorsque le preneur, tel un établissement hospitalier, qui aurait la qualité d'assujetti au sens de la 6ème directive, reçoit un service pour lequel le critère d'imposition est le lieu d'établissement du preneur, comment la T.V.A. du pays est-elle perçue? Quelles sont les garanties de perception pour le Trésor dans l'hypothèse où ce preneur, n'étant soumis à aucune obligation, ne fait pas l'objet d'un contrôle? Comment la taxe doit-elle être perçue dans ce cas-là?

Réponse

M. CAPPELLEMAN: Tout d'abord effectivement, un établissement hospitalier est un assujetti au sens de la 6ème directive, mais un assujetti exonéré parce que les activités sont de caractère social. En Belgique on con-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

sidère que tous les établissements hospitaliers sont de nature sociale.
Depuis l'Arrêté royal no. 31 de 1971, dans une situation pareille, la T.V.A. doit être perçue par le preneur du service, par l'apposition de timbres fiscaux entiers, sur la facture reçue et la taxe doit être acquittée dans les dix jours qui suivent la réception de la facture ou l'expiration du délai de la facturation.
Je pense donc que le mode de paiement de la T.V.A. est parfaitement réglé par les textes. Quant à dire qu'il en est de même de ce qui concerne le contrôle du paiement, j'estime que le contrôle est possible.

M. LEBRUN: C'est d'abord un problème d'Administration. Mais je crois, tout-au-moins au travers de la législation française, qu'à partir du moment où nous avons créé une solidarité entre les prestataires et le preneur, le prestataire lui-même a intérêt à ce que son preneur ne se soit pas placé dans une situation fiscale irrégulière. Nous ne pouvons pas écarter l'opinion suivant laquelle les intérêts "solidaires" du prestataire et du preneur consisteraient à tenter d'éviter l'impôt, surtout si, dans l'hypothèse qui a été envisagée, il s'agit d'un établissement qui n'est pas soumis à la taxe et qui n'a donc pas la possibilité de déduire les taxes sur ses achats. Dans l'exemple de la clinique, ou bien celle-ci est soumise à la T.V.A. étant donné les conditions dans lesquelles elle exerce en France son activité, et dans ce cas-là il n'y a pas de problème. Ou bien elle n'est pas soumise à la T.V.A. (hôpital public, centre hospitalier, centre universitaire) ces établissements sont de toute façon tenus d'avoir une comptabilité, ils sont même dans un certain nombre de cas, des établissements publics et, à ce titre, soumis à un contrôle d'un représentant de l'Etat.

M. PRUSSEN: Le problème ne se pose pas seulement pour les hôpitaux, mais pour tous les assujettis qui font les opérations exonérées et qui ne sont pas tous les assujettis qui font partie des pouvoirs publics. Chez ceux-là, il y aura effectivement un problème de contrôle. C'est la raison pour laquelle au Grand-Duché de Luxembourg, on n'a pas encore fait application de cette disposition, on a simplement prévu une habilitation.
Donc le prestataire devra lui-même déclarer par voie de lettre à l'Administration et payer lui-même la taxe.

Question

Une société belge possède un établissement stable en France. Elle prend en location des wagons citernes auprès de bailleurs français. Ces wagons citernes sont utilisés en Belgique. Depuis le 1er janvier 1979, en suite de l'adaptation de la législation française à la 6ème directive communautaire, la T.V.A. française est due. Comment récupérer cette T.V.A.?
Il ne serait pas, selon certains avis, possible pour l'établissement français d'imputer la T.V.A. sur celle due en raison de son activité, étant donné que cet établissement français est considéré comme formant un secteur d'activité distinct de celui exercé en Belgique.

Réponse

M. LEBRUN: Je crois qu'il y a une réponse à terme et une réponse immédiate. La réponse à terme, c'est la 8ème directive à l'évidence. La réponse immédiate: il est exact que la société en cause ne peut pas déduire la taxe dont elle est redevable en France puisque ce n'est pas au titre de son activité imposable en France que la taxe est demandée en déduction, mais l'Administration a fait prendre une décision ministérielle en la circonstance autorisant le remboursement, et avant même l'intervention de la 8ème directive (décision ministérielle du 29.09.1979 qui a été diffusée d'une part dans le Bulletin officiel, et d'autre part dans un certain nombre de publications).

Question

Une société belge agit comme courtier pour le compte d'un client au Canada, sollicitant des ventes pour le compte de la société canadienne auprés de clients en Europe. L'opération est en principe exemptée de T.V.A. en vertu de l'art. 21. Mais la solution est-elle la même, que les ventes de la société canadienne se fassent à l'étranger ou en Belgique?
L'auteur de la question précise également que la société belge touche une commission de la société canadienne, que les marchandises sont vendues et expédiées au client final, mais non prélevées dans un dépôt se trouvant en Belgique par exemple.

Réponse

M. CAPPELLEMAN: Dans ce cas, la T.V.A. n'est jamais due en Belgique puisque le courtier intervient toujours dans des opérations qui se situent à l'étranger pour la livraison de biens, livraison qui a lieu au départ des marchandises. Il en est de même quand le client final est en Belgique.
Le raisonnement est toujours le même pour les prestations de courtage où la règle principale, c'est le lieu du prestataire. Mais il y a exonération lorsque le prestataire intervient dans une opération qui est exonérée pour des raisons d'exportation, ce qui n'est pas le cas ici, où lorsqu'il intervient dans des opérations qui s'effectuent à l'étranger, ce qui est bien le cas, puisque la marchandise est toujours expédiée du Canada à destination de tous pays dans le monde, en sorte que la T.V.A. n'est pas due: le lieu du service, c'est en Belgique, mais il y a exonération en vertu de l'art. 41, §2 du Code belge.

Question (Me. de Longueville)

Quel recours a le contribuable quand il y a divergence d'interprétation entre deux administrations nationales? Existe-t-il au sein du Marché Commun une commission chargée de régler ces problèmes et le contribuable peut-il introduire auprès de cette Commission le recours que cela comporte?
Cette Commission peut-elle être consultée avant que le problème ne se pose concrètement c'est-à-dire qu'il y ait conflit ouvert entre le contribuable et deux ou plusieurs administrations nationales?

Réponse

M. GUIEU: La question peut comporter plusieurs réponses.
D'abord il faut savoir où se situe le problème. Y a-t-il ambiguité de texte qui aboutit à des législations ou à des interprétations différentes de pays à pays, auquel cas le

© 1980 International Bureau of Fiscal Documentation – BULLETIN

contribuable ou le représentant ou le syndicat professionnel peut toujours demander à l'Administration de son propre pays de poser ce problème dans le cadre du Comité de T.V.A., pour savoir comment est appliquée dans les autres pays, la disposition ambigüe. Ici nous avons une mécanisme de concertation où l'on examine les orientations que l'on peut dégager pour arriver à une interprétation communautaire, si possible, ou, au moins majoritaire ou grande majoritaire, parce qu'il y a des nuances dans nos orientations.

Mais il peut aussi y avoir un litige au cours duquel le contribuable pense que la disposition nationale ne correspond pas du tout aux directives communautaires. Alors deux possibilités: ou l'intéressé saisit la Commission par une plainte et la Commission doit examiner la situation et répondre à la plainte, le cas échéant ouvrir une procédure d'infraction sur base de l'article 169 du Traité de Rome.

Avant d'arriver à cette application de l'article 169, un dialogue est engagé avec l'Administration concernée, des explications sont demandées, des visites sur place sont parfois effectuées, on cherche des précisions et ce n'est qu'en connaissance de cause définitive que l'on envoie l'affaire devant la Cour de Justice de Luxembourg.

Une autre procédure est possible: le contribuable saisit la juridiction nationale en demandant à la juridiction nationale de poser une question préjudicielle à la Cour de Luxembourg pour connaître l'interprétation de cette Instance sur le texte litigieux et sur la 6ème directive.

Il y a donc beaucoup de possibilités d'approche en fonction du degré de divergences entre la législation nationale et ce que croit l'assujetti par rapport à la législation communautaire, pour arriver à savoir exactement où se situe la difficulté.

Mais avant d'arriver à ces cas de procédure, il y a toute une procédure amiable de contact avec l'Administration nationale. Il nous arrive à nous-mêmes de recevoir des demandes des syndicats professionnels, etc., et je vous dirai que nous sommes d'une prudence assez grande dans ce domaine et que nous renvoyons très souvent aux Administrations nationales pour provoquer une concertation multi-nationale.

Enfin, je voudrais compléter ma réponse en disant qu'à partir du 1er janvier 1981, on appliquera la directive sur l'assistance mutuelle. Ce sera une occasion inespérée d'avoir des échanges entre administrations pour essayer de régler cela d'abord sur le plan bilatéral et ensuite tous les problèmes qui peuvent se poser au sein du Comité de T.V.A.

Mais je ne vois pas de saisine directe des assujettis devant les instances communautaires sauf la plainte auprès de la Commission.

Question

Quelle est la solution apportée dans les trois pays sur le problème d'assujettis étrangers n'ayant pas d'établissement stable à l'étranger ni dans le pays, ni d'activité connue à l'étranger, mais bien dans le pays?
Quel est le cas du commerçant ambulant, par exemple, qui pourrait avoir un domicile de complaisance non réel.

Réponse

M. CAPPELLEMAN: Cette personne doit au moins avoir quelque part un établissement, un domicile en matière de prestations de services. Il est dit expressément que le prestataire de services a un lieu où il établit son activité etc., ou, à défaut d'un tel siège ou d'un tel établissement stable, le lieu de son domicile ou de sa résidence habituelle.

En Belgique, il n'y a pas mal de familles de tziganes (dont il a été question il n'y a pas encore si longtemps); quand on essaye de chercher quelqu'un dans la famille, on ne le trouve jamais, mais toujours quelqu'un d'autre. Cela pose effectivement des problèmes et c'est d'ailleurs pour cela qu'on parle de prendre certaines mesures, notamment en matière de véhicules d'occasion.
En fait, si un étranger passe la frontière avec une roulotte chargée de marchandises, il est obligé d'avoir un représentant responsable. C'est vraiment un des cas dans lequel le représentant responsable est nécessaire, parce que même s'il ne peut pas passer la frontière sans payer la T.V.A., il faut encore assurer la perception de la T.V.A. pour les ventes qu'il fera dans le pays. C'est précisément un des cas où on ne voit réellement que le représentant responsable comme sauvegarde pour l'observation et le respect des formalités normales en tant qu'assujetti.
En matière de prestations de services, c'est encore beaucoup plus délicat. Je crois que je ne peux pas m'expliquer beaucoup sur le cas de commerçants ambulants en matière de prestations de services. Cela pourrait être un cirque, mais dans ce cas-là précisément la 6ème directive dit expressément que le lieu du service est le lieu où le cirque exerce son activité. Ce sera donc une imposition coup par coup.
Mais si c'est une autre petit commerce ambulant, je crois que dans la plupart des pays on dira qu'en tant que petite entreprise il sera exonéré; en Belgique, ce commerçant sera taxé.

M. LEBRUN: Je me suis interrogé pour savoir comment j'arriverais à répondre à cette question. Je me suis dit si on me lit les lignes de la main, c'est une prestation de services.

Je me suis fait deux réponses. La première c'est que c'est le prestataire qui est taxable et qu'à partir du moment où ce prestataire a, dans l'hypothèse envisagée un domicile fictif et que nous ayons la possibilité de démontrer le caractère fictif de ce domicile, j'aurais tendance à dire que le prestataire a son domicile à l'endroit où il a lu les lignes de la main en question.
La deuxième réponse, Monsieur de Président, parce que dans les choses sérieuses, il faut à certains moments ajouter une boutade, il n'est vraiement pas besoin de lui faire franchir une frontière et je défie toute administration de faire réellement payer la taxe sur la valeur ajoutée aux cartomanciennes ou aux lectrices de la main que l'on peut trouver sur les foires et marchés. Mais ceci est une autre histoire.
En d'autres termes, je crois que la territorialité en la circonstance n'intervient pas. Mais comme il s'agit a priori de petites entreprises, en tout état de cause, elle bénéficieraient des différents régimes applicables aux petites entreprises dans les différents pays communautaires.

VAT SEMINAR organized by the French-Belgian-Luxembourg Branch of IFA –

March 7, 1980

INTRODUCTION

by Prof. Dr. Paul Sibille

Several national branches of the International Fiscal Association (I.F.A.) have for several years maintained the excellent custom of bilateral meetings at which reports are presented and discussions take place on topics and questions of particular interest to the participant countries.

In this way, as a continuation of the workshop held in Paris in May 1978, the French and Belgian-Luxembourg branches organized a workshop in Brussels on March 7, 1980.

The topic for the workshop was the difficulties in applying Article 9 of the Sixth Directive of the European Communities of May 17, 1977, concerning the place where services are considered to be supplied, thereby creating liability to VAT, and the solutions which must be brought to bear (taking into account the Eighth Directive, which has just been adopted by the Council of Ministers of the European Community, concerning arrangements for the refund of value added tax to taxable persons not established in the territory of the country).

Experience since January 1, 1978 — the date on which the Sixth Directive of the European Communities came into force, at least in certain of the member states — would seem to indicate that Article 9 of the Directive poses some problems to which the solution under the current legislation and relevant administrative instructions of the countries concerned, to the extent they exist, is far from obvious as it varies from one country to another.

The particular problems considered at this workshop were the following:

a) *to define concretely the services, enumerated in Article 9 of the Directive, which are placed under the jurisdiction of the tax administration in the country where the supplier of services is domiciled;*
b) *what would the supplier of services, who owes VAT in a country where he has no business or establishment, do to meet his obligations* **without excessive difficulty** *on an administrative or financial plane?*
c) *how can the consumer of services who has borne the charges for these services recover them* **without excessive difficulty** *when, fulfilling the necessary conditions to obtain this refund, he has not established a business in the country where VAT has been paid by the supplier of services?*

The workshop was presided over by Mr. Henry LEVY MORELLE, President of the Belgian-Luxembourg branch of I.F.A., assistant professor at the Free University of Brussels. Co-chairman was Mr. Georges EGRET, Secretary-general of the French branch of I.F.A., replacing the President, Mr. Max LAXAN.

That this workshop was productive is due, on the scientific side, to Messrs. Jean de LONGUEVILLE and Guy van FRAYENHOVEN, respectively President and member of the Scientific Committee of the Belgian-Luxembourg branch, and, on the organizational side, to M. Jacques AUTENNE, lecturer at the Catholic University of Louvain, Secretary of the Belgian-Luxembourg branch.

The Belgian-Luxembourg branch is pleased to be able to publish the results of this workshop, comprising the reports, the essential parts of the lectures and resumés of the debates, with the International Bureau of Fiscal Documentation in Amsterdam.

The gathering of this material has been realized thanks to the notes taken and transcribed by Madame Marie-Cécile van GRIEKEN, assistant at the Higher School of Fiscal Sciences, under the direction of Professor P. SIBILLE, Director of the School.

This publication will doubtless constitute a valuable guide for lawyers and tax experts and for enterprises which are continually confronted with one of the most complex international problems concerning VAT.

INCORPORATION OF THE SIXTH VAT DIRECTIVE INTO DOMESTIC LEGISLATION

All member countries of the European Communities have now adjusted their VAT legislation in accordance with the Sixth Directive. The changes have become effective at the following dates:

Belgium	– 1st January, 1978
Denmark	– 1st October, 1978
France	– 1st January, 1979
German Federal Republic	– 1st January, 1980
Ireland	– 1st March, 1979
Italy	– 1st April, 1979
Luxembourg	– 1st January 1980
Netherlands	– 1st January, 1979
United Kingdom	– 1st January, 1978

© 1980 International Bureau of Fiscal Documentation – BULLETIN

SUMMARY *

of *"Localisation of taxable operations"* by Jacques Malherbe, Lecturer at the University of Louvain and advocate at the Brussels Bar

Delivery of goods. Both the Sixth Draft Directive (Article 8.1.b.) and the Belgian VAT Code provide that the delivery of a good occurs at the place where the good in question is physically present at the moment of delivery. The Directive further provides that where a good is transported the delivery is deemed to take place at the point of departure (Article 8.1.a.). The Belgian Code obtains the same results by providing that the delivery is deemed to have taken place at the moment that transportation starts. Where goods are assembled, the delivery is deemed to take place upon completion of the assembly (Article 15, Para. 1, (2)(1°)).

Rendering of services. The Sixth VAT Directive situates the place where a service is rendered at the main place where the economic activities of the entrepreneur are performed or at the location of his permanent establishment if the service is rendered by this establishment. In the absence of these criteria the service is deemed to have been rendered at the place where the entrepreneur has his domicile or residence. Thus the Sixth Directive abandons the criterion of place where the service is utilized, which was introduced by the Second Directive and which is also to be found in the former Belgian VAT legislation.

Article 21 (new) of the Belgian VAT Code brings Belgian VAT law in line with the provisions of the Sixth Directive. This also applies to the numerous exceptions to the main rule which the Sixth Directive introduced. These exeptions include:

1. Services connected with real property are deemed to have been rendered where the property is situated (Directive, Article 9.2.a. and Code, Article 21, Para. 3 (1°)). These services include, in addition to construction activities, services rendered by real estate agents acting as intermediaries and experts, services rendered by architects, by surveyors, and by engineers, the renting of parking lots, of furnished lodgings, of warehouses, of camping sites and of other real property as well as of strong boxes and also the management of real property.
2. Transportation is deemed to be carried out where transportation takes place varying with the distance covered (Directive, Article 9.2.b. and Code, Article 21, Para. 3 (3°)).
3. Services which are deemed to have been rendered in the place where the service is actually performed include: cultural activities, activities connected with transportation, activities connected with tangible movable property. The Belgian Code localizes the latter activities in the place where the good is physically present.
4. The renting of movable tangible goods (other than means of transportation) is deemed to take place where they are being used. If the lessor is established in the EEC the good in question must be exported to the Member State where it is being used.
5. The main place where the economic activities of the entrepreneur are performed or his permanent establishment is situated (or, in the absence of these criteria, his domicile or residence) is considered as the place where the following services are performed:
   - sale or licensing of rights, including sales monopolies and the right to exercise a professional activity,
   - advertising,
   - banking and financial operations (excluding the renting of strong boxes and insurance transactions which are exempted),
   - the hiring out of personnel,
   - services of intermediary persons with the exception of those carried out by certain commission agents (Directive, Article 9.2.e.; Code, Article 21, Para. 3 (7°)).

SUMMARY*

of *"The regime of the value-added tax applicable on the rendering of services after the amendments of the law resulting from the implementation of the Sixth Directive"* by Messrs. R. Gerbes (chartered accountant) and Y. Prussen (attorney at law).

In Luxembourg the Sixth Directive on VAT was implemented by the Law of February 12, 1979 which became effective on January 1, 1980. With respect to services the most important change introduced by this law was a new definition of the place where a service is deemed to be rendered which changed the liability for Luxembourg VAT purposes.

Currently the main rule is that a service is deemed to be rendered in the place where the supplier has his business or permanent establishment from which the service is rendered.

However, there exist numerous exceptions to this rule.

Services connected with real property are deemed to be rendered where the property is situated. This is, for instance, the case with services rendered by architects, the maintenance of a building, services rendered by real estate agents, notaries and other experts in connection with real property, the renting of real property, including hotel rooms, storage rooms, safes and parking space. However, the service must be rendered with respect to a *specific* real property otherwise the main rule applies.

Transportation services are deemed to be rendered where the transport takes place. However, international transport is generally exempt.

In a number of cases a service is deemed to be rendered where it is physically carried out. This is, for instance, the case with cultural, scientific and similar activities, ancillary transport activities and work with respect to movable goods.

The place of utilization determines the place where the service is rendered in case of hiring out of movable tangible property which is exported by the lessor from one Member State with a view to its being used in another Member State. However, in all other cases the main rule applies. Another group of services is generally deemed to be rendered in the place where the *customer* has established his business or has a fixed establishment to which the service is rendered. This group includes the sale and licensing of patent rights and other industrial rights as well as banking services and publicity. The rule applies when the services are performed for customers established outside the Common Market or for *taxable persons* established in the Common Market.

Non-resident entrepreneurs carrying on taxable transactions in Luxembourg must — as under the previous legislation — register the transaction with the VAT office. Generally a return must be filed before the fifteenth day of the second month following the month in which the transaction was effected. If the Luxembourg customer is subject to Luxembourg VAT the non-resident entrepreneur must send him an invoice indicating the amount of VAT before the 25th day of the month in which the transaction was effected. If the non-resident entrepreneur regularly operates in Luxembourg he will be registered by the VAT office and the authorities may demand that he appoint a responsible representative or put up a guarantee.

SUMMARY OF PAPERS ON THE FIRST SUBJECT *

Mr. Guieu (Common Market)

The speaker pointed out that the present provision in the Sixth Directive regarding the place where a service is deemed to be rendered is a compromise which the EEC Members were able to approve, but he admitted that it could possibly cause difficulties at the national level.

When in April 1967 the Second Directive was adopted it was believed that the ideal solution had been found: services would be subject to VAT in the place where they were utilized.

However, the scope of this provision was very limited since it applied only to services indicated in Annex B of the Second Directive which was, in addition, not compulsory for the Member States. These States were further permitted to deviate from the above rule, provided that no double taxation would occur.

Another problem which emerged was that the Member States defined the place of utilization in different ways. Criteria used were: (i) the place where the supplier of the service was located, (ii) the place where the receiver of the services was located and (iii) the place of actual utilization. Double, or even triple, taxation or non-taxation would have resulted if the Member States had not introduced a great number of exceptions. However, this resulted in a multitude of complicated rules which deviated from country to country.

In order to remedy this situation the Commission proposed to abandon the criterion of utilization of a service and to concentrate the criterion for determining the place where a service is rendered around the person rendering the service. However, one correction was necessary: where a service would be "exported" from one Member State to another, VAT should be levied by the "importing" State as is the case with export of merchandise. Unfortunately, two more exceptions had to be introduced, i.e. for services relating to real property which are deemed to have been rendered in the place where the property is situated, and for transportation which is deemed to be rendered where the transportation is carried out taking into account the distance covered on the territory of the countries concerned.

In the present text of Article 9 of the Sixth Directive one finds the general rule that a service is deemed to be rendered in the place where the supplier has established his business. This permits the legislature to cover all cases where services are rendered to persons not subject to VAT, using one uniform rule which permits neither non-taxation nor double taxation.

However, the Member states did not stop at the introduction of deviating rules for real property and transportation. Other exceptions to the main rule comprise cultural activities, activities connected with transportation and services rendered with respect to tangible movable goods.

Another exception to the main rule is to be found in Article 9.2.e. of the Sixth Directive where, in case of "export" of certain, sometimes indicated as "intellectual", services to either a taxable person in a Member State or to any person (taxable or not) in a non-Member State, it is the place of business establishment of the receiver of the service which is the criterion for determining the place where the service is rendered. This means that to such services two different criteria apply according to the circumstances, i.e. where the receiver is established and whether he has the status of taxable person or not. Although this exception can be defended on economic grounds, the Common Market experts regret this dualistic approach.

The situation is even more complicated since the Member States are authorized to use the old criterion (of place of utilization where services are rendered to persons established in non-Member States) in those cases where there would otherwise be non-taxation, double taxation or distortion of competition.

What kind of difficulties may arise can be illustrated by the following example. Assume an entrepreneur purchases a tangible movable good (not a means of transportation) in another Member State, which it leases to a customer in that other State. Some countries consider this transaction to be effected in the place where the supplier of the service is established, whereas other countries find that the place where the customer is established is decisive.

In order to clarify this situation the Commission has proposed a Tenth Directive which provides that the service is in such a case rendered in the country where the customer is established by deeming that the supplier of the service has his business in that country.

Another problem which arises after the determination of the place where a service is rendered is: who is responsible for the payment of VAT? In many cases the taxable person and the payer of the tax are the same person, but in other cases where a non-resident supplier of services is involved the Government of the "importing" country may demand the nomination of a fiscal representative who will be responsible for the payment of VAT or it may introduce legislation under which it can collect the VAT from the receiver. However, with respect to the services which we have described as being mainly of an intellectual nature (Sixth Directive, Article 9.2.e.), it is the receiver who is the sole person from whom VAT can be collected.

With respect to the manner in which VAT can be recouped or refunded the Sixth Directive contains provisions to the effect that the taxpayer can receive full reimbursement for any VAT paid. According to the speaker the refund procedure as laid down in the Eighth Directive will have little significance for persons rendering services.

Mr. Lebrun (France)

The speaker indicated that because of the difficulties which arose from the use of the *place of utilization* when determining the place where a service is rendered, it was the original idea of the Commission to turn either to the concept of *supplier* or *receiver of a service* as a decisive factor. However attractive these juridical concepts may be, there remains the economic reality that VAT is a consumption tax which is destined to be shifted on to the consumer. For this reason a realistic approach is needed, which, as Mr. Guieu indicated, has resulted in a compromise.

How have the tax administrations reacted vis-à-vis the problems connected with the definition of place where a service is rendered?

An important problem relates to the definition of certain services enumerated in Article 9 of the Sixth Directive which are not subject to VAT in the country where the supplier is established. These services include the renting of real property and services connected with such property, services connected with transportation and a number of intellectual services and operations connected with the sale or licensing of copyrights.

With respect to the renting of means of transportation no fundamental difficulties have yet been encountered. A problem might arise, however, with respect to the definition of domicile of the taxpayer or the definition of his permanent establishment. The approach followed by the Sixth Directive with respect to services connected with real property seems to be realistic. It is sensible to subject these services to VAT in the country where the

* This summary has been made by the Editors of the Bulletin who are solely responsible for its contents.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

property is situated and make no exceptions. Otherwise an absurd situation might exist under which some of these services would be taxable in one country and others in another country. It is for the same reason that all services connected with transportation — loading, unloading, the handling of merchandise etc. — follow the same rules as those which apply to transportation services.

The most important difficulty in the field of cultural, educational and similar services is, according to the speaker, to be found when training foreign personnel, since in many cases such training is a corollary to export operations. It would be in the spirit of the Commission to treat such training in the same manner as an "exportation".

Cultural services are in most cases rendered in the country where the performer is established. However, difficulties of an administrative nature may arise where a foreign performer is only present in a country for a short time. Collection of tax may in such cases prove to be difficult. It is for this reason that the national delegates have sometimes posed the question whether it was worth returning to the "place of utilization" as a criterion in some of these cases.

A second field of problems related to the rendering of intellectual services. The speaker indicates that there have been some difficulties with the delimination of publicity transactions. Also, the concept of counselling (in case of patents, in the information field, management, etc.) is difficult. Furnishing of information includes, for instance, the use of a computer for tourist information and also for the use by airlines or travel agencies for their terminals and cultural information broadcast by television or radio.

Other problem fields indicated by the speaker include such concepts as the main place of activities of a permanent establishment, the concept of beneficiary in the sense of Article 9.2.c of the Sixth Directive and the definition of taxpayer.

Mr. Cappelleman (Belgium)

The speaker's intention was to describe certain problems which the Belgian legislature encountered when introducing the provisions of Article 9 of the Sixth Directive in Article 21 of the Belgian VAT Code.

Para. 2 of Article 21 of the Belgian Code provides, in conformity with the Sixth Directive, that a service is generally deemed to have been rendered in the place where the supplier has established his business or where he has his permanent establishment.

There are, however, a number of exceptions to this rule, in the first place with respect to real property: all services connected with real property (and which have been listed in Royal Decree No. 5) are deemed to have been rendered in the place where the property is situated. This also applies to services rendered by intermediaries for the creation or the establishment of a right in rem or right to enjoy real property and services rendered by real estate agents which were formerly subject to different rules. Services in the form of administering real property also follow the above rule.

A second exception to the main rule is that work performed in connection with tangible movable property is deemed to have been carried on in the place where the good is physically present. In some cases where goods are imported with a view of being processed in Belgium and subsequent re-exportation, an exemption is available provided that certain conditions have been met.

Valuation of movable tangible property located in Belgium is considered to be effected in that country. The question may be asked whether the term "work" means actual physical work or also work of an intellectual nature.

The third exception concerns transportation which is deemed to have been supplied where the transport takes place having regard to the distances covered.

The fourth exception deals with cutural, artistic, scientific, educational and similar services which are deemed to have been rendered in the place where they have been physically carried out. Normally, training of personnel would fall under this rule, although where such training is connected with the exportation of equipment it is defensible that such services would follow the rules for export of merchandise and thus be exempt from Belgian VAT. However, it is doubtful whether the Belgian tax administration will adopt this theory considering that exempt services connected with exportation have been exhaustively listed in the Code and such training schemes are not included. However, the supplier of the training may invoice the non-resident customer for the training of his personnel, using an invoice which will show Belgian VAT for which the customer may claim a refund.

Services rendered by cafes and restaurants are deemed to have been supplied where these establishments are located. If similar services are rendered ancillary to transportation services it is also the place where the services are physically carried out which is decisive for Belgian VAT purposes.

Other services ancillary to transportation which follow the rules applicable to transportation services include loading, unloading and handling of merchandise as well as: weighing, measuring, receipt of merchandise, including quantity and quality checks, the taking of samples, etc. However, where these services are connected with importation and exportation they will in many cases be exempt.

A rather controversial criterion is the one which applies to the renting of movable tangible goods (except means of transportation). This type of service is deemed to be rendered where the supplier has his business, unless he is established in a Common Market country and exports the good to another Common Market country where it will be utilized. In that case the place of utilization is decisive. A second exception to the general rule is that the place of utilization is also decisive if the lessor is established outside the Common Market. These rules have caused a number of problems in Belgium, which may be illustrated by the following case.

A Dutch company purchases equipment in the Netherlands which is rented to a Belgian company for which purpose the equipment is exported to Belgium. In this case VAT is due in Belgium. However, if the Dutch company purchases identical equipment in Belgium for renting to its Belgian customer there is no question of exportation so that the main rule applies, i.e. the service is in principle subject to VAT in the Netherlands. This rather bizarre situation will be remedied when the Tenth Directive on VAT has been adopted.

Another exception applies to means of transportation rented to third persons. According to the Sixth Directive the place where such a service is rendered is the place of business of the lessor. However, the Sixth Directive permits Member States to deviate from this rule for the renting of movable tangible goods in two cases: (i) if the place of service (according to the provisions of the Sixth Directive) is located in the Common Market but the good is used outside the Common Market, and (ii) if the place of service is located outside the Common Market but the good is used inside the Common Market. In those cases, Member States may use the criterion of place of utilization and Belgium has indeed made use of this facility. To give a concrete example: if a person rents a car for travel abroad he will be subject to Belgian VAT for that part of his journey in Belgium and the other Common Market countries, but will be exempt for the distance covered outside the Common Market. On the other hand, if a person rents a car outside the Common Market and visits Belgium he is in principle subject to VAT with respect to the use of the car in Belgium, although collection of the VAT will not be a simple matter.

The last exception to the main rule discussed by the speaker concerns the "export" of certain services (which are sometimes indi-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

cated as "intellectual" services) in the sense of Article 9.2.e. of the Sixth Directive. In those cases the service is deemed to have been rendered in the place where the customer has established his business. These services include advertising services which include any advertisement, whether for the sale of real property or for the hiring of personnel. The concept of intellectual services proper (services performed by legal counsel, accountants, engineers, research centers, etc.) is taken very broadly by the Belgian tax administration since these services, if exported, are normally used by entrepreneurs. Thus, in case of export of those services they will in most cases be exempt under the provisions based on Article 9.2.e. which is preferred over the cumbersome refund procedure of Article 17 (4°) to which entrepreneurs are entitled. Finally, the place where the customer has his business establishment is also used as the criterion for banking and financial services in the cases described in Article 9.2.e. of the Sixth Directive, as well as for the supply of personnel and for services of agents when they procure for their principal the services enumerated in the above article.

Mr. Prussen (Luxembourg)

The text of the Luxembourg VAT law after its adjustment to the provisions of the Sixth Directive only entered into force on January 1, 1980 so that the experience with the new provisions is rather limited.

As prescribed by the Sixth Directive the place where a service is deemed to be rendered is where the supplier has his business establishment or his permanent establishment or, in the absence of this criterion, the place where he has his domicile. The term "permanent establishment" is defined as for the direct (e.g. income) tax.

The situation with respect to the first exception, i.e. for real property, is not as simple as it seems, Assume, for instance, that an engineering bureau established in Paris gives advice with respect to the purchase of real property located in Germany for a Japanese firm established in the United Kingdom. VAT with respect to this service will be due in Germany even where the purchase of the property is eventually not effected.

In some cases (covered by Article 9.2.e. of the Sixth Directive) Luxembourg VAT law deems the place where a service is rendered the place where an *essential* part of the service has physically been carried out. Difficulties may arise with the definition of "essential part". For instance, an expert established in a country is invited to value a movable object located in another country. Where is the essential part of the transaction effected? In the country where the contract has been concluded? Or the country where the good in question is located? Or where the expert discussed the case with his principal? Or perhaps the country where the actual intellectual work, the writing of a report, was performed?

The third exception to the general rule is where the place of utilization determines the places where a services is rendered in the sense of Article 9.2.d. of the Sixth Sirective. The speaker points out that this exception only covers one special case and there exist numerous transactions which lead to the same economic result to which the general rule (place where the supplier of the service has his business establishment) applies.

The fourth exception is where the place where a service is rendered is determined by the place where the customer has his business establishment in the sense of Article 9.2.e. of the Sixth Directive. The speaker remarked that services regarding real property, even if they could be brought under this article, will follow the rules set for services connected with real property in the sense of Article 9.2.a. of the Sixth Directive.

SUMMARY OF DEBATES ON THE FIRST SUBJECT *

1. Article 15.13 of the Sixth Directive exempts from VAT the supply of services including transport and ancillary transactions but excluding the supply of services exempted under Article 13, when these are directly linked to the transit or the export of goods, or to the imports of goods benefiting from the provisions of Articles 14.1.b. and c. and 16.1.

This provision has been included in Article 262, Para. 1 of the French General Tax Code which exempts the export of movable goods as well as the rendering of services which are directly connected with such exports. This exemption in particular applies to the lease of means of transportation, of containers, of material used for the protection of the exported merchandise and training of personnel of the foreign customer in connection with the exported goods.

All EEC Member States exempt the lease of means of transportation (or apply a zero rate) but, apart from France, there are doubts with respect to the treatment of training of foreign personnel. It seems that Belgium subjects such services to VAT but with the possibility of refund to the foreign entrepreneur, although another speaker believes that there may be a possibility in Belgian law to exempt these services as an export transaction.

2. With respect to the lease of means of transportation, all EEC Member States in principle apply the general rule, i.e. such services are deemed to be rendered in the place where the supplier has his business establishment. Belgium, France and Germany, however, have made use of the exception laid down in Article 9.3 of the Sixth Directive, i.e. where these goods are used outside the Common Market no VAT will be due and VAT will be imposed where these goods are used in the country but the supplier of the service is established outside the Common Market.

3. With respect to the lease of tank cars (wagons citernes), the general rule applies, i.e. the place of the business establishment of the supplier of the service determines the place where the services are rendered. Belgium, however, applies the two exceptions to the main rule indicated above.

4. With respect to the lease of pallets the rules for the lease of movable tangible goods apply, although it may perhaps be debatable whether they should not fall under means of transportation.

5. Where a French real estate agency requests a similar Swiss organization to investigate real property in Switzerland with a view to purchasing this property, the services rendered by the Swiss supplier will be subject to VAT in France if the purchase is not effected (rules of Article 9.2.e. of the Sixth Directive) and exempt from French VAT where the property is purchased (rule of Article 9.2.a.). Anyway, this seems to be the opinion of the Belgian, French and EEC experts at the meeting, although it was admitted that this solution is not always convenient for the parties concerned.

6. Where a parent company established outside the Common Market renders administrative assistance to its subsidiaries established in the Common Market (including France) based on data furnished by its subsidiaries, the services rendered by the parent will follow the rules of Article 9.2.e. of the Sixth Directive. Thus it would be subject to French VAT with respect to the administrative assistance rendered to its French subsidiary.

7. A Belgian permanent establishment of an American company sells merchandise to a French subsidiary of the American compa-

* This summary has been made by the Editors of the Bulletin who are solely responsible for its contents.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ny at the same price for which the French company sells the merchandise to its customers. In order to compensate the French company for its activities the Belgian permanent establishment grants the French company a commission. The French tax administration subjects the commission fee to VAT. In fact, the term "commission fee" is incorrect since the goods become the property of the French company and it should therefore be considered to be increase of the purchase price of the goods which is indeed subject to VAT in France.

8. The question was asked why the EEC in its Sixth Directive has adopted as the main rule for the place where services are rendered the place where the supplier of the service has a business establishment and not the criterion of the place where the customer is established. It was conceded that the latter criterion is also a good one since the VAT is then levied in the country where the customer has the right to credit the tax. However, it would not have been possible to avoid the introduction of a rather large number of exceptions to the main rule.

9. Where a French company utilizes advertisement services in France and charges part of the VAT invoiced to it to a Belgian company, the latter transaction is subject to Belgian and not to French VAT. In practice, the French VAT administration seems to have erroneously imposed French VAT in such a case.

10. The question was raised in what manner a supplier of services may ascertain whether he deals with a person subject to VAT, since this will in a number of cases affect his VAT liability. It seems that all manner of proof will be acceptable, including a statement from the VAT administration of the country concerned. At the moment no VAT identification card exists. In Belgium difficulties may be met in the area of construction since entrepreneurs may have been removed from the list of taxpayers without anybody knowing it. In order to prevent tax fraud the Belgian VAT authorities consider all transactions with a party established in Belgium to be subject to Belgian VAT and leave it to the supplier of the service to show that in his case no VAT is due.

11. It was suggested that a uniform form to be stamped by the VAT authorities be introduced to prove that a person has been subject to VAT. A like form exists under the provisions of the Eighth Directive but there is a real danger that the VAT administration will thus be snowed under with paper work.

12. Upon the contribution of a patent right to a company against shares, no VAT will be due. However, where the transaction is effected against other consideration it will be a taxable service.

SUMMARY*

of *"Regime applicable to non-resident taxpayers"* by J. Autenne, tax adviser of the Federation of Chemical Industries of Belgium and lecturer at the Catholic University of Louvain.

Non-resident entrepreneurs carrying on business transactions in Belgium are generally subject to VAT in that country. An important issue is whether the taxpayers carry out such operations through a permanent establishment in Belgium or not.

1. Taxpayers who possess a permanent establishment in Belgium

A non-resident taxpayer who possesses a permanent establishment in Belgium is treated for VAT purposes as a resident taxpayer.

A permanent establishment is deemed to exist if the taxpayer has in Belgium a branch office or agency or any other fixed place of business, provided that the establishment is managed by a person who is authorized to conclude contracts on behalf of the taxpayer.

The consequences are, inter alia, the following:

(i) The taxpayer must register with the Belgian VAT authorities as soon as he commences business in Belgium and he must report any subsequent changes in his status, including the termination of his activities when deciding to cease his business operations in Belgium.
(ii) He must send his customers invoices in the prescribed form and keep financial records in conformity with Belgian law (a simplified recording system may be used if his turnover does not exceed 15 million Bfrs.).
(iii) He must regularly submit tax returns (normally on a monthly basis, but three-monthly if the turnover does not exceed 15 million Bfrs.) and pay VAT to the Belgian Treasury on the dates fixed by law.

The general rule is that the taxpayer is not required to record any transactions which are not effected through his Belgian permanent establishment. However, if he delivers goods or renders services in Belgium which would, in the absence of a permanent establishment, oblige him to appoint a responsible representative (see below), such transactions must be included in the financial records of his Belgian permanent establishment.

2. Taxpayers not possessing a permanent establishment in Belgium

Non-resident entrepreneurs who carry out business transactions in Belgium must generally appoint a responsible representative if they do not possess a permanent establishment in that country. This will, for instance, be the case if the non-resident taxpayer carries on construction or assembly operations in Belgium or if he rents goods in Belgium to other persons. Note also, that where a non-resident taxpayer imports goods into Belgium and indicates himself as the recipient of those goods when paying the taxes at importation (e.g. customs duties and VAT), he is also obliged to appoint a VAT representative, since he will be deemed to re-sell the merchandise involved.

The VAT representative, who may be the non-resident taxpayer's customer or a bank or other financial institution or any other person approved by the Belgian VAT authorities, is severally liable for the VAT liability of his principal. However, he may request the VAT office to limit his responsibilities. However, the non-resident taxpayer may only appoint *one* VAT representative so that such limitation may have consequences for the volume of transactions he carries on in Belgium.

Where a non-resident taxpayer renders services in Belgium the obligation to appoint a VAT representative is often waived. This will, for instance, be the case for:

(i) services of an intellectual nature such as the drafting of reports, checking and supervising, market research, advertising and the sale and licensing of certain incorporeal rights, such as patents, trademarks and copyrights;
(ii) if the taxpayer occasionally renders services other than those designated under (i).

The fact that a non-resident taxpayer is exempted from the obligation to appoint a VAT representative does not necessarily mean that he is also exempt from Belgian VAT. In those cases he must generally pay the tax through the affixing of stamps on the invoices he submits to his customers. This system of payment will in particular be used where the non-resident taxpayer has requested a refund of Belgian VAT charged to him by his suppliers.

* This summary has been made by the Editors of the Bulletin who are solely responsible for its contents.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

However, in those cases where the non-resident taxpayer does not request such a refund (for instance, because he did not use either goods or services subject to Belgian VAT), the VAT will not be collected from the taxpayer but instead from his Belgian customer. Generally, this situation would occur in the case of rendering services of an intellectual nature.

Special rules apply to international passenger transportation. With the exception of sea or air transportation (which is exempt), passenger transportation effected on Belgian territory is subject to VAT. If the transporters do not have a permanent establishment in Belgium they should normally appoint a VAT representative. However, lacking such a VAT representative the Belgian tax administration usually imposes a lump sum tax ranging from 30 to 600 Bfrs. at the frontier.

SUMMARY OF PAPERS ON THE SECOND AND THIRD SUBJECTS *

Mr. Cappelleman (Belgium)

Non-resident taxpayers carrying on taxable transactions in Belgium may be divided into three categories:

1) Those having in Belgium a permanent establishment or a business are subject to the same legal obligations as resident taxpayers.
2) Those who do not have in Belgium a permanent establishment nor a business must in principle appoint a fiscal representative in Belgium who takes care of all administrative and legal obligations. Any VAT due is paid through this representative and any VAT to be refunded is collected through him.
3) Non-residents who have no permanent establishment in Belgium nor a business in that country are exempt from the obligation to appoint a fiscal representative in case of exempt export transactions, isolated transactions and the rendering of services which are subject to VAT in the country where the customer is established.

Where services are subject to VAT in the country where the customer is established, the tax is directly collected from the latter, although the non-resident supplier of the service may be severally liable. If the non-resident supplier has incurred VAT invoiced to him by a Belgian supplier he is entitled to a refund, provided that a Belgian taxpayer would also be eligible for such a refund under the same circumstances. However, there exist some limitations with respect to the refund, inter alia, where vehicles for the transportation of persons and investment goods are concerned. In fact, Belgian VAT legislation, with respect to refund of VAT, is more generous than the Eighth Directive which prescribes such refund only in those cases where the non-resident does not carry on taxable operations in the country which has to make the refund. The Eighth Directive prescribes, further, that VAT must be refunded to non-resident taxpayers who perform exempt transportation services in another Member State, which is a situation also covered by current Belgian VAT legislation. Therefore, Belgian VAT law does not need to be much amended in order to adjust it to the provisions of the Eighth Directive.

Mr. Lebrun (France)

Non-resident entrepreneurs rendering services in France are in principle obliged to appoint a fiscal representative in France who must be accepted by the French tax administration. This representative is subject to all obligations to which any other taxpayer is subject, like the preparing of invoices and the keeping of records of the transactions performed. However, the tax administration permits the non-resident entrepreneur to prepare the invoices providing that the name of the fiscal representative is indicated. Where services rendered by a non-resident are subject to VAT in France and are collected from the customer, the formalities with which the supplier of the services must comply are reduced to a minimum. He will in such a case only be severally liable for the payment of the VAT due.
The speaker stated that starting from January 1, 1981 France will fully apply the Eighth Directive on the refund of VAT.

Mr. Prussen (Luxembourg)

Where a non-resident entrepreneur has a business or permanent establishment in Luxembourg, approximately similar rules apply as in Belgium. However, there are some slight differences, in particular with respect to those services whereby VAT should be collected from the customer under the provisions of Article 21 of the Sixth Directive. The Luxembourg VAT only authorizes the Government to introduce such rules but no further regulations have been issued. Thus, under current law it is always the non-resident supplier of the services who must submit the VAT returns and make the payments.

However, non-resident suppliers of services performed in Luxembourg are not necessarily obliged to appoint a fiscal representative in that country. In many cases the customer may take over the obligation to pay VAT or the supplier may put up collateral. With respect to refund of VAT the speaker stated that currently the Luxembourg tax authorities demand that the supplier of the services file the VAT returns himself. No refund is available if the formalities are being taken care of by the customer.

SUMMARY OF DEBATES ON THE SECOND AND THIRD SUBJECTS *

1. The question was raised whether Belgian enterprises have met with financial difficulties because the collateral demanded by the Luxembourg VAT authorities and which must be placed with a Luxembourg financial institution is very substantial. *Mr. Prussen* replies that it is not obligatory to put up collateral and that the non-resident supplier can always propose to appoint a fiscal representative instead. In many cases the customer will be prepared to act as such a fiscal representative.

2. It was further asked whether fiscal representatives do normally demand compensation for their services. *Mr. Cappelleman* has no personal knowledge of such situations but he believed that a remuneration will be asked.

3. It was agreed that the formalities imposed on non-resident entrepreneurs are financially burdensome and time consuming. However, no VAT system is in itself watertight and the VAT authorities need these formalities to combat tax fraud. *Mr. Guieu* pointed out that the EEC Commission did its utmost to draft the Sixth Directive in such manner that no fiscal representative would be needed but unfortunately not all its proposals were accepted. However, the Eighth Directive will further reduce the number of cases wherein a fiscal representative must be appointed.

4. Taxpayers who are exempt from VAT (e.g. hospitals) may cause a problem where they receive services from a non-resident supplier and become liable to the payment of VAT on such services. In Belgium, payment is effected through the affixing of stamps and it was thought that administrative checks were possible. In France such taxpayers, when exempted, are often subject to investigation by public authorities representing the State. Luxembourg does not yet have rules under which the customer is subject to VAT.

* This summary has been made by the Editors of the Bulletin who are solely responsible for its contents.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

5. The following question was asked: a Belgian company possesses a permanent establishment in France. It rents a tank car to be used in Belgium from a lessor in France. In this case French VAT is due. Is this VAT refundable? The reply was: yes under the provisions of the Ministerial Decree of September 29, 1979. When the Eighth Directive is in force, a refund will be available under the provisions of that Directive.

6. The next question was: a Belgian company acts as an agent for the account of a Canadian customer, soliciting sales for this customer. Sales are effected in Belgium and abroad. The merchandise is sent to the final customer but not from a warehouse situated in Belgium. The reply was: in such a case no Belgian VAT is due.

7. What possibilities exist for a taxpayer in case the VAT authorities of two EEC Member Countries have different interpretations of VAT law? The following solutions may be available:

(i) If the text of the VAT Directive is ambiguous, resulting in differing legal provisions or differing interpretations in two or more countries, the taxpayer may request his VAT administration to submit the problem to the VAT Committee of the EEC Commission. In this manner a certain uniform interpretation may be reached.

(ii) If there is litigation the taxpayer may file a complaint with the EEC Commission which then examines the situation and may open the procedure of Article 169 of the Rome Treaty for violation of the Treaty. The taxpayer may also request the national court to let the Court of Luxembourg render a preliminary decision.

As of January 1, 1981 the Directive on mutual assistance will come into effect and from then on the tax administrations of the countries concerned may attempt to solve the problem bilaterally.

8. The last question concerned services rendered by itinerant traders (e.g. cobblers) and having no fixed domicile or permanent establishment. Admittedly, these persons, when performing taxable services, will be difficult to assess to VAT and in many cases they may benefit from relief accorded to small entrepreneurs.

ERRATUM

The article by Howard M. Liebman, "Allocations of foreign blocked income under United States tax law", in the June 1980 issue of the Bulletin contains a serious printing error which distorts the meaning of the article. Please read on page 253, left column, 18th line from bottom: "The Sixth Circuit refused to accept this argument, however, and reversed the decision of the court below. The Circuit Court cites a number of decisions, including *First Security Bank of Utah*, for the principle that a taxpayer need not arrange its affairs so as to maximize its tax liability. [25]" The underlined part was omitted in the article.

Bibliography

Books

The publications listed in this bibliography have recently been acquired by the Bureau's library which will gladly supply further information upon request (please quote the reference numbers). They should, however, be ordered through a bookseller or direct from the publisher indicated, and not through the Bureau.

AFRICA

AFRICA GUIDE 1980

Saffron Walden, World of Information, 1979. 430 pp.
Country by country chapters provide up to date economic and political information; a general part contains studies of development in the continent (such as "Processing for export: a short guide to Africa's industrial free zones"). The material was furnished by various contributors. (B. 13.059)

DROIT DES SOCIETES EN AFRIQUE

(Afrique noire francophone, Maroc et Madagascar). By Georges Meissonnier. Paris, Librairie Générale de Droit et de Jurisprudence, 1978. Bibliothèque Africaine et Malgache, Tome XXVII. 863 pp., 215 Fr.Frs.
Study describing and analyzing the present company law in force in the French-speaking African countries. Registration duties payable at the creation of companies are dealt with. The countries included are: Benin, Cameroon, Zaire, Ivory Coast, Gabon, Guinea, Upper Volta, Madagascar, Mali, Morocco, Mauritania, Niger, Central African Republic, Senegal, Chad and Togo. (B. 13.057)

ALGERIA

INVESTMENT CODES OF NORTH AFRICA

Compiled and translated by Elizabeth de Brauw. Amsterdam, International Bureau of Fiscal Documentation, 1979. Publications of the International Bureau of Fiscal Documentation, No. 27. 66 pp.
English translations of investment statutes and related laws, preceded by a short introduction to investment and taxation in Algeria. (B. 13.062)

ARGENTINA

IMPUESTOS NACIONALES 1979

Leyes — Decretos reglamentarios; disposiciones complementarias. Buenos Aires, Editorial Cangallo, 1979. 566 pp.
Compilation of the principal tax laws and tax regulations of Argentina. Supplementary material includes the texts of some of the tax treaties entered by Argentina. (B. 15.978)

IMPUESTOS NACIONALES 1980

Leyes — Decretos reglamentarios; disposiciones complementarias. Buenos Aires, Editorial Cangallo, 1980. Numero extraordinario de "La Información". 532 pp.
1980 Compilation of tax laws and decrees. (B. 15.990)

TAXATION IN ARGENTINA

International Tax and Business Service. New York, Deloitte Haskins & Sells, 1979. 60 pp.
Comprehensive outline of the tax system in Argentina with emphasis on income taxes. (B. 15.972)

ASIA

ASIA'S LABOR MARKET

Tapping the region's greatest resource. Hong Kong, Business International Asia/Pacific Ltd., 1979. 240 pp.
Research report on labour markets in Asia organized by country and largely based on the experience of companies within each country. Countries covered are Bangladesh, Hong Kong, India, Indonesia, Republic of Korea, Malaysia, Pakistan, Philippines, Singapore, Sri Lanka, Taiwan, Thailand. Quality of labour, recruiting and training, wages and related costs and industrial relations are dealt with . (B. 51.493)

ASIAN INDUSTRIAL EXPANSION

By Anthony Edwards. Published and distributed by: The Financial Times Ltd., Bracken House, Cannon Street, London EC4P 4BY. 1977. 211 pp.
Study on the economic development in Asia and the investment and export opportunities for Western European business enterprises within or with this part of the world. (B. 51.532)

BANKING STRUCTURES AND SOURCES OF FINANCE IN THE FAR EAST

Edited by The Banker Research United. 3rd Edition. London, Financial Times Business Publishing, Ltd., 1980. 350 pp., £50.
Revised third edition of study describing the role of the central bank and the operation of different types of banks doing business (including finance houses, savings banks, foreign and joint venture banks) in Australia, New Zealand, the Philippines, Thailand, Singapore, Hong Kong, Japan, Indonesia, Malaysia, South Korea and People's Republic of China. The book is available from the Book Sales Dept., Financial Times Business Publishing, Minster House, Arthur Street, London EC4R 9AX. (B. 51.577)

MERCHANT BANKING IN THE FAR EAST

2nd Edition. By Michael T. Skully. London, Financial Times Business Publishing, Ltd., 1980. 474 pp., £60.
Revised second edition of study on the state of merchant banking in Australia, Hong Kong, Indonesia, Japan, Malaysia, New Zealand, the Philippines, Singapore, South Korea, Thailand. The book is available from the Book Sales Dept., Financial Times Business Publishing, Minster House, Arthur Street, London EC4R 9AX. (B. 51.578)

REVENUE SYSTEMS OF ASEAN COUNTRIES

An overview. By Mukul G. Asher. Singapore, Singapore University Press, 1980. 66 pp.
Comparative analysis of central government revenues in member countries of ASEAN (Association of South East Asian Nations). (B. 51.547)

STATISTICAL YEARBOOK FOR ASIA AND THE PACIFIC 1978

Bangkok, Economic and Social Commission for Asia and the Pacific, 1978. 506 pp.
Eleventh issue of statistical yearbook covering the following ESCAP member countries: Afghanistan, Australia, Bangladesh, Bhutan, Brunei, Burma, China, Cook Islands, Democratic Kampuchea, Fiji, Gilbert Islands, Hong Kong, India, Indonesia, Iran,

(B. 102.621)

AUSTRALIA

AUSTRALIAN INCOME TAX GUIDE

Being the 25th edition of Gunn's Guide to Commonwealth Income Tax. By E.F. Mannix and D.W. Harris. Chatswood, Butterworths, 1980. 752 pp., Aus$22.50.
Summary of 1979 changes with references to "Australian Income Tax Law and Practice" by the same authors. (B. 51.524/530)

BUTTERWORTHS INCOME TAX LEGISLATION HANDBOOK 1980

Incorporating the Income Tax Assessment Act 1936 together with Ancillary Income Tax Legislation as amended to December 1979. Edited by Butterworths' Editorial Staff. Chatswood, Butterworths, 1980. 1136 pp., Aus$22.50.
Consolidated text of the Income Tax Assessment Act 1936 updated to December 1979 and related statutes thereto. (B. 51.529)

INCOME TAX ASSESSMENT ACT 1936

Incorporating all amendments by legislation made to 31 December 1979. With tables of provisions, note and index to act and regulations. Canberra, Government Printer, 1979. 880 pp.
(B. 51.527)

TAXATION AND THE FAMILY UNIT

Report of proceedings of a public seminar convened by the Taxation Institute Research and Education Trust at Sydney, May 30, 1979. Sydney, Taxation Institute Research and Education Trust, 1980. 46 pp.
Report subjects include, inter alia: "Asprey proposals for family unit taxation" by R.W. Parsons; "Taxation and the family unit: social aspects" by Meredith Edwards. (B. 51.543)

AUSTRIA

DOKUMENTATION ZUR STEUERREFORMKOMMISSION

By Otto Helige. Vienna, Wirtschaftsverlag Dr. Anton Orac, 1980. 232 pp., 350 ÖS.
Compilation of documents relating to the discussions and preparatory work of the Austrian Tax Reform Committee.
(B. 102.551)

DAS EINKOMMENSTEUERGESETZ

Nach dem Stande vom 1. Jänner 1980. Zehnte Auslage. By Karl Dollak, Egon Bauer and Emmerich Simon. Vienna, Im Selbstverlag der Verfasser, 1980. 614 pp.
Tenth edition of a book containing the text of and comments on the Austrian individual income tax as of January 1, 1980. The texts of a number of other relevant laws and an extensive index are appended. (B. 102.686)

BELGIUM

DE BELGISCHE BELASTINGEN

Derde herziene druk. By A. Tiberghien. Antwerp/Deventer, Kluwer, 1980. 101 pp.
Third revised edition of publication describing taxes levied in Belgium; the material is up to date as of March 1, 1980.
(B. 102.637)

FISCAAL ZAKBOEKJE 1980

By E.J. de Wolf and J. Rousseaux. Antwerp, Kluwer, 1980. 103 pp.
"Fiscal pocket book 1980" contains in a nutshell all the relevant provisions of the major tax laws levied in Belgium. (B. 102.642)

PEREQUATION CADASTRALE ET REFORME DE LA FISCALITE IMMOBILIERE

1. Commentaire de la loi du 19 juillet 1979; 2. Textes légaux. By Jacques Malherbe and Jacques Autenne. Brussels, Maison Ferdinand Larcier, 1980, 1980. 62 + 48 pp.
Two volumes containing legal text and comment on the law of July 19, 1979 which modified the 1962 tax reform concerning immovable property taxation (cadastral income) in Belgium.
(B. 102.577/578)

BRAZIL

FINOR ORIENTAÇÕES E PROCEDIMENTOS BÁSICOS

By José Geraldo Wanderley, Paulo de Tarso de Moraes Souza and Eugénio Cordeiro Benevides Filho. Rio de Janairo, Ministério do Interior, Departamento de Indústria e Comércio, 1977. Série: Brasil — SUDENE — Industrialização, 8. 40 pp.
Discussion of the Investment Fund for the North-Eastern region and its operation. (B. 15. 965)

TEORIA GERAL DO DIREITO TRIBUTARIO

2a Edição. By Alfredo Augusto Becker. São Paulo, Edição Saraiva, 1972. 621 pp., 590 Cr.
Handbook on the general principles of tax law. (B. 15.936)

CANADA

DOMINION TAX CASES

Volume 33, 1979. Don Mills, CCH Canadian, Ltd., 1980. 9220 pp.
Bound volume containing full text of 1979 loose-leaf Dominion Tax Cases reports. (B. 102.632)

INCOME TAX ASPECTS OF EXECUTIVE AND EMPLOYEE COMPENSATION

Corporate Management Tax Conference 1979. Toronto, Canadian Tax Foundation, 1980. 294 pp., $11.
Published papers and proceedings of the 1979 Corporate Management Tax Conference held in Toronto in June 1979 which was devoted to income tax aspects of executive and employee compensation. (B. 102.596)

INTERGOVERNMENTAL TRANSFERS IN CANADA

By Robin W. Broadway. Toronto, Canadian Tax Foundation, 1980. Financing Canadian Federation: 2. 93 pp.
Study designed to review the existing system of intergovernmental grants in Canada, consider their economic rationale, and offer some suggestions for structural change. (B. 102.640)

THE NATIONAL FINANCES 1979-1980

An analysis of the revenues and expenditures of the Government of Canada. Toronto, Canadian Tax Foundation, 1980. 310 pp.
(B. 102.641)

CHILE

1979 BOLETIN DE ESTADISTICA TRIBUTARIA

Tomo I: Impuesto a la renta. Santiago, Servicio de Impuestos Internos, 1979. 52 pp.
Bulletin including statistics and other data on income tax revenue. (B. 15.984)

CHINA (PEOPLE'S REPUBLIC)

CHINA'S ECONOMY IN THE 1980's

Consultancy Co., 1978. 66 pp.
Chinese and English texts of speeches given by various contributors. The topics include, inter alia: "Chinese way of modernization and the prospects for China's economy in the 1980's" by Xu Dixing; "On reforming China's economic management system" by Lin Kuoguang; "The concept and prospects of Guangdong special economic zone" by Sun Ru. (B. 51.531)

ECONOMIC MANAGEMENT IN CHINA

By Joan Robinson. Cambridge, Anglo-Chinese Educational Institute, 1976. 40 pp. (B. 51.521)

HOW TO DO BUSINESS WITH CHINA

A seminar for businessmen, bankers, lawyers and accountants. New York, Law Journal Seminars-Press, Inc., 1979. 515 pp.
Collection of informative articles on China relating to doing business with China. The English texts of the Constitution and the Act for the Control of Trademarks are included. (B. 51.507)

STATUTE OF TIANJIN INTERNATIONAL TRUST AND INVESTMENT CORPORATION

Tianjin, Tianjin International Trust and Investment Corporation, 1980. 18 pp. (B. 51.523)

WHY CHINA HAS NO INFLATION

By Peng Kuang-Hsi. Peking, Foreign Languages Press, 1976. 44 pp. (B. 51.522)

WIRTSCHAFTLICHE ENTWICKLUNG UND SOZIALER WANDEL IN DER VOLKSREPUBLIK CHINA

By Willy Kraus. Berlin, Springer Verlag, 1979. 738 pp.
German-language study on economic development and social change in the People's Republic of China. Dealt with are measures in the field of education, health care, population growth and minority population policy. An extensive list of literature and statistics is appended. (B. 51.568)

COLOMBIA

PRINCIPIOS DE DERECHO TRIBUTARIO

La reforma tributaria de 1960. Impuestos sobre la renta, patrimonio y exceso de utilidades en Colombia. Second edition. By Isaac Lopez Freule. Bogotá, Ediciones Lerner, 1962. 805 pp.
Comprehensive discussion of the general principles of tax law in Colombia and the tax reform of 1960, with respect to income tax, net worth tax and liquidation income. (B. 15.985)

DENMARK

EJENDOMSSALG 2. HALVÅR 1979

Udarbejdet af Statsskattedirektoratet. Vurderingsafdelingen. Copenhagen, Government Printer, 1980. 75 pp.
Statistics on the "free" sales of real property in the second half of 1979 in Denmark (thus not including, for example, auction sales) prepared by the Evaluation Department of the National Tax Directorate. (B. 102.645)

ECUADOR

LEY DE IMPUESTO A LA RENTA Y REGLAMENTO

Prepared by Luis A. Tobar Sanchez. Quito, Corporación de Estudios y Publicaciones, 1979. 182 pp.
Income tax law and regulations. (B. 15.979)

FRANCE

LAMY SOCIETES

Droit des sociétés commerciales. Paris, Lamy S.A., 1980. 1337 pp.
Monograph explaining company law for doing business in France effective as of February 1, 1980. (Forms and other relevant documents are not published annually. See two-volume edition of 1979.) (B. 102.601)

MEMENTO PRATIQUE FRANCIS LEFEBVRE

Fiscal 1980. Paris, Editions Francis Lefebvre, 1980. 1117 pp.
Annual guide for 1980 containing explanation of the French tax law as of April 10, 1980. (B. 102.633)

MEMENTO PRATIQUE FRANCIS LEFEBVRE

Social 1980. Securité sociale, droit du travail. A jour au 10 avril 1980. Paris, Editions Francis Lefebvre, 1980. 927 pp.
Annual guide for 1980 containing explanation of French social security and labour laws as of April 10, 1980. (B. 102.634)

PRECIS DE FISCALITE

Volumes I and II. Prepared by Ministère du Budget, Direction Générale des Impôts. Paris, l'Imprimerie Nationale, 1980. 1068 + 825 pp.
Volume I of this tax guide deals with individual income tax, company income tax, value added tax, tax on real property and capital gains. Volume II covers registration and stamp duties, indirect taxes and direct local taxes, control, sanctions, cadastral administration and other related tax matters. (B. 102.635)

GERMAN DEMOCRATIC REPUBLIC

LOHNSTEUERTABELLEN FÜR MONATLICHE UND TÄGLICHE LOHNZAHLUNGEN MIT ERLÄUTERUNGEN

Berlin (East), Staatsverlag der Deutschen Demokratischen Republik, 1980. 79 pp.
Booklet explaining the essential elements of the wage tax system of the German Democratic Republic with full tax tables for monthly and daily wage payments. (B. 102.522)

GERMAN FEDERAL REPUBLIC

EINKOMMENSTEUER-RICHTLINIEN

Einkommensteuergesetz und EinkommensteuerDv. 4., neubearbeitete Auflage. Stand 1. Februar 1980. Munich, Verlag C.H. Beck, 1980. 720 pp., 19.80 DM.
This book contains the texts of the German income tax law, the income tax regulatory ordinance and the income tax directives. It is up to date as per February 1, 1980. (B. 102.675)

LA FISCALITE ALLEMANDE: SES PIEGES ET SES POSSIBILITES

By Gerhard Haas. Paris, Librairie Générale de Droit et de Jurisprudence, 1979. 107 pp., 48.50 Fr.Frs.
Explanation in French of the major features of the German tax system, such as individual and corporate income tax and value added tax. The book also contains an overview of the international aspects of German tax law. Tax tables of the income tax and translations of legal provisions of interest to foreign taxpayers are appended. (B. 102.595)

THE GERMAN COMMERCIAL CODE

As amended to January 1, 1978. By Simon L. Goren and Ian S. Forrester. Littleton, Fred B. Rothman & Co., 1979. 210 pp.
English translation of and annotations to the German Commercial Code, effective as per January 1, 1978. (B. 102.572)

GRUNDSÄTZE ORDNUNGSMÄSSIGER BILANZIERUNG FUR BETEILIGUNGEN

By Eberhard Weber. Düsseldorf, IdW Verlag, 1980. Schriften der Schmalenbach-Gesellschaft, Band 7. 278 pp., 48 DM.
Monograph forming part of a series which studies the basic principles of drafting the balance sheet in a regular way; the present work emphasizes participations in companies and other enterprises. (B. 102.573)

© 1980 International Bureau of Fiscal Documentation – BULLETIN

HANDBUCH DER FINANZWISSENSCHAFT

Dritte, gänzlich neubearbeitete Auflage unter Mitwirkung von Norbert Andel und Heiz Haller. Herausgegeben von Fritz Neumark. Lieferungen 27-30. Tübingen, J.C.B. Mohr (Paul Siebeck), 1980. 320 pp., 95.40 DM.
Third revised edition of a handbook on public finance prepared by Norbert Andel and Heinz Haller and edited by Fritz Neumark. The present supplements deal particularly with parafiscal budgetary revenue and the theory of public indebtedness. (B. 102.589)

HANDBUCH DER STEUERVERANLAGUNGEN 1979

Einkommensteuer, Körperschaftsteuer, Gewerbesteuer, Umsatzsteuer. Munich, Verlag C.H. Beck, 1980. 2700 pp., 124 DM.
Annual guide for filing 1979 returns for individual income tax, corporate income tax, business tax and turnover tax.
(B. 102.674)

STEUERBERATER — JAHRBUCH 1979/80

Edited by Franz Hörstmann, Ursula Niemann en Gerd Rose. Cologne, Verlag Dr. Otto Schmidt, 1980. 582 pp., 89 DM.
Proceedings and lectures of the 31st congress of German tax advisers held in 1979. Congress topics dealt, inter alia, with tax policy from the point of view of the "Länder", the new 1980 Turnover Tax Law, possibilities to set up private old age pensions, tax problems with respect to the finishing of business activities, the available net worth and corporate income tax, etc. (B. 102.570)

DIE VERANLAGUNG ZUR EINKOMMENSTEUER FÜR 1979

Einkommensteuergesetz, Durchführungsverordnung, Richtlinien, Anlagen, Rechtsprechung, Nebengesetze, Tabelle, Stichwortverzeichnis. Düsseldorf, IdW-Verlag, 1980. 1259 pp., 36 DM.
Annual guide for purposes of filing individual income tax return for 1979 assessment year. Relevant text of statutes is appended.
(B. 102.591)

NIGERIA: Capital Transfer Tax

A Critical Review

by A.C. Ezejelue *

I. INTRODUCTION

The Capital Transfer Tax Decree [1] introduced the capital transfer tax (CTT) throughout the country with effect from April 1, 1979. The Decree makes provision for the imposition of capital transfer tax on transfer of property inter vivos or on death. It also provides, inter alia, for certain exemptions from the tax and generally for its due administration.

The tax is at a graduated rate on chargeable transfers and the rates [2] vary from 10 to 60 percent on the value of transfers exceeding ₦100,000. The tax is administered by the relevant State Tax Authorities.

One of the main objectives of CTT is to control the colossal acquisition of personal wealth and fortune by the affluent minority in the last few years. [3]

II. CTT ON TRANSFERS INTER VIVOS

CTT shall be payable under the Decree on the value of any property [4] transferred by any person during his lifetime. [5] However, the tax will not be levied if the transfer is a genuine outright sale of the property and is not intended to confer gratuitous benefit on the transferee. [6] Specifically, the transfer must either be made or be such as might be made in a transaction at arm's length between persons not connected with each other.

In the case of a settlement, where property comprised in a gift inter vivos is property settled by that gift, it is treated as an ordinary gift inter vivos for purposes of CTT. The person to whom the gratuitous transfer is made is accountable for CTT. [7] The transferor is in no way liable.

Contents

I. Introduction
II. CTT on transfers inter vivos
  (a) Cumulative transfers
  (b) Title to property and valid registration
III. CTT in respect of transfers on death
  (a) Property deemed to pass on death
  (b) Exemptions from CTT
  (c) Persons accountable for CTT
IV. Administration and general
  (a) Determination of value of property
  (b) Rates of CTT and quick succession relief
  (c) Disposition to relatives
  (d) Payment options and recovery actions
  (e) Offences, penalties and appeals
V. Review of the objective of the Decree
VI. Shortcomings of the Decree
VII. Summary

(a) Cumulative transfers

Section 2(1) of the Decree exempts a transferee from CTT where on the date of the transfer the value of the property does not exceed ₦100,000. However, if there are subsequent transfers to the transferee, the value of all the transfers is aggregated, and only the first exemption of ₦100,000 is applied to the cumulative transfers made to the same person. [8] Thus, where gifts of property worth ₦40,000, ₦50,000, and ₦20,000 are made to X on different dates, the value of the property that will attract CTT is ₦10,000 = ₦(40,000 + 50,000 + 20,000 — 100,000). This provision is subject to the exclusion of any property tranferred before the coming into effect of this Decree. [9]

As a corollary, the emphasis is not on the total value of gratuitous gifts by any person to a number of donees during his lifetime, but on the cumulative and total

* Senior Lecturer in Accounting and Acting Head, Department of Accountancy, University of Nigeria.

1. No. 12 of 1979.
2. Sec. 18. See footnote 22, below.
3. General Olusegun Obasanjo, "1979/80 Federal Budget", *New Nigerian*, April 2, 1979, pp. I-IV.
4. According to Sec. 28, "property" includes money and all interests capable of being held in land, and personal property and the proceeds of sale thereof, respectively, and any money or investment for the time being representing the proceeds of sale.
5. Sec. 1(1).
6. Sec. 1(2).
7. Sec. 1(3).
8. Sec. 2(2).
9. Sec. 2(3).

© 1980 International Bureau of Fiscal Documentation — BULLETIN

transfers to each donee. Thus, assume that the sum of the value of all transfers made by Obinna after April 1, 1979 is as follows:

To Chizoba ₦45,000 + ₦30,000 + ₦50,000
To Ifeyinwa ₦60,000 + ₦25,000
To Chinasa ₦90,000

The value of the property subject to CTT is only ₦25,000 = ₦(45,000 + 30,000 + 50,000 — 100,000) to Chizoba. The first ₦100,000 value of gifts to Chizoba is specially exempt and the gifts to Ifeyinwa and Chinasa are also exempt as each is cumulatively less than ₦100,000.

(b) Title to property and valid registration

In order to ensure that CTT is paid by the person accountable for the tax. Section 3 provides that the title to property transferred inter vivos and which is liable to CTT shall not pass to the transferee until the tax has been paid. It further provides that where an instrument effecting the transfer is registrable under any law in Nigeria, such instrument shall not be registered unless the Relevent Tax Authority has issued a certificate of clearance evidencing payment of such tax. Any registration made without the discharge certificate having been issued shall be void ab initio and of no effect whatsoever.

III. CTT IN RESPECT OF TRANSFERS ON DEATH

Section 4 provides that CTT shall be imposed on the value of all property passing on the death of a person. In order to determine the rate of CTT payable on any property passing on death, all such property situated within a State is aggregated to form one estate for the purposes of the tax. [10]

(a) Property deemed to pass on death

Section 5 includes the following property as passing on the death of the deceased:

(i) Property in which the deceased was at the time of his death competent to dispose.
(ii) Property in which the deceased or any other person had an interest ceasing on the death of the deceased, to the extent to which a benefit accrues or arises by the cesser of such interest.
(iii) Any property taken as donatio mortis causa (i.e. gift in contemplation of death) made of taken under a disposition made by the deceased, purporting to operate as an immediate gift inter vivos whether by way of transfer, delivery, declaration of trust or otherwise but exclusive of any such property in respect of which CTT had been paid during the lifetime of the deceased.

For a donatio mortis causa to be valid the following conditions should be expected to be satisfied:

— It must be made in contemplation of the death of the donor. If a gift is made in contemplation of suicide it is void for being repugnant to public policy. [11]
— The condition that the gift must be by way of delivery, transfer, declaration of trust or otherwise is met if there is an antecedent delivery of the chattel alio intuitu to the donee before the date of the gift. [12] In *Re Lillingstone* [13] it was held that if the property was bulky and could not be transferred, the provision of the means of making use of it or taking delivery thereof was sufficient.
— The circumstances are likely to be such as to establish that the gift is intended to take full effect only after the death of the donor such that the thing is to revert to the donor (unless the donor indicates otherwise) in case he should recover. [14]

(iv) Any property which the deceased was entitled to and which he has caused or may cause to be transferred to or vested in himself and any other person jointly whether by disposition or otherwise, so that the beneficial interest therein or in some part thereof passes or accrues by survivorship on his death to such other person.
This is reminiscent of an estate held in joint tenancy with one of its peculiar characteristics of jus accrescendi. There might be a problem of survivorship in a case where the joint tenants perish in a common disaster. In this situation it is likely that the common law rule would apply allowing their heirs to hold as joint tenants so that there is no survivorship. [15]

(v) Any property passing under any past or future settlement made by the deceased by deed or any other instrument not taking effect as a will, whereby an interest in such property for life or any other period determinable by reference to death is reserved either expressly or by implication to the settlor, or whereby the settlor may have reserved to himself the right, by the exercise of any power, to restore to himself, or to reclaim the absolute interest in such property.
This creates a reversionary interest whereby the residue of the estate reverts to the grantor upon the determination of the prior estate as opposed to a remainder which stands over for the remainder-man at the end of the particular estate.

(vi) Any annuity or other interest purchased or provided by the deceased either by himself alone or in concert or by arrangement with any other person, to the extent of the beneficial interest accruing or arising by survivorship or otherwise on the death of the deceased.

(b) Exemptions from CTT

No CTT shall be payable in respect of any family house. [16] Also, no CTT shall be payable in respect of such paintings, manuscripts, works of art or scientific collections as may be donated or bequeathed to any body or institution in Nigeria such as museums, universities or other public institutions as may be specified by the Federal Executive Council. [17]

(c) Persons accountable for CTT

The executor of the deceased is accountable for the CTT on all personal property wheresoever situate in the

State concerned of which the deceased was competent to dispose at his death, but shall not be liable for any tax in excess of the assets which he has received as executor, or might but for his own neglect or default have received. [18]

Where by operation of any law property passes on the death of the deceased, and there is no executor, or the executor is not accountable for the CTT in respect of such property, sub-section 2 of Section 11 deems the following responsible for the CTT on the property:

(i) every person to whom any property so passes for any beneficial interest in possession,
(ii) every trustee, guardian, committee or other person in whom any interest in the property so passing or the management thereof is at any time vested, and
(iii) every person in whom the same is vested in possession by alienation or other derivative title.

These are subject to the proviso that a person who acts merely as agent or bailiff for another person in the management of property shall not be held accountable for the tax. Also a bona fide purchaser for value without notice of tax attaching to the property takes the property free from CTT liability.

IV. ADMINISTRATION AND GENERAL

The Decree is administered by the State in which the property subject to CTT is situated. CTT is under the care and management of the Relevant State Tax Authority charged with responsibility for the assessment and collection of tax on the income of persons resident in that State. [19] In order that the Relevant Tax Authority of the State where the property is situated should exercise jurisdiction over the assessment and collection of the CTT, it is not necessary that the deceased or transferor should be resident for income tax purposes in that State.

Section 9 provides that every person who is accountable for CTT, in the case of transfers on death, shall not later than 12 months after the death of the deceased or six months after the transfer in the case of transfer inter vivos prepare and deliver to the Relevant Tax Authority the CTT Form. While in the case of the former the Form shall contain a true and perfect inventory and account of the estate of the deceased and a statement of the value of the estate, in the case of a transfer inter vivos the Form shall contain a description of the property and a statement of its value.

(a) Determination of value of property

The value of any property is the estimated price which, in the opinion of the Relevant Tax Authority, the property would fetch if sold in the open market at the time of the death of the deceased or of the transfer of the property. [20] For this purpose, the value can be ascertained by the Relevant Tax Authority in such manner as it thinks fit, such as by appointing valuers.

In determining the value of a deceased's estate for CTT, allowance shall be made, subject to a few exceptions, for reasonable funeral expenses and for debts and incumbrances incurred bona fide for full consideration wholly for the deceased's own benefit.

Where an estate includes an interest in expectancy and CTT on such interest is paid together with the rest of the estate, the value of the interest is that at the date of the death of the deceased. Where, on the other hand, CTT is not paid until the interest falls into possession, the value of the interest is calculated according to its value when it falls into possession. [21]

(b) Rates of CTT and quick succession relief

The scale of rates of CTT on chargeable transfers is at a graduated rate ranging between 10 and 60 percent. [22] However, Section 19 provides for a reduction of tax in the case of quick succession such as where within ten years of a first death a second death occurs subjecting the same property or any part thereof to CTT for a second time. A tax reduction is given on the death of the donee or legatee based on a percentage, which depends upon how long the donee or legatee survived the gift or legacy, of the rate of tax originally paid on the property by the transferee. The percentages, which decrease with the increase in the length of time the transferee survived the property, range from 80 percent where the second death occurs within twelve months of the first to 10 percent where the second death occurs within ten years of the first death. The quick succession relief avails where CTT becomes payable on any property consisting of land or a business (not being a business carried on by a company), or any interest in land or such a business. Where, however, the value of the property on which the tax is payable on the second death exceeds the value on which tax was payable on the first death, the former value would be used to determine the amount of tax on which the quick succession relief is to be computed.

(c) Disposition to relatives

Any disposition made by the deceased in favour of his relative [23] shall be treated as a gift unless:

18. Sec. 11(1).
19. Sec. 8(1).
20. Sec. 10(1).
21. Sec. 13(3) (a) and (b). Interest in expectancy may include future interests such as remainders or reversions whether vested or contingent.
22. Sec. 18. The rates are graduated as follows:

Net value of the estate or property transferred	*Rate of CTT*
₦	%
First 100,000	Nil
Next 150,000	10
Next 150,000	20
Next 250,000	30
Next 500,000	40
Next 1,000,000	50
Thereafter	60

23. See paragraph 1 of Part I of the Schedule to Sec. 6. Deceased's relative means: (i) the wife or husband of the deceased; (ii) the father, mother, children, uncles and aunts of the deceased; and (iii) any issue of any person falling within (i) or (ii) and the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

(i) the disposition was made for full consideration in money or money's worth paid to the deceased for his own use or benefit, or
(ii) the disposition was to discharge a fiduciary obligation imposed on him.

Where, however, the consideration for the disposition was only partial, the value of the consideration shall be allowed as a deduction from the value of the property for the purpose of CTT.

(d) Payment options and recovery actions

Under Section 22, the Relevant Tax Authority may, on the application of any person accountable for CTT, accept any property (including interest in land) in satisfaction of the whole or any part of such tax. However, in order to alleviate the undue strain and excessive sacrifice of lump sum payment of CTT it is provided that the tax authority may, on such terms as it thinks fit, allow payment to be postponed for such interest not exceeding 3 percent. [24] But under certain conditions [25] specified in the Decree, such as the difficulty in ascertaining the exact amount of CTT payable, the Revenue has the power, on the application of any person accountable, to accept by way of composition for all the CTT payable, payment of the sum so assessed in full discharge of all claims for the taxes in respect of such property or interest, and shall give a certificate of discharge accordingly. The certificate shall not, however, discharge any person from any tax in case of fraud or failure to disclose material facts. But under Section 20(3) a discharge certificate in respect of any property included in the certificate shall exonerate a bona fide purchaser notwithstanding any such fraud and failure.

For the purposes of enforcing payment of CTT on any person accountable where that person fails, neglects, or refuses to pay the tax, the tax authority may for the non-payment of such tax distrain:

(i) upon the land, premises or place in respect of which the tax was charged;
(ii) the person charged by his goods or other chattels including money, bills of exchange, bonds or other securities. [26]

The amount of tax unpaid may be recovered by the sale of anything so distrained.

If after the tax has been paid, it appears for any reason that too little tax was paid, an additional tax shall, unless a discharge certificate has been issued, by payable, and be treated as tax in arrears. [27]

As a counterpoise to the provisions on raising additional tax in case of underpayment, the Decree provides that where the tax authority is satisfied that too much tax has been paid, a repayment of the excess shall be made. [28] Where the overpayment was due to overvaluation of the property by the tax authority, the repayment will attract an interest of 3 percent per annum.

(e) Offences, penalties, and appeals

A person accountable for CTT who violates the provisions of Section 11 such as by his wilful failure to supply required information or to complete correctly the CTT Form shall be guilty of an offence and will be liable on conviction to a fine of a sum equal to double the amount of the CTT, if any, remaining unpaid for which he is accountable. [29] Also if any person makes any statement in a CTT Form which is false in any material particular he shall be guilty of an offence and liable on conviction to a fine of ₦10,000 or to imprisonment for two years. [30]

If any person is aggrieved by the decision of the Relevant Tax Authority with respect to the amount of CTT payable on any property whether on the ground of the value of the property, or the rate charged, or otherwise, he may on payment of 50 percent of the tax assessed, or of such portion of it as is therein payable by him, appeal to the High Court of the State concerned for the determination of the amount of the tax. [31] Any excess payment of tax will be repaid, and the High Court may, where it appears to it just, order the repayment of such excess with interest at 3 percent per annum for such period as appears to the court just. Appeals shall lie from decisions of the High Court in the same manner and to the same extent as appeals from the decisions of the Court in civil proceedings given by that Court sitting at first instance. [32]

V. REVIEW OF THE OBJECTIVE OF THE DECREE

While introducing the Decree in the 1979-80 Federal Budget the then Head of State, General Olusegun Obasanjo, specifically mentioned the following factors [33] as contributing to the promulgation of the Decree:

(i) the tendency among the youths to regard the material successes of their parents as reasons for not wanting to make any effort to improve themselves and earn their own living;
(ii) the belief that every individual should work for his or her livelihood because that is what self-respect dictates;
(iii) the fact that in the process of working for a living, the individual inevitably makes some contribution to the growth and development of the society;
(iv) the noticeable trend among children and youths in our educational institutions and elsewhere of believing that they should have no ambition and relying on their parents' wealth to see them through life;
(v) the imposition of some measure of control in the acquisition of personal wealth and fortune by the affluent minority in order to avoid future disaffection and social explosion;
(vi) the additional effect of providing, in due course, one more source for financing the economic and social programme of the nation.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Some of the objectives for introducing this tax, which is a combination of gift tax and death duty, in Nigeria appear to be similar to some of the objectives for introducing it in the United Kingdom in 1974. This is because it has been claimed that "the object of CTT is to reduce large individual holdings of wealth in the United Kingdom" [34]; it is also for "the redistribution of wealth as a means to greater justice and equality in our society". [35] The similarity is not suprising since "as usual the Decree is patterned after the United Kingdom law". [36]

It is believed that the social and economic considerations which motivated the promulgation of the Decree are laudable and that the Decree may have a far-reaching effect towards achieving the declared objective. This is particularly so if the provisions of the Decree are faithfully and efficiently implemented both by the taxpayers themselves and by the already over-worked staff of our various Revenue Departments.

However commendable the objectives may appear to be when examined in isolation, some of them are self-defeating when looked at in collectivity. For instance, while in one breath the Decree tends to encourage youths to remain self-sufficient through the process of working hard for a living and having some ambition, in another breath it tends to impose some control in the acquisition of personal wealth and fortune. How far does labouring towards self-sufficiency go before the imposition of the control sets in? It amounts to blowing hot and cold to require a person to work hard for his economic independence and at the same time requiring him to stop at some point in that pursuit.

One of the reasons for this control is to avoid future disaffection and social explosion since according to the Head of State, "self-interest is undeniably part of human nature but so is envy". [37] If everyone becomes self-sufficient by working hard, then the issue of envy and disaffection will not arise. The reference to envy and disaffection imports some degree of economic equality through some elements of socialism. But his has no validity in a capitalist set up. It has been emphasized that "we cannot impose socialist norms and dogma . . . on an essentially capitalist institution without ensuring that the ethos and core values are redefined and the institution redesigned to serve the new values". [38]

Furthermore, the issue of control of acquisition of personal wealth is in conflict with the objective of using the tax as a source of revenue for the government. The idea of restraining such acquisition has an inherent disincentive effect. The government will not therefore try to discourage one of its possible sources for financing its economic and social programmes.

One of the criticisms of taxing marginal incomes heavily is its disincentive effect to work. Therefore if CTT bites seriously into a personal wealth such that hard work and enterprise is discouraged, it countervails some of the well-conceived intentions of the Decree. In particular, it will be a counter-offensive to the belief that every individual should work for his or her livelihood and that in doing so the individual inevitably contributes to the growth and development of the society. Although excessive wealth ought to be taxed, CTT should not be used as a vehicle for restricting the acquisition of personal wealth and fortune.

CTT must not be considered in isolation. It must be emphasized that there are other taxes such as income tax, capital gains tax and corporation tax, which together with CTT may affect the same persons who are supposedly well-to-do. Apart from the fact that the taxpayers may be suspicious of the multiplicity of the taxes, the government should not create a situation where a taxpayer's financial security will be endangered by his desire to minimise tax liabilities. Therefore CTT should be regarded more as a means of wealth redistribution rather than as a means of raising revenue. This appears to be the conception in Britain because, according to Ind, "the tax is not presented by Parliament as a revenue-raising measure but as a social measure with the objective of redistributing wealth. . . although a man should be allowed to accumulate wealth created by his own energies during his lifetime, that same wealth should not be too readily transferable to his children". [39] The principal "raison d'être" of CTT should be viewed from this perspective.

It is doubtful whether CTT per se can in fact, in all cases, curb the tendency among youths to regard the material successes of their parents as reasons for not wanting to make any effort to improve themselves and earn their own living. If a substantial amount of wealth is bequeathed to a son by his father, CTT can make only such a little dent on the whole bequest that the son who so desires can conveniently rely on it without further improving himself. The desire to improve oneself and have one's own ambition is more a factor of the social and political set up and self-discipline rather than of CTT.

VI. SHORTCOMINGS OF THE DECREE

Since one of the objectives of the Decree is for the tax to serve as a revenue-yielding source, the fact that all property within the federation is not aggregated en bloc reduces the yield from the tax. The yield from this source could have been more substantial for financing our economic and social programmes if the aggregation were on national level rather than on piecemeal State levels. However, the problem of aggregation on a nation-wide level is to determine which of the States will be responsible for the overall aggregation and how the tax yield will be distributed among the States having regard to such exemptions as the first ₦100,000 and the family house and also the debts to be paid out of the various properties.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Also for the purposes of aggregation it is not clear from the Decree how property located outside Nigeria as well as shares and other such investments should be treated. For example, is the location of shares to be based on where the share certificate is deposited or where the register of shareholders is maintained?

The Decree provides that the value of any proprty for CTT shall be estimated to be the price such property would fetch if sold in the open market at that time. This may be fraught with difficulties. For instance, a market may not exist for that property, or where it exists it may not be perfectly competitive. Besides, a quoted price for a property is strictly comparable with another only if the grade, quality, location, delivery terms, credit terms, and auxiliary services are exactly the same. Some isolated prices represent nothing but distress prices for quick disposition of property in a financial emergency. Again there is the possibility that the property cannot be sold, or can only be sold to restricted persons, or can only be sold at a fixed price. Also, the Decree does not provide for the costs of the realisation of the property. It is for the High Court to determine the issue of the open market valuation when a case goes on appeal. The following observations of Swinfen Eady, L.J. on the same issue in the English case of *Commissioners of Inland Revenue v. Clay* [40] may be persuasive:

"A value, ascertained by reference to the amount obtainable in an open market, shows an intention to include every possible purchaser. The market is to be the open market, as distinguished from an offer to a limited class only, such as the members of the family. The market is not necessarily an auction sale. The section means such amount as the land might be expected to realize if offered under conditions enabling every person desirous of purchasing to come in and make an offer, and if proper steps were taken to advertise the property and let all likely purchasers know that the land is in the market for sale.... Not only is the probable buyer a competitor in the market, but other persons, such as property brokers, compete in the market for what they know another person wants, with a view to a resale to him at an enhanced price, so as to realize a profit."

As reasonably persuasive as these explanations are, they are difficult conditions to fulfill.

In determining the value of the state of a deceased person an allowance shall be made, inter alia, for reasonable funeral expenses which include reasonable expenditure in embalming and transporting the deceased to the burying place. However the Decee went beyond the requirement of reasonableness to put the ceiling of such admissible expenses at ₦1,000 in respect of a tombstone and ₦3,000 in respect of all other expenses. The restrictions completely ignored two important things which have remained with us, namely: the inflation and the differences in the status and place of the deceased. The Decree could have stopped short at the requirement of reasonableness which ought to vary with time and status of the deceased. Also the Decree does not provide for the apportionment of funeral expenses where the assets are located in more than one State.

Although the CTT is a combination of gift tax and death duty, some form of the latter is not new in Nigeria. There are the Administrator-General's Laws [41] which apply to an estate of a deceased person in respect of which probate or letters of administration may be granted by the High Court. Under these Laws, the Administrator-General may be appointed the sole executor of a will, and in some circumstances a person who establishes his claim may be granted probate of the will or letters of administration. One of the duties of the Administrator-General under this Law is to dispose of the property of the estate in the prescribed manner [42] which includes payment to the credit of the Consolidated Revenue Fund such percentage [43] as may be prescribed of the gross amount of money arising from the realization of the estate. This represents the duty on the estate of the deceased person. Since this duty could be readily avoidable by the simple device of transferring property inter vivos so as to reduce the taxable estate at death, the CTT has a more far-reaching effect.

One could have thought that like our predecessor, the United Kingdom, the CTT Decree which operates throughout Nigeria could have specifically repealed all the previous estate duty legislations. "The introduction of a far-reaching CTT [i.e. U.K. Finance Act 1979] removed the need to retain the long-standing estate duty liability and no liability for this duty will arise in respect of deaths occurring on or after March 13, 1975". [44] On the contrary, the Decree does not repeal or amend the Administrator-General's Laws and Ordinance, and one is left with the problem of determining their relationship with the Decree.

However, Section 20(4) provides that, where after filling the CTT Form by the person prima facie responsible for accounting for the tax, the Revenue shall, if satisfied with the information disclosed therein that CTT is payable in respect of any estate, issue a certificate of provisional assessment to him for the purposes [45] only of exempting him, if he applies to any court for probate or letters of administration in respect of the will or estate of, or of any matter connected with the distribution of the estate of, a deceased person, from payment of such fees as may be prescribed by any law including rules of court. It is further provided that such certificate shall not relieve any such person from payment of court fees chargeable for oaths or, subject to the Decree, of any probate fees where it is subsequently revealed that the estate is not chargeable to CTT.

45. See Sec. 25.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

The implication of this, it would appear, is that both the CTT Decree and the Administrator-General's Law will operate pari passu. Where the value of the estate transferred on death exceeds ₦100,000 CTT will be imposed, but where it does not exceed ₦100,000 estate duty under the Administrator-General's Law will be payable. In the case of transfer inter vivos, however, any property whose value is not greater than ₦100,000 stands exempt from both taxes since transfer inter vivos does not come under the Adminstrator-General's Law. Being federal legislation, it is expected that in the case of any conflict the Decree would take precedence over the estate duty laws.

However, it would have been better if, as in the U.K., the estate duty legislation gave way to the CTT Decree for the sake of tidiness and unification and for the elimination of any doubts and possible confusion. The Decree could, where necessary, incorporate any portions of the Administrator-General's Law and similar laws which should be saved. Moreover, some aspects of the Administrator-General's Law, for example the rates of estate duty, are, in the light of current changes, out of alignment with some provisions of the Decree.

VII. SUMMARY

Although efforts have been made to highlight the principal issues involved in our Capital Transfer Tax Decree, there are a few obscure points which were deliberately left out. As a new piece of legislation some time is needed to put it in practice before a meaningful stock is taken. Until it is fully understood and practised, its merits, pitfalls as well as ways of mitigating the tax cannot be fully appreciated. However, the introduction of CTT is another landmark in the development of taxation in Nigeria.

PRENTICE~HALL,INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

Prentice Hall Announces:

The most strikingly different new tax guide ever published for taxpayers with income from foreign sources.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Continuously Supplemented. . . . . Always Up - to - Date

This outstanding new Service is created specifically to help save money for:

U.S. INDIVIDUALS
with investments and/or earned income from a foreign source

U.S. CORPORATIONS
with income from foreign sources

FOREIGN CORPORATIONS
with income earned or taxable in the U.S.

NONRESIDENT ALIENS
receiving income from, or taxable in the U.S.

If you fit any of these categories — or if you counsel, advise, or in any way service any of these categories — U.S. TAXATION OF INTERNATIONAL OPERATIONS will be an invaluable new tool for you.

It will deliver management benefits — operations benefits — tax benefits.

In clear, direct language, backed up by practical, tested practices of acknowledged experts in international business operations, the new work spells out how the taxpayer can best take full advantage of every popular, every sophisticated, and every little-known tax-saving device.

Authoritative, specific guidance from one source devoted exclusively to this kind of vital help has been non-existent — until now.
With the first 1972 publication of the innovative U.S. TAXATION OF INTERNATIONAL OPERATIONS this important need is now fulfilled. And bi-weekly "Report Bulletins" will keep the guide as new and up to the minute as the day you receive it.

Personal response to this new publication has been even more enthusiastic than our most optimistic projections. Subscriptions are now being accepted by mail for $ 231 a year.

Address your request to Dept. S-RR-103, Prentice-Hall Inc., Englewood Cliffs, N.J. 07632 and specify U.S. TAXATION OF INTERNATIONAL OPERATIONS, 1-year introductory charter subscription.

Annual payment is not due until 20 days after receipt of the new, ready-for-reference volume.

Romania: **Law of Finance**

Amended Juridical Framework of Financial Relations

by Drd. Ioan Condor *

Contents

1. The necessity of amending the financial mechanism and the legal framework therefor.
2. The system of monetary funds within the national economy.
3. Income and expenses budget.
4. Amended forms of financing and crediting the national economy.
5. Provisions referring to financial-foreign exchange relations.
6. Conclusion.

1. The necessity of amending the financial mechanism and the legal framework therefor.

At the present time in the multilevel development of the entire national economy, based on the Program of the Romanian Communist Party,[1] as changes in society rapidly occur, the constant perfection of economic and financial management and planning and improved efficiency in all fields of activity become imperative. From the point of view of the Romanian Communist Party, the forms and methods of management, far from being immutable, must constantly be subject to improvement and adapted to the pace of development of economic and social life and at the same time to the objective requirements for the material and spiritual development of society.

In accordance with these facts and with exacting demands as to the quality of the management process as well as great openness to new elements, the Romanian Communist Party acted, and is still acting, to eliminate everything which had become superannuated and which no longer corresponds to the targets necessitated by rapid progress in constructing the socialist society to improve permanently the management and planning of the entire socio-economic sphere. Decisive moments in this framework for drawing up the socio-economic development strategy for the country were the measures taken by the Romanian Communist Party at the 9th Congress and the National Conference of 1967, the 10th and 11th Congresses and the National Conferences of 1972 and 1977 on perfecting socio-economic management and planning.

In conformity with the requirements of the present stage of development of the national economy, the Plenum of the Central Committee of the Romanian Communist Party,[2] which met on 22 and 23 March 1978, made decisions of exceptional importance on economic and financial management and planning, the raising of workers' self-management to a higher level, and increasing role and responsibility of each separate work collectivity (party) in the administration, with the goals of the most efficient utilization by the party of the national experts involved in the sphere of management, and of reinforcing economic-financial self-management. The entire process of elaborating the Party's documents and the laws of the country, intended to lead to the perfection of the economic-financial mechanism, has been directly led by President Nicolae Ceausescu, Secretary-General of the Romanian Communist Party.

The measures taken by the Plenum of the Central Committee of the Romanian Communist Party of 22-23 March 1978 are intended to increase the role of the financial-banking system which, while ensuring the financial means necessary to the progress of economic activity under the proper conditions, must pay more attention to the adequate use of these funds to encourage increasing economic efficiency. At the same time, the financial-banking system has to ensure permanent systematic financial control in all sectors of the economy in order to intervene promptly in settling the various matters which arise in the multilevel progress of our economy.[3]

With a view to implementing the measures decided upon by the Party on the further perfecting of financial and banking activity and the reinforcing of the role of finance to create better conditions for achieving the financial, monetary and foreign currency policies, the proper adjustment of the existing legal framework appeared to be necessary.

The Finance Law (No. 9 of 1972) which entered into force on 1 January 1973 was responsive to the goals set up by the 10th Congress of the Party and the National Conference of the Party of July 1972:

— to raise to a higher level the planning, management and organization of the economy; and
— to ensure, within this framework, the improvement of economic-financial activity.

Coherently dealing with socialist financial matters at both a macro- and micro-economic level, the Finance Law was unique, not only nationally but also on the international scene. [4]

The decisions of the 11th Congress of the Romanian Communist Party, the National Conference of 1977 and the Plenum of the Central Committee of the Romanian Communist Party 22-23 March 1978, taken together with the requirements of the present stage of development of the national economy, call for the further improvement of the juridical framework of financial relations in order to reflect the measures adopted to perfect economic and financial management and planning.

To this end, the Great National Assembly has adopted the Law Amending and Completing the Finance Law (No. 9 of 1972). [5]

The measures adopted to perfect economic and financial management and planning are reflected also in the fiscal law field. Thus, as of January 1, 1979, provisions relating to the contribution to society of a part of the net production value (the so-called "prelevarea pentru societate a unei părți din valoarea producției nete") became effective (Decree No. 429/1978). [6]

2. The system of monetary funds within the national economy

To best determine the proportions and pace of economic growth, one must consider the role played by proper distribution of the national income between development and the consumption fund. [7] With this in view, the Law has enacted many and various improvements which significantly fill out the provisions referring to the functioning of monetary funds in the national economy, thus creating a highly perfected legal system for the formation and distribution of these monetary funds.

The national income serves as a basic source of monetary funds in the economy and is distributed between a fund for consumption and a national fund for the socio-economic development of the country. The latter, however, is also funded through the depreciation fund as well as other sources.

The national fund for socio-economic development functions as an overarching fund system, comprised of a central fund for socio-economic development, a local fund for socio-economic development, the own funds for socio-economic development belonging to the State economic units, the own funds for socio-economic development set up by co-operatives as well as by other public organizations, [8] and the funds used by the people for building houses, production and raising of livestock, and other similar purposes.

From a material point of view, the national fund for socio-economic development is intended to finance new investments and the growth of material stocks out of it.

The means contained in the *fund for consumption* are remitted — in monetary form — to the working people through several channels, i.e. as a remuneration (according to the quantity, quality and social importance of the work performed), as profit sharing and as social retributions from the state budget or from the funds of the socialist units.

The Law reserves an important place and ensures a complete control to *the own funds* [9] of state economic units, cooperatives and other public organizations. Within the framework of measures adopted by the Romanian Communist Party, the concept of economic management has been enriched, amplified and given new qualities, as the enterprises must now cover their expenses from their own income, reimburse the amounts provided by society, ensure the self-financing of their own growth, provide material incentives for the working people and, at the same time, participate efficiently in the formation of the centralized resources of the state which are earmarked for certain objects and activities.

The material forms in which the enterprises hold part of the financial resources for self-financing of development and for creating incentives for the working people, as well as the conditions on which depend the amount of the resources held, both constitute component parts of the economic-financial mechanism and reflect, as regards the content and manner of functioning of the system of the monetary funds belonging to the economic units, the principal framework which was approved by the Plenum of the Central Committee of the Romanian Communist Party of 22-23 March 1978.

The amendments and completions to the Law of Finance effected by Law No. 2 of 1979 elaborate the measures by which these funds are legislatively instituted. The resources for the own funds of which state enterprises

can dispose are constituted from profits, [10] the depreciation of capital goods [11] and other sources established by law.

In order to enable the self-financing of their own development (i.e. financing from their own resources), the state enterprises can use the fund for economic development and the working means fund. The industrial "trusts" (associations of enterprises) may call upon the fund for the financing of investments in new enterprises and for the financing of important developments as well as the reserve fund for working means.

What is of paramount importance in the new regulations on self-financing is the basic principle that, from their funds, the enterprises must ensure the coverage of planned investments, the payment of installments due on the bank credits granted for investments, the planned annual growth of working means and the installments to be paid back to the state budget from the amounts received by new enterprises to cover their needs of working means in their first year of activity. Thus, only the financing of investments in new enterprises and important developments in existing enterprises, as provided for by the national one-time plan [12] (Appendix No. 1 of the Law), is ensured from the fund which has been set up for such a goal by a "Central".

In order to increase the role of the enterprises in satisfying social needs and to provide incentives for the working people to increase profits, provision is made for the establishment of a fund for housing construction and other investments with a social character, a fund for profit sharing of the working people and a fund for social activities. In addition to these funds, the enterprises may set up — based on production expenses — as own funds: a fund for scientific research, technological development and introduction of technical progress, a fund for labor protection and other funds provided for by law.

Provision is also made for the obligation of the enterprise to repay the funds received from society for financing their investment as well as the funds received for covering the necessary working means to the new enterprises during the first year of operation. For such new enterprises, the obligation to repay the amount received for financing the investment begins in the year following that in which the project begins operations.

There are also new and specific regulations with regard to the funds of the agricultural, handicraft and consumption co-operatives and also funds of other public organizations.

In this way a uniform, clear and precise legal framework is ensured for the own funds of the socialist units, which facilitates a better knowledge, application and control of their means of formation, distribution and utilization.

3. Income and expenses budget

The main instrument implementing the measures which aim at perfecting the economic-financial mechanism — in the financial field — is represented by the income and expenses budget. In this context Finance Law No. 9 of 1972 (amended by Law No. 2 of 1979) provides for financial activities on all organizational levels of the economy to be set up and developed on the basis of an income and expenses budget as well as other financial plans, all comprising a uniform system. This system of financial plans which has been brought to fruition by the new law comprises: the income and expenses budget; the state budget; the cash plan; the credit plans; the balance of income and expenses of the population, the foreign payments balance; the centralized financial plan; the territorial financial plans of the counties and the municipality of Bucharest.

In comparison to the previous regulation, new elements of the Finance Law regarding the system of financial plans include the income and expenses budget, the foreign payments balance and the territorial financial plans of the counties and the municipality of Bucharest. In this way, a complete schedule of financial plans, each of which is separately defined in the Finance Law, has been accomplished, thus ensuring a legal delimitation of the contents of each of the plans.

The *income and expenses budget* [13] has a central place and a special importance in the economic-financial activity of the state enterprises. The introduction thereof in all state enterprises and "industrial centrals"

10. Law No. 29/1978 on the forming, planning, destination and payment of profits, published in the Official Bulletin, I, No. 114 of December 27, 1978. The law is also intended to apply the measures established to perfect management and economic and financial planning. In accordance with the law, which entered into force on January 1, 1979, "profit" refers to that portion of the newly earned profits generated by an enterprise's business activities which remains after deduction of the tax discussed in note 6, wages paid to the employees and other similar payments, research costs, including the costs for the introduction of new techniques, the tax on total remuneration fund, contribution to social insurance and any other cost connected with the labor force. The anticipated profits for enterprises are planned in advance on the basis of efficiency indicators and standards prescribed by law, and are then set forth in the enterprise's income and costs budget. The planned profits of the State economic unit are applied to returning the funds received from society, to form own funds in order to replenish or expand its own supply of funds and in payment of any outside obligations as provided by law. The sums remaining subsequent to such distributions represent payments to the State budget. In the event that an economic unit generates profits in excess of the planned profit level, the law requires that at least 35 percent of the excess amount must be paid to the State budget. The exact amount which must be paid is determined taking into account the relevant legal provisions concerning the allocation of over-planned profits either to an enterprise's own funds or in satisfaction of outside obligations. If the State economic unit is not successful in achieving its planned profit level, then it is only required to pay into the State budget the amount of profits it actually achieved.

Vîlcu, Income and expenses budget for the state establishments (Accounting Review No. 4/1979, pages 1-9); A. Bran, Income and expenses budget of the economic units (Economic Review No. 23/June 8, 1979, pages 10-11); A. Sesan, Economic-financial self-management (Scînteia No. 10222 of Sept. 20, 1978).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

occurred during the second half of 1978, under the terms of the previous legislation.

This budget has been conceived as a basic instrument of the managing bodies in enterprises, "industrial centrals", establishments, ministries and the other central and local bodies for the planning of economic-financial activity, with the aim of ensuring the achievement of the targets of the economic and financial plans and guaranteeing the financial balance.

In fact, the income and expenses budget is a basic instrument of the collective management of the State enterprises in reinforcing economic-financial self-management and self-financing, because it constitutes a synthesis, in monetary form, of the economic and social activity in every enterprise: it is a reflection of the conditions under which material and financial funds are managed and ultimately of the results obtained and the efficiency with which these results are obtained. Using these budgets, the general assemblies of the working people and the collective managing bodies of the enterprises are able to consider and set up measures to strengthen economic-financial self-management, the growth of economic efficiency and the degree of self-financing for their respective enterprises only.

At the same time, the income and expenses budgets are a useful tool in planning financial activity, used at the draft stage when proposals must be submitted for approval. The budget is drawn up by the collective managing body of the State enterprise on the basis of the proposals and is adopted by the general assembly of the workers.

Finally, these budgets are an instrument to analyze the implementation of financial activity and also the financial balance, for they can be used to take appropriate measures in fields where deficiencies or shortfalls in economic and financial proposals or infringements of planning and financial discipline appear.

The income and expenses budgets, at all levels, are conceived as part of an integrated system, in correlation with the national one-time plan, the state budget, the credit plans and the centralized state financial plan.

Measures to implement the perfected economic-financial mechanism are also relevant for the activity of the territorial administrative bodies and the state establishments. In this way emphasis has been placed on the fact that self-management and self-financing require that each territorial administrative body, each town, each commune, would have its own income and expenses budget. It is intended that, within a few years, all localities in the country will be able to finance themselves without expecting allowances from the state budget. [14] Thus, the income and expenses budget of the administrative territorial bodies becomes the main instrument through which the people's councils try to achieve more rapid development of the urban and rural communities.

The increased resources for the rise in the degree of self-financing are ensured by the increase in the income of the local budgets, because a close relationship exists between the socio-economic development of each administrative territorial body and the strengthening of its self-financing. Therefore, in addition to the introduction and application of a strict savings scheme so that the targets could be implemented with as reduced an amount as possible of material and financial aid, it seemed necessary to aim at further enlarging the income basis of each locality through the development of industrial activities relating to local needs for services, and handicrafts and other income-producing activities utilizing to the utmost local raw materials. [15]

4. Amended forms of financing and crediting the national economy

The measures taken to perfect the economic-financial system have also imposed new regulations in the fields of financing and granting credits for production, turnover and investments. An improvement can be seen in the system which established the level of the funds for the working means and the methods for covering them financially.

The working means fund is partially constituted from profits expressed as a rate of the yearly increase of the total working means and approved through the state budget. The other part of the increased need for working means is covered by bank credits. In the first year of activity, the financing of the needed working means of a new state enterprise is guaranteed from the state budget. In succeeding years the financing of the working means is secured from the working means funds and other resources which are temporarily available, according to law.

Financing and crediting of investment projects which have been approved through the national one-time plan for economic and social development are provided for as follows:

- investments in new enterprises and important expansions (detailed in Annex 1 to the Law) are financed from the fund established by the "industrial centrals" and, where this fund is insufficient, redistribution can be made within the same ministry; should the planned needs not be met, the difference is to be covered by allowances from the central fund for socio-economic development which is included in the state budget;
- investments in existing enterprises, except important expansions (mentioned in Annex 1 to the Law), are financed from the enterprise's own fund for economic development, supplemented by bank credits;
- house building and other investments with a social character are financed from an own fund which has been especially set up for this purpose by the enterprise, supplemented by bank credits;
- investments of the state establishments are financed from the state budget.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Through the means of financing and granting credits in the field of investment, emphasis is placed on the stimulation of state enterprises to provide themselves with sufficient resources and to finance the investments first out of their own funds.

Funds which the enterprises have received for financing investments and covering the need for working means in the first year of activity are to be repaid out of the redemption of capital investments as well as out of profits.

The Law provides an important explanation for the jurisdictional character of the credit. It provides for credit relations between banks and economic units to be established on a contract basis containing: the amount of credits to be granted, the terms for the granting and reimbursing of the credits, the interest rate and the obligations and responsibilities of the contracting parties.

Of particular importance are the provisions regarding the measures for economic-financial recovery which are established by law in order to strengthen discipline in the management of material and financial means for those economic units which are not fulfilling their plan targets, are immobilizing the working means and are unable to reimburse within the time limit the credits received. These measures are essentially the following:

- setting up of bank control on payments which have been due for more then 60 days, the financing-bank having the right to refuse to effect those payments which breach the legal rules related to reasonable management of material and financial means, planning and financial discipline and to introduce an instrument of payment based on the prior liquidity of the enterprise. At the same time, the banks are obligated, together with the next-highest ranking body of the concerned unit, to examine the economic-financial condition of the enterprise and to propose or even establish measures intended to lead to the recovery of the activity;
- examination of the economic-financial situation of those units whose working means are frequently immobilized and which are unable to reimburse on time the credits received. The examination is to be made by the bank, together with the managing bodies of the respective enterprises, "industrial centrals", ministries and other central or local bodies, with the assistance of the State Committee of Planning, Ministry of Finance, Ministry of Technical Material Supply and Capital Goods Management Control, Ministry of Foreign Trade and International Economic Co-operation. On the basis of the examination and subsequent debate in the general assembly of the working people from the respective enterprises, effective measures are set up in order to restore a sound economic-financial situation. The means for achieving the established measures are controlled by the Ministry of Finance together with the Central Board of Workers Control of Economic and Social Activity and the Superior Court of Financial Control;
- establishment of a special regime of economic-financial supervision, set up for those economic units which continue to be unable to make payments despite the measures taken, or which incur losses or seriously breach the rules of fund management. The setting up of this regime is intended to take measures aiming at the profitability and recovery of the enterprise's economic-financial activity, and to establish the reasons for such unprofitable activity and the responsibilities of the persons in charge of the management of the enterprise. The special regime is set up by the Council of Ministers, on the proposal of the Central Board of Workers Control of Economic and Social Activity, the Superior Court of Financial Control and the Ministry of Finance. During the period established by the Council of Ministers for this special regime, an economic-financial supervisory board is constituted which must analyse the reasons for the unprofitability of the enterprise and establish compulsory measures to restore economic-financial soundness, which proposals are subsequently debated in the general assembly of working people. The responsibility for the recovery of economic-financial soundness lies by law with the working people's board together with the economic-financial supervisory board. Should it appear that the condition of the economic unit is a result of the actions of the manager or another person of the unit leadership, the supervisory board can propose the dismissal of such individuals and forbid them assuming further managerial positions for a limited period.

5. Provisions referring to financial-foreign exchange relations

A new Chapter (V) was introduced by Law No. 2 of 1979 which, for the first time in the framework of the Finance Law, governs financial-foreign exchange relations.

The Law establishes *the uniform system of plans*, which forms the basis for the functioning of financial-foreign exchange activity and which is comprised of: the balance of foreign payments, the plan of payments and receivables in foreign currency of enterprises, "industrial centrals", ministries and other central and local bodies and the balance of foreign rights and liabilities.

The *balance of foreign exchange* [16] is drawn up by the Ministry of Finance, the State Committee of Planning, the Ministry of Foreign Trade and International Economic Co-operation and the banks together with the ministries and other governmental bodies, keeping in mind the indicators of the national plan and the state budget and the need for an even balance in foreign exchange. It is submitted to the Council of Ministers and approved simultaneously with the national one-time plan for socio-economic development, annual or five-year.

Law No. 2 of 1979 introduces, for the first time, such a plan for *foreign exchange receipts and payments of enterprises, "industrial centrals" and ministries.* This

16. C.C. Kiritescu, International currency-financial relations (Scientific encyclopedia Publishing House, Bucharest 1978, page 170); I. Bituleanu, The trade balance and its role in economy (România Libera No. 10742 of May 11, 1979).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

plan encompasses the total of foreign exchange receipts and payments, drawn up in conjunction with the economic and financial plan and the balance of foreign payments situation.

The economic units and central bodies are authorized to engage in importation and to make payments within the limits of the provisions of the plan, dependent upon the availability of foreign exchange resources from exports. In cases where export receipts do not meet the quota established in the quarterly plan approved for the ministries and such a condition affects the planned foreign exchange balance, the ministries involved cannot contract new imports within the limits of the unfulfilled receipt amounts. At the same time, the central bodies are obligated to report to the Council of Ministers on the measures taken in order to meet the receipts and ensure the planned foreign exchange balance.

The balance of foreign receipts and liabilities [17] is drawn up by the Ministry of Finance, the State Committee of Planning, the Ministry of Foreign Trade and International Economic Cooperation and the banks. It is submitted to the Council of Ministers at the same time with the yearly and five-year plans.

The socialist entities, from the enterprises up to the ministries and banks, keep records in both foreign and domestic currency of the receipts and liabilities resulting from foreign trade and other foreign activities and are responsible for collecting receivables in foreign currency and for payments of debts engaged abroad, and for periodically reporting their position to the Ministry of Finance.

The basic legal regulation of foreign credits and payments is also established by the Finance Law. In this way, provision is made for setting up foreign credit relations on the basis of foreign contracts, agreements, conventions and other understandings. Foreign credits are granted and received through banks, foreign trade enterprises and other authorized bodies. There are also regulations for those financial resources from which foreign credits are granted and for obligations of economic units which engage in foreign trade and of banks with regard to the performance of credit transactions abroad, as well as their obligation to keep records thereof and to make proper provisions in the foreign contracts in order to ensure receipt of the rights to which they are entitled and to fulfil due procedure to collect all rights and obtain the due amount. At the same time, the Finance Law established the duties of the central bodies and those of the economic and financial central synthesis bodies charged with collecting by the due date the rights resulting from the granted credits and also the repayments due on credits received.

Law No. 2 of 1979 has added to the Finance Law (No. 9/1972) rules with regard to the financing and crediting of foreign trade and regulations as to the crediting of Romanian economic units which participate in joint ventures.

We can therefore see that this new chapter of the Finance Law, which is justified by the unprecedented upward trend of foreign trade and international economic cooperation of Romania, is made up of the major regulations which form the general legal framework of financial-foreign exchange relations. This is necessary because Romania's growing participation in world-wide economic trade imposes the necessity of perfecting the national monetary system and financial-foreign exchange and credit relations, in the light of the close inter-influence among international economic co-operation, foreign exchange relations and finances.

6. Conclusion

In implementing the measures taken to perfect the economic-financial mechanism, encompassed in the amendments made to the Finance Law, the enlarged role, duties and responsibilities of all state units in strengthening the workers' self-management, economic-financial self-management and discipline in handling financial funds is ensured.

These same ameliorated provisions of the Finance Law also ensure the enlarged role, duties and responsibilities of the Ministry of Finance and the banks in working out and implementing the national one-time plan, the state budget, the centralized Financial plan, the foreign payments balance, the plans of receipts and payments in foreign currency, the balance of receipts and liabilities abroad, and other plans, and also ensure obtaining peak efficiency in the conditions necessary to maintain a general economic and financial balance, and prompt and firm action in solving economic-financial problems. In the same way, the duties and responsibilities of financial accounting departments have increased as have those of the staff charged with the task of exercising financial control from the outset which must both observe planning, contractual and financial discipline.

17. The balance comprises the rights and obligations towards foreign countries, at a certain moment, from export, import and international economic co-operation activities, construction, services, tourism and other activities, as well as the external credits received and allowed, related interest and fees, participants in joint ventures and international financial-banking bodies, liquidity in foreign currency abroad and liquidity of foreign partners with Romanian banks and other rights and liabilities in foreign currency in foreign relations.

APPENDIX: Sources of information

I. INTRODUCTION

The Trust Territory of the Pacific Islands includes virtually all (2,203) Micronesian islands in the North Western Pacific except the U.S. Territory of Guam, the Republic of Nauru, Tuvalu and Kiribati. Spread over a three million square mile expanse of water, these islands together amount to less than 720 square miles of land area.

The Trust Territory is administered by the United States under a Trusteeship Agreement with the United Nations. This agreement was never intended to be a permanent arrangement. In 1976, the Northern Marianas group became a Commonwealth of the United States. The other three entities, the Federated States of Micronesia (comprised of Kosrae, Yap, Truk and Ponape States), the Marshall Islands and Palau will have separate constitutional governments and will sign future agreements with the United States, scheduled for 1981.

Major commodity exports include coconut oil, copra cake, frozen tuna fish, copra, and handicraft. The entities also receive "invisible exports" from tourism and the sale of fishing rights within their 200-mile economic zones to foreign fishing companies.

The Northern Marianas, as a Commonwealth of the United States, will follow the United States tax system and will be excluded from this discussion. For the moment the three remaining entities of Micronesia have a relatively simple tax system based on gross receipts and gross wages with no deductions. The tax burden is low. In 1978, for example, only about 4 percent of the more then $138 million in grants and revenues to the Trust Territory Government was made up of local tax revenues. So far, Palau has been the only area in which export incentive tax measures have been passed.

II. ECONOMY

The Micronesian economy is based primarily on Government employment and services arising therefrom. In the private sector, it depends on agriculture, fishing and tourism. Similar to other developing areas its rural population derives its primary income from subsistence activities.

Estimates based on the 1973 Census of Population indicate that the population of Micronesia in 1980 is about 121,000, of which about 70 percent live on or near the six administrative centers.

There are 16,500 people employed for wages; average wage is US$3,412. The average government wage is about 1.5 times the average private sector wage. Average per capita income is $820.

Micronesia has an overall deficit in its balance of trade, which varies from entity to entity. Palau, with more

* Economist, Bureau of Resources, Office of the High Commissioner, Saipan, Mariana Islands.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

than 60 percent of all exports, has a favorable trade balance. Government imports are not taken into account in these calculations.

There are about $18 million worth of aggregate assets of foreign investment in Micronesia. Of this, more than half is in Palau in a coconut oil plant, tuna freezing plant, POL distribution center and hotel.

U.S. currency is used; U.S. postal services and branches of U.S. banks are in all administrative centers.

III. INVESTMENT OPPORTUNIES AND PROCEDURES

Because of the overall dependency of the Territory on U.S. grants, the development of the private sector has been relatively limited. Nevertheless, there are investment opportunities in tourism, marine resources, agriculture and related industries.

A. Tourism

Tourism offers the most immediate opportunities for expansion. Although tourist numbers are small (25,700 visitors during 1979), growth has averaged over 11 percent for the past five years. Major constraints to the development of tourism include hotels (there are only 367 rooms throughout the Territory) and airline seats. About 50 percent of visitors are from the United States and 25 percent from Japan. Over one third of all tourists visit Palau. Development of tourism is monitored carefully to protect the fragile island environments.

B. Marine Resources

Micronesia's millions of miles of ocean and hundreds of square miles of fringing reef and lagoons present many opportunities for development. The offshore resources are presently being harvested by Japanese, Taiwanese and American fishing vessels under various agreements with local maritime authorities. The only local harvesting of the offshore tuna resources is done in Palau where between three and five thousand tons of skipjack are harvested annually and exported to canneries abroad.

C. Agriculture

Agriculture is the largest productive sector of the economy, constituting the major activity of more than 50 percent of all households.

Commercial agriculture development will require intensive use of land, involving substantial capital investment and technology. Copra oil mills in Palau and the Marshalls are the major investments in agriculture-related business. Other areas with potential for development for production and processing include coconut products, staple crops, vegetable and fruit crops, black pepper, livestock and poultry (eggs).

D. Procedures

1. *Foreign investment permits.* Permits to conduct business are issued in accordance with the Foreign Investors Business Permit Act. Under this law, applications from foreign investors are reveiwed by foreign investment boards in the various states prior to approval or disapproval by Chief Executives. Further information on this procedure may be obtained from foreign investment boards in Palau and the Marshalls and from the Director of the Department of Resources and Development of the Federated States of Micronesia.

2. *Work permits.* Import of alien labor is regulated by the Protection of Resident Workers Act. Under this law, alien workers may be granted one year work permits after it has been determined that no local person is available with requisite skills.

3. *Corporations and partnerships.* Corporations and partnerships may be chartered or registered with Registrars of Corporations in the Marshalls, Palau and Federated States of Micronesia.

4. *Licenses.* Other licensing requirements are in force in various localities and vary from state to state.

IV. TAXES

Because of the present emergence of three separate entities (Marshalls, Palau and Federated States of Micronesia) in the Trust Territory, it is extremely difficult to discuss the tax administration of each separate entity and of states within entities. In general, tax laws derive from general taxing and licensing laws which were in force prior to the transfer of these functions to the new constitutional governments of Micronesia.

The following economic controls are generally held by the Marshalls, Palau and Federated States of Micronesia central governments.

A. Economic controls and taxation authority

1. Central governments

The Central Governments fulfill the following tasks:

(a) Control of banking, organization of business corporations, business associations, credit unions and cooperatives, insurance, sale of securities, and public utilities, including the exclusive licensing of such activities. Persons and companies engaged in these activities are subject to local general taxation, but not subject to any local licensing requirements or payment of license fees for these activities other than to the central government.

(b) Control of the establishment and operation of and investment in business and corporations by non-citizens.

(c) Establishment and control of the terms and conditions under which importing and exporting licences shall be issued.

(d) Exclusive control of import, export, and income taxes including any excise taxes which are actually collected on the basis of imports.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

2. State governments

State governments are charged with:
(a) Liquor control, including the right to collect wholesale liquor license fees and to impose taxes on alcoholic beverages; however, neither of these shall be on imports or volume or value of imports.
(b) Exclusive issuance of licenses for wholesale business, other than banking, insurance, sale of securities, and public utilities, including the exclusive right to collect fees for such licenses, provided these are not based on imports or volume or value of imports.
(c) The imposition and collection of sales taxes, and the authorizing of municipalities to impose and collect excise taxes on any items other than foodstuffs.

B. Taxes, levies, charges, duties, etc.

1. Import taxes

All entities levy taxes on certain goods imported into and exported from their jurisdictions and on the use, distribution, and sale of gasoline and diesel fuel within their jurisdictions.
(a) Cigarettes — seven cents per every 20 cigarettes;
(b) Tobacco, other than cigarettes — 50 percent ad valorem;
(c) Perfumery, cosmetics and toiletries, including cologne and other toilet waters, articles of perfumery, whether in sachets or otherwise, and all preparations used as applications to the hair or skin, lipsticks, pomades, powders and other toilet preparations not having medicinal properties — 25 percent ad valorem;
(d) Soft drinks and non-alcoholic beverages — at the rate of two cents on each 12 fluid ounces or fractional part thereof;
(e) Beer and malt beverages — at the rate of four cents per can or bottle of 12 fluid ounces or fractional part thereof;
(f) Distilled alcoholic beverages — at the rate of seven dollars per wine gallon, except that any person permitted by applicable law to possess, consume and use distilled alcoholic beverages may bring into such district/state of the Trust Territory tax free, an amount of liquor not to exceed two fifths of a wine gallon per trip, if such liquor is for his personal use and consumption and not for resale;
(g) Wine — at the rate of two dollars per wine gallon, except that this tax shall not apply to any religious organization which is importing or receiving into the Trust Territory sacramental wine for use in the religious rites of such organization;
(h) Foodstuffs for human consumption — one percent ad valorem;
(i) All other imported products, except those specified above and gasoline and diesel fuel — three percent ad valorem.

2. Export taxes

The following export taxes have been levied on all scrap metal exported from the various jurisdictions:
(a) Nonferrous — 25 percent ad valorem;
(b) Ferrous — five percent ad valorem;
(c) Lead and lead covered cable—ten percent ad valorem.

3. Gasoline and diesel fuel tax

An excise tax is levied upon the use, distribution or sale within the Trust Territory of all gasoline and diesel fuel at the rate of five cents per gallon so used, distributed or sold. The tax is paid by the importing company directly to the three entities.

4. Income tax

All entities impose a tax of five to ten percent upon the gross wages and salaries received by every employee, except that those employees whose gross annual wages and salaries are $5,000 or more are allowed a deduction of $1,000 per year from all wages and salaries subject to tax. Employee is generally defined as any individual who, under the usual common law rules applicable in determining the employer-employee relationship, has the status of an employee.

5. Business tax

A forty dollar tax per year is levied upon that portion of the amount of gross revenues earned by every business which does not exceed $10,000 per year and an additional tax of 2.5 percent to 3 percent per year is levied upon that portion of the amount of gross revenues earned by every business which is in excess of $10,000 per year. Businesses which earn gross revenues of not more than $2,000 per year are exempted from taxation.

6. Meaning of income

Although taxable income in the ordinary sense excludes certain types of expenses, for Trust Territory entities' income tax purposes, income is divided into two major categories: gross wages and salaries of employees and gross revenue of businesses. The following is the statutory definition of income:

(a) *Wages* or *salaries* mean and include commissions, fees, compensation, emoluments, bonuses, and every and all other kinds of compensation paid for, credited or attributable to personal services performed by an individual, which services have been performed by such person as an employee. Wages and salaries shall not include the following:
— Wages and salaries received from the United States by members of the Military or Naval Forces of the United States or the Armed Forces of the United States.
— Reasonable per diem and travel allowances to the extent that they do not exceed any comparable Trust Territory Government rates.
— Rental value of a home furnished to any employee or a reasonable rental allowance paid to any employee (to the extent such allowance is used by the employee to rent or provide a home).
— Any payment on account of sickness or accident disability, any payment of medical or hospitalization expenses, made by an employer to or on behalf of an employee. Normal wages or salaries paid to an employee for a period of time during which he is excused from work because of sickness are not excluded from wages and salaries.
— Remuneration paid for casual or intermittent labor not performed in the ordinary course of the em-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ployer's trade or business and for not more than one week in each calendar month.
- Any payment in the form of a scholarship, fellowship, or stipend made to any employee while he is a full-time, bona fide student at an educational institution within the Trust Territory.
- Wages and salaries received by a minister of the gospel, or clergyman from a religious group or organization.
- Wages and salaries received by an employee for services performed or rendered in the capacity of a domestic or household employee for a private individual or family.
- Wages and salaries received by a non-Trust Territory citizen employee for services performed or rendered within the Trust Territory for a total of not more than 90 days or less during any one calendar year.

(b) *Gross revenue* means the gross receipts, cash or accrued, of the taxpayer received as compensation for personal services not in the form of salaries or wages and the gross receipts of the taxpayer derived from trade, business, commerce or sales and the value proceeding or accruing from the sale of tangible personal property, or service, or both, and all receipts, actual or accrued by reason of the capital of the business engaged in, including interest, discount, rentals, royalties, fees, or other emoluments however designated, and without any deductions on account of the cost of property sold, the cost of materials used, labor cost, taxes, royalties, interest or discount paid or any other expenses whatsoever.

Gross revenue does not include the following:
- refunds, rebates and returns;
- monies held in a fiduciary capacity;
- income in the form of wages and salaries which is taxed separately.

Income has also been administratively interpreted to include casual sales as follows:
- Sales made in performance of any profession, trade, manufacture or any other undertaking that requires different skills, materials and tools than those normally used in the conduct of the taxpayer's activity. Casual sales are limited to 12 individual transactions per calendar year and $2,000 in annual gross revenue.
- Casual sales include annual gross revenue of $200 or more from the sale of farm produce, fish or native handicraft.

7. Rules governing apportionment of income

(a) If an employee is credited or paid salaries or wages derived from, or attributable to, personal services performed or rendered both within and without the jurisdiction during any given month, then the whole of the salaries or wages is presumed to have been earned within the jurisdiction. The employer paying the tax or the employee whose compensation is taxed may file for an apportionment of the tax.

(b) If any business earns or derives its gross revenue from business activities or undertakings both within and without the jurisdiction during the taxable year, then the whole of its gross revenue is presumed to have been derived from sources within the jurisdiction. The business may file for an apportionment of the tax.

8. Ascertainment of income

The tax imposed is collected by the employer by withholding the appropriate tax from the employee's wages and salaries. The employer is liable for payment of the tax withheld on a quarterly basis. All taxes withheld by the employer are held in trust by such employer for the government. Employees whose taxes have been withheld by their employers do not file a return. Annual wage and tax statements and reconciliation of income tax withheld coupled with field audits serve as a basis for compliance. Any individual who is paid or credited wages or salaries from an employer who does not have a place of business in the Trust Territory and does not have an agent within the Trust Territory responsible for withholding the appropriate tax is required to file an individual return.

As a practical matter, all taxes may be passed on to consumers. However, specific notation on an invoice showing taxes as additional charges to consumers is misleading and such a practice has been administratively interpreted to be unlawful.

9. Ascertainment of income from businesses

Business means any profession, trade, manufacture or other undertaking carried on for pecuniary profit and includes all activities, whether personal, professional or incorporated, carried on within the Trust Territory of the Pacific Islands for economic benefit either direct or indirect, and excludes casual sales. One who qualifies as an employee is not considered as a business.

A business is exempted from tax if its gross revenue is $2,000 or less during any one tax year. Since the tax is on gross revenues or gross receipts the following receipts are not considered gross revenue:
- Refunds, rebates and returns.
- Monies held in a fiduciary capacity.
- Income in the form of wages and salaries which has been taxed under other provisions of the law.

Businesses are also exempted from taxation on revenues which are accrued but which subsequently are found to be uncollectible (bad debts). The amount of such bad debts will be allowed as a deduction only in the year in which it is determined to be uncollectible. The law does not allow deduction and exemption from taxation of business expenses such as directors' remuneration, management fees, rents, interest expense, travelling, accounting and consultancy expense, entertainment expense, and research.

The only item of pure income exempted specifically by law is income from copra production by unincorporated copra producers either collectively or severally. This was intended to encourage production and export of copra, a major income earner of a large proportion of those engaged in subsistence activities.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

10. Tax treatment of special sources of income

Dividends, interest, technical service fees, management remuneration, film leasing, rents, etc. are taxed on their gross amount if they are attributable to the engagement of business capital or if they are connected with the carrying on of a business.

Again, the tax on businesses is on gross revenues as gross receipts. Rules governing ascertainment of profits, conditions of expenses and other deductions from gross revenue do not apply.

11. Treatment of losses

The tax on gross revenues does not allow deduction for losses sustained by a business except for bad debts which have been determined to be uncollectible; provided, however, that accrual of revenue was made for which the tax had been paid. Allowable losses incurred by a business arising out of change of ownership may be taken in the same manner as an additional tax liability.

Setting off refunds and additional tax liability may be made provided that the refunds and the additional tax liabilities have been determined using the appropriate tax rate in the year incurred or otherwise accrued. Carry forward or carry backward of losses is not provided for by law.

12. Tax treatment of corporate entities

Corporations are taxed at the same rate and in the same manner as any other business. For purposes of reporting, businesses are classified in three major categories:

(a) *Unincorporated "Unitary Business"*. A "unitary business" is one carrying on one kind of business of which the component parts are too closely connected and necessary to each other to justify division or separate consideration.
(b) *Unincorporated "non-unitary businesses"*. A "non-unitary" business is one which shows units of substantial separateness and completeness, each of which might be maintained as an independent business and be capable of producing profit in and of itself. Each unit is taxed as a separate business.
(c) *Incorporated businesses*. A corporation consisting of two or more separate and distinct businesses would pay the tax on the combined gross revenues of all the business as one entity.

13. Tax treatment of the family: head, wife, children and dependents

The tax on personal income is a tax on gross wages and salaries of an individual who qualifies as an employee. As the tax is on gross wages and salaries, the liability is determined on the basis of each individual employee and no regard is given as to dependents, head of household, spouse or any other kind of support which an individual taxpayer may provide for his family.

As the only income tax applicable within the Trust Territory is on wages and salaries, a tax liability exists only if an individual qualifies as an employee. There is no liability for wealth tax, gift tax or any other tax (with the exception of social security) as there is neither law nor statute imposing such taxes. Considerations relative to property ownership, property held by members of a family do not apply therefore.

14. Liability of non-citizens, non-residents (individuals and companies)

Individuals. Non-resident means any individual who received income from sources within the Trust Territory but does not reside or perform services within the Trust Territory for a period of 90 days or more during any one calendar year (tax year). Non-residents do not pay the tax but are required to file a return for ascertainment of status. Non-citizen means any individual who is not a citizen of the Trust Territory of the Pacific Islands and who performs services within the Trust Territory. Non-citizens are required to pay the Trust Territory income tax in the same manner as that required for citizens, except that the tax rates for non-citizens are limited to three percent if they are employees of the United States Government, agencies, instrumentalities thereof, and contractors if their purpose is not in the interest of the Government.

Companies. Non-resident company means a business activity which operates both within and without the Trust Territory and whose principal place of business is located outside the Trust Territory. Non-resident companies are taxed in the same manner as resident companies except that that tax rate is limited to one percent if they are contractors of the United States, United States agencies and instrumentalities; provided, however, that their activities are not in the interest of the Government.

15. Liability of partnerships and joint ventures to tax

The gross revenue tax applies to all businesses as defined, without regard to the business formation such as sole proprietorship, partnership, corporation, or joint venture. A partnership must file a return and pay the tax in the same manner as any other business.

16. Liability of foreign states, foreign state trading enterprise

Although it was not the intent to tax enterprise activities of other government units, agencies or instrumentalities, the tax would apply to a specific government enterprise only is such activity was determined to be carried on for pecuniary profit and is considered a non-essential government service.

17. Trusts

There are generally no trust companies established within the Trust Territory.

V. DOUBLE TAXATION, EVASION, AVOIDANCE

A. Double taxation

Foreign enterprises (non-resident companies) and permanent establishments (resident companies) are subject to tax only on that portion of income which is earned in or derived from sources or transactions or parts of transactions within the Trust Territory. This

© 1980 International Bureau of Fiscal Documentation – BULLETIN

scheme eliminates double taxation on that portion of the revenue earned outside the Trust Territory. It is presumed that the same principle applies to other countries.

Although there is no statute in the Trust Territory governing the exchange of information with other countries, data and information of a general nature may be made available to other countries. Specific details pertaining to a particular taxpayer cannot be exchanged, however, except for the purpose of carrying into effect the tax law or any other enactment imposing taxes or duties payable to the governments. For the purpose of ascertaining the correctness of any return and determining the liability of any person for any income tax the particular government is authorized to:

- Examine any books, papers, records, or other data which may be relevant or material to such inquiry. The required records shall be made available no later than ten days beginning with the date that the request is received.
- Summon the person liable for tax or required to perform the act, or any person having possession, custody, or care of books of account containing entries relating to the business of the person liable for tax or required to perform the act, or any other person the Director or his designee may deem proper, to appear before the Director or his delegate at the time and place named in the summons and to produce such books, papers, records, or other data, and to give such testimony, under oath, as may be relevant or material to such inquiry.
- Take such testimony of the person concerned, under oath, as may be relevant or material to such inquiry.

B. Avoidance, evasion

The Trust Territory income tax law has the following provisions as anti-avoidance statute.

1. Assessment.

Upon the failure of any person, business, or employer to make and file a return required by law within the time and in the manner and form prescribed, or upon failure to pay any amount due, the Director may notify such person, business or employer of such failure and demand that a return be made and filed and the tax paid as required.

If such person, business or employer upon notice and demand by the Director fails or refuses within 30 days after receipt of said notice and demand to make and file a return and pay the tax required, the Director may make a return for such person, business or employer from any information and records obtainable, and may levy and assess the appropriate amount of tax. Such assessment shall be presumed to be correct unless and until it is proved incorrect by the person, business or employer disputing the amount of the assessment.

2. Records and audit.

All persons, employees, and businesses required to make and file returns shall keep and maintain accurate records, which may be inspected and audited at any reasonable time by the Director.

3. Criminal penalties.

Any person or business convicted for tax evasion shall be fined not more than $1,000, or (if a natural person) imprisoned for not more than one year, or both.

4. Separate civil penalties.

The criminal penalties imposed for violation of provisions of the law are separate from, and in addition to, all other penalties or interest. The following civil penalties are levied and may be assessed and collected.

(a) *Failure to file return on time.* If any taxpayer fails to make and file a required return on or before the date set, unless prior to that date such taxpayer applied for and received an extension for reasonable cause, one percent of the tax shall be added for each 30 days or fraction thereof elapsing between the due date of the return and the date on which it is actually filed. The minimum penalty is five dollars.

(b) *Failure by employer to file statement.* Any employer required to furnish a written statement who willfully failed to file such statement on the date prescribed, except with regard to any extension of time for filing, is subject to a five dollar penalty for each statement not so filed.

(c) *Failure to file return and pay tax after demand.* In any case where the Director makes a return and assesses a tax after a taxpayer's failure or refusal to make and file a return and pay the required tax, 25 percent of the tax assessed, in addition to penalties, is added.

(d) *False and fraudulent returns.* If any part of any deficiency is due to fraud with intent to evade the tax, or any portion thereof, 50 percent of the total amount of such deficiency, in addition to penalties, is assessed and added to the deficiency assessment.

(e) *Interest.* If any tax or penalty imposed is not paid on or before the date prescribed for such payment, interest is collected, in addition to such tax and penalties, on the unpaid balance of the tax principal at the rate of six percent per annum from its due date until the date it is paid.

(f) *Lien on property.* All taxes imposed or authorized under the law are a lien upon any property of the person or business obligated to pay these taxes and may be collected by levy upon the property.

The Trust Territory income tax laws have provided that all tax information is considered privileged and that secrecy is required.

VI. FISCAL AND OTHER INCENTIVES FOR TRADE AND INVESTMENT

Except for a few isolated cases, the Trust Territory does not specifically allow deductions or any other form of tax holiday to promote trade and investment within the Trust Territory. Copra production from unincorporated copra producers whether severally or collectively is exempted from tax. This promotes copra production and exportation of the major cash crop.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

No import taxes are levied on raw materials imported into the Trust Territory for manufacturing.

No customs charges are levied on equipment and machinery required to establish and maintain a business in Micronesia. Customs charges are levied when the equipment or machinery is sold locally.

Tax rebates or refunds are allowed on goods imported into the Territory and then exported to a buyer outside of the Territory.

Tax rebates or refunds are allowed on goods damaged or not received by importers.

Export incentives tax (Palau)

In January 1980, the Palau District Legislature enacted the first tax incentives law in the history of the Trust Territory. This law basically relieves exporters of commodities manufactured, processed, assembled, and packaged in Palau of the tax on gross revenues on these exports. Instead, in lieu of the gross revenue tax, it levies a special export tax of one percent per year upon the net profit derived from the exempted export activities.

MITCHELL B. CARROLL PRIZE FOR BOKILA LOFUMBWA

On September 19, 1980, at the final meeting of the General Assembly of IFA during the Paris Congress, the Mitchell B. Carroll prize was presented to Mr. Bokila Lofumbwa for his work entitled: *Les régimes fiscaux visant à encourager les investissements directs et de portefeuille dans les pays en voie de développement, l'interaction du système fiscal zaïrois et des régimes préférentiels des Pays de l'OCDE.* The medal which goes with the prize was awarded in the presence of its founder, Dr. Mitchell B. Carroll, whose advanced age does not prevent him from taking an active part in the proceedings of IFA.

SUDAN: New Investment Law

by Elizabeth De Brauw-Hay*

The Sudan's new investment law has been in force since April 26 of this year. The law, entitled the Encouragement of Investment Act, repeals and replaces the three laws which previously regulated investment in the Sudan, namely the Encouragement of Investment in Economic Services Act, 1973, the Development and Encouragement of Industrial Investment Act, 1974 and the Development and Encouragement of Agricultural Investment Act, 1976.

The new Act relates both to foreign and domestic investment and a clause in the Act expressly forbids discrimination on account of the nationality of the project. Investment is encouraged in the Act in the agricultural, animal, mining, industrial, transport, tourism, storage and housing fields and any other economic field subsequently prescribed by the Ministerial Committee for Investment.

Within these sectors investment will be encouraged generally in projects which:

"(a) contribute effectively to the increase of national income and widening of the base of national economy and the strengthening of its activity, or

(b) contribute to the removal of any bottlenecks obstructing development, or

(c) make available necessary services which contribute in the consolidation of economic and social development, or

(d) the production of which depends on local material or the establishment of which is encouraged for production of such materials, or

(e) assist in the realization of self sufficiency and creation of surpluses for export, or

(f) assist effectively in the consolidation of balance of payments, or

(g) make available directly or indirectly chances of employment for citizens, or

(h) have defense or strategic importance, or

(i) contribute in the realization of the objects of economic cooperation or integration with Arab and African countries".[1]

Incentives under the Act

A number of incentives, fiscal and otherwise, are available. These include the following:

(a) Total or partial exemption for a period of up to five years from the business profits tax from the date of commencement of production. This exemption may be extended for a further period of up to five years in the case of so-called "integrated projects". These are projects requiring large investments or which, in addition to production, provide for the building of roads and provision of other essential services. This latter provision is of major importance in the Sudan where development in many sectors of the economy is severly hampered by the lack of infrastructure.

Losses incurred during the exemption period will be deemed to have been incurred during the last year of that period.

(b) Total or partial exemption may also be granted from the following duties:

(i) customs duties on machines, equipment, apparatus and imported spare parts necessary for the project, and imported raw, manufactured and intermediary materials necessary for the project which cannot be found locally in the required quality and quantity;

(ii) import duties on manufactured or semi-manufactured goods arising from the project;

(iii) any other duties and taxes imposed on the project. This would presumably include the development tax imposed on virtually all imports and exports and import surcharges;

(iv) exemption — total or partial — from excise duties on locally produced materials and commodities required for the project.

(c) Projects will also be given exemption from local taxes unless the locality involved obtains the consent of the Minister of finance to impose such taxes.

Other incentives of a non-fiscal nature include reductions in electricity and freight rates, allotment of land necessary for the establishment of the project at reduced prices, protection of the production of a new project for a limited (but unspecified) period by means of raising customs duties on or restricting imports of competing products and preferential facilities for projects established in less developed regions.

Guarantees under the Act

Remittance is guaranteed of profits from foreign capital invested in a project and interest on foreign loans after taxes, duties, dues and other obligations due to the Sudanese government have been paid or fulfilled in the currency in which the capital or loan was imported or in any other agreed currency. Also guaranteed is the remittance of profits arising on liquidation, sale or transfer of the investment project in the currency in which the capital was imported or in any other agreed currency. Foreign capital is defined in the law [2] as:

"(a) the foreign hard currency transferred to the Sudan at the exchange price current at the time of transfer through a bank working in the Sudan for the utilization thereof in execution of a project.

(b) imported machinery, equipment and means of transport financed from abroad and necessary for the execution of the project and compatible with the technical development suitable for the Sudan, answering such specification as prescribed by the Minister.

(c) the foreign hard currency utilized on preliminary studies, feasibility studies and foundations undertaken by the investor within the limits approved by the Minister.

(d) the profits realized by the project if capitalized with the consent of the Minister or if invested with his consent in another project in accordance with the provisions of this Act.

(e) intangible assets, i.e., patents, trademarks, technical experience, etc, registered by the foreign investor for utilization in the project".

A provision does, however, exist in the new law prohibiting liquidation of a project within five years from the commencement of production.

The Act also contains a guarantee against nationalisation except where the public good is involved. Where nationalisation does, nevertheless, occur then "just" compensation at the price current at the time of nationalisation must be paid. Such compensation must be evaluated within six months from the date of nationalisation and paid within a period of five years therefrom in the currency in which the investment was originally made or in any other agreed currency.

Miscellaneous

Other provisions of the Act deal with the procedure to be followed for obtaining the required license and the various available incentives. The conditions of cancellation thereof are also covered as is the arbitration procedure for settlement of investment disputes.

BIAC's* Response to the OECD's Report on Transfer Pricing and Multinational Enterprises

This paper has been prepared to supplement the comments contained in the OECD report, which it is hoped, will add to the value of the OECD report in the hands of readers.

I. INTRODUCTION

The OECD report on "Transfer Pricing and Multinational Enterprises" is welcomed by BIAC. It is a useful contribution to efforts being made to achieve some degree of uniformity in this overly complex field, which, as the report rightly notes, is in the interest of both governments and multinational enterprises (MNE's). As noted in the report, the fact that international business and industry can be a victim of conflicting national requirements occurs all too frequently in practice. It is hoped that the report will contribute towards reducing the number of cases in which this does occur.

BIAC considers that the OECD report clearly reflects the complicated nature of the problem of intercompany transfer pricing, with all the many and varied aspects inherent in it. BIAC also warmly endorses the comment in the report that it is not possible to "lay down rules that are appropriate to every aspect of every case." This comment constitutes recognition of the fact that to draw up a manual establishing a procedure for determining whether the transfer prices within a group conform to the arm's length principle is simply not possible or feasible.

BIAC regards as significant the fact that the report provides a set of parameters which can be applied by tax authorities in forming a judgement on transfer prices and pricing structures within a group. The implicit recognition that there is no such thing as "the right price", but that, in fact, the arm's length principle contemplates a range of prices, prompts BIAC again to express the view that managerial flexibility in regard to transfer pricing policy within a group must not be preempted by revenue authorities. Once it has been established by appropriate means that prices and pricing within a group are maintained within this range, tax authorities should refrain from attempting to apply adjustments. In such a situation the transfer pricing policy of an MNE group should simply not be susceptible to change under pressure from a Revenue examiner; in other words, it should be respected and accepted.

BIAC concurs enthusiastically with the view of the OECD report that the "so-called global methods" of allocating profits within a group of companies are entirely inappropriate to a proper determination of an arm's length price. Such an approach is not only incompatible with the arm's length principle, but it opens the door to taxation on an arbitrary basis and thus potential double taxation. Accordingly, BIAC commends OECD for including this comment in the report, with the anticipation that it will deter the use of the global method by OECD member states as well as non-member states whose MNEs engage in transactions with MNEs in member states.

While in the more detailed analysis of the OECD report to follow, some criticism is expressed on certain points, OECD should understand that this has not been done with any intent to detract from the overall impact of the report. As already mentioned, BIAC considers that the OECD study provides a clear picture of the myriad of problems in the area of transfer pricing.

On the other hand, as expected, the report has been prepared from the vantage point of the tax authorities, who are confronted with a formidable task of having to pass judgement on a countless variety of intragroup pricing practices. This inevitably leads to an approach to the problem from a perspective which differs in a number of respects from the perspective of business and industry. These points are dealt with in more detail below.

BIAC emphasizes that fiscal authorities should not permit themselves the luxury of hindsight when making adjustment to transfer prices. This point is partially met in the report where it is stated that tax authorities should not substitute hypothetical transactions or their own commercial judgement in relation to the transactions at the time they were concluded. BIAC would have liked to see a more positive statement that when examining the actual transactions and the commercial judgement of the enterprises, it is not permissible to use facts which were not available to the enterprise at the time.

II. GENERAL

1. The language in several places in the text conveys the view that an MNE can use transfer pricing as a device for artificially shifting profits so as to minimize its world-wide tax burden. The report seems to emphasize the battle by revenue authorities against tax evasion. This approach, however, fails to recognize the fact that the possibility of tax evasion, as well as the means of combating it, are only one, perhaps minor, aspect of the problem. In fact, it should be noted that actual cases of abuse in the transfer pricing area in recent years are probably minimal since pricing policies are generally established from a business point of view. The more significant aspect of the problem stems from the fact

* Published with the kind permission of BIAC (Business and Advisory Committee to OECD). This BIAC report was drafted in January 1980.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

that transnational movements of goods and services within an MNE involve the fiscal sovereignty of different countries, and that an MNE is faced with the sometimes conflicting views of these countries regarding their respective right to levy taxes on the income generated by cross border transactions. Where, for example, there are transactions within an MNE involving two countries having the same approximate rate of taxation, then it will generally not matter to the MNE where the profit is allocated, since the total tax liability of the group will not be substantially affected. The two tax authorities involved, however, view the matter differently, since each of these has a fiscal interest in the income allocation process and, therefore, in the observance of the arm's length principle.

The fact that this aspect of the application of the arm's length principle has been overlooked in the report surfaces with particular impact in the discussion (or lack of discussion) in the area of *corresponding adjustments* and the discussion of *central costs.*

With regard to *corresponding adjustments*, the OECD takes the view that this subject need not be dealt with since it is "a related problem, but outside the scope of this report." BIAC emphatically disagrees with this approach. Understanding that OECD will in the near future commence a study of this subject, BIAC urges this study to be undertaken and concluded expeditiously because of the uncertainties created during the period from issuance of the OECD report until some clear internationally accepted rules are accepted. No topic is more directly concerned with the entire area of transfer pricing than is the topic of corresponding adjustments, because it is inextricably wound up in establishing the demarcation of the power of the different countries involved to levy their tax. An argument is often heard that the absence of a definitive rule requiring corresponding adjustments is in the interest of tax authorities, on the grounds that the possibility of double taxation will provide an additional obstacle to prevent MNEs from attempting to reduce their tax liabilities through artificial pricing schemes. Not only does this proposition lack validity in today's economic climate, but it imposes a heavy burden upon taxpayers by making them vulnerable to arbitrary and capricious pricing adjustments proposed by examining revenue agents. The application of the arm's length principle is equally a concern of the two countries involved in the cross border transaction. Therefore, BIAC considers that the OECD report should have set forth and endorsed a mandatory system of corresponding adjustments binding on all members of the OECD.

BIAC considers this essential for the following reasons:

- The report indicates that each situation should be examined in light of its own particular facts and circumstances. Since the tax authorities in different countries will very probably attach different weight to the various elements in a transfer pricing practice of an MNE, the wish expressed by the OECD that "a common approach . . . should help to reduce the need for any such corresponding adjustments" will be of little value of taxpayers in reducing double taxation.

- The same rationale may apply as to the methods mentioned in the report for determining whether prices conform to the arm's length principle, in that, if one country adopts the "cost plus" method and another adopts the "resale minus" method for the same transfer price, the result may well lead to double taxation, to the detriment of the taxpayer.

Although the report will obviously have a direct impact on relations between OECD countries, it seems to BIAC that it may well influence relations between member and non-member states, as well as among non-member states. Since it seems that such non-member countries base their taxation policies on a mixture of OECD concepts and principles other than those adopted in the OECD countries, the failure to deal adequately with corresponding adjustments may raise the specter of increasing cases of double taxation in non-member states opting to follow the principles laid out in *this* report.

In summary, BIAC concludes that it is essential to the effectiveness of what OECD is attempting to accomplish in the transfer pricing report that the subject of corresponding adjustment be definitely dealt with. The fact that this was not done is regrettable, BIAC hopes that consideration of this subject be undertaken and concluded as rapidly as possible.

With regard to the treatment of *costs of central services and activities*, the OECD report devotes a great deal of attention to the means by which tax authorities can determine whether or not is is appropriate for subsidiary companies to bear all or some portion of such costs. It is not stated in the report, however, that such costs should, in any event, be deductible in some jurisdiction. The report should have acknowledged this fact, to provide assurance that MNEs will not suffer double taxation arising out of disputes with the tax authorities of the MNE's home and host countries.

2. Although BIAC realizes that subdividing the subject into its separate components, dealing with each in a separate chapter of the report, was necessary for analytical purposes, this approach could conceivably give rise to misunderstandings between taxpayers and the tax authorities. This fact should have been recognized and pointed out in the preface of the report to avoid such a potential misapplication of the report. It is indicated that it is not always possible to draw a clear distinction between, for example, the transfer of know-how and services related thereto. BIAC believes that the various concerned tax authorities are extremely likely to use the specific methods set forth in the OECD report in their review of each individual type of intercompany transaction within an MNE. The danger arises that, without specific guidance in the report, an overall consideration of the totality of relationships between the entities of the group will be ignored. In effect, tax officials will not see the forest for the trees. In such cases, although it may seem that the arm's length principle has not been observed with regard to certain of the individual intercompany transactions between two associated enterprises, conformity to the arm's length principle will nevertheless have been achieved when the picture is reviewed as a whole, as for example, by means of package deals or set-offs. In this regard, incidentally, BIAC notes

© 1980 International Bureau of Fiscal Documentation – BULLETIN

that, contrary to the implication in the OECD report, such arrangements are not uncommon in third-party relationships.

For this reason BIAC wishes to emphasize that, in any scrutiny of transfer pricing with an MNE, initial emphasis should be placed on a judgment of the totality of overall relations within the enterprise, over a reasonable period of time, and this should be borne in mind while reviewing the separate categories of transactions within the area of transfer pricing.

III. PARTICULAR POINTS

1. Burden of proof

As noted above, the OECD report appears to espouse the concept that generally MNEs adopt transfer pricing schemes as a device to reduce artificially their tax liabilities (a view with which BIAC does not concur). This could lead to the assumption that the burden of proof (of the appropiateness of transfer prices) is to be placed upon the MNEs. In BIAC's view, the initial burden of proof (that a particular transfer price does not comply with the arm's length principle) should rest with the relevant tax authorities.

2. Benefit test

In the chapters covering transfer of technology and intragroup services, the report suggests that a group member must demonstrate that it has derived a benefit (or was expected to derive a benefit) in consideration for payments made to another affiliate (often the parent) for services or certain intangible property rights. This concept is acceptable insofar as it relates to specific services rendered and specific property transferred. In addition, however, a parent company of a group often incurs substantial costs for central activities carried on to benefit the group as a whole, rather than to benefit any one or more specific affiliates. For example, know-how of all kinds is available centrally for all members of the group to avail themselves of, if desirable or necessary; and a continuous stream of information of all sorts (e.g., marketing, advertising, technical, etc.) flows to the subsidiary companies. It seems to BIAC that the members of a group should make an appropriate contribution toward defraying these costs, whether or not specific benefit (actual or intended) can be demonstrated.

The performance of central services and central activities is inherent in the very nature of a multinational group, and, accordingly, it is logical to conclude that the enterprise as a whole is benefited by the costs incurred for activities carried on by the headquarters unit. In many cases, however, it will not be possible to substantiate that an immediate benefit has been conferred upon the group members, even though they are called upon to bear an allocable portion of such central costs. BIAC believes that it is reasonable that every group member of an MNE should pay its share of those central costs from which it can expect to benefit collectively, each respective share being determined by an appropriate apportionment formula.

3. Information

In dealing with the subject of information flows, both the provision of information by the enterprises itself and the exchange of information between the tax authorities of the relevant States should be considered.

A. Information provided by the enterprise

BIAC recognizes the obligation of MNEs to co-operate with the tax authorities in a pricing examination as regards the providing of information, as long as the information requested by the authorities is relevant to the examination in process and is necessary to allow the authorities a basis upon which to form a proper judgement of the pricing structure under study. It must be emphasized, however, that the tax authorities involved in a pricing examination should *not* request from any member of the group detailed information on transfer pricing in transactions in which the particular tax authority has no direct interest.

Moreover, where there is no actual evidence that the arm's length principle has *not* been observed, the tax authorities should not be permitted to go on a "fishing expedition". If the obligation to provide information were, in fact, to encompass the type of data mentioned in the preceding two sentences, it would impose a heavy and unjustifiable burden on an MNE, particularly since the MNE could be confronted with such requests from tax authorities in many countries of the world.

B. Exchange of information between States

BIAC strongly recommends that information to be exchanged between states on transfer pricing should relate only to such matters as are relevant to an actual pricing examination; furthermore, such information as is exchanged, should only be used for the specific purpose of the particular examination. Further, it is important that any exchange of information does not involve the disclosure of business secrets. BIAC also believes that, before any such exchange of data takes place between tax authorities, the enterprise concerned should be informed and given an opportunity to register any objection it might have to such exchange.

4. Marginal pricing

BIAC believes that proper attention should be devoted to the subject of marginal pricing, which is missing from the report. The failure to discuss this concept conveys an impression that marginal pricing occurs only by way of exception. BIAC wishes to emphasize that marginal costing and pricing are normal practices. As a result of the non-treatment of the subject, BIAC fears that tax authorities in a pricing examination of one or more affiliates of an MNE may reach erroneous conclusions in cases in which intercompany pricing has been based on a marginal costing method. Accordingly, BIAC strongly urges that the OECD consider this subject for inclusion in a subsequent report and, in fact, is undertaking a

© 1980 International Bureau of Fiscal Documentation – BULLETIN

study of this topic for the use of OECD in its deliberations.

5. Accounting methods

The tax authorities of two countries, when reviewing the transaction between two affiliates of an MNE in each of their countries, should be required to accept uniform methods of calculating transfer prices with respect to the transactions under study. To do otherwise would open up a potential for distortion and ultimately result in double taxation (i.e., taxation of an amount of profit in both countries in the aggregate exceeding the actual profit). BIAC therefore makes a plea that the MNE's own method of calculating prices should be accepted if in conformity with generally accepted accounting practices consistently applied.

6. Shareholders costs

BIAC concurs with the report insofar as it treats shareholder (stewardship) costs as costs of the parent company only, not allocable to other members of the group. BIAC does not agree, however, with the overly broad interpretation of what constitutes shareholders costs.

Shareholders costs should be limited to only those costs incurred by a parent company *solely* in its capacity as a shareholder (investor) in the other group affiliates. It should not include any costs attributable to coordinating the various business activities of the group. The costs of internal auditors, for example, should not be included as a shareholder cost. Since examinations carried out by internal auditors are primarily intended to provide information to the parent and the group members which is, *inter alia*, used for management purposes, the tion that the result of an internal audit merely serves to protect the investment of the parent company is not correct, and is a misconception of the role of the internal audit function.

BIAC cautions against interpreting the concept of shareholders costs too broadly, inasmuch as the result could be to create a sitution where a significant portion of the central costs of a group would effectively not be deductible anywhere.

7. Retroactivity

In view of the fact that the transfer price in every cross border transaction involves at least two jurisdictions and that an MNE must, for business considerations, be afforded the opportunity to arrange a suitable transfer pricing structure, any pricing structure, once acceptable to the tax authorities in question, should not subsequently be challenged by such tax authorities, unless circumstances have substantially changed since original acceptance. Even in such a situation, tax authorities should proceed very cautiously in proposing any retroactive price adjustments, as this may create particularly difficult problems, including the threat of double taxation, for the MNE concerned.

8. Advance rulings

BIAC considers it desirable to offer an MNE the opportunity to satisfy itself in advance whether or not a particular approach, structure or system contemplated for use in intercompany transfer pricing is fiscally acceptable. This can be accomplished through the mechanism of advance rulings whereby an MNE could consult with the tax administration(s) in advance of implementing a pricing structure and request the views of the administration(s) involved. This could be done formally or informally, depending upon the customs of the particular country. Once approved, however, the pricing system should not be subject to challenge; in other words, the ruling should be binding on the tax administration. BIAC believes that further study of this matter is warranted.

IV. CONCLUSION

BIAC wishes once again to express its appreciation to the OECD for the Report on Transfer Pricing and Multinational Enterprises. It is a signal achievement. It is evident, however, that the transfer price problem has many and varied aspects, and that it is not possible to treat the subject in its entirety in a report of this scope. Moreover, several of the issues discussed, including those commented upon above, have been treated primarily from the perspective of the government (i.e., the revenue authorities), without giving full weight to the taxpayer's viewpoint.

As we are informed that OECD will continue its work on areas not covered in the report, BIAC is pleased to offer its assistance and co-operation in such endeavor.

IFA NEWS

SOME HIGHLIGHTS

FROM THE SECRETARY GENERAL'S 1979-80 REPORT PRESENTED AT THE PARIS CONGRESS 1980.

IN GENERAL

The Secretary General, Prof. Dr. Jan H. Christiaanse, paid special attention to the administrative aspects of IFA. The appointment of Prof. Dr. J.C.L. Huiskamp (Director of the Fiscal Economic Institute of the Erasmus University in Rotterdam) as Assistant Secretary General will enable IFA to fulfill better certain tasks which have in the past received too little attention. Prof. Huiskamp will in particular be involved with the preparatory work for Seminars held at Congresses. This year he edited the papers for the Seminar entitled: "Recourse to Tax Havens — Use and Abuse" for the Paris Congress. Prof. Huiskamp is further responsible for the contact with IFA liaison officers to various international organizations and he takes part in the sessions of the Permanent Scientific Committee which is the scientific arm of IFA. He will also coordinate the work and the promotion of the Mitchell B. Carroll Prize.

The Permanent Scientific Committee's decision to prepare for Congresses two years in advance has added to the work load of the General Secretariat, which has been busy with preparations for the Paris, Berlin and Montreal Congresses in 1979-80.

Recent changes in the Dutch legislation governing associations made it necessary to amend the statutes of IFA. This proved to be a time-consuming task which took much of the General Secretariat's time.

The General Secretariat, desirous to be kept informed of the activities of the national branches, has requested the supply of information on a regular basis. This information will be published under the heading "IFA News" in the *Bulletin for international fiscal documentation*. It is, of course, vital that the national branches keep the General Secretariat informed of their work.

COPENHAGEN CONGRESS

The 33rd Congress held in Copenhagen organized by the Danish Branch under the supervision of Mr. Aa. Spang-Hansen was very successful. General reporters were Prof. Th. Nielsen (Denmark) and Mr. Gerhard Laule (Germany) and discussion leaders Mr. J.F. Avery-Jones (U.K.) and Prof. I. Claeys Boúúaert (Belgium). Two highly interesting seminars were held, one chaired by Prof. Stanley Surrey (U.S.A.) and the other by Prof. Dr. Gustaf Lindencrona (Sweden) and booklets containing information as a basis for these discussions were distributed by IFA.

MITCHELL B. CARROLL PRIZE

At the Copenhagen Congress Prof. Dr. Klaus Vogel (Germany), chairman of the jury, handed the medal to Mr. Edwardes-Ker for his work: "International Tax Treaties Service". For the 1980 prize there are four competitors:

H.M. Liebman (Belgium):
— A Formula for Tax-Sparing Credits in U.S. Tax Treaties with Developing Countries.

Jean-Pierre Panis (France):
— Tax Harmonisation and Industrial Policy within the EEC; Company Taxation: Corporate Income Tax.

Dr. A. Storck (Germany):
— Ausländische Betriebstätten im Ertrags- und Vermögenssteuerrecht.

Lofumbwa Bokila (Belgium):
— Les régimes fiscaux visant à encourager les investissements directs et de portefeuille dans les pays en voie de développement, l'interaction du système fiscal zaïrois et des régimes préférentiels des Pays de l'OCDE.*

PARIS CONGRESS 1980

The two subjects of the Paris Congress are in the capable hands of the two General Reporters:
— Mr. Guy Delorme (France) for Subject I, "The dialogue between the tax administration and taxpayer up to the filing of the tax return"; and
— Mr. Robert J. Patrick (U.S.A.) for Subject II, "Rules for determining income and expenses as domestic or foreign".

Prof. J. van Houtte (Belgium), honorary president of IFA, is prepared to act as discussion leader for Subject I and Mr. P. Kerlan (France) for Subject II. Prof. Vedel (France) will be the chairman of the working session on Subject I and Prof. Dr. Th. Nielsen (Denmark) of the working session on Subject II.

FUTURE CONGRESSES

1. Berlin Congress 1981

During the Spring meeting of the Permanent Scientific Committee (PSC) the directives for the Berlin Congress were discussed. The topics are:

Subject I — Mutual agreement — procedure and practice
General reporter: Dr. K. Koch (German Federal Republic)

Subject II — Unilateral measures to prevent double taxation
General reporter: Dr. D. Juch (Netherlands)

The PSC decided to hold Seminar I on the subject "Taxation of income arising from the international seabed" (this title may be subject to rephrasing) instead of on "The OECD Model Convention on Estate Taxes" since the pertinent OECD Report scheduled to be published in Spring 1981 may be delayed.

The Berlin Congress will be held from September 21-25, 1981.

---

* See page 507.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

2. Montreal Congress 1982

At the same PSC meeting the topics for the Montreal Congress were established:

Subject I — The tax treatment of interest in international economic transactions
General reporter: Prof. E. Höhn (Switzerland)

Subject II — Taxation of transportation of passengers and goods in international traffic
General reporter: Mr. G. Coulombe (Canada)

3. Other Congresses

Further congresses are scheduled in Venice (Italy) in 1983, in Buenos Aires (Argentina) in 1984 and in London (United Kingdom) in 1985.

IFA OFFICERS COME AND GO

Mr. C.J. Berg (Australia) and Mr. R. Baconnier (France) joined the Permanent Scientific Committee whereas Mr. P. Kerlan (France) left after a long and active participation.

Mr. K. Beusch (Germany), Mr. A. Elvinger (Luxembourg) and Dr. A. Toffoli Tavolaro (Brazil), elected at the Copenhagen Congress, took their posts in the Executive Committtee.

Prof. P. Sibille was welcomed as President of the Editorial Committee. Mr. M. Laxan will be proposed for nomination as President-Elect of IFA during the Paris Congress. [1] Mr. R.M. Hammer (U.S.A.), Mr. J.L. Perez (Spain) and Mr. K. Beusch (Germany) were elected as 1st, 2nd and 3rd Vice Presidents respectively.

Mr. P.F. Vineberg (Canada) will be due for statutory retirement at the meeting of the Executive Committee at the Paris Congress.

Mr. D.E. Richards acted for the last time as President of the Nominations Committee.

NATIONAL BRANCHES

During the Copenhagen Congress two new national branches were recognized: Hong Kong and Colombia. Applications for such recognition were received from Indonesia and Malaysia which will be recognized during the Paris Congress. [2]

NUMBER OF MEMBERS

IFA had 5,659 members in January 1980 (the last count in March 1979 was 5,427).

MEMBERSHIP FEES

The membership fees will be increased for 1980/81:
US$ 38 for individual members of national IFA branches;
US$ 40 for direct individual members of IFA;
US$ 90 for corporate members, both direct and of national branches.

---

1. His nomination was approved by the General Assembly of IFA during its session on September 19, 1980.
2. Their recognition was approved by the General Assembly in the above meeting (note 1).
3. The increase was approved by the General Assembly in the above meeting (note 1).

AUSTRIA

The Austrian Branch of IFA reports the following on its activities during the first half of 1980.

1. Meetings

On May 9 and 10, 1980 the Austrian and German Branches organised a workshop in Salzburg. The following subjects were discussed:

(i) The German VAT reform which became effective on January 1, 1980 and which was partly based on the Eighth EEC Directive on VAT. Special attention was paid to the place of rendering of services, the refund procedure and the limitation of the tax jurisdiction.

(ii) The current tax situation in Austria and the Federal Republic of Germany. During World War II German tax law was applicable in Austria and the papers read showed to what extent the developments in Austrian and German tax law have diverged, but in some cases tend to similar solutions.

(iii) Dr. Bechinie, the President of the Austrian Branch, read a paper dealing with the work of the Austrian Tax Reform Committee which concluded its work in the beginning of 1980. He reported in detail on the Committee's proposals but pointed out that their implementation will necessarily depend on budgetary circumstances, since it is not intended to reduce or increase taxes.
He also mentioned some subjects which are currently in the center of interest, like the reform of tax rates and the introduction of a withholding tax on interest from savings accounts and bonds. Although the Tax Reform Committee has completed its task, some sub-committees continue to study the structure of the Austrian income tax law and the reform of the present investment incentives.

(iv) A German speaker discussed some fundamental problems with respect to taxation of families, the envisaged tax rate reform and amendments of the unilateral relief for double taxation.

(v) Officials of Austrian and German local tax administrations (from the city of Salzburg and from Bavaria, respectively) discussed the functioning of the mutual agreement procedure under the Austrian-German double taxation treaty. The results are very favorable and the fact that also lower tax administrations have been involved leads to a substantially less time-consuming procedure.

On June 17, 1980 the General Assembly of the Austrian Branch convened. Considering the success of the meeting in Salzburg the members expressed their wish to continue the cooperation with the German Branch in 1981.

2. Members honored

Dr. Robert Halpern, vice-president of the Austrian Branch, mem-

Dr. Alexander Hörtlehner.

Prof. Dr. Robert Halpern

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ber of the General Council of Central IFA and Chairman of its Finance Committee, received from the President of the Austrian Federal Republic the title of "Professor".

Dr. Alexander Hörtlehner, the Secretary of the Austrian Branch, received the Gold Medal for Merit of the Austrian Republic during a ceremony at the Ministry for Trade.

BRAZIL

The Brazilian Branch announces that from November 16-21, 1980 a joint congress will be held entitled:

I Congresso Internacional de Estudios Tributários
IV Congresso Interamericano de Tributação

The subject of these congresses is: Municipal tax policy facing urban concentration — a search for a new system.

Speakers will include:

Ives Gandra da Silva Martins, Geraldo Ataliba, Ruy Barbosa Nogueira, Bernardo Ribeiro de Moraes, Aires Fernandino Barreto, Gilberto de Ulhôa Canto, Souto Maior Borges	Brazil
Manuel de Juano	Argentina
Carlos A. Mersan	Paraguay
Ramón Valdés Costa	Uruguay
Euzébio Gonzales Garcia	Spain
Victo Uckmar	Italy
Sergio Francisco de la Garza	Mexico
Klaus Vogel	Germany

Further information from the Secretariat:
Rua Juataba no. 20
CEP 05441 SAO PAULO
Brasil

SPAIN

The Spanish Branch of IFA reports that their membership is gradually increasing: from 70 to 79 during 1979 and it is hoped that this trend will continue in 1980. With respect to its activities it indicates that it is involved in the preparation of the national reports for the Paris Congress of IFA and that it took part in the Congress of the I.I.F.P. Its members will also contribute to the IX "Jornadas Luso-Hispano-Americanas de Derecho Financeiro" which will take place during 29 September — 2 October 1980 in Oporto (Portugal). Subjects to be discussed at this meeting include: (i) the influence of taxation on the financing of enterprises, and (ii) the family as a taxable unit.

The foundation of a tax journal in the Portuguese and Spanish languages is envisaged, which will act as the official organ of the Portuguese and Spanish-speaking Branches of IFA and which will be entitled "Fiscus". Contact for this purpose has been established with the Argentine and Portuguese Branches.

The Spanish Branch of IFA is also involved in the creation of a national association of taxpayers. At this moment the charter and by-laws have been drafted and officially approved.

Finally, the Spanish branch participates with the Chamber of Commerce and Industry in a center for the study of taxation and economics which was created in 1960. The main goal of this center is the training of tax experts, accountants and business consultants. The center is managed by Latin American experts.

SWEDEN

The annual general meeting of the Swedish Branch, chaired by Mr. C.O. Sandström, was held on May 28, 1980. After the meeting Mr. Hans Pehrson of the National Tax Board spoke on "The development in Sweden of international tax control".

UNITED KINGDOM

The Annual General Meeting of the British Branch of IFA was held on May 29, 1980.

Mr. R.T. Esam was reelected Chairman, and Mr. D.A. Clarke, Mr. C.J. Crowe and Mr. D.F.A. Davidson were reelected Vice Chairmen. For 1980-81 the Branch's Committee comprises the following persons:

Mr. J.F. Avery Jones	Mr. E.J. Henbrey
Mr. I.D. Barnett	Mr. A. Lord
Mr. J.B. Bracewell-Milnes	Mr. J.D.B. Oliver
Mr. J.F. Chown	Mr. J.S. Phillips
Mr. H.L. Duncan	Mr. H.R. Roe
Miss M.E. Erskine	Mr. B. Sabine
Mr. W.K. Evans	Mr. F.H. Seale
Mr. D.E. Evennett	Mr. C.H. Thomas
Mr. M.J. Gammie	Mr. D.N.C. Gray

The U.K. Branch met on September 30, 1980 to discuss the draft national report on the first subject for the 1981 Congress in Berlin: "Mutual agreement — procedure and practice". The national reporter on the first subject is Mr. Ivor Barnett, Tax Adviser, Beecham Group Ltd. On October 21, 1980 the meeting discussed the draft national report on the second subject: "Unilateral measures to prevent double taxation". Reporter is Mr. Harvey McGregor, Q.C.

On November 4, 1980 there will be a talk on "Recent developments in U.S. tax" by Mr. W. Donald Knight, Jr.

IFA Manchester Sub-branch

The following programme was established:

October 9, 1980: Mr. John Avery Jones on "VAT pitfalls".

November 4, 1980: Mr. Walter Richards (GKN Ltd) will lead a tax workship dealing with interest paid to non-residents. It is hoped to examine (and provoke discussion on) grey areas surrounding foreign loans, foreign borrowing vehicles, Eurobonds, Sections 248 and 249, interaction of interest payments and double taxation relief, the effect of double taxation agreements etc.

December 3, 1980: Mr. John Stevenson (Inland Revenue, Somerset House) on "Practical problems relating to Section 485".

February 17, 1981: Sir Norman Price (former Chairman of the Board of Inland Revenue) on "EEC finance, including Revenue aspects such as the U.K. contribution".

March 4, 1981: Mr. Peter Holdstock (Price Waterhouse & Co, London) will lead a tax workship on "Outward direct investments".

© 1980 International Bureau of Fiscal Documentation – BULLETIN

People's Republic of China

Promulgation of the Regulations on Special Economic Zones in Guangdong Province

On August 26, 1980, the 15th Session of the Standing Committee of the Fifth National People's Congress of the People's Republic of China passed the Regulations on Special Economic Zones in Guangdong Province as submitted by the State Council.

Plans for the establishment of such Special Economic Zones in China have been in existence for some time now, and, indeed, some work has been done towards the establishment thereof particularly in Guangdong and Fujian Provinces. [1]

The present regulations concern the Special Economic Zones in an area in the South of Guangdong Province, namely in Shenzhen (Shekou), Zhuhai and Shantou.

The Shenzhen (Shekou) Zone was established earlier this year; the BULLETIN FOR INTERNATIONAL FISCAL DOCUMENTATION reported on this Zone. [2] One of the most significant differences between the rules then established for Shenzhen (Shekou) and the present Regulations concerns the tax rate. This was originally set at 10 percent of taxable profit whereas the Regulations for the entire Guangdong Province have now promulgated a rate of 15 percent. We have been informed by the competent authority that the 10 percent rate will apply for all the agreements in Shenzhen (Shekou) which were signed before August 27, 1980; agreements signed after that date will, however, be governed by the Regulations below.

The following translation has been released by XINHUA. The headings preceding the Articles were, however, added by the International Bureau of Fiscal Documentation.

REGULATIONS OF THE PEOPLE'S REPUBLIC OF CHINA ON SPECIAL ECONOMIC ZONES IN GUANGDONG PROVINCE

Chapter I — General principles

Article 1 — Location and type of activities
Certain areas are delineated from the three cities of Shenzhen, Zhuhai and Shantou in Guangdong Province to form special economic zones (hereinafter referred to as special zones) in order to develop external economic cooperation and technical exchanges and promote the socialist modernization program. In the special zones, foreign citizens, overseas Chinese, compatriots in Hong Kong and Macau and their companies and enterprises (hereinafter referred to as investors) are encouraged to open factories or set up enterprises and other establishments with their own investment or undertake joint ventures with Chinese investment, and their assets, due profits and other legitimate rights and interests are legally protected.

Article 2 — Legal framework
Enterprises and individuals in the special zones must abide by the laws, decrees and related regulations of the People's Republic of China. Where there are specific provisions eontained in the present regulations, they have to be observed as stipulated herewith.

Article 3 — Administrative authority
A Guangdong Provincial Administration of Special Economic Zones is set up to exercise unified management of the special zones on behalf of the Guangdong Provincial People's Government.

Article 4 — Scope of operation
In the special zones investors are offered a wide scope of operation, favourable conditions for such operation are created, and stable business sites are guaranteed. All items of industry, agriculture, livestock breeding, fish breeding and poultry farming, tourism, housing and construction, research and manufacture involving high technologies and techniques that have positive significance in international economic cooperation and technical exchanges, as well as other trades of common interest to investors and the Chinese side, can be established with foreign investment or in joint venture with Chinese investment.

Article 5 — Development of the infrastructure
Land-levelling projects and various public utilities in the special zones such as water supply, drainage, power supply, roads, wharves, communications and warehouses, are undertaken by the Guangdong Provincial Administration of Special Economic Zones. When necessary, foreign capital participation in their development can be considered.

Article 6 — Advisory board
Specialists at home and abroad and personages who are enthusiastic about China's modernization program will be invited by each of the special zones to form an advisory board as a consultative body for that special zone.

Chapter II — Registration and operation

Article 7 — Registration application
Investors wishing to open factories or take up various economic undertakings with investment should apply to the Guangdong Provincial Administration of the Special Economic Zones, and will be issued licenses of registry and use of land after examination and approval.

Article 8 — Banking and insurance
Investors can open accounts and deal with matters related to foreign exchange in the Bank of China in the special zones or other banks set up in the special zones with China's approval.
Investors can apply for insurance policies at the People's Insurance Company of China in the special zones and other insurance companies set up in the special zones with China's approval.

Article 9 — Sale of products
Products of the enterprises in the special zones are to be sold on the international market. If an enterprise wants to sell its products in the domestic market in China, it must have the approval of the Guangdong Provincial Administration of Special Economic Zones and pay customs duties.

Article 10 — Operation; Employment of foreign personnel
Investors can operate their enterprises independently in the special zones and

1. A detailed survey of Special Economic Zones in the People's Republic of China will be included in a forthcoming supplement of our loose-leaf publication: TAXES AND INVESTMENT IN ASIA AND THE PACIFIC, Chapter on the People's Republic of China.
2. BULLETIN FOR INTERNATIONAL FISCAL DOCUMENTATION, April 1980, at 171 ff.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

employ foreign personnel for technical and administrative work.

Article 11 — Termination of activities
If investors want to terminate their business in the special zones, they should submit the reasons for their termination to the Guangdong Provincial Administration of Special Economic Zones, go through related procedures and clear the debts. The assets of the closed enterprises can be transferred and the funds can be remitted out of China.

Chapter III — Preferential treatment

Article 12 — Provision of land
The land in the special zones remains the property of the People's Republic of China. Land to be used by investors will be provided according to the actual needs, and the length of tenure, rent and method of payment will be given favourable consideration according to the different trades and uses. Concrete methods will be specified separately.

Article 13 — Importation of equipment
Machinery, spare parts, raw materials, vehicles and other means of production for the enterprises in the special zones are exempted from import duties. The necessary consumer goods shall be subjected to full or lower import duties or exempted, depending on the merits of each case. Imports of the above-mentioned goods and exports of products of the special zones must go through existing customs procedures.

Article 14 — Income tax on enterprises
The rate of income tax levied on the enterprises in the special zones is to be 15 percent. Special preferential treatment will be given to enterprises established within two years of the promulgation of these regulations, enterprises with an investment of US$5 million or more, and enterprises involving higher technologies or having a longer cycle of capital turnover.

Article 15 — Remittance abroad
Legitimate after-tax profits of the investors, salaries and other proper earnings after paying personal income tax of the foreign, overseas Chinese and Hong Kong and Macao workers and staff members of the enterprises in the special zones can be remitted out of China through the Bankc of China or other banks in the special zones in line with the zone's foreign exchange control measures.

Article 16 — Reinvestment
Investors who reinvest their profits in the special zones for five years and longer may apply for exemption of income tax on profits from such reinvestment.

Article 17 — Use of domestic items
Enterprises in the special zones are encouraged to use China-made machinery, raw materials and other goods. Preferential prices will be offered on the basis of the export prices of China's similar commodities and settled in foreign exchange. These products and materials can be shipped direct to the special zones with the vouchers of the selling units.

Article 18 — Entry and exit procedures
Entry and exit procedures will be simplified and convenience offered to the foreign, overseas Chinese and compatriots in Hong Kong and Macau going in and out of the special zones.

Chapter IV — Labour management

Article 19 — Provision of labour
Labour service companies are to be set up in each of the special zones. Chinese staff members and workers to be employed by enterprises in the special zones are to be recommended by the local labour service companies or recruited by the investors with the consent of the Guangdong Provincial Administration of Special Economic Zones. Enterprises can test them before employment and sign labour contracts with them.

Article 20 — Performance and dismissal
The employees of the enterprises in the special zones are to be managed by the enterprises according to their business requirements, and, if necessary, can be dismissed in line with the provisions of the labour contracts.
Employees of the enterprises in the special zones can submit resignation to their enterprises according to the provisions of the labour contracts.

Article 21 — Remuneration
Scales and forms of the wages, award methods, labour insurance and various state subsidies of the Chinese staff members and workers in the enterprises are to be included in the contracts signed between the enterprises and the employees in accordance with the stipulations of the Guangdong Provincial Administration of Special Economic Zones in Guangdong province.

Article 22 — Labour protection
Enterprises in the special zones should have the necessary measures for labour protection to ensure that the staff members and workers work in safe and hygienic conditions.

Chapter V — Administration

Article 23 — Supervisory body
The Guangdong Provincial Administration of Special Economic Zones exercises the following functions:
1. Draw up development plans for the special zones and organize for their implementation.
2. Examine and approve investment projects of investors in the special zones.
3. Deal with the registration of industrial and commercial enterprises in the special zones and with land allotment.
4. Coordinate the working relations among the banking, insurance, taxation, customs, frontier inspection, postal and telecommunications and other organizations in the special zones.
5. Provide staff members and workers needed by the enterprises in the special zones and protect the legitimate rights and interests of these staff members and workers.
6. Run education, cultural, health and other public welfare facilities in the special zones.
7. Maintain law and order in the special zones and protect according to law the persons and properties in the special zones from encroachment.

Article 24 — Administrative agencies
The Shenzhen Special Zone is under the direct jurisdiction of the Guangdong Provincial Administration of Special Economic Zones. Necessary agencies are to be set up in the Zhuhai and Shantou Special Zones.

Article 25 — Business promotion company
A Guangdong Provincial Special Economic Zones Development Company is to be set up to cope with the economic activities in the special zones. Its scope of business includes fund-raising and trust investment, operating enterprises or joint ventures with investors in the special zones, acting as agents for the investors in the special zones in matters related to sales and purchases with other parts of China outside the special zones, and providing services for business talks.

Chapter VI — Appendix

Article 26 — Entry into force
These regulations shall be enforced after their adoption by the Guangdong Provincial People's Congress and after they have been submitted to and approved by the Standing Committee of the National People's Congress of the People's Republic of China.

TAX GLOSSARY

by H.W.T. PEPPER *

TAX SPARING — Where one country grants a tax holiday in respect of profits, e.g., from a "pioneer" enterprise, and/or to the dividends declared out of those profits, and the income belongs to a resident of another country with which a double tax treaty has been made, the other country may grant "tax-sparing" relief. The "sparing" amounts to a "recognition", by the county of residence, of the tax given up by the other country in its tax holidays and giving relief as if the tax had actually been charged and paid in the country where the enterprise is operating. The tax thus recognized is sometimes known as PHANTOM TAX (q.v.).

TAX THRESHOLD — The level (of income, capital, sales, etc.) at which tax commences to be levied. A taxpayer with income below the threshold level would be exempt from income tax, an estate below a certain value would be exempt from death duties, and a trader whose sales are below a certain threshold is excluded from Value Added Tax (though in that case the goods he buys will contain a tax element which will not ordinarily be available for refund).

TAXABLE BASE — The "taxable base" or "tax base" is a term used in connection with a tax or duty to indicate what is covered by the levy. For example, an income tax might apply to all income received within a country and foreign income remitted to the taxing country by resident taxpayers. In the case of death duties, the duty might apply to all assets situated within the country where the deceased person was domiciled, and also to all the foreign assets of such a deceased person. (See also SCOPE OF TAX, TAX-INCLUSIVE BASE.)

TAXABLE CAPACITY — A somewhat abstract concept as far as individuals are concerned (as regards taxes on goods where the maximum "capacity" for tax may be regarded as a point beyond which additions to the tax charge would result in DIMINISHING RETURNS (q.v.) of revenue). The capacity of individuals to pay tax is proportionate to per capita income, to the political stability of the country, the efficiency of the tax administration, and probably to the proportion of the total revenue which comes from indirect, rather than direct taxes. (See also UNMERKLICHKEIT.)

TAXABLE EVENT — This term is used mainly in connection with sales taxation which may be chargeable, e.g., upon a sale taking place, on delivery of goods to a customer, or on the movement of goods from the trader's premises, including in each case those goods for the internal or personal or domestic use of the business or the proprietors thereof. (See also TAX POINT.)

TAXABLE INCOME — Some income tax systems use the term "taxable income" to refer to all income which is by definition taxable, and under other tax codes the term may relate to the income which is actually subjected to tax rates, representing the gross or assessable income less deductions for items such as depreciation, losses, and personal reliefs.

TAXABLE PERIOD — Many taxes are related to a particular period of time, such as a fiscal year in the case of income taxes (which are applied to the income of the whole year). In the case of sales taxes, the tax is usually payable by reference to the sales of, transactions in, or movements of goods, or the rendering of services, within a particular period of time, and the taxpayer is usually required to pay tax on the basis of each period within a fairly short time of the end of it. Typically, the taxable period for sales taxation is either a month or a quarter of a year, but there are some instances where tax has been collected at shorter intervals, and others where, exceptionally, it has been related to a period of six months or a year.

TAXABLE PRICE — In the case of sales taxes, and ad valorem customs duties, where the duty or tax is a percentage of the price or value of the goods, it is usual to define the price in the tax law. For example, a manufacturer's sales tax would make a levy on certain classes of goods on the price at which the manufacturer would ordinarily sell (at arm's length) to a wholesaler, and a wholesale tax would normally define the taxable price as that at which a wholesaler would ordinarily sell the goods (in the open market) to a retailer (note, for example, the British purchase tax which adopts this definition of wholesale value. (See also TAXABLE VALUE.)

TAXABLE VALUE — The value upon which various duties and taxes are to be levied. In the case of imports, the taxable value for ad valorem customs duties is generally taken to be the price, either C.I.F. (q.v.) or "F.O.B." (domestic price in country of origin) at which goods are sold, and the rules enunciated in the Brussels Tariff Nomenclature (B.T.N.) (q.v.) represent those which are most widely followed, even among countries which do not yet use the B.T.N. The concept of "value" rather than actual price has to be adopted in certain cases with regard to sales tax, e.g., where goods are transferred from one part of a business to another for internal use or to the proprietor for personal consumption, so that the arm's length, or open market, price is not necessarily charged, and in other instances where the buyer controls, or is controlled by, the seller, or both are controlled by a third person. In practice the tax charge is often related to "value" which is then defined in the tax law as being the open market price, where this price is available, and, where it is not, rules are laid down for determining a value equivalent to open market price. Other instances of the value concept being used as the basis for charging duty or tax include death duties, which are based on the value of assets as at the date of death, wealth taxes upon the aggregate wealth of an individual at specified dates, e.g. each 31 December, and transfer taxes which extend to transfers of assets other than for full cash consideration. (See also TAXABLE PRICE, ANNUAL VALUE.)

TAXATION AT SOURCE — A system of tax collection pioneered in the U.K. where the payer of certain types of

* With the assistance of the staff of the International Bureau of Fiscal Documentation.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

income to others was required by law to deduct tax (and account for it to the Revenue) at the STANDARD RATE (q.v.) from the payments, in effect as a prepayment by the recipient of the income who would be credited with the tax deducted.
Deductions were required from interest on loans and mortgages, alimony, ground rents on land, dividends paid by companies and interest on Government securities. The system was extended to tax on salaries and wages by tax deduction schemes culminating in the P.A.Y.E. system; deduction at source, or withholding, is now widely adopted in other countries. See, for example, PRECOMPTE.

TAXATION YEAR — Income taxes are normally "annualised", i.e., levied for successive 12-month periods, whereas sales taxes may be levied on a monthly, quarterly or annual basis. Reliefs are given from income tax on the basis of the circumstances of the year when the tax is payable (or of the basis year where this is different). The tax year usually, though not necessarily, coincides with the Government's fiscal year. See also TAXABLE BASE.

TAXE D' APPRENTISSAGE — (Belgium, France, Luxembourg) Apprentice tax.

TAXE LOCALE — The retail sales tax in France, which was abolished when V.A.T. was extended to the retail level.

TAXE OCCULTE — Tax charged upon the incredients or components of an article which is not easy to quantify, and hence difficult to relieve where the goods are exported, represents a "hidden tax" or "taxe occulte". Attempts have been made to relieve such tax when embodied in goods for export, e.g., by EXPORT REBATES (q.v.) and by border adjustments as a means of tax equalisation on imports. The difficulties regarding exports involved have also been tackled in another way, i.e., by adoption of V.A.T. (q.v.). (Note, also, the SANDWICH EFFECT IN V.A.T.)

TAXE SUR LES ACTIVITES FINANCIERES — (Belgium, France, Luxembourg) Turnover tax on certain financial transactions.

TAXE UNIQUE — In the context of a cascade tax, certain articles of commerce may be specially treated by being charged with a composite tax levied at a single stage and exempted at all other stages of distribution. Such a composite tax is sometimes known as a "taxe unique", but the terms "Forfaitaire" and "Phasenpauschalierung" have also been applied.

TAXE SUR LA VALEUR AJOUTEE (T.V.A.) — (Belgium, France, Luxembourg) Value-added tax (V.A.T.).

TAXFLATION — Term used in U.S.A. for FISCAL DRAG (q.v.).

TEILWERT — This term refers to the system in Federal Germany whereby in calculating income tax depreciation on assets the sale proceeds of an asset may be taken to be a proportion of the sale price of the business where it is sold as a going concern if this figure is less than the WRITTEN-DOWN VALUE (q.v.) for tax purposes.

TELEVISION ADVERTISEMENT DUTY — A duty levied in Britain on advertisements inserted in television programmes provided by private sector contractors.

TELEVISION LICENCE FEES — Annual fees collected in some countries from users of television sets as a contribution towards the cost of broadcasting programmes by the television broadcasting authority appointed by the government. In the U.K., prepayments by purchase of stamps has recently been revived in respect of television licence fees. Being payable once yearly these fees are a substantial liability for those in lower-income groups who may spread payment by buying special television stamps to fix to the licence renewal application form in due course.

TEMPORARY ENTRY (IMPORTATION) — Many countries allow the temporary importation (without levying customs duty and sales taxes) of items which are to be within their borders for only a short time. Examples include motor cars brought in by visitors, including those temporarily employed in the country. Work done in the country by foreign contractors may involve the temporary importation of specialised equipment not available in the country. While some countries allow temporary duty-free import another treatment some times adopted is to charge a proportion of duties and tax based on the ratio of the period the items are employed in the country to the period of the normal working life of the equipment. See also PERFECTION OF ENTRY.

TENTHS — A 14th century tax on real property in England charged at the rate of 1/10 of value. (See also FIFTEENTHS.)

TERMINAL ADJUSTMENTS — See BALANCING ALLOWANCES AND CHARGES: CESSATION ADJUSTMENTS.

TERMINAL LOSSES — Losses in the final year of a business cannot obviously be carried forward because the business has ceased, but some tax codes provide for a carry-back against earlier profits and an offset against other income of the same taxpayer for the same year. In the U.K. and the U.S.A. the carry-back period is 3 years.

TERMINAL PAYMENTS — See GOLDEN HANDSHAKE, LOSS OF OFFICE, REDUNDANCY PAYMENTS, SEVERANCE PAYMENTS.

TERRITORIALITE — See TERRITORIALITY.

TERRITORIALITY — The scope and incidence of a tax is usually related to a particular geographical area, in that residents of that area may be subjected to tax. In addition, assets, income, or transactions located within that territory may be taxed, even though respectively belonging to, or carried out by or on behalf of, non-residents. The territorial concept has relevance, e.g., to income tax, where residents may be taxed on their world-wide income and non-residents on their income that arises within the territory. In the case of death duties the world assets of those domiciled in the territory may be taxed, and the assets in the territory of those domiciled outside it may also be taxed. For sales taxation, tax may apply to transactions taking place within the territory other than exports to customers resident outside the territorial limits. See also SALES AND USE TAXES.

THERMAL INSULATION — As in the case of expenditure on fire prevention, safety measures, anti-pollution, etc., the tax treatment of the cost of fuel economy, including thermal insulation, is usually favourable. In the U.K., for example, expenditure on heat insulation in industrial buildings by the person carrying on trade is regarded as equivalent to expenditure on plant and machinery, thus qualifying for CAPITAL ALLOWANCES. See also RESIDENTIAL ENERGY CREDIT.

Bibliography

Books

The publications listed in this bibliography have recently been acquired by the Bureau's library which will gladly supply further information upon request (please quote the reference numbers). They should, however, be ordered through a bookseller or direct from the publisher indicated, and not through the Bureau.

ARGENTINA

BUSINESS OPERATIONS IN ARGENTINA

By Adolfo Atchabahian. Washington, Tax Management, Inc., 1976. 86 pp.
Guide containing information for doing business in Argentina from taxation and legal points of view. (B. 102.733)

AUSTRALIA

BUSINESS OPERATION IN AUSTRALIA

By Charles J. Berg. Washington, Tax Management, Inc., 1979. 146 pp.
Guide providing basic information relating to the tax and general legal problems affecting a foreign business conducting its operations in Australia. Supplements will report latest developments. (B. 102.723)

TAXATION IN AUSTRALIA

International Tax and Business Service. New York, Deloitte Haskins & Sells, 1979. 87 pp.
Comprehensive outline of taxation in Australia. After an introduction to the tax system, income taxes and other taxes are covered. (B. 51.570)

AUSTRIA

BUNDESABGABENORDNUNG

Stand 1.5.1980. Vienna, Industrieverlag Peter Linde, 1980. 191 pp., 180 OS.
Consolidated text of the Austrian Fiscal Code as per May 1, 1980, thus reflecting the changes set forth by the law of March 19, 1980. References to the former text of the amended provisions are also published. (B. 102.672)

BUSINESS OPERATIONS IN AUSTRIA

By Herbert Kotrnoch and Wolfgang Schoenstein. Washington, Tax Management, Inc., 1977. 146 pp.
Guide to assist American and other foreign business in evaluating the problems of doing business in Austria, from both taxation and general legal points of view. (B. 102.731)

INVESTMENT AND TAXATION: AUSTRIA

London, Touche Ross International, 1979, 29 pp.
Brochure providing basic information on investment incentives, business entities and taxation in Austria for those intending to do business there. (B. 102.713)

WEITERE ÄNDERUNGEN UND ERGÄNZUNGEN ZU ESTG

(Einkommensteuergesetz 1972). 3. Auflage 1978. Nach dem Stande vom 1. Juni 1980. By Walter Schögl, Werner Wiesner and Wolfgang Nolz. Vienna, Manzsche Verlags- und Universitätsbuchhandlung, 1980. 50 pp., 42 ÖS.
Pamphlet updating the original 1978 edition of a book, containing the text of and comments on the Austrian Individual Income Tax Law as per June 1, 1980. (B. 102.679)

BELGIUM

BUSINESS OPERATIONS IN BELGIUM

By Jacques Malherbe. Washington, Tax Management, Inc., 1979. 115 pp.
Guide to taxation of business operations in Belgium. Business regulations, company law and the tax system in Belgium affecting business operations are explained. Supplements will provide latest developments. (B. 102.721)

BRAZIL

REGULAMENTO DO IMPOSTO DE RENDA

Contents

of the December 1980 issue

Sanford H. Goldberg:

MODERN U.S. ESTATE AND GIFT TAX TREATIES. . . . 531

The author discusses the development of U.S. estate and gift tax treaties and the impact which the O.E.C.D. Draft Treaty of 1966 and the U.S. Model Treaty of 1977/1979 have had on these treaties. A number of important current issues are also dealt with.

NOUVELLES CONVENTIONS AMERICAINES TENDANT A EVITER LES DOUBLES IMPOSITIONS EN MATIERE DE SUCCESSIONS ET DE DONATIONS

L'auteur étudie l'évolution des conventions américains en la matière et l'impacte que le Projet de Convention de l'O.C.D.E. de 1966 et la Convention Modèle Américaine de 1977/1979 ont eu sur ces conventions. Un certain nombre de publications courantes importantes sont également présentées ici.

DIE NEUESTEN NACHLASS- UND SCHENKUNGSTEUER-ABKOMMEN DER U.S.A.

Der Verfasser untersucht die Entwicklungen bezüglich den neuesten Nachlass- und Schenkungsteuerabkommen der U.S.A. und den Einfluss, den das O.E.C.D. Musterabkommen von 1966 und der U.S.—Mustervertrag von 1977/1979 auf diese Abkommen ausüben konnte.

Daneben wird eine Reihe von damit zusammenhängenden wichtigen aktuellen Fragen behandelt.

M. Carr Ferguson:

TAX HAVENS 539

The author discusses various manners in which tax evasion through the use of tax haven facilities may be stopped. He places special emphasis on the obtaining of sufficient data by the U.S. Internal Revenue Service.

REFUGES FISCAUX

L'auteur étudie les différentes façons permettant d'arrêter l'évasion fiscale par l'intermédiaire des facilités offertes par les refuges fiscaux. Il insiste particulièrement sur l'obtention de données suffisantes par le Service du Fisc Américain.

STEUEROASEN

Der Verfasser stellt verschiedene Möglichkeiten vor, womit die Einschaltung von Steueroasen unterbunden werden kann. Besonderen Wert legt er auf die Bereitstellung notwendiger Daten durch die amerikanischen Steuerbehörden.

Richard A. Gordon:

IMPACT OF TAX HAVENS ON THE U.S. TAX SYSTEM 541

The author discusses the tasks and objectives of the study group to examine the impact of tax havens on the U.S. tax system.

IMPACTE DES REFUGES FISCAUX SUR LE SYSTEME FISCAL AMERICAIN

L'auteur étudie les travaux et les objectifs du groupe d'étude ayant pour but d'examiner l'impacte des refuges fiscaux sur le système fiscal américain.

DER EINFLUSS VON STEUEROASEN AUF DAS STEUER-SYSTEM DER U.S.A.

Der Verfasser stellt die Aufgaben und Zielsetzungen einer Studiengruppe vor, die den Einfluss der Steueroasen auf das Steuersystem der U.S.A. zu untersuchen hat.

David Rosenbloom:

TAX TREATY INTERPRETATION. 543

The author raises a number of questions regarding tax treaty interpretation, such as whether it makes a difference who is interpreting, what kind of law does a treaty create and what materials are relevant.

INTERPRETATION DES CONVENTIONS TENDANT A EVITER LES DOUBLES IMPOSITIONS

L'auteur soulève un certain nombre de problèmes quant à l'interprétation des conventions tendant à éviter les doubles impositions, ainsi existe-t-il une différence en fonction de la personne qui interprète, quelle sorte de loi crée une convention et quels sont les matériaux importants.

DIE AUSLEGUNG VON DOPPELBESTEUERUNGS-ABKOMMEN

Der Verfasser beschäftigt sich mit einer Reihe von Fragen bezüglich der Auslegung von Doppelbesteuerungsabkommen, wie z.B. der Frage, ob es eine Rolle spielt, wer diese auslegt, welches Recht ein Abkommen schafft und welche Referenzen relevant sind.

David A. Ward:

PRINCIPLES TO BE APPLIED IN INTERPRETING TAX TREATIES. 545

The author presents a survey for tax practitioners of some well developed principles of public international law shich may be brought to bear on problems of tax treaty interpretation.

PRINCIPES A APPLIQUER DANS L'INTERPRETATION DES CONVENTIONS TENDANT A EVITER LES DOUBLES IMPOSITIONS

L'auteur fait un exposé pour les praticiens fiscaux de quelques principes bien établis de droit international public qui pourraient s'appliquer aux problèmes d'interprétation des conventions fiscales.

ANZUWENDENDE PRINZIPIEN BEI DER AUSLEGUNG VON DOPPELBESTEUERUNGSABKOMMEN

Der Verfasser präsentiert eine insbesondere für Praktiker zusammengestellte Übersicht allgemein anerkannter Prinzipien, die im Rahmen des Völkerrechts entwickelt wurden und die dazu benutzt werden können, im Zusammenhang mit der Interpretation von Doppelbesteuerungsabkommen auftretende Probleme einer Lösung näher zu bringen.

Marshall J. Langer:

OVERRIDE OF TAX TREATIES BY ORDINARY LEGISLATION. 552

The author discusses the introduction of new legislation in the United States which will inevitably conflict with existing tax treaty provisions. He states that Congress has indeed the right to enact a law overriding inconsistent treaty provisions if its intention to do so is clearly shown.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

DEROGATION AUX TRAITES FISCAUX PAR LA LEGISLATION ORDINAIRE
L'auteur étudie l'introduction d'une nouvelle législation aux Etats-Unis qui entrera inévitablement en conflit avec les dispositions des traités fiscaux existants. Il considère que le Congrès a en effet le droit de promulguer une loi dérogant aux dispositions contradictoires d'une traité s'il en exprime clairement l'intention.

VORRANG NATIONALER GESETZGEBUNG GEGENÜBER DOPPELBESTEUERUNGSABKOMMEN
Der Verfasser untersucht die Einführung neuer Gesetze in den U.S.A., die unzweifelhaft mit bestehenden Bestimmungen in Doppelbesteuerungsabkommen in Konflikt stehen. Er stellt dabei fest, dass der Kongress in der Tat das Recht habe, Gesetze zu verabschieden, die gegenüber Doppelbesteuerungsabkommen Vorrang geniessen, und zwar dann, wenn dies mit dem ausdrücklichen Zweck geschieht, Widersprüche in den Abkommensbestimmungen zu bereinigen.

David Brockway:

OVERRIDE OF TAX TREATIES BY ORDINARY LEGISLATION. 553

The author comes to a similar conclusion as Mr. Langer with some difference in emphasis. He points out the difficulties with which Congress is faced when amending U.S. tax law in case such an amendment conflicts with a provision existing in a multitude of tax treaties.

DEROGATION AUX TRAITES FISCAUX PAR LA LEGISLATION ORDINAIRE
L'auteur arrive à une conclusion similaire à celle de M. Langer en mettant l'accent sur des points différents. Il souligne les difficultés auxquelles le Congrès doit faire face lorsqu'il modifie une loi américaine et que l'amendement est en conflit ave une disposition prévue dans un grand nombre de traités fiscaux.

VORRANG NATIONALER GESETZGEBUNG GEGENÜBER DOPPELBESTEUERUNGSABKOMMEN
Der Verfasser komt zu ähnlichen Schlussfolgerungen wie Hr. Langer, wobei er allerdings die Schwerpunkte etwas anders setzt. Er weist dabei auf die Schwierigkeiten hin, mit denen der Kongress konfrontiert ist, wenn es darum geht, eine Änderung des amerikanischen Steuerrechts herbeizuführen und diese mit einer Vielzahl von Doppelbesteuerungsabkommen in Konflikt gerät.

John F. Avery Jones:

MUTUAL AGREEMENT PROCEDURE 556

The author discusses, inter alia, the question whether mutual agreements bind courts or the competent authority which has concluded the agreement.

PROCEDURE AMIABLE
L'auteur étudie, entre autres, la question de savoir si les procédures amiables lient la Cour ou l'autorité compétente qui a conclu le traité.

VERSTÄNDIGUNGSVERFAHREN
Der Verfasser untersucht u. a. die Frage, ob ein Verständigungsverfahren die Gerichte oder die zuständige Behörde, die dieses Verständigungsverfahren vereinbarte, zu binden vermag.

Paul McDaniel:

SOURCE RULES IN U.S. TAX TREATIES 559

The author discusses the question which principles guide the United States when it agrees to modify its source rules by treaty.

LES REGLES DE LA SOURCE DANS LES CONVENTIONS TENDANT A EVITER LES DOUBLES IMPOSITIONS CONCLUES PAR LES ETATS UNIS
L'auteur étudie le question de savoir quels sont les principes qui guident les Etat-Unis lorsqu'ils acceptent de modifier leurs règles de la source par une convention.

DIE BESTIMMUNG DER QUELLE IN DEN DOPPELBESTEUERUNGSABKOMMEN DER U.S.A.
Der Verfasser untersucht die Frage nach dem Rahmen, in welchem die U.S.A. ihre Regeln zur Bestimmung der Quelle bei Doppelbesteuerungsabkommen anzupassen bereit sind.

Robert J. Patrick Jr.:

INCOME TAX TREATY SOURCE RULES; A U.S. PERSPECTIVE 560

Preliminary discussion of the subject to be dealt with at the Paris Congress of IFA. The author focuses on individual country rules for determining the origin of income and expenses.

LES REGLES DE LA SOURCE DANS LES CONVENTIONS TENDANT A EVITER LA DOUBLE IMPOSITION SUR LE REVENU; UNE PERSPECTIVE AMERICAINE
Discussion préliminaire du sujet devant être traité au Congrès de l'IFA à Paris. L'auteur met l'accent sur les règles des différents pays pour la détermination de l'origine du revenu et des dépenses.

DIE REGELN FÜR DIE BESTIMMUNG DER QUELLE IM RECHT DER DOPPELBESTEUERUNGSABKOMMEN – EINE AUFFASSUNG AUS DEN U.S.A.
Vorläufiges Positionspapier zu dem Thema, das bein IFA-Kongress in Paris zu behandeln war. Der Verfasser beschäftigt sich insbesondere mit den Regeln bestimmter Länder bezüglich der Bestimmung der Quelle bei Einkünften und Aufwendungen.

National Meeting of the
U.S.A. Branch of IFA,
January 17 & 18, 1980.

New Developments in Tax Treaties

On January 17 and 18, 1980 the U.S.A. Branch of the International Fiscal Association held its fourth annual meeting in Philadelphia, Pennsylvania. The technical discussions focused on new developments in tax treaties and were co-chaired by Mr. Chester C. Hilinski, executive vice-president of IFA, and Mr. Robert J. Patrick, vice-president of IFA.

As in the past, [1] *the U.S.A. Branch of IFA requested the Editors of the* Bulletin *to publish a number of papers read at the annual meeting. The Editors, considering these papers of particular import for an international readership, are pleased to comply with this request and they wish to congratulate the U.S.A. Branch of IFA on finding so many highly qualified speakers, not only from the United States but also from Canada and the United Kingdom, to discuss a number of subjects which are currently of interest.*

The first subject, estate and gift tax treaties *discussed by Mr. Sanford H. Goldberg, is not only a rare subject for IFA, as the speaker remarked, but also a topic on which not much recent literature exists. Mr. Goldberg analyzed the existing U.S. treaty network as well as the OECD and U.S. Model Conventions. He also mentioned pending legislation which will subject to U.S. tax foreign taxpayers holding U.S. real estate through a corporation, a subject which was touched upon by a number of other speakers.*

The subject of tax havens *featured two speakers, Mr. M. Carr Ferguson, assistant attorney general, and Mr. Richard A. Gordon, a representative of the Internal Revenue Service, who described possible measures to combat tax evasion through the use of tax havens.*

Professor Stanley S. Surrey's talk on the United Nations Group of Experts and the LDC Model Treaty has not *been included in the set of papers published in this issue of the* Bulletin *as Professor Surrey's extended discussion will shortly appear in the series "Selected Monographs on Taxation", which is a joint venture of the Harvard Law School and the International Bureau of Fiscal Documentation.*

The subject of tax treaty interpretation *was represented by three papers: one by Mr. David Rosenbloom of the United States and two by Canadian tax experts, Mr. David A. Ward and Mr. Nathan Boidman. Mr. Rosenbloom, who is a U.S. treaty negotiator and also an international tax counsel to the U.S. Treasury, formulated a number of questions and tentative answers thereto, focusing on issues such as who does the interpreting, what type of law is a tax treaty and which materials will be relevant in a given case. Mr. Ward expressed his views on the Canadian tradition in the field of tax treaty interpretation, giving a survey of some well developed principles of public international law which may have a bearing on tax treaty interpretation. The reader will not find Mr. Boidman's views on this subject in the present issue, as we published his paper in the combined August-September 1980 issue of the* Bulletin *which was distributed at the Paris IFA Congress in September 1980.* [2]

Mr. Marshall J. Langer and Mr. David Brockway treated the subject of overriding of tax treaties by ordinary legislation, *a subject which may be of particular interest and perhaps also surprise to non-U.S. readers who live in countries where it has been firmly established that tax treaties always take precedence over ordinary legislation.*

Mr. J.F. Avery Jones, a solicitor from the United Kingdom, discussed mutual agreement provisions, *a subject that introduces one of the main themes at the 1981 Congress in West Berlin. The focus of his narrative was on the binding force of mutual agreements for the tax authorities as well as for courts.*

Finally, Mr. Robert J. Patrick and Mr. Paul T. McDaniel analyzed source rules, *a subject that was discussed at the 1980 Paris Congress of IFA. A summary of these IFA proceedings can be found on page 564 of this issue.*

Modern U.S. Estate and Gift Tax Treaties

by Sanford H. Goldberg*

The topic I am going to discuss is estate, gift and generation skipping taxes. It is a rare topic for IFA. At the last IFA meeting in Copenhagen, the problems of the closely held corporation and wealth transfers were discussed. The only time that IFA has discussed the subject in all of its ramifications was back in 1968. Since 1968 the world has changed drastically. Inflation has resulted in estate and gift tax problems for all taxpayers. More importantly, the shift in investment into the United States has produced a major problem for many foreign investors who have decided that the United States is the last bastion of capitalism.

Foreign investment in the United States has increased to such a degree that we are now considering tax laws that would tend to discourage investment in certain areas, whereas in 1966 we were passing laws to encourage investment in the United States. One of the proposals by Representative Fisher would subject to U.S. estate tax shares of foreign corporations that own U.S. real estate. Foreign investors often use foreign corporations as investment vehicles to avoid estate tax.

The estate and gift tax area I will discuss is the treaties. I will not focus on the U.S. tax imposed by the Internal Revenue Code. For those of you who are interested in our statutory provisions, I refer you to an article which I wrote about two years ago, which originally appeared in the *NYU International Tax Institute* and which was reprinted last year in the *Canadian Tax Journal*. [1]

The estate tax treaty network of the United States is relatively modest. Not many people seem anxious to discuss and strengthen estate taxation. Compared to the 28 existing income tax treaties and the number that were discussed today as being in the process of negotiation, there are only about 13 estate tax treaties. I say "about", because I have included in this total our estate tax treaty with Canada. We do appear to have an estate tax treaty with Canada, even though Canada terminated its estate tax in 1972 (without, at the same time, abrogating the treaty). For those of you who are interested in whether the Canadian estate tax treaty is still in effect, I suggest you speak to the Internal Revenue Service and the Treasury. Their answer has been "we don't know", which is an interesting comment since, if they don't know, who should know?

Gift tax treaties are almost non-existent. Other than the treaties that I will be discussing shortly, there are only two gift tax treaties, those with Japan and Australia. Thus, there are no treaties (other than the ones that we will be discussing) which concern our generation skipping taxes. The recent treaties with France and the United Kingdom cover estate, gift and generation skipping taxes and are patterned after the U.S. Model Treaty.

Prior to 1966 estate tax treaties were situs-oriented

In order to understand our estate tax treaties, one needs a general sense of the historical background. Prior to 1966, the United States negotiated estate tax treaties that emphasized situs. Under these treaties, each signatory country would decide the situs of the asset in question, which would, in the absence of the treaty, be subject to taxation by both countries with no relief. The situs-oriented treaty would frequently permit the imposition of a tax by each country but would provide relief in the form of tax credits for the taxpayer. This approach frequently resulted in a number of problems. One important problem in a changing world resulted from double domicile, i.e. both countries claiming primary jurisdiction to tax without credit for the other's taxes. This was not covered in the old estate tax treaties, which assumed the existence of a single domicile providing a credit to offset the tax imposed in the other jurisdiction. Another problem was the usage of credits, when credits were made available in more than one jurisdiction.

OECD Draft of 1966

The publication of the OECD Draft of 1966 changed this. It provided an approach whereby taxation could only be imposed on the basis of domicile; and, only in a few situations, would the country of situs be empowered to levy tax. The United States took exception to the most important of the compromises reached in the OECD Draft: the taxation of stock and debt of U.S. corporations exclusively at the place of the taxpayer's domicile. In 1977, the United States published a model estate and gift tax treaty, which was republished and modified in 1979. [2] The above is the background against which the pattern of U.S. negotiations should be considered.

U.S. Model treaty

The Model treaty of 1977 made a radical departure from the earlier U.S. treaties. It embraced the OECD Draft concepts. Its most salient provisions appear in somewhat different form from the OECD Draft of 1966, as well as from the 1971 Netherlands treaty. Developments subsequent to the Model treaties of 1977 and 1979 with France and the United Kingdom have not indicated any major departures, so that the major provisions of these Model treaties are to be found in the U.K. treaty and the French treaty.

The most recent treaties (I am now talking about the Model (U.S.) treaty, the Dutch treaty, the U.K. treaty and the French treaty) are designed to alleviate double taxation on gifts and estates of United States citizens, domiciliaries and foreign domiciliaries by either limiting the right to tax to the country of domicile or by requiring one of the countries to grant a credit for the tax of the other. In most of these treaties, the country of domicile possesses primary tax jurisdiction, that is, the right to tax estates, gifts and transfers on a world-wide basis. However, under the Model treaty the country of situs is given priority of taxation concerning real property, business assets located in that country, tangible property, ships, aircraft, and partnership interests as well.

The Model treaty also affords a country taxing on the basis of citizenship the right to tax the estate or inter vivos transfers, with a credit allowed for taxes paid to the other state. Generally,

2. *Editor's note:* see for a reproduction of the text of the U.S. Model Treaty, 33 *Bulletin* 473 (1979).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

this is a one-way street, since only the United States still taxes on the basis of citizenship.

Domicile: a troublesome issue

The most recent treaties also attempt to resolve the troublesome issue of domicile. As was mentioned before, this problem is quite common. It is typically presented by the businessman who leaves his homeland to go abroad to manage an operation in a foreign country and then stays for a number of years. The problem presented is whether the businessman will be taxed in both countries — i.e. in his native country and in the land in which the foreign operation is situated. The problems of double domicile are familiar to most of us here in the United States because of our Federal system, which sometimes results in several states claiming to be the domicile of a given taxpayer. The classical problem involved the estate of one of the principal owners of the Campbell Soup Company. Estate taxes were paid to the states of Pennsylvania and New Jersey because neither state would agree that the other state was the sole domicile and each imposed its own tax. The Supreme Court subsequently agreed with the imposition of tax by both states. We also had the famous Hetty Green situation, involving a dispute between Florida and Texas, where it was not possible to determine which of the two states was the domicile. The Model treaty and the Dutch, French and U.K. treaties differ from our domestic decisional law in that they attempt to solve the problem by finding a single domicile. In my discussion of the way in which treaties deal with the question of domicile, I will approach the problem by focusing on the Model treaty provisions and the departures therefrom which appear in the Dutch, French and U.K. treaties.

Fictitious domicile

The Netherlands and the United Kingdom have a peculiar concept — a fictitious domicile which continues for a fixed period after a citizen leaves. The period of fictitious domicile is ten years after a Netherlands citizen leaves the Netherlands, while the U.K. treaty and the U.K. capital wealth tax use three years, so that, for three years after an Englishman leaves England, he is deemed to be a domiciliary of the United Kingdom. Our treaties with the Netherlands and the United Kingdom take this concept into account.

Interestingly, the Model treaty preserves the right of the United States to treat as a U.S. citizen for a period of ten years following the loss of citizenship a former citizen of the United States whose loss of citizenship had as one of its principal purposes the avoidance of tax (including the income tax). None of the treaties in force has adopted this provision of the Model treaty. Of course, if the Internal Revenue Service's position in Revenue Ruling 79-152 is valid, then this provision of the Model treaty is superfluous, since the Service will enforce the rule set forth in this provision of the Model treaty even if it is not incorporated in any treaty, or agreed to by any other jurisdiction. As you may recall, Revenue Ruling 79-152 rules that a former citizen is still a citizen and is therefore not entitled to the benefits of any tax treaty. The true question posed by Revenue Ruling 79-152 is whether someone who is not formally a citizen, but is accorded citizenship status within the meaning of the expatriate rules, is a citizen for purposes of those treaties. Like my partner Sidney Roberts, who wrote an article in the October 1979 *Journal of Taxation*, I think that the position expressed by the Internal Revenue Service in this Revenue Ruling is far from accurate, and it creates some continuing problems.

The Model treaty and the treaties with France and the United Kingdom cover the U.S. estate tax, gift tax and the generation skipping tax.

Gift taxes, potential problems

The Dutch treaty, which was adopted prior to our enactment of the generation skipping tax, only applies to estate taxes. There are very few gift tax treaties, only the two that I mentioned (with Japan and Australia). There has never been much interest in gift tax treaties. A very interesting article about the problem of double and triple or even quadruple gift tax problems, written by one of our panelists, John Avery Jones, appeared in *The British Tax Review* in 1977 with the intriguing title of "Timeo Danaos".

There are at least two principal types of potential tax problems in the gift tax area not effectively dealt with by our present treaty. The first and the easier type to recognize is the imposition of several gift taxes on the same transfer. Gift taxes may be imposed either because a person concerned, such as the donor or the donee, is within the jurisdiction of the taxing state as the result of domicile, residence, or nationality, or because the situs of the property which is the subject of the gift is within the jurisdiction of the taxing state. This problem is intensified when different interpretations are applied by the interested jurisdictions to any of the key terms, domicile, residence, nationality or situs. A simple illustration will call to mind the problems of multiple tax I have noted. Suppose a gift of property that is located in the United Kingdom, which taxes on the base of situs, by a donor who is a citizen of the United States, which taxes on the basis of citizenship. Suppose further that the donor resides in the Netherlands, which taxes on the basis of residence, and that the donee is an individual residing in Germany, which taxes on the basis of the donee's residence. Four gift taxes, the taxes of the United Kingdom, United States, Netherlands and Germany, may be imposed on our hypothetical gift. A bilateral treaty would not resolve all of the problems presented by our illustration. However, meaningful treaty negotiations must try to consider the problem presented by our illustration because it does arise with people having property located all over the world.

The second principal problem of multiple taxation of gifts, which I believe is not covered by our treaty, is the ability to obtain a credit for a gift tax in one country against an estate tax in another country. The Model treaty would require a credit for a prior gift tax in those situations where the United States would grant such a credit under its domestic law. To illustrate the problem, suppose a U.S. donor places his U.K. real estate in a trust in a manner that would be a completed gift for U.S. purposes, but not for U.K. purposes. Later, when the taxpayer dies, the situs of the property is in the United Kingdom. The United Kingdom would impose a death tax based on situs. The question presented is whether in computing the U.K. tax a credit will be provided for the prior gift tax paid in the United States? This is certainly an area that merits attention, and it will probably gain importance in the future.

Death and gift taxes levied by state or local governments

Another problem not dealt with by our treaties is that presented by the death and gift taxes imposed by state or local govern-

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ments. This type of problem is dealt with within our domestic regime of taxation. In computing the Federal estate tax, one derives the benefit of a credit for local estate taxes paid which reduces the amount of the Federal estate tax. Unlike the Model treaty, no similar adjustment is made for the local gift and estate taxes of foreign jurisdictions in our treaties with the Netherlands, the United Kingdom and France. Thus, only if there is no local tax imposed in the foreign jurisdiction will the non-resident alien under the treaty receive a full credit in his home country for foreign tax as required by the treaty. This omission is quite serious. The Federal tax rates on foreign estates are much lower than the rates imposed on the estates of U.S. residents or citizens (ranging from six to 30 percent), but the credit for local estate taxes in the United States is based upon statutory rates which were based upon estate tax rates for estates of U.S. citizens or residents, which may be as high as 70 percent. Therefore, the marginal Federal estate tax credit for local taxes may be as great as 16 percent, so that the effect of the estate tax rates would be to reduce the marginal rate of a foreign estate from 30 to 14 percent. Yet, the 16 percent credit is not a windfall, since it will not be available absent the imposition of local taxes of at least that amount. It thus seems inappropriate that foreign jurisdictions are not required to provide a credit for our local taxes — at least to the extent they offset the Federal tax for which a credit is available. It would appear that this is a serious deficiency of the present system. Foreign jurisdictions may have not realized the nature of this problem, or, perhaps, in our negotiations we were at fault in not seeking to assist foreigners investing in the United States by assuring they would not overpay death taxes.

Multiple domicile

As I have indicated, the most significant feature of the Model treaty, the Dutch, French and U.K. treaties is the adoption of the rule designed to benefit businessmen living abroad under which a citizen of one country who is domiciled in that country can live in the foreign country of his employment without becoming subject to the estate or inheritance tax of the country of employment. The treaties seek to avoid the problem of multiple domicile by applying the rule that one need be domiciled in a foreign country for a certain period ot time before becoming subject to its jurisdiction.

The problems of multiple domicile are caused by a difference in historical approach. The U.S. estate tax is based on domicile, which means physical presence coupled with an intent to permanently reside. In determining the existence of domicile, most European countries do not take intent into account. This poses a problem, since one who was originally a U.S. domiciliary can be physically present abroad for a long period of time, yet make it clear that he always intended to return to the United States. This intent will preserve his U.S. domicile, but it will not prevent the foreign jurisdiction from finding that it had become the place of domicile, as well. The United States' focus on intent in the determination of domicile will not only maintain the existence of U.S. domicile for one absent from these shores, but can also result in acquiring a U.S. domicile with surprising rapidity. For example, an Iranian refugee coming to the United States who says, "I never intend to go back to the Ayatollah. I have moved to the United States and intend to stay here indefinitely", will become a domiciliary of the United States immediately. The Model treaty provides that the taxpayer must be domiciled in the foreign country, if the taxpayer is a citizen of the United States, for at least seven out of the last ten years before the foreign country will obtain primary jurisdiction based upon domicile. If a U.S. citizen lives in a foreign country for less than seven of the last ten years, then he will be deemed domiciled in the United States for treaty purposes.

Dutch treaty: seven out of ten year rule

The French and Dutch treaties raise an interesting double domicile problem. The Dutch treaty provides that the seven out of ten year rule will apply unless a clear intention to the contrary has been shown (i.e. a person who is a citizen of only one of the contracting states, but would under the applicable criteria be deemed domiciled in both, shall, absent the demonstration of a contrary intention, be deemed domiciled in the country of citizenship alone, if at the time of death he was domiciled in the other contracting state for less than seven years of the ten year period ending with death). The problem presented is that of determining what constitutes the requisite clear intention to the contrary. For example, if a Dutch citizen moves his family to the United States, retains a permanent home in Holland and, at the same time, buys a permanent home in the United States and dies ten years later, he would probably, for treaty purposes, be considered to retain his domicile in Holland for at least seven years of the ten year period. But suppose our hypothetical Dutch citizen also applies for and receives a green card, and, when applying for the green card, says: "I want a green card so I can move easily and travel to and from the United States." Has that green card now resulted in our hypothetical Dutch citizen being deemed, for treaty purposes, to possess a clear intention to remain in the United States, with the result that he will not be deemed to be domiciled solely in the United States for purposes of the treaty?

French treaty: five out of seven year rule

The French treaty presents the same problem, although the details are somewhat different in that the French treaty uses as a general rule the five out of seven year rule instead of the seven out of ten year rule of the Dutch treaty (i.e. if a person is a citizen of only one of the two contracting states and would, under the applicable criteria, be deemed domiciled in both countries, he shall be deemed domiciled in the country of citizenship alone provided that he was domciled in the other country for less than five of the seven years before his death or the making of a gift and clearly intended to retain the country of citizenship as his country of domicile). It should be noted that this rule is, unlike the rule in the Dutch treaty, applicable to gifts, as well as to testamentary transfers, and, unlike the Dutch treaty, does not presume the existence of an intent to retain domicile in the country of citizenship. The French treaty also provides alternative situations in which the country of citizenship will be deemed the domicile, even absent the requisite intent needed for the application of the basic five out of seven year rule. One of these alternatives is a five out of seven year rule and the other a seven out of ten year rule. Both alternatives to the general rule depend upon the taxpayer having lived in the country which is not the country of citizenship because of the nature of the employment of the taxpayer or the taxpayer's spouse.

U.K. treaty: seven out of ten year rule

Our treaty with the United Kingdom, like the Dutch treaty, adopts a basic seven out of ten year rule, but uses as the text of residence for this purpose, not residence in the general sense meaning domicile, but, rather, in the manner used for income tax purposes. Residence for income tax purposes differs from the

© 1980 International Bureau of Fiscal Documentation – BULLETIN

definition of residence for estate tax purposes. In the latter case it is equivalent to domicile.

Hierarchy adopted by Model treaty

If the above rules do not determine domicile, the Model treaty, following the OECD Draft, adopts the following hierarchy. The individual would be considered domiciled first in the country in which he maintains a permanent home; second, in the country in which his personal and economic relationships are closest to the center of vital interest; third, in the country in which he has a habitual abode; and fourth, in the country of citizenship. (A similar hierarchy is also set forth in the French, U.K. and Dutch treaties.)

If none of the rules afforded by the treaties will determine domicile in a given situation, then both contracting parties must resolve the question through a mutual agreement procedure. It is not clear what happens if they do not agree. Unlike the provisions that deal with mutual agreement where the parties shall consult, this provision of the Dutch, U.K., French and Model treaties simply provides that they *shall* agree on one domicile.

Habitual abode

The problem with the terms used as the bases for determining domicile, and that John Avery Jones will be discussing in his presentation, is that it is hard to define them with precision, e.g. "habitual abode". Does that differ from a permanent home? Both terms appear in the OECD and the Model treaty and appear to have different meanings. I, for one, am not sure that I understand the difference. Does either term mean a principal residence? Can one, as is the case under the United States' general domestic rules, have more than one habitual abode? The Treasury's technical explanation of the Netherlands treaty states that all of these concepts are highly uncertain in their application and require factual determinations in any particular case, and that these determinations may be extremely difficult to make. More than that, the terms are not terms of art as yet in the United States. Thus, to determine the manner in which these terms will be applied in specific situations may be more in the province of your European counterpart than that of your U.S. consultant.

Permanent home preceding death

As noted, the French, English and Dutch treaties basically follow the hierarchy noted above, although there are variations. The Dutch treaty follows the Model but requires a permanent home for a period of five years immediately preceding death and does not contain the test of habitual abode. An interesting question of interpretation is posed by the way in which this five year rule is expressed. As noted, this five year rule, which is the first test for determining domicile, requires a permanent home for five years or more immediately preceding death. If the individual in question has moved shortly before his death after residing in one country for five years or more, he would appear not to have satisfied this test with respect to either country, since he has not maintained a permanent home in either country for five years or more immediately preceding his death. Yet, the next text to be applied if the five year rule fails to resolve the issue of domicile, based on a determination of the State with which his personal relations were closest, is based on the individual not having a permanent home for five years or more in either country without specifying when this five year or more period need occur. Although it would appear logical that it need occur immediately prior to death, one cannot be certain, so that if the decedent had a permanent home in the Netherlands for five years, moved to the United States for one year, and then died, it is unclear whether the personal relations test would govern with respect to determining domicile or whether you then have to go to the next test for determining domicile, which is the state of citizenship.

Since the United States is the only country that taxes on the basis of citizenship, the citizen of one of the treaty countries who is not domiciled in his country of citizenship is not specifically covered by the treaties except for residual tax in the United States.

Once the determination of domicile has been made, the jurisdiction of domicile is accorded primary tax rights by the treaties. That jurisdiction can levy tax on all manner of assets. However, the tax to be levied by the jurisdiction of domicile is then modified by situs rules, pursuant to which the country of situs is accorded primary jurisdiction over assets with a situs in that country. Although the country of domicile, as noted, may levy a tax on all assets including those with a foreign situs, it is then required to accord a credit for the tax imposed by the jurisdiction of situs. The situs rules govern the following types of property: real property, business property of a permanent establishment, assets pertaining to a fixed base used for the performance of independent personal services, ships, aircraft and interests in partnerships, owning property to which the situs rules apply.

Real property

Under the Model treaty, "real property" is taxable by the contracting state in which it is situated. The treaties generally refer to "immovable property" which is defined as real property. In defining real property, the Model and most of our treaties consider mortgages as debt obligations rather than real property. The Model also excludes ships, boats, and aircraft from the definition of immovable property. The answer is less clear for a lease. Under the earlier French treaty, a lease for less than 18 years was excluded from the definition of immovable property implying that leases longer than 18 years are immovable property. The present treaties make no specific provision for leasehold interests, but provide that the determination of whether a given asset is immovable property is to be determined by the laws of the State in which that property is situated.

Real property owned by one who lost his U.S. citizenship shortly before his death poses an interesting problem. Let us suppose that a U.S. expatriate moves to France and retains the ownership of real estate in the United States. Under the French treaty and other recent treaties (though, as noted, the Model treaty has a different rule), it would appear that the United States has lost its taxing jurisdiction even if expatriation is deemed to have been tax motivated, except that the property is deemed situated in the United States and subject to the situs rules. Thus, under the treaty, the United States is accorded the right to impose a tax, with France to grant a credit. That is clear. But the treaty makes no provision relating to the rate of tax the United States may impose. If it was clear that our hypothetical individual was neither a citizen nor an expatriate of the United States, the real estate would be subject to a tax rate ranging from six to 30 percent. However, under Section 2107 of the Code, the United States will tax the real property of a recent expatriate (whose expatriation was motivated by considerations of tax avoidance) at the much higher estate tax rate for U.S. citizens or residents that ranges up

© 1980 International Bureau of Fiscal Documentation – BULLETIN

to 70 percent. Now, pursuant to the treaty provision, is France required to go along with this? Are they to grant a credit for such an absurdly large tax? I don't know.

Business assets

The second type of property over which the situs country has primary tax jurisdiction is business assets of an individual's permanent establishment which are located in the situs country and assets relating to a fixed base of an individual, who are used for performance of professional services or other similar independent activities. All of the treaties, i.e. Dutch, French, and U.K., have adopted generally the OECD Draft with respect to a permanent establishment.

There are, however, slight variations: e.g. none of the treaties follows the OECD Draft for a "place of management" within the category of business property of a permanent establishment, although the French treaty does refer to "a seat of management", which may be the same. I am not sure whether this concept can be applied meaningfully for individuals or partnerships. Also, the Model treaty requires the presence of a building site or construction or installation project for more than 24 months if the same is to be considered business property of a permanent establishment. None of our treaty partners has agreed to that. They all have reduced that period to 12 months, which is similar to the period used in the income tax area. In addition, the Model treaty, unlike any of the treaties, treats a drilling rig or ship being used for the exploration of natural resources in the same way as a building site and thus as business property of a permanent establishment. None of the Model or the U.K., French, or Dutch treaties specifically excludes from the definition of a permanent establishment the maintenance of a fixed base used for investment purposes (although, perhaps, investment activities would not be deemed a business and so are, in fact, excluded). It would be inappropriate to apply the permanent establishment concept to a base used for investment for estate tax purposes. Under the permanent establishment, or fixed base, provision, business property may be taxed by the contracting state which is not the place of domicile, if it forms a part of the business property of the permanent establishment situated for treaty purposes in that state. This provision not only applies to property situated in the state where the permanent establishment is located, but also appears to apply to property located outside of that contracting state, and in fact, located within the other contracting partner, except with respect to real estate with respect to which the country of situs has the right to retain its jurisdiction (and ships and aircraft, which are to be taxed exclusively by the country of domicile pursuant to the Model, Dutch and French treaties, though not the U.K. treaty).

The permanent establishment concept poses interesting problems, e.g. if the decedent had a permanent establishment in France, which was the non-domiciliary State, and there was connected to that establishment tangible property in the United States, that property would be attributable to the permanent establishment in France, and, therefore, fully subject to tax by the French government (with a credit against the U.S. tax in the amount of the French tax). The problem is that it is conceivable that an individual or partnership may have more than one permanent establishment just as an individual, as we have seen, may have more than one domicile. If so, how does one decide to which permanent establishment the related property is to be attributed? For example, suppose there are two permanent establishments in different countries and one permanent establishment transfers property to the other and the individual dies when the property in question is neither in France nor the United States. To which permanent establishment will that property be attributed? In other contexts, we use a destination rule to determine the situs of property, but when dealing with a transfer within the same entity, the logic of the destination rule may not be applicable, and it is not clear which rule should govern.

Tangible personal property

The Model treaty does not specifically cover tangible movable (personal) property, though the French treaty includes that class (excluding currency, personal use property, planes and ships from that category) and renders it subject to taxation by the contracting state in which the property is sited, if the property in question is not taxable by the other contracting state because it is connected to a permanent establishment within that other state. It is not clear what this provision adds to the French treaty, since the United States taxes the property of a U.S. citizen or resident on a world-wide basis so it would always tax the tangible property of a U.S. citizen or resident regardless of where that property was located. The provision, thus, must have been directed toward permitting the United States to tax the tangible property of a French domiciliary situated in the United States. It is odd the French agreed with this provision, assuming my analysis of its effect, but that is about the only analysis I can find that accords with the words in the treaty.

As I noted above, the treaty excepts from the usual movable property rule personal use property. It is by no means clear what personal use property means. For example, we recently had a case involving a foreigner residing in France who kept more than a million dollars worth of jewelry in a vault in the United States. The jewelry was kept here to avoid the risk of moving the jewelry back and forth. On her infrequent visits to the United States, the foreigner took some of the jewelry from the vault and wore it. When she returned to France, the property was returned to the vault. In France she had other jewelry of comparable value to the jewelry kept in the United States (obviously, this was a wealthy individual). Is the jewelry our foreigner retained in the United States subject to U.S. tax because it is tangible, movable property, or is it that type of property that is exempt from U.S. tax as property used for normal personal use of our foreigner. Under our domestic law, jewelry accompanying a person vacationing abroad or in transit is deemed personal property, with a situs where the individual owner has his domicile. Under our domestic rules, tangible property in the situation just presented, which does not accompany the individual and is stored permanently away from the place of domicile, would be treated like real property and accorded a situs at the place where it is permanently stored, so that, if our domestic rule were applicable, it would be subject to U.S. tax.

Interest in a partnership

The fourth group of property that is accorded a situs under the Model treaty is an interest in a partnership. Under our Internal Revenue Code and the regulations, the situs of an interest in a partnership is not covered. The taxation by the United States of a foreigner's interest in a U.S. partnership would appear to depend on whether the partnership is treated as a juridical entity, and, if it is, whether the entity survives death. If the entity is not respected as a juridical entity following death, then under the Code it would seem to me that one should separately analyse each component of the partnership as one would the property of a sole proprietorship, locating each component where it is sited. This is the rule adopted by the Model treaty. It treats a partnership as an aggregate rather than as an entity. I am not sure whether this would be the rule under the Code. Under the Uniform Partnership Act and the Limited Partnership Act, however,

© 1980 International Bureau of Fiscal Documentation – BULLETIN

a partnership is an entity so that any interest in it is deemed to be intangible personal property with a situs where the individual owner of that interest is domiciled.

The question is presented as to whether, apart from the Model treaty, the United States could impose a transfer tax on an interest in a partnership in the United States held by a foreigner. If it cannot, then certainly the Model treaty provision should not be able to be more onerous than our local law. Unfortunately, there is no conclusive answer as to how the United States views a partnership interest for purposes of transfer taxation. It is clear that a general partnership terminates upon the death of a general partner, suggesting the absence of an entity, for estate tax purposes. However, even this is of little aid, since most foreigners who invest in the United States do so as limited partners, and when they die, the partnership does not terminate. In conclusion, no conclusive answer can be furnished as to how, given the absence of treaty provisions dealing with the problem, under U.S. estate tax law, the interest of a foreigner in a U.S. partnership will be treated. No decided cases or other authority appear to exist other than the government's asserted position.

Other property

If the property involved is not real property, business property of a permanent establishment, ships or aircraft (and under the French treaty tangible, movable property not for personal use), then the property may be taxed only by the state in which the decedent donor or deemed transferor was domiciled at his death or at the time of the transfer. This provision covers such things as shares of stock, debts, as well as all of those intangible personal property rights whose status is unclear under the Internal Revenue Code. It does not appear clear to me as to where a patent is located for purposes of the Internal Revenue Code, or, similarly, where the location of a trademark or a copyright is, assuming that these are not attributable to a business or a profession. (An interest in a trust may raise the same type of problem, as well.) As I indicated earlier, I wrote an article about two years ago in which I tried to deal with those problems, and I was unable to arrive at any definitive conclusions.

Shares of stock

The United States and the United Kingdom have traditionally insisted on taxing shares of stock on the basis of situs, that is, on the basis of the place of incorporation of the corporation, the shares of which are involved. In the OECD Draft, both had reservations concerning Article 8 which would subject shares of stock to taxation by the country of domicile alone. In the Model treaty the United States has retreated from that position and is now willing to treat shares of stock as being taxable solely by the country of domicile.

Deductions

After it is determined what is subject to tax, the next question to consider is what deductions are permitted. Under the Code, the gross estate of a non-resident alien is limited to the property situated in the United States and only certain deductions are permitted in computing the U.S. tax. Those deductions which are permitted must be allocated. Deductions attributable solely to property not situated in the United States are disallowed. Also disallowed is the portion of deductions not specifically applicable to any U.S. property. The portion of deductions not specifically applicable, corresponding to the ratio of the value of the assets included in the U.S. gross estate to the value of total world assets, will be deductible. These proportional deductions under the Code include funeral and administration expenses as well as general obligations. Certain other types of deductions — the marital deduction and the charitable deduction — are completely denied to the estate of a non-resident alien under the Code, but are granted under the Model treaty.

The deductions permitted by the Code are funeral expenses, other administration expenses, indebtedness, certain death taxes and losses. None of the treaties nor the Model discusses any of those provisions. Many jurisdictions do not allow administrative expenses in determining estate tax. For example, I believe the Netherlands will not. [3] So, unless local law or a non-discrimination provision allows one to secure a deduction for a funeral or administration expense or a loss during administration, one will not be permitted to obtain a deduction in the foreign jurisdiction based upon the treaty. With respect to debts, the Model permits a deduction for a proportionate part of debts corresponding to the proportion of world-wide assets subject to a contracting state's jurisdiction, as well as by debts assumed by the transferee or deemed transferee, and the French treaty allows a deduction for debts allowable in France corresponding to the proportion of world-wide assets taxable by French as well as for debts if specifically applicable to a permanent establishment or fixed base or to ships and aircraft, but only against the value of these specific assets.

The Code rule for claiming deductions may be applicable when the relevant treaty is silent. It should be noted that no deductions are allowed under the Code unless the executor includes all world-wide assets in the Federal estate tax return. Most clients do not wish to include their world-wide assets on form 706NR. They, therefore, generally forego all the deductions including debts. I assume they will continue to forego their deductions under the treaties because they will not wish to disclose world-wide assets.

Under the Code, a charitable deduction is available for all transfers to the United States or any state or political subdivision thereof for public purposes, or to any domestic corporation organized and operated exclusively for religious, scientific or educational purposes (as well as transfers to certain charitable trusts or fraternal orders). It should be noted that, to be deductible, the corporations and associations to which the property is transferred need be organized in the United States and transfers to trusts will only be deductible if used in the United States. It should be noted that if property is located here and the non-resident alien tries to give it to a foreign charity, the amount of the transfer is either fully deductible or totally non-deductible depending upon whether the organization, if a corporation or association, is domestic or, if a trust is involved, whether the property is used in the United States. The deduction is not prorated as with expenses and liabilities.

The other limitations upon deductions applicable under the Code to estates such as filing of a return are also required under the treaties.

The Model treaty will permit a charitable deduction in one jurisdiction for transfers to charities of the other jurisdiction if such transfer would be exempt from tax if made to a similar institution situated in the state levying the tax, and if the foreign jurisdiction in which the institution is situated normally permits a charitable deduction for a transfer to such institution. Neither the Dutch nor the U.K. treaty contains a provision for charitable deductions. The French treaty has a charitable provision, but restricts the charitable deduction to transfers to institutions

3. *Editor's note:* In the Netherlands only funeral expenses are deductible.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

which receive a substantial part of their support from contributions from the public or governmental funds. Thus a transfer to a private foundation situated in either jurisdiction would not qualify under the French treaty with the United States.

The marital deduction is not covered in the Code provisions for non-resident alien estates. Under the Regulations, this deduction is specifically denied. The significance of the loss of marital deduction in the United States depends upon whether the property subject to U.S. tax is located in a community property jurisdiction. If it is, the loss of the marital deduction is not particularly important to the taxpayer. If the property is not in a community property jurisdiction, and most states are not, then the loss of the marital deduction could prove significant. In the first Model treaty, the United States granted the marital deduction notwithstanding that in 1966 it reduced its tax rates for non-resident aliens because of the absence of a marital deduction. Thus, even though the reason for not according the marital deduction was the lower tax rates applicable to non-resident alien estates, we were willing to provide a marital deduction for a non-resident alien estate in return for obtaining from the foreign jurisdiction under the Model treaty a 50 percent reduction, up to 50 percent of the value of the property situated in that country, for property passing to the surviving spouse of a United States person. The Netherlands treaty, which became effective in 1971, after the OECD Draft but prior to the first Model treaty, made no provision for a marital deduction to be used in computing the U.S. tax for a non-resident alien; although it did require that the Netherlands provide a marital deduction when dealing with the property of a U.S. person. Both the U.K. and French treaties which were negotiated after the Netherlands treaty provide for a marital deduction in computing the U.S. estate tax on the estate of a non-resident alien. The provisions of the U.K. and French treaties differ with respect to the manner in which the marital deduction will be used in computing the U.S. estate tax on the estate of a non-resident alien. The U.K. treaty requires that the United States accord the marital deduction when dealing with a non-resident alien, while applying the lower rates applicable to the estates of non-resident aliens. The French treaty affords an option. One may in computing the U.S. estate tax for a non-resident alien decedent with a surviving spouse either use the regular rates for a U.S. domiciliary and a marital deduction, or use the rates for a non-resident alien with no marital deduction. The marital deduction provision under the treaties corresponds to the provision of the Code. If one is not entitled to a marital deduction under the Code, if a domiciliary of the United States, one will not secure the deduction under a treaty.

Exemptions, credits and rates

Under the new unified tax regime, the United States imposes a unified Federal estate and gift tax which is reduced by a single unified credit. However, unlike the taxes for a U.S. citizen or resident, the estate and gift taxes are not uniform for a non-resident alien. Non-resident alien estates are subject to lower rates than apply to the estates of U.S. citizens or residents, as I have already noted. With respect to estate taxes, the rates for non-resident alien estates run from six percent on the first $ 100,000 to 30 percent on anything in excess of $ 2,000,000. However, the gift tax for non-resident aliens is imposed at the same rate as for a U.S. citizen ranging up to 70 percent. The generation skipping tax also ranges up to 70 percent, and, as with the gift tax, non-resident aliens deemed transferors are subject to the same rates as apply to U.S. deemed transferors, so that non-resident aliens are not subject to a lower tax rate (as is the case with the estate tax). None of the treaties appears to provide for the reduction by the United States of its rates with respect to gift and generation skipping taxes for non-resident alien donors or deemed transferors. The unified credit under the Code for a non-resident alien is $ 3,600 for the estate tax. No credit is granted by the Code for the gift tax. The Model treaty does not address itself to a credit for gift taxes, but does grant the estate tax credit of $ 3,600, or an equivalent exemption in computing the tax otherwise due. Since we no longer have an exemption, it is unclear to me what purpose that provision in the Model treaty serves. What is the effect of the change in our rules unifying the estate and gift taxes replacing the prior estate and gift tax exemptions with a unified credit on treaties antedating this change? Is the estate tax credit applicable against the gift tax as well on the theory that the two taxes are unified? Similarly, whether a similar credit is available under the old treaties against the generation skipping tax is also unclear. The legislative history would indicate that none of the older treaties, when permitting a credit, contemplated that it could be offset against a generation skipping tax (at least one arising under those generation skipping provisions which are analogous to the imposition of an estate tax upon the deemed transferor).

Relief from double taxation

The Model treaty and our other treaties provide for two credit rules to alleviate double taxation. The first rule is that the United States must grant a credit when it is the country of domicile, and the property taxed is sited under the treaty in the foreign jurisdiction equal to the tax imposed by the country of situs. Situs property consisting of real property, business property, tangible property, ships and aircraft and so forth is property for which the United States must grant a credit. The second rule requires that the United States, when taxing on the basis of citizenship when domicile is elsewhere, grant a credit for the foreign tax. The Model treaty and the treaties with some of our treaty partners provide that the United States when taxing the property of a U.S. citizen not domiciled in the United States must accord a credit for the foreign tax. The normal provision under the Model treaty is that one apportions the credit against U.S. tax for foreign tax based upon the assets located in the foreign jurisdiction to worldwide assets. This would apply both to the situation when the United States taxes on the basis of domicile and when it does so on the basis of citizenship alone. The normal rule also is that the credit accorded by the United States, either when taxing on the basis of domicile or on the basis of citizenship, is to be limited to the pro rata portion of the foreign tax relating to the assets in question. The French treaty contains an exception to the usual rule, which restricts the credit, so that it may not exceed either the amount of foreign tax allocable to the assets subject to double taxation or the amount of U.S. tax allocable to such assets. The French treaty provides, when the United States imposes tax upon property of a transferor or decedent who is a French domiciliary and a U.S. citizen, for a credit in the full amount of the French tax imposed with respect to the decedent or donor in question. If this credit exceeds the U.S. tax allocable to the property in question, the excess is to reduce the U.S. tax applicable to other property in the estate of the decedent or transferred by the donor.

All of the treaties provide for a period of limitations for the purpose of claiming a credit. The Model treaty permits a credit within two years of a final determination and payment, provided that it occurs within ten years of the date of death, gift or deemed transfer. The Dutch, French and U.K. treaties have different provisions. The mutual agreement provisions, of course, may override the normal period of limitation. None of the treaties provides relief from reporting even when no tax is due. The taxpayer cannot make a unilateral determination that his situation comes under the treaty. He must file a tax return. Information exchange is the normal rule, but there are some

© 1980 International Bureau of Fiscal Documentation – BULLETIN

variations. The one that intrigues me is in the Dutch treaty. The protocol to the Dutch treaty provides that the Dutch will not give us information that is held in a bank or in an insurance company, which means that their bank and insurance company security provisions will govern.

The only treaty that provides assistance in collection is the French treaty. An assistance provision is not found in the Model treaty, but the French have decided that they may need United States' assistance, so they requested the incorporation of that provision in the treaty. It is contrary to the usual U.S. posture.

Tax Havens

by M. Carr Ferguson *

Haven has always been a very pleasant word to me. It suggests solace, respite, shelter, and tranquillity. I know that a favorite definition of a tax haven has been any piece of land not owned by the United States which is above sea level, at least at low tide, and which has no domestic taxes. Unfortunately, I think that the definition, while intended somewhat sarcastically, has come to have some real meaning to many of us. As you know, a Subcommittee on Oversight of the House Ways and Means Committee last April held two days of hearings on the subject of "Offshore Tax Havens". [1] The hearings in some ways anticipated a broader inquiry into what is called the subterranean economy or the invisible economy — that portion of our gross national product or wealth which does not show up on any of the traditional barometers or indices: a barter, cash, faceless, and ownerless economy.

Sandy said in his remarks this morning that we all know that people who own Swiss bank accounts never seem to die (at least that is the case looking at 706's which are filed), and that also is part of the subterranean or at least vaulted economy which is causing increasing concern in Washington. The hearings which were held by the Oversight Committee are instructive, and are worth securing and reading if you have not done so already. They reveal a surprising harmony of views between the private practitioners who presented their views, and the positions expressed by representatives of the Government. Your members Marshall I. Langer, Harvey P. Dale and Joseph H. Guttentag presented testimony; and the Government was represented by officials from the Departments of Justice and Treasury, the Internal Revenue Service and the Securities and Exchange Commission.

The concerns expressed by these witnesses were not substantially different from those articulated in 1962 when the Kennedy Administration initiated the first major efforts to control or regulate offshore tax havens used to shelter overseas income from U.S. taxation. These efforts reflected the continuing tension between our principle that U.S. citizens and residents are taxable on their world-wide income, and the territorial limitations on our ability to investigate and collect taxes. For example, we are all familiar with the provisions dealing with foreign base company income, foreign personal holding companies, and foreign trusts. The success of these provisions in controlling the problem is still open to question, certainly in my mind, and perhaps in the minds of many of you who are more experienced and more sophisticated in the techniques of working around Subpart F or working with Subpart F (maybe that is a more euphemistic way of putting it) than I puport to be.

The growing overlay of treaties and the use of third-country treaties as a way of reducing the tax burden on domestic taxpayers, both corporate and individual, is also a matter of increasing concern. To what extent do the provisions in the Internal Revenue Code and the provisions in our system of treaties produce results which were never intended or contemplated? Here, as in any other area of the law, to the extent that imaginative or aggressive tax planners can develop new ways of utilizing the law and conforming a newly developed kind of transaction to the changing patterns of law, new problems develop.

Another concern is the extra dimension to tax avoidance present in the case of offshore tax havens and other overseas entities. The extra dimension which we do not have in, for example, domestic tax planning without offshore ramifications is that not only can we plan to create a favorable reporting position for a client, we can plan to prepare a position for no reporting at all. More and more wealth seems to be slipping abroad invisibly in transactions which have no significance or purpose in international trade. Perhaps our reporting requirement have not kept pace with the legitimate ingenuity of the private bar and the accounting profession, but I think that this slippage has grown largely due to the creation of questionable devices, techniques, and stratagems for not reporting a transaction.

This lack of reporting has caused a gap between information and belief. This credibility gap is not held by consumers of Government with respect to their Government, but the other way around — a credibility gap held by Government officials with respect to the size of the underground economy or the invisible part of our offshore transactions. This has been reflected in a series of attempts to deal with offshore transactions through the Internal Revenue Code, most recently, I suppose, in 1976 with the draconian changes in the taxation of foreign trusts created by United States persons. But just as that legislation was put into place, we found that it did not adequately solve the problem. Practitioners who previously had been urging establishment of foreign trusts by American citizens are now finding ways to have trusts established by non-resident aliens and then utilized by Americans. [2] Some practitioners are now avoiding the trust format, and are calling entities set up abroad in tax haven jurisdictions foreign foundations or some other entity which seems immune from Section 679. At this point many tax officials have come to the belief that continued amendment of the Internal Revenue laws to try to anticipate and correct a transaction which might give rise to no reporting is almost as fruitless as sifting sand. There must be other attitudes or approaches to the problem.

I think that there is a responsibility not just on the part of governmental officials, but on the part of everyone concerned about the shape of our taxation of international transactions, to suggest and recommend changes in the law which will accomplish what seems to me would be the two principal goals here. First, the policing of investments and transactions which are made by Americans abroad but which have no significant purpose outside the boundaries of this country. Second, the establishment of a series of tax laws which will not impose unnecessary or unrealistic impediments upon the continued growth of a vigorous participation by American investors in international business.

With respect to the second goal, it is certainly worth noting the growing concern which some participants in international transactions have that the laws already on the books are beginning to cause problems or place Americans at unfair competitive disadvantages in dealing with investors or businesses in other countries. For example, in the law enforcement area, the problem of

2. This type of transaction was the subject of Rev. Rul. 80-74, I.R.B. 1980-11, 13, where the Service ruled that the double trust was a sham and taxed it as a grantor trust.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

bank secrecy has brought the goals of the investigator and commerce into conflict. In other countries, as you know, there is a growing pressure to increase bank secrecy. This is frequently referred to as a need to reassure investors, who may otherwise feel their capital should be moved to another country, that they will be protected if they keep their bank deposits or other passive investments in a country which has traditionally provided secrecy. American banks both here and in their branches abroad are concerned that if they cannot offer similar confidentiality they will tend to lose their ability to pool capital.

Partly to ameliorate this concern of American banks, Congress in 1978 enacted the Right to Financial Privacy Act.[3] The statute has not totally alleviated the banks' interest in having additional protection as to the identity and size of deposits. On the other hand, law enforcement officials repeatedly suggested during the April 1979 hearings[4] that the Treasury step up its activity with respect to currency transaction reports required of banks in this country. So I think this will be a point of conflict with respect to bank transactions; certainly, until we are all using nothing but universal credit cards, cash will continue to be amoral and at times untraceable and the problem will remain with us.

These are some of our problems and concerns. What should be the avenue of our attack on these problems? Certainly as the traditionally high level of taxpayer compliance and taxpayer morale (which is sometimes described as the best in the world) is threatened by what is perceived as a growing tendency to use tax havens and to engage in transactions lacking any significant purpose other than the reduction of taxes, there will be pressure to make use of both existing weapons and to create new weapons. This country probably takes tax evasion and tax crimes as seriously as any country in the world. That is no less true of tax havens. It is not surprising that when a part of our system seems to be particularly under siege, the instinct on the part of Government officials is to roll out heavier and heavier weapons to confront the problem. The problem here is the fact that non-resident alien entities are not subject to our tax or reporting requirements, and one of the heavier weapons which has been suggested from time to time has been the criminal law dealing with tax evasion.

It seems to me rather obvious that over-reaction by the Government to a problem is not necessarily useful. This is a good example. In a sense, using the criminal statutes with respect to tax evasion and the filing of false documents as a way of controlling what is perceived as the abuse of the laws of tax haven jurisdictions or the utilization of tax haven entities to abuse our own domestic income tax is a little like using cannons to control a mosquito problem. It is ineffective and out of proportion. One cannot end tax manipulation or efforts to reduce taxation, to below an acceptable minimum, by trying to terrorize the lawyers or other tax planners who counsel such transactions. What is needed is across the board increase in the level of intelligence — I don't mean I.Q. — but rather information developed by the Internal Revenue Service.

However, having said that, I think that the criminal laws have played and will continue to play an important role in buttressing taxpayer compliance. Offshore trusts and similar entities used to evade federal taxes are frequently undertaken after seeking rather probing and sophisticated advice from a tax professional. The reliance on the advice of tax counsel is a pretty good defense in any tax evasion suit. Almost unavoidably the focus of attention is then drawn to the tax advisor: is the advice given within the bounds of what is acceptable, or at least within the bounds of what is not criminal; or has the advice strayed beyond that boundary so that it should be characterized under the criminal laws as participating and assisting in the filing of a false document, namely the tax return?

The application of the criminal laws to tax counselors has been tested in recent years in two celebrated cases against tax lawyers who counselled series of transactions involving offshore havens. The results of those cases have not been conclusive one way or the other. All three cases were tried before juries. In one of the cases a jury acquitted the lawyer; in another case the jury convicted the tax lawyer; and in the third case involving two tax lawyers, the jury acquitted one and convicted the other. Juries being as inscrutable as their reasons, it is rather hard to know to what extent the juries weighed carefully or analyzed the boundaries between aggressive tax planning and outright fraud. But certainly there were badges of fraud alleged by the Government in all three cases: for example, the backdating of documents, the creation of documents to describe transactions which never occurred, and the intentional suppression of information required by the returns at the time they were filed. A mere substance versus form kind of argument, nothing more, hardly seems the basis for a criminal prosecution. Indeed, cases have not been brought as far as I know either against lawyers, other counselors, or their clients, where some fairly obvious and I think generally disapproved badge of fraud was not present.

One problem is that the lack of complete reporting, the lack of mechanism for filing a return with respect to the offshore entity in a tax haven, makes it difficult at times for those counselling a client to utilize the usual defense of attaching a rider to the return explaining what happened. I suggest, however, that at least with respect to the domestic part of such a transaction it is usually possible to find a return — say a return claiming a deduction with respect to a transaction which is known to be with a related offshore entity — and to attach the rider at that point even though the offshore entity itself need not file.

I also think that the disclosure problem, to the extent it exists, can be solved by better attention to the reporting forms required with respect to the establishment of an offshore entity in which an American taxpayer has a beneficial interest of a sufficient percentage. The impression which I have, and which I think many of you may share, is that those forms are not filed regularly; to the extent they are filed, as far as many people can tell they are not inspected very carefully by the Internal Revenue Service.

As I say, I think that the use of tax haven jurisdictions for transactions which really have no economic significance either in the tax haven or in a third country does not merely constitute a law enforcement or definitional problem on the civil side; it constitutes a problem for everyone whether in the Government or in private practice. As long as such problems continue or increase, the likelihood is that we will continue to see Congress periodically tightening up the tax law in ways which will penalize not those who engage in the transactions which should be the subject of corrections, but penalize others who are very conscientious in terms of their reporting requirements and in disclosure.

The targets of our investigation and prosecution have not stopped with American taxpayers and their advisers. In fact, a former Bahamian banker and a former Caymanian banker are presently fugitives from justice on criminal charges which were returned against them for participating in schemes with respect to which the United States participants have already been tried and convicted. I think that there is therefore a sense that our problem is one that involves evidentiary problems which are sometimes beyond the power of the federal courts to resolve, or beyond the power of the Revenue Service to fully grasp. And certainly, we have seen cases referred from the Revenue Service for prosecution which no doubt were solid and correct in theory but which were incapable of prosecution because of the inaccessibility of key overseas witnesses. We continue to have a group of specialists within the Criminal Section of the Tax Division working on offshore tax crimes, or tax crimes which have offshore aspects. Some of the conclusions which were drawn about the future success of those cases are rather fully set out in the hearing of last April to which I have directed your attention. I might just say, however,

3. P.L. 95-630, 92 Stat. 3541.
4. See note 1, supra.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

that there are a couple of rather common aspects of those cases. First, in most of them at least 90 percent of the necessary evidence is available within the United States. Second, the fact that a tax crime has been committed is so much more difficult to uncover where a missing party to the transaction is not seen in returns filed in this country, that in many of the cases ultimately referred to us for prosecution civil audits have already been completed without any uncovering of the crime. That means that very frequently the triggering event which prompts consideration of criminal prosecution is the development of information outside the usual civil audit technique — informers, competitors, or an investigation starting outside the tax area.

We shall continue to develop leads and techniques of this type, not just because of the Congressional prompting at the hearing last April, but because of a growing concern generally about the invisible part of our economy. Both the Department of Justice and the Internal Revenue Service will be devoting redoubled efforts to uncovering and prosecuting criminal abuses of present tax laws dealing with international transactions. Perhaps one of the clearest pieces of evidence of this new concern has been the establishment of a Special Commission headed by Dick Gordon to ferret out all the kinds of abuses, to make some estimate for us of the extent of the problem, and to recommend to the Government methods of dealing with the problem. Jerry Kurtz and I are very happy to have had Dick agree to head up this Special Commission, particularly since he comes from outside of the Government. We hope that he can investigate information available in the Departments of Treasury and Justice and in the Internal Revenue Service, and then give us a fresh evaluation of our old methods of dealing with these problems. I believe your organization shares a common interest with us in pursuing this study, so as to ensure the appropriate use of tax haven jurisdictions. I hope you can work with us and with the Congress to develop more effective ways than we have today of policing these problems.

It has been a pleasure to describe to you our concerns and problems, and to lay out broad avenues of attack. I hope that the next time someone from the Department of Justice is invited to speak, he will be able to tell you the effective results of Dick's study and to assure you that we are on the way not simply to realizing what the problems are, but also to solving them.

Impact of Tax Havens on the U.S. Tax System

by Richard A. Gordon *

At the direction of Commissioner Kurtz and Assistant Attorney General Ferguson, we have put together a study group to examine the impact of tax havens on the U.S. tax system. Congress likes us to study things and so we called it a study group. It is made up of employees of the Internal Revenue Service. Also, certain employees of the Tax Division are working with us, and we are getting significant cooperation from David Rosenbloom's office. The best thing I can do this afternoon is to spend five or ten minutes telling you what it is that we will be doing.

Conclusions are premature. I concur in Carr's wish that the next time somebody from the government comes here to speak, they will tell you about all of our conclusions and how successful we have been in acting on them.

When I took this job, I was somewhat skeptical as to the extent of the problem. A lot of strange schemes had been described to me, and there were rumors about large amounts of money flowing to tax havens. My skepticism evaporated when I started receiving brochures from practitioners in the field. Initially these came from California. Very strange things always go on in California anyway, so I disregarded them; but then they started moving east. I thought maybe one example would be very useful.

This is one example of many of these kinds of things we have seen which rely on the foreign trust which we thought we had dealt with in 1976. The promotion guarantees that your life can be 100 percent free of capital gains tax, 85 percent free of tax on ordinary income (and before you think that the 15 percent tax is grounds for malpractice, they say that this tax can usually be sheltered), 100 percent free of probate tax and red tape, 100 percent free of gift tax, and 100 percent free of inheritance tax. You can also avoid state sales tax on big ticket items, and avoid cross-liability which is where assets are protected from personal legal liability. The trusts are ready to use, they are legal, they are guaranteed by the U.S. Constitution, at least so the publicity brochures say. The fee for this, well, $ 15,000 was quoted in one or two brochures I have seen, and the brochures claim it is deductible. You might wonder how you get your money out so that you can continue to live. They allow appointments of privileged recipients who may request tax-free favors; it just goes on and on.

Purpose of the study group

I would like to tell you what we are going to try to do. As Carr pointed out, the government is having a lot of problems and in some areas some think that we are totally incapable of dealing with this epidemic. I am not sure that that is exactly true, but I think we are having trouble, there is no secret to that and a study of this area is long overdue. I think that we have recognized that the project is a very difficult one. Even defining the term "tax haven" is very difficult. At the Gibbons hearings the focus was generally on the Bahamas, and the Netherland Antilles and the Cayman Islands, but now we find that Austria adopted bank secrecy just a year ago. This is a serious development because we have an income tax treaty with Austria and I think it is important to find out whether Austria and other countries are still complying with what we feel are their responsibilities under the exchange of information provisions.

Also, any look at havens can be a very broad project because it obviously gets into the whole area of taxation of international transactions. We are going to try to narrow the focus somewhat so that we can get a report out within a reasonable time. We hope to have something by the end of the year. I think that we have people at the top in the tax administration who are very committed to this and that the time is ripe to attempt to do something and we would like to get it done while those people are still concerned about this issue. In the course of his testimony before the Gibbons Committee, David Rosenbloom described what it is that we are going to do. He said that the first step we would have to take, before we decide what to do about tax havens, is to bring ourselves up to the point where we all understand what is happening. That is our first goal. We plan to find out how offshore havens are being used and the ways in which persons who are subject to U.S. tax are using havens to avoid paying tax. We are interested in both the evasion and in the avoidance of U.S. tax.

I think this understanding of what is happening also involves

* Special Assistant Counsel (IRS).

© 1980 International Bureau of Fiscal Documentation — BULLETIN

understanding what is happening within the Government, and we intend to find out what is happening by undertaking a thorough evaluation of how the tax administrator has reacted to haven problems. We are going to analyze the efforts of the IRS to deal with havens and we are going to examine everything from IRS published positions to the allocation of IRS resources to the investigative techniques that are used in tax haven related transactions by our agents. We are going to analyze the effectiveness of IRS personnel in dealing with tax haven issues. We are also going to look at IRS coordination with other agencies and particularly of course with the Tax Division of the Department of Justice. Obviously Treasury and Justice are two departments that should be able to work very closely together but they have had problems doing so in the past, at least in some cases, and I think that is a serious concern.

We are also going to try to take a look at the substantive responsibilities of U.S. taxpayers and attempt to determine whether and to what extent U.S. taxpayers are complying with those responsibilities and whether or not there are changes in the law which are necessary to enforce those responsibilities.

In this regard we also intend, as Carr indicated, to analyze the reporting responsibilities of U.S. taxpayers and try to determine whether the reporting can be improved. First, to see whether we can get additional information which can be useful to us. Second, to make it clear to taxpayers what there responsibilities are. I think that all of us have had substantial experience in this area and we feel that at least we in general know when a form should be filed. You have people in small towns who rely on accountants and lawyers who have no experience in this area, who frankly do not know what they are supposed to be filing and there are a lot of forms out there and one hope is that possibly we can combine some of these forms and cut down on the number of forms that people need to file.

Evaluation of tax treaties

When looking at this area we have to look at the treaties and determine what their impact is on the ability of U.S. taxpayers to take advantage of havens. I think that if we find the treaties are a major contribution to avoidance, it may be necessary to reevaluate the program, reevaluate the model treaty. Such a reevaluation is beyond the scope of the present study but certainly an inquiry into the impact of treaties on this problem is not. In looking at treaties we are going to focus on the mutual assistance provision. We will try to find out whether they are working; there is, frankly, some feeling that they do not work well in all cases. You speak to some people in the Internal Revenue Service who have had experience with gathering information and they find out that the quality of information and the ability to get information does not differ from between treaty partners and non-treaty partners, which means that either some of our non-treaty countries are very cooperative or else we are not getting what we should from the treaty partners.

As Carr mentioned, we hope that a good part of this project can be undertaken through discussions with people here, people who are familiar with this area. I have already begun some of these discussions and so far the response has been excellent and I hope that the spirit of cooperation will continue. We would like the problems that are brought forward to be real problems and I think that people with experience who work in the area every day, who have the breadth that the people in this room do, can help us in that regard. We are also going to be talking to foreign tax administrators and try to find out what their problems are and what they have done in the area and try to determine whether there are multilateral approaches that can be taken. In the course of some of those preliminary discussions, we found that other countries are very concerned and a few of them have been even more aggressive on the administrative side than we have.

Finally, we plan to analyze many of the recommendations which have been made, a lot hat were made during the Gibbons Committee hearings, and others which have been made to us. We will also come up with some of our own. I would hope to be able to once again call on many of you for your reactions to some of these recommendations and I hope that these are changes which would enable the Internal Revenue Service and the Department of Justice to better deal with this area.

Non-legislative recommendations preferred

I would hope that most of the recommendations would be non-legislative. Having had some experience in working with income tax legislation I realize that any time you go up to the hill and make proposals you lose control and things sometimes end up a lot more complex that you intended. Complexity, I think, is part of what leads to the kind of scheme I mentioned to you earlier. It is at times difficult to penalize users of such schemes because all too often the courts have not been willing to find the necessary willfulness to evade tax because things are so complex.

We are also going to undertake a project which I think is the most difficult, which is to attempt to determine the extent of haven use. I think that in part our recommendations have to depend on how large the problem is.

Finally, I also think that we have to focus on the responsibility of the practitioner in this area. In the short time I have been on the job, it has become readily apparent that these kinds of things are very often the product of the overactive minds and the promotional skills of tax advisors. Too often, tax avoidance schemes are backed up by the opinion of counsel. These writers of opinions rely on the very complex nature of the law, and on the fact that the bureaucracy is cumbersome, and even if you catch a few of their clients it takes an awful long time to do it. My hope is that the profession can do something to start policing itself.

Tax Treaty Interpretation

by David Rosenbloom *

I always appreciate the opportunity to talk to IFA and I particularly appreciate the opportunity to speak on the subject of interpretation of tax treaties, a subject which I have interpreted from my own somewhat parochial viewpoint.

Let me begin by observing that Mr. Ward's very interesting paper and presentation focused upon the question of treaty interpretation in the courts, either implicitly suggesting that the interpretation of a treaty should be precisely the same whether it is undertaken in the context of a litigated case or as presented to the competent authority.

The issues

One question that I want to raise at the beginning of my statement is, whether there is a difference in interpretation depending upon who is doing the interpreting. This is the other side of a point which Sidney Roberts made in passing, which forms a central question for me; namely, has any power been delegated by the Congress of the United States to the U.S. competent authority to interpret a treaty in a creative way. Another overall issue that I just want to raise, which I think both Mr. Ward and Mr. Boidman really are suggesting, is what type of law does a treaty create — should a treaty be interpreted as statuted, as a constitution, or in some sui generis way. I would like to come back to that question, and just share with you a few thoughts from my own experience as a treaty negotiator in terms of what makes sense. I would put in a footnote at this point; any country which operates with a rule of statutory construction that legislators, in amending the Internal Revenue Code, were aware of everything that was in the Internal Revenue Code at the time of their amendment and took that fully into account is dealing with a legal fiction. Perhaps my experience as a negotiator might lead to a common sense conclusion as to what type of law a treaty creates, but it would not necessarily lead to a legally binding conclusion as to what type of law a treaty creates, because one could indulge the same type of legal fiction on that issue.

A third question besides who is doing the interpreting and what type of law are we talking about is what materials are relevant. I should say at this point that all of these issues are extremely live in my office these days because there is an ongoing, simmering issue which I have reason to believe will surface in one form or another in 1980 in regard to the role of the U.S. competent authority. This is an issue in which my office is intensely interested, much more interested than in the question of how treaties are interpreted when they reach the courts, that being the province of the U.S. Justice Department, hence my reference to my own parochial views.

Finally, a fourth issue that seems to me perhaps not as sweeping as the others, but also relevant, is what is the appropriate procedure for reaching and enunciating a given interpretation of a treaty. That question is not too terribly relevant, in a litigated case, although I can see ways that it might be made relevant. But if you are thinking about interpretation at the competent authority level, I suppose a very important question is the degree to which reciprocity should enter into the substance of decision making.

Illustration of problems

Now, I realize all of this is highly abstract; so to illustrate the problems concretely, I would like to read to you a very brief provision, paragraph 2 of Article 5 of the income tax convention between the United States and Canada, a convention which could not be more relevant given my Canadian colleagues on the panel today. This provision deals with the taxation of motor carriers. It says, "an enterprise of one of the contracting States engaged in the operation of motor vehicles, as a common carrier or a contract carrier, shall be exempt from tax by the other contracting State in respect of income (if taxed by the former State in respect of such income) arising from the transportation of property for hire between points in one State and points in the other State." An enterprise of one contracting State engaged in the operation of motor vehicles as a common carrier or contract carrier is exempt from tax at source in respect of income arising from the transportation of *property* between points in one State and points in the other State.

The obvious issue is what happens with respect to the income of buses. Now, let us assume, first of all, that the notes reflect absolutely nothing on the reason why the negotiators could conceivably have been prepared to address public transportation only of property and not of persons. Let us further assume that if the question were presented today to any negotiator on either side of the border, that person would not hesitate to reply that the issues should be exactly the same. In other words, do not quarrel with those hypotheses, because I am sure people could invent reasons for distinguishing the two cases. Property is property, persons are persons. If the clause were drafted today, it would include persons and property; and there neither was nor is any policy reason for distinguishing the two cases.

I present that case in the context of what we are talking about now because it is a real case. It is the kind of case that we are encountering regularly, so regularly, that we think we have a serious problem. It is the kind of case that has led us directly into the question of what is the competent authority all about. I suggest, however, that it also has relevance if this type of issue is being considered in the context of a litigation.

Type of law created by treaty

Now I want to return to my questions. First of all, what type of law does a tax treaty create? It seems clear that from my perspective on the U.S. side of things, a treaty does not create a type of law that is exactly the same as the Internal Revenue Code. It is inconceivable that the treaty negotiators could attempt to resolve every particular case with terminology that would track the language of the Internal Revenue Code; much less that they could spend the time on the variables that arise with respect to each treaty article to achieve the degree of detail that appears in the Internal Revenue Code.

A treaty quite clearly is an attempt to set out principles, and, in that sense, the OECD Model and the UN Model have made

* International Tax Counsel of the U.S. Treasury Department.

© 1980 International Bureau of Fiscal Documentation — BULLETIN

tremendous contributions to the area, because they have limited the amount of things left open to discuss. The process of negotiation is long enough as it is. Now that we have models that are relatively workable, we have to come to some kind of general understanding of what we have achieved. And what we have, in my view, is a set of principles that are intended to provide guidelines for the resolution of disputes. I would not go so far as to say that an adequate tax treaty is a complete delegation to the administrator, the implementor of the tax treaty, that is, competent authority — simply to resolve cases of double taxation. Obviously, on both sides of any treaty the legislatures and the governments are going to be concerned that there be guidelines. But that is essentially what a tax treaty is; it is a set of guidelines.

A tax treaty is essentially a set of guidelines

Now, I am always amused when I see courts or anyone else who reads a treaty too literally. But again I call attention to the legal fiction about how Congress acts. I suppose I should be equally amused when the court says the Ways and Means Committee had the full scope of the Internal Revenue Code in front of it when it enacted a new tax provision.

The treaty negotiators, as a practical matter, if they are going to achieve their objective, have to narrow the range of things they are going to talk about. In many cases (and I would say, not completely flippantly, even in regard to Canada), there are language differences among the treaty negotiators. It is hard, given the limits of language, to be sure that we have a true meaning of minds, on the meanings of the operative terms. Even a term that seems simple can have history one side of the border that is completely different on the other side of the border. In short, it is a will-o'-the wisp to assume that the negotiators have reached a complete agreement on all the issues that are going to arise. There has to be some room for play in the joints, some delegation of authority to the competent authority to work out particular problems in accordance with the principles which the negotiators have agreed upon.

In addition to working out particular problems within the ambit of the treaty, there are some unforeseen problems, some mistakes. Take a look back at my buses. We have no history as to why the negotiators of the 1942 treaty left out transportation of persons. Does that mean that the only resolution of the bus problem is for the executive branch to ask Congress for a protocol? — to amend the convention on that issue? If I were in Congress, my reaction would be that the administration proposing such an inconsequential charge would be crazy. There are so many other issues of much more pressing dimensions in the relationship in tax matters between the United States and Canada that it is inconceivable to me that a responsible reviewing body, such as the Senate, would allow the executive branch to try to to correct only one small problem like that. So does that mean we have to live forever with the problem? I repeat that answer. It is a live case.

A tax treaty is designed and intended to diverge from domestic law. There has been a lot of talk about a new generation of tax treaties, that suddenly the tax treaties are cutting loose from the moorings of domestic law and are going off and changing domestic law in ways that were never before changed. To a certain extent, there appears to be some truth to this, when you see an unusual provision such as Article 9(4) of the U.S./U.K. treaty or the efforts to reconcile the U.K. ACT system with the classical corporate tax system in the United States. But it is clear that a treaty is intended to change domestic law on both sides; otherwise, there would be no need for the treaty. In interpreting a treaty, one has to keep that in mind. The negotiators were trying to change domestic law for the purpose of alleviating double taxation and preventing fiscal evasion.

Relevant materials

Coming back to my second question — what materials are relevant in passing upon my motor vehicle case? It seems that there are two classes of materials that are relevant. I skipped very quickly in my hypothetical by telling you that there was nothing that bore on it, but in order to reach that conclusion, of course, I had to go back hypothetically again, and look at what there was. It seems that the first and obvious place of start is with the treaty language. One has to see whether there is any way of reading the language to achieve what seems to be a sensible result. Secondly, contemporaneous notes of the negotiators on either side of the border would be a prime source material. In the United States, as you know, we convert these notes now into technical explanations at the time the treaties are sent up to the Senate for consideration. The technical explanation or contemporaneous notes would also be a prime source of interpretation. I might add, in that connection, that although not everyone would endorse this view it is my opinion that a technical explanation of the treaty, based on the negotiators' notes would be more relevant on the interpretation of a treaty term than the comments of legislators in the ratification process, and more relevant than the Joint Committee explanation of the treaty.

What is the role of the Senate in the ratification? The Senate is advising and consenting to the ratification of the treaty. It seems, at first blush at least, that the notes of the people who negotiated the treaty are more centrally the statutory history than the Joint Committee explanation. Now, in practical effect there should be no serious divergences because, at least as matters function now, there is a great deal of interchange and there are opportunities for the negotiators to comment upon much of the legislative material. But obviously, there is a potential for divergence, particularly in areas which do not receive a great deal of attention in the ratification process. I spent a good share of yesterday trying to figure out, for example, whether the treaty between the United States and Germany required the Germans to provide exemption for employees of a U.S. Government instrumentality. Most of our present treaties cover both the U.S. government and instrumentalities thereof. The treaty with Germany does not.

What does that mean? One can argue it several ways. Since I think an instrumentality should be treated the same way as the underlying government, I would strive to reach that result. But again, on an issue like that, which is obviously not focused upon in the ratification process, and which may not be focused upon even in the negotiation process, there are opportunities for differences between the legislative materials and the notes of the negotiators.

I would also consider as important primary material in interpreting treaties, the representations made to the Senate in the ratification process by Treasury representatives. It seems that such representations are comparable to the notes of the negotiators. I would also place in the same category the models that are taken into account in negotiations, which today generally include the OECD Model, the U.S. Model, and, if dealing with a developing country, the U.N. Model. I would think that contemporaneous expressions of treaty policy can, in appropriate instances, be important.

Now, there is, however, a second class of less relevant materials which would include, for example, similar language in other treaties. There is a constant strain between the Treasury Department and the Internal Revenue Service on this issue. The Internal Revenue Service of course, is a mass operation. They like treaties to be alike. If the language in six treaties is similar it should be interpreted the same way, even if there were completely different negotiators and the notes are clear that terms were used in different ways. The Treasury wants each convention to be dealt with as a separate deal, a contract, in Mr. Ward's terms, between the United States and the other country. There is a constant tension on that issue.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Secondly, more recent expressions of policy — how relevant are they? Apparently this motor vehicle case, is it relevant to the competent authority, or for that matter to a court, that, if asked today, U.S. treaty negotiators would say that, of course, they would equate the buses with the transportation of property, that there would be no reason for making any distinction between the two types of cases. Is that a relevant consideration in interpreting the treaty? If not relevant in court, is it relevant to the competent authority? That is the kind of issue we are dealing with today.

Interpretation by competent authority

Now, my third question is, again, who is doing the interpreting? I feel strongly, and I think it is the current view of the Treasury Department, that the competent authority is more than simply exercising a mechanical function sitting there with, in one hand, the treaty and, in the other hand, the Internal Revenue Code, maybe a dictionary, and spinning forth answers as to what words mean. I do not see that as the competent authority function. I would not go quite so far as to say that the competent authority has the right for all treaties to continue negotiations with respect to unforeseen circumstances, that may be too far. There is judgment to be exercised on how far the competent authority can go, at what point it crosses the line, and it becomes necessary to go through the formal steps of negotiating a protocol or a new treaty. But, I believe, and the Treasury believes, that there is room to correct problems under treaties where the words do not precisely fit, where there are strong policies for reaching a particular result.

To spell out a little further the divergence of view on competent authority, one view which I share is that the competent authority has the right and duty to take account of all my primary materials, and that, yes, present policies, present models, any available evidence that will help, can be relied upon legitimately by the competent authority in resolving particular double taxation problems that come up under a treaty. The other side of that coin is that, no, the only things that can be looked at are the treaty language, maybe the contemporaneous notes, the materials submitted in the ratification process, and then one is thrown into the Internal Revenue Code. Now, I can see the reasons why some would be more confortable with immediate recourse to the Internal Revenue Code once that relatively thin supply of primary materials is exhausted. But it is completely unrealistic to believe that treaty negotiators, in fact, have ever or do now negotiate treaties by trying to mesh the terminology used with what is in our Internal Revenue Code in the United States, or the domestic code of any other country. In the first place, now that we are operating on the basis of the agreed models, that is just not right as a starting point. The United States, for the sake of attempting to speed up negotiations, has adopted to a very large degree the OECD Model in dealing with developed countries, and, to a fairly large degree, much of the U.N. Model in dealing with developing countries. The relevant sources of interpretation, once the primary materials are exhausted, are the commentaries on those models to the extent that the United States has not explicitly reserved upon them and — a significant point — to the extent that the commentaries are clear. The OECD Model commentaries, in particular, are not always clear.

Procedures

Finally, what about procedures? Suppose the U.S. competent authority decides that a particular issue should be decided in a particular way. What does he do then? Does he put out a revenue ruling and wait until the sky falls? We have done that on several occasions. It has not been altogether satisfactory. Do we contact the competent authority of the other side? Suppose the competent authority on the other side says that he does not agree with the U.S. interpretation — is that dispositive of the issue? I would think that there is no good across-the-board answer to these questions, but I feel increasingly strongly that issues of international consequence involving treaty partners should be at least informally cleared with the competent authority of the other treaty country, at least to obtain an expression of their views, and that this procedure should be followed to the extent that we possibly can, given time restraints. I would caution that still leaves a fair amount of slippage in the area of private letter rulings, where, as you know, the Treasury is not involved and, for that matter in many cases, neither is the competent authority.

That concludes my comments. By the way, does anyone know what the right answer is in regard to the buses?

Principles to be Applied in Interpreting Tax Treaties *

by David A. Ward **

A considerable amount of scholarly legal writing has been done in Canada, Britain, the United States and elsewhere on the subject of international treaties generally and of treaty interpretation in particular. [1] Tax lawyers, accountants and others concerned with interpretation of tax treaties have not, it seems, often dealt with this area of the law, which has been reserved to that small group of specialists, the public international lawyers. This paper, therefore, is intended as a survey for tax practitioners of some of the well developed principles of public international law which may be brought to bear on problems of tax treaty interpretation. The comments are, of course, directed principally to Anglo-Canadian jurisprudential developments rather than to developments in the American courts. [2]

The treaty: a statute or contract?

The first question which should be resolved in dealing with questions of interpretation of treaties is the determination of whether a treaty is a contract or a statute. A tax treaty originates

as a contract between two sovereign states concerning taxation or relief from taxation by one state of the residents or citizens of the other. Such treaties typically cover income taxes or estate and gift taxes. Although created through bilateral agreement by the executive branch of government, tax treaties do not come into effect unless appropriate legislation is enacted.[3] Thus, in this sense, a treaty becomes a statute.

Implementing tax treaties by legislation probably follows the Canadian practice adopted by Parliament in 1926, following the recommendations of the 1923 Imperial Conference on Treaties.[4] Whether such ratification is necessary in law is debatable,[5] and recent indications have been given in Parliament that the government believes it has the right to make and bring into force international agreements (not specifically tax treaties) without the prior approval of Parliament.[6] Clearly, to the extent that a tax treaty is at variance with the provisions of the domestic law (e.g. the Income Tax Act), an amendment to the domestic law is a necessary condition precedent to the implementation of the treaty, and this can be effected only by Parliament.[7]

For whatever reason, invariably tax treaties are created, in the first instance, as bilateral international agreements, and are brought into force in Canada as part of the statute law through enabling legislation passed by Parliament. The question is: should such treaties be interpreted by the application of the ordinary rules of statutory interpretation, or should they be interpreted by the application of the rules applied to interpretation of contracts or by some generally accepted rules of international law?

If treaties are properly regarded as fiscal legislation, they should as other fiscal legislation be construed strictly.[8] Where treaties depart from domestic law, they invariably provide an exemption or reduction of tax beneficial to the taxpayer. The usual rule of construction of fiscal statutes, in dealing with exemptions, is to require the taxpayer claiming such exemption to prove not only that his case clearly falls within the exemption but also to convince the court that the exemption clearly applies to the facts of his case. In other words, the exemption is construed narrowly.[9] It could therefore be argued that treaties, if they are the equivalent of statutes, are to be strictly construed.

Should treaties be strictly or liberally construed?

There is authority, however, that such statutory rules of construction, applicable to fiscal legislation, should not be applied to tax treaties. McNair[10] believes that treaties generally should not be construed in a pedantic spirit and when ambiguous should receive a liberal construction. Van Houtte[11] has expressed the view that tax treaties must be interpreted, in the first instance, by methods similar to those used in interpreting a private contract. It has long been recognized by British courts that a treaty of alliance is not a thing stricti juris but ought to be interpreted with liberal explanations.[12] In interpreting and applying treaties, the courts have said they should be prepared to extend "a liberal and extended construction" to avoid an anomaly "which a contrary construction would lead to". As the court has recognized that "we cannot expect to find the same nicety of strict definition as in modern documents, such as deeds, or Acts of Parliament; it has never been the habit of those engaged in diplomacy to use legal accuracy, but rather to adopt more liberal terms".[13] Canadian courts have established that:

"The accepted principle appears to be that a taxing Act must be construed against either the Crown or the person sought to be charged, with perfect strictness — so far as the intention of Parliament is discoverable. Where a tax convention is involved, however, the situation is different and a liberal interpretation is usual, in the interests of the comity of nations."[14]

The English courts have also recently confirmed this principle of a liberal interpretation of international treaties. In referring to the construction of a British statute which implemented an international treaty to which Britain had become a party, Lord Macmillan said:

"It is important to remember that the Act of 1924 was the outcome of an International Conference and that the rules in the Schedule have an international currency. As these rules come under the consideration of foreign Courts, it is desirable in the interests of uniformity that their interpretation should not be rigidly controlled by domestic precedents of antecedent date, but rather that the language of the rules should be construed on broad principles of general acceptation."[15]

Canadian system have departed significantly from principles of statutory interpretation, in part embracing techniques which American courts would routinely use in interpreting statutes but which have been avoided in the Anglo-Canadian system.

3. Vanek, in his article *Is International Law Part of the Law of Canada,* 8 U. of T.L.J. (1949-50), 265, states that a treaty that affects private rights requires ratification of Parliament. He further suggests that a treaty made by the federal executive branch could, if it affects a branch of law in which the provinces have jurisdiction, be implemented by provincial legislation. See too: *A.G. Can. v. A.G. Ont. (Labour Conventions Case).* [1937] A.C. 326 and *Arrow River v. Pigeon Timber Co.,* [1932] S.C.R. 495, rev'g. 66 O.L.R. 577, rev'g. 65 O.L.R. 595, and the Canadian Government Memorandum of July 21, 1952, published in the United Nations Legislative Series, Laws and Practices Concerning the Conclusion of Treaties, ST/LCO/SER.B/3, 24 and 25. The federal government takes the position that it has the exclusive power to make international agreements: Hon. P. Martin, *Federalism and International Relations,* Queen's Printer (1968), 11-16, 24-28 and 30-33. However, the power of the provinces to make treaties in areas of law in which they have jurisdiction has received judicial approval: *Re Reciprocal Enforcement of Maintenance Orders Act,* [1956] S.C.R. 137. *Quaere:* how would an international treaty relating to provincial succession duty or gift tax be implemented?

4. H.C. Deb. (Can.) 1926, Vol. 5, 4758.

Babco Ltd.,* [1978] A.C. 141 at 153: "... *the assumed and often repeated generalization that English methods are narrow, technical and literal, whereas continental methods are broad, generous and sensible seems to me insecure at least as regards interpretation of international conventions.*" It is submitted that this view has been overruled in the more recent decision of the House of Lords in *Fothergill v. Monarch Airlines Ltd.,* discussed infra.

14. RWS Fordham, Q.C. in *Saunders v. M.N.R.,* 54 D.T.C. 524 cited with approval by the Federal Court — Trial Division in *Canadian Pacific Ltd. v. Queen,* 76 D.T.C. 6120 and *Melford Developments Inc. v. Queen,* 80 D.T.C. 6074. In the *Canadian Pacific* case, the court added, "*The parties are in agreement that the terms of the treaty will override the Act and that it should be construed more liberally.*"

15. *Stag Line, Ltd. v. Foscolo, Mango & Co.,* [1932] A.C. 328 at 350 referred to with approval by the Federal Court — Trial Division in *Furness, Withy & Co. Ltd. v. M.N.R.,* 66 D.T.C. 5358 and in *Hunter Douglas Ltd. v. M.N.R.,* 79 D.T.C. 5340 and by the House of Lords in *Fothergill v. Monarch Airlines Ltd.,* [1980] 3 W.L.R. 209. See also *Bulmer Ltd. v. Bollinger S.A.,* [1974] 1 Ch. 401 at 425 where Denning, M.R. said: "*The draftsmen of our statutes have striven to express themselves with utmost exactness. They have tried to foresee all possible circumstances that may arise and to provide for them. They have sacrificed style and simplicity. They have foregone brevity. They have become long and involved. In consequence, the judges have followed suit. They interpret a statute as applying only to the circumstances covered by the very words .... How different is this treaty! ... Seeing the differences, what are English courts to do when they are faced with a problem of interpretation. They must follow the European pattern. No longer must they examine the words in meticulous detail. No longer must they argue about the precise grammatical sense. They must look to the purpose and intent.*"

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Therefore, the clear weight of authority would appear to be against using the type of strict interpretation which would normally be applied to an exempting provision of fiscal legislation in construing a tax treaty. The justification for this general rule of interpretation probably lies in the origins of a treaty generally as a contract or agreement between two or more States rather than in its formal ratification by Parliament as legislation. [16]

General canons of interpretation

In his excellent article, G.G. Fitzmaurice [17] classifies three main schools of thought on treaty interpretations:
(1) *intentions of the parties* or *founding fathers* school;
(2) the *textual* or *ordinary meaning of the words* school; and
(3) the *teleological* or *aims and objects* school.

The author (who at the time of writing was Second Legal Adviser to the British Foreign Office) notes that most cases involve a blending of the three schools of thought, with one of the three schools given primacy over the other two. The author correctly notes that the "teleological" or "aim and objects" school is usually applied to general multinational, social or humanitarian treaties and may not be used frequently in interpreting bilateral treaties such as tax treaties because the parties to bilateral treaties actually work out the specific terms through bilateral bargaining. Multinational treaties are not the result of such a precise bargaining process, and the court therefore has more scope of interpreting treaties by determining their apparent aims and scope. Therefore, in dealing with tax treaties, we are usually concerned with the interplay of two of the schools — the "founding fathers" or "intentions of the parties" and the "textual" or "ordinary meaning of the words" schools. Of the two, Fitzmaurice feels that in interpreting bilateral treaties, the "intentions of the parties" school should be paramount, since according to him it is the juridically natural view derived from well-known principles of private contract law. [18]

Ordinary meaning of the words

The more conservative view, however, is that the "textual" or "ordinary meaning of the words" theory of interpretation is paramount. As may be obvious, the language used in treaties generally (and tax treaties in particular) does not normally reflect the same degree of precision or detail as one has become accustomed to find in the Income Tax Act. There may be many reasons for this, including the necessity of working with a generally accepted style of drafting which accords with standards of most states. Obviously other states could not likely be persuaded of the advantages of the Canadian style of obscure and complex fiscal draftsmanship. It has been recognized that in construing treaties the court must attempt to give the widest scope to the language in order to include within it all matters intended to be included. [19] The court is bound to construe the words and not wholly depart from them, however, in order to attain the intended or reasonable consequences.

Courts should give wide scope to treaty language

If it cannot achieve such consequences by construing the words used, it is not empowered to abrogate the treaty merely because its consequences appear anomalous. [20]

It is also clear that the treaty is to be read as a whole, and particular phrases are not to be read in isolation or out of context. [21] In this regard, the natural sense of the words is to be followed, [22] unless perhaps if the result is unreasonable or absurd. [23] If, however, the natural and ordinary meaning of the words is ambiguous or leads to an unreasonable result, then the court should resort to other techniques of interpretation to discover what the parties intended. [24]

"Travaux préparatoires"

In interpreting contracts between persons in which there are ambiguities, the court may look to other evidence outside the contract for help in finding the intention of the parties. [25] Probably arising from this same principle is the rule of treaty interpretation; the tribunal in interpreting a treaty may consider the "travaux préparatoires" as evidence. [26] The real issue is whether this material can be examined only to confirm an interpretation which is fairly clear from the text itself even in the absence of a patent ambiguity or obscurity. [27] The International Court of

16. See R. Lenz, General Reporter, 2nd Subject, *Interpretation of Double Taxation Treaties*, Cahiers de Droit Fiscal International (1960), Vol. XLII, 299. The co-existence of the rule of strict construction of an exemption provision in the Income Tax Act with the rule of broad construction of a comparable exemption in a tax treaty was confirmed by Thurlow, J. in *Furness, Withy & Co. Ltd. v. M.N.R.*, 66 D.T.C. 5358 at 5363. Note should be taken of the dictum wrongly conceived, it is submitted, of Dumolin, J. in *Western Electric Co. Inc. v. M.N.R.*, 69 D.T.C. 5204, at 5210 "... *dealing, as I must, with a measure of exception, expressly enacted by the contracting parties to limit the extent of their own national laws and to devise special rules governing special cases of mutual interest, I feel bound to adhere closely to the current and ordinary meaning of the treaty terms. even more so than to provisions of any other statute.*"
17. See footnote 1.
18. Recent Canadian cases have confirmed that the purposes of a tax treaty, namely, the avoidance of double taxation, should be considered in arriving at an acceptable answer to an interpretative problem: *Hunter Douglas Ltd. v. Queen*, 79 D.T.C. 5340 and *Rutenberg v. M.N.R.*, 79 D.T.C. 5394.
19. *Shahmoon v. M.N.R.*, [1975] CTC 2361. See also Lauterpacht, 28 Harvard Law Review (1935), 564, and para. 1 of Article 31 of the *Vienna Convention on the Law of Treaties*, discussed below. Compare, however, the decision of the International Court of Justice in *Re Peace Treaties of 1947 with Bulgaria, Hungary and Romania*, [1950] I.C.J. Report 221 and *Davis v. Queen*, 78 DTC 6374 (aff'd 80 DTC 6056) where a rather strict, or textual, reading of the treaty was adopted without apparent regard for its underlying purpose.
20. "There is therefore no justification for interpreting the definition so as to distort the ordinary meaning of either word", per Thurlow, C.J., *Queen v. St. John Shipbuilding*, 80 D.T.C. 6272 at 6275. See also, *The Ionian Ships*, (1855) Spink's Prize Cases 193 and *Acquisition of Polish Nationality*, (1923) P.C.I.J. series B, No. 7, 20. This is also illustrated in the judgment of Jackett, C.J. in *Tara Exploration & Development Co. Ltd. v. M.N.R.*, to D.T.C. 6370 at 6377 (aff'd 72 D.T.C. 6288).
21. See *I.L.O. and Conditions of Labour in Agriculture*, (1922) P.C.I.J. series B, Nos. 2 and 3, 23.
22. Dictionary meanings of the words used are frequently used. See, for example, *Western Electric Co. Inc. v. M.N.R.*, 69 D.T.C. 5204; *Bank of Nova Scotia v. Queen*, 80 D.T.C. 6009 and *Queen v. St. John Shipbuilding*, 80 D.T.C. 6272.
23. *Polish Postal Service in Danzig*, (1925) P.C.I.J. series B, No. 11, 39; *Employment of Women During the Night*, (1932) P.C.I.J. series A/B No. 30, 373 and *Arbitration Between Petroleum Development and Abu Dhabi*, (1952) reported Int'l & Comp. L.O. 247, per Lord Asquith.
24. *Admission to the United Nations*, [1950] I.C.J. Reports 8 and *Fothergill v. Monarch Airlines Ltd.* (footnote 15). See for example, *McMahon v. M.N.R.*, 59 D.T.C. 1109 where the Exchequer Court in attempting to give some meaning to the concepts in Article I of the Canada—U.S. Convention interpreted the Article and the word "enterprise" by reference to the presumed sensible meaning as referring to persons and corporations.
25. *Bk. of New Zealand v. Simpson*, [1900] A.C. 182 and *Confederation Life Assn. v. Berry*, [1927] S.C.R. 595. These rules are discussed in Cross, *On Evidence*, 4th ed. (Butterworths, 1974), 546.
26. This was done by the Privy Council in *Molefi v. Legal Advisor et al*, [1970] 3 All E.R. 724. Compare however *Preen v. Simmonds*, [1971] 1 W.L.R. 1381 at 1384.
27. See Fitzmaurice (footnote 1), 5. In contract cases, such evidence, in cases as between parties, may be led only in cases of ambiguity: *Higgins v. Dawson*, [1902] A.C. 1 and *Confederation Life Assn. v. Berry*, (footnote 25).

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Justice has been reluctant to have recourse to "travaux préparatoires" where the text of the treaty is clear and leads to no absurdity in the context of the issue. [28] O'Connell seems to feel that no such restriction should apply as to the admissibility of "travaux préparatoires", stating:

"The primary end of treaty interpretation is to give effect to the intentions of the parties, and not to frustrate them. But as Lauterpacht expresses it, 'the eliciting of the intentions of the parties is not normally a task which can be performed exclusively by means of logical or grammatical interpretation'. Furthermore, the 'intentions' of the parties may never have crystallised or been formulated beyond a certain point. Every lawyer knows that the parties to a contract contemplate only performance: they enter into the transaction with optimism, and do not ordinarily advert to the problems raised by, for example, frustration. The courts pretend that the parties intended what they, the courts, believe they would have intended had they reflected on the matter. It is clear, then, that 'intention' is very often a fiction, and even when there was a conscious intention the words designed to be expressive of it may not be particularly helpful for this purpose. The same is true of treaty intepretation with the added difficulty that the parties may never really have wanted to come to agreement and may have deliberately left the area of operation of the treaty opaque.

The problem of treaty interpretation, then, is one of ascertaining the logic inherent in the treaty, and pretending that this is what the parties desired . . . .

The term 'travaux préparatoires' is employed to designate those extrinsic materials which had a formative effect on the final draft of a treaty, and which assist to this extent in the disclosure of the parties' aims and intentions. There is little dispute today on the permissibility of resort to these materials by international tribunals, due mainly to the admittedly cautious lead given by the International Court which demonstrated that even single words such as 'industry' are often not susceptible of fixed meaning, let alone expressions such as 'draw up a convention' which might mean anything from presenting a first draft to ratification. The most that the written words can do is set up a presumption in favour of a dictionary meaning, or one devised for application of the rules of syntax. It may be rebutted by the production of preliminary documents disclosing a different intention.

From a policy point of view resort to 'travaux préparatoires' is unavoidable. A municipal judge operates within an accepted context of social patterns, and is not open to the criticism of favouring a political position represented by one or other party. An international judge, however, is very vulnerable in this respect, and it is a guarantee both to him and to the litigant States of judicial impartiality if his area of discretion is delimited. Instead of devising a construction to a treaty which is open to alternative interpretations, he has the remedy of discovering exactly what the parties meant by examining their minutes of conferences, their correspondence and their rejected drafts. If objectivity is the aim of judicial construction, it is best achieved by this means. Furthermore, a treaty, unlike a municipal contract, often represents a compromise of vital political interests. To interpret it without reference to the struggle for compromise is gravely to over-simplify the problem of treaty application." [29] *(footnotes omitted)*

English Courts

The use of "travaux préparatoires" as an interpretative aid has recently been confirmed as a proper aid for English courts to use in interpreting treaties in *Fothergill v. Monarch Airlines Ltd.* [30]

"So far as purely domestic legislation is concerned it is well established as a principle of interpretation that, even where the words of a statute are ambiguous or obscure, the proceedings in Parliament during the course of the passage of the Bill may not be resorted to for the purpose of ascertaining what ambiguities or obscure provisions mean .... So Hansard can never form part of the 'travaux préparatoires' of any Act of Parliament whether it deals with purely domestic legislation or not . . . .

It is, however, otherwise with that growing body of written law in force in the United Kingdom which, although it owes its enforceability within the United Kingdom to its embodiment in or authorization by an Act of Parliament, nevertheless owes its origin and its actual wording to some prior law-making process in which Parliament has not participated, such as the negotiation and preparation of a multinational international convention . . . which Her Majesty's Government wants to ratify on behalf of the United Kingdom but can only do so when the provisions of the Convention have been incorporated in our domestic law . . . .

My Lords, it would seem that courts charged with the duty of interpreting legislation in all the major countries of the world have recourse in greater or less degree to 'travaux préparatoires' or 'legislative history' (as it is called in the United States) in order to resolve ambiguities or obscurities in the enacting words . . . .

Accordingly, in exercising its interpretative function of ascertaining what it was that the delegates to an international conference agreed upon by their majority vote in favour of the text of an international convention where the text itself is ambiguous or obscure, an English court should have regard to any material which the delegates themselves had thought would be available to clear up any possible ambiguities or obscurities." [31]

The Vienna Convention

Articles 31 and 32 of the Vienna Convention on the Law of Treaties [32] (1969) provide that:

28. *European Commission of the Danube,* [1927] P.C.I.J. Series B No. 14 at 31, *Article 4 of the Charter of the United Nations,* [1947-8] I.C.J. Reports, 63, *Admission to the United Nations,* [1950] I.C.J. Reports 4 at 8 and *Minquiers and Ecrehos Case,* [1953] I.C.J. Reports 47 at 71.
29. D.P. O'Connel (footnote 1), at 262. See also Lauterpacht, *Some Observations on Preparatory Work in the Interpretation of Treaties,* 48 Har. L.R. (1934-35), 575, and van Houtte (footnote 1), at 42.
30. See footnote 15.
31. See also *Hunter Douglas Ltd. v. Queen,* 79 D.T.C. 5340, where the court admitted oral evidence (apparently undisputed) of an officer of Revenue Canada as to the view of the Government concerning the meaning of particular words used in the Canada—Netherlands Income Tax Convention.
32. U.N. Doc. A/CONF. 39/27. May 23, 1969, to which Canada deposited its instrument of accession on October 14, 1970. A memorandum of June 4, 1970 prepared by the Department of External Affairs makes the following statement in respect of the convention:
"This Convention constitutes a law-making treaty laying down the fundamental principles of contemporary treaty law. Because of the paramount importance of treaties as a source of the international legal obligations binding upon states and the diversity and comprehensiveness of the interlocking network of treaties which today regulate the major part of transactions between states and serve to establish the relationships among them, the Convention must be viewed as virtually the constitutional basis, second in importance only to the U.N. Charter, of the international community of states."
See Castel (footnote 1), at 912. Rossenne (footnote 1), at 207, outlines the legislative history to Articles 11, 32 and 33 of the Convention.
The Vienna Convention came into force on January 27, 1980 with the deposit of the 35th instrument of accession. The following countries had (at September 26, 1980) signed, ratified or acceded to the Convention: Argentina, Austria, Australia, Barbados, Canada, Central African Empire, Cyprus, Denmark, Finland, Greece, Holy See, Honduras, Italy, Jamaica, Kuwait, Lesotho, Mauritius, Mexico, Morocco, Nauru, New Zealand, Niger, Nigeria, Panama, Paraguay, Philippines, Republic of Korea, Rwanda, Spain, Sweden, Syrian Arab Republic, Togo, Tunisia, United Kingdom, United Republic of Tanzania, Yugoslavia and Zaire. By Article 5, the Vienna Convention applies to treaties which are concluded between States after its entry into force.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

"Article 31

General rule of interpretation

1. A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose. [33]

2. The context for the purpose of the interpretation of a treaty shall comprise, in addition to the text, including its preamble and annexes:

(a) any agreement relating to the treaty which was made between all the parties in connection with the conclusion of the treaty;

(b) any instrument which was made by one or more parties in connection with the conclusion of the treaty and accepted by the other parties as an instrument related to the treaty.

3. There shall be taken into account, together with the context:

(a) any subsequent agreement between the parties regarding the interpretation of the treaty or the application of its provisions;

(b) any subsequent practice in the application of the treaty which establishes the agreement of the parties regarding its interpretation;

(c) any relevant rules of international law applicable in the relations between the parties.

4. A special meaning shall be given to a term if it is established that the parties so intended.

Article 32

Supplementary means of interpretation

Recourse may be had to supplementary means of interpretation, including the preparatory work of the treaty and the circumstances of its conclusion, in order to confirm the meaning resulting from the application of Article 31, or to determine the meaning when the interpretation according to Article 31:

(a) leaves the meaning ambiguous or obscure, or

(b) leads to a result which is manifestly absurd or unreasonable."

Even in the absence of the Vienna Convention, it appears that there was no evidentiary rule which would exclude such evidence as "travaux préparatoires" in an appropriate case if an ambiguity exists. [34] It is pointed out that Article 32 is broader than the views expressed by the International Court of Justice and the House of Lords on the use of "travaux préparatoires". Whereas the International Court and the House of Lords restrict the use to cases where the meaning of the treaty is ambiguous or obscure, or where the treaty leads to an absurd result, the Convention permits the use of such material to confirm a meaning established by applying the textual rules of interpretation set out in Article 31. [35] It is doubtful whether a Canadian court would so readily admit such evidence in the interpretation of a treaty which was concluded before January 27, 1980, the date on which the Vienna Convention came into force, in the absence of a patent ambiguity, although it may be required to do so in dealing with the interpretation of treaties concluded after that date. [36]

Use of OECD Commentary

A specific issue in dealing with tax treaties is thus raised namely whether the Commentary to the OECD Model may be admitted as evidence of the intent of the parties when interpreting a text which follows that of the Model treaty. As has already been stated, when interpreting statutes in the Anglo-Canadian legal systems, the court will not admit evidence of the proceedings in Parliament as an aid to interpretation. [37] It is suggested that Parliamentary proceedings are also inadmissible in interpreting tax treaties brought into force by legislation. However, as evidence of "travaux préparatoires" may be admitted, the Commentary should be also considered as an aid to interpretation, certainly in cases of ambiguity where the treaty has been concluded after the Commentary has been settled and the treaty clause in dispute follows the OECD Model wording, provided, of course, the State whose taxes are in question has not noted any specific observation or registered any reservation to the Commentary. [38] Although it may be a valid argument that evidence of "travaux préparatoires" is not convincing evidence of intention because the best evidence of intention is in the final work, that is to say, the agreement or treaty itself, such an argument does not have much validity in respect of the Commentary which is akin to the minutes of the negotiators of a multinational treaty.

This view is supported by the stated purpose of and use made of the Commentary. As is said in the Report of the OECD Committee on Fiscal Affairs [39] to which the 1977 Model Convention and Commentary are annexed, the Committee believed that it is *"... most desirable to clarify, standardize and guarantee the fiscal situation of taxpayers in each Member country who are engaged in commercial, industrial or financial activities in other Member countries through the application by all Member countries of common solutions to identical cases of double taxation."* In reference to the earlier 1963 Draft Model and Commentaries, the Committee said, *"The existence of the Draft Convention has made it possible to facilitate bilateral negotiations between OECD Member countries and to reach a desirable harmonization between their bilateral conventions for the benefit of both taxpayers and national administrations. Moreover the existence of the Commentaries has facilitated the interpretation and enforcement of bilateral conventions along common lines."* On the intended use of the Commentary to the 1977 Model the Committee said, *"As these Commentaries have been drafted and agreed upon by the experts appointed to the Committee on Fiscal Affairs by the Governments of Member countries, they are of special importance in the development of international fiscal law. Although the Commentaries are not designed to be annexed in any manner to the conventions to be signed by Member countries, which alone constitute legally binding international instru-*

33. Article 31(1) has recently been cited in Canada in *Hunter Douglas Ltd. v. Queen*, 79 D.T.C. 5340 and *Melford Developments Inc. v. Queen* 80 D.T.C. 6074 in the U.K. in *Fothergill v. Monarch Airlines* (footnote 15) which also cited Article 32.

34. A consideration of earlier drafts of the treaty as an aid to interpretation has been approved by the Permanent Court of International Justice in *Treatment of Polish Nationals in Danzig*, (1932) P.C.I.J. series A/B, No. 44 at 33. British Courts have also used the technique for at least one hundred years: *Maltass v. Maltass*, (1844) 1 Rob. Ecc. 76, *Porter v. Freudenberg*, [1915] 1 K.B. 857 (C.A.), *Ellerman Lines v. Murray*, [1931] A.C. 126. This is permitted by Article 32 of the Vienna Convention and seems also to have support in Canada, see: *Ritcher v. King*, [1943] 3 D.L.R. 553 and *re Noble and Wolf*, [1948] 4 D.L.R. 135. See also D.J. Harris, *Cases and Materials on International Law*, 590, for a discussion of the background positions of the United States, Britain and France to Article 32 of the Vienna Convention. In *Fothergill v. Monarch Airlines Ltd.* (footnote 15), Lord Scarman said at p. 235: "Working papers of delegates to the conference, or memoranda submitted by delegates for consideration by the conference, though relevant, will seldom be helpful: but an agreed conference minute of the understanding upon the basis of which the draft of the article of the convention was accepted may well be of great value."

35. The recitals to the Vienna Convention indicate that the Convention is a "codification and development of the law of treaties". The interpretative provisions have been recognized as a codification of existing law in *Fothergill v. Monarch Airlines Ltd.* (footnote 15). *Quaere:* if the Vienna Convention does more than codify existing principles of international law, does it require enabling legislation to make it effective?

36. As O'Connell (footnote 1), at 253, noted: "It is said that where a treaty clause is clear and unambiguous it does not require to be interpreted. However, it may be doubted if a clear and unambiguous clause has ever been devised."

37. *Lyons v. Wilkins*, [1899] 1 Ch. 255, 264 and *S.E. Ry. v. Ry. Commrs.*, 50 L.J.O.B. 201 at 203 (H.L.).

38. For tax treaties concluded between 1963 and 1977, the commentary to the 1963 Draft OECD Double Taxation Convention on Income and Capital, published by OECD, 1963, might be more appropriate.

39. Published by the OECD, 1977. See pages 5 to 17.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

ments, they can nevertheless be of great assistance in the application of the conventions and, in particular, in the settlement of disputes."

In preparing the Commentary to the Model Treaty each State is free to record its disagreements with the official interpretation by noting its observations or making a reservation, and of course it is free to depart from the Model Treaty if it wishes to do so in negotiating particular treaty provisions. Therefore, in the absence of a specific observation or reservation by Canada, it is suggested that there is little reason to exclude the Commentary from the interpretative process, even in the absence of a patent ambiguity, particularly so for treaties concluded after January 27, 1980.

Subsequent practice and exchanges of notes and other documents

Article 31(3) of the Vienna Convention contemplates that in interpreting a treaty there may be taken into account, together with the context, any subsequent agreement between the parties regarding its interpretation or application and any subsequent practice in the application of the treaty. This provision is reflective of a view previously adopted by the International Court of Justice that subsequent practice of the parties to a bilateral treaty is usually a more reliable guide to their intentions than are "travaux préparatoires." [40]

As is noted below, however, unless Parliament has delegated its powers of amending the treaty — and the law arising from the enabling legislation — an interpretation, exchange of notes or other agreement of the parties which goes beyond mere interpretation and which has the effect of amending or adding to the treaty may be ineffective.

Plurilingual treaties

It is, of course, clear in Canada that both the English and French versions of the treaty are to be given equal weight in matters of interpretation. [41] The question arises: what weight is to be given to the version of the treaty written in a third or even a fourth language?

The answer seems to be contained in Article 33 of the Vienna Convention which provides as follows:

"Article 33

1. When a treaty has been authenticated in two or more languages, the text is equally authoritative in each language, unless the treaty provides or the parties agree that, in the case of divergence, a particular text shall prevail.

2. A version of the treaty in a language other than one of those in which the text was authenticated, shall be considered an authentic text only if the treaty so provides or the parties so agree.

3. The terms of the treaty are presumed to have the same meaning in each authentic text.

4. Except where a particular text prevails in accordance with paragraph 1, when a comparison of the authentic texts discloses a difference of meaning which the application of Articles 31 and 32 does not remove, the meaning which best reconciles the texts, having regard to the object and purpose of the treaty, shall be adopted."

Article 33 may add little to already established rules of interpretation, since as it has long been the British view that where treaties are drawn up in two authentic versions, Britain could not justify adhering only to the English version. [42]

Interpretation by reference to the law of the forum

Frequently, tax treaties use terms which may have a special meaning in tax law and perhaps may mean different things in different States. The issue arises in interpreting such bilateral tax treaties: which of the two possible meanings is to govern the interpretation?

When faced with this type of question, the Tax Appeal Board has interpreted the Canada—U.S. Convention in a manner consistent with an earlier decision in the U.S. Tax Court on the same point [43] and the Federal Court—Trial Division interpreted the Canada—Netherlands Convention in a manner consistent with that adopted by the Dutch Secretary of State for finances. [44] The desirability of a uniform interpretation particularly with multinational treaties has been well recognized, but its difficulties are apparent.

"Unfortunately, there can be no doubt but that at least some of the provisions of these articles have presented difficult problems and have resulted in acutely diverging views in the courts of other States which have adopted the convention. [There are] no less than 30 decisions of various courts, in Belgium, France, West Germany, the Netherlands, Italy and Austria. . . . Those decisions show no less than 12 different interpretations of the provisions of the Convention . . . ." [45]

Although the present Canada—U.S. Convention does not so provide, the OECD Model states that any term not otherwise defined by the treaty shall, unless the context otherwise requires, have the meaning which it has under the laws of that State concerning the taxes to which the Convention applies. This, therefore, gives the court of the forum the power to interpret undefined terms in accordance with domestic law. [46]

The question remains, however, when looking for the meaning of an undefined term in domestic law, which of various meanings is to be used. In particular, is the term to be defined by reference to its ordinary meaning, or by reference to its meaning in an ordinary legal and commercial sense? If the word has a particular meaning in the ordinary legal and commercial sense, but has a

different or expanded meaning under the Income Tax Act, is the Income Tax Act meaning to be applied to the treaty and, if so, if the Income Tax Act is subsequently amended, does it effectively change the meaning of the treaty? These questions have not been fully answered. First, it should be noted that the OECD wording does not specifically require the application of special meanings of words defined in the domestic taxing statute and the Commentary provides no clarification. [47] Second, it would appear that there has been no general resolution to this question internationally, as in some countries the courts look to the everyday meaning of undefined terms, while in others the courts look to the meaning in the tax legislation. [48] In Canada the position is still open. In *Associates Corp. of North America v. Queen* [49] and *Milford Developments Inc. v. Queen* [50] the Federal Court — Trial Division refused to find that a guarantee fee paid to a non-resident constituted "interest" for purposes of the Canada—U.S. and Canada—Germany treaties respectively. Both treaties had been concluded prior to 1974 when the *Income Tax Act* was amended effectively to deem such guarantee fees to be interest for purposes of the Act. In commenting on the argument of the Crown that the definitions of undefined terms are ambulatory and change with amendments to the Income Tax Act, Mahoney, J. in the *Associates Corp.* case said:

"The definition of 'interest' in the Protocol is not, by its terms, exhaustive. This is not, however, to say that it can be unilaterally expanded by Canada to embrace income that is not interest at all."

Clearly, therefore, specific later statutory definitions of treaty terms are not to be used. However, the judge went further and cast doubt on the relevance of an Income Tax Act definition even if made prior to the conclusion of the treaty as he seems willing to accept such a definition only if the provisions of the treaty are worded in such a way as clearly to include guarantee fees in the provisions dealing with interest:

"I should note that the tax conventions concluded by Canada since its enactment (that is the new definition of interest) in 1974 all contain expanded definitions of 'interest' which may well not be inconsistent with the [new definition in the Income Tax Act.]."

On appeal, however, the Federal Court of Appeal said:

". . . we expressly refrain from any finding that a 'deeming' provision in the domestic tax law might not, in other circumstances, be embraced by the provisions of international conventions." [51]

It has been suggested that where a problem of interpretation arises, other than one of a definition of terms, the application of domestic law should be avoided and the above described rules of interpretation which apply under public international law should be used with a view to obtaining an internationally consistent interpretation of the treaty. [52]

Interpretation by competent authorities

Article 25 of the revised OECD Draft provides, in part:

"3. The competent authorities of the Contracting States shall endeavour to resolve by mutual agreement any difficulties or doubts arising as to the interpretation or application of the Convention. They may also consult together for the elimination of double taxation in cases not provided for in the Convention.

4. The competent authorities of the Contracting States may communicate with each other directly for the purpose of reaching an agreement in the sense of the preceding paragraphs. When it seems advisable in order to reach agreement to have an oral exchange of opinions, such exchange may take place through a Commission consisting of representatives of the competent authorities of the Contracting States."

The Commentary states that the purpose is to invite the competent authorities to resolve general difficulties of interpretation or application by means of mutual agreement. The view of the OECD is that such mutual agreements should be regarded as binding on the administrators. Although such an agreement may be binding on the administrators, it is questionable whether they would bind taxpayers or the courts. There appears to be no generally accepted view on this question. [53] Although Parliament clearly has the capacity to delegate its power to its own administrative bodies, [54] it is doubtful that a Canadian court would feel bound by such administrative determinations, or find in the language of Article 25 the intention to so delegate. [55] However, the implementing legislation for Canada's recent tax treaties expressly authorizes the Governor in Council by order to amend, revoke, replace or add to such treaties. Clearly, with these treaties the intention to delegate is clear, and administrative agreements as to interpretation may have the force of law if promulgated as Regulations.

Summary and conclusion

In summary, therefore, there seems to be clear authority that the well developed (now codified in the Vienna Convention) principles of international law relating to treaty interpretation will be applied by the courts in interpreting Canada's new tax treaties. At the present time there is not a large body of well reasoned Canadian jurisprudence dealing with the specific issues of tax treaty interpretation. In light of the large number of new Canadian tax treaties already in force, or signed and awaiting enabling legislation or under negotiation, these issues of interpretation must soon reach the Canadian courts with increasing frequency and such jurisprudence will be developed in the future. The lead in treaty interpretation is clearly shown in the recent United Kingdom jurisprudence and will undoubtedly soon appear in Canada.

47. The 1963 OECD Draft Model was ambiguous, but could be read as requiring a reference to terms as defined in the domestic taxing statutes.

Override of Tax Treaties by Ordinary Legislation

by Marshall J. Langer *

A number of bills now pending before the Congress are designed to tax capital gains derived by foreigners from their investment in U.S. real property. Three of these bills were former trade bills passed by the House of Representatives: H.R. 1212, H.R. 1319, and H.R. 2297. These bills have marvelous names: The Synthetic Rutile Bill, The Hawaiian Telescope Bill, and the Duty Free Entry of Carillon Bells to the University of Florida Bill. These are trade bills that have passed the House of Representatives, following which the Senate Finance Committee has deleted the entire text of each of the bills, moving the duty-free entry items to other bills. The Finance Committee has substituted entirely new texts that deal, among other things, with the subject of taxing foreigners on capital gains from the sale of real property. These bills were prepared by the staff of the Joint Committee and they were approved by the Senate Finance Committee in December 1979.

Another bill that would also tax foreigners on capital gains from real estate is H.R. 6007, which was prepared by the Treasury Department. It was introduced in December 1979 by Congressman Fisher of Virginia. Most of the bills dealing with this subject provide that any income tax treaty obligation that conflicts with the bills will be overridden after five years. It is likely that some bill dealing with this subject will be enacted during 1980, and it is apparent that both the Congress and the Treasury feel that, in order to be fully effective, this legislation must override existing tax treaty provisions.

Scope of pending legislation

The Synthetic Rutile Bill (H.R. 2297), for example, would impose a flat tax of 28 percent on capital gains derived by foreign investors from the sale of their interests in U.S. real property. The tax would also apply to gains realized by foreign investors on the sale of shares or other interests in U.S. *"real property holding organizations"*, whether corporations, partnerships, or trusts. A real property holding organization would be defined so broadly that it would include practically every closely-held entity investing in U.S. real estate. The tax would be enforced by withholding provisions, and every real property holding organization would be required to file an annual information return disclosing its shareholders.

Conflicting treaty provisions

The imposition of such a broadly-based capital gains tax would be in direct conflict with several existing U.S. income tax treaties. Treaties presently in force with Canada and the United Kingdom generally exempt from tax capital gains from the sale of U.S. real property derived by an investor from the other treaty country if there is no U.S. permanent establishment. This may not help in the long run because a new treaty is being negotiated with Canada, and it appears that the final steps toward ratification by the House of Commons of the new United Kingdom treaty are likely to take place by April 1980. When and if the new U.K. treaty takes effect, it will do so retroactively. There will be no further protection as to capital gains since the new U.K. treaty contains no restrictions on taxing such gains.

None of the other existing U.S. income tax treaties contains provisions that would directly protect an investor in real estate. However, several existing treaties do contain provisions that would exempt residents of the other treaty country from U.S. capital gains tax on the sale of shares of a corporation, whether or not the company whose shares are sold is a real property holding organization.

When we review the treaties, we find that the Netherlands Antilles treaty does not contain such a provision. Neither does the old U.K. treaty as extended to the British Virgin Islands. Nor does the treaty with Switzerland contain such a provision. You will find such provisions in the treaties with Sweden, Canada, the United Kingdom (the old treaty for as long as it lasts), the Netherlands (but not the Antilles), Germany, Finland, Belgium, Japan, Norway, Romania, and Poland. We are busily at work now trying to determine how we can make use of Polish holding companies to supersede these new provisions during the coming years.

The Synthetic Rutile Bill provides a special effective date in cases where treaties conflict with the bill. Where no conflict exists, the bill would take effect for sales in 1980 and thereafter. Regardless of any treaty conflict, the bill would apply to sales in 1985 and thereafter.

Can Congress override treaty provisions?

We come then to the question of whether or not the United States Congress can override an existing treaty by ordinary legislation? And, if it has the power to do so, should it do so in a case such as this? And, if the Congress does choose to override existing treaty obligations, should it give the Treasury five years or some other period of time within which to try to renegotiate conflicting treaty provisions? I am going to try to answer the first question on whether or not the Congress has the right to override an existing treaty by ordinary legislation.

I will leave to David Brockway, of the staff of the Joint Committee, the task of discussing the policy issues that are involved.

It seems clear that the Congress does have the right to enact a law which overrides an inconsistent treaty provision as domestic law, at least if its intention to do so is clearly shown. There is a one-paragraph statement of the law in Revenue Ruling 79—199.[1] Article VI, Clause 2, of the U.S. Constitution states that laws and treaties are the supreme law of the land. Income tax conventions are treaties within the meaning of that supremacy clause under the American Trust Company case.[2] Whenever possible, treaties and laws dealing with the same subject are to be read in a consistent manner.[3] Numerous cases hold that when a treaty and a law are inconsistent, the one last in date will control the other. Thus, when a law conflicts with a later treaty, the treaty prevails; and when a later law conflicts with an earlier treaty, the law prevails.

"The purpose of a law to override all or part of a treaty will not be lightly assumed. It should appear clearly and distinctly from the words used in the law." [4]

There is a good summary of the existing law in the Restatement Second of Foreign Relations, Section 145, which says that *"an Act of Congress enacted after an international agreement of the United States becomes effective, that is inconsistent with the agreement, supersedes it as domestic law of the United States if the purpose of Congress to supersede the agreement is clearly expressed"*. The Restatement adds that the superseding of the agreement as domestic law of the United States by subsequent Act of Congress does not affect the international obligations of the United States under the agreement.

The Internal Revenue Code contains two provisions dealing directly with the relationship between the Code and Treaties. Code Section 7852(d) states that no provision of the Code shall apply in any case where its application would be contrary to any treaty obligation in effect on the date that the Internal Revenue Code was enacted. That date was August 16, 1954. That provision was apparently included to prevent the enactment of the 1954 Internal Revenue Code from taking precedence over all pre-existing treaties on the ground that it was a new Act of Congress. Since it was later in time it might otherwise be deemed to override the pre-existing treaties. One of the interesting aspects of the section, however, is that it continues to apply to any treaty provision that was in effect prior to August 16, 1954, even with respect to new amendments of the Internal Revenue Code.

Code Section 894(a) states that income of any kind, to the extent required by any treaty obligation, shall not be included in gross income and shall be exempt from tax. That provision does not have a date so it would apply with respect to all treaties, whether or not they are pre-1954 treaties. The language of Section 894(a) is not very broad in scope. It merely deals with what is included in gross income, and not with other types of treaty provisions.

In enacting the Revenue Act of 1962, Congress expressed its intent to override existing treaty obligations, in Section 31 of that Act. A Conference Committee Report indicated that in the view of the Treasury there was only one conflict between the Act and treaties, a minor exception relating to the real estate clause of the Greek estate tax treaty. The conflicting treaty provision was successfully renegotiated shortly after the passage of the Act.

In enacting the Foreign Investors Tax Act of 1966, Congress expressed its intent not to override any existing treaty obligation. Section 110 of the Foreign Investors Tax Act (not codified) provided that *"no amendment by this title shall apply in any case where its application would be contrary to any treaty obligation of the United States"*.

The Senate Committee Report on H.R. 2297, [5] the Synthetic Rutile Bill, contains this clear expression of proposed Congressional intent:

"The amendments made by the provision will generally apply to dispositions after December 31, 1979. However, for a five-year period, gain will not be taxed to the extent required by treaty obligations of the United States. After that five-year period, for the renegotiation of conflicting treaty provisions, that is, after December 31, 1984, the provision will prevail over any conflicting treaty provisions remaining in effect."

It seems clear that Congress can override existing treaty provisions and that it apparently intends to do so in this case.

Real estate is only one of the areas where Congress may try to override treaties. Another is the foreign tax credit area, where several issues may be affected by existing treaty provisions. For example, what is a foreign income tax, and what limitations on credit should be imposed?

David Brockway, International Tax Counsel of the Joint Committee on Taxation, will deal with some of the policy questions as to whether Congress should override tax treaties and, if so, whether they should give the Treasury time to renegotiate these treaties.

When the treaty override question was raised in 1962, there was a barrage of protest from lawyers. The Committee on Taxation of Foreign Income of the American Bar Association said that the unilateral modification of tax treaties was, *"a shocking, unconscionable, and unnecessary violation of international agreements"*. Thus far, there has apparently not been any such strong opposition to the current override proposals.

4. Lee Yen Tai v. United States, 185 U.S. 213, 221 (1902).
5. S. Rep. No. 96-504, 96th Cong., 1st Sess. (1979).

Override of Tax Treaties by Ordinary Legislation

by David Brockway *

Before trying to answer Marshall's questions or address them, let me make a couple of general comments on his remarks.

First, I agree generally with what Marshall has to say about the power to override treaties by legislation. If there is a difference in our viewpoints, it is one of emphasis, and that is in the question of what is necessary for a statute to override an existing treaty obligation. I am not convinced myself that it is necessary for Congress to express clearly in the legislation its intent to override as such in the way it was done in the real estate bill, where we indicated that this was our particular purpose. I think that perhaps what the authorities stand for is the general rule of interpretation that you try to read the statute and the treaty in harmony and try to avoid a conflict if possible; that a subsequent statute should be viewed to be in conflict with and thus to override an existing treaty only if it was clear and distinct from the words of the statute and the treaty that there was an actual conflict between the provisions, but if he conflict is in fact clear and distinct it is irrelevant whether or not Congress ever expressed its intent to override as such. One project we are working on at the moment is a report on the foreign tax credit and the interrelationship of the credit and the tax treaties. We are going to have to take a position at some point this year on the question of what is necessary for legislation to override a preexisting treaty obligation; so by that time my thoughts will have been developed a little more fully.

Treaty provisions mostly prevail over Code

In any event, I think that, as Marshall said, the problem is basically solved at the moment by the Code provisions that say that, with respect to exemptions from income, the treaties prevail notwithstanding contrary Code provisions and, in the case of pre-1954 treaties, the treaties prevail in all respects. I should just note, however, that there is at least some possibility that those

* International Tax Counsel of the Joint Committee on Taxation.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

provisions will be examined by Congress within the next few years to see whether it wants to stick with the exact principles of Sections 894 and 7852. Whether these provisions are going to be changed is another question, but I think there is some concern, at least in the Ways and Means Committee, as to the general relationship between treaties and the statute.

I also note, as an aside, that in the Nat Boidman article that is in the materials, he mentions that in both the United Kingdom and Canada their principle is also that subsequent legislation will override a treaty. That being the case, I do not know that it is so shocking that we also take that position, although I gather from his article that they have the same reluctance that we do actually to invoke that power. After yesterday's discussion, though, I am somewhat reluctant to rely on Canadian and British precedents, after hearing that they do not take legislative history into account when interpreting statutes. That kind of thinking could put me out of work.

Turning to Marshall's principal question of whether we should override the treaties in the real estate bill, I would rather address the issues involved in whether Congress will override treaties in the bill rather than trying to make any judgment as to whether it would be appropriate for them to do so. First, as Marshall indicated, I do not think there is a great worry with respect to real estate held directly by foreign investors. There are only the two treaties, one with Canada and one with the United Kingdom, which limit the right of the United States to tax gains on U.S. real estate. The U.K. treaty will, I hope, go out of existence pretty soon. The Canadians have legislation similar to that we are contemplating and they would like very much to reach an agreement where each country can tax real estate gains by residents of the other country, and so I do not think there is going to be any great problem in reaching an agreement on that point, assuming we can ever get a treaty with Canada. My assumption is that within the five-year period, whether or not we put anything in the statute, there will be a change in both of these treaties on this point.

Real estate companies

Our larger problem is with corporations formed or availed of to hold real estate. It is something we have to deal with one way or another. The problem is that, if we just taxed the sale of real estate, the obvious alternative for a foreign investor holding stock in a corporation holding U.S. real estate is to sell the stock in the corporation, with the result that the new buyer gets a stepped-up basis and then liquidates the corporation without any U.S. tax. There are a number of possible ways of dealing with this problem. At the moment our judgment is that it is going to end best if we attempt to tax the sale of the stock. We have all along considered the notion of perhaps denying Section 336 treatment on the liquidation rather than taxing the sale of stock. Maybe we rejected it too soon and we are giving additional thought to that option. It would avoid many of these problems. In fact, one of the great attractions of that approach is that it does avoid the treaty problems. But for the moment, let us assume that the legislation will involve taxing sales of stock in U.S. real property holding companies.

Then the question is: will the Congress want to override the treaties if there is not a renegotiation within a reasonable period of time? I think there was a reaction that as long as there is one treaty outstanding which permits third country nationals to take advantage of that treaty, the legislation will not work. Right now, obviously nobody uses Polish holding companies, but there is no doubt in my mind that if the capital gains provision is changed in all those treaties except for the Polish treaty and if Poland would not effectively tax that income, Poland would become the new Netherlands Antilles.

Renegotiation of tax treaties may be difficult

I think that there is a feeling that something has to be done about the treaties which would prevent the United States from taxing foreign investors on gains on sales of stock in U.S. real estate holding companies. The Treasury is very concerned about the problem. I suspect with their attitude at the moment that there is no need at all for the provision in the legislation overriding any conflicting treaty provisions remaining after a five-year period for renegotiation. Realistically, they are going to try very hard to renegotiate these treaties on this point within the five-year period. However, the difficulty from Congress' standpoint is that it does not have control over whether or not the Treasury will actually succeed in renegotiating these treaties in that time frame. Notwithstanding Treasury's present intention, there is some awareness that if there is not something that automatically works to conform the treaties to the legislation after a resonable period, once the legislation is passed taxpayers will petition both the U.S. Government and the foreign governments about the problems of revising the treaties on this score, and it may prove to be very difficult to have all the treaties renegotiated in the reasonably near future. In fact, attorneys for foreign investors in U.S. real estate have warned me that I should not hope that the foreign governments were going to agree to renegotiate the treaties to allow us to tax this income. And I think there is some reality to that. For example, there has been a great deal of discussion on the issue of whether or not the Netherlands Antilles treaty should or should not be revised. I do not think that any of you would be surprised to hear me to say that it is not purely an academic issue. There has been a certain degree of pressure exerted on that issue and it is my guess that there would be in this context too. Consequently, it may not be so easy to renegotiate all the treaties to conform them to the legislation unless Congress in the legislation says that it is very serious about this and that the Treasury will have to act in one way or another.

Possible approaches

Having said that, I am not sure that the Congress necessarily has to do what was done in the Senate bill. It may well do what is in the Senate bill or it may well limit the degree to which it overrides the treaty. It does not really like to override tax treaties. I think there are some members who see restrictions on tax treaties as a positive good, especially some members of Ways and Means, but I think that most do not like overriding tax treaties and like to avoid doing so if possible. The principal concern here is one of avoidance of all taxes by the foreign investor, not so much of whether it is the United States or some foreign government which gets the revenue. In the present situation, there are many situations where U.S. real estate is held by third-country investors through a Netherlands Antilles holding company and no capital gains tax is paid to any country on the disposition of that property — that is the problem that is the real concern. So, conceivably, the legislation could limit the treaty override to situations where the stock of the foreign corporation is not directly or indirectly held by individual residents of the treaty country. That would substantially minimize the problem and should, at least in my view, deal with the legitimate concerns of the foreign government. There is no reason why foreign governments should have a strong concern in protecting the tax-free nature of investments by third-country investors.

Another possibility would be to limit the situations where the legislation overrides treaties to those where no foreign tax is paid or perhaps give a credit (a 906 credit) for any foreign tax paid on

© 1980 International Bureau of Fiscal Documentation – BULLETIN

it, just to say to those governments with which we have made treaty arrangements — which essentially are agreements governing how the two countries are going to share tax revenues — that we are not attempting to take their tax revenues; that all we are attempting to do is to make sure that our legislation works as a practical matter, and we are willing to live, at least until we can reach a renegotiation of the treaty, with their getting the revenue on the gain as long as one of the two countries taxes it. In that regard, you might see possibly a combination of these two approaches.

Another possible approach would be to notify the foreign government of the legislation in some formal manner and ask them if they want to renegotiate the issue and give them the option of either renegotiating in a reasonably short period of time or telling them that we are going to terminate the treaty. You do not violate the treaty provisions that way and it is up to them to determine how seriously they take this issue. That is a possibility we have not really explored.

Another approach, and it may be, again, combined with some of these others, is to set out in the statute a defined and limited scope in which to renegotiate this issue, delegating to the Treasury the authority to enter into some sort of executive agreement to deal with the real estate problem. I do not know how well that would fly on the Hill. I listened with interest to David's remarks yesterday in which he advocated a very broad delegation of power to the executive through the competent authority process. I think I can safely say that the Congressional viewpoint on executive discretion in these matters is somewhat different. You know, we are all sort of prisoners of our institutional roles. But, there might be some way that Congress could specify exactly what it had in mind, establishing an executive agreement procedure to resolve the real estate issue but which could not be used to negotiate foreign tax credit issues and everything else. It might be possible just to deal with the treaty provisions limiting the taxation of real estate directly or indirectly held by foreign investors — to renegotiate that issue alone, and, as long as it fell within the scope of what was set forth in the statute, let it go into effect without going through the regular ratification process. Alternatively, Congress might develop a model that could go through Foreign Relations with some speed, a model which set out the types of concessions it thinks would be appropriate to make to the foreign government in exchange for their agreeing to our desires.

The question of whether Congress wil override in a large part depends upon how the statute is set up. If the statute is set up the way the Finance Committee bill is set up, I think there will be an override to some extent. Now, if it is modified, the need to override may diminish quite a bit. An example of where modification might diminish the need quite a bit is if we gave foreign investors a fresh start on the basis of any U.S. property they presently hold. If that were done, then in the next five years we would not pick up any significant revenue from the legislation in any event and so any need to override becomes less and less important. But under the Finance Committee Bill I would expect there would be at least some limited override.

The five-year period

On the question — Marshall's second question — of whether five years is an appropriate time, I do not remember where exactly the five years came from. It was in the Wallop bill in 1978 — I guess that is when it was first introduced and I truthfully just do not know where we got five years from other than that we have five years in a lot of other places so why not here. There was in fact some attempt made to analyze whether that period was too long or too short, but once someone had thought of a number, the inertia of having that number meant someone would have to justify another number and so I think you will find the five-year period sticking unless there is some substantial change in the bill as a whole because there is no particular rationale for any number. There is one area where conceivably it might be shorter. There has obviously been a fair amount of — I do not know what the euphemism is but I think I have heard it referred to as "upgrading" — but in any event I have been told that there have been quite a few transactions prior to the effective date in bearer shares of Netherlands Antilles corporations in order to get a fresh start in the basis of those shares. You do not know who is selling to whom but it is a reasonable assumption that they are related parties. One planning technique I have heard discussed is to take existing Netherlands Antilles real estate holding companies and drop their stock down into a Netherlands subsidiary to take advantage of the capital gains provision of the Netherlands treaty. I do not know whether that particular technique actually works under the non-recognition rules in the Bill, but there may be an abuse potential. If the Bill stays in the form it is now — that is, if the tax is imposed with reference to historical basis rather than allowing foreign investors a fresh start as some have urged — I think that possibly in this type of abuse situation there may be some sort of earlier override, although the Treasury would resist that fairly strongly.

General comments

Finally, if I could make just a couple of general comments. As I said before, I think there is, for most members of Congress, a great reluctance to override treaties unilaterally. They would rather figure out some way to work it out and I think we are going to try to some extent to modify this legislation to take that into account. I think they respond to the same policy issues that the bar committee responded to. I do not think that their attitude is quite the same; but we all recognize it creates problems with our treaty program if we enter into agreements and then unilaterally override them. Having said that, I think the potential for conflict between the treaties and the statute is increasing and at some point we are going to have to work out a way to resolve the conflicts. One reason for the increase is just that international business is increasing a great deal so that the treaties have become much more important. The awareness of the impact of treaties is also increasing a great deal. I think this is attributable in large part to the U.K. treaty because it was such a political issue. It upset a number of people on both sides and made them very wary of tax treaties. And also I think the Netherlands Antilles treaty gets a certain degree of publicity and highlights the issues in this area. The hearings in the Gibbons Subcommittee contributed to this. While I understand the feeling of that bar committee, I do not think Congress is going to ignore its jurisdictional prerogatives and that in large part may govern how they are going to react. The treaties, of course, are negotiated by the Administration without any Congressional input and they are presented to Congress essentially on a take it or leave it basis.

It is extremely difficult to change anything in a treaty after it has been signed. They govern most investment within and without the United States and major changes in tax policy are made through the treaties. For example, our whole withholding tax area is basically governed by the treaty policy rather than the policy of the statute. The insurance excise tax appears to have been effectively repealed through the treaties without any disclosure to Congress that this was happening. People wonder why I bring that up from time to time, but, to put it in context, we used to collect more revenue from the insurance excise tax than we did from the interest withholding tax. The modification of our tax policy through the treaties is a very real issue for the Congress, and in particular for the Ways and Means Committee, which does not participate significantly in the formation of treaty policy. There are Members who are very concerned about their

© 1980 International Bureau of Fiscal Documentation – BULLETIN

role in the process of setting U.S. tax policy. Even in the Senate, Senator Gravel pushed in the Senate Finance Committee during its consideration of the 1978 Act for legislation that would take the jurisdiction of the tax treaties out of the Foreign Relations Committee and give it to the Finance Committee. That issue was avoided because the Senators do not like to have conflicts along those lines, but it indicates to some degree the concern there. If the tax writing committees write legislation which is regularly overridden by treaties in which they do not have any significant input, and if the tax writing committees have no practical way of changing those treaties, what you will find is that inevitably they will react adversely to the tax treaty process. Whether we have override in the future in any degree turns on whether the negotiators of the treaties take into account the concerns of Congress. One major concern is how broad the scope of the treaties is — whether the negotiators stick to actually eliminating double taxation (that is, actual taxation in a foreign jurisdiction and actual Federal taxation in the United States of the same income). A second concern is the extent to which they attempt to bring in novel provisions. I realize the desire to deal with particular problems that crop up differently in each country, but the more different types of provisions there are, the greater the possibility of a conflict between any legislative change Congress might want to make and some existing treaty obligation. Also, it is much more difficult for Congress to assess the impact of these new and different provisions. A related point in this area is the number of treaties. It is one thing when you have ten or fifteen treaties and they are basically similar and maybe you can renegotiate them without any great difficulty to reflect a tax policy change decided on by Congress. However, our treaty network is expanding very rapidly and there really is no possible way to renegotiate all our tax treaties in a short period. As Marcia Field indicated yesterday, Treasury is negotiating treaties with Malta, Bangladesh, Cyprus — that type of jurisdiction. The more treaties we get, the more and more impossible the process of attempting to renegotiate the treaties becomes. Eventually you may find Congress feeling itself somewhat tied in knots and just saying, "Well, we are going to override the treaties statutorily", unless a general agreement of all the parties is reached as to what are the appropriate matters to be included in treaties. There will have to be general agreement on the part of the tax writing committees that what is included in the treaties is acceptable to them. The treaties will have to be fairly limited in scope and not change that much from country to country in order to minimize the possibility of conflict between the treaty program and the desire of Congress to establish and control U.S. tax policy, particularly as it affects U.S. nationals and U.S. businesses anywhere in the world but also U.S. tax policy with respect to income of foreign residents and businesses that directly or indirectly arises out of the United States. There is a necessity that there be some agreement as to what the treaties should do, or there will be continuing conflict and more instances where Congress determines that it is necessary to override existing tax treaties unilaterally in order to implement changes in U.S. tax policy which it decides to adopt.

Mutual Agreement Procedure

by John F. Avery Jones [1]

I am going to speak about *mutual agreement procedure* and having heard Mr. Rosenbloom yesterday, I imagine it has another name in this country. Perhaps something like "the unilateral expression of views informally cleared with the other side" procedure.

I come from a country where the competent authority, the Inland Revenue, sometimes think they can write the tax laws. This came to a head the other day in a case in the House of Lords, the final court of appeal, in a case called "Vestey". I will not bore you with the details but what the tax authorities were claiming was they could decide not only whom to tax, but how much to tax them, under a particular piece of anti-avoidance legislation. I will read you just a short extract from one of the judges in the House of Lords, Lord Wilberforce, the senior judge, where he said this: *"A proposition that whether a subject is to be taxed or not or that if he is, the amount of his liability is to be decided even though within the limit by an administrative body represents a radical departure from constitutional principle. It may be that the Revenue could persuade Parliament to enact such a provision in such terms that the courts would have to give effect to it. But, unless it has done so, the courts acting on constitutional principles not only should not but cannot validate it."* I would like to put that concept into a United States context and ask you to imagine that the U.S. Model Convention, instead of reading as it did, contained just one article which reads as follows: *"The competent authorities may grant such relief from double taxation as they shall think fit."* Now if the Senate — and from my limited viewpoint from the other side of the Atlantic it seems to me that the Senate takes just a slight interest in what goes into tax treaties — were to pass such a provision, then I have no doubt that everything Mr. Rosenbloom said yesterday would be true. And I think I would even carry Mr. Brockway with me.

But the question which faces us this morning is not that at all. I want to pose the same questions in relation to the OECD Model. I suppose I should pose the questions in relation to the U.S. Model but my excuse for not doing so is that I am less familiar with it and in any case, it has not been adopted very widely so far. So, let me turn to the OECD Model and incidentally to the paper which you have with your bundle of papers.

Three types of mutual agreement in the OECD Model Convention

Now, like Gaul, I shall dvide the subject into three parts because in the OECD Model there are three types of mutual agreement. For those of you who do not have the model near you, I will jsut remind you what they are. There is Article 25(1) which talks about "transfer pricing", particularly where the individual taxpayer can ask (he can only ask) his competent authority to take up his case with the other country with a view to the avoidance of taxation not in accordance with the convention. That is the first type of agreement. The second type of agreement is found in the first sentence of Article 25(3), which provides that *"the competent authorities of the contracting states shall endeavor to resolve by mutual agreement any difficulties or doubts arising as to the interpretation or application of the convention"*, to which I shall refer as the interpretive provision. And the third type goes on to say, *"They [that is the competent authorities] may also consult together for the elimination of double taxation in cases*

1. *Editor's note.* See also J.F. Avery Jones et al.: "The legal nature of the mutual agreement procedure under the OECD Model Convention" in British Tax Review 1979 at 333 and 1980 at 13.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

not provided for in the convention." A rather surprising provision, you may think.

I do not claim that all types of mutual agreement neatly fall into one of those three categories. Obviously, there is an overlap. The specific case may be because there are doubts about interpretation of the convention. But, let us just use that as a framework.

A valid delegation?

Let me start at the end with what I described as a surprising provision, that is, that the competent authorities can eliminate double taxation in cases not provided for by the convention. In the United States, although this provision is in the model, my understanding is that it has only been used in treaties with Hungary and Poland. The provision is also not used in the United Kingdom, although my tax authorities were rather surprised when I pointed out to them that they had, in fact, used the provision once. Now we come to the point of validity. Let us assume that the competent authority does just that. And we turn up in court and we want to know what is the effect of that agreement. To put it another way, is there a valid delegation by, as I understand it in the United States, the President, with the advice and consent of the Senate, to the competent authority to add to the treaty. Now that, I think, is a very interesting question, and the fact that the provision is formed in two treaties means that it is no longer academic. It does seem to me that when it did get into those two treaties a point of very fundamental constitutional law was involved. And therefore, I looked, as I understand you spend all your time looking, at the legislative history, to see what was said about these provisions: "*The proposed treaty [this is the treaty with Hungary] contains various administrative provisions generally along the lines of the provisions contained in other U.S. treaties*"; and in relation to the treaty with Poland: *Thus, the proposed convention with Poland in general follows the approach of other U.S. income tax treaties.*" Well, I suppose these things cut both ways. If one must read the legislative history to find out what the treaty means and the legislative history does not draw attention to what the treaty appears to say, it may be that the treaty does not mean what it appears to say.

There, I think, is our first and very substantial point. I can tell you very roughly what the view in other countries is about this provision. It is difficult because a lot of other countries do not in fact adopt it. But Switzerland and Sweden appear to give it some validity. I have not, to my knowledge, found another country, with the possible exception of the United States, which is prepared to say that such a provision would in fact have legal validity. The reason I have a question mark about the United States is that if you read the legislative history, including the commentary to the OECD model, I think you will probably come to the conclusion that it was intended to be a delegation. Thus the answer is that it is probably legal but just wait until the Senate finds out about this. I do not know if Stanley Surrey is still here, but I gather he had a spot of bother trying to get a very much narrower provision through in the French treaty at an earlier time.

Well, so much for the surprising provision which, as I say, is not used very much. Let us look next at the more important one, the one about interpretation. "*The competent authorities shall endeavor to resolve by mutual agreement any difficulties or doubts arising as to the interpretation or application of the convention.*" And the question here is exactly the same. Is that a valid delegation by the President with the advice and consent of the Senate to the competent authority to agree? And I do emphasize agree. I do not think that a unilateral statement of opinion can possibly have any force. I am not an American lawyer but, I do think, even in this country it takes two to make an agreement.

Supposing we do have an agreement with the other competent authority as to the interpretation of a convention, what is the agreement's legal validity? Would you mind turning to page 348 in the paper which you received and you will see at the top of the page four propositions: [2]

(a) Whether there is any constitutional or other reason preventing delegation of the power to make such an interpretive agreement that is binding on the courts. And, as far as I know, the answer in this country is that there is no constitutional reason preventing it.

(b) If there is not, whether it was the intention of the interpretive provision that an interpretive mutual agreement should be binding on the courts. That, I feel, is a matter where the Senate comes in.

(c) If so, whether the mutual agreement is a valid exercise of such a power, i.e. whether it falls within the power granted by the interpretive provision, e.g. whether it is interpretive rather than legislative. That, of course, is in a treaty which does not contain what I described as the surprising provision.

(d) If so, was the agreement intended by the competent authorities to exercise its powers under the interpretive provision.

That is where the competent authority comes in but, I think, that it is the first time the competent authority comes in. I think the law is that they come last, and what matters in the legal hierarchy is what the Senate thinks. Here again, some countries will accept that there is a valid delegation. This is a matter of internal law and I can quote Sweden and Switzerland again as countries where that is the case. I can equally quote, and you will see this at the bottom of the same page, Germany, Belgium, Canada, Japan and the Netherlands, where it is quite clearly not accepted as a sufficient delegation and they make the comment that the position is quite different. Interpretation of a treaty is in the last resort the prerogative of the courts, which I also hope, is the position in this country. You will see we do not say in this article what the position in the United States is, and I cannot speak for Sidney Roberts, but presumably the reason we do not say that, and the same is true of the United Kingdom, is because the position has never been tested in the courts. This makes me think that maybe some of Mr. Rosenbloom's remarks were wider than is justified by the present state of judicial decisions.

Is mutual agreement binding on the courts?

When I say: the courts may not give effect to the agreement as a legally binding agreement, I certainly do not go as far as saying that the court should take no notice of the agreement. If I can again speak in American terminology, the agreement is something like what the courts would do to a revenue ruling. At least they will read it. They will give some weight to it. I do not know, or perhaps I should say I gather Sidney does not know, exactly what weight is given by the courts in this country to an interpretation agreement.

You will see, on page 350, [3] the extract from the Vienna Convention that was mentioned yesterday, "*there shall be taken into account together with the context, any subsequent agreement between the parties regarding the interpretation of the treaty*". Now that seems to me to fit this admirably. Here is a subsequent agreement, as to interpretation of the treaty, and what the codification of international law made by the Vienna Convention seems to be saying, is that you should take it into account, which is very different from saying that it is legally binding.

Does mutual agreement bind competent authority?

So much for the courts. What about the competent authority? The OECD commentaries say that the mutual agreement in this context is binding on the competent authorities. I find it difficult to know exactly what this means. The way I would look at it is, supposing the competent authorities were arguing a case in the court. Could they go against such an agreement? Here again, I can quote two countries where they cannot. Obviously again, Sweden and Switzerland because it is binding on the courts anyway. We could include Germany, Belgium and the Netherlands as countries where the competent authorities could not argue to the contrary. As I understand it, in the United States and Canada there is absolutely nothing to stop the competent authority from arguing any proposition it likes in the courts. Certainly in Canada it is done so and, in the United States, it has argued against a ruling or something like that.

Just to summarize at this particular point, it seems to me that (I suppose I should not say what the position seems to me to be, but I should pose questions for you to answer) if the competent authority makes an agreement with the other competent authority on the interpretation of a treaty; first, does the agreement bind the courts absolutely? And the andswer to that seems to me fairly clearly to be "no", although it has never arisen. Second, are the competent authorities even in the position to argue to the contrary in the courts? I would hazard a guess that they probably are. So I trust that that analysis — and I think that is the correct analysis whether or not I have come to the correct conclusions — is the sort of analysis which one should put to Mr. Rosenbloom's remarks yesterday in determining what is the legal status, and what matters is the legal status, of an agreement made by the competent authorities.

Relationship between mutual agreement and court decision

Let me now look at the most familiar type of mutual agreement, the one that, if I had asked anyone before I started what mutual agreement was all about, I am sure you would have all said: it is the familiar one about transfer pricing and all that. Just let me make a few, I am afraid they will be disconnected, comments on what I think the scope of this is. In asking a similar question, what is the relationship with the courts, the question is, I think, differently posed because one is not interested in what is the validity in the courts of an agreement made between the competent authorities relating to a single taxpayer dealing with a case of, say, transfer pricing. If the taxpayer does not like the agreement he can just not accept it. I think the question here is, can you make the agreement at all? Any taxpayer, of course, has a choice. He can either go to court or he can go to the competent authority and, indeed, subject, of course, to time limits, he can do both in either order. Except, I understand, in Sweden where you have to make the choice at the very beginning. It is always worth bearing in mind if you are in this field that what matters is not your law, but the other person's law. Supposing one tries the mutual agreement procedure first and it fails. They do not reach an agreement or the agreement is not satisfactory to you, what can you do? You can go to court. And, as far as I know, with the exception of Sweden, certainly of the countries considered in this article, there is nothing to stop you going to court as long as you have kept your time limits open and that's a fairly straightforward matter.

Now, what about the other way around? You go to court in either or maybe both countries and you do not like what the court decides. Can you now have a mutual agreement? Well, first of all, there is the time limit aspect. You have got to present the case within three years from the first notification of the action resulting in taxation not in accordance with the convention. I do not know how fast the courts are in your country but three years would not be an awful long time in my country. Assuming we are still within the time limits, can you override (and this is implicitly in favor of the taxpayer, of course) the court decision? As I understand it, you cannot in the United States unless the treaty says you can. If the treaty overrides all procedural barriers then the treaty means what it says. If the treaty says you can merely override internal time limits then, as I understand it, the position is, and it is the same in France, that you are stuck. You cannot vary the mutual agreement because the court decision is final. In other countries that is not, in fact, the case. Canada, for example, has legislation which specifically states that the mutual agreement can override a court decision. This makes me think, because as you heard David Ward say yesterday they have taken our legal system, that probably in countries like mine and Australia you are in the position that, there being no legislation to say that you can override it, you cannot do so. But that is uncertain. It has never happened in my country. But certainly in other countries, and I can point to Sweden, Switzerland, Japan, Netherlands, Belgium and Germany, it would be all right to override it. I think all that points to a proposition I made a moment ago, that really what counts is not your law but the other person's law, and if you start a mutual agreement procedure, or you start court proceedings, you have got to know where you stand in the other country.

How does mutual agreement fit in the legal system?

I do not want to take up any more time in introducing the topic but to come back to the main point which I would like to make: how does the mutual agreement procedure fit in with the internal legal system? In most cases, the answer seems to me that it just does not fit. You have this proposition that maybe you cannot have a mutual agreement after the court proceedings in some countries. It may be that if you do have a mutual agreement you are out of time for applying it, either in your own or in another country. That, of course, is subject to the point in the OECD Model which now says that you can implement it notwithstanding time limits. (There is a rather fascinating point on this. You have a statement in the new U.S. — U.K. treaty which says that any mutual agreement made shall be implemented and I gather there is a revenue ruling which says that means you override the time limits. But, the United Kingdom put in a reservation about overriding time limits so I think you may have pulled a "fast one" on us, as I do not think we realized what you said, or what you meant when you did say it.) And then, lastly, there is the point I started with. What is the legal effect of mutual agreements, either on the question of interpretation or on my surprising provision over rewriting the treaty? It seems to me very odd that that is a subject which, at this late stage in legal history, we could still be arguing about and I think it is certainly very unclear. So if I can say rather what the law should be, rather than what I think the law is, I think there certainly should be provisions which bring the mutual agreement procedure into the internal legal system. I can quote you Japan as one example, which specifically extends time limits under their internal law when a mutual agreement has been made.

May I end by hoping that I have asked some of the questions. I certainly do not claim to have answered them and I hope that this is a subject which we can consider in greater depth at the conference in Berlin. But, I do believe that this is the constitutional question of the 1980s. It is the question of what is the power of the competent authority? And what is the power of the Senate?

Source Rules in U.S. Tax Treaties

by Paul McDaniel *

I should explain that my initial assignment in this part of the program was to comment on the very fine paper and outline prepared by Bob Patrick. But as we talked about the reflections that his paper inspired, it seemed it might be more useful to reverse the speaking order. Thus, my comments on Bob's observations will come first and then his formal presentation will follow. I hope the reason for that change in order becomes clear.

The purpose of my remarks is to raise some issues with respect to the treatment of source rules in U.S. tax treaties. I approach the matter by asking this question: *"In what situations is it appropriate or necessary for the United States to consider modifying its statutory source rules by treaty?"* (In my remarks, I assume that the present statutory source rules are acceptable; I am not proposing to question the wisdom or desirability of those particular rules.)

Bob Patrick's discussion then will provide an analysis of the actual instances in which such source rule modifications have been agreed to by the United States or in which modifications would be made by the various model treaties. Moreover, I think as you consider Bob's analysis, a further question will be raised: Whether we can discern from existing U.S. treaties principles which do in fact appear to guide the United States when it agrees to modify its source rules by treaty.

It is important to keep in mind the elementary proposition that the U.S. statutory source rules are not self-operative taxing provisions themselves. Once an item of income or deduction is sourced, it remains for other provisions to provide the tax results that flow from that sourcing.

In my remarks I will examine three categories of operative tax rules to try to identify the situations where treaty modification of U.S. statutory source rules is appropriate for consideration.

I. *Category One:* The issue is potential double taxation of U.S. persons doing business or investing in another country (hereafter referred to as "Country A") because the source rules of the United States and Country A conflict, with the result that the foreign tax is not fully creditable for U.S. purposes.

There are various combinations of source rules which potentially produce conflict.

A. As to items of gross income:

Case 1: The United States sources the income in the United States; Country A sources the income in Country A. Double tax may result and in this situation the U.S. may consider modification of its source rules by treaty to prevent that result.

Case 2: The U.S. sources the income in the United States; Country A also sources the income in the United States. There are no problems of double taxation here because of the agreement on the source rules. But, as I will discuss later, despite this agreement on source rules, it is possible for problems still to arise, as the 1978 French protocol reveals.

Case 3: The United States sources the income in Country A; Country A sources the income in Country A. Here there is no problem because the U.S. foreign tax credit will operate to relieve double taxation.

Case 4: The U.S. sources the income in Country A; Country A sources the income in the United States. As long as Country A is an exemption country there is no double tax problem. There is a certain circular problem which arises if both countries are foreign tax credit countries, but it is not a problem of double taxation.

B. As to deduction items:

Case 5: The U.S. treats the deduction as U.S. source; Country A as A source. The U.S. foreign tax credit is increased and there is no problem of double taxation.

Case 6: The U.S. treats the deduction as U.S. source; Country A as U.S. source. Again there is no problem of double taxation.

Case 7: The U.S. treats the deduction as A source; Country A as A source. The U.S. foreign tax credit is reduced, but no double tax problem results because the Country A tax is also reduced.

Case 8: The U.S. treat the deduction as A source; Country A treats the deduction as U.S. source. Here the U.S. foreign tax credit is reduced, but A's tax is not. This is the appropriate case for the U.S. to consider treaty modification of its source.

Thus, in Category One, out of eight possible combinations of source rules, only two give rise to potential double tax problems: When both countries source an income item as domestic; and when both consider source of deduction items as foreign (Cases 1 and 8). In these situations, the U.S. may consider modifying its source rules by treaty. The question we can ask then, as we look to the discussion by Bob Patrick, is the extent to which the treaty source rules that have been agreed to by the United States modify our statutory source rules to meet one of those two situations.

II. *Category Two:* The issue is the United States taxation of foreign persons doing business or investing in the United States. Again one can look at the matter by examining the same eight cases as in Category I.

A. As to items of gross income:

Case 1: The U.S. sources the item in the United States; Country A sources it in A. Because of the possible double tax result, the U.S. could consider modifying its source rule.

Case 2: The U.S. sources the item in the U.S.; A sources it in the U.S. No double tax problems are created by the source rules.

Case 3: The U.S. sources the item in A; Country A also sources it in A. Again there is no double tax problem, unless the U.S. treats the income item as effectively connected income under Section 864(c)(4). Although in the latter situation the U.S. gives a Section 906 foreign tax credit, the U.S. could deal with the issue by providing in the treaty that only U.S. source income attributable to a permanent establishment is subject to U.S. tax. This approach was adopted, for example, in the U.S.—Swiss treaty.

Case 4: The U.S. sources the item in A; Country A sources it in the U.S. There is no double tax problem; if the Section 864(c) rules come into play, the situation is like Case 2.

B. As to deduction items:

Case 5: The U.S. sources the item in the U.S.; Country A sources it in A. The U.S. tax is reduced so there is no problem of double taxation.

* Professor of Law, Boston College Law School.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

Case 6: The U.S. sources the item in the U.S.; Country A sources it in the U.S. The U.S. tax is reduced and there is no problem of double taxation.

Case 7: The U.S. sources the item in A; Country A sources it in A. Again no problem of double taxation arises from the source rules. If Section 864(c) applies, the situation is like Case 5.

Case 8: The U.S. sources the item in A; Country A sources it in the U.S. Here there is a double tax, and it is appropriate to consider a change in the source rule by treaty.

Thus, in Category Two, the same two combinations of source rules present cases where the U.S. might modify its source rules: Where both countries source an income item as domestic, and where both countries source a deduction item as foreign. (One possible additional candidate is where Section 864(c)(4) treats an item of gross income as effectively connected with a U.S. trade or business.)

III. *Category Three:* The issue is the qualification of a U.S. individual or corporation for a U.S.—granted preference (tax expenditure).

Examples include Section 913, which is based on foreign source earned income, and deferral, which operates only for foreign source income of foreign corporations. In these situations, the source rules operate as eligibility standards to determine (in part) whether the taxpayer can qualify for the tax subsidy. As a treaty matter, modification of the U.S. source rules in these cases is a question of extending or cutting back the statutory tax preferences.

The 1978 French Protocol issue

Even though there was no disagreement that dividend and interest income of U.S. citizens residing in France was U.S. source, double tax problems nonetheless arose. The problems were created because of the interaction of residence and citizenship-based tax jurisdiction. The resolution, however, was effected by modifying the U.S. source rule to treat part of the U.S. source income as foreign source and then letting the foreign tax credit rules operate to relieve double tax. We can ask the question whether modification of the U.S. source rules to resolve a non-source rule problem was an appropriate or desirable treaty technique.

Income Tax Treaty Source Rules - A U.S. Perspective

by Robert J. Patrick, Jr. *

In discussing source rules today as a preliminary introduction to the September Paris Congress on this topic, for which I am serving as the General Reporter, I have been impressed with the schematic framework just presented by Paul McDaniel. At this point I feel very much as if he is sitting back and being able to observe the forest, and I am still laboring out there among the trees. With national reports now having been received from some 24 countries, outlining (in most cases, in some detail). their individual source rules, and also trying to take into account the consequences of source rules for treaty purposes, I am certainly in midstream in drawing conclusions and observations. Therefore, I thought the most useful thing for presentation today would be to concentrate upon one of my concerns in the general report and briefly discuss the application of treaty source rules. This services as an introduction to the larger subject of the general need for source rules and the actual role that they play.

One of my principal objectives in preparing the directive for this topic for the Paris Congress is to provide, through the individual country reports to be printed in the *Cahiers*, some general reference material on individual country rules on what we would call "source of income", or determining the origin of income and expenses. This is a subject on which it is difficult to find analyses or detailed descriptions of individual country rules, as compared to other areas of comparative tax law.

Source: one of the bases for taxation and tool in relief for double taxation

As a preliminary observation, after having been accustomed to embarrassment over the arbitrariness of certain U.S. source rules, such as our passage of title rule, which has certainly been questioned on intellectual grounds for a good many years, I find upon reading some comparative rules from around the world that I am a little less embarrassed by our own. Moreover, I am not certain at the moment as to how well anyone has been able to deal with some of these issues where it is necessary to determine source of income. I am also impressed that even among countries with substantially common jurisprudence in internal law, there is a wide variation in the rules adopted for determining the origin of income. Moreover, there are a number of items of income for which all countries have some uncertainty about what the proper source should be. I would cite such important areas as currency transactions or income or loss on the disposition of certain assets, while questions of source regarding insurance transactions are among other latecomers to the codification of source rules.

I do want to comment on how one perceives the role of source rules in the first place. My observations are tentative at this point, but I hope the *Cahiers* will provide a start toward future consideration in IFA and elsewhere of the general principles of the subject. From the practical standpoint, I am inclined to regard the concept of source as being a tool that is used to achieve certain results. Most often the practical question is which country is going to tax certain income. Source is what we consider one basis of taxation — source or origin. The other basis, which is widely accepted internationally, is, of course, residence. The United States is almost alone in also using citizenship as a basis for taxation in the case of individuals. Therefore, in looking at the concept of source of income and in determining whether we should change source rules, it is helpful to focus on the fact that generally we are looking at which country is going to have a taxation right. Or, more fundamentally, as I think Paul McDaniel suggested, will there be any taxation at all. After that determination is made, source rules are used again, and probably secondarily, as a tool in relief of double taxation.

These primary operative functions of source rules are the practical limitations on negotiators in tax treaties and are implicit in the decisions of writers of tax legislation. However, it is certainly possible, and in U.S. practice it is a fact, that source rules can be written that are, at least in form, independent of any substantive rules imposing tax. The most challenging question is whether there is any objective criteria or set of principles for judging whether a particular source rule is desirable or, indeed, what the

* General Tax Counsel, Exxon Corporation.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

source rule for a certain type of income should be. The national reports that were submitted generally do not offer reasons for the rules of national legislation.

What is the answer to this fundamental question? Why do we say income has one source rather than another? One must go to the League of Nations documents, and the Committee of Experts of the League, to attempt to determine the economic connection of income and to find theoretical discussion of this question. No very much theoretical work on this has been done since that time. Different countries have perceived of origin of income in a certain way, and perhaps the knowledge is lost in history, custom or practice of exactly what any legislature had in mind when it decided that the origin of particular income was Country A rather than Country B.

Significance of source rules

Short of providing the rationale behind particular source rules, one effort I have been making is to identify the relative significance of source rules in national legislation. I believe that with the United States emphasis on these rules, we accord to the concept of source a substantial independent existence as a fundamental feature of our taxation system. But it is very clear, as one reads the other national reports on source rules, that other countries are to a great extent able to function with a tax system that rarely talks about source or origin of income. Nevertheless, every tax system, even when it does not employ the language of source, makes distinctions as to the economic origin of income. They need to know for various purposes the origin of income although they may think only in terms of items that are taxable or non-taxable income.

Expense allocation rules

For income tax purposes we are generally talking about net income. Regardless of the degree to which a country has developed source rules for income, no other country has sought to deal in detail with expense allocation in the degree that we have done in recent years. Again, at least in theory, other countries have exactly the same problems which the source and expense allocation rules attempt to solve, and that is true whether the foreign system is a territorial system (exempting foreign source income of residents) or a foreign tax credit system. A clear fact emerging from the reports, however, is that the expense allocation rules have been given much less attention and appear to have considerably less development in internal law of other countries than that which has occurred in the last decade in the United States.

A very important part of the subject which I will not be covering in the IFA report should be noted in passing. That omission is the issue of characterization of the nature of income and its impact on source determinations. There are rather fascinating tax consequences that flow from different legal characterizations of transactions that are quite similar in substance and might involve, for example, in one case, the sale of something identified as property, and, in another case, the licensing of a process to make that property, or, in a third case, a contract requiring payment for the services to make that property. The consequences in international tax rules change dramatically from these characterizations, yet we quite arbitrarily divide economic activities into categories and give them very different treatment as to whether they are producing foreign or domestic source income.

Income tax treaties

I would like to turn specifically to income tax treaties. Both the OECD Model income tax treaty and the U.S. Model treaty (largely based on the OECD) employ rules of source. The development of source rules in U.S. treaties is roughly divisible into pre-1968 and post-1968 treaties. In pre-1968 treaties, the concept of source as such was not given much attention. For example, there was some notion that income originated in Canada, or originated in the United States, or should be apportioned, or perhaps originated somewhere else. But there is little development of this notion in the language of the treaties, and there was no separate article on source rules in these older treaties. Around 1968 (and in treaties as recent as the Korean treaty that finally went into force a year or so ago, but was based on the type of negotiating form that was used in the early 1970s), there is a separate article containing a list of source rules. As one looks at that article, one can see both the issue of how much internal law on source the U.S. was able to urge upon foreign tax systems, and, assuming U.S. rules were adopted, how much could be inserted without a great deal of detailed explanation. One also senses the inevitable incompleteness that arises in trying to incorporate the Internal Revenue Code rules on source. For example, these treaties with separate source rules generally provide that income from the purchase and sale of tangible personal property should be treated as income from sources within the contracting state only if the property is sold in that contracting state. But what about treatment of income from the manufacture and sale of property manufactured in one state and sold in the other? The treaty appears silent on that. I think the U.S. began to perceive drafting problems and questions about the effectiveness of trying to write all U.S. statutory source rules into treaties.

U.S. Model Treaty

At the time the U.S. Treasury published a Model treaty in 1975, the Treasury made an effort to adopt the OECD language in U.S. treaties. One judgment was that what would be regarded as source rules or their equivalent in the OECD Model were not all that bad for tax treaty purposes; namely, assigning primary taxation in one country and providing double taxation relief in the other country. So the U.S. has made an increased effort to adopt the rules of the OECD Model. Yet, as I will mention in considering some of these specific treaty rules, there are fairly substantial questions as to how clearly they identify origin or source.

The current U.S. Model generally combines source rules in the operative articles themselves. For example, the interest article will contain a concept of origin of the income covered. The U.S. Model treaty also contains, in the tax credit article, some special rules relating to source of income.

The permanent establishment rule

Looking at the structure of tax treaties, one observation is that there is a very important functional rule in treaties that, where applicable, does supersede numerous detailed rules about the source of different items of income. In using the permanent establishment concept, with income attributable to an establishment located in a country being made taxable in that country, the treaty tells you what you need to know. It permits you to have a general rule and treat as income attributable to a permanent establishment the connected operating and investment income of the enterprise. The fixed base rule has a similar result in the case of independent personal services. Here then is a rule that operates as a source rule in giving a situs to the income and operates functionally with the other provisions of the treaty on relief from double taxation to identify which country is going to tax and which country is going to give double tax relief. It is important, particularly if one is used to looking at tax rules from the United States' perspective, to have in mind the fact that the OECD Model is influenced very strongly by a territorial concept so that if the situs country has the exclusive right to tax the income of the permanent establishment, then under the internal law of a number of countries there is no problem in saying, "*And we the place of incorporation and the company headquarters will not tax that income.*" It makes resolution of double taxation easier for such countries than in the case of the U.S. which says, "*However, we are still going to tax United States companies just as if the treaty and its permanent establishment rule had not*

© 1980 International Bureau of Fiscal Documentation – BULLETIN

come into effect." The U.S., therefore, must provide in the treaty that the fact that the income is attributable to the foreign permanent establishment gives it a foreign source at the establishment for U.S. tax purposes. At that point the tax credit article can provide relief.

However, while the basic rule of the treaties about "attributable income" servies a very useful functional approach, it is my impression there is little guidance as to *when* income is attributable to a permanent establishment or, in the case of individuals, to a fixed base. At least the United States and some other countries have attempted to articulate how you get income effectively connected to a permanent establishment, but there appears to be no generally accepted statement of the principles. The attribution rule, once there is a determination of attribution, is really a rule that, although income in question may arise (under technical source rules) either in the country where the permanent establishment is located or elsewhere, it will be regarded as having its origin at the permanent establishment or fixed base. The U.S. Treasury, when discussing this issue in its technical explanations of treaties, has said that insofar as a foreign company has a permanent establishment in the United States, the income that is attributable to that establishment is narrower than U.S. internal law which provides that all business income is attracted to the permanent establishment. In addition, according to the Treasury, the income actually attributable is not only that generated by the permanent establishment from the activity of the establishment from sources within the United States but it also includes those attributable items of foreign source income of a permanent establishment that the U.S. taxes under the Code; that is, the foreign source income that is connected with certain designated business operations (see I.R.C. Section 864(c)) carried out in contact with the U.S. establishment even though technically, under U.S. law, the income is from foreign sources and, in general, the U.S. does tax foreign source income of non-resident aliens and foreign corporations. This is an illustration of how useful the attributable concept can be as an overriding or substitute source rule.

Per-country foreign tax credit limitation

I would add as a footnote that it is my judgment that the United States never really has had a true per-country foreign tax credit limitation. I also have some doubts about whether other countries have a true per-country limitation where income flows through foreign affiliates or subsidiaries to the parent country and is commingled, along with foreign taxes, at some offshore holding company or operating company situs. Because of the fact of commingling of income and operations at subsidiary levels, it is very difficult to think of how one would have a per-country rule that would actually work as a practical matter if our full source rules were applied. The simplest illustration of the problem is to take U.S. source rules under a per-country limitation of the foreign tax credit and apply them to, say, a subsidiary in Canada of a U.S. corporation where the subsidiary is making sales both in and out of Canada. As a practical matter, to what extent would anyone in computing the foreign tax credit look at whether or not title was effectively passed outside of Canada in determining whether the sales income of the Canadian company was Canadian source? It is not simple to impose our detailed source rules at either a foreign branch or subsidiary level, and tracing income at a sub-subsidiary level is extremely difficult. For that reason, if anyone wanted to try to write a true per-country rule, one ought to consider looking at the permanent establishment and attributable income concept not only for branches but perhaps for subsidiaries as well. This assumes, however, that there could be agreement on what is "attributable income".

The "other income" article

A second overriding treaty rule that seems to solve some of the mechanical problems of source is the "other income" article. The significance of this article is often overlooked, but it can assume great importance depending upon how narrowly or broadly defined are other operative articles, such as those covering interest and royalties. The usual OECD or U.S. model treaty provision says that income not specifically covered in another article is taxable only in the place of residence. Income that is subject to this "other income" article may include third country income or it may include income arising from the residence country itself.

Individual items of income

Turning to the individual items of income under treaties, as I previously noted the U.S. and OECD model treaties place source rules in most instances in the operative taxing rules for various items of income. The exact scope of these rules varies from item to item.

The treatment of income from real property provides perhaps the greatest degree of uniformity in source rules that one finds in any of the national reports. There would be no conflict with the basic rule of Article 6 of the model treaties that real property income has its origin at the situs of the property. In contrast, under national laws there would be a wide variation in the source of income on the sale of tangible personal property. The permanent establishment attributable income rule helps to resolve such conflicts, provided that the double taxation article is coordinated with the taxation article.

With activities such as shipping and air transport where you have international traffic that is a treaty defined concept, you have an international effort to agree on a method of taxing truly peripatetic activities using a special set of rules which frequently modify national legislation.

There is a considerable degree of national uniformity in treating interest as arising in the state of residence of the person paying the interest, but it is by no means the uniform rule under national law even among OECD member countries. The residence rule is adopted in Article 11 of the OECD and U.S. models.

Article 12 of the OECD and U.S. models, covering royalties, provides less assurance as to what exactly is covered. The OECD treaty refers to royalties "arising" in a state. But even in the U.S. model which tries to define where a royalty arises in terms of its use (based on the U.S. statutory rule), it is still not clear how the rule is applied where use in more than one country is involved. Moreover, for drafting purposes, the scope of the source may be defined to affect the result depending upon whether there is going to be exemption from tax or a positive withholding tax in what will be designated the source country.

Special mention should be made of how the treaties are used to define source of income in the area of services, especially with respect to independent services and services rendered by a company furnishing services of employees to others. This is a useful illustration of how treaty source rules are being adapted to resolve current conflicts as to which jurisdiction may have the primary taxing right because of source and which country will give tax relief. There are a number of issues in connection with the source of income from services in the present agreements. These include whether services are covered under the independent services article or under the permanent establishment and business profits articles. The U.S. Treasury, in technical explanations of recent treaties, has attempted to set forth the U.S. position on this question. But the basic negotiating conflict that exists is between taxing income from services based on the place of performance of the services, the rule in a number of countries, versus treating the origin of service income as being the residence of the person paying for the services, or where the services are "utilized", regardless of where the services are physically performed. Of course, for a U.S. taxpayer, use of a rule other than the place of performance as the source rule for income from services immediately raises a foreign tax credit limitation problem, since for foreign tax credit purposes there is no foreign source income

© 1980 International Bureau of Fiscal Documentation – BULLETIN

when services are performed in the United States.

In this service area, we see increasing evidence of a shift in U.S. treaties toward a treaty change of source. While the U.S. Internal Revenue Code rule says the source is where the services are performed, an increasing number of treaty provisions provide that for purposes of calculating the foreign tax credit, when a foreign country imposes tax on certain types of service income, regardless of where the services were performed, the U.S. will treat the income as from sources in that country. There are provisions of a limited nature like that in the pending Moroccan treaty, where services rendered anywhere on behalf of the Moroccan government are treated as Moroccan source income. There are also provisions in the pending Philippine treaty suggesting some shift in the source of certain service income through rules permitting taxation of an enterprise on a net income basis where services are furnished for 183 days or more. In the pending Jamaican treaty, income from services rendered by a U.S. company to its affiliate in Jamaica and independent consulting services are Jamaican source once an initial threshhold of physical presence has been met. The issue in these latter treaties is identifying the service income "attributable" to a permanent establishment.

Relief from double taxation

The operative provision of U.S. treaties to relieve taxpayers from double taxation is Article 23 of the U.S. model which provides a credit for covered foreign taxes. The U.S. model and recent treaties do provide some source rules in that article, including rules for interest, royalties and dividends to provide such income with the necessary foreign source content for purposes of the foreign tax credit limitation. In this regard, the U.S. model adopts the OECD approach where income attributable to the permanent establishment that is taxable in a foreign country is going to be treated as if it had its origin there for U.S. tax credit purposes. Thus, income that is taxable in the other jurisdiction will be treated as having a source in that country.

There is then the question of the relationship of the U.S. model treaty's credit article and its source rules to the U.S. Tax Code. Is there an independent treaty credit? Clearly there is. This is expressly provided in the U.S. model. I believe it is also implicit in the history of earlier U.S. tax treaties that, unless there is a statement to the contrary in connection with the treaty, the treaty structure is such that the U.S. assures a treaty foreign tax credit to U.S. citizens and residents for the foreign taxes that are the subject matter under the treaty. The saving clause, under which the U.S. can generally tax Americans just as if there were no convention, says by way of exception that U.S. citizens and residents shall be entitled to the foreign tax credit provided in the treaty. The formulation of the credit article in the U.S. model is that the credit is to be provided under the treaty for the appropriate amount of the foreign taxes covered in the treaty, subject to the procedural requirements of the Code, e.g. gross-up for dividends.

Protocol to the French Treaty

In its Technical Explanation of the Protocol to the French Treaty that was adopted in 1979, the Treasury stated its position that there is an independent treaty credit and also discussed the per-country limitation. The Treasury says that while the treaty provides a treaty credit for the covered French taxes paid in France on French income, that does not mean you can use the per-country calculation as long as U.S. statutory rules require use of an overall limitation.

An aspect of the French protocol that deals with a serious source rule problem involves the U.S. citizen resident in a treaty country who receives income taxed in that country on a residence basis, and who is taxed in the United States on the basis of citizenship. Both countries would tax income from U.S. sources. The underlying question is which country is going to give double taxation relief with respect to such income. The mechanism of the protocol to the French Treaty produces a sharing of tax revenue by the U.S. and France. In the case of services rendered in the United States by a U.S. citizen residing in France, the protocol provides for an exemption on the French side. In the case of U.S. source dividend and interest income, the protocol establishes the U.S. right to impose tax at a rate up to the withholding tax rate imposed on U.S. source dividends and interest paid to a French resident who is not a U.S. citizen. France will credit the U.S. tax. In addition, the treaty further changes what would be the effect of U.S. statutory law to state that an additional amount will be treated as French source income. The French may tax that amount and the U.S.will give a foreign tax credit for that French tax. A further residual right of taxation is reserved for the U.S. on a citizenship basis.

Branch of U.S. company

A somewhat similar problem arises in the case of a foreign permanent establishment of a U.S. company subject to tax abroad and subject to tax in the United States on its world-wide income. Resolution of double taxation requires the efforts of two countries negotiating a treaty to reach some agreement on which country will give double taxation relief on U.S. source income as well as for third country income. Here a variety of factors come into play, including (i) the effect of the non-discrimination article in the treaty, (ii) whether the permanent establishment is unilaterally given foreign tax credits in the foreign country on what that country considers foreign source income, and (iii) whether there should be either the granting of full tax relief including a credit for U.S. tax imposed on a nationality basis or a refusal to provide credit to a U.S. company forcing it to rely on the consequences of the overall limitation. I would raise the question as to how a treaty resolution compares with the U.S. legislative rule in Internal Revenue Code Section 906 where the U.S. unilaterally provides a foreign tax credit to a foreign corporation's permanent establishment in the United States with respect to the foreign source, as the U.S. defines it, effectively connected income of the permanent establishment taxed by the U.S. I am unaware of any other country that provides, by internal law, for such a tax credit. The question raised at the time Section 906 was adopted was, suppose there is a foreign branch in the United States of a foreign company that receives income subject to foreign tax and to U.S. tax; is the branch entitled to a foreign tax credit if the basis for the foreign tax is the branch's home country's taxation of world-wide income? The United States position was that the U.S. should provide a credit for the foreign tax in that case on foreign source income, but not for the foreign tax on U.S. source income. The granting of credits for a permanent establishment is not an answer that is readily adopted by other countries, even in tax treaty negotiations. The problem of double taxation of permanent establishments on third country income remains an unresolved treaty question.

Finally, with regard to the Internal Revenue Code Section 861 type of allocation of expense rule, there is virtually no real coverage of the problems under the treaties except where the allocation matches a Section 482 intercompany pricing allocation. The national reports indicate that there has not been much analysis of this problem in most countries, nor is there even general recognition of it as a problem or an issue. In our wisdom, or zeal or misapprehension, the United States has gone quite a long way in identifying this allocation issue as one affecting international taxation, and it may become an active area in future treaty considerations. But I think right now, when one is only beginning to identify some of the problems about the source of income, we are a long way from knowing what sort of treaty rules one might see develop regarding expenses.

TAX GLOSSARY

by H.W.T. PEPPER *

THINLY-CAPITALISED COMPANIES (CORPORATIONS) - Under a corporation tax regime where classic corporate income and the dividends paid thereout are both taxed without imputation relief (see ECONOMIC DOUBLE TAXATION), it is more favourable for a company to minimise its equity capital and rely heavily on borrowed money. Interest paid on loans, debentures, convertible stock, etc. is normally deductible in determining profits whereas dividends on equity shares are merely regarded (as taxable) distributions of profits.

In double taxation treaties interest on borrowed money is often given favourable tax treatment (exemption, or abatement of the tax rate) where the interest is payable to a non-resident. An enterprise, set up with foreign capital, may, thus, also have a tax "incentive" to finance its operations with loans instead of equity capital.

This form of tax avoidance which results in companies having an abnormally low proportion of equity capital is usually countered by legislation which deems a certain part of the loan interest to be dividends or distributions of profit.

THIRD-TIER FOREIGN TAX CREDIT — A U.S.A. taxpayer who owns 10 percent or more of a foreign corporation (regarded as a "first tier" foreign corporation) is entitled to relief for tax paid abroad by that corporation (regarded as, or "deemed", paid by the taxpayer) in computing his tax on income from that corporation. If the foreign corporation in turn owns 10 percent or more of another ("second-tier") corporation the former is regarded as having paid the proportionate part of the latter corporation's foreign tax. Finally, if the second-tier corporation owns 10 percent or more of another ("third-tier") corporation the second-tier corporation receives relief for its deemed-paid share of the third-tier corporation's foreign tax, which thus passes at third-hand to the original taxpayer. There is no relief for fourth-tier or more remote subsidiaries tax paid overseas.

THRESHOLD, TAX — See TAX THRESHOLD.

TILLAEGSSKAT — (Denmark) Additional tax, Surtax.

TIMBER PROFITS TAX — A tax, additional to ordinary income tax, imposed on the profits of timber-felling or logging concerns in Malaysia. The tax is intended to fall more heavily on the profits from the richer stands of timber, as a form of RESOURCE RENT TAX (q.v.).

TIME APPORTIONMENT RELIEF — Under the U.K. capital gains tax rules (which commenced 6 April 1965), a gain which consists of the excess of disposal proceeds of an asset acquired before 6 April 1965 over its original cost may be apportioned so that only the proportion on a time basis which accrued between 6 April 1965 and the date of disposal is charged with tax.

TIME LAG — See DECALAGE D'UN MOIS.

TIME LIMITS — Apart from the routine administrative time limits imposed on taxpayers for filing returns, making payments, etc. (which limits may usually be extended for adequate reasons), there are also legal limits for making assessments and claiming refunds. See STATUTE OF LIMITATIONS.

TIN PROFITS TAX — A tax, additional to income tax, imposed on the profits of tin-mining concerns in Malaysia, which falls more heavily on those mining the richer deposits and may have no impact at all on those working marginal deposits. The tax is in the nature of a RESOURCE RENT TAX (q.v.).

TITHE REDEMPTION ANNUITIES — Annual payments under the British Tithe Acts of 1936 and 1951. The payments, which were a charge on certain lands, replaced TITHES (q.v.) and 5/6 of the payments are deductible for income tax purposes. The annuities were extinguished on 1 October 1977.

TITHES — In Britain and many other countries, tithes were a charge (theoretically of one tenth) upon the produce of certain land for the benefit of the church. In 1936 tithes were converted in Britain to fixed annual payments known as TITHE REDEMPTION ANNUITIES.

TOLDAFGIFT — (Denmark) Customs duty.

TOLL GATE CHARGE — In the U.S.A., certain company liquidations, reorganisations, and incorporations involving foreign affiliates require an advance ruling from the U.S. Treasury to ensure qualification for non-taxable or tax deferred status. In some circumstances the applicant may be required to pay, as a condition of obtaining the ruling, what is known as a "toll gate charge", which is a kind of tax on the property or shares being transferred.

TOLLS — See ROAD TAX, ROAD TOLL.

TOP-SLICING RELIEF — The term applied to relief granted under a graduated direct tax regime to avoid excessive tax being charged where, because of "bunching", an unusually large amount of income or gains would fall into a single tax year. The relief given is usually in the form of allowing a notional spread of the lump sum involved over a period of years. Relief in Britain is granted in respect of such items as GOLDEN HANDSHAKES (q.v.) where the compensation for loss of employment is otherwise taxable when payable, certain gains from insurance policies, and in respect of premiums on leases.

TOTALISATOR TAX — A totalisator is an apparatus through which bets may be made at a race course. The odds are not predetermined but are calculated by the totalisator for the winning horses on the basis of the total amounts actually staked on all the horses in a particular race. Where such betting is taxed it is a simple matter for the apparatus to calculate its own tax bill and take it into account in reckoning the net winnings, and the tax collection process is a very simple one.

TOURIST TAX — Taxation on tourists is generally restricted to a service charge or airport tax levied when the tourist leaves the country by air, but indirect

* With the assistance of the staff of the International Bureau of Fiscal Documentation.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

taxation in the form of a room tax or a hotel and restaurant tax may be applied to the grade of hotels and restaurants commonly used by tourists so that the tax falls mainly on that class of taxpayers. (See also HOTEL TAX, ROOM TAX, TRANSIT TRAVELLERS TAX, AIRPORT TAX, SECURITY TAX.)

TRADE ASSOCIATIONS — It is fairly usual to treat trade associations as mutual organisations which are not taxable on any surplus transactions with members (see MUTUALITY PRINCIPLE), provided the association has duly registered under any statutory requirement governing the administration of such organisations. Where such an association makes a special levy on members for some capital project, or for some joint contribution for a purpose which would not carry a right to tax deductibility, arrangements may sometimes be made for the association to account for tax on such contributions as an alternative to disallowances being made in computing the profits of all the individual contractors.

TRADE UNIONS — It is usual to make special income tax arrangements regarding trade unions which have been duly registered under trade union legislation. Generally speaking, income tax will not be charged on the surplus of receipts from members over outgoings (see MUTUALITY PRINCIPLE) and tax exemption is sometimes given in respect of the investment income of the union, particularly where its constitution embodies activities similar to those of a friendly society.

TRADER, SMALL, RELIEF FOR — See SMALL TRADERS.

TRAINING LEVY — A training levy may be imposed by a government where the government itself is largely responsible for training workers for certain types of industrial, mining, or agricultural tasks for which there is a demand for skilled workers. A refinement is to allow rebates from the levy to employers who train their own workers to an acceptable level of skill.

TRANCHE SYSTEM — The method of levying tax at graduated rates whereby the tax rate increases on successive tranches, or slabs, of income or capital. The system is commonly used in graduated personal income taxes, death duties, and gift taxes.

TRANSACTION TAXES — Taxes levied on commercial transactions, usually at a low rate percent on a multi-stage basis. An example was the 0.6 percent tax levied on transaction in Belgium before the switch to V.A.T. Such taxes are really CASCADE TAXES (q.v.).

TRANSFER PRICING — A method whereby an international trader may adjust prices for his goods, manufactured in one country and sold in others, so that an undue proportion of total profits is allocated to the country with the lowest taxes. See also ARM'S LENGTH PRICE.

TRANSFER TAXES — There are various examples of transfer taxes in operation — see CAPITAL TRANSFER TAX, CONVEYANCE TAX, STAMP DUTY — that in Italy is levied at 10 percent on the value of the land when land and buildings are transferred. The tax is also payable on the value of the buildings concerned where these are not subject to V.A.T. (See also CAPITAL TRANSFER TAX, GIFT TAX, STAMP DUTIES, TRANSMISSION TAX.)

TRANSIT TRAVELLERS TAX — A tax, which has occasionally been charged on tourists who visit a country only briefly, e.g., those making a call of a day, or part of a day as passengers in a cruise liner, usually as a contribution towards the cost of providing facilities for such tourists. In some instances the "tax" takes the form of a landing charge. In general such levies are not usually recommended by those advising on tourism, on the grounds that tourists tend to resent even a small tax which has to be paid in order that they may visit a country. Where, however, a global charge is payable by the visiting cruise ship, instead of by individual passengers, the levy, which is justifiable, is usually collected smoothly, on the UNMERKLICHKEIT (q.v.) principle. (See also AIRPORT TAX, SECURITY TAX.)

TRANSITION ADJUSTMENTS — It is usual to make special arrangements on the introduction of a new tax in respect of existing taxes. For example, with the introduction of unified personal tax in Britain in 1973/1974, taxpayers were allowed extra time in which to pay the surtax due from them in respect of 1972/1973 incomes which would normally have been payable during 1973/1974. When V.A.T. is substituted for another form of sales tax, it is usual to make transitional arrangements to allow relief against V.A.T. for sales tax embodied in stocks of commodities which are in hand at the commencement of V.A.T.

TRANSPORTATION TAXES — Taxes levied on vehicles using public highways, ships, boats and barges using canals, rivers and waterways maintained by the government, and upon aircraft using airports. Examples include the historical LOCOMOTION TAXES (q.v.) in Britain, the federal excise tax on transport in the U.S.A., and the inclusion of charges for the carriage of passengers and freight in certain V.A.T. systems. (See also ROAD TAX, ROAD TOLL, VEHICLE TAX.)

TRANSMISSION TAXES — Taxes (1) on the transmission of assets by gift or by death (see GIFT DUTIES and DEATH DUTIES), and (2) on the transport of oil, etc. by pipeline.

TRAVEL TAX — Travel is a subject for taxation in several countries: Japan has a 10 percent levy on the higher classes of passenger travel, the U.S.A. has a 10 percent Federal excise on inter-State travel, and Israel taxes its residents on the cost of foreign travel. The term "travel tax" has also been given to the 2 percent levy introduced in 1974 on air package holidays to build up a fund (known as the Air Travel Reserve Fund) to compensate holiday-makers who suffered loss through the financial failure of their travel agents. Several such failures had occurred in 1974 after the sharp increase in world oil prices added materially to the cost of (pre-paid) air transport. Once sufficient funds had been collected, the levy was suspended and the need for it has since been reduced by a system of bonding operated by the Association of British Travel Agents in conjunction with the Civil Aviation Authority.

TREATY, DOUBLE TAXATION — See DOUBLE TAXATION.

TREE AND FRUIT CONCEPT — See FRUIT AND TREE.

TRIPLE ASSESSMENT — A tax levied in 1798 in Britain by Pitt consisting of a levy of 3 times the previous year's tax with a ceiling of 10 percent on income and charged upon (a) those who kept carriage or saddle horses and (b) those who paid inhabited house duty, or window tax. The law was an immediate precursor of income tax. (See also EXTERNAL INDICIA OF WEALTH.)

© 1980 International Bureau of Fiscal Documentation – BULLETIN

TRUST — A trust has been defined as the relationship between persons and property under which property is vested in persons known as trustees, who control the property for the benefit of persons known as beneficiaries. A trust may be set up by a living person, known as a settlor, or under a Will after his death, by the written instructions of a testator. For tax purposes, where the income of a trust is fully distributed to the beneficiaries most countries' tax codes "look through" the trust and tax the beneficiaries directly on their shares of the income. Where trust income is accumulated the tax treatment varies according to the nature of the trust provisions and the tax law.

— *Accumulation and Maintenance Trust:* A trust, the income of which is accumulated for the benefit of a beneficiary, usually a child, and usually for a period of up to 21 or 25 years. A normal provision is that money may be disbursed before attainment of the specified age, but only for maintenance of the child. Such disbursements will form income of the beneficiary while the remaining trust income will usually be taxed at a flat rate (in the U.S. currently at 48 percent).

— *Discretionary Trust:* A trust in which the trustees have absolute discretion as to whom among usually a large number of potential beneficiaries should actually benefit. Where such a trust is used for tax avoidance, the trustees, though not bound to do so, usually heed the suggestions of the settlor as to who should in practice benefit. Anti-avoidance legislation has for the most part destroyed the value of such trusts for tax avoidance, e.g., in the U.K.

— *Sprinkler (Sprinkling) Trust:* The term used in the U.S.A. for DISCRETIONARY TRUSTS (q.v.), presumably because the trustees have power to "sprinkle" the benefits upon which beneficiaries they think fit.

— *Charitable Trust:* A trust set up for purposes beneficial to the public, e.g., for the relief of poverty, the advancement of education and religion, and other objects beneficial to the community. Donations to a charity may be exempt from gift or capital transfer taxes, capital gains tax. (See also CHARITY, DONATIONS, EXEMPTION, INVESTMENT TRUST, REGULATED INVESTMENT CORPORATION, UNIT TRUST.)

TRUSTEE PRINCIPLE — The principle that taxpayers who deduct or withhold income taxes from other taxpayers, or who are registered for the payment of sales taxes and include a sales tax element in the price charged to their customers, are all collecting tax on behalf of the tax department to whom they are responsible, much as a trustee is responsible to the beneficiaries of a trust, for remitting and accounting for the tax thus collected.

TURNOVER TAXATION — The word "turnover" nowadays usually is synonymous with "sales" or "recipts", but "turnover tax" is also a term sometimes given to the cascade taxation which applies to all stages of manufacture and distribution. The turnover tax in Eire, however, was a single stage retail sales tax upon the sales or turnover of retailers (since replaced by V.A.T.). The word "turnover" has another connotation in that it sometimes means the number of times a trader "turns over" his capital or trading stock during the year, but this is now an old fashioned use of the word.

TURNPIKE — See ROAD TOLL.

U

UDBYTTESKAT — (Denmark) Dividend tax.

UMSATZSTEUER — (German Federal Republic) The value added tax.

UNA TANTUM — The term used in Italy for FORFAITAIRE (q.v.) treatment of certain commodities in the context of CASCADE sales taxation, which preceded the present V.A.T. (IVA).

UNDEPRECIATED CAPITAL COST — A term used in the Canadian tax code and defined as the original cost to the taxpayer of a depreciable asset less the depreciation allowances of previous years, plus subsequent additions to the asset and less subsequent disposals. To the uninitiated the term seems something of a misnomer since in the calculation the original cost *is* depreciated! Where the sale or salvage proceeds of the asset exceed the undepreciated capital cost the excess is recaptured (see also BALANCING CHARGES). A capital gains tax charge would only arise if sale proceeds exceed the original cost.

UNDERLYING TAX — Tax which is charged upon corporate income out of which dividends are paid, but which does not appear as a direct deduction or withholding from the dividend itself.

UNDISTRIBUTED PROFITS TAX — A tax on corporate profits which have not been distributed to the shareholders. There are various systems of taxing corporate profits and distributions out of these profits; for example, in Britain attempts were made at one stage through the imposition of a discriminatory profits tax to discourage distributions as an anti-inflationary measure — distributions were at one time subjected to a 27.5 percent rate while undistributed profits were only charged at 2.5 percent. On the other hand, the corporate tax system of the Federal Republic of Germany involves the taxing of undistributed profits at a much higher rate than distributed corporate profits. Both in Britain and in Germany dividends are also taxed in the hands of the recipients. The German system of taxing profits is designed to encourage corporate distributions and thus a healthy capital market, since there is a fiscal "penalty" on the retention of profits. In principle, it is considered that a company which pursues a full distribution policy and the obtaining of fresh finance by rights issues and thus submits its operations to scrutiny by investors should be more efficient than a company which merely ploughs back retained profits without submitting itself to periodical stock market tests.

Where a company had retained profits over the entire period of its operations and is then wound up, tax avoidance could take place through the distribution to shareholders of accumulated profits in "capital" form. Accordingly, most countries in their tax law provide for the additional taxation of accumulated undistributed profits distributed to shareholders on company liquidations. In the case of CLOSE COMPANIES (q.v.) there is usually also an annual requirement of minimum distributions to shareholders, failing which the tax law may deem such distributions to have been made and charge tax accordingly.

PRENTICE~HALL,INC.
Englewood Cliffs,
New Jersey 07632
U.S.A.

Prentice Hall Announces:

The most strikingly different new tax guide ever published for taxpayers with income from foreign sources.

U.S. TAXATION OF INTERNATIONAL OPERATIONS

Continuously Supplemented. . . . . Always Up - to - Date

This outstanding new Service is created specifically to help save money for:

U.S. INDIVIDUALS
with investments and/or earned income from a foreign source

U.S. CORPORATIONS
with income from foreign sources

FOREIGN CORPORATIONS
with income earned or taxable in the U.S.

NONRESIDENT ALIENS
receiving income from, or taxable in the U.S.

If you fit any of these categories — or if you counsel, advise, or in any way service any of these categories — U.S. TAXATION OF INTERNATIONAL OPERATIONS will be an invaluable new tool for you.

It will deliver management benefits — operations benefits — tax benefits.

In clear, direct language, backed up by practical, tested practices of acknowledged experts in international business operations, the new work spells out how the taxpayer can best take full advantage of every popular, every sophisticated, and every little-known tax-saving device.

Authoritative, specific guidance from one source devoted exclusively to this kind of vital help has been non-existent — until now.
With the first 1972 publication of the innovative U.S. TAXATION OF INTERNATIONAL OPERATIONS this important need is now fulfilled. And bi-weekly "Report Bulletins" will keep the guide as new and up to the minute as the day you receive it.

Personal response to this new publication has been even more enthusiastic than our most optimistic projections. Subscriptions are now being accepted by mail for $ 231 a year.

Address your request to Dept. S-RR-103, Prentice-Hall Inc., Englewood Cliffs, N.J. 07632 and specify U.S. TAXATION OF INTERNATIONAL OPERATIONS, 1-year introductory charter subscription.

Annual payment is not due until 20 days after receipt of the new, ready-for-reference volume.

Paris Congress 1980
Results of the discussions

At the end of the Paris Congress of IFA a resolution was adopted on Subject I and with respect to Subject II only a summing up was issued.

SUBJECT I:

Dialogue between the Tax Administration and the Taxpayer up to the Filing of the Tax Return

Resolution (translation*)

Relations between the tax authorities and taxpayers have undergone a considerable change during the last decades in almost every I.F.A. member country. This is due to the growing number of taxpayers, the increased complexity of tax legislation and the increase in the tax burden. In addition to formal, legal relations, a dialogue of a rather less formal nature has been developed, starting well before the filing of the tax return.

Congress is of the opinion that such a dialogue may be of great interest, in that it allows the taxpayers, on the one hand, to obtain more knowledge of his rights and obligations in fiscal matters, and, on the other hand, the tax authorities can reach a better understanding of real situations and conditions. In the opinion of Congress, a satisfactory dialogue between the tax authorities and the taxpayer, prior to preparing and filing the return, is in many cases, an essential condition for creating a favourable tax climate and a cost-effective method of tax collection.

In order to ensure the satisfactory organisation of the dialogue, measures should be taken to inform and protect the taxpayer, and ways found of preventing practical and legal errors, as well as tax fraud. These measures would concern the tax authorities, the taxpayers, the taxpayers' representatives and the legislators.

Congress makes the following recommendations:

1. Within the framework of the dialogue the tax administration should provide the taxpayer with full and clear information as to his rights and obligations. Information of general interest, especially administrative directives, should be readily accessible to all concerned. As far as possible, directives should be elaborated through cooperation between the tax authorities and qualified representatives of taxpayers. Points of law included in any published directives should be respected by the tax authorities and never withdrawn with retroactive effect.
2. Congress considers that a procedure for obtaining an advance ruling is an important element in a satisfactory dialogue. The subject was discussed in the Congress in London of 1965, and copy of the Resolution is attached hereto.
3 It is a condition of establishing a satisfactory fiscal climate that the taxpayer has an essentially positive attitude towards the collection of tax and compliance with the procedures. It is therefore important that schools and universities provide a general understanding of the aims of public finance and the role of taxes. Conversely, officials of the Tax Administration should be trained in the dialogue with taxpayers.
4. Within the framework of the dialogue between the authorities and the taxpayer, tax advisers play an important intermediary role. Because of the important position of the advisers, rules or practices should be elaborated in order to guarantee technical competence as well as correct professional standards.
5. Finally, the legislator has a great responsibility for the satisfactory working of the dialogue between the authorities and the taxpayer. This dialogue is made particularly difficult by the existence of regulations which are complex and frequently modified. The simplification of the regulations would create the essential basis for a more successful dialogue between the authorities and the taxpayer.

APPENDIX

The 19th Congress in London – 1965

Resolution Subject II (original version)

Advance Rulings by the Tax Authorities at the Request of a Taxpayer

The Congress points out that the complexity of fiscal legislation is constantly increasing in all countries and for this reason it has become increasingly difficult for the taxpayers to obtain reliable information concerning the application of tax laws, which is prerequisite for all financial planning. This situation, combined with high tax rates, constitutes a serious problem of legal security. Therefore it is important that taxpayers be provided with an opportunity to obtain an authoritative opinion on the meaning of the law before taking measures, the fiscal consequences of which are uncertain.

The Congress finds that the State, which must demand farreaching cooperation from taxpayers, should ensure that the position of taxpayers is facilitated in this respect. This would at the same time establish a better relationship between the fiscal authorities and the taxpayers.

The Congress, noting with satisfaction that taxpayers have in some countries been accorded by legislative means an opportunity to request advance rulings and that the fiscal authorities in

* The original version is in German.

© 1980 International Bureau of Fiscal Documentation – BULLETIN

many countries answer the inquiries of taxpayers without a statutory to do so, has decided to make the following recommendations to improve the position of taxpayers:

1. Taxpayers should be offered an opportunity to obtain within a reasonable time advance rulings concerning the tax consequences of planned bona-fide transactions, at least if they are of material significance to the taxpayer or of general legal importance.
2. The opportunity to obtain advance rulings should not be limited to special problems nor to certain taxes, but in principle it should be possible to issue advance rulings concerning all taxes.
3. The fiscal authorities should adhere to the position taken in an advance ruling upon which a taxpayer has relied in good faith. Any subsequent change in the law should be applied as far as possible without retrospective effect.
4. It is desirable that there should be a right to appeal against advance rulings in those countries where this is administratively and legally practicable.
5. It is desirable that a method of publication of advance rulings should be devised, to ensure the uniform application of the law.

SUBJECT II:

Rules for determining income and expenses as domestic or foreign

A summing up of the Congress discussion
(original version)

1. Most countries have established in their domestic tax laws rules to determine, in respect of different categories of income, the rights of the State of source and those of the State of residence, domicile, or citizenship.
2. However, the rules determining income as domestic or foreign often reveal wide disparities between countries in their definition and operation. In the absence of any generally accepted principles, such disparities may lead to problems of double taxation.
3. Moreover, there is no generally recognized basis for allocating expenses to domestic and foreign taxable income in order to determine net income liable to tax or subject to double tax relief. This also may lead to problems of double taxation.
4. It is now accepted that for the continued development of world trade and investment, every effort must be made to adapt domestic (unilateral) tax laws so that rules as to the source of cross-border income and the allocation of expenses are harmonized.
5. The Congress has discussed a number of different approaches to determining income as domestic or foreign and the lack of harmony in domestic tax laws is particularly evident in this respect as to business income, income associated with transfers of technology and income from the rendering of services.
6. The practical solution to taxation conflicts arising from unharmonized domestic laws is seen in the conclusion and revision of an increasing number of bilateral double tax conventions, having regard to the efforts of international bodies in establishing acceptable convention guidelines. These conventions should achieve a compromise between contracting States in their differing approaches to recognizing income as domestic or foreign.
   The problem of expense allocation to cross-border income can also be resolved through bilateral double tax conventions. Such conventions may use alternative means of recognizing expense allocation either by permitting the deduction of reasonably attributable expenses or by limiting the rate at which taxes may be levied.
   States should cooperate so that the same expenses be considered applicable to a given item of income by both the country of source and that of residence, domicile or citizenship of the taxpayer.
